Formerly Assistant in History, Harvard University

New Edition revised with the assistance of

GEOFFREY BRUUN
Visiting Lecturer in History, Columbia University

Preface to the First Edition

THIS *Epitome of History* itself has a long and interesting history. More than seventy years ago Dr. Karl Ploetz, in his time a well-known German teacher, published an *Auszug aus der alten, mittleren und neueren Geschichte*, intended as a factual handbook for the use of students and for the convenience of the general reader. That his compilation filled a real need is attested by the fact that within a few years it went through seven editions, and by the further fact that to date more than twenty editions have appeared in Germany, revised and edited by noted scholars. The book has easily held its own despite competition of numerous similar works.

Ploetz' *Epitome* was translated into English by William H. Tillinghast and published by Houghton Mifflin Company in this country in 1883. The translator, recognizing that the original was designed particularly to meet the needs of the German student and that therefore the history of central Europe was weighted as against the history of France, England, and America, took the opportunity to enlarge a number of sections and to add others. No less a scholar than Edward Channing contributed the new sections on modern England and the United States. Furthermore, Tillinghast first added brief sections on the Middle and Far Eastern countries, which had been completely omitted from the German version. The book appeared under the title *An Epitome of Ancient, Medieval, and Modern History*, and proved so popular that no less than twenty-four printings were necessary before 1905. Occasional revisions were made and in 1915 the title was changed to *A Handbook of Universal History*.

Since historical knowledge and historical conceptions are notoriously fluid, it is not to be wondered at that even so sound and reliable a book as the old Ploetz-Tillinghast *Epitome* should ultimately have fallen behind the times. After the World War the publishers therefore commissioned Dr. Harry Elmer Barnes to overhaul the book and bring it up to date. The new editor, with a number of collaborators, left the kernel of the old work (the Greek and Roman history, the medieval sections, and the early modern parts) as it

had to consider the further difficulties presented by space limitation: obviously anything like adequate treatment of literature, art, science, and economics would have taken us so far afield that the results could not possibly have been enclosed within two covers. In some sections the reader will find brief summaries of cultural activities, in others not, but in any case we offer them only for what they may be worth, as a matter of convenience, without any thought of sufficiency, much less exhaustiveness. And these remarks apply equally to the special sections at the beginning of the nineteenth century, entitled *Social Thought and Social Movements*, *Scientific Thought and Progress*, and *Mechanical Inventions and Technical Achievements*. The material we adduce in these sections appeared to us indispensable for an understanding of nineteenth-century development. It cannot be suitably included under any one country, for its application is general. We could not aim or hope for completeness; hence our only objective in these sections has been to bring together an irreducible minimum of pertinent information.

Each successive editor of this *Handbook* has come away from his task impressed with the difficulties of attaining accuracy in dealing with so vast a number of dates covering so wide a range of time and territory. I am no exception to the rule and am far from being arrogant enough to suppose that this new book is even more free from error than the old. There is some consolation, however, in the thought that we collaborators have all done what we reasonably could to guard against blunders and that, as a matter of fact, many dates are so uncertain or disputed that they will probably never be satisfactorily fixed.

The success of the *Epitome of History* over a period of more than two generations is ample proof of the need for a manual of this type. In the revised and extended form here presented, it ought to be more valuable than ever. Its use for students of history is obvious enough, but it ought to prove as helpful to many others. Students of the history of literature and of art should find a concise guide to political history a great boon and all readers of historical novels or biographies should welcome a book of reference to events of the past, to genealogical relationships, and so on. My own experience with the old book was that I used it more and more as I became better acquainted with it. Nothing would please me more than to have the new edition find a secure place on the shelves of all book-lovers.

In presenting the new *Epitome* to the public, I refrain from expressing my profound gratitude to all the collaborators who have helped, and also to Professors

Walter Clark and Vincent Scramuzza, to Professor Sterling Dow, Mr. Eugene Boardman, and to Miss Katharine Irwin for the ready help they gave in reading proof. My secretaries, Mrs. Elizabeth Fox and Mrs. Rosamund Chapman, took care of countless loose ends and deserve more than a little credit for whatever merit the book may have

CONTRIBUTORS

Dr. Lauriston Ward: The Prehistoric Period (Section I).

Professor Robert Pfeiffer: Early Empires of Africa and Asia (exclusive of India and China; Section II, A, 1-9 inc.).

Dr. Robert O. Schlaifer: Ancient Greece (Section II, B; D).

Professor Mason Hammond: Roman History (Section II, C; E; F).

Professor Charles S. Gardner: China throughout and India to c. 1600 (Sections II, A, 10-11; G, 2-3; III, E, 2-3; IV, F, 4; V, J, 5).

Professor Edwin O. Reischauer: Japan and Korea throughout (Sections II, G, 4-5; III, E, 4-5; IV, F, 5-6, V, J, 6-7; VI, F, 11).

Mr. Paul Cram: Western Europe in the Middle Ages (Section III, A, 1; B, 1, 3c; C, 1)

Professor William Thomson: The Moslem World in the Middle Ages (Sections II, G, 1; III, A, 3; B, 3, b, e, f, g).

Professor Michael Karpovich: Russia and Poland throughout and Scandinavia since c. 1500 (Sections III, B, 2, a, c, d; C, 2, a, b, c; IV, A, 7-9; B, 8-10; V, D; VI, B, 12-15).

Professor Crane Brinton: Western and Central Europe c. 1500-1815 (Section IV, A, 1-6; B, 1-7; V, B).

Mr. Robert S. Chamberlain: Latin America throughout (Sections III, F; IV, C; V, H; VI, D).

Professor James B. Hedges: North America, exclusive of Mexico, throughout (Sections IV, D; V, G; VI, C).

Professor Donald C. McKay: Western and Central Europe, 1815-1914 (Sections V, A, 1, 2, 3, C).

Professor John Fairbank: India since c. 1600 (Sections J, 3, 4; VI, F, 8, 9).

Professor Penfield Roberts Western and Central Europe since 1918 (Section VI, B, 1-9).

For all other sections the editor is alone responsible.

Foreword to the Revised Edition

THE ORIGINAL EDITION of the *Encyclopedia of World History* carried the chronology of world events down to the outbreak of war in Europe in September, 1939. Since then the Second World War has been fought and hostilities have come to an end. The dropping of the atomic bombs on Hiroshima and Nagasaki prefaced the end of Japanese resistance and at the same time ushered in what has already been recognized as the new, atomic age.

The happenings of six years of total war, the crowded record of military campaigns and of political upheavals certainly call for adequate treatment in a reference work of this kind. This new edition, therefore, takes full account of the developments of the most recent period. At the same time advantage has been taken of the opportunity to make numerous corrections of detail in other parts of the book. The original edition was given a wide and enthusiastic reception and in many instances readers took the trouble to send in comments and suggestions. For the most part these were constructive and proved to be valuable contributions to the improvement of the book.

The additions embodied in this new edition were prepared almost entirely by Dr. Geoffrey Bruun, who has worked tirelessly to put the revised text and tables into the best possible shape. The editor and publisher join in expressing to him their appreciation and gratitude, and also to Mr. Gordon Bassett who prepared the new index.

WILLIAM L. LANGER

Contents

LIST OF EVENTS FROM AUGUST 1, 1945, TO JULY 31, 1946 xxxvii

I. THE PREHISTORIC PERIOD

A. INTRODUCTION 1
1. Definition, Data, and Methods 1
2. The Origin of Man 1
3. Cultures and Their Dating 2
a. Cultures and Periods 2
b. Relative Dating 2
c. Absolute Dating 3

B. THE PALAEOLITHIC PERIOD 4
1. Culture and Industries 4
2. Europe 4
3. Africa 5
4. Asia and Oceania 6
5. America 7
6. Interrelationship of Palaeolithic Cultures 7
7. The Dates of Palaeolithic Cultures 8
8. Physical Types of Palaeolithic Man 9

C. THE POST-PALAEOLITHIC PERIOD 10
1. Nature and Sequence of Post-Palaeolithic Cultures . . 10
a. Mesolithic Period 10
b. Neolithic Period 10
c. Chalcolithic Period 11
d. Bronze Age 11
e. Iron Age 11
2. Modern Races of Man 12
3. Regional Distribution of Post-Palaeolithic Cultures . . 13
a. Asia 13
b. Europe 14
(1) Climatic Changes and Time-Scale. . . . 14
(2) Cultural Changes and Periods . . . 15
(3) Movements of Peoples 16
(4) Regional Distribution of Cultures . . 16
c. Africa 18
d. Oceania 18
e. America 19

II. ANCIENT HISTORY

A. EARLY EMPIRES OF AFRICA AND ASIA . . . 21
1. Egypt 21
2. Mesopotamia 25
a. Sumer and Akkad 25
b. Babylonia 26
c Assyria 26

June 25. **The United States Congress** passed a measure extending the Selective Service system until March 31, 1947.

June 27. **The foreign ministers** of **Great Britain,** the **United States, Russia,** and **France,** meeting in Paris, transferred the **Dodecanese Islands** from **Italy** to **Greece** and awarded the **Briga** and **Tenda** areas in northern **Italy to France.** The **Italo-Jugoslav** frontier was delimited July 1. The council adjourned July 12.

June 28. **The Russian Ministry of State Control** announced widespread dismissals of incompetent or dishonest officials in an effort to improve the economic and industrial activities of the nation.

June 30. **The United States Congress** allowed the **Fair Employment Practices Committee** to expire and the powers of the **Office of Price Administration to lapse.**

In Poland a national referendum favored by 5 to 2 the establishment of a **one-house parliament,** a victory for the Communists.

July 1. **A United States** naval experiment at **Bikini** demon-

1946

strated the effect of an atomic explosion on warcraft. A second experimental explosion, under water, was conducted July 25

July 4. **An anti-Jewish** pogrom in **Kielce, Poland,** cost the lives of 40 Jews. Further outbreaks of anti-Semitic violence cost 20 more lives July 12.

July 5. **The Canadian Government** announced that the Canadian dollar had been adjusted at par with the American dollar.

July 9. **The Belgian cabinet** of Premier **Achille van Acker** resigned after a vote of lack of confidence.

July 15. **The United States** loan bill extending a credit of **$3,750,000,000** to **Great Britain** was signed by President Truman.

July 18. **Strikes** in leading Italian cities forced the premier, **Alcide de Gasperi,** to call out naval and military forces.

July 22. **Palestine terrorists** blasted the King David Hotel in Jerusalem, in which British army headquarters were located The total dead exceeded fifty. An **Anglo-American committee,** studying Palestinian problems, recommended a federal state with a British-controlled central régime and separate Arab and Zionist provinces (July 25).

July 29. **A Peace Conference** of delegates from 21 nations met in **Paris,** to consider the draft treaties prepared by statesmen of **Great Britain,** the **United States, Russia,** and **France.** These treaties embodied the agreements achieved by the "Big Four" on the post-war status of **Italy, Rumania, Bulgaria, Hungary,** and **Finland.**

I. THE PREHISTORIC PERIOD

A. INTRODUCTION

1. DEFINITION, DATA, AND METHODS

HISTORY in its broadest sense should be a record of Man and his accomplishments from the time when he ceased being merely an animal and became a human being. The efforts to reconstruct this record may be classed under two heads (1) **History** (in the stricter sense), which is based on written documents and covers part of the last five thousand years of Man's activities, and (2) **Prehistory,** which is based largely on archaeological evidence and covers all the long preceding period, which probably amounts to more than one million years

The prehistoric period is important, not only by reason of its vast length, but also because during this time Man made almost all his major discoveries and adaptations to environment and group-life (except those connected with the recent machine age) and evolved physically into the modern racial types. Hence at least a brief summary of the prehistoric period is a necessary introduction to any account of the recorded history of Man.

The main body of material upon which the work of prehistoric reconstruction is based comprises first, remains left by early peoples, largely in the form of tools and other artifacts, found by excavation in old habitation sites or burials, secondly, other traces of their activities, such as buildings and rock-carvings or rock-paintings; and lastly, the bones of the people themselves. This material gives good evidence of the physical type of prehistoric peoples and their material culture, very slight evidence of their social, intellectual, and religious life and no evidence of their language It can be supplemented to some extent—and with great caution—by a comparative study of the physical types, languages, and material culture of modern peoples

The time when prehistory ends and true history begins varies greatly in different parts of the world Traditional history often covers the borderline between the two and can sometimes be successfully correlated with the archaeological evidence

In prehistory, dates are entirely a matter of estimate and cannot be used as fundamental landmarks, as in the case of recorded history.

2. THE ORIGIN OF MAN

MAN'S PLACE AMONG THE ANIMALS. The various living and extinct species of Man are assigned by zoologists to the family *Hominidae*, which belongs to the sub-order *Anthropoidea* (containing monkeys, apes, and baboons), of the order **Primates** (containing also *Tarsius* and the lemurs), of the class **Mammalia.** His nearest living relatives are the four genera of the family *Simiidae* (the so-called Anthropoid Apes): the gorilla and chimpanzee of equatorial Africa and the orang-utan and gibbon of southeastern Asia and the East Indies. Man is distinguished from the higher apes by the greater size of his brain (especially the forebrain), his fully erect position in walking, the better adaptation of his hands for grasping and holding, and his use of language for communication.

MAN'S ANIMAL ANCESTORS. No remains have yet been found of Man's immediate precursor, the primitive and more ape-like animal from which he is supposed to be descended Neither have we yet found any certain traces of the postulated animal (often popularly termed the *Missing Link*) from which both Man and the anthropoid apes are descended. Several forms of fossil apes have been found, however, which show a kinship to Man in some particulars and help to bridge over this gap notably, *Propliopithecus*, from the Lower Oligocene of Egypt, *Sivapithecus*, from Miocene India; *Dryopithecus*, from Miocene France; and *Australopithecus* (the "Taungs skull"), from the Pliocene or Pleistocene of South Africa

DATE OF MAN'S ORIGIN. This has not yet been definitely established. The ancestors of the great apes and the ancestor of Man probably diverged from one another as early as the Miocene period, and Man acquired certain essentially human charac-

teristics probably in the Pliocene period The earliest known skeletal remains that are accepted as human are believed to date from the early or middle part of the Pleistocene period. For the purposes of the prehistorian, who has to rely largely on archaeological evidence, the record of Man may be said to begin at the moment when he was able to fashion the first stone tools which can be unmistakably recognized to be of human workmanship This was early in the Pleistocene, or possibly in the very late Pliocene.

PLACE OF MAN'S ORIGIN. This is still entirely a matter of speculation The old theory of Central Asia as the "Cradle of Mankind" was based on false premises, which have been abandoned From the distribution of the living and fossil great apes, it is thought that Man's divergence from the general anthropoid stem is likely to have taken place somewhere in the area comprising western Europe, the northern half of Africa, and southern Asia, with the preference perhaps slightly in favor of Africa or Asia, but there is no real evidence at present to warrant a final conclusion.

3. CULTURES AND THEIR DATING

a. CULTURES AND PERIODS

Archaeological investigation of the material remains of prehistoric Man has shown that a wide variety of cultures flourished in different parts of the world and at different times For convenience these have been grouped into a series of major cultures based primarily on the nature of the principal material used for implements (whether stone or one of the metals), and sometimes on the technique used in fashioning these implements. The oldest culture in the world was characterized by the use of chipped stone for implements and has been named Palaeolithic culture. Neolithic culture, on the other hand, was characterized by the use of polished stone implements; Bronze culture, by the use of bronze implements, and so forth.

In most parts of the world the discovery and use of these different materials and techniques took place in a regular sequence in time In the absence of fixed dates, it was thus found convenient to use these cultural terms in a chronological sense. Accordingly prehistoric times have usually been divided into the following series of periods or ages (beginning with the oldest): **Palaeolithic** (Old Stone), characterized by chipped stone implements, **Mesolithic** (Intermediate Stone), a transitional period; **Neolithic** (New Stone), with polished stone implements; **Chalcolithic** (Stone and Copper), characterized by the first tentative use of copper implements; **Bronze Age,** with full development of copper and bronze implements; and **Iron Age,** with iron implements.

These names are excellent to identify cultures, but their use to designate periods of time has led to much inaccuracy and confusion, as the dates of the cultures to which they refer differ widely in different parts of the world. It is proper, for example, to speak of the Bronze Age of Hungary or some other limited area, where the beginning and end of the bronze culture can be fairly accurately dated. But it is quite impossible to speak with any meaning of the Bronze Age of the Old World, for this period began some thousand or fifteen hundred years earlier in Mesopotamia, for instance, than it did in western Europe, and it gave way to the Iron Age one or two thousand years earlier in Asia Minor than it did in some parts of Siberia; while in Japan there was no true Bronze Age and in Australia no Bronze Age at all. The names of these periods are, however, too well established to be abandoned and are often useful, if employed with caution.

DATING. As there are no written documents, a variety of other means have been employed to determine the duration and dates of prehistoric cultures.

b. RELATIVE DATING

This is established by the following methods

(1) **Stratigraphy.** When there is accurate excavation of a site, the undisturbed remains in any given level may fairly safely be assumed to be earlier than the remains in the levels that overlie it

(2) **Typology.** The age of a given culture may sometimes be determined approximately when most of the objects representing it appear to be identical in type with objects found elsewhere in a culture which has been dated by other means

(3) **Geology.** The relative age of different remains can often be ascertained by finding the relative age of the geological strata in which the remains occur, as in the case of a series of sedimentary deposits, or river terraces and raised beaches, marking former

shorelines or flood levels in valleys at times when the mutual relation of land and water was different from that of the present.

(4) **Palaeontology.** The presence (with the human remains) of extinct or still existing species of animals (including marine and lacustrine fauna) frequently provides a fairly exact basis for dating the human remains, in terms of geological periods

(5) **Palaeobotany.** The presence of plant remains furnishes a further basis for assigning associated human remains to certain geological periods

(6) **Climatic evidence.** When the past record of major climatic sequences in an area is known, human remains can often be dated in terms of glacial advances and retreats or pluvial and dry periods, if the remains are found in deposits characteristic of such periods The kinds of animals and plants found in association with the human remains frequently show whether the climate of the period in question was wet or dry or warm or cold. Thanks to the great progress which has recently been made in palaeobotany it is now possible to trace climatic fluctuations (as reflected by the immigration of new forest forms) through microscopic examination of pollen grains preserved intact for thousands of years in peat beds and elsewhere. Associated archaeological remains can thus often be referred with great accuracy to a given climatic phase

There is considerable room for error in the use of each of these methods, unless the greatest care is exercised, but they are all sound in principle and in general they may be relied upon, particularly when one confirms another. The ideal system would make use of all the methods listed above, establishing for any area the sequence of climatic changes, earth movements and deposits, and using this as a chronological framework into which to fit the successive cultures, reconstructed on the basis of the stratigraphy of the archaeological remains For very few regions has this been done

c. ABSOLUTE DATING

This is more difficult, but several methods have been used.

(1) **Estimate of the time needed to produce observed changes in culture.** There is no exact basis for such estimates, and this method, though often the only one available, is extremely inaccurate and inadequate.

(2) **Estimate of the time necessary for the performance of certain geological work.** This is used to date geological horizons in which human remains occur. For example, the date of a high river terrace may be given if it is estimated that it must have taken the river at least one hundred thousand years to cut down its bed to the present level Such estimates are almost equally uncertain and inadequate for the purposes of the prehistorian

(3) **Extent of the breakdown of radioactive minerals in certain rocks.** This method is based on a process that can be measured with some exactness and has been used to determine the age of the great geological epochs but cannot yet be applied accurately to any period that is much under half a million years

(4) **Geochronology;** that is, the counting of the annual layers (varves) of sediment deposited by the melt-waters of a retreating ice-sheet. This method, first devised by the Swedish scientist, De Geer, has been applied to the Scandinavian region as the basis of an absolute system of chronology covering the last twelve thousand years. Owing to the scarcity of archaeological remains found *in situ* in dated varves, this system is of value principally in correlating and dating the different stages of the retreat of the last ice-sheet and the major fluctuations in sea-level in the Baltic area. These in turn serve to date many deposits which, by pollen analysis, can be assigned to the various post-glacial climatic cycles. Thus indirectly the archaeological remains found in these deposits can be tentatively dated

(5) **Dendrochronology.** This method, devised by Douglass and applied first in the southwestern United States, is based on the fact that certain species of trees, especially in arid regions, show by the thickness of their annual rings of growth the alternation of relatively wet or dry years. By matching many specimens from trees of various ages it has been possible to construct a time scale by which to date timbers found in prehistoric ruins.

(6) **Historical evidence.** Late prehistoric cultures in backward areas can sometimes be dated in a general way by the presence of imported objects from a known historical culture in some more advanced area, where written documents already exist.

It is thus seen that dates assigned to prehistoric periods are, for the present at least, almost entirely a matter of estimate. In some cases the estimates of most experts are in more or less general agreement, but often they vary widely, depending upon the person who makes them and the particular methods he relies upon as a basis for his dating.

B. THE PALAEOLITHIC PERIOD

(Probably over one million years in duration, ending about 8000 B C)

1. CULTURE AND INDUSTRIES

THE word *Palaeolithic* is used to describe a stage of human culture, the earliest of which we have sure evidence Although this culture persisted longer in some parts of the world than in others, we can use the term with reasonable accuracy to characterize a period of time. This period includes probably 99 per cent of Man's life on earth (at least since he became a tool-using animal), all the other periods down to the present covering the remaining 1 per cent.

Our knowledge of Palaeolithic culture is based principally on implements and animal and human bones found in the gravels of old river terraces, in open camp sites, and in caves Disregarding the variations of time and place, one may say in general that Palaeolithic men knew the use of fire and lived by hunting and collecting vegetable foods, as the Australian natives and the Bushmen of South Africa do today They had no agriculture and no domestic animals, excepting possibly the dog For shelter they probably made wind-breaks and crude huts of branches, occasionally occupying caves. Their clothing was undoubtedly of skins (no textiles) Their tools and utensils were of stone, bone, and undoubtedly also of wood and basketry (no metal and no pottery) We know almost nothing of their social organization, religion, and intellectual life, except that late cave paintings and burials indicate belief in magic (in connection with hunting) and in some kind of existence of the individual after death It is fairly safe to assume, however, that a large part of the fundamental institutions and beliefs of modern primitive peoples and of our own early historical ancestors had their origin and first development in this period

The **stone tools,** which are such important criteria for this period, were usually made of flint or other hard rock by a process of chipping They are classified as **core tools,** when the basis of the implement was a piece of rock, improved by chipping, or **flake tools,** when one of the flakes knocked off from a core (which is then termed a nucleus) was used as the basis for the implement Sometimes the core was made ready for flaking by first creating a flat surface or striking-platform. Chips were removed by striking with another stone (hammer stone) or by pressure (pressure flaking) Sometimes the edges of a flake were improved by secondary chipping or flaking (retouching) The principal types of implements were hand-axes or *coups de poing* (large pear-shaped or almond-shaped cores, chipped on both sides), scrapers of various shapes, points, awls (borers); and, in late times, long blades with roughly parallel edges, and gravers (small tools of many shapes improved for use as chisels or gouges by striking a special blow near the point).

2. EUROPE

The **Pleistocene period,** or Ice Age, in which Palaeolithic culture developed and flourished, was marked, at least in the Alpine regions, by four major glacial advances (Günz, Mindel, Riss, and Wurm), separated by three warmer inter-glacial periods The last glaciation had two maxima (Würm I and II), during which much of northern Europe was covered by a sheet of ice, but between them was a comparatively warm period, the Laufen oscillation

PRE-PALAEOLITHIC. Assigned to this period, at the end of the Pliocene and early part of the Pleistocene, are certain occasional finds of crude, shapeless stones, called *eoliths*, which are supposed by some archaeologists to show traces of Man's first attempts at chipping, but this is still a matter of dispute. Here also come three so-called industries of Reid Moir the Icenian industry, characterized by rostrocarinate tools; the Darmsdenian, a pebble industry, and the Harrisonian, an industry of so-called utilized flakes

LOWER PALAEOLITHIC. This period covers the greater part of the Pleistocene.

Almost our only information about the peoples and movements of this time consists of what may be inferred from the stone implements, which show, according to Breuil, the contemporary but more or less independent development and mutual interinfluence in western Europe of four separate techniques of manufacture (industries): (1) **Hand-axe** industry (French *biface*), developing through Pre-Chellean (Abbevillian) to Acheulean types, (2) **Clactonian** industry, characterized by rough flakes with an unfaceted striking-platform inclined at a high angle to the main flake surface, (3) **Levalloisean** industry, characterized by large flakes struck from a previously prepared core (tortoise core) and retaining a faceted striking-platform; and (4) **Mousterian** industry, consisting of smaller flakes of various forms, usually exhibiting a characteristic technique of retouching the edges (stepped retouch). These industries are found both separate and mixed, and there are additional intermediate forms Chronologically they have been grouped into four periods (1) **Pre-Chellean** (Abbevillian) period, characterized by extremely crude hand-axes; (2) **Chellean** period (now usually included with Acheulean), having hand-axes somewhat less crude than the Abbevillian, as well as some Clactonian tools; (3) **Acheulean** period, marked by more highly evolved hand-axes and, particularly in its later stages, by Levallois flakes, and (4) **Mousterian** period (sometimes designated as Middle Palaeolithic), with typical flake tools (points and scrapers) and a continuation in some places of Levallois flakes. The Mousterian industry proper (which has Pre-Mousterian or Proto-Mousterian forerunners in northern and eastern Europe) is found particularly in the caves of central France, associated with bones of mammoth and reindeer and of Neanderthal Man

UPPER PALAEOLITHIC. This is a relatively short period, coinciding with the last part of the Ice Age and marked by the appearance of new flint industries and men of modern type (*Homo sapiens*) Three principal cultures are noted. (1) **Aurignacian** culture This was the earliest Evidence shows that the climate was comparatively warm The people were nomadic hunters, living in open camps and caves. The stone industry was marked by great use of the blade and included a variety of characteristic scrapers, gravers, points (Châtelperron, Gravette, Font Robert types), and beginning of very small tools (*microliths*), also bone implements and ornaments of shell and bone. Aurignacian remains are found widely through central and western Europe and the Mediterranean region. (2) **Solutrean** culture This is distributed from eastern and central Europe as far as France, intruding on the Aurignacian The climate was cold. The Solutreans lived in open camps and rock shelters, were great hunters of horses, and introduced the technique of pressure flaking (willow-leaf and laurel-leaf points). (3) **Magdalenian** culture, the latest to develop, flourished in northern and central Europe and southern France. The climate was somewhat colder and the Magdalenians lived frequently in caves, where they made remarkable rock-carvings and paintings, representing animals and men Besides stone tools there was a high development of bone carving (spearheads, harpoons, *bâtons de commande*, and representations of animals)

The Palaeolithic period in Europe ended with the great changes in climate, fauna, and flora that marked the termination of the Pleistocene or Ice Age

3. AFRICA

The Palaeolithic of Africa is characterized by a variety of stone industries, some of which are purely local, while others are similar to or practically identical with certain of the industries of Europe. Geological investigation, which has only recently been undertaken on an adequate basis, indicates that owing to fluctuations in rainfall the Pleistocene period throughout most of Africa can perhaps be divided into a succession of pluvial and interpluvial periods, which it is hoped may eventually be correlated in some way with the glacial and interglacial periods of Europe The succession of cultures is well established for certain areas, but not yet for the continent as a whole

NORTHWEST AFRICA. Heavily patinated hand-axes of definitely Chellean and Acheulean types together with an early fauna have been found, usually without stratigraphy, in Tunisia, Algeria, Morocco, and to the south in the Sahara region, which was apparently once less arid than now. A so-called Mousterian industry (accompanied by a later fauna) is also represented, and excavations show an evolution from Levalloisean types, without typical Mousterian, to a special development known as the **Aterian** industry, characterized by

small, tanged leaf-shaped points, delicately trimmed all over both faces This was succeeded by two contemporary cultures, the early **Capsian** and the **Oranian** (Ibero-Maurusian), which were Upper Palaeolithic in date and marked by blades, gravers, and microlithic forms, the earliest phases of which bear a fundamental though distant relationship to the early Aurignacian of Europe.

EGYPT. The presence of Palaeolithic Man is shown by discoveries of the following succession of industries, all *in situ*, in the terraces of the Nile Valley· Chellean, a primitive Acheulean and an Egyptian form of the Clactonian, in the 100-foot terrace (no human implements were found in the 150-foot terrace), developed Acheulean in the 50-foot terrace, Levalloisean (first reported as Early Mousterian) in the 30-foot terrace, and developed Levalloisean (reported as Egyptian Mousterian) in the 15- to 10-foot terrace These were followed, in deposits of later age, by an Egyptian version of the Aterian and a local industry, the Sebilian.

EAST AFRICA. According to Leakey, who has done the most work in this area, there is an early series of industries in Kenya, Uganda, and Tanganyika, which apparently evolved from simple pebbles, roughly chipped to an edge on one side (**Kafuan** industry), through pebbles chipped to an edge on both sides (**Oldowan** industry) and through other intermediate forms to the true hand-axe types (Chellean and Acheulean industries). In higher geological horizons, and thought to be partly contemporary with one another, are found two series of industries, Aurignacian and a sparsely represented Levalloisean (followed by the Stillbay)—both with many stages Leakey assigns the Kafuan to the First Pluvial period of East Africa (Lower Pleistocene), the Chellean and Acheulean to the Second or Kamasian Pluvial period (Middle Pleistocene), and the Aurignacian and Levalloisean-Stillbay to the Third or Gamblian Pluvial period (Upper Pleistocene)

SOUTH AFRICA. Here the **Stellenbosch** culture, containing Chellean and Acheulean types (hand-axes and cleavers and Victoria West cores), was followed, stratigraphically, by the **Fauresmith** culture (hand-axes and also flakes with faceted striking-platform, suggesting Levalloisean influence), which together form the so-called Older Stone Age. The Middle Stone Age was marked by a series of more or less contemporary flake industries (Mossel-bay, Glen Grey Falls, Howieson's Poort, Bambata Cave, Stillbay, etc), suggesting by the shapes and technique of their implements a combination of Levalloisean and Aurignacian influences, together with pressure-flaking in one case (Stillbay).

OTHER AREAS. Occasional finds of implements similar to those of some of the industries already described have been reported from Nigeria, the Sudan, Abyssinia, Somaliland, the Congo region, and northern Rhodesia.

4. ASIA AND OCEANIA

WESTERN ASIA. A remarkably complete sequence of stone industries, paralleling quite closely those of Europe, has been established for the Palestine-Syria region. Surface finds of Chellean implements are supplemented (in three caves in the Wady-el-Mughara, near Mt Carmel) by the following stratigraphic series: Tayacian, Upper Acheulean, Levalloiseo-Mousterian (with skeletons of Neanderthaloid type), Aurignacian, and Natufian (a Mesolithic industry) Occasional sites with implements of one or another of these types have been reported from northern Arabia, Asia Minor, Armenia, Transcaucasia, Mesopotamia, and Persia.

INDIA. Many implements of Chellean type, as well as Acheulean hand-axes and cleavers, have been reported in northern, central, and southern India. In the Punjab, De Terra found Acheulean hand-axes in a deposit contemporary with the second Himalayan glaciation or somewhat later. These were succeeded by a crude pebble industry (Soan industry) in strata contemporary with the third Himalayan glaciation. A few Upper Palaeolithic types, with some suggestions of Aurignacian, have also been found in central and northwestern India, as well as cave sites with rock paintings of uncertain age

CHINA. Skulls of Peking Man (*Sinanthropus pekinensis*), together with traces of fire and very shapeless stone tools, have been excavated in Middle Pleistocene deposits at Chou-kou-tien, southwest of Peiping. Implements of general Upper Palaeolithic type were found in the Ordos region, accompanied by remains of animals related to those associated with the last

glacial advance in Europe. Other finds of a similar nature have been reported from Mongolia and Manchuria, but none to date from Japan.

SIBERIA. Hearth sites, Palaeolithic implements and remains of extinct animals have been found in southwestern and central Siberia, especially in the basin of the Ob River and its tributaries, the valleys of the Upper Yenisei (Minusinsk region) and Angara Rivers and around Lake Baikal Some of the implements resemble quite closely certain Mousterian, Aurignacian, and Magdalenian forms of western Europe. The deposits in which they occur and the fauna suggest that they belong to the Upper Palaeolithic period

SOUTHEASTERN ASIA AND OCEANIA. The occurrence of a Palaeolithic culture in parts of this region has been reported, as evidenced by crude chipped stone tools unaccompanied by polished stone or pottery, and (in Tonkin) these actually occur below levels containing polished stone tools and pottery Many of the familiar types of Palaeolithic tools are lacking, however, and recent investigation has revealed that these industries definitely date from the New Stone Age or at earliest from the Mesolithic In Burma, however, a new Lower Palaeolithic culture (Anyathian), associated with extinct fauna, has been discovered in the Middle Pleistocene terraces of the Irrawaddy River In Java an important series of remains of early Man has been found, including *Homo modjokertensis*, in a Lower Pleistocene horizon, the famous *Pithecanthropus erectus*, which is now shown by the associated fauna to be Middle Pleistocene in date, and Solo Man, belonging to the Upper Pleistocene. Surface finds of implements of Lower Palaeolithic type and points and scrapers of general Upper Palaeolithic appearance have also been reported from Java. No Palaeolithic remains have been found in Polynesia.

5. AMERICA

For an account of alleged Palaeolithic cultures in America, see below.

6. INTERRELATIONSHIP OF PALAEOLITHIC CULTURES

It should be clear from the foregoing that at present we know a great deal more about Palaeolithic stone implements than we do about the Palaeolithic people who made them Our data are still too insufficient to warrant any sure account of the way in which the various elements of Palaeolithic culture were developed by different groups of mankind and spread by them throughout the world However, three fundamental facts relating to this problem may be regarded as reasonably well established

First, some of the more highly evolved implements and groups of implements found in widely different areas are so similar in shape and technique that we are forced to infer that the cultures in which they occur bear some time-relationship to one another, i e the art of making the typical implements in question (such as the hand-axe, the Levallois flake and the Aurignacian blade, to name three fundamental examples) was not evolved independently at different times and in different places but was spread from some original center, either by actual migrations of people or by cultural diffusion

Second, the geographical distribution of these various type implements, although very wide, is not haphazard, but each one of the fundamental industries has its own distinct area of major development, with outliers along natural routes of migration. For example, the industry characterized by core implements of hand-axe type is found in one continuous area, comprising southwestern Asia, eastern and northern Africa, and southern and western Europe, with outliers in South Africa and India A less sharply definable industry, characterized by the use of flake implements in preference to cores and (in its most developed form) by the use of flake implements of Levalloisean type with a faceted striking-platform, has its home in the same area, with addition of a broad belt stretching through central and eastern Europe and northern Asia Finally the blade industry has a distribution which is practically identical with that last described, though with a less characteristic development in South Africa and India The southeastern part of Asia, from the North China plain to Indonesia, seems to form a separate culture province, with an almost entirely inde-

pendent development throughout Palaeolithic times

Third, the three major industries just referred to had their principal development at different periods of time, as is shown by the fact that wherever there is stratigraphic evidence they occur in the same order of succession, with the hand-axe industry the earliest, succeeded in turn by the Levalloisean flake industry and that by the blade industry, the latest of all The foregoing outline is, of course, oversimplified and disregards many problems of local development and relations, but it is based on a mass of evidence, it represents the best opinion of archaeologists today, and it may be accepted provisionally as a true interpretation of the facts.

7. THE DATES OF PALAEOLITHIC CULTURES

The Palaeolithic period of Man's development is considered to be roughly contemporary with the Pleistocene period of the earth's history and has to be dated in geological terms The Pleistocene may be broadly divided, on the basis of faunal remains, into Lower, Middle, and Upper or (in Europe at least), on the basis of Alpine glacial deposits, into four major periods of glacial advance (Gunz, Mindel, Riss, and Wurm) with three corresponding interglacial periods The dating of Palaeolithic industries in terms of Alpine glacial and interglacial periods is still, however, a highly speculative affair, owing to the fact, which is not always properly appreciated, that almost no archaeological remains have yet been found in actual glacial deposits of the Alpine region Attempts have been made to correlate glaciations in Asia and Africa with these Alpine glaciations and to correlate with both the series of implement-bearing river terraces (especially of the Thames, Somme, and Nile) and implement-bearing deposits of so-called Pluvial periods in non-glaciated regions (notably in East Africa), but only preliminary work has yet been done on this large and complicated problem. Hence statements of experts regarding the age of the earlier Palaeolithic cultures differ greatly and should be regarded as opinions or theories only, which require further evidence before they can be accepted as established fact.

That tool-making man existed as early as the Lower Pleistocene period has been contended by a number of authorities. Teilhard de Chardin has dated the Sinanthropus finds at Chou-kou-tien as possibly Lower Pleistocene, and Breuil considers that deposits containing his Abbevillian (Pre-Chellean) industry and the earliest Clactonian industry belong to the First (Gunz-Mindel) Interglacial period. Various alleged implements of a very primitive nature (including the so-called *eoliths*) found in Europe and Africa have been ascribed to this period and Reid Moir claims to have found tools of primitive types in deposits that are presumably of pre-Gunz age Such early dates are not yet universally accepted by archaeologists and geologists

When we come to the Middle Pleistocene, however, there is a more general agreement that the early phases of the hand-axe and flake industries (Chellean, Clactonian, etc) in Europe and Africa probably existed in the Second (Mindel-Riss) Interglacial period De Terra has found similar implements in India in deposits contemporary with the end of his Second Himalayan Glacial Advance or the following interglacial period (which may be contemporary respectively with the Second or Mindel Glaciation of Europe and the Mindel-Riss Interglacial)

Furthermore, it is thought very probable that in Europe the fully developed Acheulean and associated Levalloisean industries belong to the Third (Riss-Wurm) Interglacial period, the typical Mousterian to the end of this period and the first maximum of the Fourth Glacial period (Wurm I), the Aurignacian to the time of the Laufen oscillation, the Solutrean to the second maximum of the Fourth Glacial (Wurm II), and the Magdalenian to the last stages and retreat of Wurm II. African and Asiatic implements that show relationship to some of the above industries are probably roughly contemporary with them

It is impossible to give an absolute date to these periods in years. Most recent geological opinion assigns a duration of one and one half to two million years for the Pleistocene This would mean that the earliest man whose tools we have found and certainly identified lived perhaps as much as a million years ago. It is estimated (largely on the basis of De Geer's studies of varves in the Scandinavian area) that for Europe the Pleistocene period ended (and with it the Palaeolithic Age) circa 8000 B.C

8. PHYSICAL TYPES OF PALAEOLITHIC MAN

Very few human skeletal remains have been found which can be assigned with any certainty to the Lower or Middle Pleistocene or which are so primitive in type that they are assumed to belong to these early periods The principal ones are *Homo modjokertensis*, from the Lower Pleistocene of Java, *Pithecanthropus erectus*, from the Middle Pleistocene of Java, *Sinanthropus pekinensis* (**Peking Man**), from the Middle Pleistocene of China, *Eoanthropus dawsoni* (**Piltdown Man**), found in England and generally thought to belong to the Lower Pleistocene; *Homo heidelbergensis*, from an early interglacial deposit of Germany; and **Rhodesian Man** (Broken Hill skull), from South Africa, of very uncertain age

For succeeding periods we have more satisfactory data Belonging to the latter part of the Pleistocene, and mostly to the time of the first maximum of the last ice (Wurm I) are many remains of **Neanderthal Man** (*Homo neanderthalensis*), a type which has been found, with many variations, from western Europe to Palestine (usually associated with Mousterian implements). All the primitive types so far mentioned differ greatly in their physical characteristics, and their exact relationship to one another and to modern races of men is still a subject of discussion, but it is questionable whether any one of them was a direct ancestor of *Homo sapiens* (modern or **Neanthropic Man**), the species to which all present races of men belong

Alleged early occurrences of individuals of this Neanthropic type (e g Foxhall, Galley Hill, Olmo, and Castenedolo Man) are not accepted as valid by most anthropologists, but beginning with Upper Palaeolithic times, contemporary with the Laufen oscillation and the Wurm II glacial maximum—in other words with the Aurignacian, Solutrean, and Magdalenian periods of Europe—representatives of modern man appear on the scene. Some of these, such as the men of **Cro-Magnon, Combe-Capelle, Chancelade**, and **Grimaldi** in France, are generally long-headed (*dolichocephalic*) and on the whole like present-day long-headed peoples of the White or European group, though some of the Grimaldi skeletons have been claimed to show slight Negroid characteristics. Others, like **Boskop Man**, of South Africa, are more definitely related to present Negroid types Still others, such as **Wadjak Man** (Java) and **Talgai Man** (Queensland), show relationships to the present Australian natives (Australoid type) Remains of a few round-headed (*brachycephalic*) individuals of the White group, apparently dating near the very close of the Palaeolithic, have been found in Europe—at Solutré, for example No remains of Palaeolithic men of Mongoloid type have yet been reported.

C. THE POST-PALAEOLITHIC PERIOD

1. NATURE AND SEQUENCE OF POST-PALAEOLITHIC CULTURES

In the absence of exact dates, archaeologists have divided the time from the end of the Palaeolithic to the present into the following major periods: Mesolithic period, Neolithic period, Chalcolithic period, Bronze Age, Iron Age, and Modern Age. As has been previously pointed out, this nomenclature has many disadvantages, since the names refer really to cultural stages rather than to periods of time. The words were first employed in the description of cultures as observed in Europe and the order of succession is not always the same for other continents. Furthermore, it is impossible to assign even estimated dates to these so-called periods, for each one began and ended at a different time in different parts of the world. On the whole, however, this chronological division does represent the general progress of culture, in the Old World at least, and although it often leads to confusion, unless applied with the greatest care, still it has the advantage of convenience and almost universal usage. The dividing line between prehistory and history comes at no particular place in this series, but varies in different areas. Following is a brief definition of the different periods, after which the Post-Palaeolithic cultures of the world will be described by geographical areas.

a. MESOLITHIC PERIOD

The disappearance of the last ice-sheet, which marked the end of the Pleistocene period and, with it, the end of the Palaeolithic, led to the rise of a new culture, generally referred to as the Mesolithic, in which the Palaeolithic economy of food-gathering, though basically unchanged, was partly modified in some parts of the world under the influence of new climatic conditions. The big animals of the Pleistocene, on which the Palaeolithic hunters had largely depended for their food, disappeared everywhere except in parts of Africa, and their place was taken by the present-day fauna. Also with the ice retreat new regions were opened to settlement. The stone implements of the Mesolithic cultures were still produced by chipping, but a preference was shown for extremely small forms (*microliths*), often of geometric shapes. Some of these forms had a wide distribution in Asia, Africa, and Europe, showing that there were certain cultural relations and also actual movements of peoples—the latter probably connected to some extent with the drying up of the Sahara and Central Asiatic regions. The Mesolithic period is usually considered to have begun (in northern Europe at least) circa 8000 B.C., and Mesolithic cultures lasted for several thousand years until supplanted (at different dates in different areas) by the food-producing economy of the Neolithic peoples.

b. NEOLITHIC PERIOD

The next stage of development, the Neolithic, is marked by the invention and almost universal adoption of four important new features: **agriculture, domesticated animals, pottery,** and **polished** (instead of chipped) **stone tools.** These changes and the results which flowed from them were revolutionary. Man ceased being a nomad, eternally following his food supply, and became a sedentary being, residing and growing his food in one spot. He now had an assured food supply to carry over lean seasons and this led to a great increase in the population, in most of the formerly inhabited areas, and the opening to settlement of new areas, such as loess lands of Asia and Europe. The altered conditions likewise made possible the accumulation of possessions, the creation and satisfaction of new needs, the leisure for invention and speculation, the growth of large communities and cities, the development of more complex social organization, and in fact all the progress that has taken place since that time.

The four new culture traits which characterize the Neolithic were not necessarily originated at the same time and in the same place, and there is some evidence to indicate that there may have been an early stage, with primitive hoe agriculture and the pig as a domestic animal, before the advent of the Full Neolithic, with oxen, sheep, and plow agriculture. However, there is good reason to believe that Neolithic culture as

a whole was developed in one general center and spread from there in successive waves to the ends of Asia, Africa, and Europe, but not, in any significant sense, to the New World This original center was probably western Asia, for the wild relatives of the cereals and animals that were first domesticated have their home there, and it was the region in which the higher culture or civilization which the Neolithic discoveries made possible was first developed The earliest remains of Neolithic culture which have yet been found are in Mesopotamia, Syria, Palestine, and Egypt They represent a fully developed stage of the culture, with wheat and barley in cultivation and cattle, sheep, goats, and pigs as domesticated animals. The date of these remains is considered to be about 4000 B C—a period immediately prior to the first use of copper

Neolithic remains of a much more primitive character have been found in other parts of the Old World, but they are all apparently later than this in date The first traces of the Neolithic that have been found in Europe are apparently not older than 3000 or 2500 B C, and Neolithic culture did not begin in many parts of Asia and Africa until much later still.

c. CHALCOLITHIC PERIOD

In a strict sense this is not a true period at all The word *Chalcolithic* is a term conveniently but loosely used to describe a culture which is still essentially Neolithic in character, but in which the metal **copper** is just beginning to be used, without, however, replacing stone as the principal material for implements Chalcolithic cultures are thus transitional People in many areas of the world did not pass through this intermediate stage, but obtained their first knowledge of copper directly from other peoples who had already fully developed the art of copper metallurgy The dates of Chalcolithic cultures differ everywhere, depending upon the time which it took for the knowledge of metal-working to spread The earliest cultures in which copper has been found are in the Near East, and their estimated date is somewhere between 4000 and 3500 B C Copper did not appear in Europe much before 2000 B C

d. BRONZE AGE

In most regions of the Old World (but not in all of them) there was a period in which copper or bronze came into general use as a material for tools and weapons, but iron was still practically unknown. This period is for convenience termed the **Bronze Age** (although strictly speaking the word *bronze* should refer only to true bronze, a mixed metal composed of copper, alloyed with a certain percentage of tin) The date and duration of the Bronze Age in different parts of the Old World vary greatly. As has already been stated, the earliest known use of copper was in the Near East—in Mesopotamia and Egypt—toward the middle of the 4th millennium B C Considerable evidence points to the mountainous ore-bearing regions of Asia Minor, Armenia, and Caucasia as the probable area in which copper metallurgy was first discovered and developed Copper was in widespread use in the Near East by 3000 B C and this may be considered a good rough date for the beginning of the Bronze Age in western Asia, although the general use of true bronze itself did not begin until six or seven centuries later.

The Bronze Age in Europe did not begin until 2000 B.C or later, and it was more retarded or entirely absent in parts of Asia, most of Africa, and all of Oceania. The first use of iron for implements brought the Bronze Age everywhere to a close

e. IRON AGE

The **Iron Age** is usually considered by archaeologists to be the period of some centuries immediately following the time when iron began to replace bronze as the principal material for implements and weapons In one sense, we are still living in the Iron Age, but the term is actually seldom used in connection with any specific culture which is later in date than the beginning of the Christian Era, except in referring to primitive peoples, living in remote regions Rare examples of early ornaments made of meteoric iron are known, and at least two cases of objects made of iron that was not meteoric (and hence may have been smelted) have been reported in Mesopotamia from levels dating before 2500 B C The first certain development of iron metallurgy on any scale, however, began in Asia Minor about the 14th century B C and in Europe in the Hallstatt region of Austria in the 11th or 10th century B C. Iron did not penetrate to large parts of Asia and Africa until many centuries later and did not form part of any culture in the New World until introduced from Europe in the 15th and 16th centuries A.D.

2. MODERN RACES OF MAN

Although the various physical types of modern man began to develop and differentiate in the Palaeolithic period, they assumed their present shape in Post-Palaeolithic times and such tentative conclusions as can be established regarding their major migrations, distribution, and mixture form an essential part of any reconstruction of later prehistoric times

Unfortunately the task is complicated by two factors first, that we are still largely in ignorance of the exact ways in which biological processes work to form new physical types, and, second, that all groups of mankind can interbreed and have interbred in varying combinations over an immensely long period of time Thus such things as pure racial types cannot truthfully be said to exist Rather one must consider that the population of the world is made up of an almost infinite number of physical types which grade imperceptibly into one another. For this reason attempted classifications of races differ widely and the lack of a standard nomenclature is the cause of much confusion

In spite of all these difficulties, most anthropologists believe that, on the whole, biological and historical considerations justify a division of modern man into three major groups—the **White** (or European) group, **Negroid** group, and **Mongoloid** group—and the establishment of certain sub-groups or races within each of these larger divisions Making use provisionally of such a classification, it is possible to trace in a general way the more important movements of peoples in the prehistoric and early historic periods.

THE WHITE GROUP. Representatives of this group have had a primary distribution over the western and northern portions of the Old World. In a series of migrations—some of them clearly known to us and some of them still only guessed at—the blond and slightly long-headed **Nordics** occupied the northern third of Europe; the round-headed **Alpines** took possession of a central zone stretching from Russia to France, and one branch of the dark, long-headed **Mediterraneans,** with their relatives, the Arabs, Berbers, etc., spread through southern Europe, northern Africa, and the Near East, while another, it is believed, thrust down into India and Indonesia and the easternmost islands of the Pacific Vaguely identified remnants of archaic White strains have been traced in various points in Siberia and Japan (Ainus) and are thought to be the basis of the Veddoid type (Ceylon and southern India) and the Australoid type (Australia) Other alleged races or sub-races, such as the prominent-nosed Armenoid, in the Near East, the blond but round-headed East Baltic type in northern Europe and the tall, round-headed Dinaric type of the Balkans, were apparently the result of local specialization and had a more limited distribution.

THE NEGROID GROUP without much question developed in the southern half of the Old World and its representatives stretched in an uninterrupted belt across Africa and southern Asia Today we find two fundamental Negroid types. the short-statured, somewhat round-headed Negrito (Pygmy) in Africa and in Southeastern Asia and Indonesia, and a second type, with normal stature and long head, occupying much the same areas, the True or Forest Negro branch living in central and western Africa and the Oceanic Negroes (Papuans and Melanesians) in the island world to the southeast of Asia

THE MONGOLOID GROUP quite evidently had its center in eastern central Asia, and from there its various representatives spread northeast to Siberia, east to China and Japan, southeast to Malaysia and Polynesia, and west in a long series of migrations through the Near East and Russia

Many special races or sub-races developed which may have been the result of crosses between these three major groups. Notable among these are the Australian (Archaic White and Negroid), Bushman-Hottentot (Mongoloid and Negrito), Dravidian (Mediterranean, Australoid, and Melanesian), and Indonesian, Malay, and Polynesian (which seem to be mixtures in varying proportions of Mediterranean and Mongoloid with some Negroid strains)

The American Indians do not form a single race, but consist of many types, most of them Mongoloid in their principal characteristics, but many of them, like the long-headed Eskimo and the tall, long-headed type of the eastern Woodlands, suggest the presence of other than Mongoloid strains in their makeup

3. REGIONAL DISTRIBUTION OF POST-PALAEOLITHIC CULTURES

a. ASIA

MESOPOTAMIA. Excavations at Warka, Ur, Kish, Tello, Fara, and other sites reveal the existence of a Late Neolithic and Chalcolithic culture in southern Mesopotamia during the 4th millennium B C It has been divided into four periods:

c. 4000 B.C. The Al Ubaid period began probably shortly before 4000 B C and was characterized by a simple agricultural economy and the use of painted pottery with geometric designs The **Uruk period,** which followed, saw the first development of monumental architecture, copper, seals, and pictographic writing

c. 3200-3000 B.C. The Jemdet Nasr period marked the culmination of the prehistoric culture and led up to the **Early Dynastic** (Sumerian) **period** and the beginning of recorded history A similar progress can be traced in northern Mesopotamia, though the lowest levels at Nineveh, Gawra, and Arpachiyah show a somewhat different culture, marked by the brilliant Tell Halaf pottery.

PALESTINE AND SYRIA. A Mesolithic culture, the **Natufian,** followed the end of the Upper Palaeolithic in Palestine and lasted until perhaps 5000 B C

c. 5000- It was succeeded later by the **Tahunian** and (at Jericho) by a so-called Neolithic culture, at first without pottery and later with pottery, but without polished stone implements.

c. 3000-2000. With the **Early Bronze Age** recorded history begins in this area, although our information for many centuries comes from Egyptian sources, supplemented by the results of excavations at Beisan, Megiddo, Jericho, etc An Early Bronze Age culture in Phoenicia has been revealed at Ras Shamra and Byblos, while Late Neolithic or Chalcolithic levels have been unearthed in northern Syria, at Sakje-Geuzi, Carchemish, Tell Judeideh, and Chagar Bazar.

ARABIA. Practically nothing is known of this area before the time of the historical Minaean and Sabaean kingdoms of southern Arabia in the 1st millennium B.C.

ASIA MINOR. A prehistoric culture, of Chalcolithic type, flourished in Asia Minor at the beginning of the 3d millennium B C, as shown by excavations at the famous site of Troy (Troy I, 3000–2400 B C., Troy II, 2400–2000 B C) and Alishar Huyuk (Chalcolithic Age, 3000–2800 B C, Copper Age, 2800–2300 B.C; Early Bronze Age, 2300 B C on). The historical period begins with the founding of the first Hittite kingdom about 1900 B.C.

ARMENIA AND TRANSCAUCASIA. Almost nothing is known of this region before the 1st millennium B C A Chalcolithic culture has been discovered at Shamiramalti, on Lake Van, and there are dubious Neolithic and Bronze Age finds south of the Caucasus During the Early Iron Age, however, Georgia and Russian Armenia were occupied by a people who buried their dead in megalithic graves and had an advanced metallurgy.

PERSIA AND RUSSIAN TURKESTAN. During the 4th millennium B C a highly developed Chalcolithic culture, comparable in some respects to that of Mesopotamia and characterized by fine painted pottery, flourished in many parts of this area, notably at Anau, Tepe Hissar, and Rayy in the north, at Tepe Giyan (Nihavand) in the west, and at Susa, Tepe Mussian, and Persepolis in the southwest This was followed by the Full Bronze Age in the 3d millennium B C In the latter part of the 2d millennium B.C a new people, who buried their dead in megalithic graves, appeared in the mountain region of western Persia and the ancestors of the Indo-European Medes and Persians probably entered Persia at about the same time.

INDIA. Scattered finds of microlithic implements and polished stone celts attest the probable existence of Mesolithic and Neolithic cultures in India, but practically nothing is known about them In the middle of the 3d millennium B C., the remarkable **Indus culture** flourished in the northwest. The excavations of Mohenjo-daro and Harappa reveal a civilization that rivaled that of Egypt and Mesopotamia. This was followed at a slightly later date by the so-called **Jhukar and Jhangar cultures** in the same region, but little that represents a real Bronze Age has been found outside

the Indus Valley. History begins for northern India shortly after the invasion of the Indo-Aryans toward the end of the 2d millennium B C , but no archaeological remains have been found there dating much before 500 B C The rest of India is largely a blank to us until a century or two before the Christian Era, although in central and southern India there are a great number of Iron Age cemeteries (with burials in cists, cairns, stone circles, urns, etc), some of which are prehistoric and others probably date to some time well within the Christian Era

SIBERIA AND MANCHURIA. This is a marginal area, which apparently retained a Mesolithic and later a Neolithic culture longer than other parts of the continent. The Bronze Age is represented in a few places, particularly the Minusinsk region of the Upper Yenisei Valley and the region from the western slopes of the Altai Mountains to the upper courses of the Ob and Irtish Rivers Iron was introduced late in most parts of Siberia and in the extreme north and east many of the tribes were living in a Neolithic stage of culture until the Russian explorations and colonization in the 17th century A D.

CENTRAL ASIA. Mesolithic and Neolithic cultures existed in Mongolia, but archaeologically we know little about them and practically nothing about Chinese Turkestan and Tibet before the opening centuries of the Christian Era Such information as we have about this area from Chinese records does not run much before the beginning of Han times (3d cent B C).

CHINA. Implements of Neolithic type but of uncertain date have been found in many parts of China The **Yang-shao culture,** characterized by the absence of metal and the presence of painted pottery suggesting that of western Asia, existed in Honan and neighboring provinces of northern China at about 2000 B C. This was succeeded by a culture characterized by black pottery (in lower levels at Cheng-tzu-yai and An-yang), which was followed in turn shortly after 1400 B C by the rich Bronze Age culture of the Shang Dynasty and the first written documents (as found at An-yang) In the western province of Kansu interesting but undated archaeological remains, with some suggestion of western influences, have been ascribed to the Neolithic and Bronze Ages

JAPAN AND KOREA. The **Jomonshiki culture** (Neolithic) flourished in the northern half of the Main Island of Japan (Earlier period, before 200 B C , Middle period, 200 B.C.–200 A D ; Later period, 200 A D –600 A D and even later) In the southern half of the Main Island and Kyushu there was a somewhat different Neolithic culture, represented by scattered finds dating before 200 B C. This was followed by the **Yayoi-shiki culture** (200 B C–200 A D), which was essentially Neolithic and had its nearest relationships with Korea, from which there were occasional imports of bronze implements Last of all was the **Yamato culture** (200 A D–600 A D), of Korean origin, which introduced iron implements and megalithic burials and which spread gradually through the whole of the Main Island

SOUTHEASTERN ASIA. A series of prehistoric cultures has been reported from Indo-China, especially from the Hoabinhian and Bacsonian areas in Tonkin The earliest are Mesolithic, with Palaeolithic survivals (Archaic period and Intermediate period of Hoabinhian and Keo-Phay period of Bacsonian), and possibly belong to the 3d millennium B C They were followed by certain Proto-Neolithic cultures (Latest period of Hoabinhian and Early and Late Bacsonian) The full Neolithic is represented by the **Somrong-Sen culture,** which spread through all parts of Indo-China in the 2d millennium B C. and lasted until the beginning of the Bronze Age, about 500 B C Cultures somewhat similar to those of Indo-China have been reported from Burma and the Malay Peninsula

b. EUROPE

In its broad outlines the prehistory of Europe from the close of the Palaeolithic Age is a record of (1) a series of profound climatic changes, producing modifications of culture and the settlement of new areas, (2) a series of cultural influences coming in from Asia and Africa, (3) a series of invasions of new peoples from Asia and Africa, and (4) the formation of new peoples and the development of new cultures as a result of the interaction of these major factors.

(1) *Climatic Changes and Time-Scale*

By counting and comparing the varves, or annual layers of gravel and clay laid down in post-glacial lakes in many parts of the Baltic area, archaeologists have been able tentatively to tell the year in which each layer was formed over a period covering the past 10,000 years The thickness of the varves and an analysis of the pollen contained in them and other deposits furnish a record of the progressive climatic

changes year by year and date with reasonable accuracy typical archaeological remains found in some clear relation to these deposits This gives a basic time-scale for northern Europe, which can be applied (in a general way and with modifications) to the rest of Europe, and can be checked, for the later periods, against tentative dates determined archaeologically on the basis of contacts with the historical cultures of Mesopotamia, Egypt, Greece, and Rome

Following is the sequence of climatic periods in the Baltic region

-8300 B.C. Sub-Arctic period. Contemporary with the Gotiglacial stage of the ice retreat and end of the Palaeolithic period Very cold and characterized by *Dryas* flora, dwarf birch, willow, and tundra and steppe types of animals

8300-6800. Pre-Boreal period. Contemporary with the Finiglacial stage of the ice retreat, the Yoldia Sea and first half of the Ancylus Lake phase of the Baltic and the beginning of the Mesolithic period. Less cold, and characterized by birch, pine, and willow trees and mixed tundra and forest types of animals.

6800-5600. Boreal period. Post-glacial and contemporary with the last half of the Ancylus Lake phase of the Baltic. Rise in sea-level Cool, dry "continental" climate, with birch and pine dominant, but alder and oak-mixed forest coming in and animals mostly of forest and lake type

5600-2500. Atlantic period. Contemporary with the transgression of the Litorina Sea in the Baltic Sea-level still high Warm and moist "oceanic" climate (the so-called *period of climatic optimum*), with alder and oak-mixed forest (oak, elm, and lime) dominant, and forest, lake, and sea types of animals.

2500-700. Sub-Boreal period. Land relatively stable with relation to the sea and the Baltic Sea largely landlocked as at present. Dry, warm climate

700- Sub-Atlantic period. Wet, cold climate

(2) *Cultural Changes and Periods*

The principal outside cultural influences which came into Europe at different times followed four main routes: (1) from western Asia through Russia to central and western Europe, (2) from Asia Minor through the Aegean to Greece and also through Thrace to central Europe; (3) from the Near East and the Aegean by sea to the western Mediterranean, and (4) from North Africa to Spain and western Europe. Thus the general direction of cultural movement was from south to north and from east to west, hence at any given moment in time the southern and eastern areas were apt to be enjoying a more advanced form of culture than were the more peripheral regions to the northwest. This is well illustrated by the course which developments took in each of the principal periods

c. 8000- In the Mesolithic period, lasting for several thousand years, the **Tardenoisian** culture, which was most closely related to cultures in Africa and Spain and which was characterized by microlithic implements, spread from the south over most of Europe At the same time, with the amelioration of the climate, there was a northward movement of peoples following the forests that gradually occupied the steppes and tundras of the North European plain and a forest culture was developed, characterized by the use of the chipped stone axe (Maglemosean and Ertebølle cultures).

c. 4000-3000. The Neolithic period had a similar gradual development. **Neolithic culture** appeared for the first time in Crete in the 4th millennium B C By 3000 B C some slight Neolithic influences had penetrated as far as western Europe from the east, via Russia, and from the south, via Spain The earliest full-fledged Neolithic culture in Europe proper appeared in the Danube area of central Europe in the 3d millennium B C, and spread from there to the Rhine Valley and throughout western Europe Somewhat later the Megalithic culture, characterized by dolmens, passage graves, cists, and other rough stone monuments, spread along the coastal regions of western Europe from Spain to the Baltic.

c. 3000- The **Bronze Age culture** began, for Europe, in the Aegean and Greece shortly after 3000 B C and copper axes appeared in Hungary a little before 2000 B C—in both cases due to Asiatic influence Other copper influences came into Europe by way of Spain about 2000 B C and diffused widely, apparently in association with the Bell Beaker culture At the same time there were further developments of the Megalithic culture throughout its area The Bronze Age for Europe as a whole is usually considered to cover the period from about 2000 to 1000 B C and is divided into three sub-periods: Early, Middle, and Late Bronze Age (or Bronze I, II, and III).

c. 1000- The **Iron Age** began not long after 1000 B.C. with the development of iron metallurgy in Austria and its spread through the rest of Europe The first part

of the Iron Age is usually referred to as the **Hallstatt period** (about 1000 B C. to 500 B.C), the second part of the **La Tène period** (500 B.C to 1 A.D)

(3) *Movements of Peoples*

It is still uncertain to what extent the spread of all the various cultures was due to trade and borrowing, and to what extent it involved wholesale movements of peoples The population of Europe in the early part of the Mesolithic period probably consisted largely of the descendants of the food-gathering Upper Palaeolithic peoples and was predominantly of the long-headed, White or European stock, sometimes called Atlanto-Mediterranean. Round-headed peoples began to crowd in early in Mesolithic and Neolithic times, from the east (as shown at the site of Offnet in Bavaria) and possibly from Africa (as shown in certain sites in Portugal and Spain) During the succeeding millennia the three fundamental modern European types became established in their respective areas the Mediterraneans in southern Europe, the Alpines in central and western Europe, and the Nordics in northern Europe During the latter part of the Bronze Age and especially in the Iron Age we have further witness to great movements of peoples in the spread of Indo-European languages over the larger part of Europe Greek-speaking and Illyrian-speaking peoples came down through the Balkans into Greece, and Italic-speaking peoples into Italy, Celtic-speaking peoples moved west through central and northern Europe as far as France and the British Isles, and were followed over much the same route by Teutonic-speaking and, for part of the way, by Slavic-speaking peoples We know that these groups were of mixed types, but we still have insufficient information about their physical characteristics

(4) *Regional Distribution of Cultures*

AEGEAN AREA AND GREECE. In Crete a Neolithic culture, related to that of Asia Minor, flourished for at least several centuries in the 4th millennium B.C This was followed by a high Bronze Age civilization (with its center at Knossos), which has been divided into three major periods: Early **Minoan,** 3000–2200 B C.; Middle Minoan, 2200–1600 B C.; and Late Minoan, 1600–1100 B C. Similar Bronze Age cultures have been reported from Melos and other islands of the Cyclades, namely· Early Cycladic, 2800–2200 B.C.; Middle Cycladic, 2200–1650 B.C.; and Late Cycladic, 1650–1300 B C On the mainland of Greece a third series of related cultures flourished in central Greece and the Peloponnesus Neolithic, shortly before 2800 B C , Early Helladic, 2800–2100 B C. Middle Helladic, 2100–1600 B C ; and Late Helladic, 1600–1100 B C In Thessaly were two Neolithic cultures, with northern affinities Thessalian I, before 2600 B C , and Thessalian II, 2600–2400 B C , followed by two of the Bronze Age cultures: Thessalian III, 2400–1800 B C ; and Thessalian IV, 1800–1200 B C. In Cyprus the Neolithic began before 3000 B C , after which developed a series of Bronze Age cultures During the latter half of the 2d millennium B C the so-called **Mycenaean culture** (Late Helladic), with its center in Mycenae in the Peloponnesus, spread throughout Greece and the whole Aegean area, with extensions to western Asia Minor, Cyprus, and Syria The Iron Age in Greece began about 1000 B C with the Geometric period, the close of which marked the beginning of history in this area

RUSSIA. A Mesolithic culture, related to Tardenoisian, developed in southern Russia before 3000 B C. and was followed by an Early Neolithic, resembling the Campignian A rich Late Neolithic and Bronze Age development, related in some details to that of northern Persia, had its center in the Kuban area in the 3d millennium B C From 2500 to 1500 B C the Late Neolithic and Bronze Age were represented by two distinct series Tripolye A and B, in the Ukraine, and the Red Ochre Graves, in the steppe region between the Volga and the Dnieper The most important later culture was that of the Scythians, beginning in the 6th century B C. In northern and central Russia a version of Mesolithic, with Baltic affinities, survived late and, with influences from the so-called Battle-Axe People, developed in the 2d millennium B C into the Fatyanovo culture of central Russia

CENTRAL EUROPE. In Mesolithic times the principal culture in this region was Tardenoisian, with Azilian influences in the extreme western part A full-fledged Neolithic, Danubian I, appeared in the Danubian area about 2700 B C., having come presumably from the east and south. It was succeeded by a second phase, Danubian II (2400–2200 B.C) Contemporary Neolithic cultures, characterized by painted pottery, have been found at Erosd, Cucuteni, and other places in the Balkans. In the next few centuries there was a further development of the Danubian, with influences from the Corded Ware of Poland and Russia and the Bell Beaker culture

This extended into the Alpine region (Swiss Lake Dwellings), eastern Germany, and the Rhine Valley. With the Bronze Age (about 2000–1000 B C. or later) there were distinctive local developments in Hungary, Bohemia, Austria, Switzerland, and other subareas and several important cultures with wider distribution, of which the principal ones were the Aunjetitz, Knoviz, Tumulus, Urnfield, and Lausitz The Iron Age began here shortly after 1000 B.C., with the development of the **Hallstatt culture**, followed by the La Tène, which continued to Roman times.

ITALY. Until late prehistoric times Italy was divided into two rather distinct provinces In southern Italy and Sicily the Tardenoisian persisted until the introduction of the Neolithic in the 3d millennium B.C. This in turn gave way to Chalcolithic in Sicily (Siculan I, 2000–1500 B C), with a similar development on the mainland, and a Bronze Age culture in Sicily (Siculan II, 1500–1000 B.C.), also with connections on the mainland. The relations of these were with the Aegean area and the Balkans. They were followed by Siculan III and the Punic Early Iron Age. In northern Italy there were traces of Tardenoisian, then a Neolithic culture, succeeded by Bell Beaker influences and a Chalcolithic culture (Remedello and Italian Lake Dwellers). The Full Bronze Age in this area began about 1600 B C , and a century or two later the **Terramare culture** appeared in the Po Valley and spread as far as southern Italy This was followed in the Iron Age by the **Villanova culture** (1000–600 B C) with Hallstatt affinities, and the settlement of the Etruscans (800–400 B C) in central Italy.

ISLANDS OF THE WESTERN MEDITERRANEAN. A remarkable Neolithic development, characterized by massive stone temples and underground structures, took place in Malta In Sardinia there was a distinctive Chalcolithic culture (Anghelu Ruju) shortly after 2000 B C , followed by various phases of Megalithic (Giants' Tombs, dolmens, and Nuraghis), much of which dates to the early half of the 1st millennium B C. There was a related Bronze Age culture, with stone constructions (Navetas and Talayots) in the Balearic Islands.

SPAIN. There were several cultures in the Iberian peninsula in the Mesolithic period. Final Capsian in the south and center, Tardenoisian and Azilian in the north and two special developments, the Portuguese Kitchen Middens in the west and the Asturian culture in the northwest. Some of these lasted well into the 3d millennium B.C. and were succeeded by various Neolithic cultures of which the most important developments were in the southeast (Almerian culture) and in Portugal and Galicia (Megalithic). The **Bell Beaker culture** (about 2000 B.C) ushered in the Bronze Age, which was marked by a continuation of the Megalithic and, in the southeast, by the development of the **El Argar culture** (middle of 2d millennium B C.) in southeastern Spain In the early part of the 1st millennium B C. there was a local Iron Age culture, with Hallstatt affinities, which lasted until the time of the first Punic and Greek colonies (about 500 B C.).

WESTERN EUROPE. Two cultures, the Tardenoisian and the Azilian, were dominant in western Europe during the Early Mesolithic period, with the Asturian (late Mesolithic) partially represented in southern France and the Maglemosean (Early Mesolithic) in northern France and Belgium Neolithic influences were late in arriving, but by the middle of the 3d millennium B.C there was a Neolithic culture, of Mediterranean origin, in the south, and the Campignian and Omalian cultures, of central European origin, in the north. The Bell Beaker culture appeared here shortly after 2000 B.C., while the Megalithic culture spread through the coastal region (especially in Brittany), and influences from central Europe and the Rhine contributed to the development of the Bronze Age in France. Well along in the 1st millennium B C this gave way to a western version of the Hallstatt culture, which was followed, as elsewhere in Europe, by the La Tène.

The **British Isles** had a somewhat similar but still more retarded development. In the Mesolithic period a survival of the Upper Palaeolithic Creswellian culture was modified in certain areas by the introduction of Azilian influences into southwestern Scotland, Maglemosean in southern and eastern England, and Tardenoisian more or less generally About 2500 B C. or a little later, Neolithic features first appeared, in connection with the Windmill Hill culture and the Long Barrows. Bronze came into England some time after 2000 B C. (Beaker culture, Long Barrows, and Round Barrows) About 1000 B C. new bronze-using peoples from the continent invaded England, bringing some iron with them The true Iron Age began about 400 B.C. with an invasion of continental peoples enjoying a predominantly Hallstatt culture (Iron Age A) They were followed, in the 1st century B.C , by La Tène peoples (Iron Age B), the Belgae (Iron Age C), and the Romans Modified forms of some of these cultures

reached Scotland and Ireland but at considerably later dates

BALTIC REGION. In the early part of the Mesolithic, which corresponds to the Pre-Boreal period (8300–6800 B C), Tanged-point cultures (Remouchamps, Ahrensburg-Lavenstadt, and Swiderian) occupied the North European plain from Belgium to Poland, with outliers in northern and western Norway (Komsa and Fosna cultures), but there were traces of an early Tardenoisian and the beginning of the new forest or axe cultures (Lyngby). In the Boreal period (6800–5600 B C), a Mesolithic axe culture, the Maglemosean, with many local variants, spread widely over the whole area from Yorkshire to Estonia The Komsa and Fosna cultures continued in Norway, and Tardenoisian developed further at various points on the North German plain In the Atlantic period (5600–2500 B C) the Ertebølle culture developed out of the Maglemosean, while the Komsa, Fosna, Tardenoisian, and a late version of Maglemosean survived in marginal areas. The beginning of the Neolithic period is synchronous with the beginning of the Sub-Boreal phase, circa 2500 B C At about 2000 B C. the Early Neolithic elements, of eastern origin, were profoundly modified by the introduction of the Megalithic civilization, which had spread along the Atlantic seaboard Several distinct but contemporary cultures developed, viz Megalithic (in three phases, characterized respectively by dolmens, passage graves, and stone cists), Battle-Axe, Separate Graves, Arctic, and Dwelling-Place cultures In 1500 B C. or thereabouts the Scandinavian Bronze Age began, which was followed later by the Iron Age.

c. AFRICA

EGYPT. The Mesolithic period witnessed the final stages of the Sebilian culture The Neolithic period began early in the Nile Valley (probably before 4000 B.C) and is represented by the Fayum, Merimdean, Tasian, and Badarian cultures. During the 4th millennium B C., under combined African and Asiatic influences, the important **Predynastic culture** developed (Amratian, Gerzean, and Semainian phases), and ended about 3000 B C with the establishment of the First Dynasty and the beginning of the historical period.

NORTHWESTERN AFRICA. Mesolithic cultures (final stages of Capsian and Oranian) were, at dates as yet undetermined, modified and transformed by the infiltration of Neolithic influences, which spread gradually through Tunisia, Algeria, and Morocco and south across the Sahara. Bronze was late in reaching most parts of this area, and generally stone did not give way to metal until the Punic Iron Age in the 1st millennium B C

EAST AFRICA. Following the close of the Upper Palaeolithic period in this area two Microlithic cultures developed (Wilton A and B) and another culture (Elmenteitan), but the dates of all three may be somewhat late as pottery was already present in Elmenteitan The succeeding cultures (Gumban A and B, Njoroan, Wilton C, and Tumbian) were clearly Early Neolithic in character but not necessarily in date There was apparently no true Bronze Age in this part of Africa and iron gradually replaced stone during the Christian Era

SOUTH AFRICA. In what is termed the Later Stone Age of this area, two Mesolithic cultures, Wilton and Smithfield, spread through the greater part of South Africa, beginning at some time after the close of the Pleistocene and continuing with modifications until the Bantu invasions brought iron to the region at a comparatively recent date South Africa had no true Neolithic period or Bronze Age, although some traces of agriculture and occasional polished stone implements have been found

CENTRAL AND WEST AFRICA. This also was a marginal region Mesolithic implements have been found in parts of the Sudan The Tumbian culture (Mesolithic) was represented in the Congo Basin and persisted after the introduction of polished stone Various other Neolithic cultures of more fully developed form but uncertain date have been reported from the Sudan and Nigeria. A true Bronze Age is not found here, and iron was late in arriving, but during the Christian Era iron metallurgy received a special development, notably in Benin

d. OCEANIA

The prehistory of this area is still very obscure, but it is believed that it was peopled by a series of migrations from southeastern Asia Certain groups of people occupied first the nearer islands (Indonesia), then New Guinea, Australia, and Melanesia and finally the far islands of the Pacific (Micronesia and Polynesia). The Negritos (pygmies), remnants of whom are now found in remote inland districts of New Guinea and the Philippines, were perhaps the first to enter this region. They were either followed or preceded by some of the ancestors of the Australians and the now-extinct Tasmanians At a later but

undetermined date the Papuans pushed out and occupied New Guinea and they were followed by the Melanesians, who settled largely in the islands to the east of New Guinea Lastly, the Malays and the Polynesians entered the area, the Polynesians apparently for the most part passing by the already occupied regions and pressing east across the Pacific to Micronesia and Polynesia

It is debatable whether the Polynesians had already assumed their present racial type before the great migrations began or whether the different groups of peoples (Mongoloid, White, Negroid, etc) which seem to form their ancestry moved east at different times and by different routes and interbred after their arrival in the islands In any case the date of these movements was comparatively recent Navigation received its real development in this part of the world in the 1st millennium B C The first long voyages into Micronesia and Polynesia probably did not begin until the 4th century A D, and the farther islands were not settled until some centuries later.

The majority of the peoples who took part in the settlement of Oceania were in a Neolithic stage of culture, although the Australians and Negritos still practiced a Palaeolithic economy of hunting and food-gathering when the European colonization began

e. AMERICA

North and South America were peopled from Asia, at a relatively recent date The immigrants apparently came from Siberia, across Bering Strait to Alaska Many of them probably followed a route which led up the Yukon Valley, over the divide into the Mackenzie River Basin and down the eastern foothills of the Rockies to Central and South America. Theories that some groups of people may have come from a more southern part of Asia or Oceania directly across the Pacific, bringing elements of a high culture with them, are based on very unsatisfactory evidence and are generally considered to be unproved.

There is difference of opinion on the date when the first immigrants reached America The majority of American archaeologists have held that this was some time after the close of the last glaciation. Suggestions of Palaeolithic types have been found among the stone implements in various regions, but no complete industry that is closely related to any Palaeolithic industry of the Old World has yet been reported, and no skeletal remains have been found which are appreciably outside the range of modern American Indians However, recent excavations from California to Texas and as far north as Colorado (Mojave Desert, Lake Cochise, Clovis, Silver Lake, and the Lindenmeier site) have brought to light implements (Folsom point, Yuma point, Abilene flints, etc) found in deposits which were laid down at a time when the climate was considerably colder and wetter than it is today In some cases the implements were discovered in association with the bones of mammoth, camel, ground sloth, and other extinct animals Accordingly there is a growing tendency to consider that man may have made his appearance in America soon after the close of the last (Wisconsin) glaciation, if not actually in the Glacial Age itself

Studies of the physical characteristics of **American Indians** show these to be predominantly Mongoloid, but also reveal the presence, in mixture, of other types, some of which are European or even Negroid in their suggestions, while there seems to be in both continents a marginal distribution of a long-headed stock which may represent the descendants of a group of very early arrivals.

At the time of the first European contact with America in the 16th and 17th centuries A D., some Indians were still hunters and food-gatherers, like their Palaeolithic ancestors, but the great majority were in a Neolithic stage of culture The fact that they had no cereals that were cultivated in the Old World and no Old World domestic animals except the dog has led to the general opinion that agriculture and the domestication of animals were in this case independent developments after arrival in the New World Certain polished stone tools, however, and even certain types of pottery show relationship to forms found in northeastern Asia So two of the four main elements of Neolithic culture may show some evidence of a continuation of Asiatic tradition In a few cases American Indian groups passed beyond the Neolithic stage, as is indicated by the use of metal

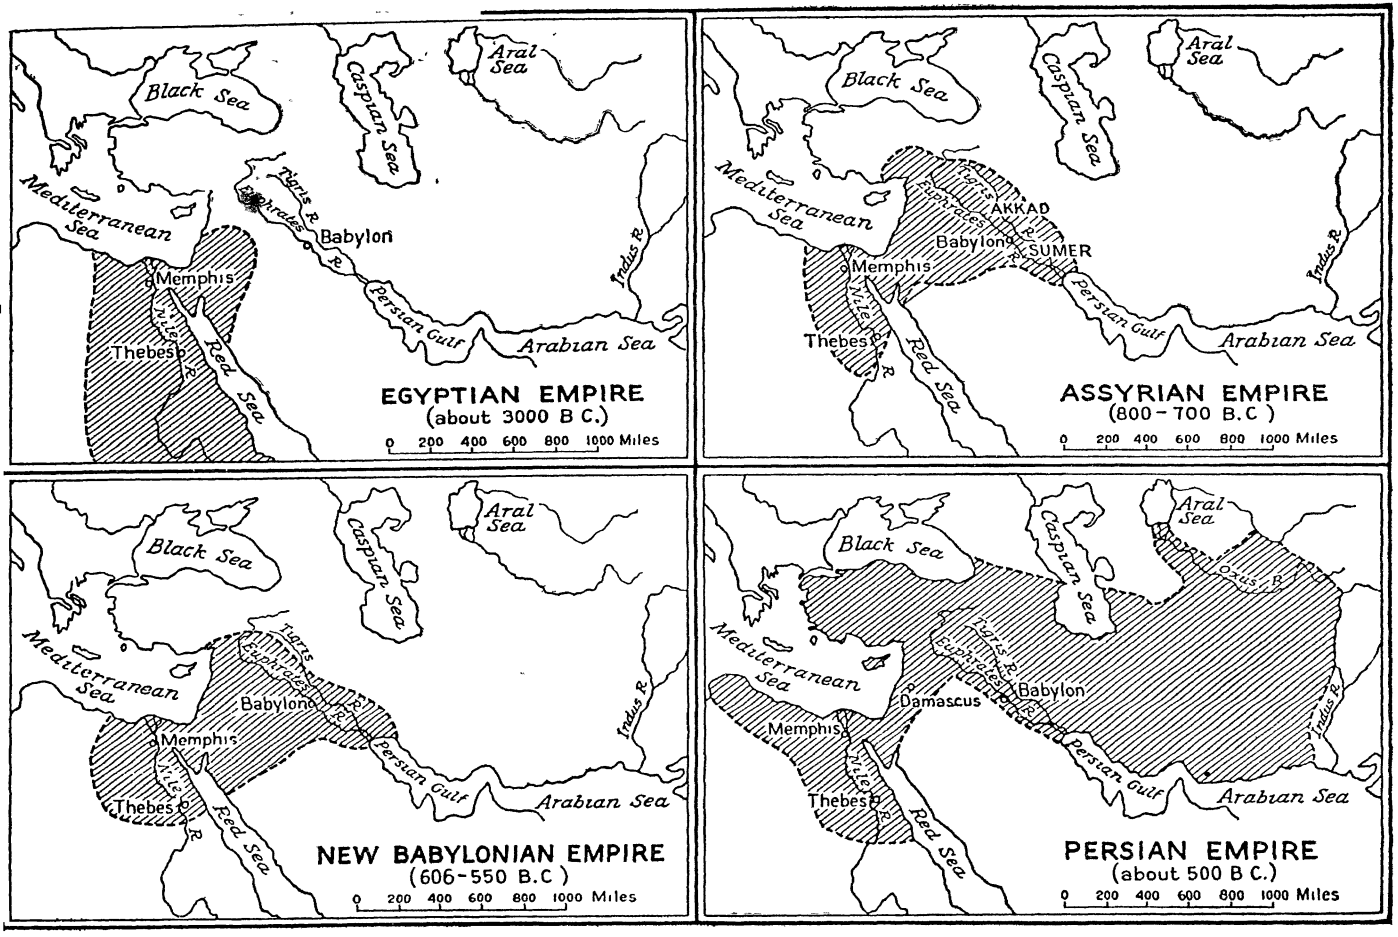
The first advanced culture in the western hemisphere is believed to have had its origin about two thousand years ago in the Andean region of South America and in the highland region of Central America and Mexico Here grew up a high civilization, parallel in many striking ways to that of the Old World but probably entirely independent of it The cultivation of Indian corn (*Zea mais*) was the basis of the new economy. Rich textiles, fine pottery, and magnificent ornaments of gold, silver, and copper were produced Great city centers arose, with canals and gardens and monu-

mental temples on lofty pyramids A highly complex social organization was developed, with priest-emperors, standing armies, schools, courts, and systematized religions Intellectual progress was marked by astronomical research, the invention of accurate calendars, and—in Yucatan and Mexico—an elaborate hieroglyphic writing

In the Peruvian area the early Nasca and Chimu cultures were followed by Tiahuanacan and, in immediately pre-Columbian times, by the **Inca civilization.** Influences spread from this center across the Andes into the Amazon Basin and down the Andes to the Argentine region Farther north, the Chibchan and Chorotegan cultures occupied the intervening area between Peru and Yucatan, where the **Maya civilization,** the climax of native American achievement, developed during the 1st millennium B C. and reached its culmination shortly before the Spanish Conquest. Similarly, in the Valley of Mexico the Archaic and Toltec cultures culminated in the **Aztec civilization,** discovered by the Spaniards. The effect of these powerful centers of influence must have been felt in lessening degree throughout much of North America, especially in the advanced cultures of the Pueblo area of the southwest, the southeast, and the Mound Builder area in the Mississippi drainage. Simpler cultures occupied the Woodlands area of the northeastern United States and Canada and the Central Plains California was a marginal region, occupied largely by food-gatherers of a low stage of culture, while the Indians of the Northwest coast and the Eskimos of Alaska and northern Canada had, each in their own way, developed highly specialized cultures, which suggest to some extent Asiatic relationships.

II. ANCIENT HISTORY

A. EARLY EMPIRES OF AFRICA AND ASIA



1. EGYPT

GEOGRAPHY. Egypt (in ancient Egyptian: *Kemet, the black [land]*) is the valley of the Nile, from the Delta to the first cataract at Assuan. The valley, extending for about 550 miles, has an average width, south of the Delta, of 12 miles, and comprises only about 13,000 square miles of cultivable ground (less than the area of Switzerland) Before Menes, the Delta (Lower Egypt) and the valley (Upper Egypt) formed two distinct kingdoms The principal cities of Lower Egypt were: Tanis, Bubastis (i e. *house of Bast*), Busiris (*house of Osiris*), Sais, On (Greek: *Heliopolis*), and Memphis (near Cairo). Those of Upper Egypt, south of the Fayum (with Lake Moeris), were Heracleopolis, Siut, Abydos, Thebes, Jeb (Greek: *Elephantine*), Philae. Egypt was divided into 42 provinces (*nomes*), 20 in Lower Egypt and 22 in Upper Egypt Egypt was "the gift of the Nile" (Herodotus) its fertility depended on the overflow of the river (June–October) which has deposited, in the course of centuries, 30 to 40 feet of rich black soil in the valley, laborious irrigation was, however, indispensable

POPULATION. The estimates of the population given by Diodorus (7,000,000) and by Josephus (7,500,000) are slightly exaggerated Racially the Egyptians are a mixture of several stocks and are ascribed to the Mediterranean race, their anthropological characters have hardly changed to the present day. Ancient Egyptian is related to the Semitic and to the Berber languages; in a lesser degree to the Galla and Somali dialects.

CIVILIZATION. The basic economic, social, and political institutions of ancient Egypt were developed in the pre-dynastic period: agriculture was, and remained, the foundation of the economic life. A calendar with a solar year of 365 days, according to Edw. Meyer and others, was introduced in 4241 (more probably in 2781). The writing went through pictographic, symbolic, syllabic, and alphabetic stages before Dynasty IV, but retained them all to Roman times; it had a monumental (**hieroglyphic**) and a cursive (**hieratic**) form from earliest times; a simpler cursive, called **demotic**, was introduced in the 7th century During the **Old Kingdom** the Pharaoh (*Per-o*, "Great House") was deified in life and in death, and exercised despotic authority, ruling through an elaborate, carefully trained bureaucracy; architects erected colossal pyramids and magnificent columned palaces and temples, sculptors and painters portrayed gods, humans, and animals with admirable realism and grace; literature began to flourish, some rudimentary sciences were cultivated for practical purposes, industrial crafts reached a high degree of perfection. This culture of the Old Kingdom remained the ideal of later epochs

RELIGION. In the earliest period each town had its own deity **Ptah** was worshiped at Memphis, **Atum** at Heliopolis, **Horus** at Edfu, **Amon** at Thebes, **Osiris** at Busiris, etc Most of the gods were conceived as animals. Ptah and Atum as bulls, the goddess Hathor of Dendera as a cow, the goddess Bast of Bubastis as a cat, Anubis as a jackal, Thoth as an ibis, Amon as a ram, etc **Horus** was the god of the kings of Lower Egypt, **Set** of those of Upper Egypt, but later Horus became the royal god of both kingdoms. Horus (the hawk) was at first the god of heaven, then of the sun, however, the solar religion that ultimately prevailed in Egypt originated at Heliopolis, where the priests of Atum-Re developed the first theological system of Egypt and made of the worship of **Re** (whose symbols are obelisks) the state religion (Dynasty V). Re was accordingly identified with many local gods, particularly with Amon. In the pyramid texts (Dynasties V and VI) the deceased king sails over the sky in the ship of Re Another conception of life after death in the same texts is connected with the myth of Osiris, who was killed by his brother Set, but was restored to life by his son Horus or, in later versions, by his wife Isis, and became at first the king of the underworld, and later the judge of the deceased (see the *Book of the Dead*) Corpses were embalmed (mummies) and buried under pyramids or in rock-hewn chambers.

CHRONOLOGY. Manetho, an Egyptian priest (c 280 B C), wrote a history of his country in Greek, of which fragments have been preserved by Josephus, Julius Africanus, and Eusebius. He grouped the kings of Egypt from Menes to Artaxerxes III (343 B.C.) into 30 dynasties Although his chronology is far from accurate, his dynastic arrangement is still used. The most valuable ancient sources are the **Palermo stone** (a chronicle written in the 5th Dynasty) and the **Turin papyrus** (a list of kings, arranged by dynasties, dating from the 19th Dynasty it reckons 955 years for the first 8 dynasties and 213 for the 12th). Extant data furnish a fairly accurate chronology, based on "dead reckoning" and astronomical data, for the period after 2000 B.C.; all earlier dates, anywhere, are uncertain.

c. 2900-2700. Dynasties I-II (capital: Thinis) The two kingdoms of Upper and Lower Egypt were united under the rule of **Menes** and his successors.

2700-2200. THE OLD KINGDOM: Dynasties III–VI (capital: Memphis). **Zoser,** the founder of Dynasty III (2700–2650), built the step pyramid of Sakkara. **Snefru** (Dynasty IV, 2650–2500) built the pyramid of Medum and developed navigation; his three successors, **Cheops, Chephren,** and **Mycerinus,** erected the three colossal pyramids at Gizeh. The first pyramid texts appear under Unis, the last king of Dynasty V (2500–2350), and continue under Dynasty VI (2350–2200); Egyptian art reached its culmination during Dynasty V

2200-2100. Dynasties VII-X. The dissolution of the power of the Pharaohs allowed the nomes to become autonomous

2100-1788. THE MIDDLE KINGDOM: Dynasties XI (2100–2000), with the capital at Thebes, and XII (2000–1788), with the capital at Lisht (near Memphis) or (with Amenemhet III) in the Fayum Dynasty XII marks the classical age of Egyptian literature, which was no longer purely religious (fiction begins with the story of Sinuhet); architecture and the plastic arts flourished as well **Amenemhet I** (2000–1970) curbed the power of the provincial barons and began the wars of conquest continued by Sesostris I (1980–1935), Amenemhet II (1938–1903), Sesostris II (1906–1887), Sesostris III (1887–1849), the latter conquered Nubia and made a campaign in Palestine. Amenemhet III (1849–1801) reorganized the mining operations in Sinai, carried out hydraulic works in the Fayum (Lake Moeris) and built there the great group of palaces known as the *Labyrinth.*

1788-1580. A period of usurpation (Dynasty XIII; capital: Thebes), of shadowy vassal rulers (Dynasty XIV; capital: Xois), and of foreign domination (Dynasties XV–XVI [Hyksos], 1680–1580; capital: Avaris in the Delta). The **Hyksos** (*Rulers of Countries*) were a mixed horde consisting chiefly of Semites and Hurrians from Palestine, Syria, and farther north; they introduced the horse into Egypt Objects inscribed with the name of the Hyksos king Chian have been found in Crete, Palestine, and Babylonia Dynasty XVII (1600–1580) began the war against the Hyksos.

1580-1090. THE EMPIRE (New Kingdom).

1580-1350. Dynasty XVIII (Capital: Thebes). **Amosis** (1580–1557) drove out the Hyksos, reconquered northern Nubia, and put an end to the authority of the local nobles. Amenophis I (1557–1536) and Thutmosis I (*Thothmes*) (1536–1520) fought in Palestine and Syria, reaching the Euphrates. The real ruler, from 1520 to her death in 1480, was **Hatshepsut,** the half-sister and the wife first of Thutmosis II, then of Thutmosis III. The great **Thutmosis III** (1501–1447) in 19 years (17 campaigns) conquered Palestine (through the victory at Megiddo in 1479), Phoenicia, and Syria (Kadesh on the Orontes was taken in 1471), to the 36th parallel; although he reached Carchemish, this city and Aleppo remained under the rule of Mitanni Obelisks of his stand in Istanbul, Rome, London, and New York **Amenophis III** (1411–1375) preserved the integrity of the Asiatic Empire through diplomacy; the *Tell-el-Amarna letters,* written in Assyrian on cuneiform tablets, preserve much of the international correspondence during his and his son's reign. His rule marks a time of great prosperity and cultural refinement. **Amenophis IV** (Ikhnaton) (1375–1358) envisioned a single god of the whole world, Aton (the sun disk and its life-giving rays), but his religious reformation, owing to the opposition of the priests of Amon-Re at Thebes, did not survive him Meanwhile, with few exceptions, the cities of Palestine, Phoenicia, and Syria, through internal disaffection and outside pressure (Hittites and Amorites in the north, Habiru-Hebrews in the east), were slipping away from Egyp-

tian control Ikhnaton built a new capital at Tell-el-Amarna, where a new style in painting and sculpture made its appearance. He was followed on the throne by two sons-in-law· the second was **Tutankhamen,** whose richly furnished unviolated tomb was discovered by Carnarvon and Carter in 1922.

1350-1200. Dynasty XIX (capital Thebes). **Haremhab** (1350–1315) was a general, but devoted himself chiefly to internal reorganization. Seti (Sethos) I (1313–1292) and **Ramses II** (1292–1225) fought against the Hittites for the restoration of Egypt's Asiatic empire The war ended with a treaty of peace and alliance between Ramses II and Hattushilish (1271); only southern Palestine, however, was incorporated into the Egyptian Empire During the remaining 46 years of his reign Ramses built prodigiously from the Delta (Pithom and Raamses; Ex. 1 . 11) to Abu Simbel in Nubia. **Merneptah** (1225–1215) (under whom, probably, Moses led the Israelites out of Egypt) quelled a rebellion of Palestine (1223) and repelled the combined attack on Egypt of the Libyans and of the *Peoples of the Sea* (Sardinians, Sicilians, Achaeans, Lycians) (1221). The movement of these Aegean peoples is connected with the Homeric war against Troy and brought about the end of the Hittite Kingdom

1200-1090. Dynasty XX (capital: Thebes) **Ramses III** (1198–1167) defeated on land and water another wave of the *Peoples of the Sea,* now including also the Danaï, the Philistines, and others (1190), the Philistines (whose culture was Aegean) settled on the Palestinian coast and probably introduced iron there. Ramses' feeble successors (Ramses IV–XII, 1167–1090) were unable to check the growing power of the high priests of Amon. Egyptian authority in Asia became purely nominal (cf. the *Story of Wen-Amon*).

1090-945. Dynasty XXI. The high priests of Amon at Thebes (**Hrihor** and his line) and the nobles of Tanis (**Smendes** and his line) strove for the royal authority

945-712. Dynasties XXII-XXIV. Shoshenk (later Sheshonk; *Shishak* in 1 Kings 11 : 40; 14 : 25) (945–924), one of the Libyan chiefs who had for some time played a considerable rôle in the Delta, founded a Libyan dynasty (XXII, 945–745) with capital at Bubastis. The high-priestly family of Amon at Thebes founded the independent southern Nubian kingdom with capital at Napata (c. 850); Libyan princes became high priests of Amon at Thebes Anarchy and civil war prevailed during Dynasties XXIII (745–718) and XXIV (718–712).

712-663. Dynasty XXV (**Ethiopian**) founded by Shabaka, King of Napata, who conquered Egypt. After defeating Taharka (*Tirhakah,* 2 Kings 19 . 9) (688–663), Essarhaddon made of Egypt, as far as Thebes, an Assyrian province (671), but Ashurbanipal was forced to undertake two more campaigns into Egypt (668 and 661), during the second of which Thebes was sacked.

663-525. Dynasty XXVI (capital Saïs) **Psamtik** (Psammetichus) (663–609), son of Necho, the governor of Saïs under Essarhaddon, was appointed governor of Sais and Memphis by Ashurbanipal (663), but, allying himself with Gyges, King of Lydia, he soon rebelled, and by 652 he was master of Egypt and inaugurated the **Saitic revival** not only in the applied arts but also in sculpture, painting, architecture, literature, and religion—a renaissance deliberately imitating the masterpieces of the Old and Middle Kingdoms. Greek mercenaries and merchants were encouraged to come to Egypt **Necho** (609–593), according to Herodotus, failed in his attempt to connect the Nile with the Red Sea by means of a canal, but Africa was successfully circumnavigated in three years by Phoenician sailors at his orders. He attempted to regain Egypt's lost Asiatic empire. he conquered Judea through his victory over Josiah at Megiddo (609), but he was ignominiously driven out of Asia after being completely routed at Carchemish (605) by **Nebuchadrezzar,** the crown prince of Babylon Necho's successors were likewise unsuccessful in their military campaigns: Psamtik II (593–588) in lower Nubia (Ethiopia), Apries (588–569) against Nebuchadrezzar at the siege of Jerusalem and against the Greeks of Cyrene. Amasis (569–525), while apparently curtailing the privileges of the Greek merchants, allowed them to make of Naukratis a purely Greek city and the most important commercial center of the kingdom.

525-404. Egypt under Persian rule after Cambyses defeated Psamtik III at Pelusium in 525 (Dynasty XXVII).

404-332. Dynasties XXVIII–XXX comprised ephemeral native rulers under whom Egypt was in some degree independent from the Persian kings

332-323. Egypt under **Alexander the Great.**

323-30. Egypt under the **Ptolemies.**

(*Cont p* 83.)

2. MESOPOTAMIA

GEOGRAPHY. The Mesopotamian plain (modern Iraq), extending for 600 miles from the southern slopes of the Armenian plateau, from which spring the Euphrates and the Tigris, to the Persian Gulf, which in antiquity reached the vicinity of Ur (60 miles north of the present shore), was divided into **Assyria** in the north and **Babylonia** in the south the line of demarcation was roughly the 34th parallel. The principal cities of Assyria (so named after its god and its oldest capital) were its four royal cities on or near the Tigris Ashshur, Calah, Nineveh, and Dur-Sharrukin (*Sargonburg*, now Khorsabad), also Arbela (Sumerian *Urbillum*, now *Erbil*, the oldest living city in the world) ✓The principal cities of northern Babylonia, or Akkad, were Babylon (*Bab-ili Gate of God*), Borsippa, Dilbat, Kish, Kuthah, Opis, Sippar, Akkad, those of southern Babylonia, or Sumer (Hebrew. *Shinar*), were Nippur, Adab, Lagash, Umma, Larsa, Erech (Uruk), Ur, Eridu Most of the cities of Babylonia were on or near the Euphrates

RACES. Little is known of the race of the earliest inhabitants of Babylonia, the few known skulls are not unlike those of modern Arabs. During the 4th millennium the Sumerians occupied the southern country (Sumer) and "Semitic" Akkadians the northern part The race and place of origin of the Sumerians are disputed, their language, which is agglutinative, has no close connections with any other linguistic group Other "Semites," the Amorites from northern Syria, entered Babylonia at the end of the 3d millennium and founded the Hammurabi dynasty. From the northeast, uncultured mountaineers invaded the country about 2270 (the Gutium) and 1600 (the Kassites). Finally the "Semitic" Arameans overran the countryside along the course of the Euphrates (beginning about 1190); one of their tribes, the Chaldeans, produced the dynasty of Nebuchadrezzar Although Assyrian is a dialect of Akkadian, the Assyrians were not Akkadians, but probably a mixture of Proto-Arameans and Hurrians It should always be kept in mind that the term "Semites" does not refer to a race but to a group of peoples speaking "Semitic" languages (Akkadian, Hebrew, Phoenician, Aramaic, Arabic, etc).

a. SUMER AND AKKAD

SUMERIAN CIVILIZATION AND RELIGION. Sumer was divided into city-states ruled by a "tenant farmer" (*ishak*) of the city-god These cities were in frequent conflict over border lines and water rights and fought for the hegemony of the country, which passed from one to the other. As a result of these wars the Sumerians were superior to the contemporary Egyptians in military equipment (they had a war chariot, drawn by donkeys, 1000 years before the Egyptians) and organization (the phalanx of Alexander is pictured on the *Stela of the Vultures* of Eannatum) Although agriculture was the chief industry, commerce with distant lands flourished the Sumerians were influential in establishing commercial and banking practices, standard weights and measures, forms of written contracts, etc , in western Asia and were the first to codify civil law in writing; prices and wages were sometimes fixed by law. Their sexagesimal system (soon combined with the decimal) still survives in the divisions of the day (24 hours, 60 minutes, 60 seconds) and of the circle (360 degrees) Out of pictographs they developed a **cuneiform writing** suitable for clay tablets Sumerian sculpture, even in the time of Gudea, was stiff and crude in comparison with that of the Old Kingdom in Egypt Sumerian buildings, with monotonous windowless walls of unbaked (or rarely baked) bricks, were ephemeral and purely practical Originally each city had its own god and goddess; eventually a pantheon was developed with the triad **Anu** (the sky), **Enlil** (the atmosphere and the earth), and **Ea** (the waters) at its head, Enlil, the god of Nippur, became the supreme god The temples usually had an irregular three-stepped pyramid (*ziggurat*) surmounted by a small shrine. Myths related the creation of the world, the deluge, the fruitless search for eternal life. Life after death was conceived as a shadowy existence in the subterranean *land of no return*, the *Hades* of Homer and the *Sheol* of the Old Testament

c. 2850-c. 2450. First dynasty of Ur (Mesanni-padda, A-anni-padda); "royal tombs" of Ur Mesilim, King of Kish. The **First Dynasty of Lagash** was founded by Ur-Nina (*Ur-Nanshe*) Eannatum defeated Umma (*Stela of the Vultures*) Urukagina instituted social reforms, but was defeated by Lugalzaggisi, King of Erech.

c. 2450-c. 2270. The Akkadian Empire. Sargon and Naram-Sin ruled over Akkad, Sumer, Elam, Assyria, and northern Syria The Sumerian culture was adopted and modified by the Akkadians, who made notable progress in sculpture.

c. 2270-c. 2145. The barbaric Gutium from the eastern hills conquered Babylonia and ruled it for 125 years Lagash, however, flourished under **Gudea** (c 2250), whose reign marked the classical period of Sumerian sculpture and literature. Utu-hegal, King of Erech, drove out the Gutium.

c. 2140-c. 2030. The Empire of Ur, under the Third Dynasty of Ur (Ur-Nammu [*Ur-Engur*], Dungi [*Shulgi*], Bur-Sin, Gimil-Sin, Ibi-Sin), extended from Ashshur and Arbela to the Persian Gulf, from Susa to the Lebanon Commerce thrived, as shown by the thousands of business contracts of the time

c. 2030-c. 1900. The Sumerians, under the mutually hostile dynasties of Isin and Larsa, declined and lost their national identity.

b. BABYLONIA

CIVILIZATION AND RELIGION. In all its manifestations, Babylonian culture represents a development of the Sumerian The foundations for Babylonia's great commercial expansion, for the elaborate government administration, for the admirable code of laws promulgated by Hammurabi, for the architectural and artistic works, for the literature and religion, were laid by the Sumerians, particularly during the time of the 3d Dynasty of Ur When Babylon became a great metropolis and the capital of an empire, its god **Marduk** acquired a new importance and, by being identified with Enlil and assuming his functions, such as the creation of the world, he became the supreme god of the pantheon and was later called **Bel,** *Lord,* a Semitic designation of Enlil The most characteristic and influential features of Babylonian religion, aside from its mythology, were the elaborate systems of magical practices (incantations) and the interpretation of omens (divination), particularly the movements and position of the heavenly bodies (astrology), the actions of animals, and the characteristics of the liver of sacrificial victims.

c. 1900-1600. The First Dynasty of Babylon (Amoritic). Its sixth king, the great **Hammurabi** (about 1800), defeated Rim-Sin of Larsa, conquered all of Mesopotamia, carried out extensive public works, and introduced an excellent administration and a code of laws unsurpassed before Roman times. After his death a dynasty arose in the Sea Land, on the Persian Gulf (c. 1740–1370)

1600-1150. After a Hittite raid, the Kassites conquered Babylonia and ruled it for 450 years. The horse became common in Egypt and western Asia after 1600. Diplomatic intrigues in 14th century (*Tell-el-Amarna letters*)

1146-1123. Nebuchadrezzar I defeated the Elamites but was routed by the Assyrians.

c. 1100-900. Invasion of Aramaic tribes into Babylonia.

900-625. The wars with Assyria were disastrous for Babylonia. In 729 **Tiglath-pileser III** of Assyria became King of Babylon (with the name of *Pul*), and from then to 625, except for occasional periods of open insurrection, Babylon remained a part of the Assyrian Empire

625-538. THE NEO-BABYLONIAN (CHALDEAN) EMPIRE.

625-605. Nabopolassar and his ally Cyaxares, King of Media, destroyed Nineveh (612) and divided between themselves the Assyrian Empire. Through the victory of Nebuchadrezzar over Pharaoh Necho at Carchemish (605), Judea became subject to Babylonia

605-561. Nebuchadrezzar took Jerusalem twice (597, 586), but failed to capture Tyre, which he besieged for 13 years (585–573) The buildings and city walls of Babylon, admired by Greek historians, were erected by Nebuchadrezzar.

555-538. Nabonidus (reigning in conjunction with Belshazzar) devoted his time to archaeological excavations and restorations of temples

538. Gobryas, a general of Cyrus, King of Persia, took Babylon

538-332. Babylonia under **Persian rule.**

332-323. Babylonia under **Alexander the Great.**

312-171. The dynasty of the **Seleucids** ruled Babylonia

171 B.C.-226 A.D. Babylonia under the **Parthians** (Arsacid Dynasty).

226-641 A.D. The Sassanian Dynasty.

c. ASSYRIA

CIVILIZATION AND RELIGION. Assyrian culture was deeply indebted to the Babylonian, to the Hittite, and to the Hurrian. Except for the Assyrian royal annals, which are historical sources of the greatest value and are inspired by Hittite models, for the most part Assyrian literature consisted in new editions of the ancient Babylonian works. **Ashurbanipal** took special pains to collect in his library copies of the ancient writings. In sculpture (particularly in the bas-reliefs depicting realistically religious scenes, hunts, and military operations) and in architecture (influenced by the Hittite styles) the Assyrians surpassed the Babylonians, as also in the fields

in which they made their greatest contributions, military equipment and imperial administration. Their fragmentary codes of law (c. 1350) are, however, decidedly inferior to the Code of Hammurabi, although the latter was not unknown among the Assyrians. In religion the Assyrians contributed only the worship of their national god, Ashur, and of Ishtar of Nineveh

c 2600-c. 2000. The city Ashshur, at first Sumerian in culture, became part of the Akkadian Empire, rebuilt after a destruction (probably by the Gutium), it was subject to the Third Dynasty of Ur

c. 1920-c. 1850. Under native rulers Assyrian merchants established a prosperous colony in Cappadocia

c. 1830-c. 1810. Assyria under **Babylonian rule.**

c. 1810. **Shamshi-Adad** made Assyria independent and extended its territory

c. 1600-1380. Assyria was hard pressed by the Hittites, the Egyptians (Thutmosis III), and the Hurrians of Mitanni.

1380-1341. **Ashur-uballit** restored the fortunes of Assyria

1341-1232. Through campaigns in all directions, Assyria consolidated its position

1232-1116. After a period of weakness due to the fall of the Hittite Kingdom (which seriously affected Assyrian trade) and a revival of Babylonian power, Assyria slowly recovered and began to work iron

1116-1093. **Tiglath-pileser I** through successful campaigns gained control of the main trade routes of western Asia.

1093-933. Hard pressed by Aramean nomads, Assyria was barely able to survive.

933-782. THE FIRST PHASE OF THE ASSYRIAN EMPIRE.

883-859. **Ashur-nasir-pal II** campaigned successfully in the northeast and in the northwest and reached the Mediterranean, where the Phoenician cities paid him tribute. He improved the provincial administration and the military equipment, particularly the battering-rams and the siege engines, adorned his palace at Calah with remarkable bas-reliefs, but was ruthless in war.

859-824. **Shalmaneser III** fought against the kingdom of Urartu (Van) and against Ben-Hadad of Damascus and his allies, including Ahab of Israel, at Qarqar (854), he conquered Carchemish (849), defeated Hazael of Damascus without taking his capital (841), received the tribute of Tyre, Sidon, and of Jehu of Israel, and thus gained control of the Mediterranean trade routes

810-806. **Semiramis** (*Shammu-ramat*) was the widow of Shamshi-Adad V (824–810) and the mother of Adad-nirari III (806–782)

782-745. Assyria, ruled by incompetent rulers, was unable to check the growing power of the kingdom of Urartu (Van)

745-625. THE SECOND PHASE OF THE ASSYRIAN EMPIRE.

745-727. **Tiglath-pileser III** restrained the expansion of Urartu, conquered Arpad, receiving the tribute of Menahem of Israel and of other Syrian princes, in 734 he forced the submission of Israel, in 732 he took Damascus, in 729 he became King of Babylon (with the name of *Pul*) He consolidated his conquests by deporting entire populations

727-722. **Shalmaneser V** besieged Samaria for three years.

722-705. **Sargon II** (*Sharrukin*) took Samaria (722), took Carchemish, and raided Urartu (717–714) He then reconquered Babylonia (710–709), where Merodach-baladan had become king in 721. He built a new capital (Dur-Sharrukin) near Nineveh.

705-681. **Sennacherib** (*Sin-ahê-erba*), faced with a general insurrection, fomented by Egypt and Babylonia, in Palestine and Syria, took Sidon and Ashkalon, defeated the Egyptians at Eltekeh, devastated Judah but failed to take Jerusalem (701): all rebellious vassals were forced into submission. In 689 he destroyed Babylon.

681-668. **Essarhaddon** (*Ashur-ah-iddin*) had difficulty in holding back the hordes of the Cimmerians in the north He permitted the rebuilding of Babylon, directed a campaign against Tyre and Sidon (676), and conquered Egypt (671).

668-625. **Ashurbanipal** (*Sardanapalos* in Greek) made two successful campaigns into Egypt (668, 661), but he could not prevent Psamtik from becoming master of that country (652) Palestine and Syria, however, remained submissive. His half-brother Shamash-shumukin, who had been appointed by Essarhaddon viceroy of Babylonia, rebelled. the resulting civil war lasted from 652 to 648 (when Shamash-shumukin committed suicide), but operations were continued against the Chaldeans, the Arabs, and Elam (completely devastated in the course of two campaigns in 646 and 640).

Ashurbanipal was a patron of arts and letters, and assembled a great library of cuneiform tablets at Nineveh

625-605. Rapid disintegration of the Assyrian Empire Nineveh was destroyed by Cyaxares, King of Media, and Nabopolassar, King of Babylonia (612) For a few years an Assyrian general, **Ashur-uballit,** attempted to save a remnant of the Assyrian Empire with Harran as its capital, but he failed dismally (605) and the Assyrian nation ceased to exist.

3. UPPER MESOPOTAMIA (MITANNI)

GEOGRAPHY. The homeland of the **Hurrians** was probably in the Nairi lands, as the Assyrians called the region east and north of Lake Van where the original nucleus of the Kingdom of Van was later located From there, early in the 17th century B C, the Hurrians moved southward, east and west of Assyria, founding a number of principalities that were eventually joined together under the rule of the kings of Mitanni The Kingdom of Mitanni extended from Carchemish on the Euphrates to the vicinity of the upper Tigris, comprising the valleys of the Balich, of the Habur, and the province of Nisibis, and, east of the Tigris, it included also the region of Arrapkha (modern Kirkuk), which had previously been a separate Hurrian kingdom. Whether Arbela was also included is not known. The Hurrians overran also parts of Asia Minor, Syria, and Palestine, without, however, organizing permanent kingdoms: their presence is attested about the middle of the 2d millennium at Boghaz Keui (the Hittite capital), at Ras Shamra (northern Phoenicia), at Jerusalem and Taanach, and in the land of Edom (the Horites), the Hyksos probaby included Hurrian contingents

CIVILIZATION AND RELIGION. The Hurrian language is imperfectly known through the letter of Tushratta, King of Mitanni, to Amenophis III of Egypt, through some tablets in a cuneiform alphabet found at Ras Shamra, through some records from the Hittite archives at Boghaz Keui, and from occasional words in the cuneiform tablets from Nuzi (near Kirkuk). It was probably related to Vannic and Elamitic, but it cannot be classed within any well-known linguistic group. The racial connections of the Hurrians are unknown. The royal dynasty and the nobility of Mitanni were of Indo-Iranian extraction: they took their oaths by the Indo-Iranian deities Indra, Mithra, Varuna, and the Nasatya. The greatest contribution of the Hurrians, or rather of their Indo-Iranian leaders, was the introduction of the two-wheeled horse-drawn war chariot into Egypt and western Asia, where it became common after 1600. A treatise on horse-training written by a Hurrian named Kikkuli, found in the archives of Boghaz Keui, contains many Indian technical terms The so-called *Hittite* bas-reliefs from northern Syria (Carchemish, Senjirli, Tell Ahmar) and Upper Mesopotamia (Tell Halaf), dating from the middle of the 2d millennium to the 9th century, are probably Hurrian in style if not in origin, as can be verified by comparison with Hurrian seal impressions. The chief deities of the Hurrian pantheon are **Teshub,** the storm-god, and **Hepa** (*Hepat*), a sun-goddess; of several other deities nothing is known but the name.

c. 1690. Beginning of the Hurrian migration.

c. 1600-1500. The Hurrians organized principalities such as the little Kingdom of Arrapkha (including Nuzi) of which we know three kings. Itkhi-Teshub (son of Kibi-Teshub), Itkhiya, and Kirenzi

c. 1475-1275. THE KINGDOM OF MITANNI (capital Washshukanni on the upper Habur)

c. 1475. Saushshattar, the son of Parsashatar, conquered Aleppo and held it, with northern Syria, in spite of the victorious campaigns of Thothmes III; Assyria was reduced to vassalage and, to judge from a letter of Saushshattar found at Nuzi, the Hurrian principality of Arrapkha was incorporated into the kingdom

c. 1440. Artatama preserved the integrity of the kingdom, if he did not extend it. A friendly policy toward Egypt prevailed.

c. 1410. Shutarna was on friendly relations with Pharaoh Amenophis III, to whom he gave his daughter Giluhepa in marriage.

c. 1390. Tuhi, the leader of the anti-Egyptian party, slew the legitimate heir (Artashuwara) and crowned his brother **Tushratta;** the latter executed the rebels, but lost part of his kingdom (Hanigalbat), where the anti-Egyptians made his brother **Artatama II** king Tushratta was allied with Pharaoh Amenophis III, Artatama with Shubbiluliu, King of the Hittites,

who conquered Tushratta's vassal principalities west of the Euphrates.

c. 1370. **Shutarna II** was appointed by his father Artatama II as regent, after the assassination of Tushratta and of his supporters, only Mattiwaza, a young son of Tushratta, was saved from the slaughter.

c. 1360. **Mattiwaza** was placed on the throne by Shubbiluliu, King of the Hittites, his father-in-law. Assyria under Ashuruballit became independent of Mitanni and began its wars against it.

c. 1350-1300. **Decadence of Mitanni.** Adadnirari I of Assyria conquered Mitanni as far as the Euphrates, sacking the capital Washshukanni (c 1300).

c. 1275. **Shalmaneser I** of Assyria defeated Shattuara, King of Hanigalbat, and devastated his kingdom Thus the Kingdom of Mitanni disappeared from history

4. PALESTINE

GEOGRAPHY. Palestine is the southern part of Syria, extending between the Mediterranean and the Syrian Desert, from Mt. Hermon to the southern end of the Dead Sea, or "from Dan to Beersheba" West of the Jordan its length is about 150 miles, its width in the north 23 miles, in the south about 80 miles The term *Palestine*, derived from the name of the Philistines, was first used by Herodotus; the Hebrew name for the land west of the Jordan was *Canaan*. The country is divided into four zones, running parallel to the coast: the maritime plain (Philistia and the plain of Sharon, south of Mt. Carmel); the western plateau, divided by the plain of Jezreel (the strategic key to the conquest of Canaan) into Galilee in the north and the mountains of Ephraim and of Judah in the south; the Jordan Valley, lying below sea-level (the Lake of Galilee lies 600 feet below sea-level, the Dead Sea 1300 feet), tropical in climate; the plateau of Transjordania, cut by numerous valleys (the three important rivers are the Jarmuk, the Jabbok, and the Arnon) and occupied, from north to south, by the Arameans, the Ammonites, and the Moabites (the occupation of some regions by the Israelitic tribes of Reuben, Gad, and part of Manasseh was precarious). The Kingdom of Edom extended from the southern end of the Dead Sea to the Gulf of Elath on the Red Sea, the list of the eight Kings of Edom that ruled about 1200–1000 is found in Genesis 36 31–39.

POPULATION. Nations of Semitic speech, commonly called *Semites*, occupied the land in successive waves since the beginning of the Bronze Age (c. 3000 B C.): the 'amw (= Hebrew *'am*, nation) of the Egyptian records dating from about 2500, the **Amorites** from the Lebanon (c. 2000), the **Hebrews** (*Habiru* in the *Tell-el-Amarna letters*) in the early 14th century, the **Israelites** (c. 1200); the **Arabs** (c 500) The term *Hebrews* includes, in the *Old Testament*, the nations tracing their ancestry to Abraham (Ishmael and the sons of Isaac, i e. Israel and Edom) and his brother Harran (sons of Lot· Moab and Ammon); the **Arameans** were said to be the sons of Nahor, brother of Abraham. The most important non-Semitic invaders of Palestine were the Hurrians (presumably the Horites that occupied the land of Edom before the Edomites), the Hittites, and the Philistines, a contingent of the Aegean *Peoples of the Sea* (c 1200).

CIVILIZATION AND RELIGION (1600–1200) The language of Canaan was Hebrew (as known from the Old Testament), a northwestern Semitic dialect akin to Phoenician, Moabitic, Amoritic, etc. The civilization was deeply influenced by Babylonia, particularly in commercial terms and practices, and Egypt, whence amulets and religious objects were imported. The influence of the Mycenaean culture antedates the coming of the Philistines Each locality worshiped its local **Baal** (master), usually at an open-air sanctuary on top of a hill called "high place." **Astarte** was the goddess most commonly worshiped.

c. 3200-2100. **Early Bronze Age** (I. 3200–2900; II. 2900–2600, III: 2600–2300; IV. 2300–2100)

c. 2100-1500. **Middle Bronze Age** (I: 2100–1850; II: 1850–1500) Relations with Egypt (story of Sinuhet, expedition of Sesostris III, c. 1870) Hyksos period (1680–1580).

c. 1500-1400. **Late Bronze Age I.** Thutmosis III of Egypt (1501–1447) conquered Palestine (**battle of Megiddo,** 1479).

c. 1400-1200. **Late Bronze Age II.** Egyptian control of the country began to relax in the Amarna period, particularly during the reign of Amenophis IV or Ikhnaton (1375–1358), when the *Habiru* (Hebrews) from the east and the Amorites and Hittites from the north were intriguing with vassal princes or attacking them. Palestine was reconquered through the campaigns of

the Pharaohs of the 19th Dynasty (1350–1200), particularly Haremhab, Sethos I, Ramses II, and Merneptah

c. 1200-900. Early Iron I. The Israelites occupied the Mountain of Ephraim, the Philistines the coastal plain, where they organized five city kingdoms (Ascalon, Ashdod, Ekron, Gath, and Gaza).

a. ISRAEL AND JUDAH

RELIGION. Through Moses, **Jehovah** (Hebrew *Yahweh*) became the god of Israel after the deliverance from Egyptian bondage Jehovah was originally the god of a sacred mountain (Sinai or Horeb). As national god, Jehovah led the Israelites into Canaan and after assuming the functions of the *Baals* and taking over their sanctuaries, he became the god of Canaan as well as of Israel By declaring that Jehovah was an international god of justice, Amos (c. 750) paved the way to the recognition of Jehovah as the only god in existence, in Isaiah 40–55 (c. 550) The combination of this prophetic theology with the elaborate temple worship proposed by Ezekiel at that time produced a new religion, **Judaism,** a revealed religion of salvation possessing a body of inspired scriptures that grew from the **Law of Moses** in Deuteronomy (published in 621) to the *Old Testament* (without the *Apocrypha*), the canon of which was closed about 90 A.D.

LITERATURE. The **Old Testament** was written and edited in the course of the millennium that elapsed from the *Song of Deborah* in *Judges* 5 (c. 1150) to the *Book of Esther* (c 130). The **Pentateuch,** published in its final edition about 400, embodies writings dated in the six preceding centuries The *historical books* (Joshua, Judges, Samuel, and Kings) were edited as religious works about 550 and were canonized about 200, but the admirable biographies of Saul and David in the most ancient parts of the *Books of Samuel* date back to about 950. The great prophets (Amos, Hosea, Isaiah, Micah, Jeremiah, Ezekiel, Isaiah 40–55) were active between 750 and 550; their writings and those of the others of later date were canonized (with the exception of Daniel, dating from 164) about 200, together with the historical books. Some *Psalms*, *Proverbs*, and perhaps the *Book of Job* are earlier than the downfall of the state in 586; the rest of the *Old Testament* belongs to Persian and Hellenistic periods. The **Apocrypha** range in date from about 180 B.C. (*Ecclesiasticus*) to the beginning of our era. The **Apocalypses,** dating from the beginnings of Christianity, were not recognized by official Judaism, but they were influential in oriental Christianity. The legalistic literature of Judaism was collected in the *Mishna* (about 200 A D.) and in the *Talmud* (about 500 A D)

c. 2000-1225. The patriarchs of the sagas in *Genesis* are legendary heroes, artificially connected with Israel Some of the Hebrew clans entered Canaan in the Amarna period (14th cent.), others roamed in the wilderness The Joseph tribes settled at Goshen, in the eastern delta of the Nile.

c. 1225-1200. Moses (whose name is Egyptian and means *son*) led a revolt of the Joseph clans in Egypt, after they had been enslaved by Ramses II, and brought them to the oasis of Kadesh

c. 1200. The tribe of Reuben settled east of the Jordan, where the tribe of Gad was already living. The tribe of Judah began to move northward from the wilderness south of the Dead Sea The Joseph tribes, under Joshua, crossed the Jordan and occupied the Mountain of Ephraim. The other tribes of Israel were already in Canaan, where Merneptah attacked them in 1223.

c. 1200-1028. Living among the Canaanites, ten tribes, without central government, worshiped Jehovah and regarded themselves as parts of Israel Three other tribes (Simeon, Levi, Judah), living in the extreme south of Palestine, became part of Israel later, through David. Six of the ten tribes answered the summons of Deborah and fought victoriously against the Canaanites of the Valley of Jezreel Victorious tribal leaders (**Judges**) ruled over their tribes, but, with the exception of Gideon, who was followed by seventy sons ruling jointly, and by Abimelech, they founded no dynasty Ehud killed Eglon, King of Moab, Jephtah, a Gileadite, defeated the Ammonites The tribe of Benjamin was nearly exterminated in a civil war. Samson of Dan is a figure of legend, symbolizing the beginning of the conflict with the Philistines, as a result of which the tribe of Dan moved to the extreme north of Palestine.

1028-1013. Under the pressure of the Philistine domination (c 1080–1028), the Israelites made **Saul** their king, after his spectacular deliverance of Jabesh in Gilead He defeated the Philistines at Michmash, but took his life after their victory at Gilboa.

1013-973. For seven years after the death of Saul, Ishbaal, his son, ruled in Mahanaim, east of the Jordan, while **David,** a Philistine vassal, was King of Judah at Hebron As King of all Israel, David conquered Jerusalem and made it his capital.

Breaking the power of the Philistines, David fought successfully against the Moabites, the Ammonites, and the Edomites; however, the jealousy between Judah and Israel provoked the rebellions of Absalom and of Sheba

973-933. In alliance with the Pharaoh of Egypt and with Hiram, King of Tyre, **Solomon** undertook far-reaching trading operations by land and sea. He introduced taxation and forced labor, built the temple, the royal palace, and the city wall at Jerusalem, and public buildings elsewhere The magnificence of his reign became proverbial.

933. Solomon's son, **Rehoboam,** refused the demand of the northern tribes for relief from taxation and they seceded, making Jeroboam their king

933-722. KINGDOM OF ISRAEL.

933-887. Jeroboam I chose Shechem as his capital His son Nadab (912) was slain by Baasha (911), who resided at Tirzah Elah (888) was killed by Zimri (887)

887-843. Omri (887) overcame Tibni and built a new capital, Samaria he inaugurated the period of expansion and power of the northern kingdom. He placed northern Moab under tribute, but failed to subdue the Arameans of Damascus. **Ahab** (875) allowed his wife Jezebel, the daughter of Ethbaal, King of Tyre, to spread the worship of Melqarth, her *Baal,* in Samaria, provoking the reaction of **Elijah** and Elisha, which eventually wiped out Omri's dynasty Ahab failed against Mesha, King of Moab, but imposed his peace terms on Ben-Hadad II of Damascus and fought with him at Qarqar (854) against Shalmaneser III of Assyria Ahaziah (853) and Joram (852) were the last kings of Omri's dynasty.

843-744. Jehu (843) exterminated the princes of Israel and Judah within reach and the worshipers of the Tyrian *Baal* in Samaria He paid tribute to Shalmaneser III Hazael of Damascus, in revenge, raided his Transjordanian provinces. Under Jehoahaz (816) and Joash (800) Israel was likewise helpless against Damascus, but **Jeroboam II** (785) reconquered the lost provinces while Damascus was attacked by Assyria (773), and ruled over a kingdom at the height of its power and prosperity. However, Amos and Hosea foresaw the impending ruin of Israel. The last king of the dynasty of Jehu, Zechariah (744), was assassinated by Shallum (744).

744-722. Tiglath-pileser III of Assyria (745–727) forced Menahem (744) and Pekahiah (738) to pay tribute Pekah (737) allied himself with Damascus (taken by Tiglath-pileser in 732) and his kingdom was devastated. Hoshea (732) refused to pay tribute to Shalmaneser V (727–722) and was deposed; after a siege of three years (725–722) Samaria was taken by Sargon (722–705), who exiled 27,290 Israelites The Kingdom of Israel ceased to exist.

933-586. THE KINGDOM OF JUDAH.

933-780. Rehoboam (933), Abijah (917), and Asa (915) fought against the Kings of Israel with small success, Jehoshaphat (875) made an alliance with Ahab. Edom rebelled against Jehoram (851). Ahaziah (844) was killed by Jehu, and his mother Athaliah, a daughter of Jezebel (843), ruled until a palace revolution placed Jehoash (837) on the throne, the latter paid tribute to Hazael of Damascus Amaziah (798) defeated the Edomites but was taken prisoner by Joash, King of Israel

780-586. Azariah (Uzziah) (780) enjoyed a prosperous reign owing to Israel's revival under Jeroboam II. Jotham (740) was attacked by Pekah and Rezin (last King of Damascus), Ahaz (735), contrary to the advice of Isaiah, called Tiglath-pileser to his help Hezekiah (720), however, defied Sennacherib, but after a disastrous war (701) he came to terms Manasseh (692) remained a faithful vassal of Assyria and encouraged the worship of its gods, as also Amon (639). **Josiah** (638) reformed the worship, centralizing it in the temple at Jerusalem, and fell at Megiddo (609) fighting against Pharaoh Necho, who deposed Jehoahaz (607) and placed Jehoiakim (607) on the throne Through Nebuchadrezzar's victory over Necho at Carchemish (605), Judah passed under Babylonian rule Jehoiakim rebelled in 598, dying soon after; Jehoiachin (598–597) was taken captive to Babylonia, together with the Judean leaders (among them Ezekiel). Zedekiah (597), against the advice of Jeremiah, defied Nebuchadrezzar, who destroyed Jerusalem (586) and brought to an end the Kingdom of Judah.

b. THE JEWS

586-538. The Jews under Babylonian Rule. In Judea the Jews were poor and hard pressed between the Edomites and the Samaritans, in Babylonia they were prosperous and progressive.

538-332. The Jews under Persian Rule. The temple in Jerusalem was rebuilt (520–516), but conditions remained wretched until **Nehemiah** (445 and 433) came to rebuild the walls of Jerusalem and enforce the observance of the Law, thus precipitating the Samaritan schism.

332-198. The Jews under the Rule of Alexander (332–323) and of the Ptolemies of Egypt (323–198).

198-168. The Jews under the Seleucids.

168-63. Led by **Judas Maccabeus** and his brothers, the Jews rebelled against Antiochus IV (Epiphanes) (175–164), who had declared Judaism illegal (168) Religious freedom was achieved in 164, and, after wars under the leadership of Jonathan (161) and Simon (143), political freedom was attained (142). John Hyrcanus (135), Aristobulus I (104), Alexander Jannaeus (103), and Alexandra (76–67) continued the struggle for conquest until the rivalry between Aristobulus II (67–63) and his brother Hyrcanus II forced Pompey to place the Jews under Roman rule.

63 B.C.-395 A.D. Palestine under Roman Rule. Under Hyrcanus II (63–40) the real ruler was his prime minister Antipater, who appointed his own sons Herod and Phasael as governors. A Parthian expedition placed Antigonus, the son of Aristobulus II, on the throne (40–37). **Herod the Great** (37–4 B C.) ruled as King of Judea by appointment of the Roman Senate He began the rebuilding of the temple in Jerusalem, erected a temple of Augustus in Samaria (renamed Sebaste in honor of Augustus), and improved the harbor of Caesarea, he was, however, hated by Sadducees, Pharisees, and Zealots **Jesus of Nazareth** was born in the latter part of his reign (between 6 and 4 B C) Herod's three sons succeeded him Archelaus as ethnarch of Judea and Samaria (4 B C–6 A D), Antipas as tetrarch of Galilee and Peraea (4 B C–39 A D), and Philip as tetrarch of Batanaea, northeast of the Lake of Galilee (4 B C–34 A.D.). After their death, except for Herod Agrippa's brief rule over the combined territory (41–44) and his son's (Herod Agrippa II, 50–100) interrupted rule over parts of it, Palestine was placed under the administration of Roman procurators During the war of the Jews against Rome (66–73), Jerusalem was destroyed by Titus (70) After another war under Trajan (115–117), the Jews, led by Bar Cocheba, rebelled in the time of Hadrian (132–135) After the devastation of Judea, Jerusalem was made into a Roman colony (*Aelia Capitolina*) and was barred to the Jews Henceforth the centers of Jewish learning were in Galilee (Tiberias) and in Babylonia, the two great editions of the *Talmud* were prepared there at the end of the 5th century.

5. PHOENICIA

GEOGRAPHY. The Phoenician cities lie along the coast of the Mediterranean, west of the Lebanon, and, except for Dor, north of Mt. Carmel From south to north the most important ones, already mentioned in the *Tell-el-Amarna letters* of the 14th century B.C, are Acco, Tyre (*Sôr*, "the rock"), Sidon, Beirut, Byblos (*Gebal*), Symira, Arwad, Ugarit (the present Ras Shamra, near Laodicea).

CIVILIZATION. The Phoenicians (called *Sidonians* in Homer and the *Old Testament*) were a branch of the Canaanites if we may judge from their language, which is one of the western Semitic dialects, closely akin to the Hebrew spoken in Canaan The greatest contribution of the Phoenicians to civilization was the invention, in the 14th century or earlier, of the **alphabet** (22 consonants, no vowels) from which the principal ancient and modern alphabets are derived A cuneiform alphabet of 29 letters, whose existence was unknown before 1929 A D., was used at Ugarit (Ras Shamra), in the extreme north of Phoenicia, in the 14th century or earlier After the decay of the Minoan and Mycenaean sea-power, the Phoenicians became great sea-traders and after the 12th century established thriving colonies in Cyprus, northern Africa (Utica, Carthage, founded in 814), southern Spain (Tarshish), and, later, in other regions The main industries, according to the Greeks, were purple dye, weaving, and glass-making Phoenician art lacks originality Egyptian and Babylonian motifs prevail

RELIGION. It is only in the mythological poems of the 14th century, recently found at Ugarit (Ras Shamra), that a real Phoenician pantheon appears **El**, "the king, father of years," was the supreme god, the creator, the father of **Mot** (the rival of **Aleyan Baal**) and of **Shepesh** (the sun-goddess); **Ashera** "of the sea" (probably his consort) was the mother of the gods and had seventy sons, the virgin **Anat** searched for her dead brother Aleyan and presumably restored him to life; other gods are also mentioned. For the rest, each Phoenician city had its local *Baal* (master), who seldom had a personal name (even the name *Melqarth*, the Baal of Tyre, means simply "king of the city," *malk-qart*, the Greeks identified him with Heracles), **Baal Hammon** was the god of Carthage The chief

goddess was **Astarte** (*Aphrodite* for the Greeks), whose great sanctuaries were at Sidon and at Byblos (where she was called *Baalath*, or lady, of Byblos), at Carthage she was usually called *Tanit* **Adon** ("Lord," *Adonis* in Greek) at Byblos, the Babylonian **Tammuz**, and **Eshmun** (Greek *Asklepios*) at Sidon and Beirut were gods of vegetation, dying and coming back to life (in Egypt Adonis was identified with Osiris).

c. 2900-2000. Egyptian expeditions went to Byblos to obtain cedar of Lebanon logs Byblos and other cities were occasionally under Egyptian rule. Sumerian and Akkadian raids reached the Mediterranean.

c. 2000-1500. Practically nothing is known of Phoenicia Byblos was subject to Egypt.

1500-1447. Thutmosis III of Egypt conquered most of Phoenicia.

1411-1358. The Amarna period (Pharaohs Amenophis III and IV). The Amorites, under Abd-Ashirta and his son Aziru, in alliance with the Hittites, defeated the Egyptian vassal princes in Phoenicia, particularly Ribaddi of Byblos and Abimelek of Tyre, Zimrida of Sidon joined the ranks of the enemies of Egypt

1350-1300. Egypt reconquered Phoenicia

c. 1300-1200. Mycenaean culture at Ugarit. Close contacts with Egypt.

c. 1200-1000. After the Aegean migration, the great cities of Phoenicia, with the exception of Beirut (subject to the Amorites) and Ugarit (permanently destroyed), flourished as independent kingdoms. The oldest inscription in the Phoenician alphabet is on the sarcophagus prepared by King Ittobaal of Byblos for his father Ahiram (c. 1200?). Tiglath-pileser of Assyria (c. 1100) visited Arwad

c. 1000-774. Hegemony of Tyre. Hiram I, son of Abibaal (969-936), provided Solomon with craftsmen and materials for his building operations and equipped for him a fleet on the Red Sea. He subjected the colony of Utica, which had rebelled. Abd-Ashtart (918-909), his grandson, was assassinated by the four sons of his nurse, three of whom ruled in succession (909-887) **Ittobaal** (*Ethbaal*) (887-856), priest of Astarte, founded a new dynasty and ruled over Phoenicia as far north as Beirut and part of Cyprus. Under Pygmalion (820-774) Carthage was founded (814).

774-625. Assyrian period. Ashur-nasir-pal II (883-859) and Shalmaneser III (859-824) received tribute from Phoenician cities, without subjecting them Tiglath-pileser III (745-727) received the tribute of Matanbaal of Arwad, Sibittibaal of Byblos, and Hiram II of Tyre (738); a greater levy was paid to him by Metinna (Mattan) of Tyre in 730; the Valley of the Eleutheros (subject to Hamath) became an Assyrian province. Elulaios (Assyrian *Lule*) of Tyre (c. 725-690) reconquered Cyprus, that had been occupied by Sargon (722-705), and fled there when Sennacherib (705-681) conquered Phoenicia, with the exception of Tyre, in 701; Urumilki was then King of Byblos and Abdiliti of Arwad Phoenicia and Cyprus were subject to Essarhaddon (681-668) and Ashurbanipal (668-625), who mention Matanbaal and Yakinlu of Arwad and Milkiasaph (followed by Yehawmelek) of Byblos, in addition to three kings of Cyprus. Essarhaddon defeated Abdimilkat of Sidon and destroyed the city (675). Tyre was not conquered, but its king Baal sent his son Yehawmelek with heavy tribute to Ashurbanipal

625-586. Temporary independence of Phoenicia.

586-538. Chaldean period. Nebuchadrezzar (605-561) subjected Phoenicia (586) but besieged Tyre, under Ittobaal II, for 13 years (585-573) without success; Tyre asserted its independence under Baal II (572-563), under judges (563-556), and under Balatoros (556-555), Marbaal (555-552), **Hiram II** (552-532)

538-332. Persian period. Phoenicia was divided into four vassal kingdoms (Sidon, Tyre, Arwad, Byblos, in the order of their importance) and prospered, it furnished fleets to the Persian kings A rebellion of Sidon led by Tennes in 350 was crushed with a great loss of life by Artaxerxes III.

332-323. Alexander the Great took Tyre by connecting this island city with the mainland (332) and gained control of the other Phoenician cities by peaceful means.

323-286. Phoenicia was ruled in succession by Laomedon (323), Ptolemy I (320), Antigonus (315), Demetrius (301), and Seleucus (296)

286-197. Phoenicia was under the Ptolemies of Egypt Sidon's vassal rulers were high priests of Astarte (Eshmunazar I, Tabnit, Eshmunazar II).

197-82. Phoenicia was part of Kingdom of Syria under the Seleucids. Tyre became autonomous in 126, Sidon in 111. Phoenicia was increasingly Hellenized

82-69. Rule of Tigranes, King of Armenia, over the Kingdom of the Seleucids.

64. Pompey organized the Roman province of Syria, including Phoenicia.

a. CARTHAGE

814. Carthage ("New City") was founded, according to tradition, by Tyrian colonists in the time of Pygmalion (820–774), according to legend, by Elissa or by Dido (a sister of Pygmalion who became the tutelar deity of the city) The language of Carthage (*Punic*) is a Phoenician dialect. Its two chief magistrates (*suffetes*) were elected annually by the Senate, the popular assembly, in cases of conflict, had the final decision

600-480. Under the successive commands of Malchus (executed about 535), Mago (who died about 500), and Hasdrubal (who died in Sardinia about 485), the Carthaginians waged wars of conquest in Africa, Sicily, and Sardinia

480-405. After **Hamilcar** had been defeated and slain at the **battle of Himera** (Sicily) (480) against Gelo of Syracuse, Carthage developed its sea-power and gained control of the western Mediterranean, including the Straits of Gibraltar The sons of Hamilcar, Himilko and Hanno, explored the Atlantic coasts of Europe (Himilko) and of Africa (Hanno) about 450 As a result of imperial and commercial expansion Carthage flourished greatly In 409 **Hannibal** avenged his grandfather Hamilkar by storming Selinus and Himera, three years later Hannibal and Himilko took Agrigentum, and western Sicily became subject to Carthage

405-367. The Carthaginians fought four wars against **Dionysius I of Syracuse** (405–367) In the first one Himilko besieged Syracuse but was utterly defeated (398–397); in the second Mago was equally unsuccessful and Dionysius gained control of five-sixths of the island (392), the third war was undecisive (383–376), and the fourth (368–367), ending with the death of Dionysius, was inconclusive.

367-268 The wars in Sicily were continued intermittently Timoleon defeated the Carthaginians at Crimissus (340) and Agathocles invaded Africa (310–307), besieging Carthage Soon afterward the Carthaginians regained control of most of Sicily and Pyrrhus, King of Epirus, could not drive them out (278–276)

268-146. WARS WITH ROME. After the **First Punic War** (268–241) (see p 86), Hamilcar conquered Spain to the Ebro (237–228) In the **Second Punic War** (219–202) Hannibal, in a brilliant campaign, marched from Spain to Italy, defeating the Romans at **Cannae** (216), but after his disastrous defeat at **Zama** in Africa (202), Carthage was forced to accept humiliating terms of peace The **Third Punic War** (149–146) ended with the destruction of Carthage.

122-B.C.-439 A.D. Carthage under Roman rule.

6. SYRIA

GEOGRAPHY. The term *Syria* (used for the first time by Herodotus) in its wider sense indicates the whole region between the Euphrates and the eastern Mediterranean south of the Taurus range (so Strabo this corresponds to the Roman province of Syria), in a narrower sense it includes only the northeastern part of this territory with the exclusion of Palestine and Phoenicia, since Hadrian divided the province into Palestine, Phoenicia, and Syria, the term is generally employed in its narrower sense. Syria's principal ancient cities, moving southward, were Sam'al, Carchemish, Arpad, Aleppo, Antioch, Kadesh, Hamath, Palmyra, Damascus Syria has never been an independent political unity; it was merely at one time, in a general way, the land of the Arameans.

The **ARAMEANS** appear as "Semitic" Bedouins out of the Syrian Desert in the 14th century under the names of *Ahlame* and *Sutu;* the name *Arameans* is used about 1100 for the first time. The movement of the Arameans may have been provoked by the expulsion of the Hyksos from Egypt (1580). In the 13th century they threatened to invade the Tigris Valley, but owing to the pressure from the Hittites and the Assyrians they were pushed back into the Syrian Desert, where they remained in the following century after the great Aegean migration of the *Peoples of the Sea* Important trading centers, like **Palmyra,** were developed in the 11th century In the 10th century powerful **Aramaic kingdoms** were organized in Syria (Damascus) and uncultured Aramaic tribesmen from the desert were invading Mesopotamia: Assyria withstood the pressure, but in Babylonia Aramaic tribes occupied the valleys of the Euphrates and the Tigris and became the basic population of the countryside after the 9th century: the most important among them were the **Chaldeans.** The Arameans were the international traders on land from the 10th century to the 4th, their language became the *lingua franca* of western Asia

during the Persian period and was not displaced as the vernacular until the Moslem conquest; much of the religious literature of the Jews and Christians (Syriac) is in Aramaic

c. 2450-c. 2350. Sargon of Akkad and Naram-Sin led campaigns into northern Syria; the reference to *Aram* in the latter's inscriptions is puzzling

c. 2140-c. 2030. Syria under the **Third Dynasty of Ur.**

c. 1800 Syria probably subject to **Hammurabi** of Babylon.

c. 1900. Beginning of the Hurrian invasion

c. 1600. Aleppo was conquered by Murshilish I, King of the Hittites

1580-1375. Syria subject to the **Pharaohs** of the 18th Dynasty. Thutmosis III (1501–1447) conquered Syria with the exception of Carchemish and Aleppo, which were subject to the Kings of Mitanni.

1375-1350. During the reign of Amenophis IV (Ikhnaton) the Amorites under Abd-Ashirta and his son Aziru, the Hittites under Shubbiluliu, and local rulers ended Egyptian control in Syria.

1350-1200. Syria remained under Hittite rule in spite of the campaigns of Ramses II.

c. 1200 The great Aegean migrations of the *Peoples of the Sea.*

c. 1200-1000. Some Hittite principalities in Syria continued to preserve their identity after the fall of the Hittite Kingdom in the midst of the flood of Aramaic migrations· **Carchemish,** where Shubbiluliu had appointed his son Biyushshilish as king before 1350, was the most important of these kingdoms and lasted until 717, when it was conquered by Sargon of Assyria. **Aleppo,** where Shubbiluliu had made his son Telipinush king, surrendered in 853 to Shalmaneser III of Assyria The culture of these kingdoms remained Hurrian-Hittite even after they became Aramean

c. 1000-700. Aramean kingdoms in Syria and in Upper Mesopotamia. East of the Euphrates. Beth-Eden (Bit-Adini), with Til Barsip as its capital, paid tribute to Ashur-nasir-pal II (883–859) and was devastated by Shalmaneser III (857), Gozan (Tell Halaf); Hadippe (capital· Suru), and other principalities paid tribute to Adad-nirari II in 894. West of the Euphrates. Gurgum (capital: Marqash, now Mar'ash), Sam'al or Ya'udi (now Senjirli), Hattin (including probably Arpad), Hamath, Damascus, and the Aramean (Syrian) kingdoms named in *II Samuel* 10: 6. The kings of Sam'al were Haian, son of Gabbar (c 858), Sha'ul (*Saul*), Kalamu (c. 800), Panammu I, Barsur, Azariah (d. 740), Panammu II (740–732), Barrekeb (d. c. 725). The last of the Aramean kingdoms of Syria were conquered by Sargon II of Assyria in 720 and in 709.

a. DAMASCUS

c. 1450-1350. Damascus under Egyptian rule

c. 1350-1200. Damascus under Hittite rule.

1198-1167. Ramses III conquered Damascus.

c. 1000-732. Aramean Kingdom of Damascus. The dynasty was founded about 970 by Rezon (Hezion?), son of Eliada, a general of Hadadezer, King of Zobah. He was followed by Tabrimmon (c. 916), Ben-Hadad I (c 900), Ben-Hadad II (Hadadezer), who was defeated by Ahab but led the coalition against Shalmaneser III of Assyria (**battle of Qarqar,** 854), Hazael (842–c 810), Mari (Ben-Hadad III), who was besieged in his capital by Adad-nirari III in 805 and was prevented by the successful resistance of Zakir (King of Hamath) from extending his power to northern Syria, Tabeel (c. 772), and Rezin, who was executed by Tiglath-pileser III after the fall of Damascus in 732

732-538. Damascus, which had lost all importance, was subject to the Kings of Assyria (732–625) and Babylonia (625–538).

538-332. Revival of Damascus under the Persian kings.

332-85. Hellenistic period: Antioch took the place of Damascus as the most important city of Syria.

333-323. Syria was conquered and ruled by Alexander the Great

323-301. Ptolemy I conquered Syria for Egypt in 320, but lost it to Antigonus in 315, through his victory at Gaza against Demetrius, son of Antigonus (312), he took possession of southern Syria, northern Syria remained under Antigonus until his death at the **battle of Ipsus** (301)

301. Northern Syria passed under the rule of Seleucus.

(*Cont. p.* 80)

7. ASIA MINOR

GEOGRAPHY. Asia Minor or Anatolia is a bridge between Asia and Europe, easily accessible by sea from the west and by land from the east The great Taurus range in the south and a series of mountains in the north constitute powerful barriers to population movements, except for such strategically important passes as the Cilician Gates The high central plateau (Cappadocia, Lycaonia, Phrygia) is surrounded by mountains and sinks in its central part around a salt-water lake (Tatta) in the midst of a desert.

RACE. The basic population of Anatolia today as in antiquity has the characteristics of the "Armenoid" type, such as a very prominent nose in line with a receding high forehead. These features are intensified in the representation of Hittites on native bas-reliefs and on Egyptian monuments of the 19th Dynasty. Other racial types (particularly the "Mediterranean") are also represented in Asia Minor

a. HITTITES

CIVILIZATION. The cuneiform tablets from royal archives at Hattushash (now Boghaz Keui) date for the most part from the 13th century and are generally written in the "Hittite" (*nashili*) language (Indo-European grammar and diction); however, these archives yield information on archaic languages (proto-Hattic and Balaic), on Luvian (a dialect of "Hittite"), and on Hurrian. The decipherment of Hittite hieroglyphics is still in its initial stages The Hittite kingdom was essentially a feudal aristocracy: the king was crowned by the nobles during the Old Kingdom (1750–1500), but the monarchy became hereditary during the New Kingdom (1350–1200), although the feudal organization persisted to the end A late fragmentary copy of a code of laws, based on an earlier codification, is characterized by the humaneness of the punishments Agriculture and shepherding were the chief industries In literature, impartial historical narratives appear first among the Hittites. The so-called *Hittite* bas-reliefs in Asia Minor and in Syria are apparently Hurrian in style, if not in origin.

RELIGION. The Hittite pantheon included archaic native deities, some of which were worshiped in languages no longer in ordinary use. At the head of the "proto-Hattic" deities was the sun-goddess of **Arinna** (the supreme deity of the kingdom) There are also "Hittite," Hurrian (Teshub and his consort Hepa or Hepat), and even Babylonian-Assyrian deities.

c. 1750-1500. THE OLD KINGDOM.

c. 1750. Anitta, King of Kushshar (Cappadocia), defeated Bijustis, King of Hatti (capital Hattushash, now Boghaz Keui)

c. 1650. Under **Labarnash** (or Tabarnash), the founder of the Old Kingdom, and his son Hattushilish I, the capital was Kushshar.

c. 1600. Murshilish I captured Aleppo and raided Babylon. He moved the capital to Hattushash (Boghaz Keui).

c. 1500. Telepinush came to the throne after three usurpers and fixed the royal succession on a hereditary basis

c. 1500-1430. Obscure period in which the Hurrians probably dominated Tribute was paid to Thutmosis III of Egypt.

c. 1430-1200. THE NEW KINGDOM.

c. 1430-1390. During the reigns of Tudkhaliash II, Hattushilish II, and Tudkhaliash III, the Hurrian Kingdom of Mitanni grew in power at the cost of the Hittite Kingdom.

c. 1390-1350. SHUBBILULIU, the greatest of the Hittite kings, reconquered Anatolia, subjected northern Syria, and reduced Mitanni to the position of a small vassal kingdom

c. 1350-1320. Arnuandash I (1350) and Murshilish II preserved the integrity of the empire.

c. 1320-1287. Muwatallish defeated Ramses II at Kadesh on the Orontes

c. 1287-1281. Urkhiteshub

c. 1281-1260. Hattushilish III made a treaty of peace and of alliance with Ramses II (1271), in which the Syrian possessions of the Hittites were recognized by the Egyptians

c. 1260-1230. Tudkhaliash IV was forced to undertake military operations in western Anatolia

c. 1230-1215. Arnuandash II was confronted with general unrest and insurrections.

c. 1200. The Hittite Kingdom came to an end as a result of the great Aegean migrations (the *Peoples of the Sea* of Egyptian records), of which the Homeric war against Troy was an incident

b. PHRYGIANS

CIVILIZATION. The Phrygians (as well as the Mysians) came from Thrace with the great Aegean migrations about 1200 B.C.

and occupied central Anatolia, west of the Halys Their language belonged to the Indo-European group Their capital was Gordion Tumuli (sepulchral mounds) are typical of the Phrygians, although graves cut into the rock also occur

RELIGION. The chief deities of the Phrygians were **Cybele** (*Ma*, the Great Mother riding in a chariot drawn by lions), whose orgiastic cult was introduced into Rome in 191 B C , and **Attis**, the god who died as a result of castration but came back to life, his priests, Galli, were eunuchs

c **1000-700. The Kingdom of Phrygia,** the history of which is not known, was organized and grew in power **Midas** (*Mita* of Mushku in the inscriptions of Sargon II of Assyria) ruled about 715.

696. The **Cimmerian invasion** devastated the kingdom, somehow the Phrygian nation survived until the time of Cyrus (547)

c. LYDIANS

GEOGRAPHY. Lydia, whose capital was Sardis, lies in western Asia Minor, between the Ionian cities on the coast and Phrygia, it borders on Mysia in the north and Caria in the south.

CIVILIZATION AND RELIGION. Whereas Phrygia constituted a barrier between Greece and the Orient, Lydia became the link between east and west, culturally and commercially, if the Etruscans, or at least their nobility, came from Lydia (according to a classical tradition going back to Herodotus which modern scholarship is inclined to accept), the Lydians contributed materially to the civilization of ancient Italy The Lydians were great merchants and expert craftsmen, they probably invented coinage They were fond of horsemanship in the early period, and later contributed to the development of music and the dance, according to Greek tradition, Aesop was a Lydian Little is known about the religion of the Lydians. the gods **Santas** (*Sandon*) and **Baki** (*Bacchus, Dionysos*) were named in their inscriptions

670-652. Gyges, founder of the dynasty of the Mermnadae, in alliance with Ashurbanipal of Assyria, defeated the Cimmerians and extended the borders of the kingdom But after sending Carian and Ionian mercenaries to the help of Psamtik, who drove the Assyrians out of Egypt, Gyges fell in battle against the Cimmerians

652-547. Dynasty of the Mermnadae: Ardys, Sadyattes, Alyattes, Croesus After overcoming the Cimmerian menace, Ardys and his successors carried out the conquest of the Greek cities on the coast (begun by Gyges), except Miletus, and of the interior of Asia Minor as far as the Halys, with the exception of Lycia. Lydia reached the zenith of her power under Croesus, who attacked the Persian Empire, but was defeated and taken prisoner by Cyrus in 547.

547-333. Asia Minor under Persian rule.

d. HELLENISTIC MONARCHIES

333-323. Antigonus Cyclops was appointed governor of Greater Phrygia by Alexander the Great

323-25. After the death of Alexander, Antigonus, who assumed the title of king in 306, extended his dominions to cover most of Asia Minor. He died at the **battle of Ipsus** in 301. The coastal regions of Asia Minor were soon divided between the Ptolemies and Seleucids (p. 77)

The following kingdoms arose in Asia Minor during this period **Pergamum:** Philetarus (d c 263), a steward of Lysimachus, made Pergamum an independent principality (283), Eumenes I (263–241) withstood Antiochus II, Attalus I (241–197) defeated the Galatians and assumed the title of king, Eumenes II (197–159) extended his kingdom over most of western Asia Minor, Attalus III (138–133) bequeathed his kingdom to Rome. **Bithynia:** an independent principality before Alexander's conquests, it became a kingdom with Ziboetes in 297, Nicomedes I (278–250) and his successors increased the power of the kingdom until Nicomedes III (91–74) bequeathed it to the Romans **Cappadocia:** Ariarathes I was an independent king in the time of Alexander, but he was crucified in 322 by Perdiccas, after passing successively under the rule of Eumenes, Antigonus, Lysimachus, and Seleucus, it became again a separate kingdom under Ariarathes II (c. 260) and his successors until Tiberius reduced it to the status of a province in 17 A D **Pontus** (including Paphlagonia). Mithridates I after the battle of Ipsus (301) founded a dynasty that came to its end with the great Mithridates VI Eupator (120–64), the implacable enemy of the Romans. **Galatia:** 20,000 Celts from among those that had invaded Greece with Brennus (279) crossed over to Asia Minor (278–277) at the invitation of Nicomedes I of Bithynia, in 232, after they had ravaged western Asia Minor for 46 years, Attalus I of Pergamum confined them to the territory called from their name (*Galli*, Gauls) Galatia the tribal organization was retained until 63, when Pompey made Deiotarus king, after the death of its third king (25 B C), Galatia became a Roman province.

8. ARMENIA

a. THE KINGDOM OF VAN (URARTU)

GEOGRAPHY. The borders of Urartu (Ararat) cannot be fixed exactly: in a general way the kingdom was located between the Caucasus and Lake Van

POPULATION. The basic population seems to have been Hurrian; the Hurrian and Vannic languages seem to be related

CIVILIZATION AND RELIGION. The Vannic inscriptions, written in Assyrian cuneiform characters but still very obscure, were chiefly annals recording wars and building operations, particularly hydraulic works (the irrigation canal of Menuas is still in use) The Vannic people showed special aptitude in industrial arts, particularly metallurgy. At the head of the pantheon, which included numerous deities, stood a triad: **Haldi,** the national god, **Tesheba** (the Hurrian storm-god Teshub), and **Ardini** (a god or goddess of the sun) The temple of Haldi and his consort Bagbartu at Musasir, pictured on a bas-relief of Sargon II of Assyria at Khorsabad, is surprisingly similar to the Greek temples in the Doric style

c. 1270-850. The Assyrian name for the **Kingdom of Van** (*Uruatri*, later *Urartu*) occurs for the first time in the inscriptions of Shalmaneser I (c. 1270) The lands of the Nairi (east and north of Lake Van) were divided into numerous Hurrian principalities and subject to repeated attacks by the Assyrian kings, particularly by Tukulti-Ninurta I (c 1250), Tiglath-pileser I (c. 1100), Ashurbelkala (c. 1070), Adad-nirari II (c 900), Tukulti-Ninurta II (c. 890), and Ashur-nasir-pal II (883–859).

c. 860-843. Arame, first known King of Urartu, was defeated by Shalmaneser III (859–824), who captured his capital Arzashkun.

c. 832-820 Sardur I, son of Lutipri, was probably a usurper; he chose Tushpa (Assyrian *Turushpa*, the present Van) as his capital and fortified it. He founded the principal dynasty.

c. 820-800. Ispuini conquered Musasir, appointing his son Sardur II viceroy there, and was attacked by Shamshi-Adad V of Assyria.

c. 800-785. Menua, who was at first coregent with his father Ispuini, enlarged the kingdom considerably, leaving inscriptions over a vast area.

c. 785-760. Argishtish I annexed the territory along the Araxes and around the Lake of Erivan. Shalmaneser IV of Assyria had no success in his campaigns against Urartu.

c. 760-733. Sardur III preserved the integrity of the kingdom.

c 733-612. The last kings of Urartu, Rusas I (c 733–714) (probably the founder of a new dynasty), Argishtish II (c. 714–685), Rusas II (c 685–650), Sardur IV (c. 650–625), and Rusas III (c 625–612), ruled over a much restricted territory The Cimmerian invasion and the raid of Sargon II of Assyria (714) weakened the kingdom, which met its doom after the Scythian invasion, when the Medes conquered the country (612). The Vannic nation ceased to exist.

b. ARMENIA

The Armenians are mentioned for the first time by Darius (519). They were probably a Phrygian tribe and they gradually occupied the territory of Urartu after 612. They adopted the religion of the Persians

612-549. Armenia under the Kings of Media

549-331. Under the Persian kings, Armenia was a satrapy administered by a member of the royal family.

331-317. Under Alexander and his immediate successors, Armenia continued to be ruled by Persian satraps.

317-211. Ardvates (317–284), one of these Persian satraps, made the country independent of the Seleucids and founded a dynasty that ruled until 211.

211-190. Antiochus III, after removing Xerxes, the Armenian king, by treachery, divided the country into two satrapies, giving the western one (*Armenia Minor*) to Zadriades and the eastern one (*Armenia Major*) to Artaxias.

190-94. After Antiochus was defeated at Magnesia (190), Zadriades and Artaxias made themselves independent rulers, founding two separate dynasties.

94-56. Tigranes, a descendant of Artaxias, deposed Artanes, the last king of

Armenia Minor, and united the two countries under his rule From 83 to 69 he was the most powerful king in Asia, ruling over northern Mesopotamia, Syria, and parts of Asia Minor Defeated by Lucullus in 69, he was stripped of his conquests, but was allowed by Pompey to rule over Armenia as a vassal of Rome.

9. IRAN

GEOGRAPHY. The Iranian plateau extends from the mountains east of the Tigris to the Indus Valley, and from the Persian Gulf and the Indian Ocean to the Caspian Sea and the Jaxartes River. Media (capitals: Ecbatana and Rhagae), Elam (capital Susa), and Persia (capital· Persepolis) in the west played a much more important historical rôle than Sogdiana, Bactria, Aria, Drangiana, and Arachosia in the east. In the north-central region, the Parthians became Rome's rivals in the Near East

POPULATION. In the 4th and possibly the 5th millennium B.C , a population of unknown race living at Susa used copper and made pottery decorated with realistic and conventionalized animals. The mountaineers of the Zagros range (Gutium, Lullubu) and the Elamites predominated in the 3d millennium The Kassites, who ruled Babylonia from 1550 to 1180, were quite distinct from the Elamites The Aryans, the Indo-European ancestors of the Indo-Iranians, invaded Iran from the northeast (probably about 1800) and became its basic population

RELIGION. The religion of the early Iranians was similar to that of Vedic Indians: the worship of **Mithra** and **Varuna,** of the Asuras (Iranian *Ahura*), and of the Devas (degraded to demons by Zarathustra), the myths about the first man Yama (Iranian *Yima*) and about the killing of the dragon, and the conception of *rita* (Iranian *asha* or *urta*) or the inflexible order of the world, and the preparation, offering, and divinization of the sacred drink *soma* (Iranian *haoma*) are common to the Aryans of India and Iran and must date back to the time preceding their separation. **Zoroastrianism** was a reform of this ancient Aryan religion and preserved some of its elements even though it took issue with its naturalistic polytheism **Zarathustra** (*Zoroaster*· "rich in camels") may have been born in Media about 660 B.C., but seems to have been active in Bactria, where according to tradition he converted King Vishtasp (*Hystaspes*). His teaching is preserved in the *Gathas,* the oldest hymns in the **Avesta.** The *Avesta* is divided into five parts: the *Yasna* (liturgical hymns including the *Gathas*), the *Vispered* (another liturgical book), the *Vendidad* (a code of ritual and ethical laws), the *Yasht* (mythological hymns in praise of the gods), and the *Khorda Avesta* (a prayer book for private devotions). The great doctrines of the finished Zoroastrian system, monotheism, dualism, individual and universal salvation, are present in germ in the *Gathas* In the cosmic battle between good and evil each person should contribute to his own salvation and to that of the world by obeying the will of the good god **Ahura Mazda** (*Ormuzd:* "Lord Wisdom") In the later parts of the *Avesta* the god of evil or supreme devil is called *Angro-mainyu* or **Ahriman** (the evil spirit) After death the pious cross the Cinvat bridge to their reward, whereas the wicked fall from it and suffer in the *House of Lies.*

a. ELAMITES

c. 2850-2150. Sumerians and Akkadians frequently defeated and subjected the Elamites, whose civilization was fundamentally Sumerian **Dynasty of Awan** (c. 2450–2150)

c. 2150. Kudur-nahunte of Elam plundered the temples of Akkad.

c. 1920-1800. Kudur-mabug of Elam placed his son Warad-Sin on the throne of Larsa The latter's brother and successor, Rim-Sin, was deposed by Hammurabi.

c. 1176. Shutruk-nahunte raided Babylonia taking to Susa the stela of Hammurabi and other monuments.

c. 1130. Nebuchadrezzar I of Babylon defeated the Elamites

721-640. Merodach-baladan of Babylon and Humbanigash of Elam joined forces against Sargon of Assyria, who was defeated at Der by the Elamites (721) Shutruk-nahunte II allowed Sargon to depose Merodach-baladan (709). Hallushu (699–693) carried into captivity Sennacherib's son, who was ruling Babylonia (694). Umman-menanu (693–689) (who succeeded Kudur-nahunte) fought at Halule against Sennacherib (691). Umman-haldash I (689–681) Umman-haldash II (681–674) raided Sippar during Essarhaddon's Egyptian campaign. Urtaku (674–664) ruled peacefully Teumman (664–655) was defeated by Ashurbanipal and his kingdom was occupied by the Assyrians. Ummanigash

(655–651) sent his forces to the help of Shamash-shumukin, King of Babylon, who had rebelled against his brother Ashurbanipal. Ummanigash was assassinated by his cousin Tammaritu. Tammaritu (651–649) was deposed by Indabigash and sought refuge in Nineveh Umman-haldash III (648–646) was defeated by Ashurbanipal, who conquered Susa, and was deposed by Tammaritu II Tammaritu II was taken prisoner by the Assyrians (646) Umman-haldash III (646–640) returned to the throne, but was taken prisoner by Ashurbanipal, who completely devastated the land of Elam and destroyed Susa The elimination of the Kingdom of Elam facilitated the task of Cyrus, who a century later founded the Persian Empire, with Susa as one of its capitals.

b. MEDES

835-705. Media, divided into small principalities, was attacked successively by Assyrian kings, from Shalmaneser III (in whose inscriptions the Medes are mentioned for the first time) to Sargon II

705-625. Media under **Assyrian rule.** The two kings Dejoces (708–655) and Phraortes (655–633) mentioned by Herodotus were probably local chieftains.

625-593. Cyaxares was the founder of the Median Empire and of its dynasty In alliance with Nabopolassar of Babylon (a daughter of Cyaxares was given in marriage to Nebuchadrezzar), Cyaxares destroyed Nineveh (612) and conquered the Assyrian territory east of the Tigris, as also Urartu (Armenia) and eastern Iran.

593-550. Astyages was deposed by Cyrus and Media became part of the Persian Empire (550).

c. PERSIANS

c. 600-550. Achaemenian kings of Anzan (in Elam): Teispes, Cyrus (I), Cambyses, Cyrus (II) the Great.

550-530. Cyrus the Great deposed his sovereign Astyages of Media (550), conquered Lydia (546) and Babylonia (538), and founded the Persian Empire, which extended from the Indus to the Mediterranean, from the Caucasus to the Indian Ocean.

530-521. Cambyses, son of Cyrus, conquered Egypt (525).

521-485. Darius I, son of Hystaspes, after pacifying the empire torn by revolts, notably that of Gaumata or Smerdis, and extending its borders beyond the Indus (521–519), divided it into 20 satrapies. His royal residences were Susa, Persepolis, Ecbatana (Hamadan), and Babylon Darius was a Zoroastrian. Good roads, with stations for royal messengers, made possible regular communications within the empire A canal was dug from the Nile to the Red Sea A general revolt of the Ionian Greeks in Asia ended with the fall of Miletus (500–494), but the war against the European Greeks was unsuccessful (**battle of Marathon,** 490).

485-465. After **Xerxes I** (*Ahasuerus*) was defeated by the Greeks on the sea at Salamis (480), and on land at Plataea and Mycale (479), Persia abandoned her plans for conquering Greece.

465-424. Athens took the offensive against **Artaxerxes I Longimanus,** by sending troops to aid a revolt in Egypt (456–454) and by attacking Cyprus (450), but finally signed a peace treaty (446) The Persian Empire began to decline

424-404. Xerxes II was assassinated by his brother Sogdianus (424), who in turn fell at the hands of his brother Ochus or Darius II Nothus (424–404).

404-358. Artaxerxes II Mnemon defeated his rebellious brother Cyrus, the satrap of Anatolia, near Babylon at Cunaxa (401), Cyrus lost his life in the battle and his "ten thousand" Greek mercenaries, after great hardships, reached the Black Sea (Xenophon's *Anabasis*) in March of the year 400. Another insurrection broke out in Asia Minor under the leadership of Datames, the governor of Cappadocia, and spread to the western satrapies (366–360). Egypt became more or less independent after 404.

358-338. Artaxerxes III Ochus succeeded, through energetic measures, in asserting the royal authority over the satraps He was followed by Arses (338–336).

336-330. Darius III Codomannus was killed after Alexander the Great, through the victories at Granicus (334), Issus (333), and Gaugamela, near Arbela (331), conquered the Persian Empire.

10. INDIA

An early urban civilization in the Indus Valley produced the polished stone, metals, incised seals, and pictographs excavated since 1920 at Harappa and Mohenjo Daro Not yet known is its relationship to Mesopotamian culture of c. 3000 B C , and to the much later historic civilization of India Indian history begins with invasion from the Iranian plateau by **Aryans** of uncertain antecedents, who gradually conquered or pushed back from the rich plains of northern India the earlier black Dravidian and Austro-Asiatic Munda populations. The conquest is variously placed at 2000–1200 B.C.

c. 1200-c. 800 B.C. The Indian Aryans worshiped nature-gods similar to those of Greece and Rome but less personified. The chief were **Indra,** god of the air and of the storm, with **Agni,** the sacrificial fire, and **Soma,** the intoxicant used for libations. Interesting, among many others, was **Varuna,** guardian of cosmic regularity, including individual human acts. The oldest sacrificial hymns, composed in northern India west of the Ganges (perhaps c 1200–1000), are contained in the *Rigveda*, which dates from c. 1000 B C , possibly two centuries prior to the related Gathas in the *Avesta* of Iran, and, like the later *Samaveda*, antiphonal selections from the *Rig;* the *Yajurveda*, hymns and sacrificial prose; and the *Atharvaveda*, a repertory of relatively late magical formulae. The *Rigveda* reveals an Indo-European hieratic literary language remarkable for clarity of structure and wealth of inflection which was, however, probably not written until the 5th century It depicts a wholesome patriarchal society, engaged in cattle-raising and agriculture, characterized by usual monogamy, adult marriage, and normal widowhood The Aryan tribes were frequently at war among themselves and with surrounding indigenous tribes The attitude toward life was vigorous and objective, with none of the pessimism and subjective traits characteristic of later India.

c. 800-c. 550 B.C. A transition period during which the Aryans expanded eastward through Magadha (modern Bihar) is known chiefly from the *Brahmanas*, commentaries upon the *Vedas* (c. 800–600), and the earlier *Upanishads* or confidential teachings (c. 600–300). The Vedic division of Aryan society into three honorable classes: priests (*brahman*), noble warriors (*kshatriya*), and commonalty (*vaisya*), including both farmers and artisans, began gradually to crystallize into a **caste system,** augmented by a fourth group, the slaves (*sudra*), who were the first to be segregated because of their black color. Progressive evolution of caste may be traced to desire of priest and noble to perpetuate supremacy, to diversification of specialized occupation, and to indigenous rules of endogamy absorbed through the sudras, many of whom improved their servile status. Continual elaboration by the priesthood of an already exaggerated ritual had become devoid of religious significance The doctrine of continuous rebirth (*samsara*), conditioned by the inescapable results of former acts (*karma*), which may be derived from indigenous animism, was first expressed in the early *Upanishads* (c 600–550). The *Upanishads*, too, teach that the soul may escape from the suffering inherent in individual existence only by the realization of its identity with an impersonal cosmic soul. Union with the latter is possible through knowledge, but not through Brahman ritual.

c. 550-321. The Aryan area was divided among many petty states. Sixteen are enumerated in an early list Kosala (King Prasenajit, contemporary of the Buddha) was the largest, extending from Nepal to the Ganges, including modern Oudh. Magadha was its small neighbor on the east, south of the Ganges. The King of Avanti ruled at Ujjain The capital of the Vamsas (King Udena) was at Kosambi (on the Jumna below Agra) Ten tribal republics are named in the oldest Pali records.

Dissent from Brahmanism, to abolish authority of its scriptures and rites, was undertaken by many schools, among them the **Jains,** followers of the Jina ("Victorious"), Vardhamana Mahavira (?540–468?), who elaborated the doctrines of an earlier prophet **Parsya,** and in Magadha under Kings Bimbisara (?543–491?) and his parricide son Ajatasatru (?491–459?). Parsya had enjoined four vows: to injure no life, to be truthful, not to steal, to possess no property. **Mahavira** added chastity and rigid asceticism as means to free man's immortal soul from bondage to the material world. He set the example by personal attainment of omniscience and freedom through twelve years of austerities.

BUDDHISM was founded in the same period and region by **Siddhartha** (?563–483?) of the clan of Gautama and the hill tribe of Sakya, who attained "illumination"

(*bodhi*) at Bodh-Gaya after he had convinced himself that Brahman doctrine and asceticism were alike ineffective He accepted rebirth to the recurrent suffering of life in accordance with fate (*karma*), which depends on individual effort, and extended reward and punishment to heavens and hells. He taught the means of escape to **Nirvana**, a state of peaceful release from rebirth, through a twofold way of life, withdrawal for meditation and personal religious experience, combined with strict morality and self-sacrificial altruism Shortly after the Buddha's death 500 disciples met at Rajagriha to rehearse together his doctrine (*dharma*) and his code of discipline (*vinaya*) for the monastic community (*sangha*) which he founded That community served as the instrument for propagation of his religion, which, like Christianity, offers salvation to all who accept simple doctrine and ethics and seek for personal religious experience. A second council at Vaisali a century after the Buddha's death was concerned with the *vinaya*, but may have begun the schism between conservative **Sthaviravadins** (Pali Theravadins) and liberal **Mahasanghikas.** About this time were formed the four *Nikayas*, earliest extant anthologies from more primitive collections (*Pratimoksa*, etc).

517-509 B.C. Darius I of Achaemenid Persia seized Gandhara from the disunited Aryans and sent his Greek admiral Skylax to explore the Indus. *Kharoshthi* script used in northwestern India (5th cent) is based on Aramaic of the Persian scribes It was confined to the northwest, doubtless because *Brahmi*, a script which was probably derived from some Semitic alphabet of c. 800 B.C., and ancestor of later Indian writing, was already current in the Jumna basin. The *Sutras* (c. 6th–2d cent. B.C), "Threads" through the *Brahmanas*, prescribe rules of conduct of various Vedic schools, regions, and periods, for sacrifice and, incidentally, for life. They describe a society in which plural marriage is permitted, child marriage recommended, while numerous taboos mark the beginning of an elaborate theory of caste defilement. **Panini** (? c. 350–300) gives in his *Sutra* the earliest extant Sanskrit grammar, with a wealth of illustration which is augmented by the *Varttikas* or supplementary rules of Katyayana (c. 180) and the rich Mahabhashya (Great Commentary) of Patanjali (c. 150 B.C. or later).

327-325. Alexander the Great invaded the Punjab, crossed the Indus (Feb. 326), was welcomed to the rich and cultured city of Takshasila (Taxila), won a battle on the banks of the Jhelum, and withdrew on demand of his troops, sending Nearchus with a fleet by sea

c. 321-c. 184. THE MAURYA DYNASTY was founded by **Chandragupta** (c. 321–c. 297), who first united northern India from Herat to the Ganges delta, with his capital at Pataliputra (Patna), and who defended it against Seleucus Nicator (c. 305) Megasthenes, a Seleucid envoy, wrote a detailed account of India, now lost. The emperor ruled with aid of a privy council and an elaborate official hierarchy, paid army, and secret service. Administration of public works embraced highways and irrigation.

A Jain high-priest **Bhadrabahu** led a portion of his community south into the Carnatic to escape a 12-year famine in Bengal. On their return (c. 300) the still resident monks in church council at Pataliputra undertook to collect the Jain scriptures, but were unable to record some of the older *purvas* The canon of the Svetambara sect, the *Siddhanta*, written in its present form at the council of Valabhi (5th or early 6th cent A D.), is consequently incomplete. The returning monks maintained a stricter rule, avoided the council, and, as the **Digambara sect,** have steadily maintained that the true canon is lost The Jain community had then already begun a westward migration to Ujjain and Mathura.

c. 274-c. 236. ASOKA'S EMPIRE, extended by conquest of Kalinga (Orissa with the Circars, c. 262), embraced two-thirds of the peninsula As a devout convert he ruled at home and abroad in accordance with Buddhist law. Besides many pious foundations, he engraved on rocks and pillars throughout his empire in true Achaemenid style edicts in vernacular Prakrit exhorting respect for animal life, reverence, and truth, and appointed censors to enforce these injunctions He sent Buddhist missions to Syria, Egypt, Cyrene, Macedonia, and Epirus, and with much greater success to Burma and Ceylon (c. 251–246, Aryan conquest of Ceylon, traditional date 483 B.C.). The Punjab and Gandhara became a stronghold of the liberal Mahasanghikas, who developed a canonical tradition enriched by legends to bring the life of the Buddha into that region. The canon was then or in the 2d century in Kausambhi, Sañchi, and Malwa expanded and fixed in Pali to form the *Tripitaka* ("Three Baskets"): *sutra* (doctrine), *vinaya* (monastic code), and *abhidharma* (philosophical discussion). The Pali tradition, which was carried to Ceylon and there preserved intact, says a third church council was held at Pataliputra under Asoka, but since his inscriptions ignore it,

it probably was restricted to the conservative Theravadin of Magadha and vicinity

Asoka's pillar at Sarnath near Benares is in form and finish Persian. It is surmounted by four lions facing outward which, with a frieze of animals in low relief, may well have been executed by a Hellenistic sculptor, perhaps from Bactria.

The west remained the chief stronghold of **Brahman doctrine** which now underwent a counter-reformation. Efforts by the priesthood to syncretize popular native gods with the Vedic pantheon, and so retain for themselves religious leadership, led to emergence of cults which constitute a new religion Rudra, a minor Vedic divinity, was exalted as **Siva**, personification of cosmic forces of destruction and reproduction implicit in all change **Vishnu**, god of the sacrifice, was recognized as incarnate in **Krishna**, a hero presented by popular legend at Mathura as romantic lover of 1000 herd-girls, and on the west coast as a somber warrior. A second avatar of Vishnu was **Rama**, symbol of conjugal devotion. Siva and Vishnu were linked as one Hari-Hara and were equated with a newly personified god Brahma as elements of a *Trimurti* or trinity

The *Mahabharata*, an epic poem composed by several generations of bards, seems to have taken form about the 2d century B C, although probably revised early in our era. The original 9000 verses were swelled to 100,000 by later accretions, largely from the *Puranas* (disordered genealogies of kings compounded with legends, put in present form 4th cent. A.D. and later). It recounts a feud between the wily and aristocratic Kurus and the fierce Pandus, a family who are unknown in early literature Krishna takes prominent part in the struggle in unscrupulous aid of Arjuna, the Pandu chief. Noteworthy within the epic is the *Bhagavadgita* ("Song of the Lord"), which first urges personal love and devotion (*bhakti*) to Krishna The *Ramayana*, although traditionally ascribed to Valmiki (?6th cent. B.C), is in its present form later than the *Mahabharata*. It recounts the trials of Rama in rescuing with an army of apes his wife Sita from a fiend. Both epics are composed in a popular form of Sanskrit.

206. Antiochus III of Syria occupied Gandhara, but shortly lost it to the Greek (Yavana) King Demetrius of Bactria, who (c 185) seized the Punjab also. Eastward expansion of the Yavanas was halted (after c. 162) by civil war between the houses of Euthydemus, represented especially by the warrior-philosopher Menander, and Eucratides

c. 184-c. 72. THE SUNGA DYNASTY was founded in the Ganges Valley and in Malwa by **Pushyamitra**, who overthrew the Maurya, repulsed the Yavanas under Menander, and by a Brahman reaction may have stimulated Buddhist emigration to Bharhut, Sañchi, and Mathura. The dynasty in its later years was overshadowed if not actually displaced by its line of Brahman advisers, the Kanvas.

A brilliant flowering of **Buddhist sculpture** is chiefly represented by railings and gates about stupas at Bharhut, Bodh-gaya, and Sañchi The railing at Bharhut (c 150 B.C.) is almost purely Indian in design and relatively primitive in execution. A Garuda pillar at Besnagar proves by inscription of a Greek envoy from Taxila contact of central India with the northwest, which is evidenced also by technical progress and by the west Asiatic motifs of the rails at Bodh-gaya and the opulent gates at Sañchi (1st cent. B.C.). Narrative is surrounded with a festive naturalism which is wholly Indian. Presence of the Buddha in these sculptures is suggested solely by symbols (the elephant of his conception, the lotus of birth, the stupa of consecration, the tree of deliverance, or the wheel of the law). At the same time (c. 100 B.C.–50 A D.) flourished in Gandhara a school of sculpture which created a Buddha image by adding to the Greek Apollo some of the 32 marks of a Buddha specified in Indian texts. Only a few decadent monuments (mostly 1st cent A.D) bear dates (318, 356, 384 with coin of Kadphises, 399) by reference to a Mauryan era (? of 322 B.C) or more probably the Seleucid era of 312 B.C Stylistic influence of the art of Gandhara was exerted chiefly in Afghanistan (frescoes of Bamiyan and Dukhtar-i-Nushirwan), where it was fused with Sassanian influences; eastern Turkestan; China of the North Wei dynasty; and Japan. But its iconographic formulae were accepted by the entire Buddhist world Meanwhile, in western India (near Bombay) were cut in rocky cliffs Buddhist *chaityas* or temple halls, of which the earliest (c. 125–100 B.C.) are at Bhaja, Kondane, Pitalkhora, and Ajanta (cave 10); the largest, finest, and latest (1st cent. A.D) at Karli. Jain caves in the Udayagiri hills of Orissa are of similar date

Scythian **Sakas** who, dislodged by the Yuechi from the Jaxartes, had overwhelmed the Greeks in Bactria (c 135 B.C.), only to be expelled thence also by the Yueh-chih (shortly after 128), invaded the Punjab from Baluchistan and Sind (Greek Indo-Scythia). (*Cont. p.* 128.)

11. CHINA

Present information indicates that the Chinese parent people, their language, and their civilization are alike native to North China. It seems probable that, at a primitive stage, they diverged from the Miao-tzu, who now find refuge in the southern mountains, the various T'ai peoples (Dioi, Laotians, Siamese) of Kwangsi and Indo-China, and the Tibeto-Burman peoples (Lolo, Mosso, Shan, and Tibetans) of southwestern China **Peking Man,** who had some Chinese characteristics, lived in the Tertiary Pleistocene epoch Palaeolithic culture deposits (without skeletal material as yet) are known. Three independent Neolithic cultures are found, characterized by (1) crude gray pottery with pointed foot; (2) red and black painted pottery similar to that found near Odessa and at Susa, (3) thin black pottery tentatively attributed to a Pacific civilization. The latter is linked with historic China through use of tripod vessels with hollow legs, and bone divination.

Two literary sources contain genealogies of **the early dynasties,** with chronologies which diverge prior to 841 B.C Neither earlier chronology has any authority whatever. Nor can historical value be attached to legends which describe a pre-dynastic golden age of fabulous culture-heroes and model rulers Of the **Hsia Dynasty** we have only the calendar, honorific use of the name, and the putative genealogy of seventeen kings It was followed by the **Shang** or **Yin Dynasty** of thirty kings, who practiced fraternal succession and who were masters of the Yellow River plain from the mountains of Shansi and the Mongolian plateau to the Shantung massif Probably the last twelve ruled at An-yang from about the 12th century. The names of twenty-eight kings are found in oracular inscriptions from this site Advanced pictographic and ideographic script; conventional decoration and perfect casting of bronze vessels; reliance upon ancestral guidance through divination.

c. 1000-950 B.C. THE WESTERN CHOU DYNASTY established its capital at Hao in the Wei Valley. It exercised actual control over its feudatories only until the murder of King Yu in 771. The king was responsible for sacrifices to his ancestors and to gods of the soil, and for the agricultural calendar, as well as for administration. Tenure of land and office was restricted to a pedigreed aristocracy, whose clan names suggest a possible early matriarchate The peasantry lived a communal life in the summer fields and winter villages, tilled common land for their prince, and practiced exogamic group betrothals and marriages The Chinese communities were still surrounded and interspersed with "barbarian," i e less cultured, tribes.

770-256. THE EASTERN CHOU DYNASTY reigned powerless at Loyang with diminishing moral authority over the frequently warring princes of surrounding (nominally) feudal states

722-481. "Annals" period of loose confederation. The chief states were Ch'i and Lu, which divided modern Shantung; Sung, west of Lu; Yen, on the northeast; Chin, in modern Shansi, Ch'in, in the former Chou lands to the west, and Ch'u, in the middle Long River Valley

458-424. Partition of Chin among three vassal houses. Han, Chao, and Wei.

412. Institution of **ever-normal granary** by Marquis Wen of Wei

403-221. Epoch of the Warring States, opened by royal recognition of the partition of Chin

391. Change of dynasty in Ch'i, which, with Chin, had been a chief bulwark of the "middle kingdoms" against the largely non-Chinese states of Ch'u and Ch'in.

334 Ch'u expanded eastward, annexing the coastal state of Yueh.

333 "Vertical" (i e north and south) **alliance of six states,** arranged by Su Ch'in, failed to restrain Ch'in, which conquered Shu (in modern Szechuan) in 316.

307. Prince Wu-ling of Chao gained military advantage for his state by adoption of Tatar dress (Iranian trousers, belt, and boots, which now gradually displaced the loose Chinese costume) and enlistment of cavalry archers, but the continual wars of the eastern states weakened them all, paving the way for

230-221. CONQUEST BY CH'IN OF ALL ITS RIVALS. Golden age of philosophy in China, as in Greece. Four major **schools of ethics,** which absorbed the practical Chinese to the exclusion of abstract speculation: (1) Coherent teaching embodied in *The Canon of the Way and of Virtue* (5th cent. or later?), attributed to **Lao-tzu,** of whom nothing is known· Man is part of an harmonious universe governed by transcendent law, and finds his best ethical guide in his own nature. **Yang Chu,**

an individualist, sought self-expression in harmless hedonism **Chuang Chou** (fl 339–329), the most brilliantly imaginative and subtle of all literary stylists, through parables taught *laissez faire*, mysticism, and relativity of truth. (2) **Mo Ti** (5th–4th cent.?) taught universal love, pacifism, economy, and the duty of the wise to set up standards New dialectic method borrowed by all later writers From him stem the schools of pacifists and sophists (3) **K'ung Ch'iu** or **Confucius** (551–479 or later?) taught that clear thinking and self-discipline lead the superior man to correct action in all his relationships Through moral influence and education he should lead the common herd with kindliness and justice, paternalism; golden rule. Having failed as minister of justice in Lu (500–496) to secure co-operation of his prince, he edited the *Annals* of that state (722–481) to illustrate his monarchical doctrine of political morality. (A much richer chronicle of the feudal states, composed c. 300, is now appended to these *Annals* as part of the *Tso Commentary*) His precepts were gathered a century later. **Meng K'o** or **Mencius** (fl 324–314) urged the now independent princes to win the world, i e North China, by exemplary conduct, declaring popular welfare to be the objective and condition of royal authority. A humanitarian, he elaborated the moral code to assure proper development of man's beneficent nature. **Hsün K'uang** or **Hsün-tzu** (c. 300–235) taught that man requires education and formation of correct habit to realize his capacity to order nature. He suggested forced conformity to standards. He synthesized earlier doctrines, and, although a muddy writer, so impressed his students that even mutually opposed thinkers for a century claimed succession from him (4) **Shang Yang,** minister of Ch'in, 359–338, organized strong centralized government, created an official hierarchy, and encouraged agriculture in that state under a severe legal code His reforms paved the way for the triumph of Ch'in. **Han-Fei-tzu** (d 233) and **Li Ssu** (d 208), disciples of Hsun-tzu, developed further the legalist doctrine of compulsion to justify Ch'in's use of military force to unify the warring states.

Greek influence, probably traceable to Alexander's invasion of Sogdiana (c 327), is seen in correct statement of the intervals of the Pythagorean musical scale by Lu Pu-wei, prime minister of Ch'in (c 250), and in diagrammatic illustration of the Pythagorean theorem. (*Cont. p.* 132.)

B. GREECE

1. THE EARLY PERIOD, TO C. 500 B.C.

a. GEOGRAPHICAL FACTORS

Greece proper forms a southward extension of the Balkan Mountains. It lies between two seas, the Aegean, which separates it on the east from Asia Minor, and the Adriatic and Ionian Seas, which separate it on the west from Italy and Sicily. Greece itself is almost split in two by the Gulf of Corinth, which runs in from the west, and the Saronic Gulf on the east These are separated by the narrow Isthmus of Corinth, which connects the southern part, the Peloponnese, with the northern. Thus Corinth, which portaged the sea-trade from gulf to gulf and which controlled land communications between south and north, played an important rôle in Greek history from an early date

The Greeks were forced to become sailors by the mountainous character of their country, a factor which also conditioned the eventual rise of hundreds of small, autonomous, self-centered states, scattered throughout most Greek lands The Greek name for such a state was πόλις (*polis*), usually translated *city-state*, but including an area of countryside in addition to the city proper This area was usually small; Sparta (c. 3000 square miles) and Athens (c. 1000 square miles) were exceptionally large *poleis*. Since the best harbors lie on the east coast of Greece and since the Aegean is full of islands, which made primitive navigation easy, the earliest expansion of the Greeks was to the Asia Minor coast, similar in aspect but more fertile than Greece proper Later they penetrated into the Euxine (*hospitable*) Sea, so-called by an apotropaic euphemism because of its inhospitable character The closeness of southern Italy to the island of Corcyra also drew them west to the Gulf of Tarentum and Sicily, where again they found a familiar but more smiling landscape

Some parts of Greece, like Attica and Corinth, were early in the historical period deforested. The resultant soil erosion and rapid off-flow of water made agriculture difficult and unremunerative. The inhabitants, therefore, unable themselves to grow enough grain, imported it from Euboea, Thessaly, the Euxine, or Sicily. They in turn cultivated the olive and vine, to export oil and wine, or developed manufactures, particularly that of pottery. Thus not only geography but economic need encouraged them to become seafarers and individualists.

b. THE AEGEAN CIVILIZATION

The pre-Hellenic inhabitants of Crete early developed an elaborate Bronze Age civilization which spread gradually to the Aegean islands and the surrounding coasts. Its effects were felt throughout the eastern Mediterranean Basin, and it, in turn, was considerably influenced from Egypt But it made little direct contribution to later Greek civilization, save perhaps in religion and myth (Hera, Athena, Minos, the Idaean Zeus).

c. 4000 B.C. **The Bronze Age** began in Crete with an increased skill in crafts, especially pottery.

c. 2300. A hieroglyphic writing came into use

c. 2000. The island was unified under one or two dynasties, notably those at Cnossus and Phaestus. There was at **Cnossus** an elaborate palace, with storehouses for taxes in kind and room for a large administrative staff The palace seems also to have been the religious center, with a priest-king. The inhabitants lived in cities built closely round the palaces. While the basis of economy was agriculture (cereals, olive, vine), handicrafts and trade (especially with Egypt) flourished.

c. 1600. The palaces at Cnossus and Phaestus were destroyed and rebuilt, perhaps in consequence of a revolution There followed the height of Cretan prosperity A **linear script** replaced the hieroglyphic. The Cretan civilization spread to Greece proper, notably to Mycenae, Tiryns, Argos, Sparta, Orchomenus, and, in a lesser degree, to Athens The princes of this Mycenaean civilization were native Greek tribal chiefs who adopted the higher Cretan culture They built strongly fortified cities as places of refuge for their subjects. Their supreme power was limited by the traditional custom of consulting their nobles and of obtaining the approval of a popular assembly in important matters. This civilization is portrayed in the *Iliad* and the *Odyssey*.

c. 1400. The palaces of Cnossus and Phaestus were destroyed a second time, by sea-raiders who were either the revolting lords of Mycenae or the Achaeans, who had occupied the mainland cities. Cretan civilization rapidly declined and during the succeeding two centuries its Mycenaean derivative, deprived of its source and subject to increasing pressure from northern barbarians, followed suit. By 1250, if not before, the Achaeans occupied Crete, and by 1100 the Dorians overran it and introduced the Iron Age.

c. THE INVASIONS

Greece was apparently uninhabited in Palaeolithic times, but the remains of Neolithic peoples occur throughout the Aegean area. Their ethnic character remains unknown, though they presumably did not speak an Indo-European tongue and were related among themselves. In later times such isolated tribes as the Leleges in Greece, the Carians in Asia Minor, or the Eteocretans in Crete probably represented their survivors.

c. 3000-2000. THE GREEKS, speaking a language belonging to the western (*centum*) division of the Indo-European family, began to spread southward from the northwestern corner of the Balkans

c. 1300. The Arcadians had already settled in the central Peloponnese and the **Achaeans,** who had migrated from Thessaly to occupy Mycenae, raided throughout the eastern Mediterranean With the aid of their Thessalian kin (**Achilles**) they sacked **Ilium (Troy),** traditionally after a ten years' war (c. 1184) Their migration may have been due to pressure from new invaders, since the **Ionians** appear to have occupied Attica and the **Boeotians** central Greece, while a backward group in Epirus were the original **Dorians.** Farther north, two peoples of the eastern (*satem*) division of the Indo-European family had settled, the **Illyrians** along the east coast of the Adriatic and the **Thracians** north of the Aegean

c. 1100. The Dorian invasion began One branch, the Phocians, thrust east to the Euripus; another south to the Gulf of Corinth, whence they crossed into the Peloponnese and drove out or subdued and enserfed the previous inhabitants (later known in Lacedaemon as *helots,* in Thessaly as *penestae*) The Dorians finally mastered Megara, the Argolid, and Laconia

c. 1000. The Greeks, who had learned seamanship from the Cretans, had long been migrating to Asia Minor for a number of reasons the adventurous spirit, increase of population, and the Dorian pressure. Some reached Cyprus, though they never fully displaced the Phoenicians The Dorians occupied Crete. On the Asia Minor coast three distinct groups emerged Aeolians from Thessaly in the north, with a religious center at Gryneium and the cities of Mytilene on Lesbos, Cyme, Magnesia on the Hermus, and Smyrna (which later became Ionian); Ionians from Attica and Euboea in the middle, with a religious center at Mycale and the cities of Phocaea, Colophon, Ephesus, and Miletus and the islands Chios and Samos, and Dorians from the Peloponnese in the south, with a religious center at Cnidus and the cities of Halicarnassus and the islands Cos, Rhodes, and Crete.

d. ARISTOCRACY AND TYRANNY; COLONIZATION AND TRADE

c. 900-600. Monarchies were replaced throughout Greece by **aristocracies,** and the kings vanished or were reduced to a titular office (the *archon basileus* at Athens) save in Sparta, where they retained considerable power, especially in warfare. The nobles became the dominant power in the state through the possession of good iron arms and the acquisition of property at the expense of poorer farmers. It was for such nobles that the *Iliad,* on the Trojan War, and the *Odyssey,* on the wanderings of Odysseus (Ulysses), were composed, probably gradually and orally out of traditional material by a series of bards in Asia Minor, though the final form is possibly due to a single **Homer** (c. 800?). Slightly later came the *Homeric Hymns,* really introductions to epic recitations, and **Hesiod** (c. 700?) of Boeotia, whose *Works and Days,* a farmer's almanac, voiced the distress of the poor and whose *Theogony* canonized Greek mythology. This was the period of the **geometric style** in vase-painting.

c. 800-600. Distress and food shortage, due to monopolization of the land by the nobles, led to **colonization,** encouraged first by the aristocrats to get rid of discontent and then by the tyrants for political and commercial advantages The traditional dates of the more important colonies in east and west, which were entered almost simultaneously, follow: Miletus colonized Cyzicus (757), and Abydus (756) on the Euxine But through friendship with Psammetichus I of Egypt, Miletus also founded the important trading post of Naucratis on the Nile (640). Phocaea settled Massalia (Marseilles) in Gaul (600). Rhodes settled Gela (688) and Gela founded

Acragas (580), both in Sicily Thera colonized Cyrene in North Africa (630) Chalcis and Eretria in Euboea sent colonies to the Chalcidice (northern Aegean) and to Sicily, notably Catana and Leontini (728), Rhegium (730), also Cumae (Bay of Naples, 760). Megara controlled the Hellespont with Chalcedon (660) and Byzantium, as well as settling the Sicilian Megara Hyblaea (728) Corinth occupied the strategic Potidaea (northern Aegean, 609), Corcyra (735), and Syracuse in Sicily (735). In southern Italy (Magna Graecia) Achaea settled Sybaris (721) and Croton (710), while Sparta, occupied with the conquest of Messenia, founded only Taras (Tarentum, 705).

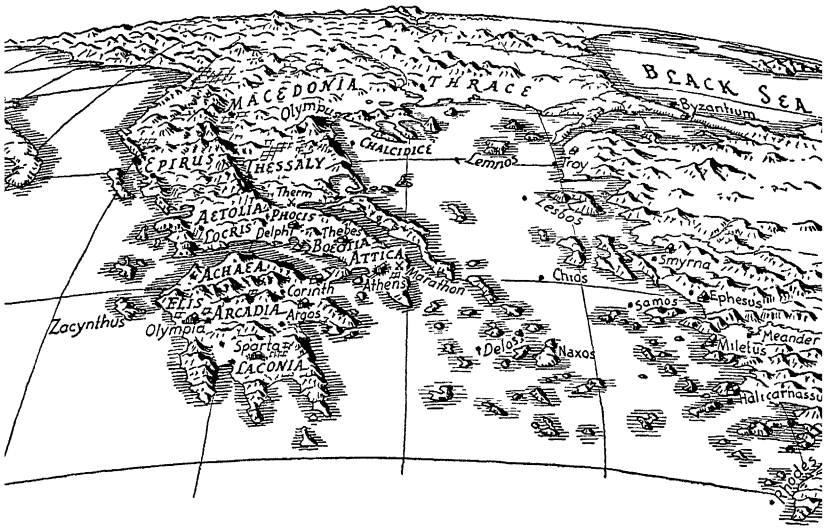
Trade had preceded colonization and in turn colonization encouraged trade, since not only the settlers but the peoples among whom they settled desired luxury products (oil, wine, and manufactures) from Greece, which they repaid with raw materials Greater skill in technical processes like metallurgy and pottery allowed the Greeks to compete favorably with the Phoenicians and encouraged the growth of an industrial population, as well as a trading one, in the cities Slavery increased and coined money was introduced from Lydia into Ionia and thence into Greece, traditionally by King Pheidon of Argos (c. 680). The two prominent standards of currency were the Euboean and the Aeginetan.

c. 650-500. Tyrannies arose in Greece, for a variety of causes The aristocracies refused political equality to the landless traders and manufacturers, the peasants were oppressed by the rich and encouraged to get into debt and then were reduced to slavery or exile, slaves began to compete with free labor. Ambitious individuals capitalized this discontent to overthrow the constituted governments and establish themselves as tyrants in almost all the Greek cities, with the notable exception of Sparta, whose landlocked situation, agricultural character, and entrenched ruling class enabled it to preserve its aristocratic form The tyrants were on the whole popular and successful; they kept the people happy with festivals and public works, they diminished the power of the nobles, and they abolished class or racial distinctions They fostered, especially, the artistic and intellectual life. **Lyric poetry** flourished, **Archilochus** the father of satire (c 700), the individual lyric of the Aeolians, **Alcaeus** and **Sappho** of Lesbos (c 600), the choral lyric of the Dorians, **Stesichorus** (c. 650) and **Arion** (c. 600). Contact with Lydia led to the replacing of the geometric style in art by the **oriental** (animal) **style. Philosophy** began with the Milesian School· **Thales** (predicted an eclipse in 585), **Anaximenes,** and **Anaximander.** Among the important tyrants were **Thrasybulus** of Miletus (c. 620); **Polycrates** of Samos (c. 530), noted for his navy, with which he almost dominated the Aegean, his building, and his alliance with Amasis of Egypt; **Cleisthenes** of Sicyon (c. 600), **Theagenes** of Megara (c. 640), **Periander** of Corinth (c. 600), patron of poetry, who recovered control of Corcyra from the oligarchs, and the **Peisistratids** in Athens The tyrannies generally were overthrown in the second generation, since they had served their purpose, and the tyrants' sons, born to power, tended to become oppressive Moreover, Sparta consistently opposed them.

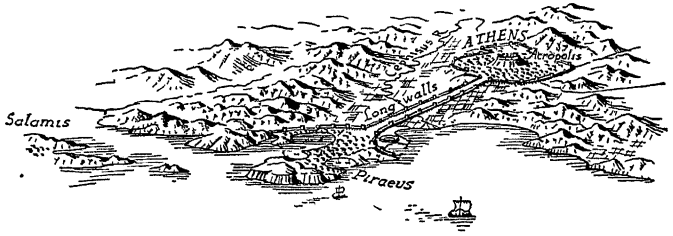
e. FORMATION OF THE GREEK STATES

(1) *Asia Minor*

c. 705. The **Kingdom of Phrygia** (traditional kings Midas and Gordius), which had considerably influenced the Asiatic Greeks, was destroyed by the **Cimmerians,** invaders from southern Russia. Its place was taken by the **Kingdom of Lydia,** in which Gyges founded the active Mermnad Dynasty (c. 685). He and his successors raided the Greek cities, but were prevented from conquest by further incursions of the Cimmerians, who sacked Sardis and slew Gyges (c 652).



585, May 28. Alyattes, third King of Lydia, and **Cyaxares,** King of Media, ended their war by a treaty defining their boundary at the river Halys Thales is said to have predicted the eclipse which induced them to treat and which, therefore, determines the date **Croesus** acceded to the Lydian throne (c 560) and began to reduce the Ionian cities to a tributary condition, save for Miletus His mild rule, however, did not check their political growth (tyrannies) but stimulated their economic and intellectual life



546 (539?). CYRUS, who had united his Persian kingdom with the Median by his defeat of Astyages (550), now defeated Croesus, crossed the Halys, sacked Sardis, and captured Croesus himself His general, Harpagus, subdued the Ionian cities, save Miletus, which retained its favorable status, and put in pro-Persian tyrants With the loss of freedom intellectual activity diminished

(2) *The Peloponnese*

c. 800. Sparta had become mistress of Laconia and had colonized the coast of Messenia. She warred with **Tegea,** chief city of the backward and disunited

Greek City-States

Athens and Piraeus

Arcadians, who maintained a loose religious union centering about the primitive worship on Mt Lycaeum. Politically, kingship survived in Arcadia into the 5th century. **Corinth,** under the close oligarchical rule of the Bacchiadae, had become commercially important and, until c 720, dominated its smaller neighbor **Megara. Argos,** though claiming the hegemony of Greece as heir of Mycenae, remained a weak state

c. 736-716. In the **FIRST MESSENIAN WAR,** Sparta, led by **King Theopompus,** conquered Messenia and divided the rich plain into lots, which the Messenians, as helots, worked for their Spartiate masters Besides helots and Spartiates, there was a third class of Laconians, the *perioeci* (dwellers-around), who were free but not possessed of citizen rights Sparta still, however, had an artistic and intellectual life equal to any in Greece, especially in respect to choral poetry.

c. 680. **King Pheidon** made Argos for a brief space powerful. He defeated Sparta allied with Tegea in the **battle of Hysiae** (669), and, in support of revolting Aegina, crushed Epidaurus and her ally Athens. Pheidon is said to have introduced coinage into Greece, perhaps with a mint on Aegina After his death, the powers of the rulers were curtailed and Argos declined.

c. 650-630. In the **Second Messenian War,** Sparta with difficulty crushed her revolting subjects, who were led by Aristomenes, master of Arcadia, and who took refuge on Mt. Eira.

c. 610. By the so-called *Eunomia,* the Spartans, fearing further revolts, completely reorganized the state to make it more severely military. Youths from the age of 7 were taken for continual military training. Men of military age lived in barracks and ate at common messes (*syssitia, phiditia*). Five local tribes replaced the three Dorian hereditary ones and the army was correspondingly divided, creating the *Dorian phalanx.* In the tribes were enrolled as citizens many non-citizens The *gerousia,* comprising 28 elders and the two kings, had the initiative in legislation, though the *apella* of all citizens had the final decision. The chief magistrates, *ephors,* were increased to five, with wider powers especially after the ephorate of **Cheilon** (556). Later ages attributed the reforms to the hero **Lycurgus** in the 9th century, perhaps because the new laws were put under his protection.

c. 560. Sparta finally reduced the Tegeates to the status of subject allies, not helots. She then (c. 546, **battle of the 300 Champions**), took the plain of Thyreatis from Argos. The kings Anaxandridas and Ariston extended the policy of alliances to all the Peloponnesian states save Achaea and Argos to form the **Peloponnesian League,** in which the allies had equal votes on foreign policies, contributed two-thirds of their forces in war, and paid no tax except for war Sparta's policy was hereafter anti-tyrant; she expelled the tyrants of Sicyon, Naxos, and, later, Athens (510), and sought to do so in Samos (c. 524, Polycrates)

c. 520. The young king **Cleomenes I** tried to reassert the royal power against the ephors. When the expulsion of the tyrants from Athens led not to a pro-Spartan oligarchy but to the democratic reforms of Cleisthenes, he led an expedition into Attica, which, however, failed because of the opposition of the other king, **Damaratus,** and the defection of Corinth through jealousy of Sparta's power Nevertheless, by his defeat of Argos in the **battle of Sepeia** (494) he so increased the power of Sparta and of himself that he was emboldened to depose Damaratus, despite the opposition of the ephors, on a charge of illegitimacy Public opinion then turned against him and he fled to Arcadia, whence he forced his return by arms. Traditionally, he soon after (c. 489) went mad, was imprisoned, and committed suicide, but this tale may conceal a real arrest and execution by the ephors He was succeeded by **Leonidas.**

(3) *Athens*

Attica was gradually unified by the device of *synoecism,* through which the numerous small independent cities surrendered their local citizenship for that of Athens. This process had by 700 taken in all Attica except Eleusis, which was soon added. Traditionally the whole process was accomplished by King Theseus

In the **Ancient Constitution of Athens** the people were divided into four hereditary tribes (*phylai*), each made up of a number of brotherhoods (*phratriai*), which had common religious ceremonies and gave assistance to members in legal strife and blood feuds. The nobles (*eupatridai*) formed smaller associations of clans (*genê*); the *phratriai* contained eventually both members of these clans (*gennetai*) and common people (*orgeones*), although at first perhaps only the former. Each tribe was divided for administrative purposes into 12 *naucrariai,* which handled the revenue and cared for the navy. The people were grouped, chiefly for military purposes, into three classes: *hippeis* (knights), *zeugitai* (those with a yoke of oxen), and *thetes* (laborers).

The nobles gradually restricted the power of the king by giving first his military functions to a *polemarch* and then his civil functions to an *archon*.

683. The hereditary kingship was abolished and made into an annual office (*archon basileus*) like the archon and polemarch Six *thesmothetai* were created to determine the customary law These, with the archon basileus, the polemarch, and the *archon eponymous* (civil archon), were known as the **nine archons.** They were chosen from the nobles by the **areopagus,** a council of nobles which was the greatest power in the state. The **ecclesia** (assembly of all the freemen) had either gone out of use or was completely without power.

632. **Cylon,** a noble related to Theagenes, tyrant of Megara, attempted to establish a tyranny, but was foiled Many of his followers were tricked into surrendering and then slaughtered by Megacles of the Alcmaeonid clan ("Curse of the Alcmaeonids")

621. Publication of the law by **Draco,** the unfairness of the nobles in administering the traditional law having led to a demand for its publication.

c. 600. **Athens** seized Sigeum from Mytilene; the resulting war was arbitrated (c 590) in favor of Athens by Periander of Corinth

594. **SOLON** was made sole archon to remedy the distress caused by the introduction of coined money and high rates of interest (usually 18 per cent); all parties agreed to give this man of the middle class complete powers of reform By the **Seisachtheia** (shaking-off-of-burdens) all debts on land were cancelled, all debt slaves in Attica were freed, those sold abroad were redeemed at state expense; securing of debts by the person was forbidden By his **judicial reforms** a new and milder code of laws replaced all of Draco's except the laws on homicide, a court of all the citizens, the *Heliaea,* was created and a right of appeal to it from decisions of the magistrates was granted By his constitutional reforms election of magistrates was given to the **ecclesia** of all freemen; a council (**boulê**) of 400 (100 from each tribe) was created as a deliberative body which had the initiative in all legislation· the assembly could only accept or reject its proposals The areopagus, hereafter composed of exarchons, continued as guardian of the laws to have large supervisory powers over the magistrates. Four classes of citizens were defined· *pentacosiomedimnoi* (who had revenues of 500 medimni of corn and/or metretai of wine or oil); the *hippeis* (300), the *zeugitai* (200); and the *thetes* (all the rest) Some time later these classes were redefined in terms of money, and based on property rather than income Only the first two classes were eligible to the archonship, the first three to the lower offices, the fourth could participate only in the heliaea and the ecclesia By his economic reforms, Solon devalued the drachma by about a quarter; weights and measures were increased in size, the exportation of all agricultural produce except oil was forbidden; and immigration of artisans was encouraged by ready grants of citizenship.

Solon's reforms were inadequate, chiefly because no provision was made to supply the freed slaves with land or to relieve the *hectemoroi* (share-croppers), who received only one-sixth of the produce of the land for themselves Besides, the rising class of artisans and traders was deprived of political power by the assessment of the classes on an agricultural basis Violent party strife continued immediately after Solon's archonship The rich nobles of the plain (*pediakoi*) were led by **Lycurgus,** the middle class (*paralioi*) by **Megacles** the Alcmaeonid

c. 565. Peisistratus acquired fame as the successful general in the **conquest of Salamis** from Megara. He organized a new party, the *diakrioi,* of the small artisans, shepherds, and other poor folk

561-527. **PEISISTRATUS** made himself tyrant, but was almost immediately driven out by Megacles and Lycurgus. In 560–559 he won Megacles over and was restored About 556 he was again expelled after a break with Megacles. After he had spent some years in gaining wealth from his mines in Thrace, he was restored with aid from Thessaly and Lygdamis of Naxos, whom he had made tyrant (c. 546) Peisistratus' opponents were now exiled and their confiscated lands used to provide for the poor. The *hectemoroi* were made landowners Peisistratus encouraged industry and trade, and introduced the popular **cult of Dionysius,** in order to break down the power held by the nobles through their hereditary priesthoods. Miltiades and a few Athenians, with Peisistratus' encouragement, set up a tyranny over the Thracians of the Chersonese. Delos was purified. Abroad, Peisistratus pursued a policy of friendship with all near neighbors, at home, he ruled without abolishing existing forms.

527. On the death of Peisistratus his sons **Hippias and Hipparchus** succeeded to the tyranny. Athens protected Plataea against Thebes (519), which was trying to force her into the Boeotian League.

514. An attempt was made by **Harmodius and Aristogeiton** to overthrow the tyranny, but only Hipparchus was killed Hippias was finally expelled by the exiled Alcmaeonids with Spartan aid (510) Party strife followed between the nobles led by Isagoras and the commons led by the Alcmaeonid **Cleisthenes,** who was finally victorious and inaugurated a

508. Democratic reform of the Constitution. In order to merge the new citizens completely with the old, *demes* (townships) were created to a number of over 150, and citizenship was made dependent on membership in one of these rather than as before in a *phratria.* To break the power of the noble clans, which were connected with the old hereditary tribes, a new system of 10 local tribes (*phylai*) was created Attica was divided into three sections: Athens and its vicinity, the coast, and the interior The *demes* in each section were associated in ten *trittyes,* and each tribe was composed of one *trittys* from each section, not always contiguous. A new council (*boulê*) of 500 replaced the Solonian 400; its members were chosen by lot, 50 from each tribe and from each *deme* in proportion to its population The army was reorganized into ten tribal regiments, each of which in 501 was put under an elective general (*strategos*).

507. At the appeal of Isagoras, **Cleomenes** of Sparta invaded Attica, expelled Cleisthenes, and tried to restore the aristocracy The Athenians rose, expelled the Spartans, and recalled Cleisthenes.

506. A second expedition of Cleomenes was prevented by King Damaratus and by Corinth. The Athenians crushed the Boeotians and Euboeans and annexed part of Chalcis' territory. They disregarded an ultimatum from Darius of Persia that they restore Hippias, whom Darius had made tyrant of Sigeum.

498. The Athenians sent 20 ships to the aid of the revolting Ionians, but after one campaign withdrew and tried to conciliate Persia by electing Hipparchus, a Peisistratid, to the archonship (496).

493/2. Themistocles was elected archon by the anti-Persian party and commenced the fortification of the Piraeus, but his naval policy was opposed by Miltiades, also anti-Persian, who had fled the Chersonese after the failure of the Ionian revolt.

(4) *Central and Northern Greece*

Some time before 700 the cities of Thessaly had been grouped in four *tetrads,* each under a *tetrarch* Now they were organized into a loose **Thessalian League,** which elected, when common action was necessary, a general (*tagos*). There was a federal assembly which levied taxes and troops on the members. Until the 6th century this league possessed the strongest army in Greece, Thessalian cavalry was always unsurpassed The looseness of the organization, however, prevented Thessaly from playing a leading rôle in Greece. Thessaly dominated the **Amphictyony of Anthela,** a religious league which by 600 included all the states of central Greece.

c. 590 In the **FIRST SACRED WAR,** under the leadership of Thessaly, and with help from Sicyon and Athens, the Amphictyony of Anthela defeated and demolished Crisa (Cirrha), in whose territory the shrine of Delphi lay. The pretext was the tolls levied by Crisa on pilgrims to Delphi. Delphi was put under the administration of the Amphictyones and their headquarters were transferred thither, Athens and the Dorians of the Peloponnese were admitted to membership.

c. 570. In **Euboea** the two states of importance, Chalcis and Eretria, had been very active in colonization and industry (c. 800–650). The Euboean coinage and weights and measures spread through the Greek world.

c. 570. Chalcis, supported by Corinth, Samos, and Thessaly, now became engaged in the **Lelantine War** with Eretria, aided by Aegina, Miletus, and Megara, over the possession of the rich Lelantine plain Chalcis was victorious

c. 600-550. Thebes formed a **Boeotian League** by bringing pressure on the other states of Boeotia After a long struggle the powerful Orchomenus was reduced.

519-506. Plataea refused to join the league and entered into alliance with Athens. In the ensuing conflict, the Boeotians and Euboeans were defeated by the Athenians.

(5) *Sicily and Magna Graecia*

The original people of Sicily were Sicans; these were displaced by the Sicels from southern Italy Before 800 the Elymians entered, probably from Spain, and occupied the western corner of Sicily. The Phoenician trading posts in Sicily (p. 32), which had covered the coast, were gradually driven out after 735 (foundation of Naxis) by the Greek colonization, except for Motya, Panormus, and Solus, in the west. Meanwhile **Carthage** (p 34) had grown into an imperial power by founding colonies of her own and by protecting the older

settlements after Tyre and Sidon were weakened by foreign domination after 669

c. 580. An attempt of the Spartan Pentathlus to colonize western Sicily was defeated by the Elymians

c. 570-554. Phalaris, tyrant of Acragas, pursued a policy of energetic and ruthless expansion, with extreme cruelty at home

c. 550. The Carthaginian **Malchus** campaigned successfully in Sicily.

535. In the naval **battle of Alalia,** off Corsica, the Carthaginians and Etruscans defeated the Phocaean settlers and forced the abandonment of their colony. Shortly after this Massilia defeated Carthage and imposed a treaty limiting Carthaginian influence in the north and west.

510. Sybaris was destroyed by Croton, which was at this time ruled by the sect of the **Pythagoreans.** An attempt of the Spartan Dorieus to colonize western Sicily was prevented by the Carthaginians.

The conquest of Ionia by Persia led to a shift of intellectual and artistic effort to Greece proper and, thanks to their wealth, to the western colonies **Tragedy** began at Athens with **Thespis** (539); the poets **Pindar, Simonides,** and **Anacreon** flourished c. 500. Attic black-figured vases gave way to red (c. 525). **Sculpture** became more common, in the archaic style (Athens, Delphi). **Heraclitus of Ephesus,** last of the Ionian physicists, advocated "change" against the "one" of **Parmenides of Elea** (*Eleatic School*) in southern Italy **Pythagoras** founded his sect of mystic philosophers in Croton.

2. THE PERSIAN WARS

499-494. The Ionians revolted under the leadership of **Aristagoras** of Miletus, against the Persians and the pro-Persian tyrants Aristagoras made a trip to Greece to solicit aid, Sparta refused, but Athens responded with 20 ships (498) and Eretria with five. The rebels made a dash on Sardis, burned it, and retired to Ephesus Greek disunion and the desertion of the Samians and Lesbians led to the defeat of the Greek fleet in a **battle off the island of Lade** (494). Darius' control of the sea now enabled him to take and sack Miletus. This practically ended the revolt Darius subdued all the Greek cities, but did not again force tyrants upon them.

490. BATTLE OF MARATHON. To punish Athens and Eretria for their aid to the rebels Darius sent an expedition across the Aegean under the command of Datis and Artaphernes The Athenian ex-tyrant, Hippias, accompanied the expedition.. Athens called for the aid of Sparta, but it came too late because of the festival of the Carneia Artaphernes besieged Eretria on Euboea with part of the Persian forces, while Datis landed with another part at **Marathon,** the center of Peisistratid strength. When Eretria fell through treachery, **Miltiades,** one of the ten generals, persuaded the Athenians to attack, lest Artaphernes sail round Sunium to Athens while Datis held them at bay. The Athenians won a complete victory and marched back to Athens in time to prevent its betrayal to Artaphernes by the now pro-Peisistratid Alcmaeonids. The Persians returned to Asia

Miltiades failed to capture Paros and was condemned to a heavy fine. He died soon.

489. Athens waged an indecisive **war with Aegina** until c 483.

488-482. By a reform of the Athenian constitution (488/7), the nine archons were hereafter chosen by lot from 500 candidates elected by the demes; at some later time this was changed to 10 preliminary candidates elected from each tribe, and still later the preliminary candidates also were chosen by lot This change naturally reduced the power of the polemarch in favor of the 10 elected generals, of whom one might be selected by the people at large as general-in-chief (*strategos autocrator*). To guard against tyranny, the device of *ostracism* was devised In a meeting in which not less than 6000 votes were cast (*ostraka* were potsherds used for voting), the man with the greatest number was obliged to leave Athens for ten years, he remained a citizen, however, and his property was not confiscated Hipparchus was ostracized in 487/6, Megacles the Alcmaeonid in 486/5; Xanthippus of the same party in 484/3. The anti-Persian party, of which the noble faction was led by **Aristides** and the commons by **Themistocles,** regained power. Themistocles prevailed upon the people to use a rich new vein of silver found in the state mine at Laurium for the building of 200 **triremes,** a newly invented type of war-

ship. Aristides was ostracized due to his opposition to this measure, and from now on ostracism was used as a measure of party government By 480 Themistocles headed the state as *strategos autocrator*

480. CAMPAIGN OF THERMOPYLAE. **Xerxes,** who had succeeded Darius in 486, demanded earth and water (submission) from all the Greek states, most of which refused. Xerxes thereupon led a carefully prepared expedition of about 180,000 men (not the traditional 900,000) into Greece through Thrace and Macedonia. A Greek force sent to hold the pass of Tempe retired when it was found untenable, the Greek army then occupied the **pass of Thermopylae,** and the fleet the Gulf of Artemisium the plan was for the army to hold the Persians while the fleet won a victory and thus compelled retreat The naval fighting, however, was indecisive Under the guidance of the Greek Ephialtes, a Persian company traversed a side path, routed a small Phocian outpost, and turned the Greek position at Thermopylae. Most of the Greeks withdrew, but **Leonidas,** with 300 Spartans and 700 Thespians, refused to retire and they were annihilated The Boeotians, Phocians, and Locrians immediately "medized"; the Greek army retreated behind a wall built across the Isthmus of Corinth, and the fleet moved to the Saronic Gulf between Athens and Salamis. The Persians occupied Attica and destroyed Athens, whence the citizens had fled to Salamis and the Peloponnese.

BATTLE OF SALAMIS. The Greek fleet was bottled up in the Saronic Gulf by the superior Persian forces Themistocles craftily warned Xerxes that the Greeks were about to escape by night, and the Persians thereupon rushed into the narrows, became entangled, and were thoroughly defeated Since it was impossible to force the isthmus merely by assault, this meant the end of the year's campaign Xerxes returned to Sardis with a third of the army, Artabazus to Thrace with another third, and Mardonius wintered in Boeotia with the rest

479. BATTLE OF PLATAEA. After unsuccessfully trying to detach the Athenians from the Greek cause, Mardonius again invaded Attica. The Peloponnesians, urged by the Athenians, advanced to Plataea under the Spartan **Pausanias.** Mardonius attacked them as they were confusedly shifting their position, but the day was won by the superiority of the heavy-armed Greek *hoplites* and the discipline and bravery of the Spartans Mardonius was killed, his camp plundered, and the Persian army routed The Greeks then took Thebes by siege, and abolished the medizing oligarchy in favor of a democracy In the meantime, the Spartan **Leotychidas** had sailed with a small fleet to guard the Cyclades against Persia The Samians and Chians prevailed upon him to attack the Persians, who were at Samos. The Persians, fearing to meet him on the open sea, drew up their ships on land at **Mycale** near Samos. Leotychidas stormed their position, but the Persians succeeded in burning their ships before the Greeks could seize them. The Ionians and several of the island cities (Samos, Lesbos, Chios) now revolted from Persia and joined the Greek fleet, which laid siege to Sestos in the Thracian Chersonese. The Spartans returned home in the fall, but the Athenians and Ionians succeeded during the winter in reducing Sestos (478)

3. THE FIFTH CENTURY

a. THE PELOPONNESE, 479-461

479. **Pausanias,** in command of the allied fleet, reduced Cyprus and Byzantium. By his domineering he alienated the Ionians and caused the ephors to fear lest his power become excessive; they recalled him and after a first acquittal he was later (c. 471) starved to death in the temple of Athena of the Brazen House. The Ionians refused to recognize his successor Dorcis and went over to Athenian leadership. Thus Sparta's prestige in the Peloponnese fell very low. In 471 Elis united herself under a democratic government by *synoecism* and Tegea deserted Sparta to form an alliance with Argos, probably fostered by Themistocles

470. After a drawn **battle at Tegea** all of Arcadia except Mantinea joined the anti-Spartan alliance. While Argos was occupied in reducing Tiryns and Mycenae (c. 469), however, Sparta crushed the allies at Dipaea and restored her hegemony.

464. An earthquake in Sparta gave the helots of Messenia a chance to revolt (**Third Messenian War**); after a defeat they retired to Mt Ithome, where the Spartans besieged them. Unable to

take the place, the Spartans called on the aid of their allies, including Athens Athens sent a force under Cimon which was shortly dismissed (462), probably because many of its members were really hostile to Sparta; this marked the end of the Spartan-Athenian alliance. The fall of Ithome ended the revolt (461), and the Messenians were given safe-conduct to Naupactus, which Athens had just acquired from the Ozolian Locrians.

461. **Megara,** involved in a border war with Corinth, appealed unsuccessfully to Sparta and then made an alliance with Athens.

b. ATHENS AND THE DELIAN LEAGUE, 479-461

479. Athens and the Piraeus were fortified by Themistocles, despite the opposition of Sparta.

478-477. **The Ionians,** disgusted with Spartan leadership, made an alliance with Athens for the expulsion of the Persians from all Greek territory. Each ally was to contribute either a quota of ships, or money in lieu of this: the smaller states chose the latter. **Aristides** ("The Just") assessed the tribute, using the old Persian tribute as a guide: the total was probably about 200 talents at first. The league had a general assembly (*synedrion*) on Delos, which at first controlled league policy, although it was soon dominated by Athens.

476. **Cimon** made an expedition to Thrace and captured the Persian forts along the coast except Doriscus; the siege of Eion occupied the winter. Some time later Carystus in Euboea was compelled to join the league. These successes enabled Cimon to procure the ostracism of Themistocles (471), probably because the latter wished to follow an anti-Spartan policy. Themistocles went to Argos, where he conspired against Sparta; he was later (467) outlawed by Athens and fled to Persia, where Artaxerxes gave him a refuge (464).

467. When **Naxos** attempted to withdraw from the Delian League, though the treaty of alliance made no provision for withdrawal, Athens forced the city to raze its walls, surrender its fleet, and henceforth pay tribute. Athens after this often interfered in the internal affairs of the tributary states, which were soon considered subjects and not equal allies. Commercial disputes between citizens of two subject states or between those of a subject state and Athens, as well as capital criminal cases, were tried in the Athenian courts Part of the rebels' lands were often taken, especially during Pericles' supremacy, to establish an Athenian *cleruchy* (colony), serving a military purpose as well as relieving unemployment in Athens Garrisons were left under military captains (*phrourarchoi*) if necessary; sometimes only civil commissioners (*episkopoi*) were sent. Athenian surveyors (*taktai*) reassessed the tribute, and the Athenian people controlled its use, as well as the use of the contingents of the autonomous allies.

466. Cimon defeated the Persians in a great naval victory at the **Eurymedon River** on the south coast of Asia Minor. He then crushed a revolt of Thasos (465-463). Under the leadership of **Ephialtes,** a man of great probity and ability, a popular party was rising against the domination of Cimon He was charged with having accepted a bribe from Alexander of Macedon, but was acquitted and prevailed over Ephialtes in having a force sent to Sparta against the helots (462). When the Spartans dismissed Cimon, the strong anti-Spartan feeling in Athens caused him to be ostracized (461). Ephialtes then succeeded in depriving the areopagus of all its powers except the jurisdiction in homicide cases, the other powers were distributed among the ecclesia, the council of 500, and the popular courts, which by this time, owing to the press of imperial business, had been changed from one panel of 6000 to several panels of from 201 up. Ephialtes was murdered shortly afterwards, and **Pericles,** on his mother's side an Alcmaeonid, took his place in the leadership of the popular party.

c. THE FIRST PELOPONNESIAN WAR

460. **Inaros,** who had previously raised a revolt in Egypt and defeated a Persian force, appealed to Athens for aid and was sent a fleet (probably not of 200 sail), which took Memphis. Simultaneously war broke out between the Athenians and the Peloponnesians, caused in part by the Megarian alliance of 462, which the Athenians had followed with alliances with Argos and Thessaly.

459. The Athenians were defeated at **Halieis** by the Corinthians and Epidaurians, but their fleet won a victory at **Cecryphaleia.** The Aeginetans joined the Peloponnesians (458), but their combined fleet was defeated by the Athenians in a **battle off Aegina** and the island was invested by a force of Athenians under Leosthenes. The Corinthians raided the Megarid to create a diversion but were defeated by the Athenian old men and boys under Myronides.

457. **The Aeginetans** were forced to surrender, join the Delian League as tributaries, and surrender their fleet.

Sparta then entered the war, sent an army across the Corinthian Gulf, and restored the Boeotian League under the hegemony of Thebes. Athens was defeated at **Tanagra,** but the Spartans returned home, leaving the Athenians to defeat the Boeotians at **Oenophyta** and enroll all the cities except Thebes in her league; Phocis and Opuntian Locris also entered. The Athenians connected the Piraeus with Athens by two long walls.

456. A Persian force under **Megabyzus** defeated the Athenians, who were besieging Leukon Teichos, the citadel of Memphis The Athenians were in turn besieged on the Nile island Prosopitis

455. The Athenian **Tolmides** sailed around the Peloponnese, raiding the coast, burning the Spartan shipyard at Gytheum, and gaining Achaea for the Athenian League

454. **Pericles** crossed the Isthmus and made an unsuccessful campaign in the Corinthian Gulf But meanwhile the Athenians in Egypt were defeated and slaughtered, and a relief squadron met the same fate As a result the treasury of the Delian League was moved to Athens

451. After three years of inactivity **Cimon** returned from exile and negotiated a five years' truce with Sparta. Thus, being unprotected, Argos had to make a thirty years' peace with Sparta. Cimon then took a large force to Cyprus (450) but a plague (famine?) caused his death and necessitated the return of the force to Athens. As it was departing, the fleet won a great **victory off Salamis,** a town of Cyprus. An understanding was then reached with Persia (the so-called **Peace of Callias**).

449-448. **THE SECOND SACRED WAR** was begun when Sparta took Delphi from Phocis and made it independent, Athens immediately restored it to the Phocians.

447. **Boeotia** revolted and an inadequate Athenian force under Tolmides was crushed at Coronea Moderate oligarchies were set up in all the Boeotian cities. The Boeotian League was re-established on a federal principle. a total of 11 Boeotarchs were sent by the cities in proportion to their sizes; for each Boeotarch a city was entitled to 60 seats on the federal council. Both local and federal councils were divided into four sections, of which each in turn served as council, while the four together constituted a plenary assembly. There was a federal treasury and coinage Troops were levied in proportion to population. Phocis and Locris followed Boeotia in quitting the Athenian League.

446. **Euboea revolted** and Pericles crossed over with an army. Simultaneously the Peloponnesians invaded the Megarid and drove out the Athenian garrison Pericles returned, but not daring a battle retired to Athens and when the Peloponnesians reached Eleusis came to terms satisfactory to the enemy, who withdrew. Pericles then crushed the revolt in Euboea, and established a cleruchy on the territory of Histiaea. Negotiations with the Spartans continued, and during the winter

446/5. **THE THIRTY YEARS' PEACE** was concluded. Megara returned to the Peloponnesian League; Troezen and Achaea became independent, Aegina was to be tributary but autonomous, disputes were to be settled by arbitration Disgust among the Athenian conservatives at the failure of the anti-Spartan policy led to an attempt to ostracize Pericles, but it resulted in the ostracism (445) of their leader Thucydides, son of Melesias (not the historian). Pericles enjoyed undisputed control until 430

d. ATHENS, 460-431

457. **Pericles** made the *zeugitae* eligible to the archonship; the *thetes* were never legally eligible, but in fact were soon permitted to hold the office. Athenian imperialism was extended to the far west by an alliance with Segesta and Halicyae in Sicily (453). An extremely important measure for the development of the democracy was the institution (451) of pay for the *dicasts* (jurors) of the popular courts, which made it possible for the poorest citizens to serve. At the same time Pericles carried a bill restricting Athenian citizenship to those both of whose parents were Athenians (repealed 429, re-enacted 403), and when Athens received a gift of free corn from Psammetichus of Egypt in 446/5 the lists were revised and 5000 citizens removed The western policy was continued with the foundation of Thurii (443) and the alliances made with several Ionic cities of Sicily.

441. Miletus, involved in a war with Samos, appealed to Athens, which replaced the oligarchy in Samos with a democracy.

440. **Samos** revolted and threw out the democracy, but the Athenians after a long siege took the city (439) which lost its fleet, its walls, and its autonomy, being made tributary Chios and Lesbos were now the only autonomous allies in the league.

437. A policy of expansion in the north was begun with the foundation of **Amphipolis** in Thrace, controlling the mines of Pangaeus; it also relieved unemployment and served as a garrison against disaffected allies. Perhaps in the same year Pericles made an expedition into the Euxine and established good relations with the princes of Panticapaeum, who exported the grain badly needed by Athens Athenian settlers were sent to various Pontic cities In the Corinthian Gulf about this time Phormio made an alliance with some of the Acarnanians.

e. SICILY, 499-409

The first decades of the fifth century witnessed the rise of tyrants in the Sicilian cities, of whom the most important were **Theron of Acragas** (488–472) and **Gelon of Gela,** later of Syracuse (485–478). Gelon made Syracuse the first city of Sicily, largely by transporting thither populations from conquered neighbors. He differed from the usual tyrant in favoring the landed nobles (*gamoroi*) at the expense of the commons.

480. **Terillus,** tyrant of Himera until Theron conquered that city, appealed for Carthaginian help. Carthage, fearing the alliance of Gelon and Theron, responded with a force under Hamilcar, which was utterly defeated at Himera by the allies Hamilcar was killed and Carthage forced to pay an indemnity

478-466. **Hieron I,** brother of Gelon, marks the height of the first Syracusan tyranny He moved the citizens of Catana to Leontini and resettled Catana with his mercenaries under the name Aetna In alliance with Aristodemus of Cumae he defeated the Etruscans in a naval **battle off Cumae** (474).

472. **Thrasydaeus,** a cruel and hated ruler, succeeded his father Theron at Acragas He immediately became involved in a war with Hieron and was decisively defeated The people of Acragas and Himera expelled him and set up a democracy.

466. **Thrasybulus** succeeded his brother Hieron at Syracuse, but was expelled directly; a democracy was established The attempted tyranny of **Tyndarides** (Tyndarion) led to the introduction of *petalism*, like Athenian ostracism.

467/6. **Rhegium and Taras** were defeated with heavy losses by the native Italian Iapyges A democracy was established in Taras and the Pythagoreans were expelled from the Italian cities generally

463-460. After a series of conflicts the mercenaries of the deposed Sicilian tyrants were left in possession of **Messana** (formerly Zancle)

459/8. The Sicels united under **Ducetius** and founded a capital at Palice.

453. The Elymian towns of Segesta and Halicyae became involved in a war with Selinus and made an alliance with the aid of Athens

450. Syracuse and Acragas finally succeeded in defeating Ducetius at Noae; he was exiled to Corinth and the Sicel federation fell apart. As a result of this victory Syracuse and Acragas fell out over the division of territory (c. 445) Syracuse was finally victorious and became the recognized leader of Sicily. In fear of her, Rhegium, Leontini, Catana (?), and Naxos (?) made alliances with Athens (443). Athens at the same time refounded the site of Sybaris as Thurii, calling in colonists from all of Greece

440/39. **Ducetius,** who had returned in 446, restored the Sicel federation, and after founding Cale Acte, died, his federation was completely ended, Syracuse destroyed Palice.

427-424. **A general war** broke out in Sicily. Naxos, Catana, Leontini, Rhegium, Camarina, and most of the Sicels opposed Syracuse, which was supported by Gela, Messana, Himera, Lipara, and Locri Gorgias of Leontini went to Athens and made an appeal for aid, which was granted. After indecisive fighting the aristocrat Hermocrates of Syracuse persuaded the warring cities, which had assembled in the **Conference of Gela,** to make peace and cease to call in the Athenians

416. **Segesta,** at war with Selinus, again obtained Athenian aid under the treaty of 453

415-413. The **Athenian expedition** against Syracuse, during the Peloponnesian War. The Athenians were finally defeated at the Assinarus. A democratic reform was instituted in Syracuse by Diocles (412) privileges of the lower classes were extended and many offices were made elective by lot Hermocrates, who had commanded a naval squadron in aid of Sparta, was banished after the **battle of Cyzicus** (410).

f. THE GREAT PELOPONNESIAN WAR

Thucydides considered the war of 431–421 (the **Archidamian War**) and that of 414–404 (the **Decelean** or **Ionian War**) to be in reality one, and together they are

called the **Peloponnesian War.** Thucydides' incomplete history covers the period to 410 The basic cause of the war was the fact that there existed in Greece two great rival systems of alliances, comprising practically all of continental and Anatolian Greece, each of which was deemed essential by its leader Thus neither leader could afford to tolerate any action threatening the solidity of its league, nor could it afford to allow the other to attain power appreciably superior to its own Hence any minor conflict was bound to involve all Greece, and such a conflict was sure to arise.

435. Corcyra, quarreling with Corinth over the latter's interference in their joint colony Epidamnus, defeated the Corinthian fleet in the **battle of Leucimne.** Corinth began preparation of a great expedition, and the Corcyreans in fear appealed (433) to Athens for an alliance, which was granted, since Athens desired a station on the route to the west (to a small degree for commercial reasons), and especially since she feared Corinth's prospective naval power should the latter acquire the Corcyrean fleet. Ten ships were dispatched to Corcyra. The Corinthians attacked at Sybota, but when it was clear they were winning, the Athenians entered the battle, and the arrival of 20 more ships caused the Corinthians to return home Athens then demanded that her subject Potidaea, a Corinthian colony, cease to receive her annual magistrate from Corinth, and raze her seaward walls

432. Assured of Peloponnesian aid, the **Potidaeans** revolted in the spring An Athenian force won a battle before Potidaea in the fall. Pericles passed a bill barring the Megarians from all the harbors of the Athenian Empire, ruining them economically; the Peloponnesians alleged that this was contrary to the Thirty Years' Peace, but the truth is uncertain. The Corinthians, Megarians, and Aeginetans forced the Spartans to take action and, although opposed by King Archidamus, the ephor Sthenelaidas persuaded the Spartan assembly to declare the peace broken The **Peloponnesian League** was then assembled and declared war The winter was taken up by fruitless negotiations

431. The war began when a band of Thebans by treachery entered Athens' ally Plataea; the Thebans were induced to surrender and were then killed.

The strategy of the Athenians, devised by Pericles, was to refuse a land battle, in which they would almost certainly be defeated, remain within their walls, and let their country be ravaged; they could support themselves through their control of the sea, and hoped to wear down the Peloponnesians by coastal raids and destruction of their commerce They also ravaged the Megarid twice annually, when the Peloponnesian army was not assembled. The strategy of the Peloponnesians was to ravage the land of Attica annually and, if possible, lure the Athenians into battle; they also gave encouragement and support to revolting allies of Athens

431. The Athenians expelled the inhabitants of Aegina and replaced them with Athenian cleruchs Thucydides put in Pericles' mouth the famous ***Funeral Oration*** for the war dead of this year

430. A great plague broke out at Athens. When an Athenian expedition against Epidaurus failed, it was sent to Potidaea, but returned after infecting the troops there with the plague Disgusted, the Athenians deposed Pericles During the winter Potidaea surrendered

429. The plague continued Pericles was re-elected *strategos* in the spring, but died soon after. Instead of invading Attica, the Peloponnesians laid siege to Plataea The Athenians sent Phormio to block the Corinthian Gulf. Off **Naupactus** he won two battles against superior forces.

428. Cleon succeeded to the leadership of the radical party in Athens, which favored war; the conservatives, opposed to war, were led by **Nicias.** All Lesbos except Methymna revolted on the promise of Spartan aid To meet this emergency the Athenians levied the first direct property tax (*eisphora*) since 510 and sent out a large fleet under Paches.

427. Mytilene fell before the dilatory Spartan admiral, Alcidas, arrived The leaders were executed and Athenian cleruchs were sent to the island. Plataea was finally taken by the Spartans, half the garrison had previously escaped; those who remained were executed The oligarchs in Corcyra, wishing to end the alliance with Athens, opened civil war on the democrats, but the latter, with Athenian help, put down the rebellion, many oligarchs fled to the mainland opposite.

426. The Spartans offered peace to Athens, but it was refused

425. The Athenian general, **Demosthenes,** in co-operation with the Acarnanians, took Anactorium. He was then sent to reinforce a fleet in Sicily but on the way seized **Pylos,** on the west coast of the Peloponnesus. Demosthenes was left with five ships, to use this station to stir up the Messenian helots against Sparta. But the Spartans besieged this force on Pylos by

landing a force on Sphacteria, an island in the bay. The Athenian fleet returned, defeated the Peloponnesians, and blockaded Pylos. Cleon, in Athens, accused Demosthenes of dilatoriness and, on the motion of Nicias, was sent himself to do better. To everyone's surprise, Cleon and Demosthenes captured the 120 Spartiates on Sphacteria. These were held as hostages to prevent another invasion of Attica.

424. Nicias seized **Cythera.** Cleon almost tripled the tribute assessment; pay for the dicasts was raised from 2 to 3 obols a day. Demosthenes and Hippocrates seized Nisaea but were prevented by Brasidas, on his way to Thrace, from taking Megara. **Brasidas,** with 700 helot hoplites and 1000 Argive mercenaries, continued to Thrace, Athens' only vulnerable point, and raised rebellion in several cities Demosthenes and Hippocrates planned a synchronized invasion of Boeotia from the west and east respectively, to be aided by Boeotian democrats The Thebans prevented Demosthenes from invading Boeotia from Acarnania and inflicted a heavy defeat on his colleague Hippocrates at Delium. Brasidas took Amphipolis. Thucydides, the historian, commanded a fleet near-by and was exiled at Cleon's instance on a charge of negligence. The fleet in Sicily returned after the **Conference of Gela.**

423. The Athenians made a year's truce with Sparta. Brasidas, however, continued to raise rebellions in the Thracian cities, so the Athenians broke off negotiations.

422. **Cleon** took a force to Thrace, but was routed and killed before **Amphipolis;** Brasidas also killed. thus the leaders of the war parties on both sides were eliminated and negotiations reopened. Sparta's position in the Peloponnese was being shaken by trouble with Mantinea and Elis, the imminent expiration of the peace with Argos, and the Athenian possession of Pylos, Cythera, and the 120 captives. Athens had exhausted her reserves, which had amounted to 6000 talents in 431.

421. **THE PEACE OF NICIAS** was negotiated, to last for 50 years The Athenians were to keep Nisaea until the Boeotians restored Plataea; the Chalcidian cities were to be autonomous but tributary; Amphipolis was to be restored; the captives on both sides were to be freed. The Spartans restored the Athenian prisoners, but Brasidas' successor Clearidas refused to give over Amphipolis The Corinthians, Megarians, Eleans, and Boeotians refused to sign the treaty the former two because they received no benefits from the whole struggle, the Eleans because of a private quarrel over Lepreum, and the Boeotians because they did not wish to restore Plataea. To protect herself, Sparta made an alliance with Athens for 50 years Thereupon, Elis, Mantinea, Corinth, and the Chalcidian cities made an alliance with Argos, whose treaty with Sparta had expired Megara and Boeotia delayed action.

420. Sparta broke the terms of the Athenian alliance by making a separate treaty with Boeotia, whereby Boeotia was to restore Panactum to Athens The Boeotians, however, first razed Panactum, and the Athenians continued to hold Pylos The action of Boeotia caused Corinth to quit the Argive League Athens formed **the Quadruple Alliance** with Argos, Mantinea, and Elis, for 100 years The two latter states at this time were already at war with Sparta.

418. The Spartans under **Agis** invaded Argos and, after considerable delay, the Athenians sent troops to Argos' support. Agis decisively defeated the Athenians, Argives, and Mantineans (the Eleans dropped out) in the **battle of Mantinea** and restored Sparta's hegemony in the Peloponnese. The Spartans then sent an ultimatum to Argos, which proceeded to repudiate the quadruple alliance and make a 50 years' alliance with Sparta. In the spring of 417, the Spartans put an oligarchic government into Argos, but it fell immediately and the democrats renewed the treaty with Athens for 50 years During the next two years various Spartan armies raided Argos, the Athenians each time sent troops which arrived too late to encounter the Spartans

416. Athens took by siege the island of Melos, which had refused to join the empire. The men were killed, the women and children enslaved; a cleruchy was established.

Selinus attacked Segesta, which appealed to Athens. Athens had by now a reserve of 3000 talents, the industrial and trading elements desired westward expansion. Against Nicias' opposition an expedition to Sicily was voted, to be commanded by Nicias, Alcibiades (the prime mover), and Lamachus

415-413. **The Sicilian expedition** set out with a fleet of 134 triremes, carrying 4000 hoplites. Nicias refused Lamachus' proposal to attack Syracuse immediately. Alcibiades was recalled on charges of sacrilege, mutilating the *Hermae* and profaning the Eleusinian Mysteries He fled to Sparta. The Athenians won over Naxos and Catana, but accomplished nothing more.

414. Hermocrates was elected to command the defense of Syracuse The Athenians almost succeeded in enclosing the city by a wall, but were prevented by the arrival of the Spartan Gylippus with a small force; his seizure of the heights called *Epipolae* permanently prevented circumvallation.

413. Reinforcements were sent under Demosthenes His night attack on Epipolae failed and he advocated immediate return, but was prevented by Nicias' superstitious fear of an eclipse (Aug 27). When the Athenians finally attempted to leave, the Syracusans, who had strengthened their fleet, defeated them in two naval battles. The Athenians withdrew by land; the rear under Demosthenes lagged behind and was defeated, the van under Nicias was crushed at the **Assinarus.** The generals were executed; the prisoners were kept for a time in the stone quarries and then sold into slavery.

414. The Athenians sent a fleet against the coasts of Sparta. The Spartans declared the peace broken

413. The Spartans seized **Decelea** in Attica. This post was fortified and a garrison kept there continually, the Athenians were thus absolutely prevented from using their own land The radical party in Athens, led by Peisander and Androcles, fell after the Sicilian defeat and a conservative reform took place A college of 10 "deliberators" (*probouloi*) received many of the functions of the old council. The imperial tribute was replaced by a 5 per cent import and export levy in all harbors of the empire

412. A small Spartan squadron stirred up revolts along the coast of Ionia. The Athenians voted to use their last 1000 talents, laid away for extreme emergency, and built rapidly a large fleet, which recovered Lesbos and Clazomenae The **Treaty of Miletus** was negotiated by Alcibiades between Sparta and Tissaphernes, satrap of Sardis Sparta recognized the Persian king's rights to all lands ever belonging to any of his ancestors, while Persia was to furnish the money to maintain the Peloponnesian fleet

The Athenians laid siege to **Miletus,** but were forced to withdraw by the arrival of the Peloponnesian fleet. The Athenian fleet at Samos received reinforcements and sent a detachment to blockade Chios. During the winter the Peloponnesian fleet was united at Caunus, but had difficulty in paying its crews, since Tissaphernes' policy, suggested by Alcibiades, was to wear out both sides and let neither win a real victory The Peloponnesians took Rhodes, where they obtained supplies and money.

411. Sparta made a new treaty with Persia, signed by both Tissaphernes and Pharnabazus, satrap of Phrygia The king's claims were limited to Ionia.

Alcibiades claimed that he could win Tissaphernes to the Athenians if the democracy were abolished The oligarchic clubs in Athens (*hetairai*) by terrorism carried a motion to restrict citizenship to about 5000 of the wealthiest Athenians Pay for public offices was abolished; all citizens except the 5000 were to be completely without political rights A provisional committee of 400 was to rule until the 5000 had been chosen The 400, however, continued to rule without choosing the 5000 The crews at Samos, who refused to recognize the new government and constituted themselves as the Athenian people, elected new generals, notably Thrasybulus and Thrasyllus. They forcibly prevented an attempt by Athenian and Samian oligarchs to restore the oligarchy in Samos which had been put down the year before. Alcibiades was recalled and made commander-in-chief; he demanded the abolition of the 400 in Athens, although he approved of the 5000. When the extremists among the 400 seemed ready to surrender to Sparta after four months of rule, the moderates, led by Theramenes, secured their deposition. Nine thousand citizens were enrolled as councilors, to serve in four sections as in Boeotia (so-called **Government of the 5000**) Pay for civic offices was not restored This government fell before the beginning of the civil year 410/9, and the democracy was restored, with pay for the dicasts

Meanwhile the Spartans raised revolts in many Hellespontine and Thracian cities and especially in Euboea The Athenians under Alcibiades defeated the Spartans at Cynossema and Abydos

410. In the **battle of Cyzicus,** Alcibiades annihilated the Peloponnesian fleet Sparta offered peace on the *status quo,* but the radical party in Athens, which had risen again under the leadership of **Cleophon,** rejected the offer. Pharnabazus paid for the building of a new Peloponnesian fleet

409. An Athenian expedition under Thrasyllus failed to take Ephesus. Sparta recovered Pylos; Megara had already recovered Nisaea

408. The Athenians made a truce with Pharnabazus and sent ambassadors to the king, but before they arrived the king had received a Spartan embassy and decided to help Sparta energetically. He

sent his son **Cyrus** to replace Tissaphernes. Alcibiades recovered Byzantium

407. **Thrasybulus** recovered Abdera and Thasos Alcibiades was elected general and commander-in-chief at Athens and returned to the city in triumph Cyrus arrived in Asia Minor and formed cordial relations with Lysander, the able Spartan admiral (*nauarchos*).

406. When **Alcibiades** went off to collect money, his guard squadron at Ephesus was **defeated off Notium** by Lysander. Alcibiades lost all influence and fled to the Hellespont. Callicratidas replaced Lysander, but could not get along with Cyrus. The Athenian Conon was defeated at **Mytilene.** The Athenians with a great effort built another fleet

406. In the **battle of Arginusae,** Conon won a decisive victory over the Spartan fleet Eight of the Athenian generals, however, were later tried and, despite Socrates' opposition, sentenced to death for not rescuing the shipwrecked sailors, two fled The Spartans again offered peace on the *status quo*, but Cleophon again had the offer rejected On Cyrus' demand, Lysander was sent with the Peloponnesian fleet, nominally as secretary, in reality to command

405. The Athenians followed Lysander to the Hellespont and, through the gross carelessness of the commanders, the fleet was annihilated while drawn up on the shore at **Aegospotami.** Oligarchies of 10 (*decarchai*) under Spartan harmosts were set up in all the Athenian subject states

404 **Theramenes** negotiated peace after Cleophon, who held out against surrender to the last, was finally tried and executed Athens was to raze her long walls and the fortifications of the Piraeus, surrender her navy, and make an alliance with Sparta

404. The Athenian oligarchs, supported by Lysander and led by Theramenes, set up **a commission of thirty** which was to make a few immediate reforms and devise a new constitution. Instead of this, the Thirty with Critias at their head seized power and ruled as the **Thirty Tyrants.** They executed Theramenes when he advocated a more moderate course Finally 3000 of the richest citizens were nominally enfranchised, but never exercised any real power Many citizens were exiled or fled, and these were supported by Argos and by Thebes, who feared the excessive power of Sparta In the autumn of 404 Thrasybulus led back some exiles, who occupied Phyle and then the Piraeus. In the beginning of 403, the Athenians deposed the Thirty, who fled to Eleusis, and elected a **government of Ten.** These, instead of bringing in the democrats from the Piraeus, asked help from Sparta, which sent Lysander. Then the anti-Lysander party in Sparta replaced Lysander with King Pausanias,who brought about a settlement by which the democracy was restored, and a general amnesty with few exceptions decreed The decarchies in the former Athenian dependencies were soon abolished

g. ECONOMIC AND SOCIAL CONDITIONS

The decline of Ionia and the growing prosperity of the western Greeks led, after the Persian Wars, to a shift of trade and industry to Greece proper, toward which converged the routes from both west and east, where the Greeks now sought an outlet for manufactures and a source of raw materials Corinth and Aegina were the leading commercial states in Greece at the beginning of the 5th century, but they were soon outstripped by Athens. This growth of industry caused a rapid rise in the number of slaves, and many **metics** (*metoikoi*, resident aliens) migrated to the commercial states of Greece, where they were well treated Athens especially was liberal in granting citizenship from Solon's time until 451. The industrial states were all dependent on the **importation of food.** In Greece itself, only Thessaly, Macedonia, and Sicily exported grain, Sparta, Boeotia, and the backward states of the west and north were self-sufficing Athens exported wine and oil The economy of almost all Greek states was now on a **money basis** (e g at Athens the Solonian classes had been converted into a money assessment of all property). The Athenian coinage became the predominant medium of exchange. **Prices** had risen tremendously since the 6th century. **Wages** were on a bare subsistence level, and the large number of slaves prevented any increase

Shipping and agriculture remained very primitive In Sparta and Thessaly great estates existed, but elsewhere ownership of land was much divided, and even in an industrial state like Athens the large majority of the citizens remained landowners. Foreigners were usually prohibited by law from owning land.

Public finance was simple, with no public debt and few surpluses. The chief source of revenue was indirect taxation, Athens profited greatly from her state-owned mines and depended on semi-compulsory contributions by wealthy citizens (*liturgiae*) for such expenses as the equipment of triremes or production of plays Direct property

taxes were used only in case of extreme need Expenses in most states were correspondingly low, Athens used the revenues from the empire for extensive public works, and also had a large number of citizens on the public pay-roll. The Peloponnesian War, however, not only exhausted the public finances throughout Greece, but also created economic dislocation, and impoverishment among individuals. These losses must, nevertheless, have been made good rapidly, as the 4th century witnessed a high level of prosperity

During the 5th century **art and poetry** attained their finest expression in Greece, especially in Athens, whose prosperity favored an artistic life. This was fostered by **Pericles,** who herein, as in other policies, resembled the 6th-century tyrants In the choral ode, **Pindar** of Thebes (518–442) and **Bacchylides** (c 480), in the epigram, **Simonides** (556–468), distinguished the early part of the century. At Athens the three great dramatists, **Aeschylus** (525–456), **Sophocles** (495–405), and **Euripides** (480–406) developed tragedy from a crude choral performance to unsurpassed perfection **Aristophanes** (c 448–385), who overlapped into the 4th century, was the acknowledged master of the **Old Comedy.** Prose lagged behind verse, but the Ionian **Herodotus,** writing at Athens (484–428?), made the Persian Wars the motif of a delightfully discursive history **Thucydides** (471–c 400) perfected history in his account of the Peloponnesian War. In philosophy the conflict of unity against multiplicity was solved by the atomic theories advanced by **Empedocles** in Sicily (c 444), by **Anaxagoras,** an Ionian at Athens (500–425? mind or *nous*), and by **Leucippus** (c 450?). But philosophy turned from physics to ethics and the **Sophists** became the teachers of Greece and advocates of the subjectivity of standards (*nomos*, convention, against *physis*, nature) The leading Sophists were **Protagoras, Prodicus, Hippias,** and **Gorgias,** the last of whom came from Leontini in Sicily to Athens in 427.

In **architecture,** the heavy and luxurious temples of the early part of the century in Sicily, especially at Acragas (Agrigentum), were succeeded by the perfection of Pericles' Doric and Ionic buildings on the **Acropolis** at Athens, the **Parthenon,** or temple of Athens (447–432), the **Propylaea,** or entrance gate (437–432), and the **Erechtheum** (420–408), or temple of the hero Erectheus. **Sculpture** reached its height in the works of **Myron** (c. 450) and **Polycleitus** (c. 430) of the Argive School and **Pheidias** (500–431) the Athenian Attic red-figured vase-painters developed line-drawing in a series of exquisite styles (to 415), and **Polygnotus** (c. 480) mastered the technique of large-scale painting

4. THE RISE OF MACEDON

a. SPARTAN HEGEMONY

401-400. **Darius II** of Persia had been succeeded in 404 by his eldest son, **Artaxerxes II.** A younger son, **Cyrus,** collected a Greek mercenary force in Asia Minor and marched against his brothers (the *anabasis* or "going up") in 401; he was killed in **the battle of Cunaxa,** and with great difficulty the Greeks, one of whose leaders was the Athenian **Xenophon,** made their way back to the Euxine by 400.

400-394. When **Tissaphernes** besieged Cyme in 400, Sparta sent Thibron to hire a mercenary army and to liberate the Ionians from Persia. Dercyllidas took over the command in 399 and ravaged some Persian territory. A truce was maintained (398–397) while Artaxerxes prepared his fleet and put the Athenian Conon in command. In 396/5 King Agesilaus, succeeding Dercyllidas, ravaged Persian territory. In 394 Agesilaus returned to Greece with most of the troops

395-387. **The Corinthian War.** In the winter of 396/5 Persia sent Timocrates of Rhodes to bribe the leaders of Athens, Thebes, Corinth, and Argos to attack Sparta. Athens made a defensive alliance with Boeotia which Corinth, Argos, Megara, Euboea, and other states joined. In 394, the Spartans won battles at **Nemea** and at **Coronea,** but their fleet, under Peisander, was annihilated by the Persian fleet, under Conon, at **Cnidus.** Persia granted autonomy to the Asiatic Greek cities and withdrew her garrisons. The Ionians revolted from Sparta and established democracies, the Cyclades followed in 393. Conon returned to Greece, and rebuilt the Athenian long walls Athens recovered Lemnos, Imbros, Scyrus, and Delos, and made alliances with Chios, Mitylene, Rhodes, Cos, and Cnidus In 392, an attempt at a general settlement was rejected by the Athenian imperialists, who

had just come to power The Persians deposed Conon, who soon died. In 390, Evagoras of Cyprus revolted from Persia. In 389, the Athenian navy under Thrasybulus recovered Thasos, Samothrace, Tenos, the Chersonese, Byzantium, Chalcedon, *et al.*; garrisons were placed in the more important towns, and 5 per cent harbor tolls levied, which really constituted a **revival of the Athenian naval league.** Thrasybulus was killed in action (388)

387-386. THE KING'S PEACE. In 387, the Spartan Antalcidas negotiated with Persia a general Greek settlement All Greek cities were to be autonomous except those in Asia, which were to belong to Persia In 386, the Spartan navy forced Athens to accept by blockading the Hellespont; Thebes was frightened into acceptance Thus the Boeotian and the new Athenian leagues were dissolved

385-379. Sparta broke Mantinea up into villages (385), seized the citadel, or Cadmeia, of Thebes (382), and captured Olynthus and dissolved its Chalcidian League (379).

379-378. The Theban democratic exiles led by Pelopidas recovered the Cadmeia by a *coup* and established a democracy in Thebes. The raid of the Spartan Sphodrias on the Piraeus caused an Athenian alliance with Thebes (378) Sparta raided Boeotia in 378 and 377.

377. SECOND ATHENIAN LEAGUE AGAINST SPARTA. Shortly after 386, Athens had renewed her alliances with several naval powers. In 377, these, Thebes, and many others united in the "second" (really third) league against Sparta All decisions were to be made jointly by a council (*synedrion*) of the allies, excluding Athens, and the Athenian *ecclesia*; funds were to be derived from contributions levied by the *synedrion* and handled by Athens, Athens was to command in war, Athens gave up all claims to its former cleruchies A fleet was quickly built up In 376 Chabrias crushed the Spartan fleet off **Naxos,** and gave Athens control of the sea Meanwhile, Thebes restored the Boeotian League on a democratic basis

372. Jason, who succeeded his father Lycophron in the tyranny of Pherae, unified Thessaly by having himself made perpetual commander (*tagos*) until his murder in 370.

371. A general peace settlement was reached with Sparta in the summer of 371, but when he was not permitted to sign for all Boeotia, the Theban **Epaminondas** withdrew. Sparta immediately sent King Cleombrotus to chastise Thebes, but he was decisively defeated at **Leuctra** by Epaminondas This shattered Spartan prestige and ended her chance of hegemony over Greece Thebes withdrew from the Athenian League, and with her Acarnania, Euboea, and the Chalcidian cities.

b. THEBAN HEGEMONY

370. An Arcadian League was formed under Theban protection as counterweight to Sparta Mantinea was restored as a city The government of the league comprised a general assembly (**the Ten Thousand**) of all free-born citizens, with sovereignty in matters of war, peace, etc.; a council of *damiurgoi*, which gave proportional representation to the member cities; a college of generals (*strategoi*) as civil and military executive, a standing mercenary army (*eparitoi*) The Theban army, under **Epaminondas,** liberated Messenia from Sparta and the city **Messene** was built. In 369 Athens and Sparta made an alliance on equal terms. The Arcadians founded **Megalopolis** as a federal capital In the following years, Thebes secured the union of all of Thessaly save Pherae under a single ruler (*archon*). The pro-Spartan party of Callistratus in Athens was replaced in power by the party of Timotheus, and peace was made with Thebes on the basis of the *status quo* (365) Pelopidas was killed in battle against Alexander of Pherae (364), whom Epaminondas then defeated (363).

362. Because of financial difficulties, the federal army of Arcadia was disbanded The oligarchs, who could serve at their own expense, came into control of many cities, which then made peace with Elis. The radicals appealed to Epaminondas, and the league broke up: Tegea and Megalopolis remained pro-Theban, while the others made an alliance with Elis and Achaea, all these jointly made an alliance with Athens, Mantinea was allied with Sparta Epaminondas faced this coalition at Mantinea, but was killed in battle A general peace was made on the basis of the *status quo*, but it was not accepted by Sparta, which refused to recognize the independence of Messenia.

359. PHILIP II became regent and, in 356, by the deposition of his ward, **King of Macedon.** Since he was troubled by his unruly barbarian subjects and Athens was involved in war with the Thracian Odrysae, both were glad in 358 to make a treaty by which Philip gave up his claim to Amphipolis and Athens promised to surrender Pydna. Philip now thoroughly reorganized his army, placing more importance on the **phalanx** of infantry, and with it subdued the rebellious barbarians By agreement

with Athens, he conquered Amphipolis (357) to exchange it for Pydna, since Athens was occupied in recovering Euboea from Thebes and the Chersonese from the Thracians.

357-355. The Athenian allies were angry at Athenian policy, e.g. the sending of cleruchies to Samos (365) and Potidaea (361), the subjection of Ceos and Naxos to Athenian jurisdiction (363/2), and especially the arbitrary financial exactions of Athenian generals; further, the decline of Spartan power had removed the league's *raison d'être*. Under encouragement from **Mausolus** (Mausollos, 377–353), who had succeeded Hecatomnus (395–377) as ruler of Caria, Chios, Rhodes, Cos, and Byzantium joined in revolt, known as the **Social War,** i.e. "War of the Allies." After the defeat and death of Chabrias at Chios, the Athenians, under the incompetent Chares, finally withdrew from Ionia and recognized the independence of many of their allies (355). Mausolus in 353 annexed Rhodes and Cos.

c. MACEDON UNDER PHILIP AND ALEXANDER THE GREAT

355-346. THE THIRD SACRED WAR began when the Phocians refused to pay a fine levied on certain of their people by the Amphictyonic Council at the instigation of Thebes (355). The Phocians seized Delphi and made alliances with Athens and Sparta. When the Amphictyons declared war, the Phocians used the sacred money of Delphi to recruit a very large mercenary army. Though they were defeated by the Boeotians at **Neon** (354), they seized Thermopylae and Orchomenus (353). When Philip attempted to oppose them in Thessaly, their general Onomarchus twice defeated him, but in 352 Philip defeated and killed Onomarchus. Philip then united Thessaly, which continued loyal to him. His march south was stopped by Athenians, Achaeans, and Spartans, at Thermopylae. The war continued indecisively in Phocis until Athens made the **Peace of Philocrates** with Philip (346). Philip then conquered Phocis, prohibited the carrying of arms, and spread the Amphictyonic fine in installments.

356-346. When Athens refused to surrender Pydna to Philip in return for Amphipolis, he conquered the former, kept the latter, made a treaty against Athens with Olynthus, and took Crenides, renamed **Philippi,** from the Odrysae. After the end of the **War of the Allies** (355), Athens was financially exhausted and the imperialist party of Chares and Aristophon was replaced by the pacifists under Eubulus. All financial surpluses were put into a **theoric fund** and used for the entertainment of the citizens. Athens allowed Philip to expand eastward almost unchecked. But in 351 Olynthus, suspicious of Philip, appealed to her for aid. **Demosthenes** appeared as the leader of the anti-Macedonian party, urging action in his three *Olynthiac orations*. An alliance was made with Olynthus (349), but an attempt to divert the surplus from the theoric to the military fund failed. Philip induced Euboea to revolt from Athens and the latter, against Demosthenes' advice, divided its efforts by sending a force there as well as to Olynthus (348). Phocion was successful in Euboea, but his successor, Molossus, lost the country. Philip took Olynthus, which he razed, and enslaved the citizens (348). Athens could secure no help from the Greeks, and even Demosthenes favored peace.

346. PEACE OF PHILOCRATES. On the motion of Philocrates, ten ambassadors, including himself, Aeschines, and Demosthenes, were sent at Philip's invitation to negotiate a peace. the terms restored the Chersonese, except Cardia, to Athens, cancelled Athens' claim to Amphipolis, and left other possessions as they should be when the peace was sworn. Athens could not secure the inclusion of her ally Phocis in the terms. On the return of the ambassadors, the assembly accepted the terms and sent them back to swear the oaths, they delayed on the way and Philip profited by this to conquer more of Thrace. After the conclusion of the peace, Philip conquered the Phocians, took their seat in the Amphictyonic League, and, as its chairman, presided over the Pythian games; Athens refused to send a delegation until Philip's threats forced her to recognize his membership in the league.

344-339. Despite the friendly attitude of Philip, Demosthenes persuaded the Athenians to make alliances against him in Euboea (341) and the Peloponnese (340), and to help Byzantium to repel him (339). Demosthenes, now in control in Athens, urged opposition to Philip in his *Philippic orations*. He reformed the system of paying for the navy by replacing the individual liturgy (*trierarchia*) with more equitable and efficient groups of contributors (*symmoriae*). He devoted surplus income to the war fund instead of to the theoric. Philip tried to get the Amphictyons to fine Athens for insulting Thebes, but Aeschines cleverly diverted them against Amphissa.

339-338. When this caused the **Fourth Sacred War,** the Amphictyons called in Philip. Athens, terrified at this,

made an alliance with Thebes on terms very favorable to the latter. The allies won some minor successes. But Philip annihilated their mercenaries near Amphissa.

338. In the **BATTLE OF CHAERONEA,** Philip crushed the allied citizen armies He garrisoned Thebes, but let Athens go free Philip called a **congress at Corinth,** and all states, except Sparta, entered a **Hellenic League.** There was proportional representation in the league council, which was presided over by the king in wartime, otherwise by a chairman; autonomy of the members was guaranteed, existing constitutions were not to be altered and no private property confiscated, no tribute was required and no garrisons left, except in a few places; the king had the military command; the Amphictyonic Council served as a supreme court Philip announced plans for an Asiatic campaign

337. A second congress at Corinth (337) declared war on Persia, and Philip sent an army under his general, Parmenio, to Asia Minor (336).

336. Philip was assassinated, allegedly at the instigation of his recently divorced wife Olympias.

337-323. ALEXANDER III, THE GREAT (b 356), succeeded.

On the rumor that Alexander had died, Thebes revolted with Athens, Arcadia, Elis, and Aetolia, but Alexander swiftly took Thebes, destroyed it, and enslaved the inhabitants. The others submitted (335)

334-331. Alexander, leaving Antipater behind as his governor in Greece, crossed the Hellespont in the spring of 334 with an army of 32,000 infantry and 5000 cavalry, supported by a navy of 160 ships, mostly allied. Memnon of Rhodes, commander of Darius' Greek mercenaries, wished to retreat, laying waste the country, but the satraps, hoping to protect their provinces, forced him to take a stand at the river **Granicus,** where he was completely defeated by Alexander (334).

Most of the Greek cities revolted from Persia Alexander subdued Caria and (spring, 333) Cilicia. Meanwhile, Memnon died and Darius summoned the mercenaries to Syria. Alexander went on to Myriandrus, where he faced Darius, who had raised a large but motley army. Since Alexander feared to come on to the open plain, Darius went behind him to the plain of Issus

333. BATTLE OF ISSUS. Alexander attacked and completely defeated Darius Darius offered to give up all Asia west of the Euphrates and pay 10,000 talents, but Alexander demanded unconditional surrender. All Phoenicia, except Tyre, submitted after Issus, and, by a difficult siege of seven months, Tyre was reduced (332).

332-331. Alexander's **expedition to Egypt** was unopposed; while in Egypt, he founded **Alexandria** and visited the oracle of Ammon

331. Leaving Egypt in the spring, Alexander met and defeated the Persian army at **Gaugamela** (Oct. 1) and went on to Arbela, where he seized much Persian treasure. Babylonia and Susa surrendered, but at Persepolis resistance was offered, so that the place was looted and burned and immense treasure was taken

331. Sparta under King Agis III, aided by Persian money and in alliance with Elis, Achaea, and part of Arcadia, defeated a Macedonian force and besieged Megalopolis, but was crushed when Antipater arrived with a greatly superior force.

330. In the spring of 330, Alexander pursued Darius through Media, where Darius was murdered by the satrap Bessus Alexander subdued the Caspian region and marched southward When Parmenio's son Philotas had been executed for complicity in a plot, Alexander sent messengers who murdered Parmenio in Media Alexander feared a revolt and Parmenio was too powerful to be discharged

329. Alexander went on into Bactria and overcame the Iranians under Spitamenes only with a great deal of trouble (328). Alexander now commenced **the adoption of Persian dress** and court etiquette In a drunken fury, he murdered his friend Cleitus who had reproached him. He had 30,000 natives trained in Macedonian fashion for the army. He married the Persian **Roxana.** He began to foster **a belief in his divinity** as the best means of dealing with the Greeks as an absolute ruler and yet without offending their sentiments of liberty. Though the Greeks had deified living men before this, Alexander's move met so much opposition that he dropped it temporarily.

327-324. Alexander was invited into **India** by Taxiles against Porus. In the **battle of the Hydaspes** (326), he defeated Porus and advanced as far as the Hyphasis. Here the army refused to go farther Alexander, therefore, returned via the Hydaspes and Indus to the Indian Ocean (325). Thence **Nearchus** went back with the fleet to explore the Indian Ocean and Alexander returned through the desert of Gedrosia.

They met in Caramania and, after a rest, went on to Susa (324).

324-323. In his policy of fusion of the Greek and Asiatic peoples, Alexander had left in office many of the native governors (satraps); most of these, and many of the Macedonian satraps, were now found to have ruled badly, some had enlisted private mercenary armies These satraps were replaced, usually with Macedonians; the private armies were ordered disbanded. Pursuing the policy of fusion, Alexander, 80 officers, and 10,000 men married native women. Alexander paid all debts of his men. He ordered all exiles recalled by the Greek cities, to give himself a basis for this interference, contrary to the constitution of the Hellenic League, he ordered the Greek states to recognize him as **son of Zeus Ammon.** At Ecbatana Alexander's closest friend, Hephaestion, died

323, June 13. Alexander died at Babylon. His exploration had fostered commerce, over 25 cities which he had founded served to Hellenize the east, although his policy of direct fusion failed. The organization of his complex empire he left much as he found it, differing in each area. The officers wished to make the unborn son of Alexander and Roxana king, but the privates preferred a Macedonian, the imbecile **Philip III Arrhidaeus,** son of Philip II. When a son, **Alexander IV,** was born to Roxana, a joint rule was established under the regents Craterus and Perdiccas.

330-322. **Athens** had recouped her strength under the financier **Lycurgus,** who, among other reforms, established compulsory military training for all young men (*epheboi*). In 330, Demosthenes had been acquitted in the trial brought by Aeschines on the justness of the award to Demosthenes of a civic crown In 326 Lycurgus fell from power, and in 324, **Demosthenes** was exiled for embezzling some of the money which Alexander's treasurer, Harpalus, brought to Athens. On the report of Alexander's death, Athens, led by the radical orator **Hypereides,** organized a new Hellenic League in central Greece and the Peloponnese. The allies under Leosthenes besieged Antipater in Lamia (winter, 323), and eventually forced his retirement to Macedonia. There Craterus joined him from Asia (322).

322. The Athenian fleet was wiped out forever at **Amorgos.** When the allied army was indecisively defeated at **Crannon** the league broke up. Athens received a Macedonian garrison, took back her exiles, and accepted an oligarchic constitution by which only those possessing 2000 drachmas had the franchise, perhaps 9000 out of 31,000 free citizens. Demosthenes, who had been recalled, fled but was caught and committed suicide.

d. THE WEST DURING THE FOURTH CENTURY

413-405. After the defeat of the Athenian expedition, **Syracuse** made democratic reforms In 410 many oligarchs, including Hermocrates, were banished. Then Segesta, warring with Selinus (409), called in the **Carthaginians,** who, despite Syracusan opposition, sacked Selinus and Himera (408) and, in a second expedition, Acragas (406)

405-367. **Dionysius I** secured his election as one of the ten generals in Syracuse and then made himself tyrant. He made peace with the Carthaginian forces, who were suffering from a plague. He distributed the confiscated land of the oligarchs to the poor and enfranchised the serfs. He conquered Catana (403), Naxos, and Leontini (400). In a **first war with Carthage** (398–392), he attempted to drive the Carthaginians out, but failed. However, he reduced the Sicels, and then began the conquest of southern Italy (390–379), where he crushed the Italiote League at the **battle of the Elleporus** (389) But he suffered a severe defeat in a **second war with Carthage** (383–381?), which he failed to retrieve in a third (368)

366-344. On the death of Dionysius, his weak son, **Dionysius II,** succeeded under the regency of his uncle **Dion.** Dion brought in Plato to educate Dionysius, but both were forced out (366). Dion regained Syracuse in 357 and ruled tyrannically until his murder in 354. After two more sons of Dionysius I had seized the power and fallen, Dionysius II returned (347), but the Syracusans called in first **Hicetas,** tyrant of Leontini (345), and then **Timoleon** of Corinth

344-337. **Timoleon** defeated the Carthaginians at the **Crimissus** (341) and made peace, with the Halycus River as the boundary (339) The tyrants were expelled from the Greek cities, which formed a military league against Carthage Timoleon established a moderate oligarchy in Syracuse, with the priest (*amphipolos*) of Zeus as chief magistrate and a council of 600 composed of rich citizens He then retired (337)

338-330. **The Greeks in Italy** (Italiotes), hard pressed by the natives, called in first **Archidamus of Sparta** (338), who was killed, and then **Alexander of Epirus** (334). The latter defeated the natives and made an alliance with Rome, but was finally assassinated during a battle (330).

e. GREEK CULTURE IN THE FOURTH CENTURY

The death of Alexander the Great marked the end of the great age of Greece in literature, philosophy, and art. **Xenophon** (431–354), though a writer far inferior to Thucydides, wrote an able continuation of his history from 410 to 362, as well as other historical works. The lesser writers of **Middle Comedy** were followed by **Menander** (343–c. 280), the most outstanding of the writers of **New Comedy**, or comedy of manners But it was in **oratory and philosophy** that the 4th century was most distinguished Of the ten Attic orators the best known were **Lysias** (445–c. 380), **Demosthenes** (384–322), and the advocate of pan-Hellenism, **Isocrates** (436–338) **Philosophy** was dominated by the figure of **Socrates** (469–399), executed by the Athenians for atheism His greatest pupil, **Plato** (429–347), founded the **Academy** in the grove of the hero Academus, and **Aristotle** (384–321), the pupil of Plato and tutor of Alexander, founded the **Peripatetic** (walking about) **school** or **Lyceum,** in the grove of the hero Lycus In **sculpture** a refined and less vigorous style was preferred by **Praxiteles** (385–c. 320), **Scopas** (400–c 340), and **Lysippus** (c 380–c 318) The center of activity began to shift to Ionia, as seen in the tomb of Mausolus of Caria (the **Mausoleum**), completed c. 350, and the new **temple of Artemis at Ephesus** (the old one was burned by Herostratus in 356).

(*Cont. p.* 75.)

C. ROME, TO 287 B.C.

1. THE EARLY PERIOD

a. GEOGRAPHICAL FACTORS

Italy is a long, narrow peninsula of which the central portion comprises the mountains and isolated valleys of the Apennines At the northern end, the Apennines swing west and enclose between themselves and the Alps a wide and fertile valley, Cisalpine Gaul, traversed by the Po, which flows east into the head of the Adriatic. The eastern (Adriatic) coast of Italy is infertile and lacks good harbors, while the Adriatic itself, because of prevailing northerly winds, hindered the penetration of the Greeks. Moreover, the rugged opposing shore of Illyria was occupied by wild and piratic tribes, whose forays constituted a continuous threat to commerce The eastern Italian peoples, therefore, remained backward compared to the western The western part, though mountainous at the northern end, contains fertile plains in its central portion (Etruria, Latium, and Campania), with good harbors, especially around the Bay of Naples Its rivers, however (the Arno and the Tiber), are too swift to be readily navigable, so that early civilization sprang up along the coast, while the inland peoples remained rude and simple The western (Tyrrhenian) Sea is enclosed by the islands of Sardinia and Corsica, the former fertile and rich in metals, the latter a wild seat of pirates Southern Italy, where the mountains begin to fall away, was a land of pastures where later herds moved seasonably from sea to hills under the charge of slave bands of shepherds, whose brigandage formed a constant threat to travelers. Around the Bay of Tarentum, however, the Greek settlers early found a hospitable welcome, and the western toe of Italy afforded ready access, across the narrow Straits of Messana, to the prosperous island of Sicily, whose rich Greek colonies and lavish crops played an important part in Roman history The western apex of Sicily in turn led towards Africa and the Phoenician colony of Carthage, which became Rome's chief rival for the control of the western Mediterranean.

b. EARLY POPULATIONS OF ITALY

Traces of Palaeolithic, cave-dwelling Man are found throughout Italy, save in Latium, which was still volcanic Bones from Liguria, the mountainous area around Genoa, suggest that there were at least two races, a Negroid (Africa) and the later, Cro-Magnon (France) Neolithic Man, after the Ice Age (c 2500–2000), lived in huts and developed more elaborate stone tombs. He practiced agriculture and herding, made pots, and eventually used copper. He belonged to the new race (Mediterranean) which occupied the whole Mediterranean Basin at this time and which survived perhaps in the later Ligurians (northwest) and Picni (east-central), and in the pre-Greek inhabitants of southern Italy (Iapyges) and Sicily (Sicels) During this period **Illyrians** settled along the east coast, to survive in the **Veneti** (northeast), the **Picentes** of central Italy, and the **Messapians** of Apulia (extreme south)

c. 2000. AN INDO-EUROPEAN PEOPLE of the *centum* branch, closely related to the Greeks, began invading Italy either from Switzerland or from the Danube Valley They brought with them a type of settlement built on piles, first in the lakes of northern Italy (*palafitte*) and then on dry land (*terramare*), in a regular, rectangular form perpetuated in the Roman camp They already knew the use of bronze.

c. 1000. THE TERRAMARE PEOPLES had spread their settlements and culture southward through Italy and into Sicily and had come into contact with the maritime peoples of the Aegean world. They probably became the later **Samnite, Sabine,** and **Latin** tribes In the meantime, perhaps, a related people had entered northeastern Italy from the Danube Valley, bringing with them the use of iron and a more advanced culture known, from the site of the chief excavations, as *Villanovan*. Some archaeologists deny, however, that this advance represented an intrusion of new stock and assume only closer cultural relations with the Danube Valley. These peoples possibly became the **Umbrians** and **Oscans.**

c. 900. THE ETRUSCANS first appeared in Italy, probably by sea from Asia Minor (Lydia?) in consequence of the break-up of the Hittite Empire They established themselves north of the Tiber in Etruria, probably as a conquering minority among enserfed Villanovan (?)

natives. The power was apparently held by an aristocracy of princes (*lucumones*), whose fortified cities (traditionally twelve, though the precise constituents varied from time to time) formed a loose league, and whose elaborate tombs were at first furnished with bronze utensils and armor, then painted and supplied with imported luxuries, notably Greek vases. They extended into the Po Valley and into Latium and Campania until the end of the 6th century, when the pressure of **Celtic invaders** into the Po Valley cut off their northern settlements and the Cumaeans and Hiero of Syracuse broke their control of the sea and Latium revolted. Thereafter they declined until their absorption by Rome during the 4th century. Their culture preserved its identity until the Sullan land distributions in the 1st century so disorganized it that within a century thereafter it had become dead The Etruscans made no original contribution to Rome save for certain forms (lictors, curule chair, purple-striped toga of office) and a gloomy religion (perhaps the three divinities Latinized as Jupiter, Juno, and Minerva, and certainly the practice of prophesying by consulting the entrails, *haruspicum*), but they first introduced to Rome Greek culture, though in a debased shape, mythology, the heavy Tuscan temple (from the Doric), and perhaps the alphabet.

c. 760. GREEK COLONIZATION began in the Bay of Naples in southern Italy, and in Sicily. The Greeks were prevented from further expansion to the west and north, save for Marseilles (Massilia), by the Phoenicians and the Etruscans. Despite victories over both peoples by the tyrants of Syracuse in the early 5th century, the Greeks never succeeded in dominating all of Sicily or southern Italy From the 4th century their fortunes declined until their eventual absorption by Rome during the 3d Nevertheless they not only impregnated these areas with a Greek culture which lasted throughout the Roman period, but, by their contact with Rome during the formative period of her national culture, first through the Etruscans and then directly, so Hellenized the Romans that when the latter conquered the Mediterranean world they respected and extended the Hellenistic civilization and, by absorbing it, preserved for later ages the Greek heritage.

c. THE ROMAN MONARCHY

753. FOUNDATION OF ROME, according to Cicero's contemporary, the antiquarian Varro. Traditionally the founder, **Romulus,** was son of a princess of Alba Longa, Rhea Silvia, and the god Mars The kings of Alba Longa, in turn, were descended from **Aeneas,** a fugitive of the Trojan War and son of the goddess Venus (Aphrodite). This tradition dates, however, from the period when Rome was assimilating Greek culture. Actually during the 8th and following centuries small settlements on the Palatine, Esquiline, Quirinal, and Capitoline Hills united into one, with a common meeting-place in the valley between, the Forum. These peoples may have been of different racial stocks, chiefly Latin but partly Sabine, Etruscan, and perhaps pre-Italic The importance of Rome is less likely to have been economic (trade up the Tiber or across the ford at this point is not attested by archaeology) than military, an outpost of the Latins against the encroaching Etruscans This would account for the inculcation in the Romans from an early date of habits of obedience, organization, and military drill. The traditions of the four early kings (**Romulus,** 753–715, **Numa Pompilius,** 715–673, **Tullus Hostilius,** 673–641, and **Ancus Marcius,** 641–616) are historically unreliable.

Early government. Rome emerged into history with a king (elective, not hereditary), limited by the existence of a **senate** of 100 elders (*patres*) which was advisory, not compulsory, and by a popular assembly of the clans (*curiae*), the **comitia curiata,** which conferred upon the newly elected king his *imperium* and may have had slight legislative power There were two classes in the state: **patricians,** who alone could belong to the Senate, and **plebeians.** Most probably the patricians were simply the more prosperous farmers, who for their own advantage organized themselves in *curiae*, set themselves up as a superior class and usurped certain privileges (another theory is that the plebeians were the conquered native people). As a result of the plebeians' lack of power to defend themselves, many attached themselves as clients to patrician patrons, who protected them in return for attendance and service.

The early religion was simple, chiefly the worship of Mars (an agricultural divinity who only later became god of war, and of animistic forces Religious ceremonies were simple to the point of being magical, by their proper performance the divine power (*numen*) inherent in gods or objects was compelled to act, and failure to get results indicated some fault in the ceremony

c. 616. Tarquinius Priscus (616–578) and his successors, **Servius Tullius** (578–534) and **Tarquinius Superbus** (the

Proud, 534–510), may represent the Etruscan domination in Rome and emerge more clearly than their predecessors Tarquin the First was a great builder (*Cloaca Maxima*, Temple of Jupiter Capitolinus, *Circus Maximus*) To weaken the patrician influence, he is said to have increased the Senate to 300. He fought successfully against Sabines, Latins, and Etruscans **Servius Tullius,** traditionally of slave and Latin descent, fought against Veii and brought Rome into the **Latin League.** His chief achievement, traditionally, was to substitute for the hereditary clans a new military division into **classes** and **centuries,** based on wealth and arms (cf reforms of Solon in Athens). It may be, however, that this reform should really be dated about 450 and, in any case, the surviving (and conflicting) descriptions of his arrangements probably portray them in the state which they reached after the 3d century B.C Upon this arrangement depended a new assembly, the **comita centuriata.** Since group voting was taken over from the *comitia curiata*, the wealthy, who though few in numbers constituted the majority of the centuries, controlled this assembly as, presumably, the patricians had the former The last, **Tarquin the Proud,** was expelled in a revolt which according to tradition was led by **L. Junius Brutus** and was due to the rape of Lucretia by Sextus Tarquinius, son of the king.

2. THE EARLY REPUBLIC

The early constitution: two annual **consuls,** originally called *praetors* (generals), held equally the undivided *imperium* of the king, either could prevent the other from acting, but could not force him to act. They had absolute command of the army in the field, including power over life and death; in the city they were provided with *coercitio*, a sort of summary police power, but with slight civil and no criminal jurisdiction They were elected by the *comitia centuriata*, but their *imperium* was conferred by the *comitia curiata* (*lex curiata*), later represented by 30 lictors.

The judicial system: cases of high treason were handled by the *duouiri perduellionis*, all other criminal cases of which the state took cognizance were handled by the *quaestores parricidii* (investigators of murder), later known simply as *quaestors*. From their collecting of fines, the quaestors became the main financial officers of the state, and in this capacity they became attached to the consuls as comptrollers, later they lost their judicial functions. Civil cases were usually handled by arbitration, but gradually the consuls came to take a larger part, until in 367 there was created a special officer (*praetor*).

In time of crisis the Senate could restore unity of command by instructing the consuls to appoint a **dictator** (*magister populi*), who appointed as his assistant a master of the horse (*magister equitum*); the dictator had absolute power in all fields, but had to resign when his task was completed, and in no case could remain in office for more than six months.

The plebs seem already to have had an organization of their own, the *concilium plebis*, with its own officers, *tribunes* (? originally commanders of the tribal regiments) and *aediles* (custodians of the temple of Ceres on the Aventine, where were kept the plebeian treasury and archives). When the first 17 rustic tribes were organized shortly after the foundation of the republic (the four urban tribes are ascribed by tradition to Servius Tullius, but may be later), the *concilium plebis* was reorganized on the basis of these, some time later a *comitia tributa* of the whole people was organized on the same basis, perhaps to break up the power of the hereditary clans (cf. Cleisthenes, at Athens). It is uncertain how long the *concilium plebis* remained distinct from the *comitia tributa*, in the later republic the difference was merely technical A resolution of the plebs alone was called a *plebiscitum*, and was originally binding only on the plebeians, as opposed to a *lex* of the entire *populus*, adopted in a *comitia*

At the beginning of the republican period, Rome was probably the dominant power in the Latin League, but apparently lost this position because of the continued Etruscan pressure, the next two centuries (to c. 280) were characterized externally by Rome's conquest of the primacy in Italy and internally by the struggle of the oppressed plebs, of which the richer members desired social and political equality with the patricians, while the poorer wanted simply protection from unjust treatment at the hands of the patrician magistrates.

509. TRADITIONAL DATE OF THE FOUNDING OF THE REPUBLIC. L. Junius Brutus and **L. Tarquinius Collatinus** (husband of Lucretia) became consuls. Almost all of the history of the first century of the republic, including the names of the first two or three decades of

consuls, is unreliable, but it is not yet possible to establish the truth. The dates given here are those of Cicero's contemporary Varro, adopted by Livy They are subject to errors of up to ten years in the 1st century of the republic, gradually decreasing to become practically certain from c 300.

A **lex Valeria de prouocatione** is said to have been passed by the *consul suffectus* (filling another's unexpired term), L. Valerius Poplicola, guaranteeing citizens in Rome (not on military service) the right of appeal to the *comitia centuriata* from a consul who proposed to execute or flog them; probably a retrojection of later legislation, but such a right was recognized by the **Twelve Tables.**

508. A Treaty with the Carthaginians recognized Carthage's exclusive interests in Africa and Rome's in Latium Doubt has been cast on the genuineness of this treaty, but probably unjustly.

Lars Porsena of the Etruscan Clusium attacked Rome and probably restored the Etruscan domination for a short time, although Roman tradition claimed he had been turned back by the exploits of **Horatius Cocles** (defense of the *pons sublicius*, or wooden Tiber bridge), Cloelia, and Q Mucius Scaevola

496. The dictator A. Postumius, in the **battle of Lake Regillus,** defeated the Latins, who, with the help of Aristodemus of Cumae, had some time before freed themselves from Etruscan rule by the **battle of Aricia.**

494. The plebeians, oppressed by debt, **seceded to the Sacred Mount** (probably the Aventine) The patricians were forced to make some concessions before the plebs would return. The latter further protected themselves by swearing to the *leges sacrae*, by which they bound themselves to avenge any injury done to their officials, the **tribunes,** the aediles, and the *decemuiri stlitibus iudicandis*. These officials were therefore called *sacrosanct* They were not officials of the state, but officers of a corporate group within the state But because of the unanimous support of the plebs they had *de facto* great powers, which were never legalized but became gradually respected by custom The basis of the tribunes' powers was the *ius auxilii*, by which they could intervene to save anyone threatened by the action of a magistrate. This *intercessio* against a specific act of a magistrate developed later (when the tribunes secured admission to the Senate) into the right of interposing a veto against any proposed law or decree They presided over the *concilium plebis*. The original number of the tribunes was 2 or 4; it eventually became 10 The **aediles** handled the fines imposed by the tribunes or the *concilium*, and through the use of this money came to have control of the free distributions of corn to the poor and over the repair of public buildings, etc., which was later extended into a general police power. The *decemuiri stlitibus iudicandis* conducted trials in which the status of persons as slaves or freedmen was in question

493. A Treaty of Sp. Cassius with the Latin League provided that booty was to be equally divided; new territory to be colonized in common; the rights of *connubium* and *commercium* (to contract valid marriages between members of different states and to carry on commerce with full legal protection) were restored as they had been before Rome's break with the league (c. 508). The reason for this peace was certainly the increasing pressure of the attacks of the neighboring Volsci and Aequi. The Hernici were later admitted to the alliance on terms of equality with the other two members (486).

491. Gn. Marcius Coriolanus traditionally tried to bribe the plebeians with free grain into giving up the tribunate; when he failed and was summoned to trial, he fled to the Volsci and led them against Rome, but was finally turned back by the prayers of his mother and wife

486. The consul Sp Cassius attempted to make himself tyrant but was executed. This much may be true, but the story that his method was a proposed division of the public land, which was of insignificant extent for a long time, is probably a retrojection from the Gracchan era

477. Battle of the Cremera. War had broken out with the Etruscan Veii (483), which was supported by Fidenae, a town controlling the upper Tiber and thus essential to Rome. A large number of Fabii took up a position on the Cremera to prevent the two cities from joining their forces, but were annihilated by the Veientines. Traditionally, only one of 300 escaped. A peace was made in 474

458. L. Quinctius Cincinnatus, called from his field to assume the dictatorship, rescued a Roman army and defeated the Aequi, who had pressed into the valley of the Algidus.

451. Agitation of the plebs for codification of the law to curb the arbitrariness of the patrician magistrates led to the creation of **ten patrician decemvirs** in place of consuls According to legend, an embassy had been sent to Athens in 454 to procure

the laws of Solon for study. The first decemvirs published ten tables, but since these proved insufficient new decemvirs were created in 450 and drew up two additional tables Thenceforth the **Twelve Tables** constituted the fundamental law of Rome until the 2d century. Tradition alleges that this decemviral board continued illegally in office in 449 under the extreme patrician **Appius Claudius.** When he attempted to get for himself by false legal process the maiden Virginia, her father Virginius stabbed her and the plebeians seceded to the Aventine and Sacred Mounts The decemvirs had to abdicate and Appius committed suicide

448. The moderate patrician consuls Valerius and Horatius passed a series of **Valerio-Horatian laws** weakening the patrician power Traditionally, these (1) made the *plebiscita* as valid as *leges*, (2) compelled all magistrates, including the dictator, to allow appeals from their decisions, and (3) affirmed the inviolability of the tribunes and also the aediles All these changes are probably mere retrojections of later reforms Two more quaestors were added specially for the military treasury, making a total of four. Though patricians, they were elected in the *comitia tributa*, and in 421 the quaestorship was opened to the plebeians The tribunes acquired the right of taking auspices (necessary before any public business and later convenient as a means of blocking action) and the privilege of sitting on a bench inside the senate, though near the door

445. A law (plebiscite?) of the tribune Canuleius allowed marriage between patricians and plebeians, the children to inherit the father's rank

444. As a compromise in the face of agitation that the consulate be opened to plebeians, **6 (?3) military tribunes with consular power,** who might be plebeians, were substituted for the consuls Two patrician *censors* were also created to hold office for 5 (4?) years, later reduced to 18 months every 5th year. They had no *imperium*, but only a *potestas*, but because usually older and distinguished ex-consuls, they came to outrank even consuls. Their tasks gave them importance, since they made up the citizen lists for tax and military purposes (the *census*), enrolled senators (*lectio senatus*) and knights (*recognitio equitum*), and examined into public morals (*regimen morum*), so that at the end of their term they could perform the ceremony of purification for the state, the *lustrum*, a word which came to be applied to their five-year cycle They also made up the state budget, handled its property, and let out contracts for public works.

439. Traditionally, Sp Maelius was put to death by Servius Ahala, master of the horse for the dictator Cincinnatus, because his free distribution of grain to the people seemed an attempt at a tyranny.

431. The dictator A. Postumius Tubertus decisively defeated the Aequi at the Algidus and drove them out of the valley The Volsci were then continually driven back and are said to have made peace in 396

426. Fidenae, which, with Veii, had declared war in 438, was destroyed by the dictator Mamercus Aemilius and the master of the horse A Cornelius Cossus; thus Veii was forced to make peace for 20 years (425)

405-396. In the siege of Veii, tradition alleged that, because the army had to be kept in the field all winter, pay for the troops was introduced The dictator M Furius Camillus finally took the town; it was destroyed, and, since the Latins had not contributed to the siege, the territory was annexed directly to Rome and organized in four new tribes. From this time on Rome really outweighed its ally, the Latin League, the Hernici had long been inferior to the other two

390. Rome was sacked by the Gauls under Brennus, who defeated the defending army at the Allia on July 18. According to tradition the Gauls held all of Rome except the Capitol, which was only saved by the geese Their withdrawal after seven months is attributed to Camillus, but they were probably bought off The Latins and Hernici took advantage of Rome's plight to break off their alliance

384. The patrician M. Manlius Capitolinus was, according to tradition, convicted of aspiring to a tyranny by releasing plebeian debtors at his own expense, and was executed by being thrown from the Tarpeian Rock

367. Licinio-Sextian Laws. After ten years of agitation the tribunes C. Licinius and L. Sextius secured the passage of reform measures: (1) some sort of relief was granted to debtors; (2) the amount of public land which one person could hold was limited to 500 iugera (1 iugum = $\frac{5}{8}$ acre). This provision is almost certainly a retrojection from the Gracchan era. (3) The practice of giving a consular *imperium* to military tribunes was abolished, and one consulship was opened to the plebs Tra-

dition incorrectly states that both consulships were opened to the plebs, and that one of them had to be filled by a plebeian At the same time a third *praetor* was created, to handle the judicial functions of the other two chief magistrates, who thenceforth were usually known as consuls. Two patrician *curule aediles* were created, with functions much like the plebeian aediles. The plebeians were soon admitted to all offices, the last being the religious colleges of *pontifices* and *augures*, by the **lex Ogulnia** of 300 As a result of these changes, a new nobility of office-holding families, both patrician and plebeian, grew up, and the patriciate lost all significance. This nobility soon became quite exclusive, so that a *novus homo* (a man without office-holding ancestors) had great difficulty in obtaining an office

367-349. Four wars were waged against the Gauls, who made incursions from Cisalpine Gaul into central Italy. In them are supposed to have been fought the single combats against Gallic champions of T Manlius Torquatus (361) and M. Valerius Corvus (349). Peace was finally concluded c. 334.

362-345. Wars with the peoples immediately around Rome The Hernici and the revolting Latin cities were forced to rejoin the Latin League on severer terms; southern Etruria was brought under Roman supremacy, and the Volsci and Aurunci were reduced, thus putting Rome in contact with the Samnites.

348. **Second treaty between Rome and Carthage;** some sources and some modern authorities call this the first treaty.

343-341. **THE FIRST SAMNITE WAR** was started by a request for aid from the Samnite tribes in the Campanian plain against the hill tribes After minor Roman victories the war ended in a draw.

340-338. **THE LATIN WAR** began with the revolt of the Latin cities from the league and their demand for complete equality. In the course of the war, P. Decius Mus sacrificed himself for the victory of his army The consul T. Manlius brought the war to a close in the **victory of Trifanum.** The Latin League was dissolved and its members made dependent on Rome without even *commercium* and *connubium* among themselves. In Rome their inhabitants received private rights but not the vote (*civitas sine suffragio*, later called *latinitas*). Some cities ceded land for settlement of Romans, some were made into Roman colonies, others were made dependent states

339. **Leges Publiliae,** passed by the plebeian dictator Q. Publilius Philo, gave *plebiscita* the force of law provided they obtained the subsequent consent of the senate (*auctoritas patrum*), for regular *leges* it was provided that this consent should now be given in advance, as a pure formality.

326-304. **THE SECOND SAMNITE WAR** began when Rome made Fregellae a colony and the first pro-consul (an ex-consul whose *imperium* was extended for carrying on a military command), Q Publilius Philo, captured Naples (327). The Romans had the support of the Apulians and Lucanians, and later of certain Sabellian cities. After initial successes the consuls Sp Postumius and T. Veturius were surrounded in the **Caudine Forks** and forced to surrender with their whole army. The Romans only slowly recovered Campania, but in 312 the censor Ap. Claudius began the great military road, the **Via Appia,** from Rome to Capua to secure Campania. The northern Etruscans joined Rome's enemies but were defeated at **Lake Vadimo** in 310 In 308 the peoples of central Italy, Umbrians, Picentini, Marsians, etc, attacked Rome. The Romans countered by using their first war-fleet in the Adriatic. The Samnites were defeated by M. Fulvius and L Postumius in 305 In 304 peace was made, slightly to Rome's advantage in that she secured undisputed hegemony of Campania

313. A law of the consul Poetilius (*lex Poetilia*) secured insolvent debtors against personal imprisonment if they surrendered their property entirely to their creditors.

312. **Appius Claudius** (later Caecus, "the blind"), as censor, is said to have distributed freedmen not holding land among all the tribes, but in 304 they, and freedmen of small landed property, were confined to the four urban tribes. This may reflect later debates as to the disposition of freedmen. In 304 a freedman of Appius, Gnaeus Flavius, is said to have made public the rules of legal procedure (*legis actiones*), to which he had access as clerk to the magistrates. This completed the work begun by the decemvirs in protecting the poor from manipulation of the law by the rich.

At about this time (or perhaps earlier, after the Gallic sack), the Roman army was reorganized so that in place of a solid phalanx with the long thrusting spear (*hasta*) the legion consisted of small groups, maniples of 120 men in two centuries (now purely titular), arranged in echelon in three lines (*hastati* and *principes* with the throw-

ing javelin, *pilum*, and only the rearmost *triarii* with the spear) for greater mobility in mountainous areas

During the ensuing years, Rome secured the Apennines by colonies, Sora, Alba Fucens, Carsioli, and Narnia, and built the *Via Flaminia* north to Narnia and the *Via Valeria* to Alba Fucens

298-290 THE THIRD SAMNITE WAR was a final effort of the Samnites, aided by the Lucanians, Gauls, and Etruscans, to break the power of Rome Their capital, Bovianum, was taken in 298, but their army managed to combine with the Gauls, only to be defeated in 295 at **Sentinum,** where a second Decius Mus secured a Roman victory by self-sacrifice, perhaps in fact the only instance The Gauls scattered, the Etruscans sued for peace in 294, and the Samnites finally made peace as autonomous allies, though the colony of Venusia was planted in the south to watch them, as well as Minturnae, Sinuessa, and Haria farther north The Sabines, northeast of Rome, were annexed and given Latin rights.

285-282. The Romans, despite defeats, annihilated the Gallic Senones, crushed the Etruscans at Lake Vadimo and Populonia, and occupied the Greek cities in Lucania Locri, Croton, and Thurii. This advance brought on the war with Tarentum and Pyrrhus.

287. The **lex Hortensia,** passed by the dictator Q Hortensius, fully equated *plebiscita* with *leges* by requiring the *auctoritas patrum* for the former to be given in advance as well as for the latter, its passage was brought about by another secession of the plebs, this time to the Janiculum The plebs had thus achieved complete legal equality with the patricians, but the old problem remained in the oppression of the poor by the rich patricioplebeian nobility, which was in full control of the *concilium plebis* and the *comitia tributa* because, since the voting was by tribes, only the rich members of the more distant tribes could afford to come to the meetings in Rome. Further, in the assemblies all initiative was in the hands of the presiding magistrates, and these were now almost always from the nobility and under the control of the Senate. As the problems of government became more complex with the expansion of Rome the control of the Senate became still more effective.

Rome had now established her supremacy throughout central Italy. Her relations with the other communities may be summarized as follows.

(1) *Municipia* retained their own municipal administration and enjoyed only the private rights (*connubium* and *commercium*) of Roman citizenship, not the franchise or right of holding office (*ciuitas sine suffragio*).

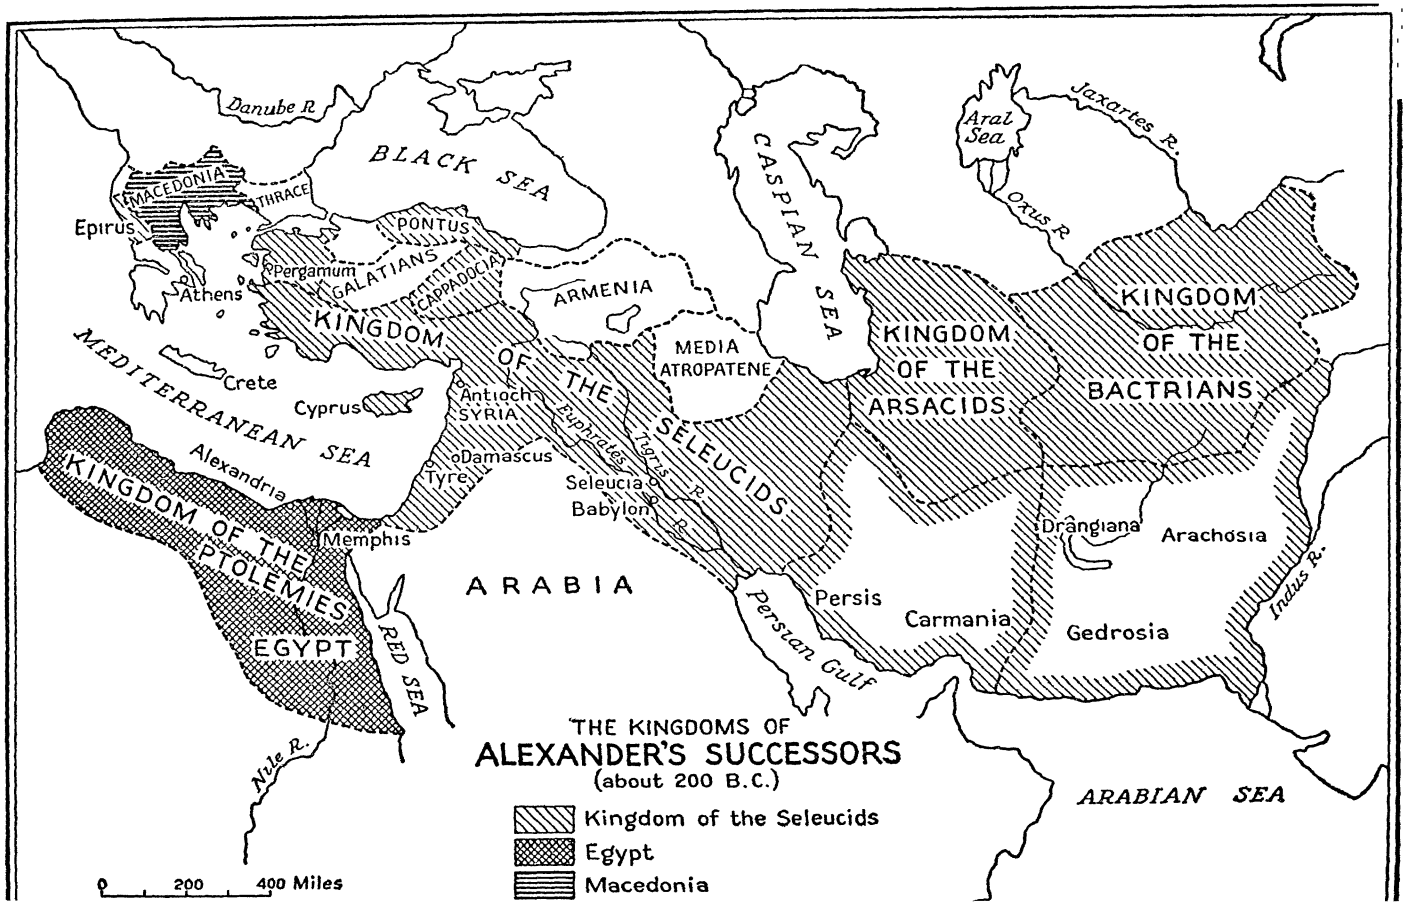
(2) *Coloniae* were settlements established by Rome for military purposes, usually on land taken from the conquered peoples. Smaller ones, Roman, were real garrisons and their settlers retained full citizenship At first they may have been administered directly from Rome. Larger ones reflected real attempts to relieve surplus population and included both Latins and Romans, the latter accepting only Latin citizenship, or *ciuitas sine suffragio*. They may have had some local government from the beginning. Ultimately colonies came to have administrations closely modeled on the Roman, with two executive magistrates (*duumuiri*) and a senate or *curia* whose members were called *decuriones*

Whatever the original form of government of the various *municipia* may have been, it tended to approximate the oligarchical model of Rome and the *coloniae*, with a small executive, often four (*quattuoruiri*), and a *curia* Moreover, recent study suggests that this general pattern of municipality may not be at all early, may, in fact, date only from Caesar's municipal reforms, and that before that both *municipia* and *coloniae* were governed by officials sent out from Rome, as was certainly the case with *municipia* which, by revolt, were deprived of self-government (e g. Capua later)

(3) *Ciuitates foederatae* were independent allies (*socii*) of Rome, whose obligations were regulated by treaty. They enjoyed freedom from direct interference in their affairs and from taxation (*libertas et immunitas*) and usually provided auxiliary troops or ships rather than legionaries. But their foreign relations were determined by Rome, and, in fact, they suffered considerable control.

(4) There were, in addition, groups or communities which did not have a civic organization and which, consequently, were administered under various names (*fora, conciliabula, uici, pagi*) either directly from Rome, by *praefecti*, or by neighboring cities to which they were attached as *attributi*

(*Cont. p.* 85.)



D. THE HELLENISTIC WORLD

1. CULTURAL DEVELOPMENT

The Hellenistic Age was characterized politically by the **atrophy of the city-state.** The cities of Greece were dominated increasingly by their richer or better educated members and the mass of the population lost power. In their external relations the cities either passed under the control of the various monarchs or joined together in leagues, whose attempts at representative federal government marked an advance in government which unfortunately bore no further fruit during the Roman period Athens was a university town, respected for its past grandeur but of little political weight after 262. Sparta, however, played a lone and considerable hand in the Peloponnese. To offset the decay of Greece itself, the Hellenistic Age witnessed the **spread of Greek culture** by the conquests of Alexander and his successors as far as the Indus Valley, the creation of Greek cities throughout Asia, and the development of monarchical governments. In the new Greek cities, municipal administration and public building reached a high level, as at Priene (Asia Minor) or Alexandria (Egypt). **Social experiments** ranged from state control of the grain supply (Athens) or distribution of grain to citizens (Samos) to extreme agrarian reforms at Sparta Private or royal munificence benefited the cities on a grand scale, and the cities themselves substituted for political rivalry that of the splendor of games, buildings, and honors. The administration of the three chief kingdoms was conditioned by their background. In **Macedon** the army, representing the Macedonian people, retained considerable influence, and the king was never so absolute as his Asiatic *confrères* The **Seleucids** developed a system of provincial administration and of communications based on the Persian satrapies; but their capital, Antioch, never attained the excellence of Egypt's Alexandria and its Hellenism was strongly affected by Syrian emotionalism. The **Ptolemies** administered Egypt as had the Pharaohs, as a state monopoly They granted a privileged position, however, to Macedonian settlers and to the city of Alexandria, which was kept apart from the rest of Egypt as a Greek city, though it contained also a large Jewish population, for whom, during the 3d century, a Greek translation was made of the Hebrew *Bible*, called the *Septuagint* from the 70 elders traditionally responsible for it. Alexandria was distinguished by its excellent administration and its magnificent buildings, among which were a lighthouse (*pharos*) and an academy of scholars (*museum*, temple of the Muses) with a magnificent library.

The economic life of the eastern Mediterranean was much stimulated by unification in Greek hands, by the opening of new areas, and by improved navigation and communications. The cities became very rich. In particular, the opening of the treasures of the Near East vastly increased the amount of gold and silver in circulation Two countries were, however, adversely affected. Greece, naturally poor, was drained of men by the opportunities offered for trade or mercenary soldiering in Asia, and could no longer compete with the more fertile areas now opened for exploitation. Egypt's resources, though ample for her self-contained economy, were exhausted by the expenditures of the Ptolemies in their attempt to create an Aegean empire. Nevertheless, in general, the period was one of complacent prosperity throughout the eastern Mediterranean.

Under the great librarians of Alexandria, **Zenodotus** (c 280), **Aristophanes** of Byzantium (257–180), and **Aristarchus** (217–145), philology, textual criticism, and kindred subjects replaced creative writing. But great advances were attained in science by such men as **Euclid** the geometrician (c. 300), **Eratosthenes** the astronomer and geographer (c. 240), and **Archimedes** the physicist (287–212, in Syracuse). **Literature** became imitative, artificial, and overburdened with learning, as in the poetry of **Callimachus** (c. 260), or the epic *Argonautica* of **Apollonius Rhodius** (295–214). Only the pastoral achieved a delicate and spontaneous freshness in the poems of **Theocritus** (c. 270, from Syracuse) The Attalids, notably Eumenes II, tried to make Pergamum into an intellectual rival of Alexandria, but their capital became famous chiefly for its **Pergamene school of art,** whose exaggerated style is best seen in the friezes of the Altar of Pergamum Another school flourished in the prosperous

island of Rhodes Much of Hellenistic art dealt with simple subjects of daily life in a realistic fashion, as in the charming pottery figurines from Tanagra, in Greece

In **philosophy**, the Academy continued the Platonic tradition but with increasing skepticism about the possibility of attaining truth. The **Peripatetics** devoted themselves almost wholly to scientific and historical studies. Two new schools, however, answered the spiritual needs of the time. **Stoicism** was founded by **Zeno** (336–264), a half-Phoenician from Cyprus, who taught in the Painted Porch (*stoa poikile*) at Athens, and **Epicureanism** by **Epicurus** (342–270), who withdrew from the world into his garden Both sought the same end, a mind which would be so self-sufficient through inner discipline and its own resources that it would not be disturbed by external accidents The Stoics sought this undisturbed state of mind (*ataraxia*) by modifying the Cynic asceticism to a doctrine of neglect of outward honors and wealth and devotion to duty. A belief that the world was ruled by a universal reason in which all shared led them to a humanitarian view of the brotherhood of men which transcended national, racial, or social differences This internationalism and the doctrine that the ruler should embody divine reason allowed them to support monarchical government The Epicureans sought the same end by following the Cyrenaics in advocating an inactive life (*apraxia*) and a moderate, not an excessive, self-indulgence To free the mind from wrong, they attacked religion and superstition and adopted the atomic metaphysics as a mechanical explanation of the universe

In **religion**, the Hellenistic Age witnessed a loss of belief in the simple Greek pantheon and a turning to more emotional oriental worships, like those of **Cybele**, the Great Mother of Asia Minor, the Persian **Mithra**, or the Egyptian **Isis**. A fatalistic view of external events led to the personification of Fortune (*tyche*) as a goddess. And a combination of flattery, legalism (since a god could always rule a city without changes in the constitution), skepticism (since many considered that the gods were originally famous men), and real gratitude for the benefits of government introduced the worship of rulers, both dead and living, which the Macedonian monarchs alone refused.

2. THE WARS OF THE DIADOCHI

322-315. When **Perdiccas** became regent for Philip III Arrhidaeus, the other generals, Antipater, Antigonus, Craterus, and Ptolemy, refused obedience Perdiccas was murdered when he attempted to dislodge Ptolemy from Egypt, but his general **Eumenes** defeated and slew Craterus in Asia Minor (321). Antipater and Ptolemy at Triparadeisus in Syria agreed that Antipater should be regent. Antipater sent Antigonus to dislodge Eumenes, who took refuge in the hills (320) When Antipater died (319), he left **Polyperchon** as regent, but Ptolemy defied him and annexed Syria. Antigonus seized Phrygia and Lydia. Polyperchon gave Eumenes command of the troops in Cilicia Antipater's son, **Cassander**, seized the Piraeus, garrisoned it, and left Demetrius of Phalerum as virtual dictator of Athens (317). Cassander took Macedon from Polyperchon (317), executed Olympias and Philip Arrhidaeus, when they attacked him, and imprisoned Roxana with her son Alexander IV, both of whom he put to death in 310. In the meantime, Antigonus, after a drawn **battle at Paraetacene** (317), had defeated Eumenes in Gabiene (316) and executed him Ptolemy in Egypt, Antipater, and Lysimachus in Thrace formed a coalition against Antigonus (315)

315-307. **Antigonus** seized Syria, but his son, Demetrius, was defeated at Gaza (312) by Ptolemy, who had already occupied the Cyclades (314) and the Peloponnese (313). Ptolemy then sent **Seleucus** to capture Babylon from Antigonus. An attempted settlement in 311 merely allowed Antigonus to continue fighting Seleucus, Cassander to secure the throne of Macedon (above), and Ptolemy to continue his expansion in the Aegean Antigonus sent Demetrius to Athens, whence he expelled Demetrius of Phalerum and restored the democracy (307).

307. **ANTIGONUS I, MONOPHTHALMOS** ("one-eyed") or Cyclops, and **Demetrius I Poliorcetes** ("besieger") took the title of king, whereupon Ptolemy and Seleucus, Cassander, and Lysimachus did the same The unity of Alexander's empire was thus openly ended.

306. Demetrius crushed Ptolemy in a naval battle off Cyprian Salamis but Ptolemy repelled a land attack by Antigonus. Demetrius failed to reduce Rhodes by a year's siege (305–304), but relieved Athens from the **Four Years' War** waged by

Cassander (307–304). He then revived the **Hellenic League** of Philip (303).

301. BATTLE OF IPSUS (in Phrygia). The allies, Cassander, Lysimachus, and Seleucus, but not Ptolemy, finally crushed and slew Antigonus Demetrius, who had been recalled by Antigonus, escaped to Corinth. By the division of spoils, Seleucus was given Syria, Lysimachus western and central Asia Minor, Cassander kept Macedon, but his brother Pleistarchus received southern Asia Minor. Ptolemy, however, seized Coele-Syria.

299. Pleistarchus was driven out by Demetrius, and Cassander himself died in 298. His eldest son, Philip IV, died also, so that two younger sons, Antipater and Alexander V, divided his realm.

295. Demetrius, after a bitter siege, recovered Athens, where one Lachares had made himself tyrant He then murdered Alexander V (294) and took Macedon He mastered northern and central Greece save for Aetolia.

288. A coalition was formed against Demetrius, and Lysimachus and King Pyrrhus of Epirus drove him out of Macedon He attempted a campaign in Asia Minor, but finally Seleucus captured him in Cilicia (285).

283. Demetrius died in captivity, leaving a son in Greece, Antigonus.

281. Seleucus defeated and slew Lysimachus at the **battle of Corupedium** and became master of Asia Minor When he tried to seize Macedon, however, he was assassinated by Ptolemy Ceraunus, who acquired control of Macedon. Ptolemy, in turn, was slain in an invasion of Celts (279)

279. The Celts ravaged Macedon, defeated the Greeks at Thermopylae, and reached Delphi A second band ruled Thrace until 210, while a third crossed to central Asia Minor and established the **Kingdom of Galatia.**

276-275. Meanwhile, Antigonus recovered Macedon for himself, founding a dynasty that lasted until 168.

3. SICILY TO THE ROMAN CONQUEST

317-289. AGATHOCLES made himself tyrant of Syracuse in consequence of a civil war (c 323–317) in which he, as democratic leader, expelled the oligarchs with Carthaginian aid and divided their property among the poor He successfully defended himself against the neighboring cities and the exiled oligarchs until these appealed to Carthage.

311. The Carthaginian general **Hamilcar** defeated Agathocles at the **Himera River** and besieged Syracuse In 310, Agathocles slipped across to Africa, where he maintained himself until 307 But his army, under his son, was annihilated during his absence

305. Agathocles came to terms with Carthage and the oligarchs, and took the title of king In the meantime the Tarentines had made peace with the Samnites (c. 320) and Rome (304), but were hard pressed by the Lucanians

302. When a Spartan commander, Cleonymus, failed to relieve them, the Tarentines called in Agathocles He also failed to accomplish much and died at Syracuse in 289, bequeathing their freedom to the Syracusans, who restored the democracy Certain of the Campanian mercenaries of Agathocles, calling themselves **Mamertines** ("sons of Mars"), seized Messana.

282-275. The Tarentines, angered by Roman occupation of towns in southern Italy, destroyed a Roman fleet which, in violation of the treaty of 304, had passed the Lacinian promontory. They then drove the Romans from Thurii. When Rome declared war, they called in Pyrrhus. Upon his departure in 275, the Greeks of southern Italy remained under Rome, while those of Sicily passed under Carthaginian power, save for Syracuse.

269-216. Hiero II made himself tyrant of Syracuse and defeated the Mamertines at Mylae. He took the title of king (265), and joined the Carthaginians in besieging the Roman force which occupied Messana in 264. But when he was defeated and besieged in Syracuse, he made peace with Rome (263). At the end of the First Punic War all Sicily save Syracuse and a few other pro-Roman cities passed into Rome's possession. Syracuse was reduced in 211 during the Second Punic War.

4. MACEDON AND GREECE TO THE ROMAN CONQUEST

290. Emergence of the **Aetolian League**, a military federation in western Greece It had a council with proportional representation and a semi-annual assembly. Affairs were handled by a committee of 100 *apokletoi* and a single general (*strategos*) in wartime. The league expanded into Phocis (254) and Boeotia (245) and dominated Greece from sea to sea. It also included Elis and part of Arcadia (245) and made an alliance with Messene, thus separating Sparta from the Achaean League.

280. Formation of the **Achaean League**, consisting of twelve towns in the northern Peloponnese It had a general (two until 255), a board of ten *demiourgoi*, a federal council with proportional representation of members There was also an annual assembly of all free citizens After 251, Aratus of Sicyon dominated its policy and was *strategos* (general) in alternate years He extended it to include many non-Achaean cities, especially Corinth (243)

276-239. ANTIGONUS II GONATAS ("knock-kneed"?) had to repel an invasion by **Pyrrhus of Epirus** (274–273). Pyrrhus was then called into Greece by the pretender Cleonymus, who sought to oust King Areus (309–265) from Sparta Pyrrhus was slain at Argos by the Argives and Antigonus (272) Antigonus established tyrants in several cities of the Peloponnese and made peace with the Aetolian League.

266-262. **Ptolemy I of Egypt** stirred up Athens and Sparta to wage the **Chremonidean War** (from Chremonides, an Athenian leader) against Antigonus Areus of Sparta was defeated and killed at the Isthmus (265) and, when Ptolemy failed to give energetic aid, Athens was obliged to surrender after a two-year siege (262). Antigonus garrisoned several strong points of Attica and imposed a moderate oligarchy on Athens.

258 (?256). Antigonus defeated Ptolemy in a naval **battle off Cos** and took the Cyclades, though he had to reconquer them later in the **battle of Andros** (245).

c. 252. Antigonus' governor of the Peloponnese, Alexander, revolted and held the peninsula until his death (c 246)

251. **Aratus of Sicyon** recovered that city from Antigonus' tyrant, and then joined the Achaean League, which he soon dominated.

245-235. **Sparta** had fallen into a serious economic crisis because of the excessive concentration of land and wealth in the hands of a few Coined money had been introduced by King Areus. The number of full citizens who could contribute to their mess-tables (*syssitia*) had fallen to 700. When **King Agis IV** (244–240) tried to redistribute the land into 4500 equal lots, the great landowners executed him **Cleomenes III**, who had married Agis' widow, became king (235)

241. Antigonus sent the Aetolian League to ravage the Isthmus

239-229. **Demetrius II** succeeded his father, Antigonus. He protected Epirus against Aetolia, so that the latter broke with Macedon and made an alliance with Achaea ' Demetrius attacked it in the **War of Demetrius** (238–229), but was recalled by invasions from the north (233) Argos expelled the pro-Macedonian tyrant Aristomachus and joined the Achaean League (229), while Athens asserted her independence

229-221. **Antigonus III Doson** ("going to give," i e always promising) succeeded his cousin Demetrius as guardian of the latter's nine-year-old son, Philip, whom he deposed in 227 to become king himself. He made peace with Aetolia and drove the barbarians out of Macedon.

228-227. **Cleomenes** defeated the Achaeans under Aratus. He then seized the power in Sparta, redivided the land, and enfranchised 4000 *perioikoi* and abolished the *ephorate*. With an increased citizen army, he reduced Aratus to appeal to Antigonus (225)

222. Antigonus formed a new Hellenic League and crushed Cleomenes at the **battle of Sellasia** (222). Cleomenes fled to Egypt Antigonus abolished the Spartan kingship, restored the ephors, and forced Sparta into his league

221-178. **Philip V**, son of Demetrius II, succeeded Antigonus III At his instigation the Hellenic League assembled at Corinth to declare

219-217. The War of the Allies, or Social War, against the Aetolians because of the latter's piracy. The Aetolians allied with Elis and Sparta, where an anti-Macedonian faction tried to recall Cleomenes When he was slain in Egypt, the Spartans nevertheless restored the dual kingship. Philip ravaged Elis (219–218), molested the Aetolian sanctuary of Thermum, and laid waste Laconia

217. Rhodes and Egypt negotiated the **Peace of Naupactus** between the discouraged Aetolians and Philip, who wanted freedom to act against Rome

215-205. In the **FIRST MACEDONIAN WAR** Philip V of Macedon attempted to help Hannibal and the Carthaginians against Rome, but a Roman fleet in the Adriatic prevented him from crossing to Italy and the Romans secured the support of the Aetolian League and Pergamum (212), as well as of Elis, Mantinea, and Sparta (210) . Sparta in particular, after a period of attempted social reform under King Cheilon (219), had risen to power under Machanidas, regent for the young King Pelops When the Achaean League under Philopoemen (since the murder of Aratus in 213) slew Machanidas at Mantinea (207), Nabis became regent and soon, by deposing Pelops, king The Greeks came to terms with Philip in 206 and Rome accepted the settlement by the **Peace of Phoenice** (205).

203-200. Philip, allied with Antiochus III against Egypt (203), began operations in the Aegean, but was defeated by Rhodes and Attalus of Pergamum in the **battle of Chios** (201)

200-196. The **SECOND MACEDONIAN WAR** arose from an appeal by Attalus and Rhodes to Rome (201). When Philip refused to keep the peace, all the Greeks joined Rome (200–198), and Flamininus defeated Philip at **Cynoscephalae** (197), and proclaimed the freedom of Greece at the Isthmian Games (196). Flamininus was forced to check Nabis of Sparta (above), who had carried through agrarian reforms (207–204) and expanded his power in the Peloponnese, especially by acquiring Argos (198). He now lost Argos and much of Laconia, and gave control of his foreign policy to Rome (195) Upon the murder of Nabis (192), Sparta was forced into the Achaean League by Rome, and Messene and Elis soon joined, so that the league controlled all the Peloponnese.

192-189. The Aetolians declared war on Rome and secured the support of Antiochus III with a small force The Achaeans and Philip supported Rome. The Romans drove Antiochus back to Asia in the **battle of Thermopylae** (191), and the Aetolians were finally made subject allies of Rome by M. Fulvius Nobilior (189)

189-181. Philopoemen humbled Sparta but lost his life in suppressing a revolt in Messenia (183) His successor in the Achaean League, Callicrates, was subservient to Rome and allowed Sparta to revive

179-167. Perseus became King of Macedon on the death of his father Philip V He had already persuaded Philip to execute his pro-Roman brother Demetrius, and now Eumenes II of Pergamum laid charges against him at Rome.

171-167. In the **THIRD MACEDONIAN WAR** Perseus was crushed by Aemilius Paullus at **Pydna** (168) He later died in captivity in Italy and the Antigonids came to an end Rome made Macedon into four unrelated republics, paying a moderate yearly tribute (167). In Aetolia, 500 anti-Romans were slain. One thousand hostages, including the historian Polybius, were taken from Achaea to Italy.

149-148 The **FOURTH MACEDONIAN WAR** was begun by Andriscus, who pretended to be a son of Perseus On his defeat, Macedon became a Roman province (148).

146. When the Achaean hostages had returned (151) and Callicrates had died (149), the Achaean League attacked Sparta, but was crushed by the Roman general Mummius (146) The Roman Senate ordered Mummius to abolish the leagues, substitute oligarchies for all democracies, sack Corinth, and place Greece under the supervision of the governor of Macedon. This marked the end of Greek and Macedonian independence, though some Greek states retained autonomy for a long time

5. THE SELEUCID EMPIRE AND PERGAMUM

305-280. SELEUCUS I NICATOR ("conqueror"), after securing his position against Antigonus (310–306) and assuming the royal title (305), ceded India to **Sandracottus** (Chandragupta) for 500 elephants (304–303). Though Ptolemy

took Coele-Syria (301), Seleucus secured Cilicia from Demetrius (296–295). Seleucus failed to reduce **Mithridates I of Pontus,** but got control of western Asia Minor on the defeat of Lysimachus (281).

280-261. Antiochus I Soter ("saviour") succeeded upon the murder of Seleucus. He fought and finally defeated the Galatians (279–275) by terrifying them with his elephants. In the **Damascene** (280–279) and **First Syrian** (276–272) **Wars** he lost, to Ptolemy II, Miletus, Phoenicia, and western Cilicia.

263-241. Eumenes I made himself virtually independent of Antiochus as ruler of Pergamum, where his uncle, Philetarus, had ruled as governor first for Lysimachus and then for the Seleucids.

261-246. Antiochus II Theos ("god"), son of Antiochus I, secured the support of Antigonus II and Rhodes against Egypt in the **Second Syrian War** (260–255). The succeeding peace restored to Antiochus. Ionia (including Miletus), Coele-Syria, and western Cilicia (255)

250-230. Diodotus I declared himself independent King of Bactria. In 248–247, Arsaces I of the nomad Parni established himself in the province of Parthia.

246-226. SELEUCUS II CALLINICUS ("gloriously victorious"), son of Antiochus II by his divorced wife, Laodice I, succeeded **Berenice II,** daughter of Ptolemy II, whom Antiochus had married in 252, provoked the

246-241. Third Syrian War ("Laodicean War" or "War of Berenice") in favor of her infant son. Though she and her son were murdered in Antioch, her brother, Ptolemy III, invaded Asia and ultimately forced Seleucus to surrender the coasts of Syria and southern Asia Minor (241)

241-197. Attalus I, Soter ("saviour"), who succeeded his father's cousin, Eumenes I, as ruler of Pergamum, took advantage of Seleucus' difficulties to secure for himself western Asia Minor by crushing the Galatians near **Pergamum** (230), after which he took the title king and received the surname *Soter*.

237. Seleucus attacked **Antiochus Hierax** ("falcon"), a younger son of Laodice, whom Seleucus in 241 had recognized as ruler of Asia Minor. Hierax secured the aid of Mithridates II of Pontus and the Galatians. The Galatians crushed Seleucus at Ancyra (236)

c. 235. Arsaces II (Tiridates), second ruler of the Parni (246–c. 211), also seized the opportunity to conquer Parthia and Hyrcania and found the **Parthian kingdom** (p 83). He made peace with Diodotus II of Bactria (c 230) and an expedition of Seleucus against him was ineffective. Arsaces likewise converted Armenia into an independent kingdom.

229-226. Attalus I of Pergamum drove Hierax out of Asia Minor (229–228), after which Seleucus drove him out of Syria (227) to Thrace, where he died (226).

226-223. Seleucus III Soter or Ceraunus ("thunderbolt"), son of Seleucus II, was murdered during a war with Attalus I (224–221).

223-187. ANTIOCHUS III, THE GREAT, brother of Seleucus III, regained from Attalus most of the territory lost since 241 He recovered the Mesopotamian provinces from the revolting governor, Molon (221). But in the

221-217. Fourth Syrian War, despite initial successes, he finally retained on the Syrian coast only Seleucia, the port of Antioch.

209-204. In a number of campaigns, Antiochus reduced the Parthian Arsaces III Priapatius to vassalship, made an alliance with Euthydemus, who had usurped the Bactrian throne of Diodotus II, and even secured the submission of the Indian rajah Sophagasenus Thus he restored the Seleucid Kingdom to its former extent.

201-195. The Fifth Syrian War resulted from the treaty which Antiochus III had made with Philip V of Macedon in 203. The war was decided in 200 by Antiochus' **victory of Panium.** After several campaigns in Anatolia, Antiochus secured from Egypt most of Coele-Syria and southern Asia Minor (save Cyprus). Although Eumenes II Soter of Pergamum (197–159), son of Attalus I, induced Flamininus to order Antiochus out of Asia Minor, Antiochus did not heed, but confirmed his conquests by a peace with Egypt (195)

192-189. WAR WITH ROME. Antiochus' continued disregard of the Senate led to a war in which he was driven from Greece (191) and his fleet was defeated at **Myonnesus** (190). The Roman army entered Asia Minor and defeated Antiochus himself at **Magnesia** (190). In the peace (189), Antiochus paid a large indemnity, lost his fleet, and surrendered Asia Minor, which was divided between Rhodes and Pergamum. This defeat led to the complete breaking away of Armenia (under Artaxias) and of Bactria, where a succession of Greek rulers preserved Hellenism until the invasions of the Sacae (c. 150–125). An offshoot of the Bactrian

Kingdom flourished in the Punjab (c. 175–c. 40), and though its rulers adopted Buddhism (c 150) it introduced Hellenistic art and ideas into India.

187-175. Seleucus IV Philopater ("loving his father") succeeded his father Antiochus, and during his reign the empire gradually recovered strength. Meanwhile Eumenes II of Pergamum fought against Prusias I of Bithynia (186) and Pharnaces I of Pontus (183–179)

175-163. Antiochus IV Epiphanes ("god manifest") succeeded upon the murder of his brother Seleucus Though friendly to Rome, he was prevented by the Romans from concluding successfully his war against Egypt (171–168) The Romans also weakened Rhodes by making Delos a free port (167) Insurrection of the Jews under **Judas Maccabeus,** after Judaism had been declared illegal (168). The Jews attained religious freedom in 164 and, after a series of wars, established political independence in 142 (p. 30) Upon his death, Antiochus left as king his young son **Antiochus V Eupater** ("of a noble father"), under the regent Lysias (163–162).

162-150. Demetrius I Soter ("saviour"), son of Seleucus IV, returned from Rome to eject Antiochus V, but was slain in 150 by a pretender, **Alexander Balas** (150–145), who claimed to be the son of Antiochus IV and was supported by Attalus II Philadelphus ("loving his brother") of Pergamum (159–138) (who had succeeded his brother Eumenes II), by Ptolemy VI of Egypt, and by Rome. Ptolemy, however, soon invaded Syria in favor of Demetrius II, the son of Demetrius I, who slew Balas in 145.

145-139. Demetrius II Nicator ("conqueror") won several victories (140) over Mithridates I of Parthia, who had seized Media (c. 150) and Babylon (c. 141). Mithridates, however, captured Demetrius by treachery in 139. In the meantime, a son of Alexander Balas, Antiochus VI Epiphanes Dionysus ("god manifest"), had held Antioch from 145 to 142, when he was expelled by the mercenary leader Diodotus, who took the title of King Tryphon (142–139). He was expelled by a brother of Demetrius II.

139-127. Antiochus VII Euergetes Eusebes Soter Sidetes ("benefactor, pious, saviour") did much to restore the Seleucid power. However, after several victories over Phraates II of Parthia, he was finally defeated and killed at Ecbatana (127).

138-133. Attalus III Philomater ("loving his mother") **of Pergamum,** a son of Eumenes II, succeeded his uncle, Attalus II. In his will, he bequeathed his kingdom to Rome, apparently in order to protect his subjects from absorption by their neighbors. Rome had to suppress the pretender Aristonicus before it could make the Kingdom of Pergamum into the Province of Asia (129).

129-125. Demetrius II was sent back to Syria by Phraates II in 129 and was slain in 125 by a pretender with Egyptian support, Alexander Zabinas Demetrius' son, **Seleucus V,** assumed the diadem but was put to death at once by his mother Cleopatra Thea.

125-96. Antiochus VIII Epiphanes Philomater Callinicus "Grypus" ("god manifest, loving his mother, gloriously victorious, hook-nosed"), a younger son of Demetrius II, reigned with Cleopatra until her death (c. 120) The pretender, Alexander Zabinas, was killed in 123. In 117 Antiochus was forced into retirement by a half-brother, **Antiochus IX Philopater, "Cyzicenus"** ("loving his father, of Cyzicus"), son of Cleopatra and Antiochus VII. After an indecisive series of battles (113–112), they divided the realm in 111 and both reigned until Antiochus VIII was murdered in 96 by his favorite, Heracleon.

95-64. Seleucus VI, son of Antiochus VIII, defeated and killed Antiochus IX (95). The son of the latter, **Antiochus X,** defeated and killed Seleucus VI, but the latter's brother, Demetrius III, seized Damascus. Another son of Antiochus VIII, **Antiochus XI,** was defeated and killed, but his brother Philip I continued the war with Antiochus X. The latter was killed in 93 fighting the Parthians in Commagene Demetrius III and Philip I engaged in civil war until Demetrius was captured by the Parthians in 88. **Antiochus XII,** another son of Antiochus VIII, seized Damascus, which he held until he was killed on an expedition against the Nabataeans in 84. An insurrection expelled Philip I from Antioch, and Tigranes of Armenia seized Syria and held it until he was defeated by Lucullus in 69. **Antiochus XIII,** son of Antiochus X, was installed at Antioch (68) and soon had to fight with Philip II, son of Philip I. The Arabian prince of Emesa slew Antiochus XIII by treachery in 67, Philip was unable to secure his rule. In 64 Pompey made Syria a Roman province.

6. PARTHIA

331-323. Rule of Alexander the Great.

312-282. Seleucus I founded the dynasty of the Seleucids, ruling over Babylonia and Syria; he built the city of Seleucia near Ctesiphon on the Tigris

249-247. Arsaces I founded the Kingdom of **Parthia,** including at first only Parthia and Hyrcania, between the Seleucid Kingdom in the west and the Bactrian Kingdom in the east

247-212. Arsaces II (Tiridates I), though defeated by Seleucus II (238), was able to establish the independence of Parthia

212-171. Arsaces III withstood the attacks of Antiochus III the Great in 209; he was followed by Arsaces IV (Priapatius) and Arsaces V (Phraates I).

171-138. Mithridates I conquered Babylonia and Media from the Seleucids, later he added to his kingdom Elam, Persia, and parts of Bactria, thus founding the Parthian Empire. Ctesiphon-Seleucia became the capital.

138-124. Phraates II (138–127) defeated Antiochus VII in Media (129), and as a result the Seleucids were permanently excluded from the lands east of the Euphrates; but he died in battle fighting the Tochari (the *Scythians* or *Sacae* of the Greeks), a tribe driven forth from Central Asia by the Yue-chi The kingdom was devastated and Artabanus I (127–124) fell likewise fighting against the Tochari

124-88. MITHRIDATES II, THE GREAT, defeated the Scythians and also Artavasdes, King of Armenia Major. In 92 he made a treaty with Rome

88-70. Parthia suffered a collapse and was greatly reduced in territory by Tigranes of Armenia.

70-57. Phraates III restored order, but was not strong enough to resist the Roman advance, led by Lucullus and Pompey.

57-37. Orodes I defeated Crassus at **Carrhae** (53) and regained Mesopotamia

37-32. Phraates IV defeated Antony in 36, but could not prevent him from conquering Armenia in 34. After a period of dynastic disturbances

A.D. 51-77. Vologesus I, after a war with Rome, obtained recognition of his brother Tiridates as King of Armenia (63), thus establishing an Arsacid dynasty in that country. In Parthia itself the utmost confusion prevailed after 77, with two or more kings (all of them little known) ruling at the same time and constantly challenged by other claimants

(*Cont. p* 124)

7. BACTRIA

328-323 B.C. Bactria under the rule of Alexander. A mutiny of Greek auxiliaries after Alexander's death was crushed at once by Perdiccas

323-302. Bactria under Perdiccas (d. 321), Antipater (d 319), Eumenes (d 316), Antigonus (d 301) In his wars against Antigonus, Seleucus I conquered the eastern provinces (311–302).

302-c. 250. Bactria under the Seleucids

c. 250-c. 139. Diodotus, the satrap of Bactria, made himself an independent ruler and conquered Sogdiana He founded a dynasty that withstood the attacks of the Seleucids.

After the defeat of Antiochus III at Magnesia (190), Euthydemus and his son Demetrius began the conquest of the Indus Valley But Eucratides made himself King of Bactria (c. 170) while Demetrius was founding a kingdom in the Punjab. About 150 the Tochari (*Scythians* or *Sacae*) occupied Sogdiana, and about 139 Bactria. The line of Eucratides maintained itself in Kabul until about 40 B C., but most of the region was ruled by Scythian dynasties.

8. PTOLEMAIC EGYPT, TO THE ROMAN CONQUEST

305-283. PTOLEMY I SOTER ("saviour"), the son of Lagus (hence the "Lagid" house), had been governor of Egypt since 323 and king since 305 He had seized Coele-Syria in 301, and acquired from Demetrius, Pamphylia and Lycia

(296–295), and Caria and the island of Cos (286) Founding of the Museum at Alexandria

285–246. **PTOLEMY II PHILADELPHUS** ("lover of his sister") adopted a Pharaonic practice by marrying his sister Arsinoe II (276) He explored the upper Nile and extended his power along the Red Sea and into northern Arabia (278) for commercial purposes

280–272. In the **Damascene War** (280–279) and **First Syrian War** (276–272), he suffered initial defeat from Antiochus I and the revolt of his half-brother Magas in Cyrene But he finally defeated both and secured Miletus, Phoenicia, and western Cilicia He subsidized Pyrrhus against Antigonus (274), aided Athens and Sparta in the Chremonidean War (266–262), and incited Alexander II of Epirus to attack Macedon (264) He likewise incited Eumenes of Pergamum to revolt from Antiochus (262) and supported the seizure of Ephesus (262–259) by his own son, Ptolemy "the Son" These activities brought Antiochus II, Antigonus II, and Rhodes together to wage

260–255. The **Second Syrian War** (260–255), in which Antigonus defeated Ptolemy in the **battle of Cos** (258 or 256) Though by the resulting peace he lost Cilicia and western Pamphylia (255), he later recovered the Cyclades (250) and also Cyrene (c 248), which had become independent in 258

246–221. **Ptolemy III Euergetes** ("benefactor") supported his sister Berenice II in the **Third Syrian War** (246–241) and acquired the coasts of Syria and southern Asia Minor, as well as some Aegean ports, including Ephesus But he lost the Cyclades to Antigonus through the **battle of Andros** (245) Height of the Ptolemaic power

221–203. **Ptolemy IV Philopater** ("loving his father") was a weak monarch, dominated by his minister, Sosibius. In the **Fourth Syrian War** (221–217) he at first lost much of the Syrian coast to Antiochus III, but the victory of **Raphia** (217) brought the recovery of all save the port of Seleucia.

203–181. **Ptolemy V Epiphanes** ("god manifest"), a young boy, succeeded his father While the Egyptian natives revolted in the Delta (201–200) Antiochus III attacked him in

201–195. The **Fifth Syrian War**, as a result of which Ptolemy retained only Cyprus of his Asiatic possessions. When he came of age (195), he succeeded in suppressing the native revolts

181–145. **Ptolemy VI Philomater** ("loving his mother") followed Ptolemy V under the regency of his mother, Cleopatra I. In consequence of Ptolemy's cowardice during the war with Antiochus (171–168), the people of Alexandria forced him to associate his brother, **Ptolemy VII**, in the rule. Rome prevented Antiochus from capturing Alexandria (168) When Ptolemy VI was expelled by his brother (164), the Roman Senate restored him and gave Cyrene and Cyprus to Ptolemy VII, who, however, secured only Cyrene (163) Ptolemy VI expelled Demetrius I from Syria (152–151) and supported Demetrius II against Alexander Balas (147–145), but was slain in the war

145–116. **Ptolemy VII Euergetes II** ("benefactor") or Physcon ("fat-bellied") reunited the empire after his brother's death and restored order. At his death, he left Cyrene separately to his son Apion, who willed it to Rome in 96, though it was not actually annexed until 75 Another son, Ptolemy IX, received Cyprus, which was ultimately bequeathed to Rome and annexed in 58

116–47. **Ptolemy VIII Soter II** ("saviour") or Lathyrus, son of Ptolemy VII, was eventually expelled by his brother **Ptolemy IX Alexander I** (108–88) The people of Alexandria, however, slew Ptolemy IX and restored Ptolemy VIII (88–80). **Ptolemy X Alexander II**, son of Ptolemy IX, succeeded but was at once slain by the people of Alexandria (80), who set up an illegitimate son of Ptolemy VIII, **Ptolemy XI Auletes** ("flute-player") or **Neos** ("new") **Dionysos.** Though expelled in 58, he bribed the "first triumvirate" (p 96) to send Gabinus to restore him (55). On his death in 51, he left his throne jointly to his children, **Cleopatra VII** and **Ptolemy XII** (51–47) When Ptolemy expelled his sister, Caesar forced her restoration (48) and, since Ptolemy died during the fighting about Alexandria (48–47), Caesar joined with Cleopatra a younger brother, **Ptolemy XIII** (47–44), whom Cleopatra murdered on Caesar's death (44)

47–30. **Cleopatra VII** sought to restore the Ptolemaic Empire by winning to her support Caesar and later Antony (41), with whom she sought to establish a Hellenistic monarchy (36). Upon Antony's suicide after Actium (31), she sought to fascinate the young Octavian, but failed and committed suicide rather than adorn his triumph (30) This brought to an end the last of the Hellenistic monarchies.

E. ROME, THE MIDDLE AND LATER REPUBLIC

1. THE PUNIC AND MACEDONIAN WARS

During the 3d and 2d centuries B.C. Rome's internal history was marked by the consolidation of the rule of the patricio-plebeian aristocracy. The extension of Rome's external relations and the consequent complexity of her internal problems raised questions impossible of settlement in the unwieldy and uninformed *comitia*, which came more and more to surrender the initiative in government to the Senate, composed as it was of ex-magistrates, urban, military, and provincial, who had the necessary background and experience They, in their turn, had come to regard government and office as a prerogative of themselves and their children. This distinction was furthered by the increased opportunities for wealth opened to the ruling group through conquest and provincial government Since custom, confirmed by a *lex Claudia* of 218, forced senators to invest chiefly in land, they built up large estates, partly by renting public land, which through long tenure they came to regard as their own, and partly by acquiring the holdings of poorer farmers The poorer farmers, in turn, subjected to the devastations of the Hannibalic Wars, and to the demands of long-term military service abroad, found it difficult to exist, and tended either to emigrate, remain in the army, or congregate as an idle mob in Rome The political, social, and economic problems thus raised finally caused the ruin of the senatorial republic by the Gracchan troubles

Rome's position in Italy became increasingly strong during these centuries. In consequence, the senatorial class began to act with increasing arbitrariness toward Rome's Italian allies and to impose on them the burdens of conquest while reserving the rewards for themselves or using them as sops to the Roman citizens The citizens, who found that citizenship paid in privilege, in some share in the public land, in free entertainment at Rome, eventually in a government-controlled food supply, and probably in the indirect benefits of bribery and corruption, became unwilling to extend the franchise The discontent of the Italians found ultimate expression in the Social War, which won for them Roman citizenship

In the Mediterranean, Rome, without really so desiring, was forced to extend her sway, *imperium*, more and more widely. The Senate, like such landed aristocracies as Sparta or the English Tories, was not imperialistic. Nor, on the whole, was the *populus* But the fear of attack from strong powers led Rome to attack such as might threaten her, and experiments in allowing her rivals a feeble and divided independence (*divide et impera*, divide and rule) proved unsatisfactory Either her creations quarreled among themselves and forced her to intervene, or they became the willing or unwilling prey of stronger powers. Hence Rome was forced into annexation But conquest led ultimately to the corruption of both Senate and people, to the creation of a financial group, the *equites*, interested in imperialism, and to opportunities for self-aggrandizement on the part of generals and governors In consequence, the discontented peoples of Asia supported Mithridates, the equestrian class became a possible rival to the Senate, and the way was opened for the domination of the state by military commanders

282-272. WAR WITH PYRRHUS arose from an attack by the Tarentines on Thurii and their destruction of a Roman fleet which entered the harbor in violation of a treaty forbidding Roman warships from sailing east of the western promontory of the Gulf of Tarentum Tarentum called in **Pyrrhus of Epirus** (p 79). In 280, with an army of 25,000 men and 20 elephants, he won a hard-fought victory over the Romans at **Heraclea.** Though the Bruttians, Lucanians, and Samnites then joined Pyrrhus, the Senate, instigated by Ap. Claudius, the blind ex-censor, rejected the peace offers of Pyrrhus' ambassador Cineas. In 279 Pyrrhus won his second victory at **Ausculum,** but with losses so great that he exclaimed, "Another such victory and we are lost" (a "Pyrrhic victory"). Pyrrhus then crossed to Sicily. Rome rejected peace with Pyrrhus and made one with his enemy, Carthage. Pyrrhus returned to Italy after two years but was defeated at **Beneventum**

in 275 and returned to Greece. His general, Milo, then surrendered Tarentum to the Romans (272), who destroyed its military resources, but left it its own municipal administration Rome rounded out her subjugation of Italy by the recapture in 270 of Rhegium from the Mamertines and the reduction of the Bruttians, Lucanians, Calabrians, and Samnites

264-241. THE FIRST PUNIC WAR arose from the fact that certain of the Campanian mercenaries, or Mamertines who were holding Messana against Hiero II of Syracuse (p. 78), appealed to Rome while others appealed to Carthage The Roman assembly, though the Senate hesitated, sent a fleet and army which found the Carthaginians already in possession The Romans drove them out and were in turn besieged by the Carthaginians. In 264 the consul Ap Claudius Pulcher relieved them, but failed to take Syracuse. During the following year two Roman armies invaded Sicily and Hiero shifted to a Roman alliance.

262. The Romans defeated the Carthaginian general Hanno and took Agrigentum (Acragas)

260. After losing the consul Cn Cornelius Scipio with 17 ships off the Lipara Islands, the Romans under C Duilius won the **naval victory of Mylae,** west of Messana.

257. The Romans sent 330 ships under the consuls M. Atilius Regulus and L. Manlius Vulso to carry troops from Sicily and effect a landing in Africa. This fleet defeated the Carthaginians off the south coast of Sicily at **Ecnomus** (256) and landed just east of Carthage. Regulus, left with half the troops, offered such stringent terms that Carthage continued her resistance under the leadership of the Spartan mercenary Xanthippus.

255. Xanthippus captured Regulus and part of his army. The Romans sent a fleet which took off the remainder, but was lost in a storm, as happened again two years later.

254. Rome seized Panormus and, in 251, defeated the new Carthaginian general, **Hasdrubal,** son of Hanno. On the advice, traditionally, of Regulus, who had been sent to negotiate an exchange of prisoners with the Carthaginians, they refused to do so and Regulus returned to die in Carthage.

249. The consul Claudius Pulcher, after throwing the sacred chickens overboard because they refused to give a good omen by eating grain, lost his fleet at **Drepana.** The Romans were unable to dislodge the Carthaginian **Hamilcar Barcas** ("lightning") from the strong promontory of Eryx, whence his ships harried their coasts

241. At the **Aegates Islands,** off Lilybaeum, the Romans annihilated the Carthaginian fleet Carthage received peace on condition of the surrender of Sicily and the payment of 3200 talents in ten years Rome left eastern Sicily to Hiero of Syracuse but undertook to govern the remainder herself as her **first province,** regularly constituted in 227.

241-217. Some time during this period the *comitia centuriata* suffered a radical reform, probably because the centuries had lost their military significance. The centuries of *equites* lost the right of first vote, which was hereafter determined by lot among the centuries of the first class The number of centuries was increased to harmonize in some way with the tribal divisions and divided into seniors and juniors. Perhaps there was one century each of seniors (over 46) and juniors from each of the five classes in each of the 35 tribes, i.e $2 \times 5 \times 35 = 350$, $+ 18$ of knights and 5 of propertyless persons $= 373$ Though the reform passed for democratic, its basis remained one of property and age, since the first class (wealthy) probably had a proportion of centuries (almost one fifth) in excess of its proportion of population and since the elders, naturally fewer than the younger, had nearly half of the centuries. At the same time (241) the final two tribes were added, making a total of 35. Thereafter new citizens were enrolled in the existing tribes, so that these lost their geographical significance.

238. Rome seized Sardinia, rich in minerals, during a revolt of the mercenaries in Carthage It later (227) formed a province with Corsica.

235. The first recorded closing of the temple of Janus since its foundation by Numa indicated that Rome was at peace with all nations.

229-228. The first Illyrian War. Rome sent a fleet of 200 vessels to suppress the pirates of Queen Teuta. The grateful Hellenes admitted the Romans to the Isthmian Games and the Eleusinian Mysteries and thus recognized her as a civilized power. In a second war (219), Rome defeated Teuta's successor, Scerdilaidas.

225-222. Large hordes of **Celts** moved from the Po Valley to Etruria. The Romans surrounded and slew a con-

siderable body at **Telamon** (225) and gradually reduced the Insubres, around Milan In the **battle of Clastidium** (222) M. Claudius Marcellus slew a Gallic chief in single combat The Romans founded the fortress colonies of Placentia, Cremona, and Mutina, and extended the *Via Flaminia* from Spoletum to Ariminum

218. A **lex Claudia** forbade senators to own a ship of more than 300 *amphorae* (225 bushels), only enough to care for their farm produce, they were thus forced to invest in land rather than in industry or commerce.

218-201. THE SECOND PUNIC WAR arose from Rome's jealousy of Carthaginian expansion in Spain, where Hamilcar Barcas (236–228) and, after his death, his son-in-law Hasdrubal (228–221) had established themselves. Rome made Carthage promise not to attack Saguntum or Emporiae, Greek foundations south of the Ebro, or to cross that river. After the assassination of Hasdrubal, his twenty-five-year-old successor **Hannibal** destroyed Saguntum in 219 (perhaps without the full support of his home government), the conservative element in which was jealous of the power and independence of the Barcids Carthage, however, refused to disown him

218. Hannibal executed a daring land march through southern France and by an undetermined Alpine pass advanced into the Po Valley The Roman consul **P. Cornelius Scipio** reached Marseilles with his fleet too late to stop Hannibal. He therefore sent his brother Cnaeus with most of the fleet to Spain and returned himself to meet Hannibal, who had perhaps 26,000 men and a few elephants, at the **Ticinus,** a branch of the Po He was defeated, as was his colleague soon after at the **battle of the Trebia,** another branch of the Po As the Romans took refuge in Placentia and Cremona, the Gauls rallied to Hannibal

217. Hannibal crossed the **Apennines** west of two new Roman armies posted at Ariminum and Arretium. The consul C. Flaminius followed him from the latter place and was led into an ambush and annihilated at **Lake Trasimene.** The Romans, terrified, appointed **Quintus Fabius Maximus** dictator. Hannibal moved east again to the Adriatic and then south, in hopes of a general Italian rising. The cities, however, refused to receive him and Fabius, without joining battle (hence his title *Cunctator*), harried his army. The Romans were dissatisfied with this policy.

216. The consuls L Aemilius Paullus (conservative) and C. Terentius Varro (popular) led an army of 86,000 Romans and Italians against Hannibal Consuls, when together, now commanded on alternate days, and Varro, on his day, unwisely attacked Hannibal at **Cannae,** in Apulia. The Romans, including Paullus, were practically annihilated, though Varro escaped. When, during the same year, a legion was destroyed in Cisalpine Gaul, a rift appeared in the allegiance of Italy to Rome. Capua deserted, along with the Samnites, Lucanians, and other peoples of southern Italy The Romans checked all public grief, refused Hannibal's terms, and sent out an army under M. Claudius Marcellus. Carthage made alliances with Philip V of Macedon, and Hieronymus, grandson of the lately deceased (217) Hiero of Syracuse. Hannibal wintered at Capua.

215. Marcellus, now pro-consul, defeated Hannibal at **Nola** and forced him into Apulia The government at Carthage gave Hannibal almost no support and he was unable to receive aid from his brother Hasdrubal in Spain.

218-211. Publius Scipio had rejoined his brother Cnaeus in Spain and between them, with varying fortune, they kept Hasdrubal busy and stirred up Syphax, King of western Numidia, against Carthage.

215-205. By using a few troops for the **First Macedonian War** (p. 80), the Romans prevented the irresolute Philip from helping Hannibal. In 211 they organized a Greek alliance, under the lead of the Aetolians (**Treaty of Naupactus**) including even Thracians, Illyrians, and Pergamum, against him After her Greek allies quit in 206, Rome was forced to make the disadvantageous **Peace of Phoenice.**

214-210. Marcellus carried the war into Sicily, where he defeated a Carthaginian army and sacked Leontini. Though Hieronymus had been murdered, the Syracusans renewed their alliance with Carthage (215), but, despite the ingenious defensive machinery devised by Archimedes, **Marcellus reduced Syracuse in 211.** The rest of Sicily quickly fell again under Roman control.

212. Hannibal seized **Tarentum,** save for the citadel. He compelled the Romans to raise the siege of Capua, defeated two armies, but retired again to Tarentum. Both Scipios were slain in Spain by the Carthaginians, who drove the Romans to the Ebro

211. Hannibal returned to relieve Capua. The Romans this time refused to abandon the siege, so he marched to within a mile of Rome, but as they did not falter, he again had to retire Capua surrendered to Rome and was deprived of all self-government As Hannibal seemed unable to weaken Rome or reduce the citadel of Tarentum, his prestige sank and his Italian allies went back to Rome

210. **P. Cornelius Scipio,** son of the late general, was sent to Spain with proconsular powers, though only 25 and a mere exaedile In Sicily, the Romans reduced Agrigentum

209. Scipio captured New Carthage in Spain Marcellus defeated Hannibal and Fabius reduced Tarentum In the following year, Hasdrubal evaded Scipio and reached the Po Valley.

207. In the **battle of the Metaurus River** (Sena Gallica), the consul M Livius Salinator, supported by his colleague C. Claudius Nero, who had made forced marches from the south, where he was holding Hannibal in check, defeated and slew Hasdrubal Hannibal withdrew to Bruttium.

206. Scipio drove the Carthaginians out of Spain and made a secret treaty with their ally Massinissa, King (in 208) of eastern Numidia He returned to Italy and was elected consul under age, for 205

204. Scipio took a force to Africa and, with Massinissa's help, defeated the Carthaginians and Syphax (203). Carthage was forced to recall Hannibal, who attempted in vain to negotiate.

202. In the **battle of Zama,** Scipio annihilated the Carthaginian army, though Hannibal escaped.

201. Carthage accepted Rome's terms· surrender of Spain and all other Mediterranean islands, transfer of the kingdom of Syphax to Massinissa; payment of 200 talents a year for 50 years, destruction of all except ten warships; promise not to make war without Rome's permission Scipio, now entitled *Africanus*, celebrated a splendid triumph The unfaithful Italian allies were in part forced to cede land, in part deprived of independence Rome founded many colonies in southern Italy.

205-178. **Spain was divided into two provinces** (197), Hither Spain (*Hispania Citerior*) in the Ebro Valley, and Farther Spain (*Hispania Ulterior*) in the south around Gibraltar and the Guadalquivir River Constant warfare, however, was necessary to subdue the Lusitanians.

200-191. The resubjugation of the Po Valley required considerable effort Rome founded colonies and built the *Via Aemilia* as a continuation of the *Via Flaminia* from Ariminum to Placentia

The newly acquired overseas territories could not be governed either from Rome or, as had been just possible in Sicily, by creating new praetors This last method was tried in Spain, but it became more economical to retain the governors there for two years so that their *imperia* were "prorogued" for another year. The device of extending an *imperium* without renewing the corresponding magistracy was apparently first employed to keep the experienced commander Philo in command against Naples As the number of provinces grew, this custom was regularly applied to the consuls and praetors, who came to expect a profitable year (for governorships were reduced to this) in a province to recoup themselves for the heavy expenses entailed in securing election (bribery) or incident to the tenure of office (games, etc) A further effect of the transmarine provinces was that it became necessary to maintain a standing army In the second and first centuries B C the soldier not only could not return to his farm for harvest or the winter — that had long been impossible — but he could not look for a discharge at the end of a year of service, for the government could not afford to send new armies each year across the sea. Though the fiction of annual re-enlistment and the requirement of a property qualification were maintained, the soldiers became in fact professional and served for 20 years or more They could not then return to farms which would have passed into other hands or fallen into decay, and so they had either to be settled in colonies or allowed to congregate in Rome As they looked to their commander for rewards in war and protection of their interests at home, they shifted their loyalty, and oath (*sacramentum*), from the state to him It is therefore extraordinary that for nearly a century the corporate class consciousness of the *nobiles* was sufficient to prevent disloyalty to the senatorial government.

200-197. Rome was drawn into the **SECOND MACEDONIAN WAR** by an appeal from Pergamum, Rhodes, and Athens, which were harried by Philip and Antiochus III of Syria. The Senate, fearful

of Philip's growing power, frightened an unwilling *comitia centuriata* into declaring war by visions of a renewed invasion of Italy. T Quinctius Flamininus, supported by both the Aetolian and Achaean Leagues, finally (197) defeated Philip at **Cynoscephalae** in Thessaly and forced him to make peace (196) on the following terms. surrender of Greece, payment of 1000 talents in 10 years; reduction of his forces to 5000 men and 5 ships; promise not to declare war without permission of Rome At the ensuing Isthmian Games, Flamininus proclaimed the independence of the Greek cities. Rome sought to balance the Achaean League by curtailing but not destroying the power of King Nabis of Sparta

192-189. THE SYRIAN WAR (p. 81). Antiochus III, invited by the Aetolians, invaded Greece, but the consul M. Acilius Glabrio landed in Epirus, moved into Thessaly and, with M Porcius Cato, repeated the maneuver of Xerxes at Thermopylae to rout Antiochus (191).

190. The Roman fleet, helped by the Rhodians, won two victories The Roman army, under **L. Cornelius Scipio** (later *Asiaticus*) and his brother Scipio Africanus, crossed the Hellespont and defeated Antiochus in the **battle of Magnesia,** near Smyrna Antiochus was obliged to make peace on the following terms surrender of all European and Asiatic possessions as far as the Taurus Mountains; payment of 15,000 talents in 12 years, surrender of Hannibal, who had fled from his enemies at Carthage (195) Though Hannibal escaped, he finally poisoned himself (183) at the court of Prusias I of Bithynia, who was about to betray him Rome divided the Anatolian territory of Antiochus between Pergamum and Rhodes and aided Eumenes II of Pergamum against the Galatians (189). In Greece, Rome subjected the Aetolians, but left the other cities free Philip was not rewarded as he had hoped

171-168. THE THIRD MACEDONIAN WAR was waged against Rome by Perseus, the successor of Philip V. After several unsuccessful campaigns, the Romans sent L Aemilius Paullus

168. Battle of Pydna. Paullus utterly defeated Perseus and brought him back in his triumphal procession So much booty accrued from his victory that Roman citizens were thereafter relieved of direct taxation, the *tributum*. Macedonia was broken up into four wholly distinct confederacies Illyria was reduced to three tributary confederacies, and Epirus was devastated From the Achaean cities 1000 of the chief citizens were taken as hostages and kept in Italy for 16 years Rome likewise dictated to Eumenes of Pergamum, to Rhodes and to Antiochus IV, who was prevented by the ambassador C. Popilius Laenas from making war on the Ptolemies of Egypt.

153. On account of an uprising in Spain, the consuls entered office on Jan 1 instead of Mar 15. Thus Jan. 1 became established as the beginning of the civil year.

151. A law forbidding re-election to the consulship superseded an earlier one of 342 which had imposed a ten-year interval between two tenures It lasted, with some exceptions, until Sulla revived the older law Possibly the same law raised the minimum ages for the tenure of all magistracies from those established by a *lex annalis* of the tribune Villius (180) to those of Cicero's time quaestorship after the thirtieth year, aedileship after the thirty-sixth, praetorship after the thirty-ninth, and consulship after the forty-second

149. The tribune L Calpurnius Piso enacted a *lex Calpurnia* which set up a permanent commission to hear the suits of provincials to recover from governors money unjustly collected (*quaestio de rebus repetundis*). This commission differed from previous specially created boards of investigation (*quaestiones*) or panels of special judges (*recuperatores* or *iudices*) in being made always available (*perpetua*) without special legislation. Like its predecessors, the membership for different cases was drawn by lot from a panel of senators and the board met under the presidency of a praetor The new court soon became an instrument whereby the Senate could discipline governors Decisions were motivated not by justice but by class selfishness It is probable that further courts of this type were established before the revision of the system of Sulla.

149-146. THE THIRD PUNIC WAR arose from alarm among conservative Romans over Carthage's revival, typified in the phrase with which Cato expressed his opinion on any question which was discussed in the Senate: *ceterum censeo Carthaginem esse delendam* ("but I declare that Carthage must be destroyed") The occasion was an attack by Carthage (150) on Rome's ally, the now aged Massinissa. When a Roman army landed in Africa, the Carthaginians offered submission, but refused to vacate the city With almost no

resources they withstood a siege until **Scipio Aemilianus** captured and destroyed Carthage (146). The Romans organized a small area around Carthage as the Province of Africa, but left the rest to the sons of Massinissa (d 149).

149-148. THE FOURTH MACEDONIAN WAR. A pretended son of Perseus, Andriscus, who called himself Philip, provoked the war, but was defeated by Q. Caecilius Metellus In 146 Macedonia became a Roman province

146. When the 300 surviving hostages returned to Achaea, the Achaeans made war on Sparta Their leaders, Critolaus and Diaeus, were defeated by Metellus and L. Mummius The latter took Corinth, sent its art treasures to Rome, sold its inhabitants into slavery, and burned the city (at the order of the Roman Senate) The territory of Corinth passed in part to Sicyon, in part became Roman public land The remaining Greek cities retained a certain measure of autonomy under the governor of Macedonia, though they paid tribute. Not until later (127) did they become organized as the Province of Achaea.

143-133. Continuous unrest in Spain grew into a **war in Lusitania,** led by Viriathus (assassinated 139, thanks to Roman bribery), and in northern Spain, where the city of Numantia took the lead Numantia fell in 133 and all Spain, except the northwestern part, passed under Roman domination

135-132. The First Servile War broke out when the ill-treated slaves of the large Sicilian estates revolted under the Syrian Eunus, who called himself King Antiochus. Eunus held Henna and Tauromenium against Roman armies, but was finally captured and his supporters brutally executed

Rome now possessed **eight provinces:** Sicilia (241), Sardinia (238) with Corsica (c. 230?), Hispania Citerior (205), Hispania Ulterior (205), Gallia Cisalpina (191?), Illyricum (168), Africa (146), Macedonia and Achaea (146). The first four were at first governed by praetors and then, as these became useful at Rome for the new standing courts and as the system of proroguing *imperia* became regular, they were governed by pro-praetors (in the less important or "praetorian" provinces) or proconsuls (in the more important or "consular"). After the middle of the 2d century, consuls and praetors less frequently took command of a province or army while in office, though this was probably never forbidden by law. Wars were conducted either by the governors or by commanders specially endowed with an *imperium* and ranking usually as pro-consuls, even though they had not held the consulship.

Provinces were generally organized by their conqueror with the aid of a commission of ten senators sent out by Rome. The charter of organization was called a *lex data*, as it was authorized in advance by the *comitia* but not brought before it (*rogata*). Usually the Senate rather than the *comitia* confirmed such arrangements. The Romans tended to leave undisturbed existing arrangements where they could, e g. the charter of Sicily incorporated the usages of Hiero of Syracuse, the *lex Hieronica*. Moreover, organized cities were left to themselves for purposes of local government. The Roman governor was chiefly concerned with warfare and general police duties, with settlement of disputes between cities, of important native trials, of all cases involving Roman citizens, and with the public land and tax-collections. Since, however, Rome had no elaborate administrative organization, the actual management of such lands (when not distributed to Roman citizens) and the collection of taxes were auctioned off at Rome (but not the taxes of Sicily), as were contracts for public works, every fifth year by the censors to companies of private capitalists (*publicani*), whose members came to be called *equites* because they had the census requisite for membership in the centuries of knights (The actual cavalry, composed usually of sons of senators and distinguished by the grant from the state of a horse, the *equus publicus*, had been abolished by Scipio Aemilianus at the siege of Numantia) The evils of the publican system lay not so much in extortionate collections, since the rates were laid down in the contract, as in the fact that on the one hand, a bad year might endanger the revenues, except in Sicily, and lead to undue hardship in the collection and that on the other the municipalities, who were responsible to the *publicani* for the payments, might fall into arrears and have to borrow, which they did from the same *publicani* (acting as bankers, *negotiatores*) at very high rates Once behindhand, they found it hard to get out of debt The rates on such loans were in time laid down by law, but the governor, who was often a silent partner in the company (a senator could openly invest only in land), would connive at illegal practices, especially since for a time after the Gracchi, and again after 70 he would be likely to be called to account for his own administration before a court imposed of *equites*.

Roman literature began with the production in 241 of a translation of a Greek

play by **Livius Andronicus,** who had been captured at Tarentum in 272 The most important early writers, all strongly under Greek influence, were for verse, **Naevius** (269–199), who wrote plays and an epic on the First Punic War (*Bellum Punicum*), **Plautus** (254–184), writer of comedies, **Ennius,** who dabbled in many fields and produced in quantitative (Greek) dactylic hexameters (instead of the old, native, accentual "Saturnians") an epic on all Roman history, the *Annales*; **Pacuvius** (220–130), a tragedian, **Caecilius** (d 166) and **Terence** (190–159), authors of comedy; and **Lucilius** (180–103), the "inventor" of satire, for prose, a number of historians who wrote in Greek, like **Fabius Pictor** (c 200), on the Second Punic War, and **Polybius, Cato** (234–149), "founder" of Latin prose with his *Origines* (Italian history) and his work on agriculture. Despite the conservative opposition, Greek rhetoric and philosophy were studied by the liberals who gathered about Scipio Aemilianus, whose "Scipionic circle" included Polybius, Terence, Laelius, and the Stoic Panaetius of Rhodes.

2. DOMESTIC STRIFE AND EASTERN CONQUEST

133. Ti. Sempronius Gracchus, a noble, was elected tribune on a platform of social reform Traditionally his motive was to stop the spread of great estates (*latifundia*) at the expense of the small peasants, but since this tendency was restricted to Etruria and Campania, he was more probably motivated by the problem of the proletariat in Rome He proposed **an agrarian law** (perhaps only a re-enactment of a law of 367) limiting holdings of public land to 500 iugera (312 acres) per person, with an additional 250 for each of two sons This measure hurt both the great nobles and certain Italian cities The Senate persuaded a tribune, M Octavius, to veto the measure, but Gracchus violated custom and had the assembly depose Octavius, the bill was then passed A commission of three (Tiberius Gracchus, his brother Gaius, and his father-in-law Ap Claudius) was appointed to recover land held in violation of this law and distribute it in inalienable lots of 30 iugera. To obtain funds for the new settlers Gracchus again violated custom, which left provincial affairs to the Senate, and proposed that the people accept Attalus' legacy of the Kingdom of Pergamum, probably this measure was not passed Again contrary to custom, Tiberius stood for a second tribunate, on an even more radical program The *optimates* (reactionary party of the nobles, contrasted with the democratic *populares*), led by **P. Cornelius Scipio Nasica,** murdered him and 300 of his followers during the election, and afterwards the Senate had more of his partisans executed as public enemies without the right of appeal

133-129. Apparently the commission carried out in part the redistribution of the public land In 129, Scipio Aemilianus, who had married a sister to Tiberius and, espousing a middle course, perhaps favored some concession to the increasing bitterness of the Italians, was found dead with suspicions of murder

129. After the defeat of the pretender Aristonicus, Pergamum became the **Province of Asia.**

125. The Senate balked the attempt of the democratic consul **M Fulvius Flaccus** to extend the franchise to all Italians and sent him to Liguria, where, by helping Marseilles against the Gauls, he began the conquest of southern Gaul The **revolt of Fregellae,** a town which despaired of peaceful means, was ruthlessly suppressed In 123 the **Balearic Islands** were conquered and in 121 southern Gaul became the province of **Gallia Narbonensis,** so-called from the newly established colony of Narbo Martius (Narbonne).

123. Gaius Gracchus, the more forceful brother of Tiberius, became tribune. To the motive of social reform was added that of revenge, and in this and the following year, when he secured a second tribunate, he put through a far more extreme program than Tiberius had envisaged. The precise order and interrelation of his measures is uncertain, but the most important were the following by a *lex iudiciaria* (probably the surviving *lex Acilia repetundarum*) he transferred membership in the court on extortion (*quaestio de rebus repetundis*, and any others that existed) from senators to equestrians He also passed a law reorganizing the Province of Asia, and particularly changing the tax rate into a tithe on produce, as in Sicily The collection was to be auctioned off to the *publicani*, as heretofore. The two measures were probably intended to relieve the provincials, but they only served to separate the equestrians from the Senate, the former were now able to avenge themselves on a governor who sought to check their rapacity

or divert the profits to his own account.

In behalf of the proletariat Gaius passed three measures (1) a revival of his brother's **land law**; (2) the foundation of **three commercial colonies** (Capua, Tarentum, and Carthage) to take care of veterans and Oriental freedmen, who comprised the majority of the Roman proletariat and who, it was recognized, would not make good farmers, (3) **a law obliging the government to provide grain at a fair price** (probably not below the average market level) to protect the poor against famine and speculation The transmarine colonies failed because the proletarians preferred the pleasures of Rome to life in remote provinces The state control of the grain supply became a means whereby demagogues could win popular support (by reducing the price and by increasing the number of eligible beneficiaries) Less important bills mitigated the conditions of military service and reaffirmed the laws against execution without appeal to the people Finally, Gracchus planned to extend the full franchise to Latin cities and to grant Latin rights to all other Italians. This measure was naturally unpopular with the Roman *populus*, now fully conscious of the advantages of citizenship The Senate took advantage of Gracchus' absence in Africa to undermine his influence, and he was defeated in the election for his third tribunate When a riot ensued over the repeal of his colonization bill, the Senate invoked a right based on recent custom and of dubious validity, to declare a state of emergency and to call upon the consuls and other magistrates to see to it, even by use of force, that the state suffered no harm (*senatus consultum ultimum ut consules operam dent ne quid res publica detrimenti capiat*) This was a substitute for the dictatorship, the last effective use of which had been made in 216 In the ensuing struggles, Gaius Gracchus and many of his supporters were slain

121-111. A series of measures, ending with the *lex agraria* of 111, recognized the failure of the land distributions by discontinuing them, by relieving the lots of rent and by making them alienable After various experiments, the courts also were completely restored to the control of the Senate

111-105. The Jugurthine War resulted from the usurpation of the African Kingdom of Massinissa's descendants by King Micipsa's nephew, **Jugurtha.** The latter murdered one rival, bribed a senatorial commission to support his claim, and captured Cirta (Constantine), capital of the surviving son of the king The death of some Italians at Cirta led Rome to declare war, but Jugurtha again bought peace A second murder led to hostilities, waged with varying success by Q. Caecilius Metellus

107. Gaius Marius, a self-made man and legionary commander (*legatus*) of Metellus, appealed to the Roman people over the head of a hostile Senate and secured the consulship, with command in the war Since the Senate refused to grant him an army, he called for volunteers and took men without the requisite property qualification There resulted a thorough **reform of the military system,** carried through by P Rutilius Rufus in 105. for the manipular system with its three ranks was substituted a division of the legion (6000 men, gradually sinking to about 4500 during the first century) into 10 cohorts, each composed of three maniples, the old military tribunes lost their importance and the command was held by a delegate of the general (*legatus*); the backbone of the legion became the centurions (commanders of the maniples); to each legion was attached an equal number of auxiliary troops, levied from the subject peoples and usually organized in their own fashion; about 300 professional cavalry replaced the old noble *equites*, abolished by Scipio Aemilianus, from the time of Scipio the general had also a special bodyguard (called from his headquarters *praetorium*), the *cohors praetoriana* or praetorian guard

107-105. Marius' aristocratic quaestor, **L. Cornelius Sulla,** secured the surrender of Jugurtha by the latter's ally and father-in-law, Bocchus, King of Mauretania Marius triumphed in 105, Jugurtha died in prison, and his kingdom was divided between Bocchus and a grandson of Massinissa

105. THE CIMBRI, a German (or Celtic) people originally located east of the Rhine, who in 113 had moved into the Alpine regions and across the Rhone, ravaged Gaul and defeated two Roman armies at Arausio, on the Rhone

Marius was elected consul for the second time, and then continuously for four more annual terms (contrary to the law of 151).

The Cimbri, defeated in Spain and again in northern France by native tribes, joined with the Germanic Teutones and other peoples Most of the Cimbri then moved on Italy, while the Teutones, some Cimbri, and others advanced into southern Gaul to approach Italy from the west.

104. By a *lex Domitia* the pontiffs and augurs were made elective, but by a minority (17) of the 35 tribes, chosen by lot so that the gods might exercise their influence This law was repealed

by Sulla but revived by Caesar in 63 to secure his election as chief priest (*pontifex maximus*)

103-99. A **Second Servile War** in Sicily, under Tryphon and Athenion, was suppressed with difficulty by the consul, M Aquillius

102. **Marius,** having deflected the invading barbarians from the Little St Bernhard Pass and having followed them to Aquae Sextae (Aix in Provence), annihilated them there He then returned to the support of Catulus in northern Italy, which had been invaded by the main body of Cimbri coming over the Brenner Pass

101. **Marius and Catulus** defeated the Cimbri at **Vercellae** (Campi Raudii). Marius became the national hero.

100. Marius, consul for the sixth time, but despised by the Senate, turned to the demagogues C Servilius Glaucia (a praetor) and L Appuleius Saturninus (a tribune) to secure land with which to reward his veterans A number of extreme bills were passed, including one which defined treason no longer as internal revolt (*perduellio*) but as impairing the "majesty" of the Roman people (*lex Appuleia de maiestate imminuta* — later *laesa*) When Glaucia secured the murder of his rival for the consulship, the Senate passed the *senatus consultum ultimum* and Marius was obliged to besiege and kill his former supporters on the Capitoline Marius then left for a tour of the east

91. The tribune, **M. Livius Drusus,** son of an opponent of the Gracchi, brought forward several liberal bills· to compromise the problem of the courts by adding 300 *equites* to the Senate; to distribute land; to cheapen the price of grain; and to extend the citizenship to all Italians The first three measures were passed as one bill, whereupon the Senate, in virtue of a recent law against such omnibus bills (*lex Caecilia Didia* of 98), declared them void

91-88. **The Social War** (i e. War of the Allies) The disappointed Italians, save for Latins, Etruscans, Umbrians, and some southern cities, flared into open revolt They formed a republic, **Italia,** with a capital at Corfinium. Though Marius and Gn Pompeius Strabo succeeded in suppressing it in the north, the consul **L. Julius Caesar** suffered reverses in the south.

90. The danger of the secession of the Etruscans and Umbrians led to the passage by Caesar of a *lex Iulia* by which citizenship was granted to all Italians who had remained faithful.

89. The war in the north was concluded and L Cornelius Sulla won successes in the south The two new consuls moved a *lex Plautia Papiria* which extended citizenship to all Italians who applied for it within 60 days, but enrolled them in only eight designated tribes, to prevent them from dominating the assemblies Cities in Cisalpine Gaul received Latin rights by a *lex Pompeia*, though the precise status of the region between the Po and the Alps, the Transpadanes, remained a matter of dispute until 49 This concession brought the war to a close in 88 and showed that the Italians preferred to remain with Rome rather than to be independent It also frankly recognized that citizenship was no longer a right, since personal participation in the assemblies at Rome was impossible for most Italians and no system of representation was devised, but a privilege which ensured to its possessors the special protection of Rome, favored treatment in the provinces, and a share in the profits of conquest

88-84. **FIRST MITHRIDATIC WAR.** Contemporaneously with the Social War, **Mithridates IV Eupator,** ambitious King of Pontus since 120, made war on Rome He had absorbed Colchis at the east end of the Pontus (Euxine, Black Sea), the Kingdom of the Bosporus in the Tauric Chersonese (Crimea), Paphlagonia, and Cappadocia. He then came into conflict with Nicomedes of Bithynia, in northwestern Asia Minor, who was supported by the Romans Mithridates routed both Nicomedes and the Romans, overran the province of Asia, and is said to have commanded the natives to put to death 80,000 "Romans" (Italian traders?) on a single day Sulla, consul for 88, joined his army at Nola to start for Asia

88-82. But **civil war** broke out in Rome The demagogue **P. Sulpicius Rufus** carried several measures by violence, notably one distributing the new Italian citizens among all the tribes, and another conferring the eastern command on Marius Sulla marched his troops to Rome, stormed the city, and slew Sulpicius and others Marius fled to Africa Sulla put through conservative reforms, which did not last, and went as proconsul to Asia in 87.

87-84. The demagogic consul **L. Cornelius Cinna** turned to violence against the optimates under the other consul, Cn. Octavius He was driven from the city, raised an army, and secured the support of Marius, who returned from Africa They seized Rome, instituted a reign of terror, a **"proscription" of the optimates,** who were

either slain or, if they escaped, lost their property. Cinna and Marius became consuls for 86 (Marius' seventh consulship) Marius soon died and his successor, **L. Valerius Flaccus**, went out to command in the east. Cinna tyrannized at Rome until his death in a mutiny in 84.

87-84. In the meantime, Sulla, in Greece, drove the generals of Mithridates, Archelaus and Aristion, back into the Piraeus and Athens respectively When, in 86, Athens fell, Archelaus retired from the Piraeus by sea to Boeotia, where he was defeated by Sulla at **Chaeronea** and, in 85, at **Orchomenos.**

84. Sulla, supported by a fleet collected in Asia and Syria by **L. Licinius Lucullus,** moved around the Aegean into Asia, where Mithridates made peace on the following terms evacuation of all his conquests, surrender of 80 warships, and an indemnity of 3000 talents Sulla then won over the troops of the democratic general C Fimbria, who had secured command by murdering Flaccus and now committed suicide. Sulla left these two legions to police Asia and to help Lucullus collect an immense fine of 20,000 talents from the Asiatic cities, while he himself returned to Italy

83-79. Sulla made a cautious advance from Brundisium against the successors of Cinna, in the course of which the army of the consul Lucius Scipio deserted him after the defeat of the other consul, C. Norbanus After wintering at Capua, Sulla conducted a brilliant campaign against the various opposing forces which culminated in the **battle of the Colline Gate** (Nov , 82), when he repulsed from Rome a large force of Samnites, who had taken advantage of the civil war to revolt. Sulla punished severely the cities that had sided with his opponents, and then had himself appointed dictator for the purpose of restoring the state (*rei publicae constituendae*).

Sulla's dictatorship was only in name a revival of the old institution. It was not an "emergency" office and was not limited in time, so that actually it was a tyranny. Sulla's objective was to restore the old senatorial system. To this end he sought, by a series of laws (*leges Corneliae*) to subordinate to the Senate all those powers which had been set up against it magistrates, governors, knights, and people The size of the Senate was increased from 300 to 600 by the addition of new members, probably equestrians; admission became automatic for those who held the quaestorship, whose numbers had increased to 20 Thus the censors lost the control which they had hitherto had over admissions to the Senate, though probably Sulla only confirmed what had already become a general practice. But he also deprived the censors of the right to remove unworthy members The *lex annalis* was revived, with permission for reelection to the consulship after ten years. The number of praetors was increased to eight Governors were forbidden to take troops outside their province by a law which made such action treason The number of **standing courts** (*quaestiones perpetuae*) was increased to at least seven *de rebus repetundis*, *de maiestate*, *de vi* (violence), *de peculatu* (embezzlement), *de ambitu* (corrupt electioneering), *de falsis* (fraud) and *inter sicarios* (assassination) Membership was definitely restricted to senators, thus depriving both magistrates and people of judicial power The **tribunes' veto** was confined to the protection of individuals (*auxilium*) and they were probably forbidden to bring any measure before the people without previous approval of the Senate. Moreover, election to the tribunate disqualified a man for further political office, so that men of ambition would avoid it The public distribution of grain, an instrument of demagoguery, was perhaps abolished

Of these reforms, the only one of enduring importance was that of the **judicial system.** Though sentimentally the Laws of the Twelve Tables continued to be regarded as the fountainhead of the Roman Law, in actual fact the *leges Corneliae* laid the foundations of Roman criminal law by defining the types of crime (which had naturally increased as Rome grew) and by providing a more expeditious system of court trial than the hearings before the *populus*. The importance of the praetors, who (except the *urbanus* and *peregrinus*) normally presided over the courts, was thus vastly increased. During this same period, by the *lex Aebutia* (probably c 150), the civil law was liberated from the restraints of the old, ritualistic, narrow "actions at law" (*legis actiones*) by the recognition of the praetor's *formulae*. The *formulae*, borrowed by the urban praetor from the peregrine (i e. praetor for foreigners) were general definitions of civil wrongs not covered by specific laws, for which remedies would be granted Such formulas were published by the praetor either on special occasions (*edicta repentina*) or in the edict with which he assumed office (*edictum perpetuum*). A large body of such material was naturally passed on from praetor to praetor and became "tralatician" (*edictum tralaticium*). Thus the praetors, until the time of Hadrian, could widen the scope of civil law to meet new needs, and

the praetor's edict became the chief authority for civil law.

As soon as his reforms were completed, Sulla voluntarily retired from public life (79). He died in the following year.

83-81. THE SECOND MITHRIDATIC WAR, resulted from a Roman invasion of Cappadocia and Pontus After victory, peace was renewed on the terms of 84.

80-72. Q. Sertorius, the democratic governor of Hither Spain (83) was expelled by Sullan troops. When the Lusitanians invited him back in 80, he established an independent state modeled on Rome He soon extended his sway over much of Spain and held the Romans at bay until he was murdered in 72 by a jealous subordinate, M. Perperna Pompey, who had been sent to Spain in 77, quickly defeated and executed Perperna

78-77. The democratic consul **M. Aemilius Lepidus** sought to undo Sulla's work. When he was blocked, he raised in Etruria an army of the discontented. He was defeated before Rome by his colleague Q. Lutatius Catulus and the remnant of his army was wiped out in northern Italy in 77 by the brilliant young Roman commander **Gnaeus Pompeius** (Pompey), son of a general in the Social War and a protégé of Sulla

74. Cyrene, which had been tentatively bequeathed to Rome in 154 and again in 96, finally became a province.

73-71. Third Servile War. The Thracian gladiator **Spartacus** and other gladiators started a war by seizing Mt. Vesuvius, to which rallied many fugitive slaves. The praetor **M. Licinius Crassus** (b 112), a favorite of Sulla who had enriched himself by buying the property of the proscribed, defeated Spartacus twice, and Pompey, returning from Spain, finished off the stragglers For his achievements during this period, Pompey became known as "the Great" (*Magnus*).

70. Crassus and Pompey openly deserted the optimate cause and used their troops to win for themselves the consulship for 70, though both were under the age set in 151. As consuls, they secured the restoration to the tribunate of the privileges of which Sulla had deprived it Already, in 75, the disqualification of tribunes for higher office had been abolished and, in 72, the censors had recovered the privilege of removing unworthy senators Thus Sulla's restoration of the Senate was largely undone. The prosecution of the corrupt propraetor of Sicily, Verres, by Cicero in 70 brought to a head discontent with the senatorial courts and the praetor L. Aurelius Cotta introduced a *lex Aurelia* under which the senators retained only one third membership on the juries and the other two thirds were filled from the *equites* and a group of slightly lower property census, the *tribuni aerarii*, whose origin is uncertain but whose sympathies were equestrian

68-67. Defeat of the Mediterranean pirates by Q. Caecilius Metellus Pius. There had been a rapid increase of piracy (especially kidnapping for the slave market at Delos) in the eastern Mediterranean after the defeat of Carthage, Rhodes, and Syria and during the civil wars in Italy. The centers were Crete and Cilicia and the situation began to interfere seriously with Rome's grain supply. Efforts to suppress the pirates met with little success until Metellus took Crete (68) It was made a province (67) and later joined to Cyrene.

67. The tribune A. Gabinius secured the passage of the *lex Gabinia*, which conferred upon Pompey for three years the command of the Mediterranean and its coasts for 50 miles inland, equal to that of the governors in each province (*imperium aequum*) Thus enabled to mobilize all available resources, Pompey in three months cleared the sea of pirates and pacified Cilicia.

74-64. THE THIRD MITHRIDATIC WAR. Mithridates, encouraged by Rome's troubles at home, supported his son-in-law, **Tigranes of Armenia,** in the annexation of Cappadocia and Syria.

74. Nicomedes III of Bithynia bequeathed his kingdom to Rome, presumably to protect it against Mithridates, who nevertheless occupied it. The consul for 74, **L. Licinius Lucullus,** gradually drove Mithridates back and occupied Pontus (73). Mithridates fled to the court of Tigranes

69. Lucullus defeated Tigranes at Tigranocerta and started to push on into the mountains of Armenia His troops, many of them brought out twenty years before by Flaccus, mutinied and forced him to retire to Asia (68) This failure and his efforts to relieve Asia by wholesale reduction of the indebtedness of the *publicani*, to say nothing of his optimate sympathies, made him unpopular at Rome.

66. The tribune C. Manilius, moved a bill (*lex Manilia*), which was supported by the rising orator, **M. Tullius Cicero** (b. 106), which gave Pompey a command over all Asia equal to that of the governors and valid until the conclusion of the war (*imperium aequum infinitum*, **i.e. without time limit).**

Pompey quickly drove Mithridates to the east end of the Black Sea, after which he captured Tigranes at Artaxata and deprived him of all territories save Armenia, besides imposing a fine of 6000 talents

65. Pompey pursued Mithridates until the latter fled to the Crimea, where he committed suicide on hearing of the revolt of his son (63)

65-62. Reorganization of Asia and Syria by Pompey He formed four provinces Bithynia-Pontus (excluding eastern Pontus), which became a client kingdom, Asia, the old province, which was again heavily taxed, Cilicia, including Pamphylia and Isauria, and Syria, the region about Antioch As client kingdoms he left eastern Pontus, Cappadocia, Galatia (under King Deiotarus), Lycia, and Judaea.

64. Pompey took **Jerusalem,** in order to pacify Judea. He left in charge the Maccabean high-priest Hyrcanus and a civil adviser, Antipater, from the non-Jewish district of Idumaea Judea was under the supervision of the governor of Syria and was subjected to a light tax.

Pompey's reorganization of Asia had enduring significance. He followed the Roman practice of making cities the responsible agencies of local government and founding new ones wherever advisable In order to keep the support of the equestrian class, he extended the pernicious publican system throughout the east The Senate was loath to confirm his arrangements or look after his veterans, but he did not turn against the government. Instead, he dismissed his army at Brundisium (61) and entered Rome as a private citizen.

64-63. Conspiracy of Catiline. The discontented classes at Rome (debtors, veterans, ruined nobles, those proscribed by Sulla, etc.) found a leader in **L. Sergius Catilina** He may at first have had the support of Crassus and of Crassus' demagogic agent, **C. Julius Caesar** (b 102 or 101). Caesar belonged to a poor branch of the patrician *gens Iulia*, but his aunt had been the wife of Marius and his (Caesar's) wife was a daughter of Cinna Catiline tried to run for the consulship on a radical program in 66, but could not get his name presented to the *comitia centuriata*, as he was threatened with prosecution for extortion while pro-praetor in Africa After a plot to murder the consuls had failed (65), he ran again in 64, but was defeated by Cicero. Catiline turned to even more extreme methods (sedition in Rome and levying a force in Etruria). Then, if not before, Crassus and Caesar abandoned him The plot was detected, and Cicero, in virtue of a *senatus consultum ultimum*, arrested the conspirators With the Senate's approval he had them put to death as *hostes* without appeal, despite the law of Tiberius Gracchus The forces in Etruria were dispersed Cicero's famous *Orations against Catiline*

60. THE FIRST TRIUMVIRATE. Caesar returned from a pro-praetorship in Spain and brought his master Crassus into alliance with Pompey, who had fallen out with the Senate because of the unwillingness of the latter to confirm his eastern arrangements This informal union became known as the first triumvirate

59. Caesar, as consul, put through the program of the trio. distribution of the Campanian land to Pompey's veterans, confirmation of Pompey's eastern settlement, grant to himself (*lex Vatinia*) for the unprecedented period of five years of the province of Cisalpine Gaul, with Illyria. To this was added later Gallia Narbonensis, with the possibility of action throughout Transalpine Gaul. The political union was cemented by the marriage of Caesar's daughter Julia to Pompey.

58-51. CONQUEST OF GAUL by Caesar, both to enrich himself and to forge for himself an army and a military reputation to rival Pompey's He used as an excuse the attempt of the Helvetii to move from Switzerland into Gaul His plan of campaign was to move down the Rhine, separate the Gauls from the Germans, and then turn back on the Gauls In 58 he defeated the **Helvetii** at **Bibracte** (Autun) and the German Ariovistus near Vesontio (Besançon) He then reduced the **Belgi** (57), including the stubborn Nervii, in northwestern Gaul He defeated the **Veneti** on the southern coast of Brittany and the Aquitani in southwestern Gaul (56). After he had repulsed the Germanic Usipetes and Tencteri, Caesar built a wooden bridge over the Rhine near Coblenz to make a two weeks' demonstration in Germany (55) He also tried with little success to invade Britain

58. To remove opposition at Rome, the triumvirs secured the mission of the irreconcilable **M. Porcius Cato** (the younger) to investigate the affairs of Cyprus, and allowed the violent demagogue and tribune **P. Clodius** to move a bill against Cicero for the execution of Roman citizens without appeal. Cicero voluntarily withdrew to Epirus, the bill was passed and his property was confiscated. Clodius also made the distribution of grain free to a large number of poor, perhaps 300,000

57. An optimate tribune, **T. Annius Milo,** secured the recall of Cicero, and organized a following to oppose that of Clodius The optimates summoned up enough courage to attack Caesar's land bill

In consequence of the shortage of grain, the Senate conferred on Pompey the supervision of the grain supply (*cura annonae*) and an *imperium aequum* over the areas concerned, but without what he really wanted, viz military force

56. Worried by the revival of opposition, Caesar, Pompey, and Crassus met at Luca, on the southern boundary of Caesar's province, and laid plans for the future

55. In pursuance of these plans, Pompey and Crassus became consuls By a consular *lex Pompeia Licinia*, Caesar's command in Gaul was prolonged for five years By a tribunician law (*lex Trebonia*), Crassus was given Syria and Pompey both Spains for the same period. Crassus hurried east, but Pompey, contrary to custom, remained near Rome and governed Spain through his *legati*.

54. INVASION OF BRITAIN. Caesar was more successful than in 55 and defeated King Cassivellaunus somewhere north of the Thames, perhaps at Wheathampstead near Verulamium (St Albans) Nevertheless, he withdrew to Gaul without any permanent result save to open Britain somewhat to the penetration of trade and Roman influence In 53 he made a second demonstration across the Rhine

54-51. Breakup of the Triumvirate. This began with the death of Julia in 54

53. Crassus was utterly defeated and slain by the Parthians at Carrhae in Mesopotamia

52. All Gaul flared into revolt under **Vercingetorix.** Caesar failed to take Gergovia (Clermont in Auvergne) and was himself surrounded while besieging Vercingetorix in Alesia (Alise near Dijon), but finally won a complete victory and captured Vercingetorix He spent the year 51 ruthlessly suppressing the remaining insurgents.

52. Milo's ruffians killed Clodius in a street fight at Bovillae

As it had not yet been possible to elect magistrates for this year, the Senate passed a *senatus consultum ultimum* and illegally appointed **Pompey sole consul,** i e in fact dictator Milo, tried in a special court under Pompey's presidency, was condemned despite Cicero's faltering defense Pompey then made the optimate Metellus Scipio, father of his new wife, Crassus' widow, his colleague, thus openly returning to the side of the Senate Afraid, however, of a decisive break with Caesar, he tried, by a series of indirect moves, to jockey him out of office long enough to leave him open for prosecution in the courts Since prosecutions could not be brought against one in office, Caesar had so arranged his tenure of Gaul (the details are uncertain) that, by being allowed to canvass in absence during 49, he could proceed direct to the consulship in 48.

49. The Senate finally passed a *senatus consultum ultimum* which declared Caesar a public enemy unless he should disband his army (Jan 7) The tribunes favorable to him fled to Ravenna, where he was waiting During the night of Jan 10–11, Caesar with one legion crossed the **Rubicon** (*alea iacta est*, "the die is cast"), the brook south of Ravenna on the Adriatic which marked the limit of his province He thus broke not only Sulla's law on treason, but also an old custom by which a general could bring armed forces into Italy only for a triumph He justified his action as aimed to protect the sacrosanct tribunes

49-46. Pompey, fearful of the legions in Gaul, left Italy for Greece, where he might have the resources of the east behind him Most of the Senate went with him Caesar, after failing to trap Pompey at Brundisium, turned to Spain, where he defeated the latter's commanders at **Ilerda** (Lerida) north of the Ebro Marseilles surrendered to him on his way back to Italy.

48. Caesar landed in Epirus and defeated Pompey at **Pharsalus.** Pompey fled to Egypt, where he was treacherously slain by order of the minister of the young king, Ptolemy XII.

48-47. When Caesar reached Alexandria in pursuit of Pompey, he was besieged by Ptolemy and the natives during the winter, until he was rescued by an army from Asia Since Ptolemy perished, Caesar made his sister **Cleopatra** and a younger brother, Ptolemy XIII, joint rulers of Egypt. Cleopatra soon disposed of her brother and set herself to restore the power of the Ptolemies with Roman aid She charmed Caesar into remaining three months with her and perhaps siring her son Caesarion.

47. Caesar advanced into Syria to meet a son of the great Mithridates, Pharnaces, who had invaded Pontus. On Aug 2 Caesar defeated him at **Zela** (*veni, vidi, vici*)

46. On his return to Rome Caesar subdued a mutiny of his devoted Tenth Legion. He then crossed to Africa and defeated the Pompeians, led by Pompey the Great's son Sextus, at **Thapsus** (Apr.). Cato committed suicide at Utica (hence called *Uti censis*) A part of Numidia, whose Pompeian king, Juba, had committed suicide, was added to the province of Africa; the rest was left to the king of eastern Mauretania. After four simultaneous triumphs in Rome (July) Caesar went to Spain, where Sex Pompey had joined his brother Gnaeus.

45. Caesar utterly routed them at **Munda** (Mar.) He then returned to Rome (Sept.).

Caesar's position was that of an absolute monarch. In 49 he had been dictator for 11 days to hold elections. In 48 he was consul for the second time. After Pharsalus he was given the consulship for a five-year term and was given the dictatorship annually, perhaps also some of the tribunician powers (*tribunicia potestas*), since being a patrician he could not be tribune. In 46 he was consul for the third time with Lepidus. After Thapsus he was made dictator for ten years and *praefectus morum* (supervisor of morals). In 45 he was sole consul. After Munda he was made consul for ten years; in 44, dictator and *praefectus morum* for life; his tribunician power was extended to include *sacrosanctias*. Thus his position was essentially a revival of the Sullan dictatorship His plans for the future are not definitely known, but while he certainly planned to continue as monarch, it is doubtful that he planned to take the crown or move the capital to Ilium.

The **Senate was increased to 900** by enrolling ex-centurions and provincials, as much to weaken it as to make it representative of the empire. To provide for its maintenance at this size Caesar doubled the number of quaestors and praetors (to 40 and 16 respectively); the quaestors were later reduced. His agrarian and colonization program was like that of all reformers since the Gracchi. The citizenship was considerably extended, beginning in 49 with the confirmation of the Transpadanes' long disputed claim. The *lex Iulia municipalis* may perhaps have been a measure to give to the cities in the west something of the autonomy enjoyed by those in the east. The **calendar was reformed** in the light of Egyptian knowledge on the nearly correct basis of 365¼ days per year; this system continued in use in some countries into the 20th century. The number of those receiving free grain was reduced from 320,000 to 150,000. The publican system was somewhat restricted, since Caesar had considerable concern for the provinces and none for the *equites*.

44. ASSASSINATION OF CAESAR. Caesar's greatest weakness was an inability to choose trustworthy subordinates. A conspiracy of such people, together with the high-minded patriots and disgruntled optimates, led by M. Junius Brutus, Decimus Brutus, and G Cassius Longinus, assassinated him in the Senate on the Ides (15th) of March. The famous *Et tu Brute* ("Thou too, Brutus") may have been addressed to Decimus, not Marcus.

The conspirators had no organization ready to take charge **M. Antonius** (Mark Antony), formerly Caesar's master of horse, got control, in part by appealing to the sympathies of the proletariat by his funeral oration and in part by seizing Caesar's papers and treasure. The conspirators fled, Decimus Brutus to Cisalpine Gaul, Marcus Brutus to Macedonia, and Cassius to Syria, provinces already assigned to them, and over which the Senate now gave them commands superior (not equal) to those of other governors (*imperia maiora*), so that they could raise armies against Antony. Antony secured from the people the transfer of Cisalpine Gaul and Macedonia to himself and Syria to his colleague, P Cornelius Dolabella. In the meantime, Caesar's eighteen-year-old great-nephew, **Gaius Octavius,** whose mother, Atia, was daughter of Caesar's sister, Julia, and who had been named as heir and adopted in the will of Caesar, came to Rome to claim his inheritance. Antony refused to give him the money and prevented the passing of the *lex curiata* necessary to ratify his adoption. Octavius nevertheless called himself **Gaius Julius Caesar Octavianus.** He borrowed money and, illegally, as a private citizen, levied a force among Caesar's veterans in Campania.

43. Antony marched north to dislodge Decimus Brutus from Mutina (Modena) The Senate sent the new consuls Hirtius and Pansa to relieve Decimus and joined to them Octavian with the command (*imperium*) of a pro-praetor. In two battles, **Forum Gallorum and Mutina,** Antony was forced to retire westward toward Gaul But the consuls were killed. Octavian, marching to Rome (July), forced the Senate to hold special elections in which he and Pedius were elected to replace the dead consuls. He had his adoption duly confirmed. By a *lex Pedia* vengeance was declared on the conspirators who had assassinated Caesar. In the meantime, **Marcus Lepidus,** governor of Transalpine Gaul, had allied with Antony and Decimus had been

slain Octavian thereupon changed his support from the Senate to Antony in a meeting at Bononia (Bologna)

43, Nov **SECOND TRIUMVIRATE.** A tribunician *lex Titia* confirmed their arrangements Antony, Lepidus, and Octavian were appointed a commission of three to establish the state (*triumviri rei publicae constituendae*), which amounted to a Sullan dictatorship in commission and differentiated this second triumvirate from the first by recognizing it legally The triumvirs proceeded with a widespread proscription inspired both by political hatred and by the need for money and lands with which to reward their troops Octavian acquiesced in the **execution of Cicero** by Antony's agents (Dec 7)

42. The triumvirs secured the erection of a temple to Caesar in the Forum, where he had been burnt, and his deification. The magistrates were forced to take an oath to support all Caesar's arrangements (*acta*) Antony and Octavian then crossed to Thrace, where they met the combined forces of Cassius and Brutus at **Philippi.** Cassius, defeated by Antony and misled by a false report of Brutus' defeat, committed suicide Brutus, though actually victorious over Octavian, was finally defeated twenty days later and also killed himself Antony betook himself to the eastern provinces, where he met Cleopatra at Tarsus in the summer of 41 Either fascinated by her charms or desiring to get control of her resources, he remained with her in Egypt for a year

41-40. **Octavian,** who shared the western provinces with Lepidus, had a difficult war against Antony's wife Fulvia and brother Lucius Antonius before finally reducing them at **Perusia** (Perugia) in 40

40. **By a pact made at Brundisium,** Antony married Octavian's sister Octavia (since Fulvia had recently died) Octavian took Gaul from Lepidus, who was left only Africa

39. **Sextus Pompey,** who had conducted a piratical career since Munda, was now a power to be reckoned with, as he controlled Sicily and his fleet could interrupt Rome's grain supply His possession of Sicily, Sardinia, Corsica, and the Peloponnese was recognized by the triumvirs in the **pact of Misenum.** Octavian divorced his second wife, Scribonia, and married **Livia,** previously wife of Tib Claudius Nero.

37. Octavia engineered a **second pact at Tarentum.** Octavian gave troops to Antony for his Parthian War and Antony supplied ships for use against Pompey. The triumvirate was renewed for five years more, though the precise date set for its termination is uncertain

36. Octavian's fleet, under his general **M. Vipsanius Agrippa,** defeated Pompey, who fled to Miletus, where he died. Lepidus, after landing in Sicily ostensibly to help Octavian, tried to secure the island When, however, his troops deserted to Octavian, the latter annexed his rival's territory but, because Lepidus himself had become chief pontiff (*pontifex maximus*) on the death of Caesar, kept him in honorable captivity at Circeii until his death in 13 Octavian spent the following years consolidating Roman power in the Alps and Illyria.

36. Antony suffered a severe defeat from the Parthians in 36, but managed to retreat to Armenia He openly married Cleopatra (though already married to Octavia).

34. At Alexandria he established her as a Hellenistic monarch and distributed Roman provinces to her children as subordinate rulers How far he intended to be her consort cannot be determined, but Octavian made the most of such a probability.

32. When Antony prepared to attack Octavian, the latter had the support of the west, which was both terrified by fear of an oriental domination under Cleopatra and angry at Antony's high-handed disposition of Roman territory After the consuls, friends of Antony, fled to him, Octavian had the *imperium* of Antony under the triumvirate annulled by the *comitia* He published a will purporting to be Antony's in which the Roman possessions in the east were bequeathed to Cleopatra Italy, and perhaps all the western provinces, took a military oath (*coniuratio Italiae*) to support Octavian In virtue of this, since he no longer had any legal *imperium* himself if the triumvirate was at an end, he levied troops, outwardly to meet Cleopatra Antony formally divorced Octavia.

31, Sept. 2. **BATTLE OF ACTIUM.** The rival fleets met outside the bay. The course of the battle is uncertain, but Cleopatra fled to Egypt, followed by Antony, whose army then surrendered to Octavian In the following year,

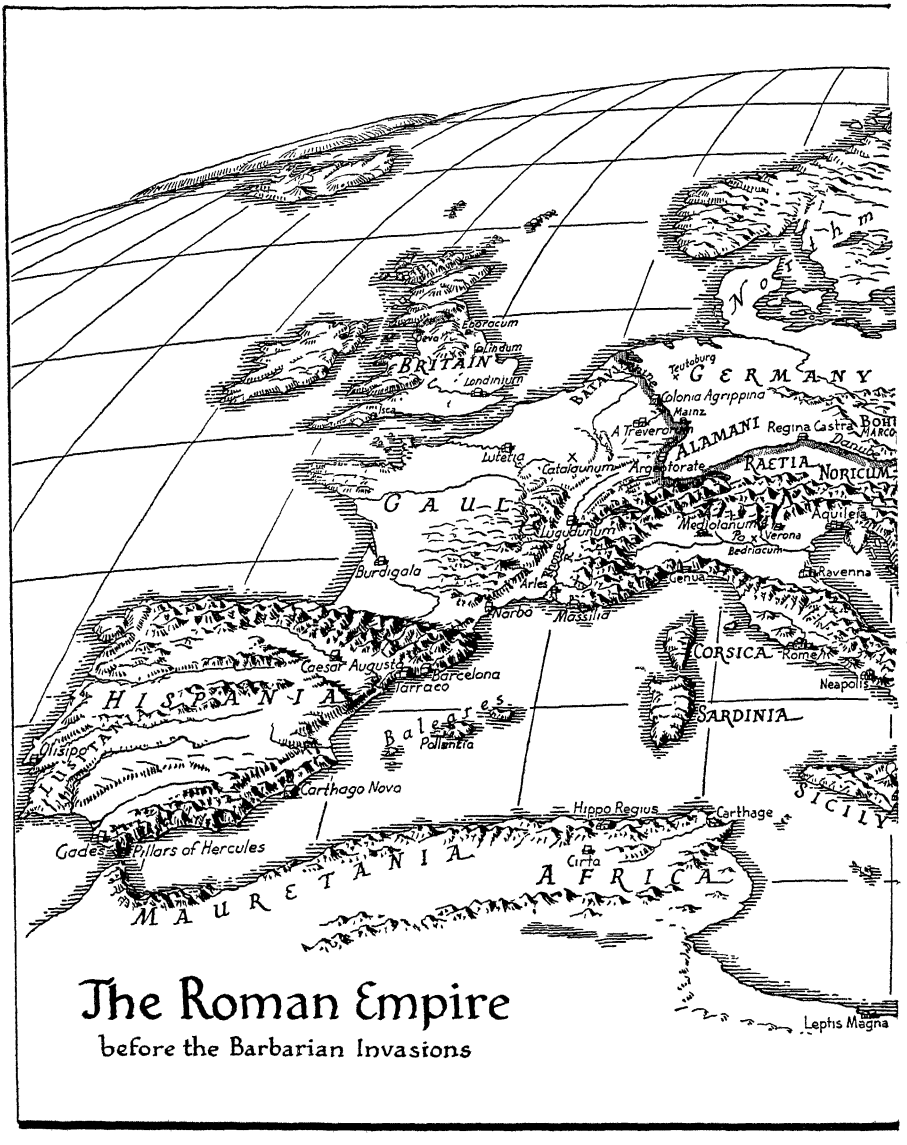
30. Antony, on hearing a false report of Cleopatra's suicide, killed himself. Upon Octavian's arrival at Alexandria, Cleopatra tried to win him as she had his predecessors When she failed, she committed suicide (the story of the asp is perhaps false) lest she have to grace his triumph. Egypt passed finally into Rome's possession.

29. Octavian celebrated three triumphs and by closing the temple of Janus, something recorded only twice before (by Numa and in 235), signalized the restoration of peace throughout the Roman world

If the crossing of the Rubicon marked the final fall of the republic, the battle of Actium signalized the final triumph of the empire. The last century of the republic was characterized by the collapse of popular government because of the wide extension of citizenship, the considerable adulteration of the citizen body at Rome by the introduction of un-Romanized Orientals, chiefly through the manumission of slaves, the growth in Rome of an unemployed proletariat, the rise of demagogues, and the complexity of the problems of government The increasingly corrupt Senate had lost control of the assemblies, the armies, and the generals The financiers, as well as the governors, saw in the provinces only a field for exploitation. Italy had been exhausted by civil war, proscriptions (which especially reduced the upper classes), recruitment, and land confiscations

The last century of the republic witnessed a vigorous literary activity at Rome Hellenism, thoroughly absorbed into Roman education, formed a constituent element in thought rather than something imposed from without. At the same time the native talent of the Romans adapted Hellenism to their own particular needs **Lyric poetry** found expression in **Catullus** (87–54) from Verona, who, besides his imitations of the Alexandrine poets, produced strongly personal and intense lyrics on his hates and loves The Epicurean **Lucretius** (99–55) wrote his epic "On the Nature of Things" (*de Rerum Natura*) to expound a materialistic atomism. Caesar's (102–44) *Commentaries* on the Gallic Wars, continued by his officers for the other campaigns, are, despite their apologetic purpose, admirably clear and impartial Minor writings which have survived are the historical monographs on Catiline and the Jugurthine War by **Sallust** (86–35) and the *Lives* by **Nepos** (100–29) Outstanding among antiquarians was **Varro** (116–27), while the **Scaevolae,** father and son, in the Sullan period, were outstanding students of jurisprudence But the figure who gave his name to the age was **Cicero** (106–43) In spite of his active public life, he not only published his forensic and judicial speeches but wrote extensively on philosophy, rhetoric, and politics He passed on to the Middle Ages much of value from Greek thought, especially from Plato, the Stoics, and the New (Skeptic) Academy But he added thereto a Roman color and much of his own thought and experience. Finally, his correspondence, published after his death, gives a deep insight into both the writer and his times.

Roman art began during this century to emerge with a definite character. Though buildings still preserved the heavy lines and ornament of the Etruscans, they acquired majesty and splendor under direct Greek influence Portrait sculpture, though executed by Greeks, portrayed the individual to a degree unknown in idealizing Hellenic art.



F. THE ROMAN EMPIRE

1. THE EARLY EMPIRE (31 B.C.-192 A.D.)

31 B.C.-14 A.D. IMPERATOR CAESAR OCTAVIANUS (b Sept. 23, 63), later called **Augustus**, established his government in 27 (Jan. 23), with some modifications later, especially after a serious illness in 23 He proclaimed that he would "restore the republic," i e resign his extraordinary powers and put the Senate and Roman people again at the head of the state He held the consulship annually until 23, but only twice thereafter for a short part of the year. He also received, and retained after 23, a proconsular command superior to those of other senatorial proconsuls and unlimited in time, though actually renewed at intervals (*imperium proconsulare maius infinitum*) Although he received a special dispensation to retain his *imperium* within the *pomoerium*, it is uncertain to what extent he could actually exercise it over Rome or even Italy, the sphere of the consuls However, in virtue of the *imperium*, he controlled all the armed forces of the state and appointed as legionary commanders his own senatorial delegates (*legati*) He also divided the provinces between the emperor and the Senate Augustus himself took charge of all provinces in which the presence of troops was required and appointed to govern them other senatorial delegates, called in this case *legati pro praetore* The Senate sent proconsuls to the pacified provinces where troops were no longer needed Thus Augustus hoped to prevent that rivalry of independent commanders which had brought about the downfall of the republic. He also sought to assure better government in the provinces by the payment of salaries to all governors, senatorial and imperial Two major districts received special treatment. The command of the legions on the Rhine was given to a special legate, independent of the imperial government of the Gallic provinces, and only later did this command develop into two territorial provinces. Egypt was administered by Augustus as a private estate under an equestrian praefect (*praefectus Aegypti*) appointed by himself, who directed the elaborate machinery inherited from the Pharaohs and Ptolemies for the benefit of the new imperial treasury (*fiscus*), which was distinct from the old senatorial treasury (*aerarium Saturni*). Smaller districts were governed, not by senatorial *legati*, but by equestrian procurators or praefects Imperial governors of all sorts tended to have longer terms than the senatorial and thus to perform their task better Since, however, the imperial *legati*, in both provinces and the army, were drawn from the Senate and usually held proconsulships later, no sharp distinction was drawn between the republican and imperial administration in the upper ranks.

A distinct **imperial civil service** did, however, grow up among the equestrians, partly in the provinces where, besides the minor governorships above mentioned, they held financial posts as stewards (*procuratores*) of the emperor or of his treasury (*fiscus*) and partly in various administrative posts in Rome and Italy, of which the chief were those with which Augustus supplemented the inadequate republican administration of the city of Rome The most important officer was a consular senator, the *praefectus urbi* who had general supervision of the city with three "urban cohorts" of soldiers for police This office, however, may have become permanent only under Tiberius. The other three major officials were equestrian. A *praefectus annonae* had charge of the grain supply for Rome. A *praefectus vigilum* had seven cohorts of freedmen as firemen, one for every two of the 14 regions into which Augustus divided the city. And a *praefectus praetorio* had charge of the nine cohorts of the imperial or "praetorian" guard (praetor-general), which Augustus kept scattered through Italy, but which Sejanus later concentrated in a camp at Rome Because of the importance of this post, later emperors frequently divided it between two incumbents

In 23, Augustus secured the consolidation and extension of certain tribunician privileges which had been granted to him because, as a patrician, he could not be a tribune. The value of this tribunician power (*tribunicia potestas*) was in part its traditionally popular appeal and in part the privileges of sacrosanctity, *auxilium*, veto, direct jurisdiction in Rome, consultation of the Senate, and, most important,

the initiation of legislation Augustus, during his reign, initiated a series of far-reaching laws (*leges Iuliae*) in an attempt to reform the criminal law, regulate social classes, and revive morality and family life With respect to the social order, he purified the Senate of Caesarian intruders by a series of "selections" (*lectiones*), he restricted severely the freeing of slaves and the attainment of full citizenship by freedmen; and he bestowed the citizenship on provincials very grudgingly. However, he did increase the recipients of free grain from Caesar's 150,000 to 200,000 The final law in his effort to restore morality was the consular *lex Papia Poppaea* of 9 A D , which supplemented his own *lex Iulia de maritandis ordinibus* of 18 B C. These laws encouraged marriage in the senatorial and equestrian orders by penalizing the unmarried and offering privileges to the fathers of children, especially of three (*ius trium liberorum*).

Augustus likewise held a number of minor offices or titles. Though he did not become chief priest (*pontifex maximus*) until after the death of Lepidus in 13, he undertook to revivify the old Roman religion in the face of an influx of exotic eastern cults He also allowed the worship of his genius, allied often with the goddess Roma, in Italy and the provinces. After his death he, like Caesar, was deified and temples were erected to him as *diuus Augustus*, but the official worship of living emperors during the early empire is questionable. Besides revising the rolls of Senate, knights, and people either as censor or with censorial powers, he controlled admission to the Senate by various methods. He alone could grant the wide stripe (*latus clauus*), the sign of a senatorial career, to those who did not inherit it as sons of senators He appointed to the minor military posts which were a necessary qualification for the republican magistracies And the privilege of either recommending (*nominatio*) or requiring (*commendatio*) the election of certain candidates for office allowed him to advance those whom he thought most fit. The republican magistracies continued with only minor changes save that the term of the consulship suffered progressive diminution until it averaged two months. When the opening pair of consuls (*consules ordinarii*) left office, there followed a succession of *consules suffecti*. Finally, in virtue either of specific enactments or of his general authority (*auctoritas*), Augustus undertook many improvements throughout the empire: roads, buildings, colonies, etc.

The title by which he is best known, **Augustus,** was bestowed on him by the Senate in 27 (Jan 16) and expressed a semi-religious feeling of gratitude for his achievements He did not, however, set himself up outwardly as a monarch, and the term which he himself used informally, though not as an official title, to describe himself was **princeps,** chief among equals.

29. **The closing of the temple of Janus** for the first time since 235 signified the achievement of longed-for peace throughout the empire (cf. year 9, below)

20. By a **treaty with Parthia,** Augustus recovered the standards lost by Crassus and Antony and thereby vindicated Roman honor.

17. A celebration of the *Ludi Saeculares*, religious ceremonies, concluded the fifth era (*saeculum*) since the founding of Rome.

16-15. The **defeat of Lollius** by the Germans necessitated the presence of Augustus in Gaul and Tiberius in Germany. Rhaetia, Noricum, and Vindelicia were annexed so that the frontier reached the upper Danube

12-9. **Tiberius** was summoned to Pannonia by a severe revolt. Drusus fought against the Germans until his death in 9.

9. **The altar of Peace** (*ara Pacis*), voted by the Senate four years before, was dedicated (cf. year 29, above)

9-7. Tiberius carried on the conquest of Germany, but was sent to Armenia in 6. For some reason now unknown, he retired to Rhodes until the death of the sons of Agrippa and Augustus' daughter, Julia, made him the only possible successor to Augustus. He returned to Rome in 2 A.D., on the death of Lucius Caesar at Marseilles, and was adopted in 4 A D , after the death of Gaius Caesar in Asia.

4 B.C. **THE BIRTH OF JESUS** (p. 32) probably occurred not in the traditional year, but shortly before the death of Herod the Great, son of Antipater the Idumaean, who had obtained the Kingdom of Judea from the triumvirs in 40. In 6 A D. some of his territories were distributed among his sons, but Judea itself was placed in charge of an imperial procurator

The Christian Era begins with the year 1 A.D , which follows directly on the year 1 B.C., since no year is numbered 0. Hereafter dates A.D. (*anno Domini*, "year of our Lord") will appear without designation and dates B.C. (before Christ) will be indicated as such.

4-6. Upon his adoption, Tiberius was sent again to Germany. From there he was recalled to suppress revolts in

Pannonia and Dalmatia until 9 He finally established the frontier on the middle Danube At the same time (6) the creation of the Province of Moesia and the reduction of Thrace to a client state advanced the frontier to the lower Danube.

6. Augustus set up a special treasury, the *aerarium militare*, to pay bonuses to retiring legionary veterans. Though land grants to veterans occurred thereafter, this bonus system finally solved the problem of caring for veterans. Augustus reduced the number of legions from 70 or more to 27 or 28 at his death. These, with about an equal number of auxiliary troops, gave a total army of some 300,000 men.

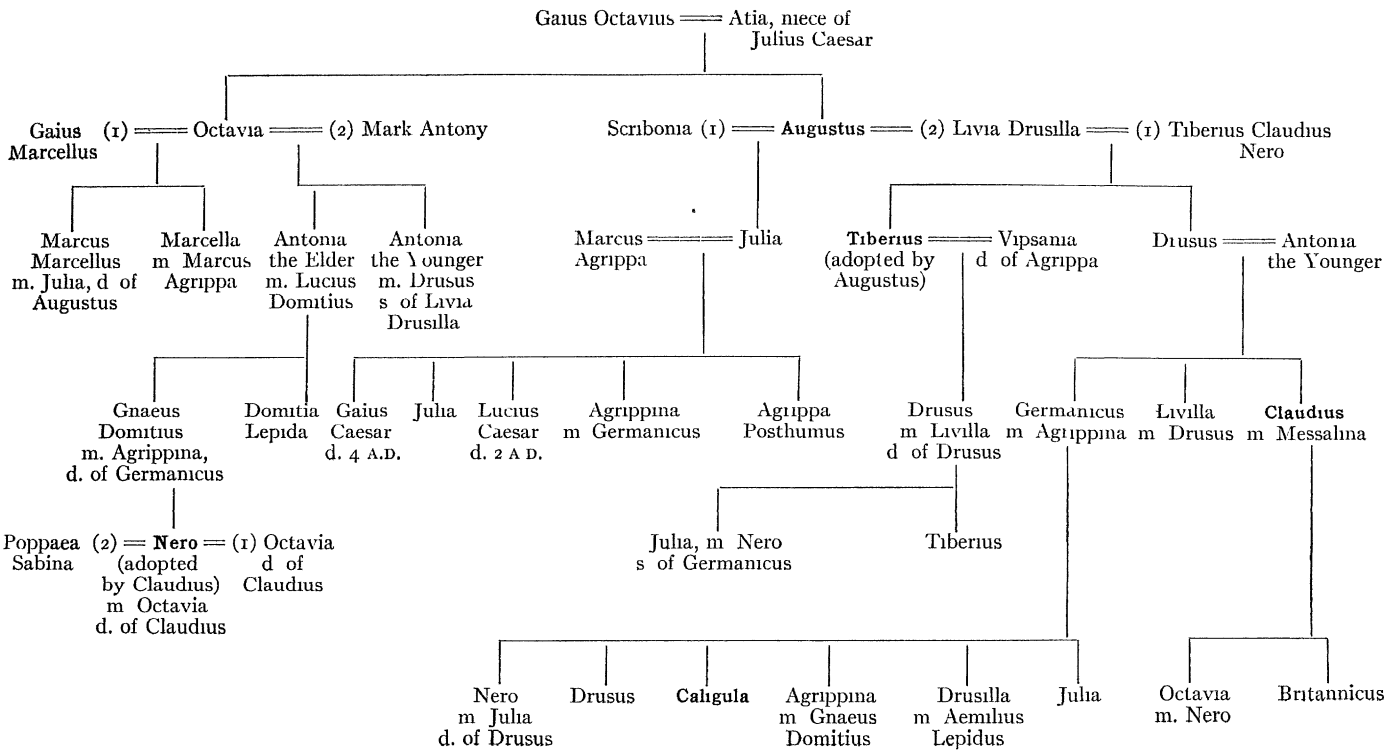
9. The legate, **P. Quinctilius Varus,** with three legions, was annihilated by the German Arminius **in the battle of the Teutoberg Forest,** perhaps near Paderborn. This defeat put an end to Augustus' plans for the conquest of Germany to the Elbe and established the Rhine as the future border between Latin and German territory Augustus discontinued his conquest because of the financial difficulties involved in replacing the lost legions and levying enough additional forces to subdue Germany permanently.

14. **AUGUSTUS DIED** at Nola on Aug 19 Legally, his position could not be inherited, since the various powers and offices composing it ceased with his death and could be received by another only from the Senate and Roman people In fact, however, Augustus had throughout his life sought so to indicate a successor as to insure the perpetuation of the principate. In this attempt he tried to combine inheritance, by either blood, marriage, or adoption, with selection of the best available man, through the bestowal of a secondary proconsular *imperium* and the tribunician power. After several possible successors had predeceased him, he selected **Tiberius,** son of his wife Livia by her first husband Though, at the death of Augustus, Tiberius held the tribunician power and an unusually extensive *imperium*, he perhaps sincerely laid before the Senate the option of restoring the republic. The Senate, however, realized the impossibility of such a step or, according to ancient authorities, found its freedom of action impeded by the hypocrisy of Tiberius. Revolts of the legions in Pannonia and Germany showed the need of a single strong commander to prevent a recurrence of the civil wars of the later republic. Tiberius already occupied too strong a position for anyone else to be chosen. The Senate therefore conferred on him the powers and titles of Augustus.

14-37. **TIBERIUS Claudius Nero** (b. 42 B C), emperor He transferred the elections from the assemblies to the Senate. Already the passage of laws in the assemblies had become a formality and though continued until the time of Nerva, the assemblies hereafter had no official share in the government save to confirm the grant of the *imperium* and *tribunicia potestas* to a new emperor. The Roman mob, however, continued by its frequent riots to exert a pressure upon the government out of proportion to its importance.

14-16. **The revolt of the Pannonian legions** was suppressed by Tiberius' son, the younger Drusus The son of Tiberius' brother Drusus, who is known by his father's title, **Germanicus,** and whom Augustus had forced Tiberius to adopt as a possible successor, suppressed the German mutiny and campaigned in Germany with some successes He defeated Arminius, whose kingdom then broke up, and recovered the eagles of Varus' legions He was, however, recalled, probably not because Tiberius begrudged his victories, but because he found them too costly.

17. On the death of their kings, Cappadocia and Commagene became a province



17-19. **Germanicus,** sent to install a king in Armenia, conducted himself in a high-handed manner both in Syria and in Egypt When, however, he died in Syria the enemies of Tiberius rallied about his wife Agrippina, and charged the legate of Syria, Piso, before the Senate with having poisoned him. Piso's consequent suicide gave color to the probably unjust suspicion that Tiberius, or even Livia, had encouraged the supposed poisoning.

19. **Maroboduus,** who had built up a strong kingdom in Bohemia, was forced by internal dissensions to take refuge with the Romans. Thereafter, the Romans were not seriously threatened on the Rhine or upper Danube until the time of Marcus Aurelius.

21. **A revolt broke out in Gaul** among the Treveri, led by Julius Florus, and the Aedui, led by Julius Sacrovir Though soon suppressed by the commander in upper Germany, Gaius Silius, it showed that anti-Roman feeling was still strong in Gaul, even among the chiefs who had received Roman citizenship, as these Julii from Caesar or Augustus

23-31. Tiberius fell increasingly under the influence of the ambitious and treacherous equestrian praefect of the guard, **Sejanus,** who quartered the praetorian cohorts in one camp outside Rome.

The Julian-Claudian House

He encouraged the gathering of information against those hostile to Tiberius by unscrupulous informers (*delatores*, many of whom were of the nobility) and the prosecution of the accused under the law of treason (*lex de maiestate imminuta*), since actions against the person of the emperor were regarded as harmful to the majesty of the state When such trials involved senators or important equestrians, they were heard by the Senate, which came increasingly to act as a court under the presidency of the emperor or the consuls Ancient writers have, however, much exaggerated the abuse of this law under Tiberius In 23, Sejanus probably poisoned Tiberius' son Drusus, in order to intrigue for his own succession

26. Sejanus persuaded Tiberius to retire from the annoyances of an increasingly hostile Rome Tiberius eventually settled on **Capreae** (Capri), an island in the Bay of Naples, where the popular imagination, probably wrongly, imagined him as giving way to the most abominable vices Actually, Tiberius was of rigid morality and of the utmost conscientiousness in governing the empire and in carrying out the policies of Augustus

29. **Livia,** accused of attempting to dominate the empire after Augustus' death, died Sejanus secured the exile of **Agrippina,** wife of Germanicus (she died in 33), and the arrest of his two eldest sons, Nero (d 31) and a third Drusus (d 33).

31. The plots of Sejanus finally came to the notice of Tiberius, who engineered his arrest and execution. Tiberius remained in rigid seclusion in Capreae.

33 (?). **PONTIUS PILATE,** procurator of Judea, allowed the Jewish Sanhedrin (national council) to crucify **Jesus,** called the "Anointed" (in Greek, *Christos*), because of his Messianic claims, which seemed seditious

36. **Artabanus, King of Parthia,** made peace with Rome Rome was saved from a serious Parthian threat throughout this period by dynastic quarrels within Parthia and by disputes over the possession of Armenia

37. **Tiberius,** dying at Misenum (Mar 16), indicated as his successors his young grandson, **Tiberius Gemellus,** and the surviving son of Germanicus, **Gaius Caesar** nicknamed *Caligula* ("Little Boot") Gaius at first favored Tiberius Gemellus, but soon put him to death.

37-41. **Caius CALIGULA** (b 12), emperor If not insane at his accession, Caligula was at least a megalomaniac and soon became unbalanced Though the follies ascribed to him may be exaggerated, his conduct was extremely irrational Behind it may have lain the desire for an absolute monarchy after the pattern of his great-grandfather, Antony He established many client kings, including Julius Agrippa I, wrongly called Herod Agrippa, a grandson of Herod the Great He had himself worshiped as a god, though his attempt to erect a statue of himself in the temple at Jerusalem was blocked by the legate of Syria, Petronius

39. Caligula's **campaign into Germany** was stopped by a conspiracy led by Gaetulicus

40. A campaign against Britain was also a fiasco

41, Jan. 24. **Caligula was assassinated** by conspirators led by Cassius Chaerea.

An attempt by the Senate to revive the republic was frustrated when the praetorian guard found in the palace a scholarly, neglected younger brother of Germanicus, Claudius Being loyal to the family, the guard imposed him upon the Senate as emperor

41-54. **Tiberius CLAUDIUS Drusus** (b 10 B C), emperor

He was regarded at Rome as a driveling imbecile, subject to the whims of his wives and freedmen Of the former he had four. The third, **Messalina** (a great-granddaughter of Antony) used her power to gratify her lusts until her enemies, the freedmen, secured her execution in 48 The last wife was Claudius' niece, Agrippina the Younger She used her power to insure the succession to Lucius Domitius Ahenobarbus, her son by a former husband. The most prominent of Claudius' freedmen were **Narcissus,** secretary for the imperial correspondence (*ab epistulis*), and **Pallas,** financial secretary (*a rationibus*) Henceforth these secretaryships and others like them, on petitions (*a libellis*), on legal precedents (*a studiis*), etc , which had hitherto been simply posts in the imperial household inherited from the establishments of the republican nobility, became real offices of state, heads of a great bureaucracy Though they never again conferred such power as they had under Claudius, their administrative importance grew and they were later filled by equestrians In fact, for all his domestic weaknesses, Claudius took a real and intelligent interest in the administration of the empire. Without departing widely from Augustan precedents, he extended the citizenship and opened the Senate to noble Gauls (48) He incorporated the client provinces of Mauretania Tingitana and Mauretania Caesarien-

sis (42), Lycia with Pamphylia (43), and Thrace (46). Though he made Agrippa king of all Judea in 41, he resumed it as a procuratorial province on Agrippa's death in 44. He restored Macedon and Achaea to the Senate in 44.

43. **Aulus Plautius** invaded Britain The precise motives for the Roman conquest are unknown. Claudius himself visited the island to receive the surrender of Camulodunum (Colchester in Essex) in the same year. Thereafter the conquest proceeded slowly north to Lindum (Lincoln) and west to Deva (Chester) and Isca Silurum (Caerlon, i e *Castra Legionum*) on the Welsh border The British leader **Caractacus** was finally captured in 51.

47. **Claudius** revived the censorship and celebrated secular games (*ludi saeculares*)

48. On the execution of Messalina, Claudius was permitted by a special senatorial enactment to marry his niece Agrippina. In 50, he adopted her son, Lucius Domitius Ahenobarbus who took the name **Nero** and ousted from the succession Claudius' son by Messalina, Britannicus (b 41 or 42 and inheriting his name from his father's British triumph). In 53, Nero married Claudius' daughter by Messalina, Octavia

53. Claudius secured a decree of the Senate by which jurisdiction was granted to imperial procurators in financial cases. This marked an important stage in the increase of the importance of imperial officials at the expense of senatorial.

54. **Claudius died** (Oct 13), reputedly from poison administered by Agrippina in a dish of mushrooms. When Agrippina secured the recognition of **Claudius Nero Caesar** as successor by the praetorian guard, the Senate had to confer on him the imperial powers.

54-68. **Nero** (b. 37), emperor. He began his rule well under the guidance of the philosopher **Seneca** and the praefect of the guard Burrus. But in spirit he was an actor and wished to play the monarch in the grand manner He discharged the freedman financial secretary (*a rationibus*) Pallas and poisoned Britannicus in 55. He deserted Octavia, first for the freedwoman Acte and then for Poppaea Sabina, the wife of his friend Otho. Finally he murdered his mother Agrippina in 59. After the death of Burrus in 62, he divorced, exiled, and murdered Octavia, and married Poppaea

55-63. The general **Corbulo,** who had been successful under Claudius in Germany, was sent to settle the Parthian problem After spending three years building up the morale of his troops, Corbulo successfully invaded Armenia and took Artaxata (58) and Tigranocerta (59) In 61, however, Nero replaced him by Paetus, who was thoroughly defeated at **Rhandeia** (62). In 63, therefore, Corbulo's solution, peace without conquest, was accepted by Nero, whose vanity was satisfied when the Parthian Tiridates came to Rome in 66 to receive his crown

56. By a decree of the Senate, the tribunes were forbidden to usurp the judicial functions of higher magistrates and the power to fine of the tribunes and aediles was limited At the same time the senatorial treasury (*aerarium Saturni*) was put under special praetorian praefects chosen by the emperor. The senatorial treasury constantly required subventions from the emperor In 61, there is evidence that the city praefect (*praefectus urbi*), originally a military or police official, had acquired a jurisdiction which was competing with that of the city praetor (*praetor urbanus*). These instances show how even in Rome the imperial officials were gaining power at the expense of the republican.

60. **St. Paul,** before his conversion to Christianity a Jew of Tarsus named Saul belonging to the rigid sect of the Pharisees, was brought to trial before the procurator of Judea, Felix, and appealed to the emperor.

61. While Suetonius Paulinus, governor of Britain since 59, was engaged in the subjugation of the Druidical center, Mona (Anglesey, an island off northwest Wales), the queen of the Iceni (Norfolk), **Boudicca** (not *Boadicea*, as usually spelled) led a determined revolt and sacked Camulodunum (Colchester), Verulamium (St. Albans) and Londinium (London) Paulinus succeeded in defeating and killing Boudicca.

64. **A great fire destroyed most of Rome.** Nero's "fiddling," if genuine, was singing to the lyre a poem on the burning of Troy. When suspected of having set the fire himself, Nero found convenient culprits in the new and despised sect of the Christians, already a considerable group in Rome, with their prophecies of an imminent second advent of Christ and a world-wide conflagration. They were put to death with refined tortures

65. A widespread conspiracy was organized to put **Gaius Calpurnius Piso** into the principate Its noble leaders conducted it with such pusillanimity that it was discovered and many senators including Seneca, his nephew Lucan the poet, Faenius Rufus (successor to Burrus as praetorian prefect), and Petronius (the

writer and friend of Nero), were executed or forced to commit suicide

66. Nero's hostility to the opposition culminated in the execution of the irreconcilable Stoics, Thrasea Paetus and Barea Soranus

66-70. REVOLT IN JUDEA, resulting from misgovernment by a succession of Roman procurators When the governor of Syria failed to suppress it, **Vespasian** was sent as special legate with three legions (67) He slowly reduced the country, took prisoner the pro-Roman Jewish historian, **Josephus,** and laid siege to Jerusalem (69) After his proclamation as emperor, Vespasian left his son **Titus** to continue the siege against the Zealot leader, John of Giscala, who had removed his rival Eleazar Jerusalem fell (7 Sept) Titus celebrated a triumph in 71, which is commemorated on the surviving Arch of Titus at Rome Some of Judea was given to Marcus Julius ("Herod") Agrippa II, son of Agrippa I, but most of it became imperial domain The Temple was destroyed, the Sanhedrin (Jewish national council) and high-priesthood abolished, the two-drachma tax paid by Jews to the temple was diverted to a special account in the imperial treasury (*fiscus Iudaicus*), and a legion under a senatorial legate superior to the procurator, was quartered in Jerusalem

67. Nero undertook an artistic tour in Greece, in the course of which he executed Corbulo, and two ex-legates of Germany.

68. On Nero's return to Italy, he heard that **C. Julius Vindex,** legate of Gallia Lugdunensis, had revolted Though the revolt was put down by the legate of upper Germany, L Verginius Rufus, who refused to be saluted as emperor (*imperator*) by his troops, the two legions in Hispania Tarraconensis, on the suggestion of Vindex, had already (March) saluted as emperor their elderly legate, Servius Sulpicius **Galba** When the praetorian guard, under the praefect Nymphidius Sabinus, recognized Galba, the Senate declared Nero a public enemy (*hostis*) He committed suicide in a villa outside Rome (*"what an artist I perish"*) and the Julio-Claudian line came to an end

68-69. Servius Sulpicius **GALBA** (b. 5 or 3 B C), emperor By the recognition of Galba, the helpless Senate admitted that, in the words of Tacitus, "emperors could be made elsewhere than at Rome " The success of Augustus' compromise depended on the loyalty of the troops to the person to whom the Senate might grant the powers of the principate. It had already been made clear that the Senate could not resist accepting a candidate of the praetorian guard, now the provincial legions, disabused of their loyalty to the Julio-Claudian house by the unwarlike conduct of Nero, and jealous of the privileges of the praetorians, asserted themselves during this year of the four emperors (Galba, Otho, Vitellius, and Vespasian)

69, Jan. 1. The eight legions on the Rhine refused allegiance to Galba, and on Jan 3 the four in lower Germany saluted as emperor their legate **Aulus Vitellius** (b 15) He was also accepted by the four legions of upper Germany under Hordeonius Flaccus Galba, whom Tacitus called "in the judgment of all, capable of ruling if he had not ruled" (*capax imperii nisi imperasset*), had reached Rome, where he adopted as his successor the aristocrat Piso Licinianus.

Thereupon, Marcus Salvius **Otho** (b 32), the dissolute friend of Nero, who had been made legate of Lusitania so that Nero could marry his wife Poppaea and had returned with Galba, secured the support of the praetorians and had Galba and Piso murdered (Jan 15) Otho was then recognized by the helpless Senate

Meanwhile, the troops of Vitellius approached Italy in two divisions under Valens and Caecina They met in the plain of the Po and defeated the forces of Otho (Apr 19) in the **first battle of Bedriacum** (near Cremona), whereupon **Otho** committed suicide The Senate immediately recognized Vitellius, who presently reached Rome himself

In the meantime (July 1) the praefect of Egypt, Tiberius Julius Alexander, proclaimed as emperor **Vespasian,** legate in Judea Mucianus, legate of Syria, lent his support Antonius Primus, commander of the seventh legion in Pannonia, rallied all the Danubian legions to Vespasian and moved rapidly into northern Italy There he defeated the forces of Vitellius in the **second battle of Bedriacum** and sacked Cremona (late Oct.) When Antonius approached Rome, Vespasian's brother seized the Capitol, which was burnt in the ensuing struggle The Vitellians fought bitterly in the city streets, but Vitellius was finally slain (Dec 20) The Senate immediately recognized Vespasian When Mucianus reached Rome in Jan (70), he ruled it until Vespasian arrived during the summer

69-79. Titus Flavius **VESPASIANUS** (b 9), emperor and founder of the Flavian dynasty He was the son of a humble tax collector from the Italian municipality of Reate. Vespasian was con-

fronted with the task, not only of restoring the principate, but of equating himself with his aristocratic Roman predecessors He himself, with his son Titus, held the opening consulship of every year of his reign save 73 and 78 A surviving law (*lex de imperio Vespasiani*) may be part of an inclusive measure whereby all the powers accumulated by preceding emperors were conferred specifically and together on Vespasian Such events as the restoration of the Capitol (70, dedicated by Domitian in 82), the triumph of Titus (71), the erection of a temple of Peace (71–75), the closing of the temple of Janus (71), the destruction of Nero's extensive "Golden House" and parks, on the site of which a vast public amphitheater, the Coliseum (or Colosseum, *amphitheatrum Flavianum*), was begun, served to surround the new dynasty with material glamor. To reorganize the Senate, Vespasian felt compelled to revive the censorship with Titus in 73, instead of tacitly assuming the right of enrollment (*adlectio*) exercised by his predecessors In 74 he granted Latin rights to all of Spain He reorganized and rigidly controlled the finances.

69-71. The revolt of some Batavian auxiliaries under their native commander, Julius Civilis, won the support of some of the legions of Germany. This inflamed the Gallic Treveri under Julius Classicus and Julius Tutor and the Lingones under Julius Sabinus. Hordeonius Flaccus was slain at Novaesium (Neuss) on the lower Rhine. Petillius Cerialis, with six legions, took advantage of disagreements between Gauls and Batavians to crush the revolt piecemeal The movement, though ostensibly begun in the interests of Vespasian, had in reality aimed at the establishment of an independent Gallic empire, the last instance of dangerous national separatism during the early empire Thereafter auxiliaries were not employed in the country of their origin and the corps soon came to be composed of recruits of different nationalities. By this time the praetorian guards were alone recruited in Italy; the legions drew from Roman settlers in the provinces or Romanized provincials, to whom citizenship was often granted to secure their enlistment. Thus the army had become less Italian, more provincial in its sympathies. After the revolt, Vespasian disbanded at least four disloyal legions.

70. By putting Cappadocia in charge of the imperial governor of Galatia, by moving the eastern legions from Syria to forts on the upper Euphrates (Satala, Melitene, and Samosata), and by absorbing a number of small native principalities in Asia and Syria, Vespasian consolidated the eastern frontier against Armenia and Parthia and prepared the way for Trajan's expansion

71. **Titus,** though a senator, was made praetorian praefect, a post hitherto equestrian He also received both the pro-consular command (*imperium*) and the tribunician power (*tribunicia potestas*), whereby Vespasian made it clear that he would follow the hereditary principle of succession

73-74. Vespasian began the conquest of the territory east of the upper Rhine and south of the Main, the later *agri decumates* (or *decumathes*, the meaning is uncertain) He furthermore reorganized the defenses of the upper and lower Danube

73. At about this time Vespasian banished and later executed Helvidius Priscus, son-in-law of Thrasea and his successor as leader of the Stoic opposition to the empire He also banished the professors of philosophy, perhaps because their doctrines encouraged disloyalty.

77-84. **Conquest of Britain. Cn. Julius Agricola** (40–93) as imperial governor continued the conquest carried on by his predecessors Cerialis (72–74) over the Brigantes around Eboracum (York) and Frontinus (74–77) over the Silures in Wales In 83 he fought a successful engagement against the Caledonians at **Mt Graupius** (not *Grampius*), possibly near Aberdeen in Scotland, the farthest point reached by Roman arms But Domitian recalled him in the following year, due to the fact that troops were needed for the German war Despite later revolts Romanization progressed rapidly thereafter in Britain

79-81. **TITUS Flavius Vespasianus** (b. 39) emperor, succeeding on the death of his father, Vespasian (June 24) Though popular, Titus was more concerned with playing the prince charming than with the economical administration of the empire. Public opinion forced him to put away the Jewish princess Berenice, already thrice married sister of Agrippa II.

79. **An eruption of Mt. Vesuvius,** on the Bay of Naples, buried the cities **Pompeii** and **Herculaneum.** In 80, a severe fire occurred in Rome During this year, however, Titus dedicated magnificently the Coliseum and some elaborate public baths (*Thermae Titianae*).

81-96. **Titus Flavius DOMITIANUS** (b. 65) succeeded upon the death of his older brother, Titus (Sept. 13).

Naturally of a suspicious, perhaps cruel, temperament, Domitian had apparently borne with ill grace the favor and preference shown to his brother and came to the throne determined to rule without respect for others, especially the Senate Nevertheless, despite the hatred which his reign aroused, he appears to have been an able administrator and general. He legislated against immorality and strictly controlled the governors

83. Domitian crossed the Rhine at Mainz to **campaign against the Chatti.** His victory allowed him to begin the construction of a series of forts connected by a road and later by an earth rampart surmounted by a wooden palisade which served to prevent the infiltration of barbarians into Roman territory and as a base for offensive or defensive operations, though it would not have withstood a full-fledged invasion. This system, which later extended along the central Rhine, then from Mainz outside the *agri decumates* to the upper Danube so as to straighten the dangerous re-entrant angle of the frontier at that point, and along the upper Danube north of Rhaetia, was known as the *limes*.

84. Through his election as consul for ten years and censor for life, Domitian openly subordinated the republican aspect of the state (Senate and magistrates) to the monarchical By increasing the pay of the troops by one-third (probably in itself a needed reform), he secured their loyalty And with lavish shows and buildings, he ingratiated himself with the Roman mob He revived the excessive use of the law of treason with its attendant encouragement of informers. After the abortive **revolt of Saturninus,** legate of upper Germany, in 88, he proceeded bitterly against the opposition, expulsion of the philosophers in 89 was followed in 93 by the execution of Herennius Senecio, Junius Arulenus Rusticus, and Helvidius Priscus. Flavius Clemens, a first cousin of Domitian, was executed in 95 on a charge of atheism (Christianity?), though perhaps the real ground was fear of him as a possible rival Domitian, besides widening the cult of his deceased father and brother, had himself addressed as "lord and god" (*dominus et deus*), in the tradition of Gaius and perhaps Antony.

85-89. An **invasion of the Dacians** across the Danube into Moesia in 85 was repulsed by Domitian in person. In 89, however, the complete reduction of Dacia was prevented by his defeat at the hands of the Marcomanni and Quadi, who had occupied Bohemia, west of Dacia Domitian made a somewhat humiliating peace with the Dacian king, **Decebalus,** who retained his independence and defeated, but did not crush, the Marcomanni, Quadi, and Iazyges (a Sarmatian people) in 92. Thus the situation on the middle and lower Danube remained dangerous

88. In consequence of the revolt of Saturninus, Domitian ceased the quartering of more than one legion in one camp to prevent any commander from gaining excessive power The individual legions became permanently fixed in separate camps and no longer highly mobile, as they had been meant to be by Augustus

96. Assassination of Domitian (Sept. 18) in a palace plot. The senate decreed the removal of his name from all public inscriptions (*damnatio memoriae*) and cancellation of his arrangements (*rescisio actorum*) Thus ended the Flavian house

Since the conspirators, wisely, had a candidate ready to receive the Senate's grant of powers, the armies remained quiet and **Nerva,** an elderly and distinguished senator, acceded without difficulty. This marked the last attempt at self-assertion on the part of the old republican element in the principate. Already the old aristocratic families had become exhausted by persecution and race suicide. Their places had been taken by a new nobility of families elevated from the cities of Italy or the provinces through the imperial (equestrian) organization to senatorial rank. Despite a sentimental attachment to the traditions and forms of the Republic, the new generation admitted that the emperor was master, not, as Augustus had pretended, servant of the Senate

96-98. Marcus Cocceius NERVA (b 35), emperor. He was forced to recognize that the wishes of the army should be consulted by adopting in the autumn of 97 as his successor the successful general **Trajan.** Since Nerva and his three successors had no sons of their own, the principle of adoption, triumphing over heredity, secured a succession of capable rulers known as **the five good emperors** (Nerva, Trajan, Hadrian, Antoninus Pius, Marcus Aurelius). Nerva's two important contributions were to shift from the cities to the imperial treasury the cost of the postal service maintained for government dispatches (*cursus*) and to supplement existing private charity by a system of state aid for orphans (*alimenta*) supported by government grants or, under Trajan, by the interest on permanent loans to small farmers. Both reforms are symptomatic of the gradual breakdown of local economy and the municipal system. The last reference to legislation in the assemblies is to an agrarian law

(*lex agraria*) in his reign Nerva died Jan 25, 98.

98-117. **Marcus Ulpius TRAIANUS** (b 53), emperor At the time he was in command in lower Germany, but was accepted at Rome without difficulty, though he was the first provincial emperor (born near Seville) and though he did not visit Rome until 99 On one Rhine frontier, Trajan continued the boundary palisade (*limes*) begun under Domitian

101-107. In two **Dacian Wars** (101–102, 105–107), whose precise chronology is uncertain, Trajan first seriously exceeded the limits set to the Empire by Augustus Upon the final death of Decebalus, Dacia, north of the Danube, became a Roman province The war was commemorated by a column, covered with a spiral band of continuous reliefs in the magnificent Forum of Trajan in Rome. Trajan had many fine buildings and arches erected throughout the empire

111-112 (?) **Pliny the Younger** was sent by Trajan as special legate with pro-consular power to reorganize the senatorial province of Bithynia The appointment of Pliny is symptomatic of a spreading bankruptcy of municipalities, particularly in the Greek east, which necessitated imperial interference The emperor not only sent special legates to senatorial provinces but appointed special supervisors for cities (*curatores rei publicae*) Extravagance and increased cost of administration, both municipal and imperial, thus started locally the crisis which disrupted the whole empire during the third century Further indications of financial stringency appear in the enlargement of the alimentary system and in the burning of records of unpaid taxes in the Forum During his governorship, Pliny corresponded with Trajan on many problems, including the treatment of Christians, toward whom Trajan instructed him to be lenient

113-117. **Parthian War.** When the Parthian monarch **Chosroes** set up his puppet in Armenia, thus violating the compromise reached under Nero, Trajan declared war on Parthia In 114, on the death of the Parthian puppet, he annexed Armenia As he advanced, he formed the provinces of Mesopotamia (115) and Assyria (116) and made the Tigris the eastern boundary of the empire He was, however, recalled from the Persian Gulf by a widespread **revolt of the Jews** and of the newly conquered areas Both were suppressed with great severity In 117 Trajan was repulsed from the desert town of Hatra He died at Selinus in Cilicia (June 22 or July 9) after having adopted on his deathbed (some suspected his wife Plotina of having invented the adoption) his ward and cousin, **Hadrian**, at the time legate of Syria. Trajan's conquests, though spectacular, were of no permanent value and probably hastened the financial collapse by increasing the military expenses

117-138. **Publius Aelius HADRIANUS** (b 75), emperor He was recognized as emperor by the Senate on Aug 11. Almost immediately he abandoned the new provinces across the Euphrates His lack of military ambition may have been responsible for the serious conspiracy, in 118, of four generals of consular rank, whom the Senate put to death Hadrian then took an oath, which had become a test of constitutionalism, not to execute senators without trial by their peers Under him the appointment of equestrians rather than freedmen to the important posts in the imperial secretariat became regular He spent most of his reign (121–126, 129–134) traveling through the provinces, where he erected many buildings He especially favored the Greek cities, notably Athens In Britain he built (122–127) the elaborate combination of road, ditches, and stone wall from the Tyne to the Solway which constituted a boundary (*limes*) between the Roman province and the unconquered Caledonians. In Numidia he completed the extensive permanent camp of the Third Augustan Legion at Lambaesis

In the collection of taxes, the companies of *publicani* had given way to individual collectors (*conductores*) under municipal supervision Like his predecessors, Hadrian lightened or remitted certain taxes. Yet the economic difficulties continued. He had to deal with the problem of deserted farm lands (*agri deserti*), an indication that peasants were finding agriculture unprofitable, and with complaints from tenants (*coloni*) on the imperial estates in Africa The replacement of slaves by tenants on large estates had begun when the cessation under Augustus of wars of conquest put an end to large supplies of cheap slaves. The oppression of tenants on both private and imperial estates by rising rents, heavier taxation, and forced labor rendered their lot ever more wretched.

131. The **Praetor's Edict** was definitively codified by the jurist Salvius Julianus under Hadrian's orders Since no praetor could thereafter alter it, the extension of legal procedure by praetorian *formulae* ended. Senatorial decrees became only a confirmation of the imperial speech (*oratio principis*) which initiated them. The tribunician privilege of introducing business had been extended to the first five

motions in any meeting so that the emperor presented all important matters. The only source of law was now **the edicts of the emperor.** The emperor hereafter summoned to his advisory council (*concilium*) distinguished jurists, who profoundly influenced the development of law.

132-135. The **Jews of Judea revolted** upon the founding of a Roman colony (Aelia Capitolina) in Jerusalem and the dedication of a temple to Jupiter Capitolinus on the site of their temple Their leaders were the priest **Eleazar** and the fanatic **Simon Bar-Cocheba.** The suppression of the revolt all but depopulated Judea and thereafter Jews could enter Jerusalem but once a year This completed the denationalization of the Jews begun by Vespasian Until 1919 the Jews of the Dispersion (*Diaspora*), scattered among other peoples and, generally despised, possessed only a racial and religious unity

138. Upon the death (Jan 1) of his first choice for successor, **Lucius Ceionius Commodus,** Hadrian adopted (Feb. 25) the competent Titus Aurelius Fulvius Boionius Arrius **Antoninus,** who received the imperial powers and took the name Imperator Titus Aelius Antoninus He, in his turn, had to adopt the young son of Commodus, Aelius Aurelius Commodus (later Lucius Aurelius Verus) and his own nephew, Marcus Annius Verus, henceforth called Marcus Aurelius Antoninus. Hadrian died on July 10

138-161. **Titus Aurelius ANTONINUS PIUS** (b 86) emperor Warned by Hadrian's unpopularity with the Senate, he spent his reign in Rome For his filial piety in securing the deification of Hadrian from a hostile Senate, he received the title *Pius.* His uneventful reign marked the culmination of the happy age of the Antonines.

142-143. **Quintus Lollius Urbicus,** legate of Britain, suppressed a revolt of the Brigantes in Yorkshire and, along the temporary line of forts built by Agricola from the Forth to the Clyde, constructed a turf wall north of Hadrian's This however, was soon abandoned

147. **Marcus Aurelius,** who had married Faustina, daughter of Antoninus, received the imperial powers Antoninus apparently passed over the younger and incompetent Verus.

155. A brief **war with Vologesus of Parthia** ended in an inconclusive peace.

161-180. **MARCUS AURELIUS Antoninus** (b 121) became emperor on the death of Antoninus (Mar 7) Loyal to the wishes of Hadrian, he shared the imperial powers in full equality with **Lucius Aurelius Verus** (b 130) This constitutes the first sure instance of complete collegiality in the imperial position, save for the office of chief pontiff (*pontifex maximus*), which remained unshared until Pupienus and Balbinus.

The reign of Marcus represents the triumph of **Stoicism.** Politically, the emperor was regarded as the human counterpart of the guiding reason of the universe and as obliged to rule for the good of his subjects. In law, the doctrine of the universal brotherhood of man, transcending limits of city or station, emphasized the humanizing trend which had long been operative, especially in legislation on slaves and women. Socially, the municipal and provincial aristocracy, which had appeared in the Senate through the imperial service, had wholly replaced the old Roman nobility and worked in complete loyalty with the emperor Economically, the empire most nearly approximated unification. Italy had yielded her economic supremacy to the increased prosperity of the provinces and was losing its favored political position. It received from the emperor four special judges (created by Hadrian, abolished by Antoninus, revived by Marcus).

162-165. **Verus** was sent by Marcus to command in the east against Parthia, adumbrating the later territorial division of the empire Though Verus dissipated at Antioch, his generals sacked Artaxata, Seleucia, and Ctesiphon, put a Roman puppet on the throne of Armenia, and made part of Mesopotamia a province.

166-167. The troops of Verus brought from the east a terrible plague, which seriously depopulated the empire.

166-175. The upper Danube was crossed by hordes of **Marcomanni** from Bohemia, with kindred tribes Marcus created his young sons, Lucius Aelius Aurelius Commodus and Marcus Annius Verus, Caesars He himself, with his colleague Verus, set out at once for the north Verus died in 169 Just when Marcus had settled with the Marcomanni and had set an extremely important precedent by importing (172?) considerable numbers of them to occupy areas in the empire which had been depopulated by the plague, the **Sarmatians** attacked the lower Danube frontier.

175. **Avidius Cassius,** a distinguished general and legate of Syria, revolted, perhaps misled by a false report of Marcus' death Though his revolt was crushed before Marcus could reach the east, it pre-

vented a final settlement of the Sarmatian war.

177. Marcus' eldest son, **Commodus,** became Imperator, then Augustus, coequal with his father The younger son had died in 169 Marcus is said to have issued a severe **rescript against the Christians.** In any case, they were subjected to increasingly bitter and far-reaching persecution, probably as fomenters of trouble by their prophecies of evil, and as disloyal to the state because they would not swear oaths to the emperor or offer incense to his statues or serve in the army

178-180. The Marcomanni again opened war so that Marcus and Commodus had to go to the Danube The wars of Marcus were commemorated on a column in Rome Marcus died at Vindobona (Vienna) Mar 17, 180)

180-192. Marcus Aurelius COMMODUS Antoninus (b 161), as Marcus' son was now called, was the first emperor since Domitian to succeed by birth rather than by adoption He made a peace with the Marcomanni which, though temporarily satisfactory, lost him favor with the troops. He returned to Rome, where he gave himself up to pleasure. The government was at first managed by the capable praetorian praefect **Perennis,** but on his unwarranted execution in 185, at the request of a deputation of mutinous soldiers from Britain, it fell to the mercenary freedman **Cleander,** who, in turn, was sacrificed in 189 to the Roman mob, which blamed him for a grain shortage Commodus, already hostile to the Senate in consequence of an abortive conspiracy in 182, became extravagantly despotic. He identified himself with Hercules and lavished wealth acquired from the treasury or by confiscation on his favorites, the praetorians, whose pay he increased by a quarter, and on hunts of beasts, in which he participated On Dec 31, 192, his concubine Marcia, his chamberlain Eclectus, and the praetorian praefect Laetus had him strangled by a wrestler named Narcissus Thus ended the Antonine line

The important trends in the early empire were: **politically,** the transformation of the *princeps,* agent of the republican Senate and Roman people, into a Stoic king, head of a state in which all good men co-operated for the common weal, **administratively,** the subordination of the republican magistracies and organs to the will of the emperor and the growth of the imperial secretariat and equestrian civil service; **socially,** the substitution for the irreconcilable republican nobility of a new aristocracy drawn from the better classes throughout the Empire, which, though sentimentally republican, accepted the Empire if the emperor was good, **economically,** the financial breakdown of the municipal system, which was accompanied by a loss of local pride, and the increased burdens of the imperial government, and **militarily,** greater and more constant pressure on both frontiers, north and east, at the same time

The literature of the early empire falls into two periods, the **Augustan Age,** which, with the preceding Ciceronian Age, forms the **Golden Age;** and (after 14) the **Silver Age** of the Julio-Claudians, Flavians, and Antonines Under Augustus, the chief figures gathered around his friend, their patron **Maecenas· Publius Vergilius Maro** or Virgil (70–19 B C) author of the *Bucolics, Georgics* and the *Aeneid,* and **Quintus Horatius Flaccus** or Horace (65–8 B C), author of *Odes, Epodes, Satires,* and *Epistles.* Besides these, **Albius Tibullus** (54–19 B.C.) and **Sextus Propertius** (50–15 B C) wrote erotic elegies and **Publius Ovidius Naso** or Ovid (43 B C –17 A D.) composed the erotic *Amores, Heroides, Ars Amatoria,* etc , and the longer *Metamorphoses, Fasti, Tristia, Letters from Pontus,* etc **Titus Livius,** or Livy (59 B C –17 A D) composed his *History of Rome* (*Libri ab urbe condita*), a prose glorification comparable to the *Aeneid* The writers of the Silver Age are numerous and less outstanding **Aulus Persius Flaccus** (34–62 A D) and **Decimus Iunius Juvenalis** (55–138) wrote satire, and **Marcus Valerius Martialis** (40–104) composed satirical epigrams **Lucius Annaeus Seneca** the Philosopher (1–65), son of Seneca the Rhetorician (55 B.C.–40 A D.), and his nephew, **Marcus Annaeus Lucanus** (39–65), author of the epic *Pharsalis,* belong, like Martial, to the Spanish group of authors prominent in the first century, as does also **Marcus Fabius Quintilianus** (35–100), teacher of rhetoric and author of an *Institutio Oratoria* **Gaius Petronius Arbiter** (d 66), the Epicurean friend of Nero, probably composed the *Satyricon,* a picaresque novel **Publius Cornelius Tacitus** (55–118?), author of the *Dialogue on Oratory,* the life of his father-in-law *Agricola,* the *Germania,* the *Annals,* and the *Histories,* **Gaius Plinius Caecilius Secundus** (61–113?), whose *Letters* are preserved, and nephew of the erudite Gaius Plinius Secundus (23–79), the author of the *Natural History* who died in the eruption of Vesuvius, and the biographer **Gaius Suetonius Tranquillus** (70–121?), whose *Lives of the Twelve Caesars* extend from Caesar through Domitian, belonged to the literary circle which flourished under Trajan. Under

Hadrian began a revival of interest in pre-Ciceronian Latin language and literature, while under the Antonines, a school of African writers introduced a florid and exaggerated style Its chief exponent was **Lucius Apuleius** (124–?), whose *Metamorphoses* and other writings cast light on the mystery religions and neo-Pythagoreanism The surviving writings of emperors, apart from administrative edicts, etc , are the succinct account of his life by Augustus, preserved on inscriptions at Ancyra (Ankara, *Monumentum Ancyranum*) and, in fragments, elsewhere, some speeches and letters of Claudius in inscriptions or papyri, and the *Meditations*, in Greek, of Marcus Aurelius

In philosophy, Stoicism remained dominant throughout the period and claimed among its chief exponents the statesman **Seneca** (1–65), the slave **Epictetus** (60–140), and the emperor **Marcus Aurelius.** But it had to compete with mystical tendencies which found expression in astrology, in such **oriental religions** as those of the Egyptian **Isis,** the Persian **Mithras,** and the Jewish **Jesus Christ,** and in a revival of the early Greek mystical philosophy of Pythagoras **Christianity,** which had begun as a Jewish sect but was universalized and widely spread by the ardent convert, **Paul,** soon developed both an organization and a literature The organization consisted of independent churches governed by boards of elders (*presbyters*) among whom one frequently secured pre-eminence as bishop (*episcopos*, overseer) Those churches which traced their foundation to the immediate associates of Christ, the **Apostles,** or which arose in big cities, tended to overshadow the less important ones and their bishops, especially, in the west, the Bishop of Rome, became authorities in ecclesiastical quarrels Heresies appeared from the beginning, like **Gnosticism** and, about 150, **Montanism.** Christian literature commenced with the *Gospels* and *apostolic* (or pseudo-apostolic) *writings* The early martyrs, **Ignatius of Antioch** (d 117?) and **Polycarp of Smyrna** (d 155?), as well as the Greek bishop, **Irenaeus of Lyons** (c. 130–200), who attacked the heretical transcendentalism of the Gnostics, wrote largely for Christians But the increasing hostility of the public and government occasioned apologetic writings addressed to non-Christians, like those of **Justin Martyr** (153?) and others

Augustan art, like Augustan literature, achieved a happy blend of native Roman realism and Greek idealism, as best appears in the sculpture of the *Ara Pacis* or the famous "Prima Porta" statue of Augustus. Julio-Claudian art aped the manner without attaining the excellence of Augustan. Under the Flavians, a certain heaviness and materialism, characteristic of the period, appeared. But two relief techniques were perfected, that of illusionism, the attempt to represent space, as on the panels of the Arch of Titus, and the continuous style, by which a series of events was represented in an unbroken sequence, as on the Column of Trajan Hadrian's reign witnessed a revived interest in and copying of Greek archaic art Under the Antonines, a crudeness appears on the Column of Marcus, though not in the reliefs from his arch. Mention should be made of the **wall-paintings** of all periods from the 2d century B C. to 79 A D. preserved at Pompeii and of the common red pottery with appliqué reliefs known as **Arretine ware** (modeled on the Greek Samian ware) made first in Italy, at Arretium (Arezzo), and then progressively at various places in Gaul and even in Britain

In architecture, the grandeur of the Augustan Age, as in the porch of the Pantheon or the Maison Carrée at Nîmes, gave way to massiveness, as in the temple of Venus at Rome and the Coliseum But the Roman engineers produced at all periods substantial and useful structures. aqueducts, theaters, circuses, baths, harbors, roads, etc.

2. THE THIRD CENTURY (192-284)

The third century is characterized by the complete collapse of government and economics throughout the Mediterranean Upon the death of Commodus, the armies asserted themselves against the Senate as they had in 68 The ultimate victor, **Septimius,** finally and frankly unmasked the military basis of the imperial power After an attempted revival of "constitutional" government under Alexander, the imperial position became the reward of successful generals of increasingly provincial and uncultured origins The one ideal which still dominated the armies was the preservation of the frontiers against the Germans and Persians Even the separatist movements were aimed, not at independence, but at the preservation of the *imperium Romanum.* To secure this end and their own support, the troops made and unmade emperors and

drained the scanty resources of the civilians by taxation, depreciation of coinage, and exactions of food, quarters, etc The military wholly absorbed the civil administration Intellectual life ceased, inscriptions became rare, and archaeological finds show a rapid decline in skill and taste

193. **Publius Helvius PERTINAX**, emperor He was chosen by the Senate, but his strict and economical rule led to his murder (Mar 28) by the praetorian guard, which then auctioned off the empire to him who promised them the highest gift of money, **M. Didius Severus Julianus** (b. 133?) The British legions proclaimed as emperor the legate, **D Clodius Septimius Albinus**; the Pannonian, the legate of Upper Pannonia **L Septimius Severus** (April or May); and the Syrian, the legate **C Pescennius Niger Justus** Septimius at once seized Rome, where the Senate deposed and executed Julianus (June 1)

193-211. **L. SEPTIMIUS SEVERUS** (b 146, at Leptis in Africa), emperor He dissolved the existing praetorian cohorts, composed of recruits from Italy, and enrolled new ones from deserving legionary veterans He kept Albinus quiet by recognizing him as Caesar (i e heir). He then defeated Niger in **battles at Cyzicus** and **Nicaea** and at **Issus** (the Cilician Gates), and put him to death near Antioch (194) Byzantium held out until 196, when it was sacked and reduced to the status of a village. Albinus, who now claimed full equality, was defeated and slain (197, Feb 19) at Lugdunum (Lyons), which was also sacked and never recovered its prosperity

Severus created three new legions, one of which was quartered on the Alban Lake in Italy, hitherto free from the presence of legionary troops He appointed equestrians to command these legions contrary to the Augustan rule and also put the new province of Mesopotamia under an equestrian He thus initiated the replacement of senators by equestrians in military posts which culminated under Gallienus Military marriages were recognized, since the immobilization of the legions had made these usual Auxiliaries were settled on public land in return for military service and the legionary pay was raised Severus humiliated the Senate, which had supported Albinus, and put equestrian deputies to watch senatorial governors When he closed down the now almost defunct courts (*quaestiones*), he transferred the jurisdiction over Rome and the area within 100 miles to the praefect of the city and over the rest of Italy to the praetorian praefect, who also exercised jurisdiction on appeal from the provinces. After the fall of the single and powerful praetorian praefect Palutianus (205), Severus returned to the practice of having two, one of whom was the distinguished jurist Papinian In the criminal law, a distinction was drawn between the privileged classes (*honestiores*), who were treated favorably, and the ordinary people (*humiliores*) The emperor began the subdivision of provinces into smaller units, which culminated under Diocletian and extended the organization of municipalities as the basis of tax-collecting even to Egypt, which shows how valueless municipal status had become He created a new treasury in addition to the *fiscus* (the original imperial treasury) and the *patrimonium Caesaris* (originally the ruler's private property, then crown property), namely the *res privata*, his personal funds He depreciated the silver content of the denarius to 60% Despite all of these difficulties, his administration was good

197-198. In a successful **Parthian war** Severus advanced as far as Ctesiphon and reconstituted the Province of Mesopotamia under an equestrian governor with two legions

205-211. A recurrence of **troubles in Britain**, which had suffered from invasion in 155 and revolt in 180, required the presence of Septimius himself to fight the Caledonians He definitely withdrew from the wall of Antoninus to that of Hadrian, which he rebuilt He died at Eboracum (York) on Feb 4, 211

211-217. **CARACALLA** (properly Caracallus), so named from a Gallic cloak which he wore He was the oldest son of Septimius and had been associated with him as Augustus (198). To strengthen the bond between the Severi and the Antonines he had changed his name from Septimius Bassianus to Marcus Aurelius (Severus) Antoninus (197) Upon his accession, he murdered his colleague (since 209) and younger brother, P (originally L) Septimius (Antoninus) Geta (b 189), along with the jurist Papinian and many others He increased the pay of the troops to a ruinous degree and called them all *Antoniniani* To meet the consequent deficit he issued a new coin, the *Antoninianus*, with a face value of 2 *denarii* but a weight of only one and two thirds He erected at Rome the vast **Baths of Caracalla** (*thermae Antoninianae*).

212. The **EDICT OF CARACALLA** (*constitutio Antoniniana*) extended Roman citizenship to all free inhabitants of the empire save a limited group, perhaps including the Egyptians. His motive has been much disputed, citizenship now meant

so little that this step was a natural culmination of the levelling down of distinctions which had been continuous throughout the empire Moreover, he may have hoped to extend to all inhabitants the inheritance tax paid by Roman citizens.

213-217. Caracalla successfully defended the northern frontier against the Alamanni in southern Germany and the Goths on the lower Danube (214), and in the east he annexed Armenia (216). But as he was preparing an invasion of Parthia, he was murdered by a group of his officers (217, Apr 8).

217-218. M. Opellius (Severus) MACRINUS (b. 164?), emperor. He was a Mauretanian who had risen from the ranks to be praetorian praefect, and was the first equestrian emperor. He surrendered Caracalla's eastern gains and sought to reduce the pay of the troops, who set up as a rival (218, May 16) at Emesa in Syria a grandnephew of Julia Domna, the Syrian wife of Septimius Macrinus fell on June 8, 218

218-222. ELAGABALUS (Heliogabalus, b. c 205), emperor He derived his cognomen from the Emesa god, whose priest he was. To legitimize his rule, he changed his name from (Varius) Avitus to Marcus Aurelius Antoninus and claimed to be a son of Caracalla. While Elagabalus surrendered himself to license and introduced the worship of his god to Rome, the empire was really ruled by his forceful mother, **Julia Maesa.** She obliged him to adopt his cousin (Gessius) Bassianus (Alexianus?), son of her sister, Julia Mamaea. The praetorians murdered Elagabalus (222, Mar. 11).

222-235. Marcus Aurelius SEVERUS ALEXANDER (b c 208), emperor. He was the adopted son of Elagabalus and was dominated by his mother, Mamaea She established a regency committee of senators and used the advice of the jurists Paulus and Ulpian. The new rule was an attempt to revive the Antonine monarchy. It was marked, however, by an extension of governmental control over the trade guilds (*collegia*) and further depreciation of the coinage.

227. The New Persian (Sassanid) Empire (p. 124) was founded by **Ardashir** (Artashatr, Artaxerxes), a Persian who overthrew the Parthian Arsacids, Artabanus V and Vologaesus V. The strength of the new empire lay in a revival of **Zoroastrianism.**

231-233. Persian attacks required the presence of Alexander, who seems to have won some success before his recall to the west.

234-235. Alexander was forced to buy peace from the Alamanni on the Rhine The disgruntled troops murdered him (235, Mar) With his death the last attempt to preserve a civil or "constitutional" government came to an end and military anarchy began

235-238. C. Julius Verus MAXIMINUS "Thrax" (b c 172), a Thracian peasant of huge size and no culture, was elevated by the Rhine legions, but was not recognized by the Senate, which put forward the senators **M. Clodius Pupienus Maximus** and **D. Caelius Calvinus Balbinus.** In the meantime, the African legions proclaimed the eighty-year-old pro-consul **Marcus Antonius Gordianus I** and his son **Gordianus II.** Though the praefect of Mauretania defeated and slew them, the populace of Rome forced the Senate to join the grandson, **Gordianus III,** with Pupienus and Albinus. Maximin was slain by his troops while besieging Aquileia (238, June) and the praetorians murdered Pupienus and Balbinus (238, June?).

238-244. Marcus Antonius GORDIANUS III (b 225) was dominated by the wise praetorian praefect **C. Furius Timesitheus** (Misitheus?), whose daughter he married (241) Timesitheus drove the son of Ardashir, Shapur (Sapor), out of Antioch (241–243) but died himself of disease The new praetorian praefect, an Arabian, made himself co-Augustus, then murdered Gordian (early in 244).

244-249. M. Julius PHILIPPUS "ARABS" bought peace with the Persians and, at Rome, celebrated the *ludi saeculares* for Rome's thousandth birthday (248) He was killed at Verona (249) in battle against his commander in Dacia, Decius.

249-251. C. Messius Quintus Traianus DECIUS (b 200?), instituted the first general **persecution of the Christians,** and perhaps of all who would not sacrifice to the emperor Emperor-worship though used as early as Pliny as a test against Christians, seems now to have become a requirement of all loyal subjects, which indicates a growing belief in the actual divinity of the emperor Decius was slain by the Goths in Dacia (251) because of the disloyalty of the legate of Moesia, Gallus.

251-253. C. Vibius Trebonianus GALLUS (b. c 207) put to death his co-Augustus, **Hostilianus,** son of Decius In his reign began a fifteen-year plague When he marched against his successor in Moesia, the Moor M Aemilius Aemilianus, his own troops slew him (before Oct , 253).

253-259. P. Licinius VALERIANUS (b. c. 193), commander in Germany, be-

came emperor, with his son Gallienus as co-Augustus. He fought unsuccessfully against the Franks, who crossed the Rhine in 256, the Alamanni, who reached Milan, and the Goths. As the frontiers ceased to hold, cities within the empire began to build walls. Valerian recovered Antioch again from Shapur (256–258) but was treacherously seized at a parley (259?) and died a captive at an uncertain date.

259-268. **P. Licinius Egnatius GALLIENUS** (b. 218) continued to reign alone, though pretenders appeared throughout the empire and the period has been called that of the **"thirty tyrants."** He completed the substitution of equestrians for senators as legionary commanders and as governors.

The Goths, who had broken through to the Black Sea, harried Asia and the Aegean area from ships.

258-267. **Odenathus,** ruler of Palmyra in the Syrian Desert, kept the Persians out of Asia (260), but his queen and successor **Zenobia,** declared her independence (267).

259-268. **Postumus** set himself up as emperor in Gaul **Gallienus** was finally murdered by his own troops before Mediolanum (Milan), where he was besieging the pretender **Aureolus** (before Sept., 268). Aureolus in his turn was slain by Claudius II

268-270. **M. Aurelius CLAUDIUS II "Gothicus"** (b.?) was the first of a series of capable Illyrian emperors who prepared the way for Diocletian. He repelled a Gothic invasion of the Balkans (269, whence his title) at **Naissus** (Nisch) and settled numbers of Goths in the vacant lands of the Danubian provinces Upon his death from plague, the Balkan legions elevated his compatriot and assistant, Aurelian (before July, 270).

270-275. **L. Domitius AURELIANUS** (b. c 214?) was rightly entitled "restorer of the world" (*restitutor orbis*). He abandoned trans-Danubian Dacia and settled its Roman inhabitants in a new Dacia carved out of Moesia. He repulsed the Alamanni from Italy (271) and built the existing walls of Rome (271–276) as a protection against future incursions

271-272. **Probus,** and then Aurelian himself, defeated and captured Zenobia and, upon a second revolt, sacked Palmyra (273), which remained a ruin.

273 or 274. Aurelian recovered Gaul from the successor of Postumus, Tetricus, in a **battle at Châlons.** Both Zenobia and Tetricus adorned his magnificent triumph in Rome (274). He was murdered by some officers while preparing to invade Persia (275).

275-276. **M. Claudius TACITUS** (b. ?), an elderly senator, was appointed emperor against his will by the Senate, to whom the troops left the choice (275, autumn?) Though he defeated the Goths and Alans, who had invaded Asia Minor, the troops slew him and, soon after, his brother M Annius Florianus.

276-281. **M. Aurelius PROBUS** (b. ?), an Illyrian, was saluted by the eastern armies (276, early summer?) He repelled from Gaul the Franks and Alamanni and other peoples, who had inflicted great devastation. He also strengthened the Danube frontier, quieted Asia Minor, and suppressed pretenders in Gaul. When he tried to use the troops in works of peace, e g. clearing the canals in Egypt, they murdered him (281, autumn?).

281-283. **M. Aurelius CARUS,** an Illyrian (?) and praetorian praefect to Aurelian, succeeded and campaigned successfully against the Persian monarch Varahran. He perished (murder, disease, or lightning? in 283, midsummer?) and his son Marcus Aurelius Numerius Numerianus, co-Augustus with him, was murdered (284, autumn) A second son, M. Aurelius Carinus, tried to hold the west against **Diocletian,** an officer whom the eastern army had elected emperor, but he was slain by his own troops during the battle at the river Margus in Moravia (285, summer?).

The troubles of the third century had two main causes. the increased pressure on the frontiers from the new Germanic tribes and from the vigorous Persian Empire, and the economic collapse within, the causes of which cannot be wholly established. In part, at least, the economic crisis was due to the heavy burdens of government and defense and to the oppressive and erratic system of taxation; in part, perhaps, to a "fatigue of spirit" Literature ceased almost entirely Of art and building notable examples survive, like the Arch of Septimius, the Baths of Caracalla, and the Walls of Aurelian at Rome, but these are imitative and uninspired **Roman law,** however, reached its heights under the Antonines and Severi. Though the two great schools of jurisprudence, the **Sabinians** and the **Proculians,** originated under Augustus or Tiberius, the great jurists were **Salvius Julianus** under Hadrian, who dealt with the **Praetor's Edict, Gaius** under the Antonines, whose *Institutes* became a standard textbook, and the triumvirate of **Papinian, Paul, and Ulpian** under the Severi, whose various works provided most of the material for Justinian's *Institutes* In **philosophy,**

neo-Pythagoreanism gave way to neo-Platonism, whose chief exponents were **Plotinus** (204–207), **Porphyrius** (233–306), and, later, **Iamblichus** (d 333?).

Despite the persecutions under the Antonines, Severus, Maximin, and Decius, the **Christian Church** grew in numbers and power. Its chief competitor was the cult of the Persian **Mithras**, a god popular with and widely spread by the troops The major internal problems of the church in the third century were the heresy called Montanism (an extreme asceticism) and the acute question of the treatment of those who lapsed from their faith during persecutions (*lapsi*) or betrayed the sacred books (*traditores*). Those who had confessed their faith in the face of persecution (*confessores*) opposed the readmission of backsliders to full communion, while the church as a whole, led in the west by the Bishop of Carthage, **Cyprian**, and the Bishop of Rome, **Stephen**, advocated a milder policy. The extremists were called **Novatians** in the third century and **Donatists** in the fourth, after a certain Donatus, whose riotous bands of schismatics (*circumcelliones*) terrorized the province of Africa Christian apologetics gave way to homiletic and theological writings in the hands of the African **Tertullian** (150–225) and **Cyprian** (200–258) and the Alexandrians **Clement** (d 215) and **Origen** (182–251), the last two of whom combined Platonism with Christianity in the manner of contemporary neo-Platonism.

3. THE LATER EMPIRE (284-527)

284-305. C. Aurelius Valerius DIOCLETIANUS (b. 245, saluted as emperor 284, Nov. 17?), was of humble Illyrian stock. Faced with the task of bringing order out of chaos, he desired to emulate Augustus, to revive the happy days of the early empire, but he succeeded only in creating an oriental despotism

Since it is difficult to distinguish how far the reorganization of the empire was due to Diocletian and how far to Constantine, a brief outline will be given here In general, all these reforms were merely a regularization and crystallization of practices developed in the 3d century. Although the Senate continued to meet and the higher republican magistrates survived to varying dates, e.g. the consulship in the east until its abolition by Justinian, and although two provinces, Asia and Africa, still received senatorial pro-consuls, nevertheless the whole administration was organized in a pyramid of interlocking bureaus emanating from the emperor.

According to Diocletian's system, which operated only sporadically, there were to be two coequal emperors (*Augusti*), as in the case of Marcus and Verus Now, however, the empire was divided for practical administrative purposes into two spheres, eastern and western, the line between which ran from the Danube to the Adriatic south of Dalmatia. Each part was administered by one of the Augusti. But the edicts of the emperors were issued conjointly and they might on occasion command in one another's spheres.

The emperors ruled absolutely, in virtue of selection by the troops and without the consent of the Senate (since 282). Each surrounded himself with the pomp of an oriental court No longer was he the first citizen among equals (*princeps*), but, since Aurelian, "lord" (*dominus*). All connected with him was "sacred" (the "sacred court," *sacra aula*, appeared under the Severi). Each emperor chose an assistant and successor (*Caesar*)

Under these four rulers, praetorian praefects, now wholly civilian magistrates, administered the four praefectures, Gaul, Italy, Illyrium, and the east Each praefecture was divided into several dioceses under vicars (*uicarii*) independent of the praefects and directly responsible to the emperor The dioceses were subdivided into provinces under presidents (*praesides or rectores*). These provinces were subdivisions of those of the early empire and their number increased from 60 to 116.

The military power, which during the third century had absorbed all the functions of government, was now wholly separated from the civilian Each province had a duke (*dux*) or count (*comes*) in charge of its permanent garrison, which was not, as in the early empire, concentrated in large camps, but scattered in smaller posts along the frontier, often in the guise of soldier-peasants (*limitanei, riparienses*, border or riverbank men). In each praefecture, under masters of the infantry and of the horse (*magistri peditum, equitum*), were mobile forces which could be rushed to strengthen threatened points (*comitatenses*, companions of the emperor). The emperors, moreover, had large bodies of special guards (*protectores or domestici*). The old legions

were split into smaller, more mobile but less highly trained units of about 2000 men Heavy armed cavalry (*cataphractarii*) played a large part in warfare. The auxiliary troops were mostly mercenary bands of barbarians, whose chiefs became extremely influential The total forces now numbered about 500,000 men, an increase over the Augustan 300,000 which accounts in part for the financial problems of the later empire.

Besides the separate and elaborate administration for each territorial unit, the emperors had an extensive central bureaucracy, the various "offices" (*officia*) under such officials like the quaestor of the sacred palace (*quaestor sacri palatii*, the chief judicial officer), the chancellor (*magister memoriae*, master of records), and the personnel manager (*magister officiorum*, master of the offices, very powerful because he had a finger in every department) These men automatically belonged to the Senate, and other high officials had the titles of honor formerly reserved for equestrians, who vanished as a class. The senators also now formed a class of dominant and very wealthy landowners throughout the empire, who might seldom actually attend the Senate, but who enjoyed privilege and exemption. The rest of the population were crushed by heavy taxes, which were largely collected in kind (*annona*) after the collapse of the currency, and which were reassessed every fifteenth year by an "indiction" (*indictio*). Both labor and property were evaluated in terms of a unit of wheat-producing land (*iugum*). The taxation bore especially heavily on the members of the municipal senates (*curiales, decuriones*), who continued to be held responsible for the collection of taxes and the payment of arrears, and on the small landowners, who had to provide recruits for the army and see that waste lands (*agri deserti*) were kept under cultivation. Thus freemen found it wisest to flee the country, enter monasteries, or become serfs (*coloni*) on large estates. Craftsmen and tradesmen were rigorously confined to their professions. The whole caste system was arranged to insure the maintenance of the administration and the army Since, therefore, it benefited no one but the great landlords or imperial officials, the vast majority of the population lost interest and either accepted the barbarian invasions supinely or even welcomed relief from oppression. Whether, however, this lethargy, which pervaded not only the political and economic life but also the intellectual, save in the Christian Church, resulted from the system or whether the unwieldy and inflexible system indicated the poor mental caliber of the rulers, so many of whom were of peasant or barbarian origin, and the effeteness of the hereditary upper class, cannot be determined

285. Upon the defeat of Carinus, Diocletian chose as his colleague (Caesar in 285, Augustus in 286) the Illyrian **M. Aurelius Valerius Maximianus** (b c 240?), who was a harsh, uneducated man but a competent general They assumed the titles respectively of *Jovius* and *Herculius* Diocletian took up his residence in the east, at Nicomedia in Bithynia, from which the main road to the upper Euphrates frontier began, while **Maximian,** in the west, lived mostly at Mediolanum (Milan) in northern Italy, which was a better center for the defense of the northern frontier than Rome. Despite its sentimental pre-eminence, Rome thereafter declined in practical importance. But the departure of the imperial court gave the Bishop of Rome increased scope.

293, Mar. 1. Diocletian chose as Caesar **C. Galerius Valerius Maximianus** (b. c. 250), who became his son-in-law and received the government of Illyricum; Maximian chose **Flavius Valerius Constantius** (misnamed Chlorus) (b. ?) who divorced his wife Helena to marry Maximian's daughter Theodora; he received the praefecture of Gaul. He at once drove out the rebel Carausius from Boulogne and subdued the Franks.

294. A revolt was raised in Egypt by Achilleus, whom Diocletian besieged in Alexandria (295) and captured.

296. **Narses,** King of Persia, invaded Roman Mesopotamia and defeated Galerius, but the latter gathered reinforcements in the winter and returned to defeat Narses (297) and recover Mesopotamia; Roman influence was restored in Armenia, whose king became Christian

297. Constantius crossed to Britain and his lieutenant defeated and killed Allectus, who had murdered and replaced Carausius

298. Constantius returned to Gaul and defeated the Alamanni

301. An edict limiting prices of goods and labor was passed by Diocletian in an attempt to end the economic distress caused by the collapse of the currency; no attempt was made to enforce it in the west, and in the east it soon proved impracticable.

303, Feb. 23. Galerius persuaded Diocletian to declare a **general persecution of the Christians,** which, however, Constantius did not enforce in his prae-

fecture. The persecution was stopped in the entire west in 306 but raged in the east until 313

305, May 1. Diocletian and Maximian abdicated; Galerius and Constantius became Augusti; Diocletian and Galerius selected as Caesars **Flavius Valerius Severus** under Constantius, receiving the praefecture of Italy, and for Galerius his own nephew **Galerius Valerius Maximinus Daia,** who received Syria and Egypt The hereditary claims of Maximian's son Maxentius and Constantius' son Constantine were neglected

306-337. Flavius Valerius CONSTANTINUS I THE GREAT (b 288? of Constantius and Helena) fled from Galerius to his father in Britain On the death of the latter (July) Constantine was saluted as emperor by the troops, but made an agreement with Galerius by which he became Caesar and Severus became Augustus In Rome the praetorians and the people proclaimed **Maxentius Augustus** (Oct 28), he called his father Maximian to be Augustus and temporarily took the title of Caesar When the Emperor Severus came with an army, it deserted and he surrendered to Maximian and was later executed by Maxentius In fear of Galerius, Maximian went to Constantine in Gaul, Constantine recognized him as senior Augustus and married his daughter, Fausta Galerius attempted an invasion of Italy (307), but disloyalty in his army forced its abandonment Maxentius took the title of Augustus (308) and Maximian fled to Constantine, for four years Maxentius ruled in Italy very oppressively Galerius induced Diocletian to preside over a conference at Carnuntum, where it was decided that Maximian should abdicate, **Valerius Licinianus Licinius** was to be Augustus in the west, and Constantine was to return to the rank of Caesar Constantine refused and Galerius gave him and Daia the rank of *filius Augusti*, both were still unsatisfied, and were finally given the rank of Augustus (310) Maximian made an attempt to revolt, but was killed by Constantine. When Galerius died of disease (311, May), Daia seized Asia Minor, leaving the Balkans to Licinius

312. Constantine suddenly invaded Italy and after winning a battle over Maxentius' general at Verona defeated and killed Maxentius himself near Rome at the **Milvian Bridge** (Saxa Rubra) (Oct. 28). Before the battle he is said to have seen in the sky a cross and the device *in hoc signo vinces* Sometime later he became a Christian He dissolved the praetorian guard At a meeting with Licinius in Milan (early 313?) equal rights were proclaimed for all religions and the property confiscated from the Christians was restored by the **Edict of Milan.**

313. Daia crossed to Europe, but was defeated by Licinius at **Tzirallum** and fled to Tarsus, where he died soon after Licinius now held the entire east and Constantine the west

314. After a brief war, in which Licinius was defeated at **Cibalae** (Oct 8), a peace was made giving Constantine all of the Balkans except Thrace

324. Relations between the two were strained by Licinius' anti-Christian policy, and war finally broke out Licinius was defeated at **Adrianople** (July 3), his fleet was defeated by Constantine's son Crispus, and Licinius was again defeated at Chrysopolis in Anatolia (Sept. 18). He surrendered and was executed in the next year

324-337. CONSTANTINE REUNITED THE EMPIRE under his sole rule. He had already interfered in the affairs of the Church (at its invitation) when in 316 he tried to settle the Donatist schism.

325. He now summoned the **first oecumenical** (world-wide) **council of the Church,** to meet at **Nicaea** in Asia Minor It was to settle a controversy which had arisen in Alexandria between the priest **Arius,** who maintained that Christ was of different substance from God (*heter-ousios*), and the Bishop Alexander (succeeded in 328 by **Athanasius,** who continued his doctrine), who supported the doctrine that they were of the same substance (consubstantiality, *homo-ousios*) The council agreed on a creed favorable to Alexander (not the present "Nicene" creed), in addition it adopted certain canons giving privileges to the Bishops (Patriarchs) of Alexandria, Antioch, and Rome Constantinople later acquired similar rights The **primacy of Rome,** although in a very restricted sense, had been generally recognized in the west since the **Council of Arles** in 314. The prominent part taken by Constantine in this council laid the basis for the later supremacy of the emperor in the eastern Church. Though Arius died a horrible death in 336, Constantine and his successors swung the Church increasingly toward Arianism, and strife in the Church on this subject was not ended until the reign of Theodosius I The west remained firmly Athanasian.

330, May 11. Constantine dedicated as his capital **CONSTANTINOPLE,**

which he had spent four years in building on the site of Byzantium, commanding the strategic center of the east, the Bosporous.

337, May 22. **Constantine died** at Nicomedia. He had been induced (326) by his wife Fausta to execute Crispus, his son by his first wife His heirs were three sons and two nephews Of the sons, all Augusti, Constantinus II (b 317) received the praefectures of Italy and Gaul, Constantius II (b. 317) took the east, and Constans (b 323?) got Illyricum and part of Africa The nephews, Dalmatius and Annibalianus, were at once executed by Constantius

337-361. **RULE OF CONSTANTINE'S SONS.** While Constantius carried on an indecisive war against Persia, Constantinus attacked Constans, but was slain at Aquileia (340) Constans was killed by the pretender **Magnus Magnentius** (350, Jan)

351, Sept. 28 Constantius defeated Magnentius at **Mursa,** near the confluence of the Danube and Drave The latter slew himself at Lugdunum (353) and the empire was once more united

351, Mar 15. Constantius chose his cousin Gallus as Caesar, but had him executed in 354

355, Nov. 6. Constantius chose as Caesar the half-brother of Gallus, **Julian,** who was given command against the Alamanni and Franks.

360. Julian marched against Constantius, who died before Julian reached the east (361).

361-363. **JULIANUS, "the Apostate,"** (b 332). He is known chiefly for his attempt to substitute paganism for Christianity and to organize a pagan church. After continuing his successes against the Franks, he campaigned against the Persians, but died on his way back from an attack on Ctesiphon (363, Jul. 26). With him ended the line of Constantine

363-364. **JOVIANUS** (b c. 331), was elected by the troops. He surrendered Mesopotamia to the Persians and died soon after (364, Feb. 17)

364-375. **FLAVIUS VALENTINIANUS I** (b. 321) was the next choice of the troops. He ably defended the west against the barbarians and made his brother **Valens** co-Augustus in the east (364, Mar. 28).

367. Valentinian made his son **Gratian** co-emperor in the west Valentinian died on an expedition against the Quadi and Sarmatians (375, Nov. 17)

375-383. **GRATIANUS** (b 359), named his half-brother **Valentinian II** (b 371) co-Augustus in the west.

376. **The Visigoths** (West Goths) crossed the Danube Valens fell in battle against them at **Adrianople** (378, Aug 9) The Goths continued to ravage the Balkan region

379, Jan. 19. Gratian appointed as co-Augustus for the east, **Theodosius,** son of a successful general in Britain

382. Gratian, at the request of Bishop Ambrose, removed from the senate-house the pagan altar of victory and gave up the title of *pontifex maximus*

379-395. **FLAVIUS THEODOSIUS "THE GREAT"** (b 346) He supported orthodoxy (i e Athanasianism) in the east, and came to terms with the Goths by settling them as military allies (*foederati*) in the Balkans

383. The British legions proclaimed **Magnus Maximus,** who seized Gaul Gratian was slain at Lugdunum (Aug 25) Theodosius recognized Maximus

387. When Maximus drove Valentinian II from Italy, Theodosius captured and executed him at Aquileia (388, July 28)

390. Theodosius cruelly massacred 7000 people at Thessalonica in revenge for an insurrection. Bishop Ambrose of Milan forced him to do penance for this act and emphasized thereby the independence of the western church from imperial domination

392, May 15. The Frankish count (*comes*), **Arbogast,** murdered Valentinian II at Vienne and set up as emperor the pagan rhetorician **Eugenius.**

394, Sept. 5. Theodosius defeated and slew Eugenius and Arbogast at the Frigidus, just east of Aquileia. The empire was reunited for a brief space.

395, Jan. 17. **Theodosius died** at Milan. The empire was divided between his elder son **Arcadius** (made Augustus in the east in 383) and the younger son **Honorius** (made Augustus in the west in 393) The division proved to be permanent, though at the time the unity of the empire was fully accepted in theory and was always envisaged as a practical possibility One consul regularly held office in Rome (until 472) and one in Constantinople (until 541)

395-408. ARCADIUS (b. 377), emperor of the east He married Eudoxia, daughter of the Frank, Bauto (395) The praetorian praefect, Rufinus, managed to check the inroads of the Visigoths in the Balkans until his murder by the troops, but thereafter the eunuch Eutropius failed to prevent the invasions of the Visigoths or of the Huns, who overran Asia.

395-423. HONORIUS (b 384), emperor of the west He fell wholly under the influence of the Vandal **Stilicho** who, as master of the troops (*magister militum*), commanded all the forces and married his daughter Maria to Honorius (398)

396-397. Stilicho drove the Visigoths, led by Alaric, out of Greece.

402, Apr. 6. He frustrated their efforts to invade Italy (victory of the Romans at **Pollentia**).

406, Aug. 23. Stilicho at Florence broke up a miscellaneous force of barbarians which Radagaisus had led into Italy

At about this time Gaul was overrun by Vandals, Alans, Suevi and Burgundians

407. EVACUATION OF BRITAIN by the Romans. Constantine, whom the troops in Britain had proclaimed emperor, crossed to Gaul with his forces and it is probable that Roman troops were never sent back The Romanized natives were left to deal as best they could with the inroads of Caledonians (Picts) from the north and of various German tribes coming by sea. The Saxons seem to have secured a permanent footing at the mouth of the Thames about 441.

408, Aug. 22. Murder of Stilicho, at Honorius' order.

408-450. THEODOSIUS II (b. 401), emperor of the east. He was the son of Arcadius and was a weak ruler dominated by his sister Pulcheria. With Valentinian III, Theodosius issued the earliest collection of existing laws, the **Theodosian Code** (438).

The Huns, under Attila, continued to ravage the empire and extort tribute.

409. Alaric again invaded Italy and set up a usurper, **Attalus** (praefect of Rome, the last pagan "emperor"). Alaric soon deposed him again.

410, Aug. 14 or 24. ALARIC SACKED ROME. He died soon after in southern Italy. His brother Athaulf led the Visigoths into Gaul (412) and thence began the conquest of Spain from the Vandals (415). There **Wallia** (416-419), successor of Athaulf, established the first recognized barbarian kingdom (419)

411. Constantine was defeated by Honorius' commander Constantius, near Arles

423-425. Johannes usurped the purple on the death of Honorius at Ravenna (which he had made the capital in place of Milan)

425. Forces sent from the east by Theodosius II captured Johannes and put him to death

425-454. VALENTINIAN III (b 419), emperor of the west He was the son of Honorius' half-sister Galla Placidia and the general Constantius, who had been made Augustus in 409, but had died almost at once Valentinian was recognized by Theodosius II and married his daughter Eudoxia (437).

429. The general **Bonifatius** tried to set himself up as independent in Africa, with the aid of the Vandals, who crossed from Spain under **Gaiseric** (*Genseric*) But the Vandals seized Africa for themselves after a two-year siege of Hippo Regius (430-431) during which the bishop, **St. Augustine,** died (430, Aug. 28).

430. Aetius, master of the troops, disposed of his rivals, Felix and Bonifatius (recalled from Africa in 432) He then devoted himself to clearing Gaul of barbarians, which he did by a resounding victory over the Visigoths (436) and by suppressing an uprising of the peasants and slaves (*Bagaudae*, 437).

435. The Vandal Kingdom in Africa was recognized The Vandals took Carthage in 439

450-457. MARCIAN, emperor of the east. Pulcheria, sister of Theodosius II (d 450), had married Marcian, an able general. He allowed the Ostrogoths (east Goths) to settle as military allies (*foederati*) in Pannonia

450. Attila, leader of the Huns, decided to bring his people from the east into Gaul.

451, June. Aetius, aided by the Visigothic king, Theodoric I (*Theoderich, Theoderid*), defeated the Huns in the **battle of Châlons** (actually the *campi Catalauni* or Mauriac plain, near Troyes).

452. Attila invaded Italy, but turned back, traditionally because warned by Pope Leo I, but probably because well paid. Attila died in 453 and his hordes broke up.

454, Sept. 21. Valentinian rewarded Aetius by murdering him with his own hand.

455, Mar. 16. Valentinian was murdered by two of Aetius' guards. End of the house of Theodosius.

455-472. A succession of puppet rulers in the west In 455 Eudoxia, widow of Valentinian, set up **Petronius Maximus** at Rome On his murder, in the same year, she called the Vandals from Africa

455, June 2-16. Gaiseric and the Vandals sacked Rome. By the thoroughness of their destruction they attached a permanent stigma to their name.

456. Avitus advanced from southern Gaul to Rome, but was deposed by his able general, the Suevian **Ricimer.** Ricimer retained power by securing the consent of the eastern emperors to his nominees, who were **Majorianus** (457–461), **Severus** (461–465), and after a two-year interregnum, **Anthemius** (467–472), and **Olybrius** (472) When in 472 both Ricimer and Olybrius died, the eastern emperor, Leo I, appointed **Glycerius** (473), and **Julius Nepos** (473–475)

457-474. **LEO I** (b ?), a Thracian (?), succeeded Marcian as emperor of the east. To offset his master of the troops, the Alan Aspar, he married his daughter Ariadne to Zeno, an Isaurian from the mountains of southern Asia Minor (467) and made Zeno's son, Leo, his colleague (473).

474. **Leo II,** who succeeded on the death of Leo I. His father, Zeno, made himself his colleague Leo died the same year

474-491. **ZENO** (b 426), disposed of the pretender Basiliscus, brother-in-law of Leo I (475) He then tried to control the Goths by setting the rival chiefs, Theodoric, son of Strabo, and Theodoric the Amal, against each other.

475. The master of the troops, **Orestes,** removed Nepos in favor of his own son, whose name combined those of the founder of Rome and of the Empire,

475-476. **ROMULUS AUGUSTUS** (nicknamed *Augustulus*).

476, Sept. 4. After defeating and killing Orestes at Pavia, the Herulian **Odovacar** (*Odoacer*) deposed Romulus Augustulus, the last emperor of the west, at Ravenna. Traditional end of the Roman Empire.

The eastern emperor, **Zeno,** apparently recognized Odovacar as "patrician" (*patricius* had become the title of honor for barbarian commanders). Nepos retained titular claim as emperor until his death in 480 and after that date the empire was theoretically reunited under the eastern emperors, but actually Odovacar ruled as an independent king in Italy

481. On the death of Theodoric, the son of Strabo, Zeno recognized his rival as patrician and master of the troops His people were established in Moesia as *foederati.*

488. Theodoric, ostensibly as Zeno's agent, invaded Italy.

493, Feb. 27. After a three-year siege of Ravenna, Odovacar surrendered He was soon after murdered by Theodoric. Italy was united under Theodoric the Great (b c. 455) as the kingdom of the Ostrogoths (p 145).

491-518. **ANASTASIUS I** (b. 431) emperor of the east He married Zeno's widow and removed the Isaurians from power, thus causing a serious revolt in Isauria (suppressed only in 497).

The inroads of the Slavic Getae forced him to protect Constantinople by a wall.

502-506. The emperor waged a long war with the Persians (p. 126).

514-518. Conflict with the pretender Vitalian, commander of the Bulgarian *foederati* Anastasius died in 518 (July 1).

518-527. **JUSTINUS I** (b 450?), a humble Illyrian who had risen to be commander of the imperial bodyguard. He took as his colleague his able nephew Justinian (527) and died the same year.

527-565. **JUSTINIAN.** (For his reign see Byzantine Empire, p 170)

Diocletian and his successors managed to delay, but not to stop the decay which had attacked the empire during the 3d century The administrative reforms added to the burdens of taxation without stopping the military domination and rivalry for the purple. The army became increasingly barbarized and immobilized by settlement on the land as peasant militia or barbarian *foederati.* The active defense was entrusted to barbarian mercenaries under their powerful chiefs, who came to dominate the state Thus, the empire in the west did not fall it petered out, and the establishment of the barbarian kingdoms simply recognized the end of a gradual process. In the east the empire, in Greek garb, maintained itself, at times as a very great and splendid power, until the conquest of Constantinople by the crusaders in 1204 and the definitive fall of the city into the hands of the Turks (1453).

In **architecture,** the later empire continued the able engineering of earlier days, as in the Baths of Diocletian at Rome, his

palace at Spalato, or the Basilica of Maxentius and Constantine at Rome But art showed a rapid decline, e g in the frieze of the Arch of Constantine at Rome

The second half of the 4th century witnessed a revival of pagan Latin literature in **Symmachus,** the praefect of the city who vainly urged Valentinian II to restore the altar of victory (384), the Gallic poet **Ausonius,** consul in 379, and the Alexandrian **Claudius,** court poet of Honorius and Stilicho **Boethius,** the last classical philosopher, whether he was pagan or Christian, wrote his *Consolation of Philosophy* in prison before his execution by Theodoric the Ostrogoth (524)

Active intellectual life, however, appeared chiefly in the Church The great Latin fathers were: **Lactantius** (d c 325), **Ambrose** (340–397), Bishop of Milan (374), **Jerome** (340–420), who retired from Rome to Bethlehem, where he translated the Bible into Latin (the *Vulgate*), and **Augustine** (354–430), Bishop of Hippo Regius in Africa (395), who founded Christian theology on Platonism The important Greek fathers were **Basil** of Caesarea (330–379), his brother **Gregory** of Nyssa (d c. 394), and **Gregory** of Nazianzus (329–389), all three Cappadocians, and **John Chrysostom** (329–389), Patriarch of Constantinople (381). **Eusebius** (264–340), orthodox Bishop of Caesarea (315), who should be distinguished from the contemporary Arian, Eusebius of Nicomedia, is noted for his *Ecclesiastical History* and other historical works.

During the 5th and 6th centuries the eastern Church was torn by the **monophysite heresy,** whose doctrine was that Christ had a single nature. The orthodox doctrine, that Christ combined divine and human, had the support of Pope Leo of Rome and was approved at the **Council of Chalcedon** (451), but the eastern emperors on the whole were monophysite In the west, as imperial authority weakened, and as rival bishoprics passed into barbarian hands, the Bishop of Rome — or **pope** (*papa*) as he came to be known — became supreme, and such great popes as **Damasus** (pope, 366–384) and **Leo I, "the Great"** (pope, 440–461) became temporal as well as spiritual leaders of their people A claim of territorial sovereignty began to be based on a fictitious **"Donation of Constantine"** to Pope Sylvester of the lands around Rome A significant missionary effort of the Church was the sending of **Ulfilas to the Goths** (c 340–348), who converted them to Arianism But the chief feature of the Church during this period was the introduction of **monasticism.** In the east, the single solitary had long been common and **St. Antony** first gathered some of them together for a common life (*coenobite*) in Egypt in about 285 **Basil of Caesarea** (above) established a monastic rule popular in the east Monasticism spread to the west under the efforts of **Martin of Tours** (362) and **Jerome** (above) **Cassian of Marseilles** (c 400) wrote *Institutes* for his monastery, but the rule which became dominant was that of **St. Benedict** (*regula Sancti Benedicti*), who founded his monastery at Monte Cassino, near Naples, in 529 His rule was adopted by Cassiodorus (480–575), secretary to Theodoric the Ostrogoth, who founded a monastery at Beneventum in 540. The closing of the schools at Athens by Justinian, the execution of Boethius, and the founding of Benedict's monastery mark the transition from classical to mediaeval intellectual life.

(*Cont. p.* 141)

G. THE EMPIRES OF ASIA

1. THE NEO-PERSIAN EMPIRE OF THE SASSANIANS (226-651 A.D.)

226-240 A.D. Ardashir I (*Artaxerxes, Artahshatr*), son of Papak, a vassal-king of the Parthian Empire ruling in Fars (Persia proper), revolted against Artabanus, last king of the Arsacid dynasty of Parthia, and defeated him finally at **Hormuz** (226–27), where Artabanus was slain.

Merv, Balkh, and Khiva conquered by Ardashir; submission of the kings of Kushan, Turan, and Makran received; India invaded and tribute levied on the Punjab

229-232. War with Rome (p 115). Rome summoned to evacuate Syria and the rest of Asia. Armenia, the real objective of Ardashir's campaign, subjugated after the murder of its Arsacid king, Chosroes.

Under Ardashir a strongly centralized nation supported by the priesthood created, Zoroastrianism revived and the privileges of the Magi restored; collection of the text of the *Zend Avesta* under Arda-Viraf. He was succeeded by

240-271. Shapur I (*Sapor, Shahpuhri*). Revolts in Armenia and Hatra crushed (240).

241-244. FIRST WAR WITH ROME (p 115). Shapur invaded Mesopotamia and Syria, took Nisibis and Antioch, but was finally driven back across the Euphrates and defeated at Resaina by the Emperor Gordian. Gordian was murdered and peace was concluded by his successor, Philip. In the east, Balkh apparently independent.

258-260. SECOND WAR WITH ROME (p. 116) Shapur again invaded Mesopotamia and Syria, taking Nisibis, Edessa, and Antioch, and defeating and capturing near Edessa the Emperor Valerian, who remained a captive until his death (265–66) Asia Minor also invaded, Caesarea Mazaca in Cappadocia taken, but no attempt made to consolidate and hold the conquered territory

260-263. Palmyra. In a brilliant campaign **Odenathus,** the Arab prince of Palmyra, drove the Persians back across the Euphrates, defeated Shapur and besieged Ctesiphon, seized and occupied Mesopotamia, Syria, and other provinces west of the Euphrates, and was recognized by Gallienus as co-regent for the east

Shapur's later years were devoted to public works, of which the greatest was the dam at Shuster He also founded many cities, among them Nishapur In his reign appeared Mani (215–273), founder of **Manichaeism,** whom Shapur at first favoured, then banished

271-293. Shapur was succeeded by his son, **Hormisdas I** (271–272), who was followed by his brother, **Varahran I** (272–275) Mani executed Insufficient support given to **Zenobia of Palmyra** (p 116), the widow of Odenathus, against Aurelian, whose Persian expedition came to an end with his murder (275) Varahran succeeded by his son, **Varahran II** (275–282) An eastern campaign, in which the Sakae of Sistan were subdued, was brought to a close by a Roman invasion of Persia under the Emperor Carus, who conquered Mesopotamia and took Ctesiphon (283). The mysterious death of Carus ended the war (284) Armenia seized by Tiridates, the son of the murdered Chosroes, with the help of the Emperor Diocletian (286). **Varahran III,** son of Varahran II, reigned four months, and was succeeded by his brother,

293-301. Narses, who finally worsted his brother and rival, Hormisdas, and drove Tiridates from Armenia (296)

296-297. WAR WITH ROME (p 118). The Roman army under Galerius routed near **Carrhae** (296). The Persian army surprised by Galerius in the following year and almost annihilated. Peace concluded (297) Terms 1 Cession to Rome of the five provinces west of the Tigris 2 The Tigris to be the boundary instead of the Euphrates. 3 Cession to Armenia of Median territory up to the fort of Zentha 4. Iberia (*Georgia*) to be a Roman protectorate

Abdication of Narses and accession of his son, **Hormisdas II** (301–309), noted for his activity in building and for setting up a court of justice at which the poor were encouraged to make complaint against the oppression of the rich. Upon his death his

natural heir, Hormisdas, was set aside by the nobles, who elected his posthumous son, the famous

309-379. SHAPUR II.

309-337. His minority and early campaigns. Persia invaded by the Arabs of Bahrain and Mesopotamia; Ctesiphon sacked At the age of seventeen Shapur grasped the reins of state, adopted an active policy, invaded Arabia and exacted a terrible revenge upon the Arabs

337-350. FIRST WAR WITH ROME (p 120). The Romans were defeated in the field, but Shapur was unable to capture the Roman strongholds. Nisibis invested three times in vain (338, 346, 350) Constantius routed at Singara (348). Persecution of the Persian Christians (from 339 on) **Treaty with Armenia** (341), but in 351 Armenia went over to Rome. Successful campaigns in the east against the Huns, Euseni, and Gilani (350–357).

359-361. SECOND WAR WITH ROME. Syria invaded, Amida taken after a heroic defense (359). Singara and Bezabde captured (360). Constantius attempted in vain to recapture the latter place, and died in the following year. His successor, Julian, invaded Persia, forced the passage of the Tigris, defeated the Persians north of Ctesiphon, but retreated before investing that city and was mortally wounded in a battle near Samarra (363) His successor, Jovian, concluded peace with Shapur for thirty years. Terms (1) restoration of the five provinces ceded by Narses, (2) surrender of Nisibis, Singara, and a third fortress in eastern Mesopotamia to Persia, (3) Armenia declared to be outside the Roman sphere of influence Conquest of Armenia by Shapur and invasion of Iberia

371-376. THIRD WAR WITH ROME. No decisive results and an obscure peace Persian power at its zenith at the death of Shapur II. His immediate successors weak and unenterprising. **Ardeshir II** (379–383) and **Shapur III** (383–388) Shapur concluded a peace with Rome (384) by the terms of which Armenia was partitioned between Rome and Persia. **Varahran IV** (388–399) Khusru (*Chosroes*), the satrap of Persian Armenia, who had revolted, was deposed and succeeded by Varahran's brother. Varahran was killed in a mutiny and succeeded by his son,

399-420. Yezdigird the Wicked. A peaceful reign. A firman issued permitting Christians to worship openly and rebuild their churches (409), a decree as important to the eastern church as the **Edict of Milan** to the church of the west The **Council of Seleucia** adopted the decrees and the creed of the **Council of Nicaea.** Yezdigird possibly contemplated baptism and persecuted the Magians, but returning to his old faith he authorized the destruction of the Christian sect A terrible persecution for four years. Yezdigird succeeded by his son,

420-440. Varahran V. Brought up among the desert Arabs who supported him against his cousin, Khusru, the choice of the nobles, who finally accepted him peacefully He continued persecution of the Christians and declared war on Rome (420), when the Christians crossed the border seeking Rome's protection. Varahran was defeated and peace concluded (422). Christians to be allowed to take refuge in the Roman Empire, persecution of the Christians to cease Declaration of the independence of the eastern church at the **Council of Dad-Ishu** (424). Persian Armenia reduced to a satrapy (428). Campaign of Varahran against the White Huns or Ephthalites (*Haytal*), of Turkish stock probably, in Transoxania They invaded Persia, but were surprised and defeated by Varahran, who crossed the Oxus and forced them to sue for peace Varahran succeeded by his son,

440-457. Yezdigird II. War declared upon Rome and peace concluded the same year (440) Successful campaigns against the Ephthalites of Transoxania (443–451). Armenia forcibly converted to Zoroastrianism (455–456), after the defeat of the Christian party at the hands of the Persians and their Armenian supporters. Persecution of Christians spread to Mesopotamia Khorsan again invaded by the Ephthalites, who inflicted a severe defeat upon Yezdigird, after he had driven them across the Oxus At his death his younger son, Hormisdas, seized the throne, but the elder son,

459-483. Firuz (*Perozes*), defeated and captured Hormisdas with the aid of the Ephthalites. A famine of several years; wise measures adopted by Firuz. Unsuccessful campaigns against the Ephthalites ending in a humiliating peace (464–480?) A further defeat at the hands of the Kushans of the maritime provinces of the Caspian Sea (481) led to the revolt of Iberia and of Armenia under Vahan (481–483). This was still smouldering when Firuz, breaking his troth, attacked the Ephthalites, was defeated and slain. Succeeded by

483-485. Volagases (*Balas*), his brother. Tribute paid by Persia to Khush-Newaz, the Ephthalite Khan, for about two years. Conciliation of Armenia. **Edict of toleration** granted Christians, after Vahan

aided Volagases in a civil war Thereupon Armenia and Iberia contented provinces of the empire Nestorian Christological doctrine of the two natures in Christ established by **Bar-Soma** in the Persian Church with royal authority, the college of Edessa driven out by Zeno and set up at Nisibis by Bar-Soma (489) Repudiation by Armenia of the **Council of Chalcedon** (491). Volagases succeeded by his son,

485-498. Kobad (first reign), who had taken refuge with the Ephthalites after an abortive attempt to seize the throne Successful campaign against the Khazars, dwelling between the Volga and the Don Many converts gained for his communistic and ascetic doctrines by **Mazdak**, a high priest of Zoroastrianism, among them the king Unrest in Armenia and Persia owing to the intolerant proselytism of the Mazdakites, leading to a conspiracy of the Chief Mobed, nobles, and army against Kobad, who was deposed and succeeded by his brother **Zamasp**, who reigned from 498 to 501 Kobad escaped to the Ephthalites, who espoused his cause with vigor Zamasp resigned the crown voluntarily

501-531. Kobad (second reign) Official support withdrawn from Mazdak

503-505. FIRST WAR WITH ROME Cause non-fulfillment of the Eastern Empire's agreement to pay a share of the expenses of the defense of the pass of Derbend, the usual route taken by nomadic tribes in their invasions of Persia and the Eastern Empire. Roman Armenia invaded, Theodosiopolis taken, sack of Amida in northern Mesopotamia (502) An Ephthalite raid forced Kobad to conclude peace on the basis of the *status quo ante*

503-523. Successful and final campaign against the Ephthalites (503–513) Massacre of the Mazdakites (523) Rebellion in Iberia

524-531. SECOND WAR WITH ROME. Cause: Erection of the fortress of Daras within a day's march of Nisibis by the Emperor Anastasius The first campaign ended in the defeat of the Romans (526), who were again defeated in 528, but were finally victorious in the **battle of Daras** (528) under Belisarius. An indecisive battle near Callinicum brought the war to a close. Kobad was succeeded by

531-579. ANUSHIRWAN THE JUST (*Chosroes*), his son The most illustrious member of the Sassanian dynasty Succession disputed. Execution of all his brothers and their male offspring with one exception. Massacre of Mazdak and his followers Conclusion of the **Endless Peace with Rome** (533). Terms. (1) Rome to pay 11,000 pounds of gold toward the upkeep of the Caucasian defenses (2) Rome to keep Daras as a fortress, but not as its headquarters in Mesopotamia; (3) restoration on both sides of captured strongholds in Lazica, (4) eternal friendship and alliance. Within seven years, however, Anushirwan, alarmed at Justinian's successes in Africa and Italy (533–539) and prompted by the Ostrogoths and Armenians, began a defensive war.

540-562. WAR WITH ROME. Syria invaded Antioch sacked. Terms of peace agreed upon and ratification of the treaty received by Anushirwan at Edessa He nevertheless extracted ransoms from the cities along the route of his return march, whereupon Justinian denounced the treaty.

540-557. Campaigns in Lazica. Lazica (ancient *Colchis*), a Roman protectorate since 527, appealed to Anushirwan for help to throw off the Roman yoke Petra taken by the Persians (540) Lazica a Persian province Petra retaken by the Romans (550), and the Persians driven out of the country (555) A truce agreed upon (557) **Definitive peace with Rome** (562) The terms included (1) cession of Lazica to Rome; (2) payment by Rome of 30,000 pieces of gold annually; (3) free exercise of their religion guaranteed to the Christians of Persia, (4) commercial intercourse restricted to certain roads and marts, (5) Daras to remain a fortified town, (6) arbitration of all disputes and free diplomatic intercourse, (7) inclusion in the treaty of the allies of either party; (8) the defense of the Caspian gate to be undertaken by Persia alone, (9) the peace to hold for fifty years.

554. Subjugation of the Ephthalites with the aid of the Turks and the division of their territory with the Oxus as boundary Successful campaign against the Khazars.

572. Declaration of war on Persia by Justin. Syria ravaged by Anushirwan and Daras taken (573). Abdication of Justin A peace purchased by Tiberius.

576?. Arabian campaign. The Abyssinians driven out of southern Arabia, which became a Persian province

576-578. Alliance of the Turks with the Eastern Empire Ill-success of their invasion of Persia. Armenian campaigns An Indian campaign also reported

Under Anushirwan the administration was reorganized The empire was divided into four great satrapies the east comprising Khorasan and Kerman; the west including Iraq and Mesopotamia; the north

comprehending Armenia and Azerbaijan; and the south containing Fars and Khuzistan A fixed land tax was also substituted for the former variable tax on produce, and its collection placed under the supervision of the priests Irrigation and communications were improved, the army reformed, foreigners protected, agriculture encouraged, laws revised, the Christians granted toleration, learning subsidized, Indian tales and chess introduced Anushirwan was succeeded by his son,

579-589. Hormisdas IV (*Hormazd*). War with Rome continued The Persians were defeated at Constantia (581) and again at Arzanene near Martyropolis (588) In 589 the Persians took Martyropolis and defeated the Romans, who, however, gained a signal victory near Nisibis soon thereafter

589. Invasion of Persia by Arabs, Khazars, and Turks The advance of the Turks constituted a real danger, but they were defeated by the great Persian general, Varahran (*Bahram*) **Bahram** was then ordered to invade Lazica, but was met and defeated by the Romans on the Araxes Superseded and insulted by the king, he rebelled. Hormisdas was deposed, and murdered, and succeeded by his son,

589-628. KHUSRU PARVIZ (*Chosroes II*), the last famous king of the Sassanian dynasty. Under him the Neo-Persian Empire reached its greatest extent and suffered also a sudden downfall Defied by Bahram, Khusru was forced to flee to Constantinople, whereupon Bahram seized the throne and reigned as Bahram (*Varahran*) VI (590–591) Restoration of Khusru with the aid of the Emperor Maurice Flight of Bahram to the Turks, by whom he was assassinated

603-610. A victorious war against Phocas, the murderer of Maurice. Capture of Daras, Amida, Harran, Edessa, Hieropolis, Berhoea (Aleppo), etc Armenia, Cappadocia, Phrygia, Galatia, and Bithynia ravaged.

610. A Persian force defeated by the Arabs at Dhu-Qar, a famous day in the annals of the tribes

610-620. Accession of Heraclius as Roman emperor. War with Rome continued. Sack of Antioch and Apamea (611) by the Persians Invasion of Cappadocia (612). Capture of Damascus (614). Sack of Jerusalem and capture of the *True Cross* (615) Capture of Pelusium and Alexandria by Shahr-Baraz Subjugation of Egypt (616). Chalcedon taken The Persians within a mile of Constantinople (617). Ancyra and Rhodes captured (620) Khusru had now restored the empire of Darius I, and the condition of the Roman Empire was desperate. Thrace was overrun by the Avars Heraclius decided to flee to Carthage, but was prevented by the citizens of Constantinople He determined as a forlorn hope to make use of his one great advantage, the possession of sea power, and carry the war to enemy territory.

622-627. The famous campaigns of Heraclius. Disembarkment at Issus and defeat of Shahr-Baraz (622) Expedition to Lazica and invasion of Armenia (623). Retreat of Khusru and wintering of Heraclius in Albania The second invasion of Armenia Surprise and defeat of Shahr-Baraz (624). Invasion of Arzanene and the recovery of Amida and Martyropolis. Campaign in Cilicia. Indecisive **battle of the Sarus.** Retreat of Shahr-Baraz (625).

626. THE SIEGE OF CONSTANTINOPLE. Alliance between Khusru and the Avars. Two Persian armies placed in the field, one against Heraclius in Asia Minor, the other to co-operate with the Avars in the siege of Constantinople The first under Shahen, the captor of Chalcedon, was defeated by the emperor's brother, Theodore The second was prevented by the Roman command of the sea from assisting the Avar assault on Constantinople, which failed

627. Invasion of Assyria and Mesopotamia by Heraclius. Defeat of the Persians near Nineveh Flight of Khusru Heraclius marched on Ctesiphon, but did not besiege it. His retreat to Canzaca Mutiny of the Persian troops in Ctesiphon under Gurdanaspa, their commander Imprisonment and murder of Khusru, he was succeeded by

628-629. Kobad II (*Siroes*), who made peace with Heraclius on the basis of an exchange of conquests and prisoners and the surrender of the "True Cross" The massacre of his brothers and his death by plague (629) The usurpation of Shahr-Baraz and his murder by his own troops (629) The reign of **Purandukht** and that of **Azarmidukht,** daughters of Khusru Parviz, followed by a period of anarchy, in which pretender after pretender aspired to the throne and perished almost immediately (629–634).

634-642. Yezdigird III, grandson of Khusru Parviz, and last Sassanian king of Persia, whose story is that of the expansion of the Muslim Caliphate eastwards.

633-651. Arab invasion of Iraq under Khalid ibn al-Walid Hira and Obolla taken The Arab advance checked temporarily at the **Battle of the Bridge.** The

Persians under Rustam were decisively defeated by the Arabs under Sa'd ibn-abi-Waqqās at **Qadisiya** (637) Mesopotamia invaded by Sa'd and Ctesiphon (*Madain*) captured Defeat of the Persians at Jalula (637). Invasion of Susiana and Fars (639) Defeat of the Persians at Ram Hormuz, Shuster taken; conquest of Khuzistan (640). Final defeat of the Persians under Firuzan at **Nehawand** (642) Conquest of the Persian provinces and their incorporation into the caliphate Flight of Yezdigird to Balkh; his appeal for help to the Emperor of China, his murder in a miller's hut near Merv (651).

2. INDIA, TO 500 A.D.

a. NORTHERN INDIA

1st cent. B.C. Dating of the known Saka rulers, the "**Great King Moga**" or Maues, Azes, and Azilises, raises a complex chronological problem affecting the whole epoch from 100 B C to 200 A D. It springs from multiplicity of eras, which are hardly ever explicitly identified. The sequence of rulers has been well established by E J. Rapson, with the aid of numismatic evidence. Moga appears to date an inscription at Taxila ("78" = c. 72 B C) with reference to a Scythian era of c 150 B C. Azes seems to have begun a new era, for "136 ayasa" (= AZOY) is identified (although disputed) in the Chir Tope, Taxila. There is no positive evidence that either the "Vikrama" era of 58 B.C or the Saka era of 78 A D originated or was ever used in the Northwest A Jain text prior to 1428 A.D purports to explain their origin in Ujjain, but no certain examples of their use are found until 372 A D. and 578 A D. respectively. Accession of Azes, however, presumably took place not far from 58 B C. which may be employed as a working hypothesis.

The Pahlavas (Parthians closely related to the Scythians) under Vonones and his brother Spalirises became independent in eastern Iran with the title of King of Kings sometime (c 30?) B.C) after the death of Mithradates II (88 B C., supposed by L. de la Vallée Poussin to begin a Pahlava era, or does such an era begin with appropriation of the imperial title?). **Azes II,** son of Spalirises, succeeded the Sakas in the Punjab. The period of these events depends on the era intended in the Takht-i-Bahi inscription in the 26th year of his successor Gondopharnes, dated "103" He ruled 19–45 + A D. if the era is that of Azes-Vikrama; c. 11 B C–c. 15+ A D. if it is that of c 88 B C. To him St Thomas was sent according to a legend current by 250. Pacores was the last to rule as suzerain, although others probably continued as satraps.

The Kushana **Kujula Kadphises** forcibly united the five tribes of Yueh-chih in Bactria (end 1st cent B.C) and seized from the Pahlavas the Kabul Valley and adjacent regions His son **Vima Kadphises** conquered northwestern India and ruled it by deputy till his death at 80. An inscription near Panjtar speaks of a "Gushana Great King" under date "122" which is 64 or 34 A D by the Azes or Pahlava systems The inscription of "136" similarly belongs to 78 or 48 A.D.

c. 78-176 + A.D. A second Kushana dynasty was founded by

c. 78-96 + A.D. KANISHKA, who extended his rule from Benares and Kabul to the Vindhyas, and established his capital at Peshawar. His inscriptions are dated from "3" to "18," and that of "9" is explicitly dated as of his reign Whether or not the era which he founded is the "Saka" era of 78 A.D., he probably came to the throne near that date. The Chinese *Later Han History* says

84. A Yueh-chih king was allied to Sogdiana by marriage, and by presents to him Pan Ch'ao secured the help of the latter against Kashgar.

88. The king presented precious stones and lions with a request for a Chinese princess, peremptorily refused by Pan Ch'ao.

90. A punitive army of 70,000 sent across the Pamirs under the Yueh-chih viceroy Hsieh was starved into surrender by Pan, the ablest strategist of his time, who exacted payment of annual tribute. Although the king is not named, only a powerful ruler could have played so strong a hand across the mountains Some scholars identify Kanishka rather with King Chien of Khotan, who was killed in error by a Chinese envoy in 152 A.D. The Chinese source does not, however, suggest any connection of this king with the Yueh-chih or with India.

Kanishka appears to have been tolerant in religion, and built a great stupa at Peshawar over relics of the Buddha. A fourth church council, unknown to the Pali sources, was apparently convoked at Jalandhara in the Punjab by the powerful Sarvastivadin, a realist sect of the conservative Sthaviravadin It probably supervised

translation into Sanskrit of the canon which had been fixed in Prakrit in Mathura, the Punjab, and Kashmir in the last centuries B C The four Sanskrit *Agamas* agree with the earliest Pali *Nikayas*, but the seven *Abhidharma* books contain catechism, comment, and doctrine peculiar to the school. The *Vibhasha* commentary on one of the *Abhidharmas*, completed by Kashmir professors after the death of Kanishka, cites conflicting doctrines of diverse sects

The earliest and most vigorous classical Sanskrit is found in Asvaghosha's *Saundarananda* ("Conversion of Nanda") and the *Buddhacharita*, an artistic versified life of the Buddha, together with a work long supposed to be his *Sutralamkara*, which is now identified as the *Kalpanamanditika* of Kumaralata, a junior contemporary

2d cent. A.D. Kanishka's successors with their inscriptions (dated in terms of his reign) are his son Vasishka (24, 28, 29); the latter's son Kanishka II (41); his younger brother Huvishka (29 or 33–60), Vasushka, son of Kanishka II (68, 74); and Vasudeva (76–98).

Asoka's inscriptions name three **Tamil states** in the Carnatic: Pandya (extreme south), Chola (southeast), and Chera or Kerala (southwest coast, chief port Muziris) These competed with Maesolia at the mouth of the Kistna and especially with the rich western port of Barygaza (Broach) in thriving trade with the Roman Empire An embassy to Augustus (c. 22 B C) was sent by a king "Pandion" who may have been a Pandya Strabo (d. 21 A D) speaks of fleets of 120 ships from Egypt to India, and Pliny (23–79) values annual imports from India at 50 million sesterces.

THE DECCAN was dominated (from c 100 B.C. to c. 225 A D) by a dynasty of Dravidian or **Munda kings**, called *Andhra* by the late *Puranas* but *Satavahana* or *Satakani* in their own Prakrit inscriptions. Founded by Simuka on the ruins of the Sunga-Kanva power, with capital at Pratishthana (Paithan) on the upper Godaveri, its early conquests to north and northwest were appropriated by the Saka satraps. A Saka satrap **Bhumaka** established Scythian power on the northwest coast (c. 70 A.D) Nahapana, junior to him, ruled many years over Surashtra (Kathiawar) and the adjacent coast with capital probably at Junnar, east of Bombay. Named Mambanos in the *Periplus* (c 89), his inscriptions are dated "41–46" (?119–124 A D), probably with reference to the Saka era of 78 which he may have founded.

c. 109-132+. Gotamiputa Siri Satakani conquered Surashtra from Nahapana, and in an inscription at Nasik (18th year of his reign, c. 126) claimed not only the Deccan from the Vindhyas to Banavasi, but less probably Malwa as well. Very likely by this epoch the Satakani had extended control over the properly Andhra Telugu (Dravidian) lands of the Godaveri and Kistna deltas. The Prakrit poems of the *Sattasai* "Seven Centuries" in part date from this time Liberal towards all religions, the Satakani especially exalted the Brahmans Sculptures about the great Buddhist stupa of Amaravati on the lower Kistna reveal union of Hindu traditional style with its crowding and naturalism, already more refined than at Bharhut and Sañchi, with Greco-Buddhist motifs which were borrowed from Gandhara and in turn transmitted to Malaya, Sumatra-Java, Cambodia, and Champa

c. 120-c. 395. A DYNASTY OF WESTERN SATRAPS of Ujjain in Malwa was founded by Bhumaka's son Chashtana (Tiastanes of Ptolemy, c. 150).

c. 170. Rudradaman, Chashtana's grandson, in a Sanskrit inscription at Girnar in Kathiawar, records repair of a dam which broke in 150 A D, defeat of northern tribesmen, and repeated rout of the southern Satakani.

Ujjain became a center of Sanskrit learning, and was taken as meridian by Indian astronomers At Mathura, where sculpture early resembled that of Bharhut and Sañchi, and later clumsily imitated the forms of Gandhara, the heavy drapery of the Hellenistic school was rendered transparent, and schematized in decorative ridges, creating the so-called *Udayana Buddha*, carried to China and Japan.

The Buddhist community was now divided between two means to salvation· the **Hinayana** or *Lesser Vehicle*, which retained much of the primitive simplicity of the "Law" *Dharma*, by which "Buddhism" was then named, and the **Mahayana** or *Great Vehicle*, which emphasized personal devotion to Sakyamuni and to a pantheon strange to him. Although practically deified in the *Lalitavistara* (2d cent.?, Chinese trans 308) and *Saddharma-pundarika-sutra*, "Lotus of the Good Law" (Ch trans , 265–316), he is regarded as but the human representative (*manushi-buddha*), for the current epoch, of an infinite series of buddhas Some of these, identified as *dhyani-buddhas*, dwell permanently in various heavens as spiritual guides to more active colleagues Amitabha, says the longer *Sukhavativyuha* (Ch. trans. by a Yueh-chih before 186), is the Buddha of Boundless Light who reigns in a western paradise

(Iranian influence) Maitreya, who is destined to complete human salvation as next manushi-buddha, waits in Tushita heaven as a *bodhisattva*, a being capable of enlightenment (Chinese trans 265–316). No less popular bodhisattvas are Avalokitesvara (*Lotus Sutra*, ch 24), Manjusri (*Avatamsaka-sutra*, 2d–3d cent, Chinese trans 317–420), Samantabhadra, and Kshitigarbha, all of whom have deferred their own illumination to succor struggling mankind The goal of effort is no longer sainthood or final absorption in nirvana, but direct attainment of buddhahood or rebirth to indefinite residence in a celestial paradise Nagarjuna (2d cent.), founder of the Madhyamika school, in his *Madhyamika Sutra* teaches that all sensory and mental experience is illusion, and comments on the *Prajñaparamita*, "*Perfect Wisdom*" (Chinese trans 160) which consists in recognition of the Buddhist law as sole reality.

Already before our era Indian writers recognized and wrote treatises about three phases of human existence *dharma*, religious and moral duty, *artha*, politics and practical life, and *kama*, love The *Arthasastra* (compounded from earlier materials c. 300–330) aims to teach a prince the whole science of successful rule according to accepted principles It assumes autocratic monarchy, justification of all means by the end (personal aggrandisement), and chronic war. It advocates use of spies in all quarters; deception, intimidation, false witness, and confiscation to obtain money; cunning and assassination. Virtuous rule is described because desirable to win affection of a conquered people The *Kama-sutra* ("Laws of Love") by Vatsyayana Mallanaga (c 4th cent or later) imitates the *Artha-sastra* in both form and morals

320-c. 535. THE GUPTA DYNASTY united northern India after five centuries' division.

320-c. 330. Chandragupta I ruled from Pataliputra (Patna), having strengthened his position by marriage into the ancient Lichchavi tribe His son

c. 330-c. 375. Samudragupta completed the conquest of the north (Aryavarta) and won glory by traversing Telugu lands to force homage of the Pallava. Claiming to receive tribute from southeastern Bengal, Assam, and Nepal, with presents from the Kushan "son of Heaven and king of kings" (now actually vassal of the Sassanids) in Kabul-Kapisa-Gandhara, the Satrap of Ujjain, and King Meghavanna (352–379) of Ceylon (who founded a monastery at Gaya for his subjects), he revived the Vedic horse-sacrifice which sanctified claim to the title of "universal monarch" He was a patron of poetry and music

c. 375-c. 413. Chandragupta II Vikramaditya (on throne in 379) ended the Satrapy of Ujjain by conquest of Malwa, Gujerat, and Surashtra (between 388 and 401) He moved his capital to Ayodhya (in Oudh) and then to Kausambi on the Jumna.

c. 413-455. Kumaragupta I probably founded the monastic community at Nalanda which was the principal Buddhist seminary till it burned c 988

455-c. 467. Skandagupta repulsed the White Huns, as heir apparent and as emperor (455)

477-496+. Budhagupta, last emperor of the dynasty, ruled from northern Bengal to eastern Malwa, perhaps to Surashtra After c. 500 the chief branch of his house ruled as kings of Magadha till the 8th century.

The **Brahman legal writers** defined the social structure in sloka metre The *Dharma Sastra* of **Manu** (1st cent B C?) was respected and freely utilized by later writers The *Dharma Sutra* of **Vishnu** (3d cent A D), like the epics, recognized *suttee*, widow-burning, though it is not yet recommended The days of the week were named from Greek sources **Yajnavalkya** (4th cent) admitted documentary evidence, and recommended use of ordeals of ploughshare, scales, and poison in addition to Manu's fire and water. **Narada** (5th cent) first omitted religious and moral precepts from legal discussion **Brihaspati** (c 600 or 700) cited nine ordeals. Punishments. impalement, hanging, burning, mutilation, fines and outcasting, were adjusted to caste. A plaintiff might enforce justice by fasting to death on a debtor's premises. Fa-hsien, pioneer Chinese Buddhist pilgrim at the height of Gupta power, stated that fines were usually imposed, and that mutilation was reserved for brigands and rebels. He was enthusiastic about the peace and happiness of northern India (401–409) and Ceylon (410–411).

Six **schools of Hindu philosophy** (or rationalized religion) developed during the first centuries before and after Christ They enjoy orthodox status in that all recognize the primordial and eternal character of the *Veda*, although in fact they do not derive from it. None is concerned primarily with ethics, but all seek freedom from bondage through deeds to rebirth. Escape for the soul is found in knowledge

and cessation of thought The Purvamimamsa is a systematization of rules for sacrifice. The *Vaiseshika-sutras* are variously dated from the 2d cent (Masson-Oursel) or 4th-5th cent (Stcherbatsky) They elaborate an analysis of matter as composed of atoms combined in molecules under influence of time and direction Souls are bound through linkage to such matter The Nyaya is a system of logic calculated to attain that knowledge necessary to freedom. The *Yoga-sutras* (5th cent ?) teach rigid concentration of mind and body, a method open to all and regarded as valuable by many diverse religious groups The *Samkhya-karika* is attributed to Isvarakrishna (3d or 4th cent ? Ch trans c. 560). It sets forth a dualistic system teaching that the eternal soul can be freed by realization that it is not material like the world about it The *Brahma Sutra* (c 350–400) gives the first clear expression of the Vedanta *darsana* or "point of view," developed continuously from the older *Upanishads* God is everything, the soul is God, and it is the task of the high-caste Brahman to realize in contemplation this identity.

Vasubandhu (c 300–350), leading philosopher of Hinayana Buddhism, in his *Abhidharmakosa sastra* gave a classic summary of the Vibhasha and of the Vaibhashika school based upon it, with illuminating comments on the competing Sautrantika school founded by Kumaralabdha (c 150–200) and developed by Harivarman Vasubandhu was converted to the Mahayana by his brother Asanga, founder of the Vijñanavadin (Idealist) or Yogachara (Mystic) school, which explains phenomena as mere reflections of ideas and exalts the bodhisattvas, in particular Maitreya The active translator to Chinese, **Kumarajiva** (c. 344–413), and the logician **Dignaga** (c. 5th cent) were both adherents of this school, which developed important branches at Valabhi and Nalanda (6th–7th cent.). Fahsien first reported Mahayanist monasteries separate from those of the Hinayana

Literary studies at Ujjain blossomed under the Guptas into the **golden age of classical Sanskrit. Arya Sura** in the *Jatakamala* (Ch. trans. 428) put into elegant *kavya* verse tales of former births of the Buddha which had been best known through the *Divyavadana* (Ch. trans in part, 265) Secular fables gathered into the *Panchatantra* passed through Pehlvi (531–570), Syriac (570), and Arabic (750) into the languages of Europe The *Sakuntala* and *Vikramorvasi* of **Kalidasa** (c. 400–455) rank first among Indian dramas (Greek influence), his *Meghaduta* equally high as a lyric poem, while his *Kumarasambhava*, and *Raghuvamsa* mark the apogee of *Kavya*, scholarly epic poetry. Literary taste survived the Gupta Empire witness **Sudraka's** drama, *Mrichchakatika* ("Little Clay Cart"), and **Dandin's** romance *Dasakumaracharita* (both 6th cent.) and **Santideva's** brilliant poem of Mahayanist altruism, *Bodhicharyavatara* (late 7th cent).

As in literature, so in **art** the Gupta period is one of dignity, restraint, and refinement. classicism in a land given to exaggeration. Neither the Dhamekh Stupa at Sarnath nor Buddhist sculpture copies the motifs of Gandhara, yet they have assimilated its spirit to chasten the exuberant naturalism of Sañchi and Amaravati. At Ajanta new caves were cut, both *chaitya* halls (nos. 19 and 26) and monasteries (nos 1 and 2) Many of these were decorated with troweled fresco paintings (still visible in caves 1, 2, and 17), which are impressive in scale, graphic facility, and sensitive naturalism, but marred by crowding and incoherence. Slightly later frescoes survive in caves at Bagh (s w Vindhyas), and at Sigiri, the rock fortress of parricide king Kassapa (526–552) of Ceylon

Indian medicine largely parallels the Greek, but was limited, and surgery atrophied, by objection to dissection An ethical code like the Hippocratic oath appears in works of Charaka and Susruta (prior to 4th cent , though present texts date from 8th and 11th) Greek origin is clear for many astronomical ideas in the (4th cent.?) treatises summarized in **Varahamihira's** *Pañchasiddhantika* (c 550). Zodiacal division of the ecliptic replaces the (Babylonian?) Nakshatras, planetary motion is explained by epicycles, parallax and eclipses are calculated, etc But many Indian inconsistencies suggest that Greek astronomy was known imperfectly, perhaps through rule-of-thumb manuals. **Aryabhata** (499) taught rotation of the earth and the value of π as 3 1416 (epic value 3 5). **Brahmagupta** (b 598) systematized the rules of astronomy, arithmetic, algebra, and geometry. His integral solution of an indeterminate equation, with another method given by **Bhaskara** in his *Siddhantasiromani* (1150) is called by Hankel the finest thing in numerical theory before Lagrange (1736–1813) The abacus was described in the *Abhidharmakosa* from first-century sources long before its use in China (1303–1383). More important, the zero (actually a superscribed dot) is attested in Indian literature (600), and the decimal position in a Sanskrit inscription in Cambodia (604) before they passed to the Arabs of Syria (662), and thence to the Europeans.

b. SOUTHERN INDIA

The whole Indian peninsula south of the Vindhyas, save for a part of Maharashtra (Nasik and Pratishthana) easily accessible from Malwa and already Aryanized before our era, was occupied by **Dravidians**: Canarese on the northwest, Telugu on the east, and Tamil in the Carnatic Jainism, brought to Sravana Belgola in Mysore under Chandragupta (end 4th cent B C), flourished in the Digambara, "naked clergy," form which the north rejected Buddhism with its stupas and sculpture was brought to Amaravati and Mysore under Asoka Sanskrit and Hindu culture were carried from the south to Cambodia about the opening of our era Sanskrit influence is clear in the early (pre-Christian?) Tamil grammar *Tolkappiyam*, and the *Kural* of Tiruvalluvar, lofty songs of a priest of pariahs (2d–3d cent A D) Brahman colonies with Hinduism and the caste system were at various periods imported from the Ganges Valley and endowed by local rulers, as was done also in Bengal.

The south, however, placed its own impress on what it received, and developed linga-worship, *bhakti* devotion to Vishnu and Siva, organization of Saiva monasteries and laymen, occasional violent religious intolerance, and municipal and corporate life with a sacrificial spirit of personal loyalty

c. 225. Breakup of the Satakani Empire led to establishment in Maharashtra near Nasik, of a

c. 250–c. 500. Traikutaka dynasty, probably founded by chiefs of the pastoral Abhira tribe, which used for dating an era of Aug 26, 249, possibly based on a usurpation of the throne of Ujjain. Another local dynasty,

c. 300–c. 500. The Vakatakas, extended their power from the fortress of Gawilgarh in northern Berar to Nagpur, Bundelkhand, and Kuntala, probably limiting Gupta expansion to the south At Ajanta caves 16 and probably 17 date from the reign of Harisena (c 475–500)

Farther south the **Chutu branch of the Satakani,** called *Andhrabhrityas* in the Puranas, ruled at Banavasi (c 200–c. 250) where they were succeeded by

c. 350–c 500. The Kadamba dynasty, founded by a Brahman rebel from the Pallava. His great-grandson **Kakutsthavarman** (c 435–475) married his daughters to a Gupta, a Vakataka (445), and a Ganga of Mysore

In the Telugu lands, the Andhras were succeeded by the **Ikshvaku dynasty** (3d cent), notable for donations to a Buddhist stupa on the Nagarjunikonda (hill), on the Kistna above Amaravati; by the

c. 300–450. Salankayana of Vengi; and by the

c. 400–611. Vishnukundins, a dynasty of at least ten kings at the same place

c. CEYLON

Ceylon traditionally received Buddhism from Asoka under

?247–?207 B.C. Devanampiya Tissa, who founded the Mahavihara or Great Monastery at his capital Anuradhapura The Pali *Tripitaka,* which reflects Theravadin tradition, was written under

89–40 or 29–?17 A.D Vattagamani, who founded the rival Abhayagiri Monastery. His epoch is supported by the geography (c. 90–200 A D) of the *Mahaniddesa,* a commentary admitted late to the Canon. Under

412–434. Mahanaman, Buddhaghosha of Magadha, author of the *Visuddhimagga* or "Way of Purity,"[2] recorded in Pali Singhalese traditions. (*Cont. p.* 330)

3. CHINA, TO 618 A.D.

221–207 B.C. THE CH'IN DYNASTY established by the self-styled *First Emperor* (**Shih Huang Ti,** b. 259; acceded 247, d. 210), advised by **Li Ssu.** Territorial reorganization into thirty-six *chün,* each under civil, military, and supervisory officials. Disarmament by melting down weapons. Standardization of law, weights and measures, and axle length to facilitate interstate commerce.

214. Earlier ramparts linked by convict labor to form the **Great Wall** against the Turkish Hsiung-nu or Huns. Strategic roads Wholesale transportation of families, especially criminals, to strengthen defenses and weaken particularism. Central South China conquered, from T'ai and Miao tribes, as far as the Southern Mountains and Canton, with the help of a new canal at Hsing-an, from present-day Hunan into Kwangsi

213. Proscription of books which had been employed by enemies of the new order. Exception made for all scientific works and for those in the hands of seventy official scholars. Introduction of roll silk

as writing material led to improvement of hair brush (attributed to Gen. Meng T'ien, d 209) and to standardization and simplification of script (attributed to Li Ssu) Old complex characters were quickly forgotten

206. Epic struggle of **Hsiang Yu** against **Liu Pang** (posthumous temple name (Han) Kao Tsu), who founded

202 B.C.-9 A.D. THE FORMER OR WESTERN HAN DYNASTY, with capital at Ch'ang-an Classic illustration of the typical Chinese dynastic pattern foundation by rude warrior and administrator, gradual weakening of ruling line, renaissance under a strong successor whose reign reveals cultural progress; further degeneration of dynasty, weakening of control over officials, oppression, revolts, dissolution In general the Han continued the Ch'in system of administration, gradually increasing the *chun* from 36 to 108

200. The emperor was surrounded for seven days by the Hsiung-nu, who had formed the first Turkish Empire in Mongolia during the preceding decade The gift of an imperial princess as consort (repeated in 173), with other presents, secured peace till 166

196. **Chao T'o** was recognized as king of southern Yueh (the modern Kwang provinces) which he had conquered for the Ch'in in 218–214 An expedition against him in 181 ended in disaster

191. Withdrawal of proscription of conservative literature permitted private scholars in the cultured East to begin its restoration and (equally vital) to transcribe it into modern characters

155-130. **Liu Teh**, Prince of Ho-chien, collected a library of archaic texts His cousin, Liu An, Prince of Huai-nan (d. 122), directed an inclusive compilation of early (especially Taoist) philosophy

140-87. **The reign of Wu Ti**, *The Martial Emperor*, was notable alike for foreign conquests and for the establishment of Confucian scholarship in control of civil administration

140. **Tung Chung-shu** advocated Confucian training for a civil service, and urged limitation of private holding of land and slaves to remedy undue concentration of wealth which resulted from commerce and mining on a national scale As result of his efforts the emperor appointed in

136. **Doctors of the Five Classics.** These were the *I* or Changes (an early divination manual); the *Shih* or Odes, the *Shu* or History (documents compiled in the 6th century); the *Ch'un Ch'iu* or Annals of Confucius; and the *Shih-li* (now *I-li*) or Rituals All were studied in terms of moralistic and ritual commentaries. The Han had followed the bad precedent of the Chou by granting fiefs to relatives and assistants, and found that direct efforts to weaken them resulted in revolt of seven princes (154)

127. **Chu-fu Yen** solved the problem by suggesting that younger sons should share by inheritance one-half of their father's fief. He thus also demonstrated the utility of the scholars

126. **Chang Ch'ien** returned empty-handed, but with new knowledge of Central Asia and India, from a mission (138) to secure help against the Hsiung-nu from the **Yueh-chih**, an Indo-European people who had been driven by the Hsiung-nu west from the Chinese border into Ili, and had thence invaded Hellenistic Bactria.

124. **Creation of a Grand College** to train officials for civil service through study of what was now fast becoming Confucian orthodoxy.

121-119. The Hsiung-nu were driven north of the Gobi by **Ho Ch'u-ping** (d 117, aged 22) They then split into northern and southern divisions (54).

111-110. **Subjugation of eastern Yueh** and southern Yueh (along the coast from modern Chekiang to Tonkin), and of the southwest These conquests rounded out the frontiers of modern "China proper," and gave the Chinese all the best lands in their known world During the next century Chinese officials traveled on the coasting vessels of local southern merchants at least as far as the Indian Ocean, exchanging gold and silk for glass and pearls.

110. **Wu Ti inaugurated the sacrifice to Heaven** which has since been the primary prerogative and obligation of imperial office.

108 **Conquest of Ch'ao Hsien**, a border kingdom of Korea.

102. **Conquest of the petty states of the Tarim Basin** and **Ferghana** (Ta Yuan) by Li Kuang-li and a large army. Indo-European languages were spoken throughout this region: Tokharian and Kuchean in the northern oases, Eastern Iranian or Shaka in those of the south, while Sogdian served as *lingua franca*

Imperial finances, drained by war, were

replenished by sale of military titles (123), monopolies of salt and iron (119), forced contributions by the nobility (112), and commutation by fines of judicial sentences (97) They were inflated by debasement of currency (119). The government, guided by Sang Hung-yang, entered the grain business (110), buying cheap and selling dear until exactions of greedy officials led to repeal under Chao Ti (86–73).

The *Shih Chi* or *Historical Memoirs*, first general history of China and a model for later dynastic histories, was compiled by **Ssu-ma Ch'ien** (d c 87) **Tai Teh** and **Tai Sheng** compiled standard repertories of early ritual texts, the *Ta Tai Li-chi* and *Li-chi* **Liu Hsiang** (79–8) prepared a series of reports on the contents of the imperial library. His son **Liu Hsin** (d 23 A D) digested these to form the first classified inventory of extant literature, and rescued from archaic script several important texts, notably the *Tso-chuan* (cf supra) and the *Chou-li* or Chou Ritual

1-8. A.D. **Wang Mang** served as regent for child-emperors

6. All candidates for office were required to take **civil-service examinations.** Tribute of a live rhinoceros was presented on request by the distant but unidentified southern state of Huang-chih

9-23. **WANG MANG** reigned as emperor of the **Hsin Dynasty**, and undertook radical reforms: nationalization of land with division of large estates and manumission of slaves had to be repealed (12), a tax on slaveholding was substituted in 17. To monopolies of salt, iron, and coinage was added one on wine, and other mining profits were taxed. Seven regional commissions were directed to establish annual high, low, and mean price levels for staple products, to buy surplus goods at cost; and to peg the market by sales above the seasonal index. To curb usury, loans were offered free up to 90 days for funerals, and at 3 per cent a month or 10 per cent a year for productive purposes Merchants and capitalists employed as administrators provoked revolts, in one of which Wang was killed.

25-220. **LATER OR EASTERN HAN DYNASTY,** founded by a collateral imperial scion, (Hou Han) Kuang Wu Ti (25–57), reigned at Loyang. **Buddhism** was introduced by missionaries from Central Asia, and later from India, probably about the time of Christ In 65 A.D. the presence of monks and lay believers at his brother's court was favorably mentioned in a decree by Emperor Ming (58–75). The story of official introduction following a dream of this emperor has been shown by Maspero to be a pious legend, completed in its main outlines by the end of the 2d century

43. **Ma Yüan** conquered Tonkin and Annam, much of which remained (except for brief revolts) under Chinese control until 939 A few natives adopted the Chinese classics, Confucianism, and Buddhism, but the masses retained their own language and customs Commercial relations through the southern seas were gradually extended. "Java" (perhaps then Sumatra) sent tribute early in 132, and traders from the Roman Empire reached Cattigara or Chiao-chih (now Tonkin) in 166 and 226 A newly organized Malay people, the Chams, occupied Quang-nam, the region of Tourane, c 192, but when they came farther north they were repelled (270, 360, and 446)

74-94. **Pan Ch'ao,** by personal diplomacy and strategy, brought into submission all the petty states of Turkestan, opening the way for extensive silk trade with the Roman Orient (**Ta Ch'in**). His lieutenant Kan Ying penetrated to the Persian Gulf (97). Even the Yueh-chih, who had recently founded the Kushana Kingdom in the Indian Punjab, sent tribute in 90. The northern Hsiung-nu, as a result of successive defeats by the southern Hsiung-nu (85), by the Mongol Sien-pi (87), and by the Chinese general Tou Hsien (89), in part submitted, in part migrated westward, leaving their lands to the Sien-pi, who in 101 in turn began raiding the frontier To the west the Ch'iang Tibetans disturbed the peace of modern Kansu for several decades until repulsed by Chao Chung, 141–144

After only two vigorous reigns the court was dominated by women, by their relatives, and by eunuchs by whom they were surrounded.

82. **Empress Tou** altered the succession, and, with her family, ruled as dowager (88–97)

105-121. **Empress Teng** ruled as dowager for her infant son and his boy successor till her death, when her most prominent relatives chose suicide.

124. A change in succession made by Empress Yen was violently reversed in the same year.

132. **Empress Liang** secured honors for her father, and ruled for three youthful emperors from 144 until her death in 150 A younger empress of the same family survived until 159.

159. **Emperor Huan** finally compassed the death of Liang Chi, brother of the elder empress

184. **Rebellion of the Yellow Turbans,** provoked by the rapacity of the eunuchs, against whose influence and ruthless murder of scholars opposed to them there had been vigorous protests in 135–136

189. Massacre of the eunuchs by Yuan Shao

190-220. **Emperor Hsien,** last of the Later Han dynasty, never really governed, the actual power having passed to competing military dictators

Insecurity of life and property contributed to the popularity of **religious Taoism,** a cult of mysticism and occultism which promised longevity or even immortality as a reward for support, faith and monastic austerity. Its founders, **Chang Ling** (according to tradition he ascended into heaven in 156 at the age of 123) and his son **Chang Heng,** claimed authority from Lao-tzu and philosophic Taoism, but followed the practices of alchemy, breath-control, and magic inherited from charlatans who had infested the courts of Ch'in Shih Huang Ti and Han Wu Ti Their successors slavishly imitated Buddhism by creation of a divine hierarchy, a voluminous textual canon, and a monastic community

Cultural tradition was maintained by **Pan Ku** (32–92), who compiled the dynastic *History of the Former Han,* his sister **Pan Chao,** whose *Lessons for Women* codified the standard of feminine morality, and **Hsu Shen,** who completed in 100 the first lexicon of archaic script, *Shuo wen chieh tzu* The rhymed and rhythmic prose-form *fu* was developed at this time. In 105 the eunuch **Ts'ai Lun** presented to court **paper** made of vegetable fibers bark, hemp, fish nets, and rags. Paper rolls now rapidly supplanted bamboo or wooden slips strung with cords, and the costly roll silk and silk floss paper. **Ma Jung** invented the device of double-column commentary (138–140) Six classics were first engraved on stone (175–183) to perpetuate the academic victory of the conservative school of commentators, who accepted only the earliest renderings into modern script Figure painting (portraits of 28 generals) and calligraphy (text for stone classics written by Ts'ai Yung) emerged as fine arts Mortuary chapel of Wu Liang decorated with stone flat reliefs (151).

220-264. **Three kingdoms divided the empire,** each claiming imperial status

220-264. **Wei dynasty** formally founded by Ts'ao P'ei, son of Ts'ao Ts'ao who had dominated the court since 196. Loyang remained the capital Eunuchs excluded from government Families of empresses excluded from future exercise of regency (222). Three classics cut in stone (240–248) to establish versions sponsored by the Archaic Text School, founded by Liu Hsin

221-264. **Shu or Shu-Han dynasty** founded in the west by Liu Pei (d 223), antagonist of Ts'ao Ts'ao since 194 Capital at Ch'eng-tu Chu-ko Liang chief minister 221–234 Rapid development of Szechuan

222-280. **Wu dynasty** founded by Sun Ch'uan in the lower Long River Valley with capital at Chien-K'ang (modern Nanking)

c. 245-250. **K'ang T'ai mission to Fu-nan,** Khmer state in southern Cambodia (first tribute 243), learned details of southern Asia from the envoy of the Indian king

265-317. Nominal reunion under weak **western Chin dynasty,** established by rebellion of Ssu-ma Yen against the Wei Institution of the censorate

317-589. **Southern and Northern dynasties** divided the empire Six dynasties (counting the eastern Wu) ruled at Chien-K'ang The later five are considered legitimate.

317-420. **Eastern Chin dynasty,**

420-479. **Former** (or Liu) **Sung dynasty,** so called from the eight emperors of the Liu family,

479-502. **Southern Ch'i dynasty,**

502-557. **Southern Liang dynasty,**

557-589. **Southern Ch'en dynasty.**

Meantime a series of barbarian dynasties was established in the north by invasion and infiltration of diverse peoples who avidly sought Chinese culture, followed Chinese precedents, and were rapidly absorbed

304-439. **Sixteen kingdoms** established along the northern marches by three Chinese and leaders of five northern peoples· three Turkish Hsiung-nu, five Mongol Sien-pi, three Ti, one Chieh, and one Tibetan Ch'iang

386-534. **Northern Wei dynasty,** founded at **Ta-t'ung** by the Toba Tatars who spoke a Mongol dialect strongly palatalized by contact with the Tungus. In 495 the capital was transferred to Loyang.

534-550. **The Eastern Wei dynasty** ruled at Ye (present Anyang) as did their successors,

550-577. **The Northern Ch'i.** Meanwhile at Ch'ang-an

535-556. **The Western Wei** were succeeded by

557-581. **The Northern Chou,** who overthrew the northern Ch'i in 577.

This long epoch of political division retarded cultural progress Pseudo-reconstruction of texts which had been added to the *Canon of History* by K'ung An-kuo in the 2d cent B.C, but lost in the 1st cent A D, was probably carried out c. 250, and was presented to the throne in 317–322 Thirteen texts, including the *Bamboo Annals,* were recovered (281) from a tomb which was closed in 299 B C Gen. **Wang Hsi-chih** (321–379) provided the classic models (cut in stone) for formal and cursive calligraphy **Ku K'ai-chih** (c 344–c 406) perfected the technical refinement of episodic figure-painting

Buddhism flourished in China already by the close of the Han. The splendor of the Buddhist pantheon and ritual, with its novel conceptions which embraced ten heavens, ten hells, re-birth, and salvation of individual souls of common men, proved irresistible Sutras were translated in terms borrowed from philosophic Taoism chiefly by Indian and Central Asiatic missionaries among whom the most prolific was **Kumarajiva** (c 344–413, to China 383), son of an Indian and of a princess of Kucha. Indian sectarian divergencies became reflected especially in versions of the monastic law (*vinaya*) Desire for direct intelligence of authoritative texts led at least 82 Chinese pilgrims to visit India during the period 200–600 (61 in the 5th cent alone). Fa-hsien blazed the desert trail across Central Asia and returned by sea (399–414), and Sung-yun followed the land route to and from Udyana and Gandhara (518–522) Most popular text of the 6th century was the *Parinirvanasutra,* which recounts the birth, illumination, first teaching, and death of the Buddha Unfavorable Confucian appraisal of Indian asceticism, parasitic practices (celibacy, monasticism, mendicancy), and unrestrained imaginative metaphysical literature, together with hostility of the competing Taoist priesthood, led to brief persecution by the Northern Wei (446) and by the Northern Chou (574)

The Northern Wei cut **cave temples** in the Yün-kang cliffs near Ta-t'ung and decorated them with Buddhist sculpture in imitation of the Caves of a Thousand Buddhas at Tunhuang, then the point of bifurcation of trade routes north and south of the Tarim basin. After 495 new caves were cut at Lung-men near Loyang. The various Buddhas, Bodhisattvas (future Buddhas), Lohan (Skt. Arhat or Saints), and militant guardians of the law reflect Indian iconography given form by Greek artisans in Gandhara, as well as Iranian influence

In Central Asia the Juan-juan or Avars founded the **first Mongol empire** throughout Mongolia (407–553) Revolt by the T'u-chueh in the Altai (551) led to establishment in imitation of it of a Turkish empire which shortly (572) split into eastern and western divisions The Western Turks assailed Sassanian Persia from the east, and by weakening it contributed to the triumph of Islam a few decades later

581-618. **The Sui dynasty** was founded at Ch'ang-an by Yang Chien (Wen Ti), chief minister (580) of the Chou

585 and 607-608. Reconstruction of the Great Wall (as in 543 by the Eastern Wei and in 556 by the Northern Ch'i), against the Eastern Turks of the Orkhon

589. **REUNION OF THE EMPIRE** by conquest of the southern Ch'en dynasty

Active patronage of Buddhism, the common religion of north and south, multiplied shrines and images Chinese Buddhists increasingly neglected the intangible goal of Indian theology, the eventual ending of the perpetual chain of sentient existences by nihilistic absorption into nirvana; and stressed more practical objectives immediate response to prayer by the protective Bodhisattva Kuan-yin (Avalokitesvara), direct rebirth into the Western Happy Heaven (Sukhavati) of O-mi-t'o (Amitabha), and salvation by the coming Buddha Mi-lo-fo (Maitreya) Early Chinese philosophic divergencies reappeared within Buddhist sectarian doctrine Taoist thought was reflected in the increasingly influential **Ch'an sect** which taught that the Buddha-nature is in every man, and that illumination is to be sought solely through meditation, to the exclusion of prayer, asceticism, and good works. Confucian reaction was evident in the emphasis by the **T'ien-t'ai school,** founded (575) in the mountains of Chekiang by Chih-i (531–597), upon education as necessary to realization of the Buddha-nature Strongly synthetic, approval was given to ecstasy, ceremonial, discipline, and to a variety of texts which were interpreted as corresponding to stages in the Buddha's teaching. Perfection was reached in the Lotus (*Saddharmapundarika*) Sutra, which thenceforth surpassed all others in popular favor.

602-605. **Liu Fang** suppressed rebellion in Annam, repelled the Chams, and sacked their capital Indrapura (near Tou-

rane). The Chams now paid tribute for a century and a half They controlled (until the 10th cent) the trade in spices for China, and in silk and porcelain for the Abbasids, which was largely in the hands of Persian merchants Probably before this time the Cambodian kingdom of Chen-la overthrew its suzerain Fu-nan, and now resumed tribute missions to China (616 or 617)

605-618. Yang Ti, a parricide (604), was ruined by extravagance at home and fruitless foreign wars.

605. The Grand Canal was formed by linking existing waterways from the sumptuous new capital at Loyang (604) to the Long River It was extended to Cho-chun (near modern Peking) by a million laborers in 608, and to Hangchou in 610.

606. The National College was enlarged, and the doctoral *chin-shih* degree first awarded The first Japanese embassy was received from the Empress Suiko

607. Appointment of P'ei Chu to command in the west led to defeat (608) of the Mongol T'u-yu-hun, who had entered the Koko-nor region in the early 4th century, and submission of minor kingdoms (609), but provoked the Eastern T'u-chueh, who invested the emperor in Yen-men (615).

610. The king of the Liu-ch'iu Islands (or Formosa?) was killed by Ch'en Leng.

611-614. Disastrous wars with Kao-li in the Liao Basin and Korea completed exhaustion of the empire and provoked

613-618. Domestic revolts which led to murder of Yang Ti.

618-907. The T'ang dynasty was founded

(*Cont p.* 339)

4. KOREA, TO 562 A.D.

Korea is a mountainous peninsula 100 to 150 miles wide and about 400 miles long extending southward from Manchuria towards the western tip of Japan. High mountains and the cold Japan Sea have retarded the development of the east coast, but the milder climate and more suitable terrain of the west coast facing China and the south coast opposite Japan have made these regions the natural centers of Korean history.

The people since prehistoric times seem to have been closely related racially, linguistically and culturally to the ancient peoples of Manchuria and Siberia as well as to the Japanese, but their post-neolithic civilization came largely from China

c. 300-200 B.C. A semi-Sinicized state called **Chosŏn** (Japanese. Chōsen) developed in the northwest, and other less civilized states appeared in the south and east.

108 B.C. Emperor Wu-ti of the Han dynasty of China conquered Chosŏn and established four prefectures covering central and western Korea and centering around Lo-lang near the modern P'yŏng-yang (Ch P'ing-jang, J. Heijo), where an extensive Chinese colony grew up.

c. 150 A.D. Koguryŏ, founded over 100 years earlier in Manchuria and northern Korea, and other states in the south and east asserted their independence of the Chinese colony.

c. 210. The Kung-sun family of southern Manchuria obtained control of Lo-lang and established Tai-fang to the south of it

c. 238. The Wei dynasty of China captured Lo-lang and Tai-fang by sea.

c. 250. Northern invaders established the state of **Paekche** in the southwest.

313. The last remnants of the Chinese colonies were extinguished by native states, and Chinese civilization was diffused throughout the peninsula by the dispersed Chinese colonists. This marked the beginning of

313-668. THE THREE KINGDOMS PERIOD. After the elimination of China, Korea remained for several centuries divided between Koguryŏ in the north, Paekche in the southwest and Silla, established probably in the second or third century, in the southeast.

c. 360-390. Period of greatest Japanese influence and activity in Korea through their foothold on the coast between Silla and Paekche.

372. Koguryŏ received Buddhism from China.

413-490. King Changsu brought Koguryŏ to the height of its power and

moved the capital from the banks of the Yalu River to P'yŏngyang (427)

528. Silla adopted Buddhism. The last of the Korean states to do so and culturally the most backward, Silla at this time began to make rapid progress and to expand at the expense of the Japanese sphere

554. Silla won an outlet on the East China Sea in central Korea, giving her easy sea communications with China

562. Silla destroyed Japan's sphere in Korea. (*Cont p* 348.)

5. JAPAN, TO 645 A.D.

GEOGRAPHY: Japan proper consists of a group of islands running eastward from the southern tip of the Korean peninsula for some 700 miles and then turning abruptly northward for about the same distance, approaching the Asiatic mainland once more off the coast of the Maritime Province of Siberia The cold Japan Sea enclosed by this island arc gives the inner side of the archipelago a cold damp climate, but because of the Japan Current the Pacific coast of southwestern Japan enjoys a warm temperate climate Consequently, here the main centers of civilization have developed. Four main islands account for most of the land area of Japan Hondō, the largest, extends for the greater part of the arc. The next largest, Hokkaidō or Ezo, lies to the north of Hondō. Kyūshū at the southwestern extremity and Shikoku east of it, together with the westernmost portion of Hondō, almost surround a long narrow strip of water known as the Inland Sea. Among the many lesser islands Tsushima and Iki are of most significance, for they lie in the straits between Korea and Japan.

The two most important areas of Japan are the group of small plains lying in Hondō at the eastern end of the Inland Sea and the great Kantō Plain around Tōkyō Bay in eastern Hondō. The Inland Sea, as an artery of communications, and northern and western Kyūshū, which face the Asiatic mainland, are also important regions.

The rivers are all short and shallow and are consequently of little significance. Mountains cover almost the entire area and are particularly high in central Hondō. Many of them are volcanic, and eruptions and earthquakes are frequent The climate is temperate throughout the land, and rain is abundant. Since antiquity rice has been the principal crop

ETHNOLOGY: The origin of the Japanese people is still in question. Archaeology and physical anthropology indicate a close connection with the Koreans and the Tungusic peoples of northeastern Asia. Linguistic evidence, though more hotly disputed, tends to support this However, ethnographical evidence and mythology suggest South Chinese, Malaysian or even Polynesian origin. Furthermore, the Ainu (also called Ezo and Emishi), possibly a proto-Caucasian people, originally inhabited the northeastern half of Japan and undoubtedly contributed to the racial composition of the Japanese One may conclude, therefore, that, though the early Japanese seem to have been primarily a Mongolian people, there was probably some admixture of blood from southeastern Asia and from the Ainu.

RELIGION: The primitive religion of Japan was a simple worship of the manifold manifestations of the powers of nature combined with a system of ritualistic observances, notable among which was an insistence on physical and ritual purity The deities tended to become anthropomorphic and to merge with memories of past heroes They were also affected by attempts to explain the origins of man and society in mythological terms This eventually resulted in an organized mythology centering around the sun-goddess (*Amaterasu*) and her descendants, the imperial family. After the introduction of Buddhism this combination of nature-worship, ritualistic observances and ancestor-honoring mythology was given the name of **Shintō** to distinguish it from the Indian religion

CIVILIZATION: Japan's earliest known civilization was a neolithic shell-mound culture, which before the Christian era gave way to a culture featured by sepulchral mounds over dolmens containing pottery and iron and bronze objects which show a predominantly north Asiatic influence Prehistoric Japanese civilization seems to have come from what is known linguistically as the Altaic region and seems early to have been influenced strongly by the much higher Chinese civilization.

HISTORY: The first authentic historical accounts of Japan occur in Chinese histories

of the 3d century A D , and picture western Japan, if not all of Japan, as divided among a great number of small political units, among which feminine rule was not uncommon Some of these petty states had direct relations with the Chinese colonies in Korea, and embassies from Japanese states to the Chinese capital are recorded from 57 to 266.

Japanese historical mythology commences with the accession of the first emperor, **Jimmu,** in 660 B C , a date arbitrarily chosen, probably over thirteen centuries later The mythology hints at the migration of the future imperial clan from Kyūshū up the Inland Sea to the plain of Yamato or Nara, and a successful contest for supremacy with another clan in Izumo on the Japan Sea The Izumo clan seems to have had a rather distinctive culture and to have had close relations with Korea During the first four centuries of the Christian era the imperial clan in Yamato seems gradually to have established its suzerainty over most of central and western Japan in a long series of wars with neighboring clans and with the Ainu in the east and the Kumaso in the west, a people apparently of alien and quite possibly of southern origin.

c. 230 A.D. With the accession of the tenth emperor, **Sujin,** Japanese records begin to contain some material of probable historical accuracy The victories of the half-legendary **Prince Yamatodake** over the Kumaso and the Ainu seem to reflect a period of rapid expansion in the early decades of the 4th century.

c. 360. The story of the **conquest of Korea** by the Empress Jingō, ruling in the name of her deceased husband and later in the name of her son, probably refers to Japanese campaigns in the peninsula. Korean records mention Japanese inroads during this century, and a Korean inscription of 391 proves that their armies were widely active in the peninsula at that time From this period probably dates the establishment of a Japanese protectorate over a group of miniature states in southern Korea known as *Kara* or *Imna* (J , *Mimana*), which had for long constituted a Japanese sphere of influence, and at the same time a semi-protectorate over Paekche, a larger state in southwestern Korea. Japan in the 5th century claimed suzerainty over all of Korea, but in reality her power was on the wane even in the south, as Silla, a vigorous kingdom in the southeast, gradually rose to supremacy The chief significance of the Korean contacts was that Japan through them was able to imbibe deeply of Chinese civilization and was able to open the way once more for direct relations with China, which was accomplished in 413

About the end of the 4th century or early in the 5th scribes able to read and write Chinese are said to have come from Korea This implies the official **adoption of Chinese writing,** but not the first knowledge of it in Japan Writing spread slowly, but was early used for historical records, for by the first half of the 6th century the traditional Japanese chronology becomes reasonably accurate.

Japan's social organization as it emerged at that time was that of a large group of clans (*uji*) under clan chiefs (*uji-no-kami*) The members of a single clan all claimed descent from a common ancestor, often the clan god (*ujigami*) The clan chief acted as high priest to the clan god, and his political rule was tinged throughout with a sacerdotal flavor. The chief and his immediate family often had one of several hereditary titles (*kabane*), which in time came to be grouped hierarchically Below the clans were hereditary occupational groups (*be* or *tomo*), often called guilds or corporations They were the economic foundation of the clan system Below them in turn was an inconsiderable number of slaves

The imperial clan at first was little more than hegemon among the various clans Its chief was the emperor, and its clan god was made the national deity Its rule over the country was extremely loose and feeble. The clans with the two most important hereditary titles, *Omi* and *Muraji*, were controlled through a chief *Omi* (*Ōomi*) and a chief *Muraji* (*Ōmuraji*). *Tomo-no-miyatsuko* were placed over the imperial clan's hereditary occupational groups and *Kuni-no-miyatsuko* over its rice lands Chieftains of the Kume, Ōtomo and Mononobe clans served as imperial generals and those of the Nakatomi and Imube (also pronounced Imibe and Imbe) clans were in charge of the court religious ceremonies.

The importation of Chinese civilization and an influx of Korean immigrants seriously shook the clan system In imitation of China there developed a greater centralization of power in the hands of the imperial clan and its ministers, who at times even aspired to the throne themselves Imperial lands were gradually extended, and imperial authority grew, eventually leading to a complete political and economic reorganization of Japan on the Chinese model.

? 527. A serious **revolt in Kyūshū** prevented the crossing of an army to Korea to aid Imna Dissension among the Japanese and the treason of some of

their officers in Korea seriously reduced their prestige in the peninsula and opened the way for the conquest of Imna by Silla.

? 552. The official introduction of **Buddhism** from Paekche, which itself had received it in 384, marked the beginning of a new epoch in Japan There probably were Buddhist converts in Japan prior to 552, but at this time Buddhism first began to play a significant rôle in Japanese history and to stimulate the influx of Chinese civilization by way of Paekche Supported by the powerful Soga clan and strengthened by the arrival of clerics from Korea, Buddhism made headway at court, but soon a temporary proscription of it was brought about by the Nakatomi and Mononobe clans, the political rivals of the Soga It was presently restored, and the Emperor Yōmei (585–587?) embraced the faith shortly before his death.

? 562. Silla drove the Japanese out of Imna, ending their long direct control of a portion of Korea.

? 587. The Soga crushed their rivals in a short civil war, thereby establishing their political supremacy and the right of Buddhism to an unhampered development in Japan

592. Soga Umako (d. 626) had his nephew, the Emperor Sushun (587–592), murdered

593-628. Suiko, the first officially recognized empress, ruled over the land at the crucial period when Buddhism was taking root and the importation of Chinese civilization was strongly influencing the basic forms of Japanese government and society. The leading spirit during her reign was the crown prince, **Shōtoku** (d 621 or 622), who was the real establisher of Buddhism in Japan, the pioneer in laying the foundations for the Sinicized form of government of the next several centuries and the founder of such great monasteries as the Shitennōji (593), the Hōkōji (588–596) and the Hōryūji (607?).

604. Prince Shōtoku issued the so-called **Seventeen Article "Constitution,"** a moral code consisting of somewhat vague injunctions imbued with Confucian ethics and the Chinese political theory of a centralized imperial government Thus it served as an ideological basis for political centralization The constitution was also strongly influenced by Buddhism and shows that the prince was aware of its moral and philosophical import and not merely of its supposed magical powers, which chiefly attracted the contemporary Japanese In this same year, in imitation of China, official grades known as "cap ranks" (*kan'i*), an official calendar and regulations for court etiquette were adopted

607. Ono Imoko, the first official envoy from the central government, was dispatched to the Sui court in China. This and a second embassy to the Sui in 608 were followed in the course of the next two and a half centuries by twelve embassies to the T'ang Since Japanese students, scholars and monks accompanied the envoys to China and sometimes remained there for prolonged periods of study, these embassies were a very important factor in the importation of Chinese civilization to Japan

630. First embassy to the T'ang.

643. Prince Yamashiro no Ōe, the heir of Prince Shōtoku, was forced to commit suicide by Soga Iruka (d. 645), the son of Emishi (d. 645), the kingmaker of the period The prince had twice been overlooked in the imperial succession by the Soga, whose obvious imperial aspirations brought about

645. THE DOWNFALL OF THE SOGA in a *coup d'état* led by the future Emperor Tenchi (661–672) and by Nakatomi Kamatari (d 669), the founder of a new clan, the Fujiwara. This incident gave the progressive element at court a chance to begin a series of sweeping reforms along Chinese lines, which mark the beginning of a new era in Japan. (*Cont p* 349.)

III. The Middle Ages

A. THE EARLY MIDDLE AGES

1. WESTERN EUROPE

a. THE EARLY PAPACY

The Church before the emergence of the Bishops of Rome. The center of gravity was in the east. Possession of the Holy Places and the presence of the emperor gave the east political and ecclesiastical supremacy.

Rise of the episcopate. The bishops, originally overseers (*episcopus*), thanks to their consecration, the tradition of apostolic succession, and their control of the sacraments, were distinguished among the clergy. Each church was originally independent, but the evolution of an ecclesiastical counterpart to the centralized civil state gave the bishop a clearly monarchical quality in the 3d century The lay and ecclesiastical states met in the person of the emperor, and the original loose autonomy of the independent churches began to be lost in a centralized system The precedence of **metropolitans** (i e the bishops of the great sees) was recognized (341), without reducing the accepted superiority of the **patriarchs.** The five patriarchates (ecclesiastical equivalents of exarchates) were (save for Rome) in the east — Jerusalem, Antioch, Alexandria, Constantinople. The west (including Rome) was either poorly represented or not represented at all at the oecumenical councils in the east. Vague precedence in honor was conceded to Rome, but no more

Oecumenical councils settled general problems of dogma and discipline. These councils were called by the emperor and presided over by him in person or by legate. Local problems were dealt with in synods.

EMERGENCE OF THE BISHOPS OF ROME.[1] *Papa* was a title applied to all bishops until c 425, and did not take on its present meaning until the 7th century **Bishop Victor** of Rome (c. 190) exercised a kind of spiritual sovereignty which was continued in the 3d century Gradually the recession of the Church of the east, the loss of Africa, and the rise of powerful churches in the east, left Rome isolated in the west. As the sole western apostolic see, the scene of the martyrdom of Peter, and guardian of the tombs of Peter and Paul, Rome enjoyed a unique spiritual prestige, and until the reign of Diocletian (285–305) it was the administrative center of the empire After that the capital was at Milan, and this see at times was almost equal to Rome in influence. With the removal of the imperial capital to Constantinople (330), Rome lost prestige, especially in the east On the other hand, between 330 and 395, since there was no emperor permanently resident in the west, the Bishop of Rome had no political rival.

(1) The emperors supported the Roman campaign against paganism and against heresy (e g. Arians and Donatists) with civil penalties, and confirmed and deprived bishops.

(2) The Roman See as early as the days of Diocletian was rich, and was further enriched by the emperors until it was the wealthiest in the Church; the Bishop of Rome enjoyed the "presidency in charity" throughout Christendom

(3) Sporadic intervention (usually on appeal) was made outside his direct jurisdiction by the Bishop of Rome, but until after 1000 the Bishop of Rome "never once on his own special authority pronounced upon any doctrinal point addressed to the Catholic world" Nor did he interfere between a bishop and his flock in ordinary diocesan affairs or collect money except within his own immediate episcopal jurisdiction

(4) **The Petrine theory,** on the basis of Matthew 16 18, 19, asserts that Peter was designated by Christ as the founder of the Church, and that Christ conferred the "power of the keys," i.e "the power to bind and loose," upon Peter, who transmitted it to his successor the Bishop of Rome, through whom it passed to all bishops. This theory was given currency by **Pope Celestine I** (422–432). In effect this abandoned the original concept of the Bishop of Rome as *episcopus inter episcopos* for the more radical monarchical concept of the Roman bishop as *episcopus episcoporum.* Early writers give no indication of such interpretations, and Cyprian (d 258) in a famous passage avers that the Bishop of

[1] A complete list of the popes will be found in Appendix IV

Rome is no more than a bishop among other bishops.

340. The introduction of **eremitical monasticism** into the west by Athanasius marked the beginning of a strong ascetic reaction against the corruption of western life Supported by Jerome, Ambrose, and Augustine, this development led to a great growth of monasticism Bishop Eusebius of Vercelli (d 371), by insisting that his clergy lead a monastic life, began a practice which led to the general ordination of monks Martin of Tours founded (c. 362) a cenobitic community of monks near Poitiers

343. **The Council of Sardika** apparently recognized the right of appeal from a provincial synod to the Bishop of Rome

The oldest extant decretal dates from the episcopacy of Siricius (c 384–498)

THE LATIN FATHERS OF THE CHURCH· **Jerome** (c 340–420), a Dalmatian, devoted to pagan learning despite his keen ascetic convictions. The first great western exponent of monasticism. One of the greatest scholars of the Latin Church, his translation of the *Bible* into Latin (the *Vulgate*) is still authoritative in the Roman Church today. This excellent version exerted stylistic and theological influence throughout the Middle Ages **Ambrose** (c. 340–397) of Trier, a Roman provincial governor, elected (374) Archbishop of Milan before he was baptized. His *Duties of the Clergy* (based largely on Cicero, *de Officiis*) was for centuries the standard work on ethics, and is probably the chief single source of the Stoic tradition in early western thought. He made Milan almost the equal of Rome in prestige, and forced the Emperor Theodosius to do penance, maintaining that in ecclesiastical matters a bishop was superior to an emperor. **Augustine** (354–430) of Hippo, greatest of the western fathers. Converted to Christianity after ventures in Neo-Platonism and Manichaeism, he was the founder of western theology, the link between the classical tradition and the mediaeval schoolmen. Through him a great stream of Platonic and Neo-Platonic thought came into the Church. For a thousand years all thought was influenced by Augustine, and theology betrays his influence to this day He gave wide currency to the doctrines of original sin, predestination, salvation through divine grace, and his influence was felt by Calvin and Luther. His *City of God* presents a dualism of the heavenly city (identified with the Christian Church) and the earthly city (Rome), and is written to prove that the misfortunes of Rome (e.g. the sack of 410) were not due to Christianity The *Confessions* set the fashion in spiritual autobiography.

402–417. **INNOCENT I** asserted that the pope was custodian of apostolic tradition and claimed universal jurisdiction for the Roman Church.

440–461. **LEO THE GREAT**, the first great pope, a highly cultivated Roman, vigorous foe of the Manichaean heresy He procured an edict from Emperor Valentinian III (445) declaring that papal decisions have the force of law Leo was probably the first pope to enunciate the theory of the mystical unity of Peter and his successors, and to attribute all their doings and sayings to Peter Leo, repudiating the decrees of the Robber Council of Ephesus (449) at the Council of Chalcedon (451), dictated without discussion, and with imperial support, his solution of the greatest doctrinal controversy since 325. His *Tome* promulgated the doctrine of the union of the two natures. He refused to accept the decree of the council that the Patriarch of Constantinople was supreme in the Church. The tradition of his miraculous arrest of Attila's advance and his efforts to stop Gaiseric's attack (455) won the papacy tremendous prestige in later days. (*Cont pp.* 150, 215).

b. INVADERS OF THE WEST

ORIGINS OF THE INVADERS. The Germanic race was established in Scandinavia (Denmark) and between the Elbe and Oder as early as the 2d millennium B C. Eastward lay the Balts (Letts) and to the west of the Elbe were the Celts

EXPANSION. (1) The West Germans (Teutons) displaced (c 1000 B C) the Celts, moving up the Elbe and Rhine (the Main reached c. 200 B.C.). South Germany was occupied (c. 100 B.C); Gaul threatened (cf. Caesar's *Commentaries*). These invaders were a pastoral, agricultural folk, tending to settle down. By the time of Tacitus' (c. 55–c. 117 A.D.) *Germania* they were wholly agricultural. Later new tribal names and a new kind of federated organization appeared (2) The East Germans (Scandinavians) crossed the Baltic (c. 600–300 B C.) and pushed up the Vistula to the Carpathians. (3) The North Germans remained in Scandinavia.

NEW GROUPINGS AMONG THE WEST GERMANS. **Alamanni** (of Suevian stock) on the upper Rhine; **Franks** (i e. "free" of the Romans) and **Saxons** between the Weser and the Elbe, inland to the Harz; **Thuringians,** south of the Saxons.

GOVERNMENT. All were tribal democracies, some under kings, others under *grafs* In each case the head of the state was elected by the assembly of free men, the kings chosen from a royal house, e g Amals (Ostrogoths), Balthas (Visigoths), Mervings (Franks), the *grafs* without such restriction.

PROGRESS OF MIGRATIONS. The East Germans (Alani, Bastarnae, Burgundians, Gepids, Goths, Heruls, Rugians, Sciri) moved toward the Black Sea where they had arrived by 214 A D The division of Visigoth (West Goth) and Ostrogoth (East Goth) probably arose after their arrival at the Black Sea

(1) *The Huns*

The Huns, nomadic Mongols of the Ural-Altaic race group, probably under pressure from the Zhu-Zhu Empire in Asia, swept into Europe in the 4th century and halted for some 50 years in the valley of the Danube and Theiss.

372. They defeated the Alans and Heruls, destroyed the Ostrogothic empire of Hermanric, absorbed the Ostrogoths for a time in their own empire, routed the Visigoths under Athanaric on the Dniester River, and then began a new thrust to the west

445-453. Height of the Hun power under **Attila.** Honoria, sister of Valentinian III, to escape an unwelcome marriage, sent her ring to Attila and asked for aid Attila claimed this to be an offer of marriage About the same time Gaiseric the Vandal was intriguing to induce Attila to attack the Visigoths By a clever pretense of friendliness to both sides, Attila kept the Romans and Goths apart, and set out westward with a great force (451) which included Gepids, Ostrogoths, Rugians, Scirians, Heruls, Thuringians, Alans, Burgundians, and Ripuarian Franks Metz was taken and the Belgic provinces ravaged To meet Attila the Roman Aetius mustered a force of Salian Franks, Ripuarians, Burgundians, Celts, and Visigoths under Theodoric I, as well as his own Gallo-Romans. Attila apparently declined battle near Orleans and turned back.

451. **Aetius** overtook him at an unknown spot near Troyes, the so-called *Lacus Mauriacus* (**Châlons**), and a drawn battle was fought. Attila continued his withdrawal Still claiming Honoria, Attila turned into Italy, razed Aquileia, ravaged the countryside (foundation of Venice) and opened the road to Rome Pope Leo, one of a commission of three sent by the emperor, appeared before Attila. Attila retreated after plague had broken out in his force, food supply had run low, and reinforcements arrived from the east for the Roman army. Attila's death (453) was followed by a revolt of his German vassals led by the Gepids, and (454) the defeat of the Huns on the Nedao (in Pannonia). The remnant of the Huns settled on the lower Danube, the Gepids set up a kingdom in Dacia, the Ostrogoths settled in Pannonia.

(2) *The Visigoths*

After their defeat by the Huns, the Visigoths (perhaps 80,000 in number) sought refuge in the Roman Empire

376. The **Emperor Valens** ordered them disarmed and allowed to cross the Danube in order to settle in Lower Moesia. Faced with the unprecedented problem of these refugees, the Roman government bungled the administration, failed really to disarm the Goths and ultimately had to fight a two-year war with them.

378. The Visigoths, under **Fritigern,** defeated and killed **Valens** near Adrianople, thereby making the first decisive break in the Rhine-Danube frontier. This defeat of the Roman infantry by mounted warriors forecast the revolution in the art of war which determined the military, social, and political development of Europe throughout the Middle Ages.

Fritigern, hoping to carve a Visigothic empire out of the Roman provinces, ravaged Thrace for two years, but could not take Adrianople. After his death (379), the Emperor **Theodosius** arranged a pacification of the Visigoths as part of a general policy of assimilation He won over some of the chieftains, including **Alaric** of the royal house of Balthas, who hoped for a career in the Roman service. Alaric, disappointed in his hopes at the death of Theodosius, was elected king by the Visigoths, and ravaged Thrace to the gates of Constantinople Arcadius, emperor of the east (395–408), was helpless until the arrival of Stilicho, *magister utriusque militiae* (field marshal of both services) in the east.

Stilicho, a Vandal by blood, married to Theodosius' sister, was guardian of Theodosius' sons, Arcadius and Honorius He faced Alaric in Thessaly and the Peloponnesus, avoiding battle, apparently on orders from Honorius. Alaric was made *magister militum* in Illyricum, and Stilicho, out of favor in Constantinople, was declared a public enemy.

401. **Alaric** began a thrust into Italy, probably because of the triumph of an

anti-German faction in Constantinople, and ravaged Venetia. Simultaneously Radagaisus (an Ostrogoth) began an invasion of Raetia and Italy. Stilicho, firmly against any Germanic invasion of the west, repulsed Radagaisus

402. **Pollentia**, a drawn battle between Stilicho and Alaric, was a strategic defeat for Alaric. Alaric's next advance was stopped, probably through an understanding with Stilicho Halted again (403) at Verona, the Visigoths withdrew to Epirus

406 **The Rhine frontier**, denuded of troops for the defense of Italy, was crossed by a great wave of migrants, chiefly East Germans Vandals, Sueves, and Alans (non-German) The usurper **Constantine** having crossed from Britain to Gaul, Alaric in Noricum was paid a huge sum of gold by the Senate, as a sort of retainer for his services against Constantine. Stilicho, his popularity undermined by these events and by the hostility of Constantinople, was beheaded There is no evidence of treason by Stilicho His execution was followed by a general massacre of the families of the barbarian auxiliaries in Italy, and some 30,000 of them went over to Alaric in Noricum

410. **Alaric took Rome** after alternate sieges and negotiations. He sacked it for three days, and then moved south toward Africa, the granary of Italy. Turned back by the loss of his fleet, Alaric died and was buried in the bed of the Busento. His brother-in-law Ataulf was elected to succeed him. Ataulf, originally bent on the destruction of the very name of Rome, now bent his energies to the fusion of Visigothic vigor and Roman tradition.

412. **Ataulf** led the Visigoths north, ravaged Etruria, crossed the Alps, ravaged Gaul and married (against her brother Honorius' will) Galla Placidia (414) after the Roman ritual. He was forced into Spain (415), where he was murdered. **Wallia** (415–c 418), after the brief reign of Sigeric, succeeded him

Ulfilas (311–381), a Gothic bishop of Arian convictions, invented the Gothic alphabet for his translation of the *Bible*. This translation, the first literary monument of the German invaders, had enormous influence, and recalls the wide extent of the **Arian heresy**, which won every important Germanic invader except the Franks, a development with the greatest political consequences, since the lands where the Germans settled were peopled by orthodox Roman Catholics.

Spain had already been overrun by a horde of Vandals, Sueves, and Alans (409), and the Roman blockade made food hard to get. Wallia planned to cross to the African granary, but lost his ships, was forced to make terms with Honorius and restore Galla Placidia to her brother He agreed to clear Spain of other barbarians Succeeding in this he received the grant of *Aquitania Secunda* (i e the land between the Loire and the Garonne) with Toulouse as a capital Thus began the

419-507. **KINGDOM OF TOULOUSE.** The Visigoths received two-thirds of the land, the remainder being left to the Roman proprietors A Gothic state was created within the Roman state Honorius, hoping to counteract alien influences, revived a Roman custom of holding provincial councils, decreeing an annual meeting of the leading officials and the chief landowners for discussion of common problems The most important rulers of Toulouse were

419-451. **Theodoric I**, who fell in the **battle of Châlons**, and

466-484. **Euric**, whose reign marked the apogee of the kingdom. He continued the pressure of the Visigoths upon Gaul and Spain, and by 481 extended his domain from the Pyrenees to the Loire and eastward to the Rhone, securing Provence from Odovacar (481). Euric first codified Visigothic law, but the *Breviary of Alaric* (506), a codification of Roman law for Visigothic use, had tremendous influence among the Visigoths and among many other barbarian peoples. Under Visigothic rule the administration in general remained Roman and the language of government continued to be a Latin vernacular. The Gallo-Roman population and clergy were hostile to the Visigoths as Arians, and this hostility opened the way for the **Frankish conquest** (507), which reduced the Visigothic power to its Spanish domains.

507-711. **The Visigothic Kingdom of Spain** dragged out a miserable existence under more than a score of rulers, some mere phantoms, until the arrival of the Moslems (p. 163).

554. **Belisarius' invasion of Spain**, part of Justinian's reconstruction of the Roman Empire (p. 172), was a brilliant campaign, but reduced only the southeast corner of Spain, later regained by the Visigoths, who also reduced the Sueves in the north.

(3) *The Vandals*

406. **The Vandals** (Asding and Siling), allied with the Sciri and Alans, crossed the Rhine near the Main, followed the Moselle and Aisne (sacking Reims,

Amiens, Arras, Tournai), then turned southward into Aquitaine, and crossed the Pyrenees into Spain (409).

429-534. THE VANDAL KINGDOM IN AFRICA. The Vandals and Alani had been established in southern Spain under Gunderic His brother **Gaiseric** received an appeal from Boniface, the revolted Roman governor of Africa, following which the Vandals (perhaps 80,000 in number) crossed into Africa (429)

430. The first siege of Hippo failed, but Boniface, now reconciled to the regency of Galla Placidia, was annihilated, and the city fell (431). **St. Augustine,** Bishop of Hippo, died during the siege The creation of a great Vandal power in Africa, supported as it soon was by a powerful navy, distracted the attention of the Roman government from the new barbarian kingdoms of the west and had a decisive effect of a negative kind

In Africa the Vandals spared nobody and nothing and the treaty made with the Romans was no restraint After the arrival of a fleet from Constantinople, a second treaty was made Eudocia, daughter of Valentinian, was betrothed to Gaiseric's son, Huneric, and the Vandals received most of the Roman territory except the region about Carthage

439. Gaiseric took Carthage from the Romans, and made it his capital and naval base.

455. Gaiseric attacked Rome, on the invitation (according to tradition) of Valentinian's widow Eudocia. He took it easily, and for two weeks pillaged the city, scientifically and ruthlessly, but without wanton destruction

In Africa the Vandals were hated as Arians, and they had to deal with serious Berber revolts, but their power was not broken until the

533-548. Vandalic Wars of Justinian. Belisarius quickly defeated the Carthaginian power of the Vandals, the ensuing Berber revolt was not put down until 548

(4) *The Burgundians*

411-532. The Burgundians, arriving from the Oder-Vistula region, moved along the Main athwart the Rhine, entered Gaul under King Gundicar, and finally settled as federates of the Roman Empire in upper Germany (i e the lands including Lyons, Vienne, Besançon, Geneva, Autun, Macon). King **Gundibald** (d 516) codified Burgundian law in the *Lex Gundobada* The Burgundians were finally conquered by the sons of Clovis (c 532), but the Burgundian state remained separate under Frankish control with Merovingian princes until 613. After 613 it was a province of the Frankish Empire.

c. THE OSTROGOTHS IN ITALY, 489-554

On the breakup of the Hunnic Empire (after Nedao, 454), the Ostrogoths settled in Pannonia (their first settlement inside the Roman frontier) as federates of the empire Under the Huns the emergence of a single ruler had been impossible Thiudareiks (ruler of the people), corrupted into Theodoric, educated as a hostage at Constantinople, was elected (471) merely a *gau* king, but soon became leader of his people on a march into the Balkan Peninsula where he forced the Emperor Leo to grant them lands in Macedonia His ambition for imperial appointment was realized (483) when he was made *magister militum praesentalis* and (484) *consul* He quarreled with the emperor and marched on Constantinople To get rid of him the emperor commissioned him (informally) to expel Odovacar from Italy Arriving in Italy (489) the Ostrogoths triumphed over Odovacar, but did not reduce Ravenna until 493. Theodoric killed Odovacar with his own hands and had his troops massacred

489-526 THEODORIC THE GREAT. In general Theodoric continued Odovacar's policy, substituting Ostrogoths for Odovacar's Germans, and assigning one-third of the Roman estates (as Odovacar had probably done) to his people Theodoric's rule was officially recognized (497) by Constantinople Together with the emperors he named the consuls in the west, but never named an Ostrogoth Theodoric was the only member of his people who was a Roman citizen, constitutionally the others were alien soldiers in the service of the empire No Roman was in military command, no Ostrogoth in the civil service. Imperial legislation and coinage continued The so-called *Edictum Theodorici* is a codification of Theodoric's administrative decrees rather than a body of legislation, as none of Theodoric's "laws" were anything more than clarifications of imperial legislation. Theodoric's secretary of state was the learned Italian, **Cassiodorus,** and the dual state was paralleled by a dual religious system Theodoric was tolerant of the orthodox Catholics and a protector of the Jews His chief aim was to civilize his people under the Roman environment and to keep peace.

Theodoric's co-operation with the other Germanic peoples was close, and he cemented his associations by marriage alliances (one daughter married Alaric II the Visi-

goth, another in Burgundy, and he himself married Clovis' sister). He intervened to protect the Alamanni from Clovis and tried to save the Visigoths Provence was acquired from Burgundy and annexed to Italy. He was regent and protector of his grandson Amalaric after Alaric II's death, and virtually ruled the Visigothic Kingdom until his death (526)

To the Italians Ostrogothic rule was alien and heretical and they resented it The end of Theodoric's reign was marked by a growing ill-feeling and suspicion which may have been due to this. **Boethius,** the Roman philosopher and commentator on Aristotle, author of the *Consolation of Philosophy*, an official of Theodoric's government, and his father-in-law, the brilliant and polished Roman **Symmachus,** were both executed (c 524) on a charge of treasonable conspiracy.

535-554. RECONQUEST OF ITALY BY THE EMPEROR. Justinian, as part of his grandiose reconstitution of the Roman Empire, dispatched **Belisarius** and later **Narses** who reduced the stubborn Ostrogoths and drove them over the Alps to an unknown end

After the expulsion of the Ostrogoths the **Exarchate of Ravenna** was established under the Emperor Maurice (582–602). The exarch had military and civil powers and received full imperial honors. He exercised imperial control over the Church, including the Bishopric of Rome. War and pestilence had completely ruined northern Italy; Rome, in ruins, had sunk from her imperial position to be a provincial town, the way was open for the Lombard invaders.

Ravenna had been the capital of the west (c. 402–476) and was the home of Theodoric's brilliant court The architecture of the city offers a unique series of examples of Roman and Romano-Byzantine buildings begun under the emperors and continued by Theodoric The name and glory of Theodoric have survived in German tradition in Dietrich von Bern (i e. of Verona, where he had a palace).

PROGRESS OF THE PAPACY. Gelasius (492–496) was the first pope to proclaim the independence of the papacy from both emperor and church council in matters of faith He asserted that two powers rule the world, the *sacerdotium* and the *imperium*. The *sacerdotium*, since it is the instrument of human salvation, is superior to the *imperium*.

As soon as Italy ceased to be a ruling state, there began a long effort to create national unity and to establish national independence. The barbarian invasions had isolated Italy, accentuated the break with the empire and left the pope as the sole native representative of ancient unity and Italian hegemony At the same time the Ostrogoths (half romanized as they were) did not destroy Italian culture, but allowed the Church to transmit the Greco-Roman tradition (linguistic, social, cultural, administrative, and religious) in the west.

529. Western monasticism, representing a wide ascetic reaction against current corruption in life and supported by Jerome, Ambrose, and Augustine, had expanded rapidly in the 6th century and reached a chaotic condition ranging from extremes of eremitical asceticism to the laxest kind of cenobitic worldliness **Benedict** of Nursia, scandalized at conditions, withdrew to Monte Cassino where he founded a colony and gave it (traditionally in 529) the famous *Benedictine Rule*. This rule, which dominated western monasticism for centuries, was a remarkable and characteristic Roman compromise adapted to the average man It placed the monks under the control of an abbot, made each house autonomous in a loose federation (not strictly an order at all), and provided for careful recruiting and probation. Discipline was efficient but not extreme, and great stress was laid on labor, especially in the open air (*laborare est orare*). The individual was merged in an ascetic, self-contained, self-sufficient corporation The spread of the Benedictines was rapid, and soon the only important survival of eremitical monasticism was in the Irish monks of St. Columban The order became the chief instrument for the reform of the Frankish (Gallic) Church, and for the conversion and civilization of England and Germany In the course of history it gave the Church 24 popes, 200 cardinals, 5000 saints, 15,000 writers and scholars

Ruined by invasion, its aqueducts cut, Rome was reduced in population from a half million to perhaps 50,000 Its aristocracy had fled, and mediaeval decay had replaced pagan grandeur. The city was not revived until the Renaissance.

554. Justinian's Pragmatic Sanction restored the Italian lands taken by the Ostrogoths and made a *pro forma* restoration of government, but agricultural lands were depopulated and grown into wilderness, the rural proprietors were sinking into serfdom. Town decline was similar. The Roman Senate ceased to function after 603 and the local *curiae* disappeared at about the same time.

Duces were appointed, probably over each *civitas*, as part of the imperial administration, but they gradually became great landowners and their military functions dominated their civil duties. A fusion of the

ducal title and landownership ensued and a new class of hereditary military proprietors emerged beside the clergy and the old nobles. The details of this process are, of course, hard to determine, the more so as evidence is scant

d. THE FRANKISH KINGDOM, 481-752

The Franks first appear as settlers on the lower Rhine in two divisions, the **Salians** (dwellers by the sea, *sal*) and the **Ripuarians** (dwellers by the riverbank, *ripa*). By the end of the 4th century the Salians were established in the area between the Meuse and the Scheldt as federates of the Roman Empire; the Ripuarians in the tract between the Rhine and Meuse They formed no permanent confederations, and, unlike the other Germanic peoples, did not migrate as a nation, but expanded.

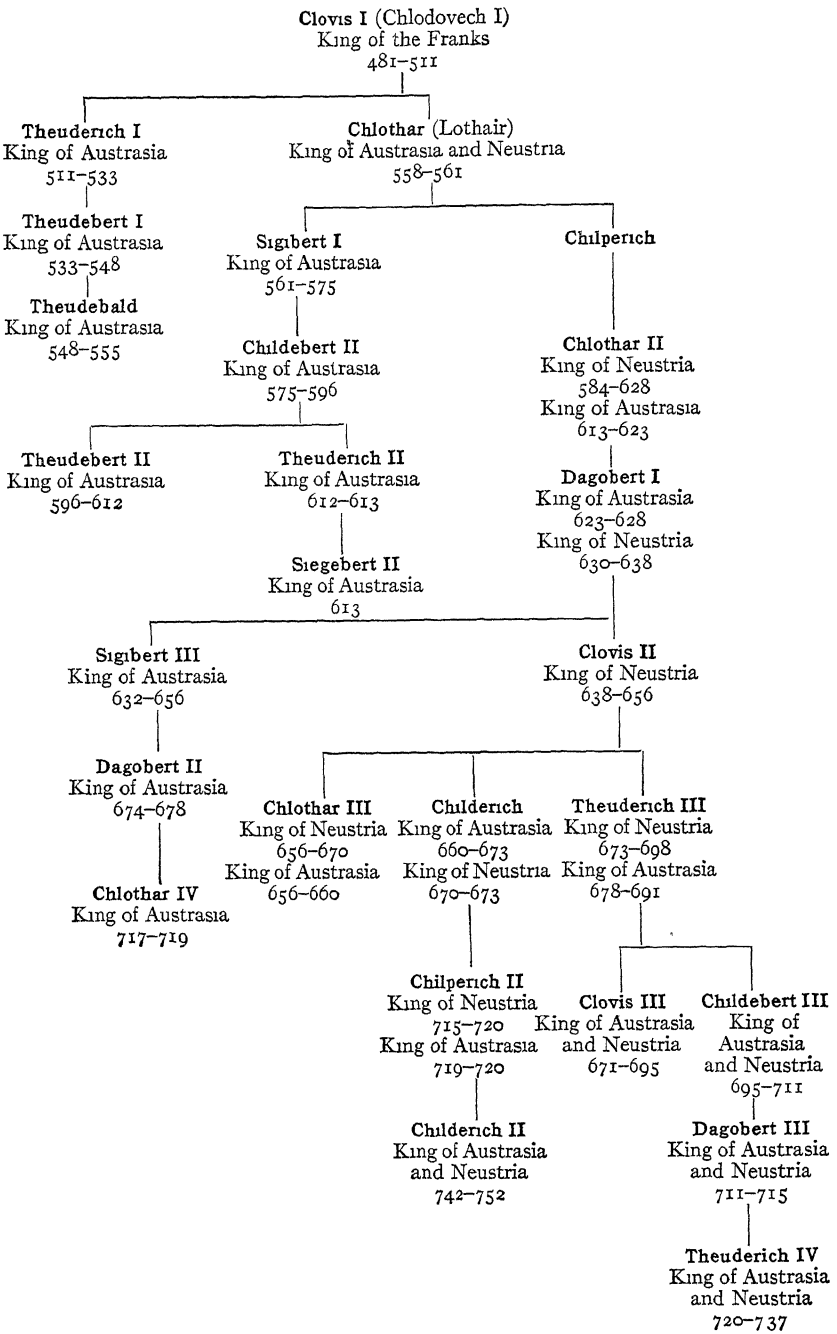
431-751. THE SALIAN FRANKS UNDER THE MEROVINGIANS

451. **Chlodio** (son of Merowech) invaded Artois, and was defeated by Aetius Salian Franks were in the Roman forces at the **battle of Châlons.** King Childeric (d 481) fought as a federate of the empire at Orléans when Aetius defeated the Visigoths, and he later defeated the Saxons on the Loire. His tomb was found (1653) at Tournai, the "capital" of the Salians

481-511. **CLOVIS** (Chlodovech), son of Childeric, in the service of Julius Nepos and Zeno. He defeated the Gallo-Roman general Syagrius at Soissons (486), expanding Salian power to the Loire The story of the **Soissons vase** is significant of the friendly relations between Clovis and Bishop Remigius. Siegebert, the Ripuarian, defeated an Alamannic invasion at Tolbiac (496) with Salian support Clovis in the same year defeated the Alamanni (Strasburg?) and later, after election as King of the Ripuarians, emerged as master of the Franks on both sides of the Rhine

496. The traditional date of the **conversion of Clovis** to Roman Catholicism is 496 He had previously married a Burgundian, Clotilda, who was of the Roman communion. The Burgundians in general were Arians, and Clovis' choice may have been deliberate In any case his conversion won him powerful papal and episcopal support and opened the way to wide conquests from the heretic (i e Arian) German peoples Burgundy was conquered (after 500), the Visigoths defeated at Vouillé (507), and their whole kingdom north of the Pyrenees (except Septimania and Provence) was soon subjugated. These conquests were warmly supported by the Gallo-Roman clergy as a religious war. Clovis founded the Church of the Holy Apostles (Ste Geneviève) at Paris, and shortly moved his "capital" from Soissons to Paris. He was made an honorary consul by the Emperor Anastasius, a proceeding which brought the Franks technically into the empire.

511-628. **Divisions of the Frankish lands** after the death of Clovis. (1) His four sons established four capitals — Metz, Orléans, Paris, Soissons Expansion eastward continued along the upper Elbe, Burgundy was added, and the territory of the Ostrogoths north of the Alps After a period of ruthless conflict, only **Lothair** (Chlothar) survived, and for a brief time (558–561) the Frankish lands were under one head again. (2) Lothair's division of his lands among his four sons led to a great feud from which three kingdoms emerged Austrasia (capital Metz) lying to the east (Auster) and mostly Teutonic, Neustria (the "new land" as the name implies) (capital Soissons), Gallo-Roman in blood, Burgundy, which had no king of its own but joined Neustria under a common ruler The Prince of Neustria exterminated the rival house in Austrasia, but the local baronage preserved the kingdom's identity. Under Lothair II all three kingdoms were united again (613) under one ruler



628-638. **Dagobert** (Lothair's son), the last strong ruler of the Merovingian House, made wide dynastic alliances and found wise advisers in **Bishop Arnulf** and **Pepin of Landen.** His firm rule led to a revolt Under the *rois fainéants* following Dagobert the **mayors of the palace** emerged from a menial position to a dominant rôle in the government both in Austrasia and Neustria

Merovingian government retained the Roman *civitas* as a unit of administration and set a count (*comes* or *graf*) over it. The source of law was not the king, but local custom administered by the *graf* with the aid of local landowners Military leaders of large districts were the *duces* who were over several counts Land grants were made in lieu of pay to officials

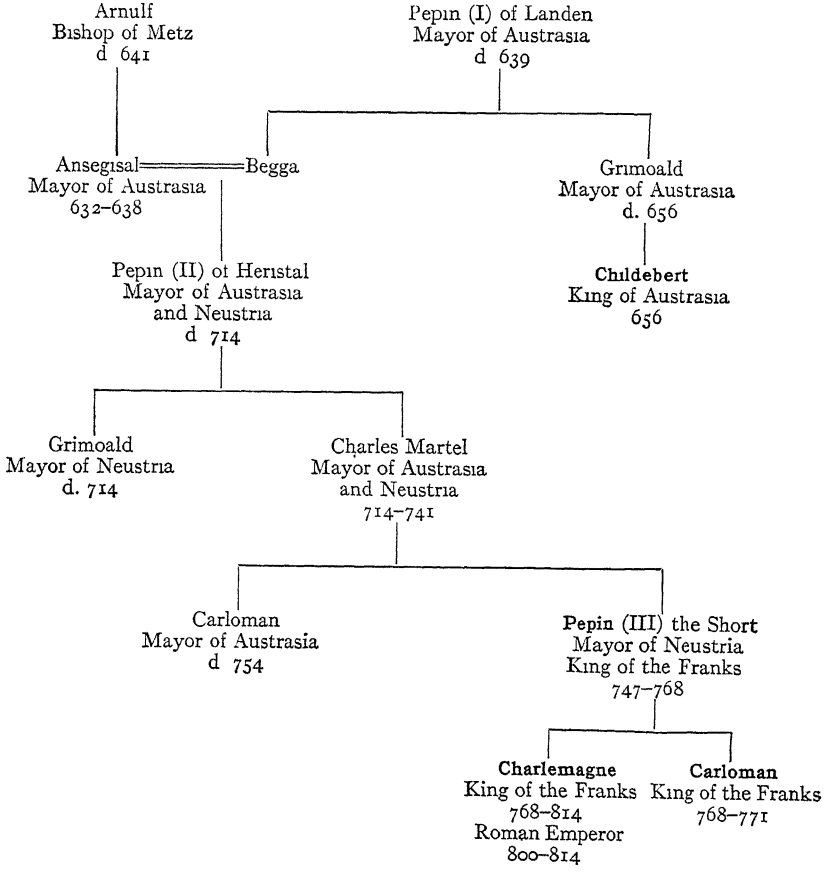
Gregory, Bishop of Tours (c 540–594), a Frank, wrote in Latin the *History of the Franks*, the best single source on the history of the Merovingian period

Decline of the royal power under the last of the Merovingians, and beginning of feudal decentralization. (1) Concentration of landownership in the hands of a few (i.e a landed aristocracy of which the mayors of the palace were representative). (2) The breakdown of the old clan and tribal organization without an effective state to replace it, leading to personal and economic de-

The Merovingian Kings

pendence on private individuals rather than on the state (e g. commendation, *beneficium*, immunity) (3) Military service on horseback became attached to the benefice as early as the 8th century; for example, Martel's cavalry (see *infra*) for service against the Saracens Since these grants involved church lands to a considerable degree, Martel in effect compelled the Church to help support national defense (4) The royal domain was exempt from visitation except by the king's personal administrators This immunity was extended to royal lands granted to others, and then to lands never in the royal domain The upshot of the system was complete decentralization by the delegation of the royal powers to local officials who tended to become entirely independent

The Carolingians



Emergence of the Carolingians in Austrasia. The son of Arnulf married the daughter of **Count Pepin I** (of Landen, d. 639), mayor of the palace, founding the line later called Carolingian

656. Pepin's son Grimoald made a premature effort to usurp the crown, which cost him and his son their lives, and led to a reaction in favor of the Merovingians

678-681. Ebroin, mayor in Neustria, united the mayoralties under one house, he was murdered (681)

687. Pepin II (of Heristal), grandson of Pepin I, gained supremacy in Austrasia and Neustria by his victory at Tertry

The House of Pepin

The kingdom was on the verge of dissolution (ducal separatism), and Pepin began an effort to reduce the landed aristocracy from which he himself had sprung.

714-741. Charles Martel (i e. the Hammer), Pepin's son, an ally of the Lombards, supported Boniface's mission in Germany (Boniface testified that his achievements would have been impossible without Martel's aid).

732. Martel's great victory at **Tours** arrested the advance of the Moslems in the west, and was followed by their final retreat over the Pyrenees (759).

Pepin's conquest of the Frisians was continued, five wars were waged against the Saxons, and powerful decentralizing forces (notably in Burgundy and Alamannia) were broken down

739. Pope **Gregory III,** threatened by the Lombards, sent an embassy to Martel, and offered the title of *consul* in return for protection against the Lombards. Charles, an ally of the Lombard king, ignored the appeal. At the end of his life Martel, like a true sovereign, divided the Merovingian lands between his sons, Austrasia and the German duchies going to Carloman, Neustria and Burgundy to Pepin. Carloman and Pepin ruled together, 741–747; Pepin ruled alone, 747–768

(*Cont p.* 158)

e. THE LOMBARDS AND THE POPES, 568-774

Under the Emperor Augustus the Lombards were still established on the lower Elbe (Bardengau) and were defeated (5 A.D) by the Romans Their history for the next 400 years is confused and often blank They were members of the Hunnic Empire and were subdued by the Heruls (505), whom they then destroyed (508). They were probably Arians by this time. Resistance to the Gepids began (c. 546). They were given land by Justinian in Noricum and Pannonia and aided (553) the imperial attacks on the Ostrogoths. The Avars arrived (c 560) from the Volga, entered Thuringia (562), were defeated by the Franks, and allied themselves (c. 565) with the Lombards against the Gepids, who were annihilated The Lombards moved on toward Italy and the Avars occupied Dacia Alboin (d 573), the Lombard king, killed the Gepid king, Cunimund, with his own hand and married his daughter Rosamund (story of Cunimund's skull as a drinking-cup). The Lombards took part in Belisarius' conquest, and soon the nation began to move south toward Italy.

568. THE LOMBARD CONQUEST OF ITALY. Italy, worn out by the Gothic wars, famine and pestilence, offered little resistance. Constantinople was indifferent, and the conquest was easy. The Lombards, always few in numbers, had associated other peoples (including 20,000 Saxons who soon departed, and some Slavs) in their invasion, but even then they were not numerous enough to occupy the whole peninsula. Rome and Naples were never held, and Ravenna only briefly. The coast was not really mastered The Lombards (unlike even the Vandals) did not enter into a compact with the empire, and Italian feeling against them was bitter Pavia became the capital (Italy, until 774, had always two and usually three capitals: Rome, the papal capital, Ravenna, the Byzantine capital; and Pavia the Lombard capital after 573) and the peninsula was a mosaic of Byzantine, papal, and Lombard jurisdictions

Lombard occupation (virtually military rule at first) covered inland Liguria, inland Tuscany, inland Venetia, the Duchy of Spoleto and the Duchy of Benevento. **Imperial Italy** comprised Venice and the land from north of Ravenna to the south of Ancona, and included the Duchy of Rome and the Duchy of Naples, as well as the toe and heel of Italy. *Hospitalitas* was revived and one-third the produce of the land (not one-third the land) was given to the Lombards Lombards also took the lands of the dead and the exiled At first lands were assigned with a full title, but Liutprand introduced (713, 735) leases, and the grant of estates without permanent tenure

The Lombards took Roman titles and names, and in the end accepted Roman Catholicism. By the time of **Liutprand** (712–744) their speech was clearly Italian, but the natives were loyal to their past, and remained sharply divided from the Lombards. Legally there was a dual system of private law, and in Lombard territories there was a dual episcopal system (i e Arian and Roman)

573-584. Alboin's murder was followed by the rule of Cleph (d 575) and then by ten years of anarchy and private war under a loose federation of dukes (some 36 in number). Roman Catholic opposition and papal negotiations with the Franks alarmed the Lombards, and led to the election of

584-590. Authari, a grandson of Alboin, who was endowed with half the baronial lands as royal domain. The dukedoms were gradually absorbed (the marches like Friuli, Trent, Turin, survived longest).

Authari's widow Theodolinda, a devoted Roman Catholic, bidden to choose a husband who should also be king, selected a Thuringian,

590-615. Duke Agilulf, of Turin, who was friendly to the Roman Church and the true founder of the Lombard state Gregory the Great blocked an Italian conspiracy against the Lombards **Rothari** (636–652) became a Roman Catholic He collected Lombard customary law in Latin and began the consolidation of Lombard power. Eventually Roman law triumphed and Lombard law survived only in the schools (e g Pavia)

The Italian bishops since 476 had been the leaders of the peaceful civilians in the cities, the protectors of the oppressed, and the dispensers of charity Under the Lombards a system of **episcopal immunities** emerged which made the bishops virtually local temporal sovereigns and enabled them to preserve the local spirit of municipal independence and organization (e g consuls, guilds). The urban population was free of feudal bonds, and the town walls (often built by the bishops) were refuges Milan resumed her greatness and almost equaled Rome. These developments prepared the way for the great assertion of Italian town independence against Roman clerical and German feudal encroachments **Paul the Deacon** (c. 720–c 800), the first important mediaeval historian, wrote the *History of the Lombards*

590-604. GREGORY THE GREAT. Of medium height, good figure, large, bald head, brown eyes, aquiline nose, thick red lips, prominent bearded chin, with exquisite tapering hands His family was a rich senatorial house and Gregory was prefect of Rome (573) He founded (c. 574) six monasteries in Sicily and one at Rome (St. Andrews) into which he immediately retired as a monk. Embassy to Constantinople (c. 579–586). As Abbot of St. Andrews (586) his rule was severe Elected pope (590) against his will, he began a vigorous administration Discipline within his patriarchate was rigorous (stress on celibacy, close watch on elections, insistence on exclusive clerical jurisdiction over clerical offenders). Church revenue was divided into four shares for the bishop, the clergy, the poor, and church buildings. His administration of the wide estates of the Church was honest and brilliant, and the revenue was expanded to meet the tremendous demands on Rome for charity. The pope continued the old imperial corn doles in Rome and elsewhere, aqueducts were repaired, urban administration, especially in Rome, reformed.

Outside his immediate patriarchal jurisdiction Gregory expanded the influence and prestige of the pope, maintaining that the pope was by divine designation head of all churches. Appeals to Rome were heard even against the Patriarch of Constantinople, whose claim to the title of universal bishop was denied. Gregory boldly assumed the rôle of the emperor in the west, and the powers of a temporal prince, counterbalancing the prestige of Constantinople. From his administration date the foundations of later **claims to papal absolutism.** Gregory was the real leader against the Lombards, appointing governors of cities, directing the generals in war, and receiving from Constantinople pay for the army.

As the first monk to become pope, Gregory made a close alliance between the Benedictines and the papacy (at the expense of the bishops) The monks were given charters and protected from the bishops, the Benedictine Rule was imposed, and a great missionary campaign was begun with monkish aid (1) The mission to Britain (596) under **Augustine of Canterbury** and the conversion of England provided a base from which the Frankish (Gallic) Church was later reformed and the German people converted, (2) campaigns against paganism in Gaul, Italy, and Sicily, and against heresy in Africa and Sicily

Gregory was the last of the four great Latin Fathers, and first of the mediaeval prelates, a link between the classical Greco-Roman tradition and the mediaeval Romano-German. Not a great scholar, he was a great popularizer, and spread the doctrines of Augustine of Hippo throughout the west. At the same time he gave wide currency through his *Dialogues* to the popular (often originally pagan) ideas of angels, demons, devils, relic worship, miracles, the doctrine of purgatory and the use of allegory Gregory reveals the clerical contempt for classical Latin which profoundly influenced the Latin of the Middle Ages His *Pastoral* remained for centuries an essential in the education of the clergy There was a school of music at Rome, but how much Gregory had to do with it, and how much with the introduction of the Gregorian Chant, is doubtful.

Gregory introduced the papal style, *Servus Servorum Dei*

CONTINUED ALIENATION OF ITALY FROM THE EAST. (1) The **Monothelete controversy:** condemnation by the **Lateran Synod** (649) of Emperor Heraclius' *Ecthesis* (of 638) and Emperor Constans II's *Typos* of 648. Arrest (653) by the exarch of Pope Martin I (649–655), who died in exile in the east. **The Council of Constantinople** (680–681) compromised on the controversy, taking a position in favor of Rome. The Coun-

cil of Constantinople (692) reasserted the equality of the Patriarchates of Constantinople and Rome (2) **Emperor Leo the Isaurian's** (717–740) attempt to bring Italy back to obedience heavy taxation to reduce the great landowners angered Pope Gregory II (the largest landowner in Italy) and Leo's iconoclastic decree (726) aroused all Italy Gregory III excommunicated all Iconoclasts (731) Gregory's defeat and final humiliation weakened the pope and opened the way for the final Lombard advance

712-744. DESTRUCTION OF THE LOMBARD KINGDOM. Liutprand, fearing Frankish, Slavic, Hungarian, Byzantine, and papal hostility, began to consolidate his kingdom, reducing the duchies of Benevento and Spoleto Ravenna was taken temporarily During the Iconoclastic controversy Liutprand's sincere efforts at rapprochement with the papacy met a brief success

749-756. Aistulf continued Liutprand's policy of consolidation. The pope, alarmed at Lombard progress, had already (741) made overtures to Charles Martel Martel, busy with the Moslems, remained faithful to his alliance with the Lombards, but Aistulf's continued advance brought a visit (753) from Pope Stephen II. Stephen had already begun negotiations with Pepin, and the mutual needs of the rising papacy and the upstart Carolingian dynasty drew them into alliance

754, 756. Pepin in two expeditions forced Aistulf to abandon the Pentapolis and Ravenna (bringing the Lombards virtually to their holdings of 681). Legally the lands involved in the **Donation of Pepin** (756) belonged to the Eastern Empire. The Donation was a tacit recognition of implicit claims of the popes to be the heirs of the empire in Italy Most important from the papal point of view was the fact that the Church had won a powerful military ally outside Italy. Henceforth the Carolingians maintained a protectorate over the papacy in Italy

774. Charlemagne, heir to the traditions of Pepin, having repudiated the daughter of the Lombard king, Desiderius, appeared in Italy to protect the pope. After a nine-month siege Pavia was taken, Spoleto and Benevento were conquered, Charles absorbed the Lombard Kingdom into the rising Frankish Empire, and assumed the crown of the Lombards On a visit (774) to Rome (the first of any Frankish monarch), Charlemagne confirmed the Donation of Pepin, but made it plain that he was sovereign even in the papal lands At no time did Charlemagne allow the pope any but a primacy in honor (in this respect following the strict Byzantine tradition). The Donation of Pepin was the **foundation of the Papal States** and the true beginning of the temporal power of the papacy. Henceforth there was neither the Lombard menace nor the overlordship of the exarch to interfere with the rising papal monarchy In this sense the fall of the Lombard Kingdom was decisive in papal history It was equally decisive in Italian history, for the papal victory over the Lombards terminated the last effective effort to establish national unity and a national government until the end of the 19th century. For the Carolingian monarchy the episode was equally significant

Under the successors of Charlemagne the emperors continued to participate in the papal elections and did what they could to protect Italy against the attacks of the Moslems from Africa

827-831. The Moslems conquered Sicily.

837. They attacked Naples, pillaged Ancona (839) and captured Bari (840)

846. In the **battle of Licosa,** Duke Sergius of Naples defeated the Moslems at sea

847-848. Construction of the **Leonine Wall** by Pope Leo IV (847–855) to defend St Peter's from the Moslems

875-877. The Emperor **Charles the Bald** continued to support the papacy against the invader and came to Rome (875) to be crowned, having forced Charles the Fat to retreat and having induced his brother Carloman to sign a truce and withdraw. He was then elected King of Italy by the local magnates.

888. Berengar of Friuli was crowned emperor at Pavia.

891. Guido of Spoleto was consecrated emperor with his son Lambert as co-emperor and co-king

893. Zwentibold (illegitimate son of Arnulf) was sent to Italy in response to an appeal from Pope Formosus (891–896), but he accomplished nothing Arnulf then came in person (894) and received an oath of fealty from the Italian magnates, but Guido continued as emperor and was succeeded by

892-899. Lambert. Arnulf embarked upon a second expedition, took Rome and was formally crowned (896)

The Papacy in the Carolingian Period

POPE NICHOLAS I (858–867), one of the few great popes between Gregory I and Gregory VII, was the arbiter of western Christendom. Elected by the favor of Louis II. Three great controversies (1) **Support of Ignatius,** Patriarch of Constantinople, resulting in the excommunication (863)

of Ignatius' rival, Photius. Photius' futile deposition (867) of Nicholas This controversy brought the Eastern and Western Churches closer to the final rupture (1054) (2) **Discipline of King Lothair** of Lorraine because of the divorce of his wife Theutberga Lothair had been allowed (Synod of Aix) by his pliant bishops to remarry, and Nicholas reopened the case at the Synod of Metz (863), which found for Lothair Nicholas (supported by Charles the Bald) quashed the entire proceeding, disciplined the bishops, and, despite the invasion (864) of the Leonine City by Louis II, compelled Lothair to submit (3) **Vindication of the right of appeal to Rome** by a bishop against his metropolitan — humiliation of the powerful Archbishop Hincmar of Reims First papal citation (865) of the *Forged Decretals* (brought to Rome, 864) Emergence of the theory that no bishop may be deposed or elected without papal approval

867- Decline of the papacy, after the pontificate of Nicholas and the death of Louis II As the popes had no powerful protectors outside Italy until 961, they fell increasingly under the dominance of the Roman and Italian feudal aristocracy. The lapse of the imperial power left room for the insinuation of a new **doctrine of papal autonomy,** well formulated in the *False Decretals* Outside Italy the relaxation of papal control and the decline of papal prestige, accompanied by the rise of dominant local feudal lords, accentuated the power of the bishops and made the unity of the western Church a mere shadow until the papacy, having learned to cope with feudalism in the second half of the 11th century, once again made its supremacy felt in the Church

(*Cont p* 215.)

f. THE EMPIRE OF CHARLEMAGNE AND ITS DISINTEGRATION

747-768. PEPIN THE SHORT, who attempted to conciliate the Church by granting and restoring lands to it.

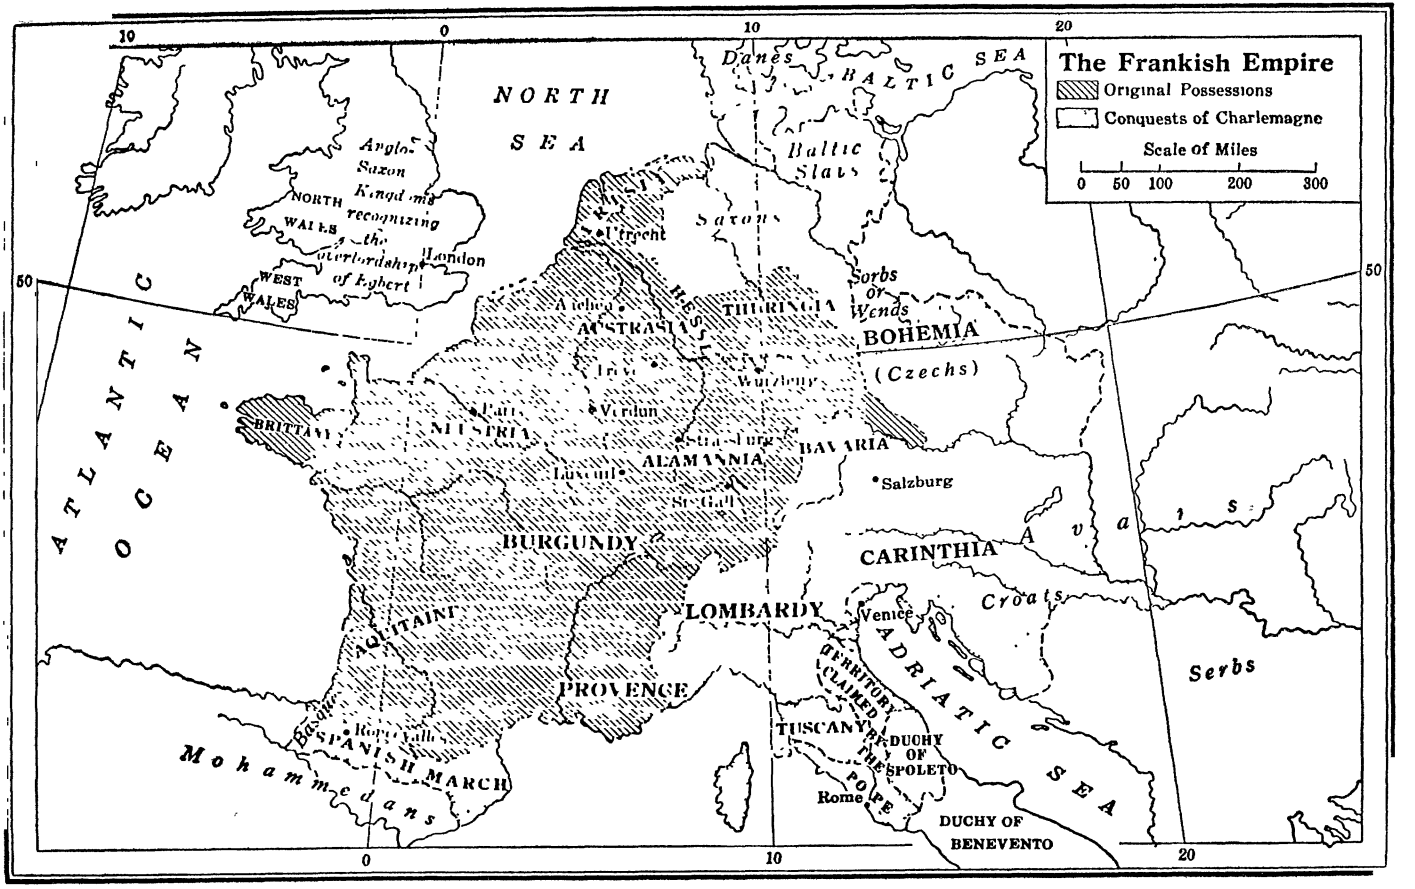
752. Pepin was elected king by the Frankish magnates Both the house of Pepin and the papacy (in the act of usurping political control from the emperor at Constantinople) needed each other's support. The immediate need of the popes was protection against the expanding Lombard monarchy **Aistulf,** King of the Lombards, had taken Ravenna (751), the seat of the exarch, besieged Rome, and exacted tribute

754. Pope Stephen II arrived in Gaul, annointed Pepin, and by conferring the title *Patricius* (which could legally come only from Constantinople) designated him in a sense *regent and protector of Italy.* The net result was to give some shadow of authority to Pepin's new title as King of the Franks

754. Pepin marched into Italy, defeated the Lombards, and required them to hand over the exarchate and Pentapolis to the pope The Lombards failed to do so

756. Pepin returned and, after defeating the Lombards again, made his famous Donation The **Donation of Pepin** (which Pepin had no legal right to make) established the Papal States (*Patrimonium Petri*) and began the temporal power of the papacy. It also established the Franks, a distant, non-Italian power, as the allies and defenders of the papacy

759. Pepin conquered Septimania, disciplined Aquitaine, and so brought effective Frankish rule to the Pyrenees. On his death his lands were given to his sons Charles receiving Austrasia, Neustria, and northern Aquitaine; Carloman, southern Aquitaine, Burgundy, Provence, Septimania. The brothers ruled together, 768–771, Charles alone, 771–814



771-814. CHARLES THE GREAT (Charlemagne), a reign of the first magnitude in European history. Charles was a typical German, six feet in height, a superb swimmer, of athletic frame, with large, expressive eyes and merry disposition. He understood Greek, spoke Latin, but could not learn to write He preferred the Frankish dress In general he continued the Frankish policy. (1) expansion of Frankish rule to include all the Germans was completed (omitting only Scandinavia and Britain); (2) close understanding with the papacy; (3) support of church reform (which settled the foundations of mediaeval Christian unity)

Italian conquest and reduction of German tribes: Already overlord of the Lombards, Charles married King Desiderius' daughter, soon repudiated her, conquered

773-774. Lombard Italy, and became King of the Lombards, whose kingdom was absorbed into the Frankish Empire. Charlemagne also established his rule in Venetia, Istria, Dalmatia, and Corsica

787-788. Bavaria was incorporated, its Duke Tassilo first made a vassal and then deposed.

785. Saxony, after a costly and bitter struggle of thirty years, involving eighteen campaigns, was conquered, and Christianity forcibly introduced despite stubborn pagan resistance Foundation of the Bishopric of Bremen (781).

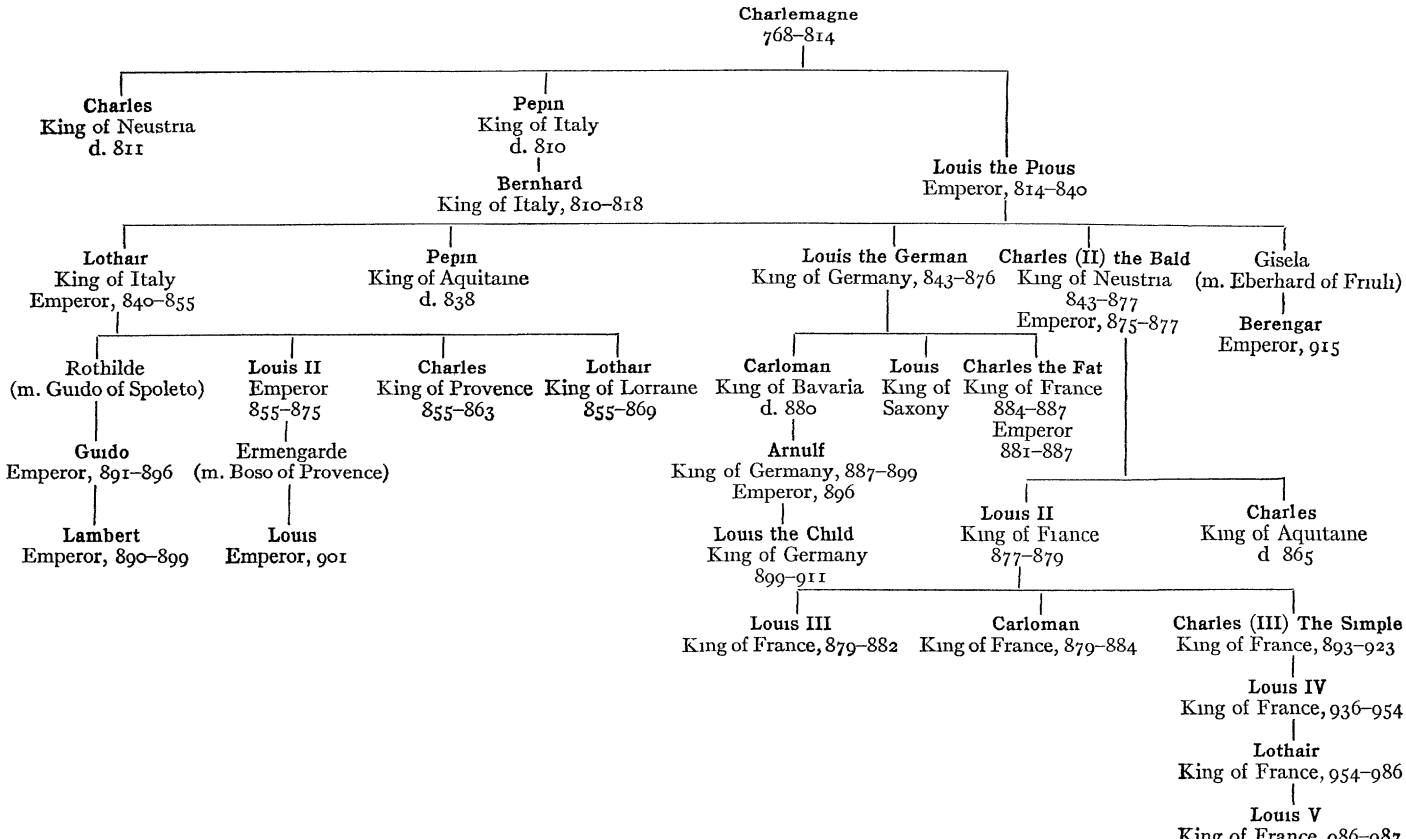
795-796. The Avars (on the lower Danube) were reduced.

801. After the Frankish defeat at **Roncesvalles** (778), the Moslems in northeastern Spain were gradually reduced (Barcelona taken, 801), and the **Spanish March** created

Establishment of marks (after c 782) to hold the conquests Dane Mark, the Altmark (against the Wends), Thuringian Mark, Bohemian Mark, Ostmark (against the Avars), Friulian Mark (on the Italian border), and the Spanish Mark. These marks were also centers of colonization and germanization

Relation to the Church and to Constantinople. Charlemagne held it to be his duty to defend the Church and the pope, and to maintain the faith He treated the pope like any Frankish bishop, but recognized his unique spiritual prestige His visit (774) to Rome was the first of a Frankish sovereign: the Donation of Pepin was confirmed, but the terms are not clear. The pope crowned Charles' son, Pepin, King of Italy (781), his son Louis, King of Aquitaine.

REVIVAL OF THE ROMAN EMPIRE IN THE WEST. Pope Leo III, a submissive pontiff, notified Charlemagne of his election to the Holy See, and dated his pontificate by Charlemagne's regnal years Driven from Rome (799) by a conspiracy and riot, he sought refuge at Charlemagne's court and was restored by Frankish troops



800. **Charlemagne** arrived in **Rome,** allowed Leo to clear himself of a series of charges by oath (avoiding the trial of a pope), and was crowned emperor in St Peter's on Christmas Day. According to Einhard, Charlemagne avowed his regret at the coronation He cannot have been unaware of the general plan, and his feeling may have been due to modesty or concern at Byzantine reactions or hostility to papal pretensions Charlemagne disregarded the imperial title in a partition of the empire (806), and arranged to have his son Louis crown himself (813) Theoretically the coronation of 800 marked a return to the dualism of Theodosius I (i e two emperors over an undivided empire). In fact the Frankish Empire was more German than Roman in population and institutions Byzantium regarded Charlemagne as a usurper; Charlemagne seems to have meditated a marriage with the Empress Irene as one solution of the difficulty. The papal coronation, an act of rebellion in Byzantine eyes, marked a definite break between Rome and Constantinople. The Emperor Michael I recognized (812) Charlemagne's title in the west in return for sovereignty in Venice, Istria, Dalmatia.

GOVERNMENT: (1) **In the Church:** Charlemagne's rule was a theocracy, and he insisted on supremacy over the Frankish Church, legislating on all subjects, settling dogmatic questions, deciding appointments, presiding at synods. (2) **In the Frankish state:** centralization continued; taxation in the Roman sense (which survived only under local and private auspices) was replaced by services in return for land grants (the economic basis of Carolingian society). Such services included forced labor on public works among the lower ranks, the provision of food for the court and public officials on duty, and judicial and military obligations (primarily among the upper ranks). Charlemagne's continuous campaigns reduced the small farmers, accentuating the tendency to serfdom. Charlemagne tried to offset this tendency by allowing groups of poorer farmers to co-operate in sending a single soldier, and by excusing the poorest from ordinary field service. Systematization of the army and of military service was also begun Commendation and immunity continued, and the basis of later feudal development was firmly established.

Administration: The tribal dukes were largely eliminated and government was carried on by counts, appointed for life, but frequently removed. This system was extended to Italy, Bavaria, and Saxony. To prevent the counts establishing an hereditary tenure, and to limit local abuses, the *missi dominici* (usually a bishop and count) were introduced (802) as officers on circuit in a given district The *missi* held their own courts, had power to remove a count for cause, and were charged with the supervision of financial, judicial, and clerical administration. They formed an essential link between the local and central government. Under the counts were viscounts and vicars (*centenarii*) Margraves (*Mark grafen*) were set over the marks with extended powers to meet the needs of their position. Local administration of justice was reformed by the introduction of *scabini*, local landowners appointed by the counts to sit as permanent judiciary officers

The Carolingian revival of learning: Charlemagne, perhaps out of concern for the improvement of ecclesiastical education, set up the Palace School under **Alcuin** from the School of York, later Abbot of Tours. Various clerics were also given liberal grants that they might establish local schools, though no general system of education was introduced in the Frankish Empire. In general, the source of inspiration was Latin

The Carolingian Dynasty

rather than Greek. **Einhard,** for example, who came to the Palace School from Fulda, wrote his biography of Charlemagne in the manner of Suetonius At Charlemagne's court were gathered scholars and literary men of almost every nationality, including **Peter of Pisa,** the grammarian, the Visigothic poet **Theodulf,** the Lombard historian, **Paul the Deacon** (*History of the Lombards*) Great care was given to the copying of texts, and the refined Carolingian minuscule was evolved.

814-887. THE DISINTEGRATION OF THE CAROLINGIAN EMPIRE

Such efficiency as the Carolingian government possessed under Charlemagne derived rather from his personality than from permanent institutions Local administration was carried on by unpaid officials whose compensation was a share of the revenue Local offices tended to become hereditary The tentative partitions of the empire in Charlemagne's lifetime followed Frankish tradition, and had no relation to any racial or national elements One son, Louis the Pious, survived, and the empire was passed on to him (quite by accident) undivided The decisive stage in the partition of the empire came under Louis and his heirs

814-840. LOUIS the Pious (emperor), educated at the Palace School, crowned in his father's lifetime Sincerely religious, a reformer of his court, the Frankish Church, and the monasteries, he allowed himself to be crowned again by the pope (816). Ineffectual as a soldier and ruler Louis and his heirs concentrated on a long struggle (leading to civil war) over territorial questions, to the neglect of government, foreign policy, and defense, a program which hastened the breakup of the empire.

817-838. A significant series of **partitions** involving Louis' sons. Lothair (d 855), Louis the German (d. 876), Pepin (d 838), and their half-brother, Charles the Bald (d 877)

The division of 817: Aquitaine and parts of Septimania and Burgundy went to Pepin as sub-king; Bavaria and the marches to the east were assigned to Louis the German as sub-king undivided, Francia, German and Gallic, and most of Burgundy were retained by Louis and his eldest son Lothair. Italy went to a third sub-king

The division of 838: Charles the Bald was assigned Neustria and to this was added Aquitaine on the death of Pepin Charles' holding, which had no name, approximated (accidentally) mediaeval France and was mainly Romance in speech.

840-855. LOTHAIR I (emperor). On the death of Louis the Pious the three heirs continued their struggle, and after the indecisive **battle of Fontenay** (841) Carolingian prestige sank to a new depth. Charles the Bald and Louis the German formed an alliance against Lothair (who was supported by the clergy in the interests of unity) in the bilingual (Teutonic and Romance) **Oaths of Strassburg** (842), sworn by the rulers and their armies, each in their own vernacular They then forced a family compact upon Lothair at Verdun.

843. THE TREATY OF VERDUN divided the administration and control of the Carolingian Empire as follows: (1) **Lothair** kept the (empty) title of emperor, and was King of Italy and of an amorphous territory (the "middle kingdom") which was bounded roughly by the Scheldt, the upper Meuse, Saône, and Rhone on the west, and by the Rhine and Frisia on the east (i e the territory of Provence, Burgundy, and what was later called *Lotharingia*). (2) **Louis the German,** as King of the (East) Franks, ruled a realm essentially Teutonic in blood, speech, and geography, extending from the Rhine (except Frisia) to the eastern frontier of the empire. (3) **Charles the Bald,** as King of the (West) Franks, received a realm (loosely called Karolingia for a time) made up of West Francia and Aquitaine, Gascony, Septimania, etc., mainly Romance in speech, approximating mediaeval France in general outline

855-875. LOUIS II (emperor). At Lothair I's death his lands were divided as follows among his sons Louis II received Italy, Charles (d. 863) the newly formed Kingdom of Provence (centered around the city of Arles), and Lothair II the inchoate aggregate (from Frisia to the Alps and from the Rhine to Scheldt) which began to be called *Lotharii regnum* or *Lotharingia* (modern Lorraine)

870. Treaty of Mersen, following the death (869) of Lothair II, King of Lorraine Louis the German forced Charles the Bald (crowned King of Lorraine, 869) to divide equally and solely on the basis of revenue the lands of Lothair outside of Italy. Thus Louis gained a strip of land which brought his frontier west of the Rhine

875-877. CHARLES THE BALD, emperor.

877-881. Anarchy and interregnum in the empire.

879. The **Kingdom of Burgundy** (Cisjuran Burgundy) was established by Boso of Provence.

888. The **Kingdom of Juran Burgundy** (i e Besançon, Basel, Lausanne, Geneva, etc.) was erected by Rudolf I. It passed to the empire by bequest in the time of Conrad II

c. 787-925. THE NINTH CENTURY INVASIONS:

(1) **In the North.** Bands of Northmen (Scandinavians, p 170), under pressure of population and resentful at the rise of local kings, pushed outward from Scandinavia The Swedes penetrated into Russia, the Norwegians and Danes moved into the northern islands (including the British Isles) and south to the Continent. Within a half century of the first raid (c. 787) on England, the British Isles had been flooded Masters of the sea in the west, the Northmen pushed inland from the mouths of the great rivers (e g. Rhine, Scheldt, Somme, Seine, Loire), sacking the cities (e g Utrecht, Paris, Nantes, Bordeaux, Hamburg, Seville). "Normandy" was invaded (841) and a simultaneous attack made (845) on all three Frankish kingdoms The Mediterranean was entered (843). In the east Constantinople was attacked by Swedes (*Rus*), who came down from Russia. A great attack on Paris (885) was heroically met by Count Odo (Eudes), son of Robert the Strong Raids were pushed farther into France and the Mediterranean in the course of the 9th century

(2) **In the East.** Bulgarian expansion produced a great Bulgar state between the Frankish and Byzantine Empires. The Bulgars were converted to the Greek communion (870). Hungarians (Magyars), closely followed by Petchenegs, crossed the Carpathians and the lower Danube, pushing into Venetia, Lombardy, Bavaria, Thuringia, Saxony, the Rhineland, Lorraine, and Burgundy (925).

(3) **In the Mediterranean.** Moslem domination of Sicily, Corsica, Sardinia, and the Balearic Islands made the Mediterranean virtually a Moslem lake. Raids were almost continuous, Rome was attacked (846) and later Monte Cassino

852-886. Under the combined influence of the disruption of the Carolingian Empire and the pressure of the 9th-century invasions, the great fiefs of France began to appear as the only effective centers of local resistance to invasion, and feudalism may be said to have struck root.

Feudalism. Its origins may be traced to the German *comitatus* and the proprietary system of the later Roman Empire. Essentially it was an informal system of contracts for the disposal of land and honorable services, and was in no sense a form of government. Inseparable from it was the agricultural organization (*manorialism*) which rested on servile tenures and contracts for manual labor and services. Antedating feudalism, manorialism was also derived from the Roman proprietary system. The feudal system evolved in each country under local conditions and followed a different development The feudalism of France is ordinarily regarded as typical

g. THE WEST FRANKS UNDER THE CAROLINGIAN KINGS, 843-987

843-877. CHARLES THE BALD (emperor, 875–877) His kingdom under the **Treaty of Verdun** was roughly equivalent to modern France with additions in the north and south and a restricted frontier on the east Charles was effective master of Laon, but his sway over Neustria was nominal, his control sporadically maintained by war and intrigue. Charles granted three great fiefs as a buffer for his frontiers The County of Flanders to his son-in-law, Baldwin Iron-Arm (862), Neustria to Robert the Strong as "Duke between Seine and Loire", the French Duchy of Burgundy to Richard, Count of Autun Brittany (Armorica) was semi-independent under its own dukes and counts in the 9th century and continued so virtually to the end of the Middle Ages Aquitaine, joined to Neustria for Charles (838), soon emerged as a duchy and was consistently hostile The Duchy of Gascony was joined to Aquitaine in **1052.** From Neustria were carved the Counties of Anjou (870) and Champagne Septimania remained refractory

870. Carloman, Charles' son, emerged from monastic retirement and led a series of intrigues which ended when he was blinded and fled to his uncle, Louis the German He died in 874 Charles was further weakened by his intrigues in Lorraine and Italy, and by his efforts to win the imperial crown, leaving France open to invasion, anarchy, and brigandage

The crown, impotent and virtually bankrupt, commanded no respect from magnates or prelates, and the **Capitulary of Mersen** (847) shows clear evidence of the progress of essentially feudal ideas every free man is to choose a lord, none may quit his lord, each must follow his lord in battle. It must be noted that this was purely a military measure. France was already divided into *comtés* under counts theoretically removable by the king

875. Expedition of Charles to Italy and imperial coronation.

877. The Capitulary of Kiersy made honors hereditary, but lands were still granted only for life.

877-879. LOUIS II (*the Stammerer*), son of Charles the Bald, maintained himself with difficulty despite the support of the Church. His sons

879-882. LOUIS III and

879-884. CARLOMAN divided their heritage, Louis taking Neustria, Carloman Aquitaine, Septimania, and Burgundy, and reduced their rivals to impotence. Louis' victory over the Northmen (Saucourt, 881) did not stop their raids

884-887. CHARLES THE FAT, son of Louis the German, already King of the East Franks (879) and emperor (881-887), was chosen King of the West Franks instead of Charles the Simple, the five-year-old brother of Louis and Carloman Charles the Fat, having failed (886) to aid the gallant Odo (Eudes) against the Northmen, was deposed (887).

888-898. Odo (Eudes), Count of Paris, Marquis of Neustria (son of Count Robert the Strong, whence the name *Robertians* for the line before Hugh Capet) was elected King of the West Franks by one faction of magnates to avoid a minority on the deposition (887) of Charles the Fat Another faction chose Charles III, the Simple, son of Louis II (Carolingian). Despite five years of civil war

893-923. CHARLES III ruled from Laon, the last Carolingian with any real authority in France Charles, unable to expel the Northmen from the mouth of the Seine, granted (911) Rollo (Hrolf the Ganger, d 931), a large part of what was later Normandy, for which Rollo did homage

Formation of Normandy. Rollo was baptized (912) under the name **Robert,** acquired middle Normandy (the Bessin, 924) and the western part of the duchy (Cotentin and Avranche, 933). The colony was recruited with fresh settlers from Scandinavia for the best part of a century, and was able to retain a strong local individuality. Yet soon after 1000 the duchy was French in both speech and law. Between this period and the accession of Duke William I (the Conqueror) Norman history is fragmentary

923-987. **The French kingship. Robert,** Count of Paris, *Duke between the Seine and Loire*, won the West Frankish crown with the aid of his sons-in-law, Herbert, Count of Vermandois, and Rudolf, Duke of Burgundy, but was killed (923), leaving a son (later Hugh the Great) too young to rule

929-936. RUDOLF followed Robert as the foe of Charles the Simple, and ruled with no opposition after Charles' death. **Hugh the Great,** master of Burgundy and Neustria, declined the crown, preferring to rule through the young Carolingian heir,

936-954. LOUIS IV, a son of Charles the Simple. Hugh's title, *Duke of the French*, seems to have implied governmental functions as much as territorial sovereignty, and he held most of the northern barons under his suzerainty.

954-986. LOTHAIR succeeded his father Louis IV. On the death of Hugh the Great, his son Hugh, known as *Capet*, succeeded him (956).

978. Lothair's effort to gain Lorraine led to an invasion by Emperor Otto II to the walls of Paris. Hugh Capet, in alliance with Emperor Otto III, and aided by Gerbert of Reims, reduced Lothair's rule at Laon to a nullity. Lothair's son

986-987. LOUIS V was the last Carolingian ruler of France

987. ELECTION OF HUGH CAPET, engineered by Adalbero, Bishop of Reims, and by Gerbert Hugh was crowned at Noyon with the support of the Duke of Normandy and the Count of Anjou. His title was recognized by the Emperor Otto III in exchange for Hugh's claims to Lorraine. The emergence of the new house of Capet was not the victory of a race, a nationality, or a principle, but the triumph of a family, already distinguished, over a decadent rival. (*Cont p.* 225.)

h. GERMANY UNDER THE CAROLINGIAN AND SAXON EMPERORS, 843-1024

843-876. LOUIS THE GERMAN Increasing Slavic and Norse pressure (general Norse attack, 845, on Carolingian lands). Louis had three sons Carloman (d 880), Louis (d. 882), and Charles the Fat. Carloman was assigned Bavaria and the East Mark; Louis, Saxony and Franconia, Charles, Alamannia. Contest with Charles the Bald for Lorraine. By the **Treaty of Mersen** (870) Louis added a strip of land west of the Rhine.

876-887. CHARLES THE FAT. He blocked Charles the Bald's advance toward the Rhine. Emergence of the Kingdom of Cisjuran Burgundy (i e. Dauphiné, Provence, part of Languedoc) under Boso (879). Expedition to Italy and coronation by John VIII (881). Negotiations (882) with the Northmen, now permanently established in Flanders While Charles was in Italy settling a papal election, a great Norse invasion burst on France (Odo's defense of Paris, 886). **Deposition of Charles** by the Franconian, Saxon, Bavarian, Thuringian, and Swabian magnates at Tribur (887).

887 (896)-899. ARNULF (illegitimate son of Carloman, grandson of Louis the German). A certain supremacy was conceded to Arnulf by the various rulers of Germany and Italy who rendered a kind of homage to him. Victory over the Norse on the Dyle (Lowen, 891), resistance to the Slavic (Moravian) advance (893), with Magyar aid Magyar raids after 900 Arnulf dared not leave Germany to answer the appeal of Pope Stephen V (885–891) for aid His illegitimate son Zwentibold was sent on the call of Pope Formosus (891–896), but accomplished nothing (893) Arnulf went to Italy in person (894), was crowned king and received an oath from most of the magnates On another appeal from Formosus (895) he took Rome and was crowned emperor (896)

900-911. LOUIS THE CHILD (born 893), last of the Carolingians, elected king by the magnates at Forcheim (900) Increasing Norse, Slavic, and Magyar pressure and devastation

The weakening of the royal power as the East Frankish Kingdom of the Carolingians declined, and the survival of tribal consciousness, left the way open for the emergence of the Stem (German *Stamm*, a tribe) duchies These duchies preserved the traditions of ancient tribal culture, and their independent development under semi-royal dukes (beginning in the 9th century) ensured the disruption of German unity for a thousand years These Stem duchies were Franconia (the Babenbergers ultimately drove the Conradiners into the East Mark, later Austria); Lorraine (not strictly a stem duchy but with a tradition of unity), Swabia (the early ducal history is obscure), Bavaria (under the Arnulfings, repulse of the Magyars, acquisition of the Mark of Carinthia), Saxony (under the Liudolfingers; repulse of the Danes and Wends, addition of Thuringia); the Frisians (no tribal duke appeared)

911. End of the East Frankish line of the Carolingians, with the death of Louis the Child (899–911); the German magnates, to avoid accepting a ruler of the West Frankish (French) line, elected Conrad, Duke of Franconia.

911-918. CONRAD I. Magyar raids and ducal rebellions in Saxony, Bavaria, and Swabia met vigorous but futile resistance from Conrad Lorraine passed (911) temporarily under the suzerainty of the West Frankish ruler, Charles the Simple. Conrad nominated his strongest foe, Henry, Duke of Saxony, as his successor, and he was elected.

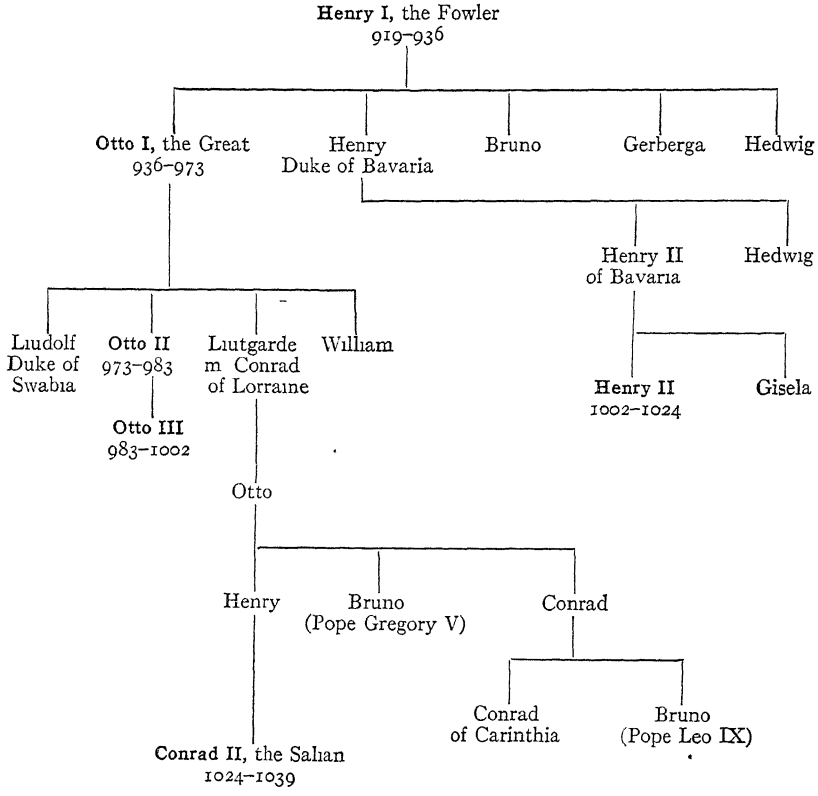
919-1024. THE SAXON (OR OTTONIAN) HOUSE.

919-936. KING HENRY I (called *the Fowler*, supposedly because the messengers announcing his election found him hawking) Tolerant of the dukes, he forced recognition of his authority; cool to the Church, he avoided ecclesiastical coronation.

920-921. Reduction of the Duke of Bavaria, alliance with Charles the Simple

923-925. Lorraine restored to the German Kingdom and unified into the **Duchy of Lorraine,** a center of spiritual and intellectual ferment Henry's daughter married the Duke of Lorraine (928).

924-933. Truce (and tribute) **with the Magyars,** fortification of the Elbe and Weser Valleys (Saxony and Thuringia), palisading of towns, villas, monasteries, etc, establishment of *Burgwarde*, i e garrisons (which later often became towns like Naumburg, Quedlinburg), where one-ninth of the Saxon effectives were on duty and trained as horsemen each year



928. Saxon expedition across the frozen Havel River **against the Wends:** Branibor (Brandenburg) stormed, the Wends driven up the Elbe; creation of the Marks of Branibor, Meissen, and (later) Lusatia as guardians of the middle Elbe

933. Henry ended the Magyar truce with his **victory at Riade** on the Unstrut River, the first great defeat of the Magyars Occupation of the land between the Schlei and the Eider (Charlemagne's Dane Mark), and erection of the Mark of Schleswig, guardian of the Elbe mouth, the Danish king was made tributary and forced to receive Christian missionaries. Henry had prepared the way for his son whose election was a formality, the succession becoming virtually hereditary

936-973. KING OTTO I (*the Great*). Otto revived the policy of Arnulf, was crowned and anointed at Aachen, Charlemagne's capital, his coronation banquet revived the Carolingian coronation banquet (of Roman origin) at which the Duke of Franconia served ceremonially as steward, the Duke of Swabia as cup-bearer, the Duke of Lorraine as chamberlain, and the Duke of Bavaria as marshal

Otto's vigorous assertion of royal authority (a three-year war reduced the Dukes of Bavaria, Franconia, Lorraine, and Saxony) He followed the policy of keeping the great duchies (except Saxony) in his own hands or those of his family. Taking Conrad, the boy King of Arles (Provence and Burgundy), under his protection (937), Otto forced the recognition of his overlord-

The Saxon Emperors

ship (forestalling Hugh of Provence), Conrad's sister, Adelheid, married Lothair, one of the claimants to the crown of Italy, and later Otto himself The Bavarians defeated Otto (944) at Wels, but Otto conquered (950) Duke Boleslav of Bohemia and put the duchy under the suzerainty of Bavaria

951-952 **Otto's first expedition to Italy** to keep the passes through the mountains open Marriage to Adelheid and assumption of the crown of Italy, the pope refused him imperial coronation; Berengar of Ivrea, forced into vassalage, ceded the Marks of Verona, Friuli, Istria (the keys to the passes), to Otto's son Henry, Duke of Bavaria

953. **Revolt of Otto's son** (Liudolf, Duke of Swabia), his son-in-law Conrad (Duke of Lorraine), and others (suppressed, 955)

955. **BATTLE OF THE LECHFELD.** Otto, with an army recruited from all the duchies, ended the Magyar menace by a great victory Defeat of the Wends on the river Rechnitz Re-establishment and colonization with Bavarians of Charlemagne's East Mark (Austria)

968. The bishoprics established among the Slavs (e g Brandenburg, Merseburg, Meissen, Zeiz) were consolidated under the new **Archbishopric of Magdeburg.** German bishoprics were everywhere filled with bishops loyal to the monarchy, marking the alliance of the king and the Church against feudal opposition

961-964. **Otto's second expedition to Italy** on the appeal of Pope John XII

for protection Assumption of the crown of Italy at Pavia.

962. IMPERIAL CORONATION BY THE POPE: REVIVAL OF THE ROMAN EMPIRE IN THE WEST. Otto put a temporary end to feudal anarchy in Rome, deposed one pope and nominated another, and compelled the pope to recognize the emperor's right to approve or reject papal elections

966-972. Otto's third expedition to Italy: deposition of one pope, restoration of another, nomination of a new pope, punishment of the Romans Imperial coronation (967) of the future Otto II and assertion of suzerainty over Capua and Benevento (967) Betrothal of **Theophano** (daughter of the Greek emperor, Romanus I) to the future Otto II (969), coronation of Theophano (972) and marriage to Otto (supposedly bringing Greek Italy as her portion)

Otto, with the able assistance of his brother Bruno, Archbishop of Cologne, began a cultural revival (the so-called *Ottonian Renaissance*) in the manner of Charlemagne; late in life, he learned to read, but not to speak, Latin, Bruno knew Greek The cosmopolitan court literary circle included Irish and English monks, and learned Greeks and Italians, notably **Liutprand of Cremona** (*Historia Ottonis*, *Legatio Constantinopolitana*) Great literary activity of the monasteries: **Widukind of Corvey** (*Res Gestae Saxonicae*); **Roswitha,** the nun of Gandersheim, author of the *Carmen de gestis Ottonis* and of learned Latin comedies in a bowdlerized Terentine style, celebrating saintly virginity; the vernacular *Heliand* (9th century), a Christian epic, **Ekkekard of St. Gall's** *Waltherius*, inspired by German legends.

The German rulers and nobles of the 9th century had regarded the monasteries as their personal property and prepared the way for a strong clerical reaction toward reform supported by the regular clergy (e g. Cluny), opposed by the seculars who were rapidly passing under feudal influences

973-983. OTTO II. The revolt of Henry the Wrangler, Duke of Bavaria, in alliance with Boleslav of Bohemia, and others, required five years to put down, Henry was banished (978). Repulse of a Danish incursion.

978. Lothair, King of the West Franks, invaded Lorraine and was forced to abandon his claims by Otto's invasion of France (980).

981-982. Otto's campaign in southern Italy, to expel the Saracens and reduce the Byzantine power, ended in defeat.

983-1002. OTTO III (an infant of three years) Rule of his brilliant mother Theophano (983–991), his grandmother Adelheid, and Archbishop Willigis of Mainz (991–996) Under Theophano's influence his education was in the Byzantine tradition, his tutor **Gerbert of Aurillac,** one of the most learned men of his day, whose brilliance won him the nickname *Stupor Mundi* Henry the Wrangler proclaimed himself king, but was forced to submit

996. Otto's first expedition to Italy ended Crescentius II's sway in Rome; Otto designated his cousin Bruno as pope (Gregory V).

998. Returning to Rome on his **second expedition to Italy,** Otto deposed the Crescentine pope, John XVI, and decapitated Crescentius Otto made Gerbert of Aurillac pope, as Sylvester II. Sylvester shared Otto's devotion to the Carolingian tradition of an intimate union and cooperation of pope and emperor Otto's romantic antiquarianism led him to a plan of reform through universal imperial overlordship independent of the German crown. He settled down at Rome and began a theatrical restoration of the splendors of the city: palace on the Aventine, Byzantine court and Byzantine titles, futile revival of ancient formulae (seals inscribed *Renovatio imperii romani*, etc), rapid alienation of the Roman populace He left no heir and was buried by his own orders beside Charlemagne at Aachen

1002-1024. HENRY II (son of Henry the Wrangler, cousin of Otto, great-grandson of Henry the Fowler) emerged from the contest for the throne, and was crowned emperor at Rome (1014). Devout (canonized with his wife, St Kunigunde), but a political realist and firm with the Church, he concentrated his attention on Germany Against episcopal objections he founded (1007) the great Bishopric of Bamberg, endowed it richly as an outpost of German culture against Slavdom, the cathedral, one of the glories of German architecture, contains his tomb Vigorous (Gorzian) monastic reform with many confiscations

1002. Successful **revolt of Ardoin** in Lombardy (reduced temporarily in 1004, and finally in 1014)

1003-1017. A long, unsuccessful struggle with Boleslav Chrobry (992–1018) of Poland, Duke of Bohemia, who had acquired Lusatia and Silesia

1006-1007. Unrest in Burgundy and **revolt of Baldwin of Flanders** (suppressed, 1007).

In practice Henry had no choice but to allow the great fiefs to become hereditary He relied heavily on the clergy to supply advisers and administrators, and looked to the Church also for military and financial support, but he dominated the Church in Germany through his control of the episcopal appointments Extensive secularization and reform of the monasteries of the Church resulted (*Cont p* 205)

i. SPAIN

(1) *The Visigothic Kingdom*, 466-711

In the time of **Euric** (466–484) the Visigothic rule extended from the Loire to Gibraltar and from the Bay of Biscay to the Rhone The capital was Toulouse

507. Clovis' victory in the **battle of Vouillé** obliged the Visigoths to withdraw over the Pyrenees, retaining only Septimania north of the mountains The new capital was Toledo

The Visigoths in Spain were a small minority (about one in five) and were rapidly romanized (e g the *Breviary of Alaric*). The conversion of King Reccared (587) from Arianism to Roman orthodoxy brought an end to their religious separateness, accelerated the process of romanization and initiated the domination of the clergy over the monarchy The **Synod of Toledo** (633) assumed the right to confirm elections to the crown After 600 the Jews were forced to accept baptism, for which reason they later on welcomed the Moslem invasion. Visigothic speech gradually disappeared and the current vernacular was of Latin origin Roman organization and tradition survived to a marked degree **Isidore of Seville** (c 560–636), a bishop, theologian, historian, man of letters, and scientist, produced in his *Etymologiae* a general reference work which remained a standard manual for 500 years and served as a medium for the transmission of much ancient knowledge to the mediaeval world

(2) *Moslem Spain*, 711-1031

711-715. THE MOSLEM CONQUEST. In 711 a mixed force of Arabs and Berbers, led by the Berber **Tariq** (whence Gibraltar — *Gebel al-Tariq*) crossed from Africa. Roderick, the last Visigothic king, was completely defeated in the **battle on the Guadalete** (Rio Barbate), whereupon his kingdom collapsed The Moslems took Cordova and the capital, Toledo. Tariq was followed (712) by his master, **Musa**, who took Medina Sidonia, Seville, Merida, and Saragossa. The Moslems soon reached the Pyrenees (719), having driven the remnants of the Christians into the mountains of the north and west

732. In the **battle of Tours** the Moslems, having crossed into France, were decisively defeated by Charles Martel and the Franks By 759 they had been entirely expelled from France.

756-1031. THE OMAYYAD DYNASTY OF CORDOVA.

756-788. Abdurrahman, emir. He was the grandson of the Omayyad Caliph of Damascus, and was the founder of the Moorish state in Spain Christians were given toleration in return for payment of a poll tax The Jews were very well treated. But Abdurrahman met with vigorous opposition from the Arab nobility, which was supported from abroad by Pepin and Charlemagne.

777. Invasion of Spain by Charlemagne, checked by the heroic defense of Saragossa Annihilation of his rear-guard at Roncesvalles (778 — *Song of Roland*). Wars with the Franks continued throughout the rest of the century, Charlemagne ultimately conquering northeastern Spain as far as the Ebro River (capture of Barcelona, 801)

788-796. Hisham, son of Abdurrahman, emir, during whose reign Malikite doctrines were introduced in Spain.

796-822. Hakam, son of Hakam, emir Revolts in Cordova (805, 814) and Toledo (814) The Toledan rebels, expelled from Spain, went to Alexandria and thence to Crete, which they reconquered

822-852. Abdurrahman II, son of Hakam. During his reign Alfonso II of Leon invaded Aragon He was defeated and his kingdom destroyed. The Franks too were driven back in Catalonia The Normans first appeared on the coasts In 837 a revolt of Christians and Jews in Toledo was suppressed, but Christian fanatics continued to be active, especially in Cordova.

852-886. Mohammed I. He put down another Christian uprising in Cordova, and carried on extensive operations against the Christian states of Leon, Galicia, and Navarre (Pampeluna taken 861)

886-888. Mundhir.

888-912. Abdullah, brother of Mundhir.

912-961. ABDURRAHMAN III. The ablest and most gifted of the Omayyads of Spain, who assumed the titles of *Caliph* and *Amir al-Mu'minin* in 929, thus asserting supremacy in Islam as against the Abbasid Caliphs of Bagdad. Abdurrahman's reign was marked by the pacification

of the country, by completion of governmental organization (centralization), by naval activity, by agricultural advance and by industrial progress **Cordova** (population c. 500,000) became the greatest intellectual center of Europe, with a huge paper trade, great libraries, and pre-eminent schools (medicine, mathematics, philosophy, poetry, music, much translation from Greek and Latin).

The height of **Moslem learning** was reached by **Averroes** (ibn Rushd, c 1126–1198), philosopher, physician and commentator on Plato and Aristotle, master of the Christian schoolmen.

The aristocracy, by this time almost extinguished, was replaced by a rich middle class and feudal soldiery The Christians and Jews continued to enjoy wide toleration

Abdurrahman continued the wars with Leon and Navarre, which extended over most of his long reign By the **Peace of 955** with Ordono III of Leon, the independence of Leon and Navarre was recognized and the Moslem frontier withdrawn to the Ebro, on the other hand, Leon and Navarre recognized the suzerainty of the caliph and paid tribute This peace was soon broken by Ordono's brother Sancho (957) who, after his defeat, was expelled by his subjects but restored by the caliph (959)

961-976. Hakam II. He continued the wars against Castile, Leon, and Navarre and forced their rulers to sue for peace (962–970). At the same time he waged successful war against the Fatimid dynasty in Morocco, which was brought to an end (973) and replaced by the Omayyad power

976-1009. Hisham II, whose reign marked the decline of the Omayyad dynasty. Power was seized by Mohammed ibn Abi 'Amir, with the title of *Hajib al-Mansur* (European: *Alamansor* = the Victorious Chamberlain), a brilliant reforming minister (army and administration) He carried on successful campaigns against Leon, Navarre, Catalonia, and Mauretania, and temporarily checked the religious and racial separatism which later on brought about the collapse of the Omayyad Caliphate On his death in 1002 he was succeeded by his son, Abdulmalik al-Muzaffar (the Victorious), who several times defeated the Christians, and was followed by his brother, Abdurrahman, named Sanchol The latter obliged Hisham to proclaim him his heir, whereupon a revolt took place in Cordova under the leadership of Mohammed, a member of the royal family Hisham was compelled to abdicate in favor of Mohammed, and Sanchol was executed In the meanwhile the Berbers nominated Sulayman as caliph. Civil war ensued, reducing Spain to more than a score of petty kingships (*taifas*) and making easier the Christian reconquest.

1027-1031. Hisham III, the last Omayyad caliph.

(3) *Christian Spain*

CASTILE AND LEON, 718-1065

718-737. Pelayo, successor to Roderick the Visigoth, created the **Kingdom of the Asturias,** a theocratic elective monarchy in the Visigothic tradition Beginning of the reciprocal alliance of kings and clergy under

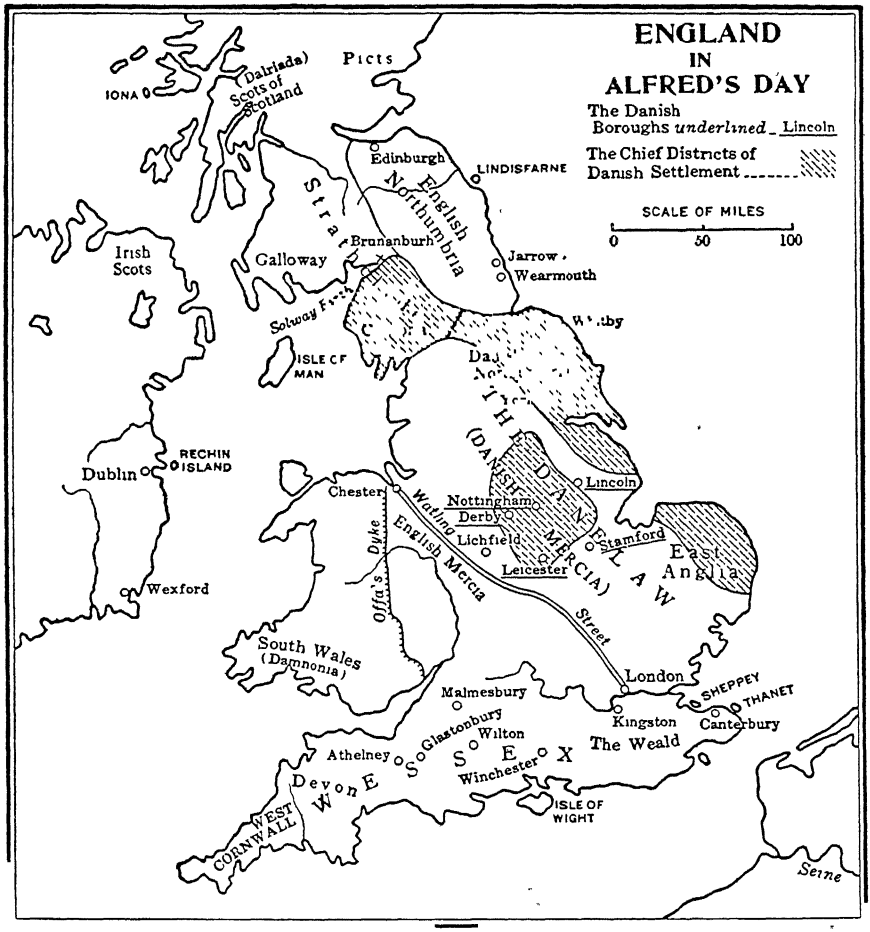
739-757. Alfonso I, who assigned to the Church a generous share of the lands conquered from the Moslems and used the clergy as a counterweight to the aristocracy

899. Miraculous discovery of the bones of **St. James the Greater** and erection of the first church of Santiago de Campostella, which became the center of the Spanish national cult and one of the most influential shrines in Europe

910-914. García, King of Leon, began a rapid expansion of his domain to the east (construction of numerous castles, hence the name *Castile*).

c. 930-970. Count Fernán González, Count of Burgos (later Castile), marked the rise of the Counts of Burgos By intrigue and alliance with the Moslems he expanded his domains at the expense of Leon, and made the country of Castile autonomous and hereditary His progress was arrested by Sancho the Fat of Leon (d 966), who was in alliance with Abdurrahman III.

970-1035. Sancho the Great of Navarre effected a close union of Castile and Navarre and began the conquest of Leon



1035-1065. Ferdinand I, of Castile, completed the work by conquering Leon (1037) and assuming the title of *King of Leon* (*Cont p. 233*)

j. THE BRITISH ISLES

(1) *England to* 1066

Prehistoric Britain. The prehistoric inhabitants of Britain (called *Celts* on the basis of language) were apparently a fusion of Mediterranean, Alpine, and Nordic strains which included a dark Iberian and a light-haired stock Archaeological evidence points to contacts with the Iberian Peninsula (2500 B C) and Egypt (1300 B.C.).

1200-600 B.C. The true **Celts** are represented by two stocks: Goidels (*Gaels*), surviving in northern Ireland and

high Scotland, and Cymri and Brythons (*Britons*) still represented in Wales. The Brythons were close kin to the Gauls, particularly the Belgi. Their religion was dominated by a powerful, organized, priestly caste, the Druids of Gaul and Britain, who monopolized religion, education, and justice.

57 B.C.-c. 450 A.D. ROMAN OCCUPATION began with Julius Caesar's conquests in Gaul and Britain (57–50 B C), Emperor Claudius' personal expedition and conquest (43 A D) were decisive in the romanization of Britain Reduction of the "empire" (5–40 A D) of Cymbeline and suppression (61) of the national revolt of Boudicca (*Boadicea*). Conquest of Wales (48–79). Construction of the great network of Roman roads began (eventually 5 systems, 4 centering on London) Bath emerged as a center of Romano-British fashion

78-142. Roman conquests in the north began under Agricola, results north of the Clyde-Forth line were not decisive. The Emperor Hadrian completed the conquest of Britain in person construction of **Hadrian's Wall** (123) from Solway Firth to Tyne mouth Firth-Clyde rampart (c 142).

208. Emperor Septimius Severus arrived (208), invaded Caledonia (Scotland), restored Roman military supremacy in the north, and fixed Hadrian's Wall as the final frontier of Roman conquest

300-350. Height of villa construction in the plain of Britain Chief towns. Verulamium (St. Albans), Colchester, Lincoln, Gloucester, York The skill of the artisans and cloth-workers of Britain was already famous on the Continent in the 4th century. The island south of the Wall was completely romanized.

c. 350. Piratic raids of Irish (*Scoti*) and **Picts** were common, and the Teutonic conquest of Gaul cut Britain off from Rome in the 5th century, leaving the Romano-British to defend themselves against Saxon attacks on the south and east which soon penetrated the lowlands.

410-442. Withdrawal of the Roman legions and the end of the Roman administration coincided with an intensification of Nordic pressure and the influx of **Jutes, Angles, and Saxons,** which permanently altered the racial base of the island By c. 615 the Angles and Jutes had reached the Irish Channel and were masters of what is virtually modern England A Celtic recrudescence appeared in the highlands of the west and northwest The history of Britain for two centuries (c. 350–597) is obscure. Christianity had not made much progress under the Romans

Seven Anglo-Saxon kingdoms, the *Heptarchy*, emerged after the Teutonic conquest: Essex, Wessex, Sussex (probably prevailingly Saxon as the names suggest); Kent (Jutes); East Anglia, Mercia, Northumbria (Angles)

560-616. The supremacy of **Ethelbert of Kent** in the Heptarchy coincided with the

597. Arrival of **Augustine the Monk** and the conversion of Kent to the Roman Church The hegemony in the Heptarchy passed eventually to **Edwin of Northumbria** (which had also been converted)

633. The defeat and death of Ethelbert's brother-in-law Edwin at the hands of the heathen Mercians ended the Northumbrian primacy and temporarily overwhelmed the Roman Church A period of anarchy ensued

633. Oswald of Northumbria called Aidan from Iona, whose mission began the great influence of Celtic Christianity, which for a time threatened to replace the Roman Church.

664. The Synod of Whitby turned Britain back into the orbit of the Roman Church and the Continent, and prepared the way for the decisive rôle of

699-690. Theodore of Tarsus, Archbishop of Canterbury Theodore introduced a strictly Roman parochial system and a centralized episcopal system which became the model for the secular state and created a new concept of kingship National synods brought the rival kingdoms together for the first time, and began the long evolution destined to create English nationality and national institutions, and to spread them through the civilized world.

Theodore's episcopate was marked by the reintroduction of Greco-Roman culture and the permanent establishment of a new cultural tradition which produced **Bede** (673–735), the father of English literature, and culminated in the wide influence of the great School at York, which extended to the Continent (e g **Alcuin** at the court of Charlemagne) The Archbishopric of York was founded, 735 Romance ecclesiastical architecture and church music flourished

757-796. Under Offa II the Kingdom of Mercia, supreme south of the Humber, reached its maximum power, after which it broke up

787. The first recorded raid of the **Danes** in England was followed by the

Danish inundation of Ireland In the pause before the great wave of Viking advance, Wessex under

802-839. **Egbert,** who had been in Charlemagne's service, emerged supreme (conquering Mercia), exercised a vague suzerainty over Northumbria, and received the homage of all the English kinglets.

856-875 Full tide of the first Viking assault Wessex was the spearhead of resistance

871-899. **ALFRED THE GREAT** purchased peace until he could organize his forces and build up a navy. Almost overwhelmed by the winter invasion of 878, he finally defeated the Danes and forced the **Peace of Wedmore,** whereby Guthrun the Dane became a Christian and divided England with Alfred The *Danelaw,* north of the Thames-Lea line, went to Guthrun, the south, together with London, went to Alfred.

878-900. The Danes were masters of the northeast, and under Danish pressure **Scotland** began to take on shape and unity.

Alfred proceeded to organize the defense of his kingdom. London was walled and garrisoned with burghers charged with its defense Earth forts (*burhs*) of the Viking type were thrown up and garrisoned The *fyrd* and the fleet were reorganized, the army increased, the *thegns* began to be used as a mounted infantry Henceforth all citizens of the requisite wealth were forced to thegnhood, i e. to join the military class attached to the royal household A Danish reaction (892–896) was firmly put down

Alfred's patronage of **learning.** Foreign scholars and learned refugees were welcomed at court Alfred translated Bede's *History,* Orosius, and Boethius' *Consolatio* into the vernacular To provide trained administrators, Alfred established schools for the sons of thegns and nobles. The Anglo-Saxon *Chronicle* was started.

899-924. **Edward,** Alfred's son, succeeded him, and with his sister, Ethelfreda of Mercia, began the conquest of the Danelaw, which was completed under

924-939. **Ethelstan,** Edward's son The sons of Alfred were the first true kings of England; his grandson **Edgar** (959–975) was recognized as such. Archbishop Dunstan, Edgar's chief counselor, was a great ecclesiastical reformer (simony and morals) of the Church and the people He followed a policy of fusion and conciliation toward the Danes, and Oda, a full-blooded Dane, became (942) Archbishop of Canterbury The absorption of the Danelaw by Wessex left the Celtic fringe in Scotland and Wales independent under a vague kind of vassalage to the king

As the Danelaw was absorbed, the shire system was extended to it with the old Danish boroughs as a nucleus The administration was often in the hands of men of Danish blood The Anglo-Saxon farmers had no love for war, and the thegns began to emerge as a professional soldier class. The old tribal and clan organization was superseded by a system of quasi-feudal form whereby each man had a lord who was responsible for him at law The great earldoms were beginning to emerge

No common law existed, shire and hundred courts administered local custom with the freeman suitors under the king's representative-ealdorman, shire-reeve, or hundred-reeve From the days of Edgar, the feudal element tended to encroach on royal authority, especially in the hundred courts The old monasticism had been destroyed by the invasions, and the Church in England fell into corruption and decadence, only reformed by the influence of Cluny and Fleury and the Norman Conquest

991 An ebb in Viking raids was followed by a fresh onset during the reign of **Ethelred the Redeless** (978–1016), led by Sven I (*Forked Beard*), King of Denmark *Danegeld* had been sporadically collected under Alfred, now it was regularly levied and used as tribute to buy off the invaders This tax, and the invasions, led to a rapid decline of the freeholders to a servile status Under Canute, the Danegeld was transformed into a regular tax for defense Collection of the Danegeld, originally in the hands of the towns, fell increasingly to the lord of the manor, and it was only a step from holding him for the tax to making him lord of the land from which the tax came

1013-1014. **Sven I** (d. 1014) was acknowledged by the English, and Ethelred fled to Normandy, the home of his second wife, Emma

1017-1035. **King Canute,** one of the two sons of Sven, elected by the Witan The Witan was a heterogeneous body of prelates, magnates, and officials without any precise constitutional status Canute was "emperor," on the model of Charlemagne, over a northern empire which included Denmark, Norway, and England, and, but for his early death, might have played a more important rôle. His reign was marked by conciliation and fusion. The Church was under Anglo-Saxon clergy. Canute maintained a good navy, and his

standing army included the famous *housecarls*, which soon had an Anglo-Saxon contingent. The four great earldoms, Wessex, East Anglia, Mercia, Northumbria, and seven lesser earldoms can be distinguished in this period The greatest of the earls was **Godwin of Wessex.** Canute's sons were incompetent, and his line ended, 1042

Godwin was chiefly responsible for the election of the successor to Canute's line, Edward, son of Emma and Ethelred, who married (1045) Godwin's daughter.

1042-1066. EDWARD THE CONFESSOR, of the line of Alfred, was under Godwin's domination Brought up at the Norman court, speaking French, he tried to Normanize the English court Godwin's influence led to the deposition of the Norman Archbishop of Canterbury and the selection of the Saxon Stigand by the Witan As Stigand had supported an antipope, Alexander II favored the Normans, as did Hildebrand, the power behind the papal throne Godwin's son, **Harold,** succeeded (1053) him as Earl of Wessex, and dominated Edward as his father had Another son of Godwin, Tostig, became Earl of Northumbria Harold (c 1064) was driven ashore on the Channel, fell into the hands of William, Duke of Normandy, a cousin of Edward the Confessor, and was forced to take an oath to aid William to attain the crown of England, which William declared Edward had promised him

1066. Tostig, exiled after the Northumbrian revolt (1065), returned with Harold Hardrada to attack Northumbria The Confessor died in January (1066) and William at once began vigorous preparations for the conquest of England

1066. On Edward's death **Harold** was chosen king by the Witan and was guarding the coasts of England against William when Tostig and Hardrada appeared in the north After a brilliant dash northward, Harold defeated them at **Stamford Bridge** in September, at the very moment that the Norman invaders arrived in the Channel. Rushing southward after his victory, Harold confronted the Normans, who had already landed, with a reduced, wearied, and shaken force, and was beaten and killed in the

OCT. 14. Battle of Hastings, or Senlac.

(*Cont. p* 191)

(2) *Scotland to* 1034

Racial origins obscure. A wave of Neolithic peoples from the Mediterranean was followed by Celts, Goidels, Brythons, Saxons in the 6th century B.C., and then by Picts The Romans arrived at the end of the first century, A D , but made no permanent impression.

450-600. Four political nuclei: Picts (Pentland Firth to the central plain), **Dalriada** (Argyllshire and the islands of Jura and Islay), **"Welsh" refugees** in Strathclyde, **Ida of Bernicia's realm** (from the Tweed to the Firth of Forth)

c. 565. COLUMBA arrived from Iona and converted the King of the Picts to the Celtic Church, giving Scotland her first cultural contact with the civilized world

664. The Synod of Whitby turned England to the Roman Church and temporarily isolated Scotland. The Picts ultimately went into the Roman communion (c 700) and Iona itself followed (716)

685. The English power was broken on the southern frontier, and Scotland began her independent evolution Under **Kenneth I** (d 858) began the first Scottish union.

794. Arrival of the Norse. Iona burned (802), a series of devastations followed.

921. Edward, son of Alfred the Great, was acknowledged lord of Scotland Ethelstan enforced the bond in arms (934) and a Scottish effort to revolt was crushed (937)

1005-1034. Under **Malcolm II,** Lothian was added to the Scottish crown and Strathclyde completed (1034) the union of the four nuclei under

1034-1040. Duncan, but without a homogeneous racial or political basis. The Isles and the north were under Scandinavian dominance, and England aimed to make Scotland her vassal. (*Cont. p* 201.)

(3) *Ireland to* 1171

Racial origins. The Neolithic inhabitants, followed by Celts and Goidels (c. 600–500 B C) The "fifths" (i e Ulster, Leinster, Connaught, East and West Munster) may date from the Goidel arrival. Belgic and other Brythonic migrations (300–150 B C) probably in the southeast Supremacy of the Brythonic **Kingdom of Tara** in the 4th century of the Christian Era The **Picts** pushed into Antrim and Down There is an enormous body of legend dealing with the early origins

431. Traditional date for the arrival of **Bishop Palladius** and his mission

432. PATRICK, a pupil of Germanus of Auxerre, especially trained for this

mission, arrived to continue Palladius' work He founded churches in Meath, Ulster, Connaught, and probably established the Bishopric of Armagh Chieftains were converted, but much paganism survived. Patrick began the education of the priesthood. Patrick's ecclesiastical organization was probably close to that of Britain and Gaul, but with the withdrawal of the Roman legions from the latter countries the Roman connection was cut, and there was a recrudescence of paganism The diocesan organization of Patrick apparently slipped back into the native system

Chieftains, on their conversion, made donations of land to the Church, and at first the ecclesiastical offices seem to have remained in the hands of the sept, with the *coarb* (inheritor) as bishop or abbot The cenobitic organization of the 5th century was that of a sept, whose chief was a Christian Later there was a rigorous form which separated the sexes As the earlier diocesan organization declined, the number of bishops rose to fantastic figures There was a great exodus of Irish scholars and monks to Europe during the 8th and 9th centuries

c. 500-800. The Golden Age of Irish monastic scholarship occurred in the 6th to the 9th centuries A great school founded by **Eudo,** Prince of Oriel (c 450–540), at Aranmore drew scholars from all Europe Establishment of the monastery **of Clonard** (c 520) under Welsh inspiration Here there were said to be 3000 students living in separate, wattled huts under open-air instruction From Clonard went forth the so-called *Twelve Apostles of Ireland,* founding schools all over Ireland and later the Continent.

c. 533. True monasticism began with the work of Columba Columba founded Iona (563), the mother Church of Scotland, whence Aidan, the apostle of England, founded Lindisfarne (635) for the conversion of Northumbria The *Book of Kells* and the flowering of Gaelic vernacular poetry date from this period

590. Columban of Leinster, from Bangor, began his mission to Europe, founding Luxeuil and a great series of other foundations (e g Gall, Wurzburg, Salzburg, Tarantum, Bobbio) The 8th century saw a great wave of missions from the Rhine-Meuse area inland to the Rhone-Alps line. This powerful advance of Celtic Christianity at one time seemed destined to win northern Europe from Rome The chief formal differences from Rome were in tonsure, the date of Easter, the consecration of bishops In the 7th century the Irish Church conformed to Roman usage, but the bond with Rome was not close.

723. Boniface (Winfred) the Anglo-Saxon, arrived on the Continent to begin the organization on Roman lines of the Celtic establishments among the Franks, Thuringians, Alamanni, and Bavarians

Before the coming of the Norse there were no cities, no stone bridges in Ireland, and no foreign trade of importance

795. The first Norse attack Dublin (840), Waterford, and Limerick founded as centers of Norse trade with the Continent Soon a mixed race, the Gallgoidels (whence Galloway) arose, and a Christian decline set in The Scandinavians remained chiefly in the ports

1002-1014. Brian of Munster established his supremacy A period of road- and fort-building At Clontarf (1014) Brian defeated the Norse, ending the domination of Dublin, though the Norse remained in their cities Brian fell in the battle and anarchy followed — the struggle of the O'Brians of Munster, the O'Neils of Ulster, the O'Connors of Connaught — which ended in an appeal to King Henry II of England by Dermond (or Dermot) MacMurrough

1152. The Synod of Kells established the present diocesan system of Ireland, recognized the primacy of Armagh, and the Archbishoprics of Cashel, Tuam, Dublin. Tithes were voted

1167-1171. The Norman Conquest. Henry II, on his accession, had the idea of conquering Ireland John of Salisbury records that on his request as Henry's envoy (1155), Pope Adrian IV sent Henry a letter granting him lordship of Ireland, and a ring as the symbol of his investiture Henry seems never to have availed himself of the papal grant

1167. On the appeal of Dermond MacMurrough, Henry issued a letter allowing Dermond to raise troops in England for his cause Dermond came to terms with Richard of Clare, a Norman, Earl of Pembroke, and with other Normans, most of whom were related to one another A series of expeditions to Ireland brought into the island a group of Norman families (e g Fitzmaurices, Carews, Gerards, Davids, Barries, *et al*), who began to establish a powerful colony, which alarmed Henry

1171. HENRY II, with papal sanction landed in Ireland to assert his supremacy and to reconcile the natives. The **Synod of Cashel,** at which Henry was not present, acknowledged his sovereignty.

(*Cont p* 201)

k. SCANDINAVIA

ORIGINS. References in Pytheas, Pomponius Mela, Pliny the Elder, Tacitus, Ptolemy, Procopius, Jordanes Archaeological remains indicate Roman connections in the 3d century after Christ, but there is no evidence for close continental relations until the Viking period

VIKING PERIOD. Scandinavia developed in isolation during the barbarian migrations until the 2d century after Christ The Viking expansion from Scandinavia itself prolonged the period of migrations in Europe for four hundred years The traditional participation of Scandinavia in the Viking migration through Europe was as follows (1) **Norwegians** (outer passage) raids in Scotland, Ireland, France (Hrolf the Ganger, i e "Rollo") (2) **Danes** (the middle passage) British Isles, France, the Low Countries (3) **Swedes** (eastward passage). across Slavdom to Byzantium (foundation of Novgorod 862, Kiev, c 900) There never was a mass migration, and probably all stocks shared in the various movements to some degree **Causes:** (1) pagan reaction, including renegade Christians, (2) pressure of population, (3) tribal warfare and vassalage of the defeated, especially after 872 (this is the traditional explanation for Rollo's migration, 911), (4) love of gain, (5) fashion and love of adventure.

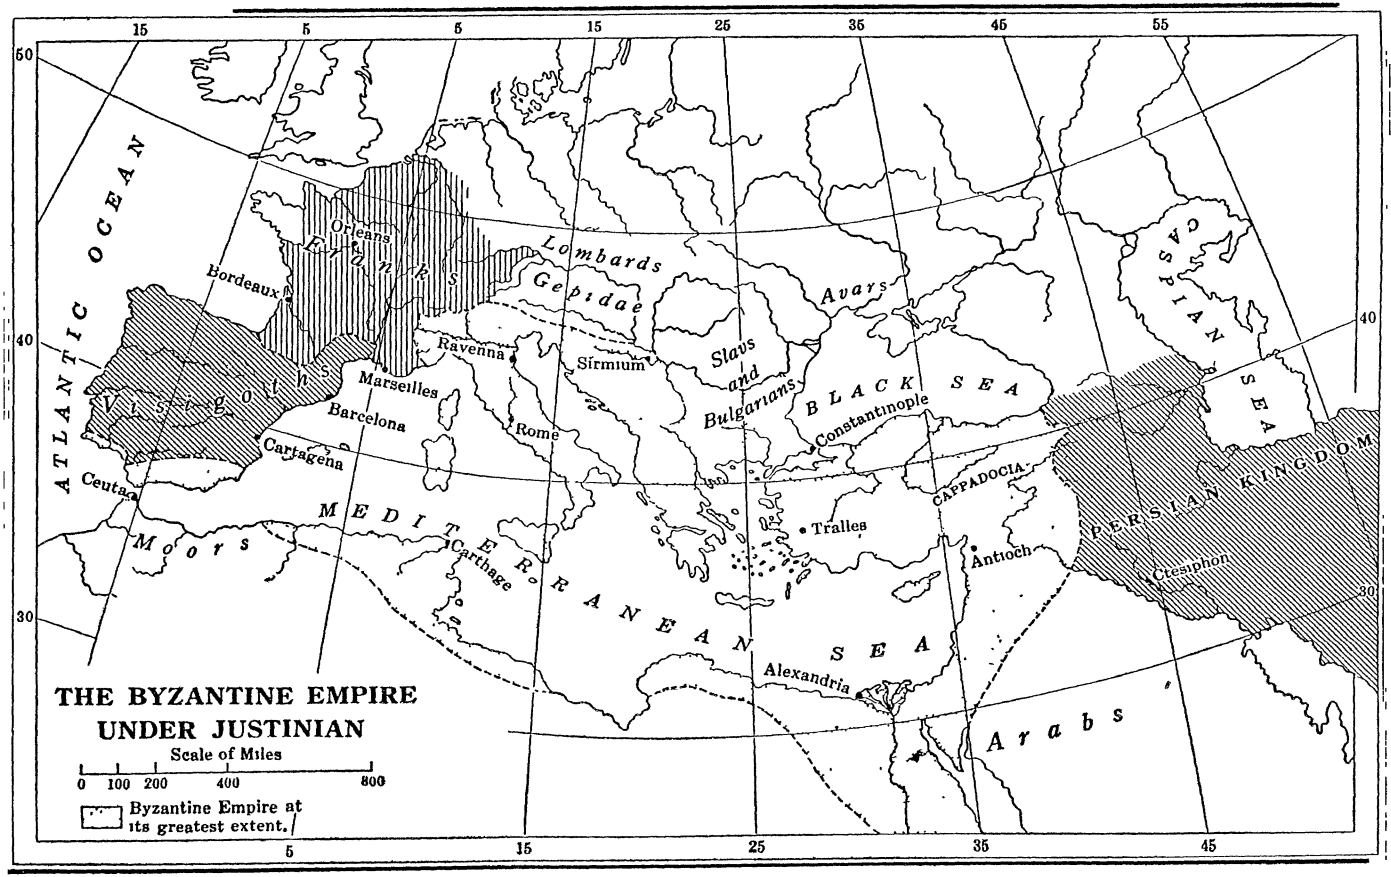
NORWEGIAN COLONIZATION. (1) **Ireland:** the Norwegian conquest began c. 823 and centers were established at Dublin (the kingdom endured until 1014), Waterford, and Limerick Exodus of learned monks to Europe (**Scotus Erigena?**) Attacks by the Picts and Danes The subsequent colonization of the Scottish Islands drew Norwegians from Ireland and accelerated the celtization of the colonists who remained there (2) **The Islands:** Hebrides, Man, Faroes, Orkneys, Shetlands (3) **Iceland:** reached by Irish monks c 790, discovered by the Norsemen in 874 and colonized almost at once, establishment of a *New Norway*, with a high culture (4) **Greenland:** visited by Eric the Red of Iceland (981) and colonized at once, expeditions from Greenland to the North American Continent (p 365) The Norse settlements in Greenland continued until the 15th century.

CIVILIZATION. Large coin hoards indicate the profits of raids and trade with the British Isles, Mediterranean, Byzantium, and Moslem Asia Export of furs, arms (to eastern Europe), and mercenary services to rulers (e g bodyguards of Ethelred, Canute, Slavic princes, Byzantine emperors). Trade eastward was cut off by the Huns and Avars (5th and 6th century), but resumed after Rurik's expedition (862) reopened Russia.

Runes (from a Scandinavian root, meaning to inscribe) were already ancient in the Viking period, and probably are modified Roman letters The *Eddas*, dramatic lays (prose and verse) of the Norwegian aristocracy (especially in Iceland) dealing with gods and heroes (many in the German tradition, e g Sigurd and the Nibelungs), are the highest literary production of heathen Scandinavia

Scandinavian society rested on wealth from raids and commerce and consisted of a landed aristocracy with farmer tenants with the right and obligation to attend local courts, there were few slaves The only general assembly was the *Allthing* of Iceland (established 930), the oldest continuous parliamentary body in existence

Mythology and religion. The Norwegians had a more complicated mythology than any other Teutonic people. giants, elves, dwarfs, serpents, succeeded by the triumph of **Odin,** his wife **Friga,** and his son **Thor.**



Conversion to Christianity. The first Christians (probably captives) appeared in the 6th century The first Christian missionary was the Anglo-Saxon, **Willibord** (c. 700), who accomplished but little A Carolingian mission (c 820) was welcomed by King Bjorn of Sweden A few years later (c. 831) the Archbishopric of Hamburg was established and became at once the center for missionary work in the north.

(*Cont. p.* 203.)

2. EASTERN EUROPE

a. THE EASTERN EMPIRE TO 1025

527-565. JUSTINIAN. A Macedonian by birth and the chief adviser of his uncle, Justin, since 518 Justinian was a man of serious and even somber temperament, but of strong, even autocratic character, sober judgment, grandiose conceptions. He was strongly influenced by his wife **Theodora** (d. 548), a woman of humble origin, probably unduly maligned by the historian Procopius Theodora was cruel, deceitful, and avid of power, but a woman of iron will and unusual political

Byzantine Empire at its greatest extent.

judgment Justinian's whole policy was directed toward the establishment of the absolute power of the emperor and toward the revival of a universal, Christian Roman Empire The entire reign was filled with wars in the east and in the west, punctuated by constant incursions of the barbarians from the north

527-532. The first **Persian War** of Justinian. His commander, **Belisarius,** won a victory at Dara (530), but was then defeated at **Callinicum** The conflict ended with the **Perpetual Peace of 532,** designed to free the imperial armies for operations in the west

532. **The Nika Insurrection** (so-called from the cry of the popular parties, *Nika* = *Victory*) This was the last great uprising of the circus parties and led to great violence and incendiarism Much of Constantinople was destroyed by fire Justinian was deterred from flight only through the arguments of Theodora Ultimately Belisarius and the forces put down the insurrection with much cruelty (30,000 slain). Therewith the period of popular domination came to an end and the epoch of absolutism began

533-543. **CONQUEST OF NORTH AFRICA.** Belisarius, with a relatively small force, transported by sea, defeated the Vandal usurper, Gelimer, and recovered the whole of North Africa for the empire

535-554. **THE RECONQUEST OF ITALY.** Belisarius landed in Sicily, overran the island, conquered southern Italy from the Ostrogoths and took Rome (Dec 9, 536). The Ostrogoth king, **Witiges,** besieged the city for a whole year (537–538), but failed to take it In the following year Belisarius advanced to the north, took Ravenna and captured Witiges, but, after the recall of Belisarius, the new Ostrogoth leader, **Totila,** reconquered Italy as far as Naples (541–543). He took Rome (546) and sacked it Belisarius returned, captured the city, but then abandoned it to the Goths (549) He was later replaced by **Narses,** who invaded Italy by land from the north with a large army composed chiefly of barbarian mercenaries He defeated the Ostrogoths decisively in the **battle of Tagina** (552) and brought all of Italy under imperial rule.

540. **The Huns, Bulgars,** and other barbarian tribes crossed the Danube and raided the Balkan area as far south as the Isthmus of Corinth

540-562. The great **Persian War against Khusru I** (*Chosroes*) The Persians invaded Syria and took Antioch, after which they attacked Lazistan and Armenia and raided Mesopotamia In 544 they besieged Edessa, but in vain A truce was concluded in 545, but hostilities were soon resumed in the Transcaucasus region The Persians took Petra (549), but lost it again (551) By the fifty-year **Peace of 562,** Justinian agreed to pay tribute, but Lazistan was retained for the empire.

542-546. Constantinople and the empire were visited by a very severe and disastrous epidemic of the bubonic plague

554. The **conquest of southeastern Spain** by the imperial armies Cordova became the capital of the province.

559. **The Huns and Slavs,** having advanced to the very gates of Constantinople, were driven off by Belisarius.

JUSTINIAN AND THE CHURCH. Peace had been made with Rome in 519 and Pope John I had visited Constantinople in 525 Justinian made a great effort to maintain the unity of the western and eastern churches, but this led him into trouble with the **Monophysites** of Syria and Egypt. He attempted to reconcile them also, but with indifferent success The cleavage between Latin and Greek Christianity became ever more marked Justinian suppressed all heresies and paganism (closing of the Neo-Platonic Academy at Athens, 529) Extensive missionary work was carried on among the barbarians and in Africa For the rest the emperor, with a great taste for dogma, set himself up as the master of the Church and arrogated to himself the right to make binding pronouncements in even purely theological matters

ADMINISTRATION. The emperor insisted on honesty and efficiency He abolished sale of offices, improved salaries, united the civil and military powers of provincial authorities, etc In order to hold back the barbarians, he built hundreds of forts along the frontiers and established a regular system of frontier forces (*limitanei*). Financially the empire suffered greatly from the extensive military operations and from the great building activities of the court.

LAW REFORM. In order to clarify the law, Justinian appointed a commission headed by the jurist, **Tribonian.** This commission collected and ordered all the constitutions promulgated since the time of Hadrian and published them as the *Codex Justinianus* (529) There followed the collection of opinions of the jurists, the *Digest* or *Pandects* (533), and a general textbook of the law, the *Institutes.* Justinian's own legislation was collected in the *Novellae* (565) By this great work of codification Justinian assured for the Roman Law an immense prestige and far-reaching influ-

ence, but at the same time diminished its chances of further development

BUILDING ACTIVITY. The period was one of unexampled construction, ranging from whole towns to public baths palaces, bridges, roads and forts, as well as countless churches and cloisters It was a period of much free experimentation and originality, resulting in unusual variety of types, all of them, however, marked by grandeur and splendor The **Church of St. Sophia** (constructed between 532–537 by Anthemios of Tralles and Isidoros of Miletus) is the greatest of the many monuments of Justinian's reign

LITERATURE. An age of revival The *Secret History* of **Procopius**; the historians **Agathias** and **John of Ephesus.** Renascence of Greek classical poetry, creation of religious poetry by **Romanos.**

565-578. JUSTIN II, nephew of Justinian, who seized the throne with the aid of Tiberius, commander of the guard Justin was a careful, economical ruler, who continued the policies of his predecessor, but attempted to concentrate attention upon the economic plight of the empire and the growing danger from the barbarians In 574 he became insane, after which the empire was ruled by Tiberius, in conjunction with the Empress Sophia.

568-571. The Lombard invasion of Italy led to the loss of most of the imperial possessions in the north and center, though Ravenna, Rome, and Naples were retained

572-591. War with Persia, growing out of an insurrection in Armenia, which was supported by the emperor The Persians took Dara (573) and devastated Syria In 575, Khusru ravaged the country as far as Cappadocia, but was finally driven back by the imperial commander, Maurikios.

578-582. TIBERIUS, emperor His reign was marked by a great inundation of the Slavs, who advanced into Thrace and Greece and settled in large numbers, thus changing profoundly the ethnographic composition of the Balkan populations

582-602. MAURICE (*Maurikios*), emperor Like his forerunner, Justin, he pursued a policy of retrenchment, which only made him unpopular in the capital The reign was marked by constant disturbances and by widespread dissatisfaction

583. The Avars, grown to be a formidable power, took the forts along the Danube.

589-591. Last phase of the Persian War. Khusru I had died in 579 In 589 a military revolt led to the deposition of Khusru II, who fled to Constantinople. The emperor, espousing his cause, led a great army to the east (591) and restored him to the throne. In return the emperor received Dara and the larger part of Armenia

591. The Avars raided to the very gates of Constantinople

593. The imperial armies, under **Priscus,** proceeded against the Avars The latter were defeated at **Viminacium** (601) after which Priscus pushed on to the Theiss

602. A mutiny of the troops on the Danube, led by Phocas, resulted in a march to the capital, the outbreak of popular insurrection in the city, and the flight of the emperor

602-610. PHOCAS, emperor He was an untutored soldier, cruel and utterly incompetent Maurice was captured and executed with his sons All his supporters met with a like fate

606-608. Resumption of the Persian War. The Persians again captured Dara and overran Syria and Mesopotamia (608) advancing through Anatolia as far as Chalcedon

610. Conspiracy against Phocas, led by Priscus and supported by the Exarch of Africa The latter sent an army by land which conquered Egypt, while a fleet from Carthage arrived at Constantinople The mob thereupon rose, slew Phocas and proclaimed Heraclius, the son of the exarch, as emperor

610-641. HERACLIUS I, founder of a new dynasty, in whose reign the empire became definitely a Greek (*Byzantine*) monarchy Heraclius found the empire in a parlous state, threatened from the north by the Avars and from the east by the Persians But he showed himself an able organizer, general and statesman, and found in the Patriarch Sergius a courageous supporter.

611-622. The Persian advance. They took Antioch, Apameia, Emesa, and Kaisareia, Damascus (613); Jerusalem (614), which was sacked, the inhabitants and the Holy Cross being transferred to Ctesiphon In 615 the Persians were at Chalcedon. In 619 they conquered Egypt

616. The imperial possessions in Spain were lost to the Visigoths.

619. The Avars appeared at Constantinople, which was threatened on the Asiatic side by the Persians Heraclius was deterred from flight to Africa only by the influence of the patriarch

622-630. DEFEAT OF THE PERSIANS Heraclius, with a newly organized army and supported by a tremendous outburst of religious enthusiasm (the *Byzantine Crusade*), took the offensive against the Persians and carried on three brilliant campaigns in the Transcaucasian region, refusing to allow himself to be distracted by the constant attacks of the Avars in the Balkans In the **battle of Nineveh** (Dec. 12, 627) he won a decisive victory, which enabled him to advance to Ctesiphon (628) The death of Khusrau (628) and dynastic disorders in Persia made possible the conclusion of a victorious peace All the Persian conquests were returned and the Holy Cross restored to Jerusalem

626. The Avars and Slavs attacked Constantinople by land and sea, but were unable to storm the walls This marked the height of the Avar power.

634-641. The Arab conquests (p 184) They took Bostra (634); Damascus (635), by the **battle of Yarmuk** (636) gained all Syria, forced the surrender of Jerusalem (637), overran Mesopotamia (639) and conquered Egypt (640–642)

635. Alliance between the emperor and Kuvrat, King of the Bulgars, intended to break the power of the Avars

638. The *Ecthesis*, a formula elaborated by the Patriarch Sergius and other churchmen in the hope of reconciling the Monophysites, who were welcoming rather than opposing the Islamic advance The formula recognized one will in the two natures of Christ (*monotheletism*), but failed to win acceptance in Syria and Egypt On the contrary, it called forth much opposition in the strictly orthodox Italian and African possessions

641. HERACLIUS CONSTANTINUS, son of Heraclius, became emperor, but died in a few months under suspicious circumstances

641. HERACLEONAS, younger son of Heraclius, emperor, under his mother's tutelage He was almost at once overthrown by the army

641-668. CONSTANS II (*Constantinus*), grandson of Heraclius, emperor He was an energetic and able ruler, who did his utmost to check the Arab advance With this object in view he reorganized the provincial administration by establishing **themes** (*themata*) under military governors with wide powers (*strategoi*) and authority over the civil officials. This system greatly strengthened administrative control and was the basis of the imperial organization for centuries.

643. The Arabs took Alexandria, last outpost of the Greeks in Egypt

647-648. Arab invasion of North Africa.

648. The Arabs, having assembled a fleet, took Cyprus

649. Pope Martin condemned the teaching of the *Ecthesis*, but was soon arrested by the Exarch of Ravenna (653) and sent to Constantinople.

653. The Arab advance continued Armenia was conquered (653) and Rhodes plundered (654) In 655 the Arab fleet defeated an imperial armada under the emperor's own command off the Lycian coast But in 659 a truce was concluded with the Arab commander in Syria

663-668. Transfer of the court to Italy. Constans was intent on blocking the Arab conquest of Sicily and Italy and had dreams of restoring Rome as the basis of the imperial power. But he failed to make any conquests in Italy at the expense of the Lombards and in his absence the Arabs annually invaded and devastated Anatolia.

668. Constans was murdered in the course of a mutiny at Syracuse

668-685. CONSTANTINE IV (*Pogonatus*), the son of Constans, a harsh character, but an able soldier He had been in charge of affairs and had come to Sicily to put down the revolt that had resulted in his father's death On his return to Constantinople, the troops obliged him to accept his brothers Heraclius and Tiberius as co-rulers, but after 680 Constantine was sole emperor His reign witnessed the high point of the Arab attack, accompanied, as usual, by repeated incursions of the Slavs in the Balkans

673-678. The Arab attacks on Constantinople. After a siege by land and sea (Apr.–Sept 673), the assailants blockaded the city and attacked it every year for five years The city was saved by the strength of its walls and by the newly invented **Greek fire,** which raised havoc with the Arab fleet In 677 the Greeks destroyed the Arab fleet at **Syllaeum** and secured a favorable thirty-year peace (678) Never again did the Arab menace become so pressing The empire had proved itself a formidable bulwark of Europe

675-681. Repeated assaults of the Slavs on Thessalonica The city held out, but the settlement of Thrace and Macedonia and northern Greece by Slavic tribes continued uninterruptedly.

679. Appearance of **the Bulgar menace.** The Bulgars, a people of Turkish race, had pressed westward through south-

ern Russia and settled in Bessarabia The emperor failed in his efforts to defeat them there They crossed the Danube, settled in the region between the river and the Balkan Mountains, gradually fused with the Slavs and became largely Slavicized, and founded the first coherent Slavic power in the Balkans

680-681. **The sixth oecumenical council** at Constantinople condemned the monothelite heresy and returned to pure orthodoxy Since the loss of Syria and Egypt, there was no longer any need for favoring the monophysite view The return to orthodoxy was a victory for the papal stand and was probably intended to strengthen the Byzantine hold on Italy In actual fact the Patriarch of Constantinople (now that the Patriarchs of Antioch, Jerusalem, and Alexandria were under Moslem power) became more and more influential in the east and the primacy of the Roman pope was hardly more than nominal.

685-695. **JUSTINIAN II,** the son of Constantine and the last of the Heraclian dynasty. He ascended the throne when only sixteen and soon showed himself to be harsh and cruel, though energetic and ambitious like most members of his family

689. The emperor defeated the Slavs in Thrace and transferred a considerable number of them to Anatolia

692. The Byzantine forces were severely defeated by the Arabs in the **battle of Sebastopolis.**

695. A revolt against the emperor, led by Leontius and supported by the clergy and people, initiated a period of twenty years of anarchy Justinian was deposed and exiled to the Crimea (Cherson)

695-698. **LEONTIUS,** emperor His reign was marked by the domination of the army.

697-698. The Arabs finally took **Carthage** and brought to an end the Byzantine rule in North Africa

698-705. **TIBERIUS III,** made emperor by another revolt in the army. The reign was distinguished by an insurrection against Byzantine rule in Armenia and by constant Arab raids in eastern Anatolia.

705-711. **JUSTINIAN II,** who returned to the throne with the aid of the Bulgar king He took an insane revenge on all his enemies and instituted a veritable reign of terror.

711. The emperor failed to suppress a serious **revolt in the Crimea,** supported by the Khazars. The insurgent troops, under Philippicus, marched on Constantinople and finally defeated and killed Justinian in an engagement in northern Anatolia

711-713. **PHILIPPICUS,** emperor. He proved himself quite incompetent and was unable to check the raids of the Bulgars (reached Constantinople in 712) or the ravages of the Arabs in Cilicia (they took Amasia, 712).

713-715 **ANASTASIUS II,** emperor, the creature of the mutinous Thracian army corps He attempted to reorganize the army, but this led to new outbreaks.

715-717. **THEODOSIUS III,** an obscure official put on the throne by the army. He was helpless in the face of the Arabs, who in 716 advanced as far as Pergamon. The invaders were finally repulsed by the *strategos* of the Anatolian *theme*, Leo, who forced the abdication of the emperor and was enthusiastically proclaimed by the clergy and populace of the capital.

717-741. **LEO III** (*the Isaurian*), founder of the Isaurian dynasty, an eminent general and a great organizer Leo used drastic measures to suppress revolts in the army and re-established discipline by issuing new regulations The finances were restored by heavy, systematic taxation, but steps were taken, by an **agrarian code,** to protect freemen and small holders. By the *Ecloga* (739) the empire was given a simplified law code, distinguished by the Christian charity of its provisions. In the administrative sphere Leo completed the **theme organization,** dividing the original units and making seven *themes* in Asia and four in Europe

717-718. **Second great siege of Constantinople** by the Arabs. The siege, conducted by land and sea, lasted just a year and ended in failure, due to the energetic conduct of the defense.

726. **Beginning of the great iconoclastic controversy.** Leo found the empire generally demoralized and a prey to superstition and miracle-mongering Like many devout persons (especially in the Anatolian regions), he disapproved of the widespread image-worship, which he proceeded to forbid Behind these measures there undoubtedly lay the desire to check the alarming **spread of monasticism,** which withdrew thousands of men from active economic life and concentrated great wealth in the cloisters, which were free from taxation. The first measures led at once to a revolt in Greece (727), whence a fleet set out for Constantinople with an anti-em-

peror This was destroyed by the Greek fire of the imperial fleet The pope at Rome (Gregory II) likewise declared against the emperor's iconoclasm and the population of the Exarchate of Ravenna rose in revolt and made an alliance with the Lombards Only with the aid of Venice were a few crucial stations held by the imperial forces A fleet from the east failed to restore Byzantine authority (731) In revenge the emperor in 733 withdrew Calabria, Sicily, and Illyria from the jurisdiction of the pope and placed them under the Constantinople patriarch

739. The Byzantine forces won an important victory over the Arab invaders of Anatolia in the **battle of Akroinon.**

741-775. Constantine V (*Kopronymos*), the son of Leo and for years associated with him in the government Constantine was autocratic, uncompromising, and violent, but withal able and energetic as well as sincere. A revolt of his brother-in-law, Artavasdos, was supported by the idolaters and by part of the army It took fully two years to suppress it

745. The emperor, taking the offensive against the Arabs, carried the war into Syria

746. The Greeks destroyed a great Arab armada and reconquered Cyprus

746. The empire suffered from the greatest **plague epidemic** since the time of Justinian

751-752. The emperor led a successful campaign against the Arabs in Armenia The Arabs were weakened by the fall of the Omayyad Caliphate and the removal of the capital from Damascus to Baghdad (p 189)

751. The Lombards conquered the Exarchate of Ravenna The pope thereupon called in the Franks and was given the former Byzantine territory by Pepin (*Donation of Pepin*) (p 153).

753. The Church Council of Hieria approved of the emperor's iconoclastic policy. Therewith began the violent phase of the controversy The monks offered vigorous resistance, but the emperor was unbending The monks were imprisoned, exiled, and some even executed; monasteries were closed and their properties confiscated; images were destroyed or whitewashed

755-764. Nine successive **campaigns against the Bulgars.** The emperor won important victories at Marcellae (759) and Anchialus (763), and, despite some reverses, forced the Bulgars to conclude peace (764)

758. The Slavs were defeated in Thrace and a large number of them settled in Asia

772. Renewal of the **war with the Bulgars,** marked by further victories of the emperor

775-780. LEO IV, the son of Constantine In religious matters he simply continued his predecessor's policy.

778-779. Victory over the Arabs at **Germanikeia** (778) and their expulsion from Anatolia

780-797. CONSTANTINE VI ascended the throne as a child, wholly under the influence of his ambitious, unscrupulous, and scheming mother, **Irene,** and her favorites Irene, anxious to secure support for her personal power, devoted herself almost exclusively to the religious question The Arabs, who again advanced to the Bosporus (782), were bought off with heavy tribute (783) On the other hand, the general, Staurakios, carried on a successful campaign against the Slavs in Macedonia and Greece (783).

787. The Council of Nicaea abandoned iconoclasm and ordered the worship of images Tremendous victory for the monkish party, which soon advanced far-reaching claims to complete freedom for the Church in religious matters.

790 The army, opposed to the monks, mutinied and put Constantine in power Irene was forced into retirement The emperor set out on campaigns against the Arabs and Bulgars, but met with indifferent success

792 Constantine recalled his mother and made her co-ruler. She took a vile advantage of him and, after his divorce and a remarriage arranged by her (795), put herself at the head of a party of the monks in opposing the step A rising of the army put her in control and she had her son taken and blinded (797)

797-802. IRENE, the first empress Though supported by able generals (Staurakios and Aetios), she preferred to buy peace with the Arabs (798) and devote herself to domestic intrigue.

800. Resurrection of the empire in the west, through the coronation of Charlemagne The Eastern Empire refused all recognition of the claim

802-811. NICEPHORUS, who was put on the throne by a group of conspiring officials of the government. Irene, deposed, died in 803 Nicephorus

ruler, who carried through a number of much-needed financial reforms.

803. The emperor made **peace with Charlemagne,** the Eastern Empire retaining southern Italy, Venice, and Dalmatia

804-806. The Arabs resumed their raids in Anatolia and ravaged Cyprus and Rhodes, ultimately forcing the conclusion of a humiliating peace

809. Banishment of the monks of Studion, who, under **Theodoros of Studion,** took the lead in advancing claims of church freedom. They went so far as to appeal to the Roman pope and offer to recognize his primacy

809-813. War with Krum, the powerful king of the Bulgars The emperor was defeated and killed in a great battle (811)

811. STAURAKIOS, son of Nicephorus, was emperor for a few months.

811-813. MICHAEL I (*Rhangabé*), brother-in-law of Staurakios, emperor. He proved himself quite incompetent, being unable to check the advance of Krum to Constantinople, or the success of the party of monks in domestic affairs

813-820. LEO V (*the Armenian*), called to the throne by the army. Though personally not much moved by the religious controversy, he could not avoid taking up the challenge of the monks

815. THE COUNCIL OF ST. SOPHIA marked the return to iconoclasm and the beginning of the second period of active and violent persecution of the monks.

817. The emperor won a great victory over the Bulgars at **Mesembria,** Krum having died (814). The Bulgars were obliged to accept a thirty-year peace

820-829. MICHAEL II (*Phrygian dynasty*), succeeded to the throne after the murder of Leo by conspirators

822-824. Insurrection of the general, **Thomas,** in Anatolia. This was supported by the lower classes and encouraged by the Arabs Thomas attempted twice to take Constantinople, but was ultimately defeated and executed in Thrace

826. Crete was seized by Moslem freebooters from Spain and until 961 remained the headquarters of pirates who ravaged the eastern Mediterranean

827-878. Conquest of Sicily by Moslems from North Africa

829-842. THEOPHILUS, emperor He was an arrogant, theologizing fanatic who promulgated a new edict against idolaters (832) and pushed the persecution to the limit.

837-838. War against the Arabs. The Byzantine armies, after invading the caliphate, were repulsed. After a long siege, Amorion, one of the key positions on the frontier, was taken by the Moslems (838)

842-867. MICHAEL III, for whom his mother Theodora was regent. Advised by her brother, **Bardas,** she decided to end the religious controversy

843 Image-worship was restored. This was a great victory for the opposition party, but only in the matter of doctrine. Politically the power of the emperor over the Church remained unimpaired, if not strengthened.

849. Reduction of the Slavic populations of the Peloponnesus, followed by their conversion

856. Theodora was obliged to retire, but her brother Bardas, an able but unprincipled politician, remained the real ruler of the empire by exploiting to the full the weaknesses of the emperor

860. First appearance of the Russians (*Varangians*) at Constantinople

863-885. Missionary activity of **Cyril** and **Methodius** of Thessalonica among the Slavs of Moravia and Bohemia They invented the **Glagolitic** (i e Slavic) **alphabet** and by the use of Slavic in the church service paved the way for the connection of Slavic Christianity with Constantinople

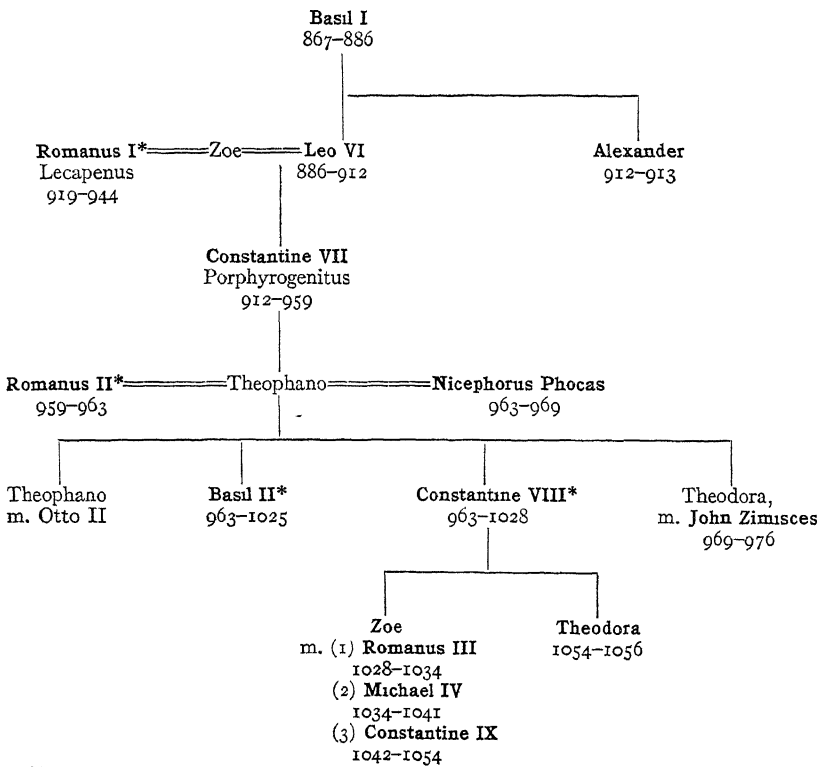
865. Tsar Boris of Bulgaria (852–889) allowed himself to be baptized. Although Michael III acted as godfather, the Bulgarian ruler was for a time undecided between the claims of Rome and Constantinople to religious jurisdiction in Bulgaria

866 Bardas was murdered by Michael's favorite, Basil.

867 Michael himself was deposed and done away with at Basil's order.

867. Schism with Rome. The great patriarch, **Photius,** had replaced **Ignatius** in 858, whereupon the latter had appealed to the pope for an inquiry. Photius came to represent the Greek national feeling in opposition to Rome He took a strong stand towards the papal claims and the **Council of Constantinople** (867) anathematized the pope, accused the papacy of

doctrinal aberrations, rejected the idea of Rome's primacy, etc



867-886. BASIL I, founder of the *Macedonian dynasty* (he was really of Armenian extraction, though born in Macedonia) His reign initiated what was probably the most glorious period of Byzantine history. The empire had by this time become a purely Greek monarchy, under an absolute ruler. Settlement of the iconoclastic controversy released the national energies and there followed a period of brilliant military success, material prosperity, and cultural development An important departure was the recognition of the idea of legitimacy and of an imperial family. This was paralleled by the gradual emergence of a feudal system.

Basil I was himself an intelligent, firm, and orderly ruler, a good administrator and general, whose ambition was to restore the empire both internally and externally He rebuilt the army and especially the navy, and did much to revise the legal system the *Procheiros Nomos* (879), a compilation of the most important parts of the Justinian code, the *Epanagoge* (886), a manual of customary law.

869. The eighth oecumenical synod. Photius had been banished (867) and Ignatius recalled The latter made peace with Rome on papal terms, but conflict and friction continued.

871-879. Campaigns in the east. Border warfare with the Arabs was chronic, but the campaign against the Paulicians (Christian purists hostile to the empire) was a new departure The imperial armies advanced to the upper Euphrates and took Samosata (873) In 878-879 victorious campaigns were carried through in Cappadocia and Cilicia. By land the

The Macedonian Emperors

* Died without male issue.

Byzantine forces were gradually taking the offensive against the Moslems, wracked by internal dissensions.

875. The Byzantine forces seized **Bari** in southern Italy Some years later (880) they took Tarentum and then (885) Calabria, establishing two new themes in southern Italy, which became a refuge for Greeks driven from Sicily by the completion of the Saracen conquest (Syracuse taken, 878, Taormina taken, 902)

877. Photius was restored as patriarch and the break with Rome was renewed.

880-881. A number of naval **victories over the Moslem pirates** of the eastern Mediterranean marked the beginning of a long campaign against this scourge

886-912. **LEO VI** (*the Wise*), a somewhat pedantic philosopher, but nevertheless a determined ruler with a high sense of his office and obligations He deposed Photius at once and put the Ignatians back in power The result was a renewal of the **union with Rome** (900), which, however, could hardly be more than external The reign of Leo was marked also by further legislative work The *Basilika* (887-893) provided a series of 60 new law books, consisting largely of a compilation of decrees since the time of Justinian

889- **War with the Bulgarians,** who now entered the period of greatness under **Tsar Symeon** (893-927) The emperor encouraged the Hungarians to attack by way of diversion and most of Symeon's reign was taken up with continued campaigns against this enemy. Symeon was educated at Constantinople and was deeply impressed with Greek culture, which he introduced in Bulgaria.

904. The Saracen corsair, **Leo of Tripoli,** stormed Thessalonica, plundered it and carried off some 20,000 of the inhabitants

907. **The Russians,** under their prince, Oleg, appeared again at Constantinople and secured rights of trade.

912-913. **ALEXANDER,** the brother of Leo, emperor for less than a year.

913-959. **CONSTANTINE VII** (*Porphyrogenitus*) ascended the throne as a child, with a regency composed of his mother Zoe, the Patriarch Nikolas, and John Eladas Constantine was a learned man of artistic tastes He never really governed, leaving the actual conduct of affairs to strong men who were associated with him

913-917. **The Bulgarian threat.** Tsar Symeon, who had established a brilliant capital at Preslav (seat also of the Bulgarian patriarchate), styled himself Emperor of the Romans, and undoubtedly hoped to possess himself of the imperial crown. In 913 he appeared at Constantinople, in 914 he took Adrianople, only to lose it again But in 917 he defeated a Byzantine army at Anchialus The war continued, indecisively, for years In 924 Symeon again appeared at Constantinople

915. A Byzantine victory over the Arabs at **Garigliano** assured the empire of its possessions in South Italy.

919-944. **ROMANUS LECAPENUS,** co-emperor with Constantine He was the emperor's stepfather, an able but ruthless Armenian, whose whole policy was designed to strengthen his own control and establish that of his family

920-942. Brilliant campaigns of the Byzantine general, **John Kurkuas,** in the east He took the modern Erzerum (928) and Melitene (934), and extended the imperial power to the Euphrates and Tigris.

920. **Official reunion with Rome.**

924. The piratical fleets of **Leo of Tripoli** were completely defeated off **Lemnos.** Nevertheless, the Moslem pirates continued to be the scourge of the Mediterranean.

927. The empire suffered from a **great famine,** which probably explains the stringent legislation of the government to prevent the purchase of small holdings by the great landed magnates

941. A great armada of Russians, under **Prince Igor,** was signally defeated by the Greeks

944. **The Emperor Romanus** was seized and imprisoned (d 948) by the very sons whose interests he had attempted to serve The Emperor Constantine became officially the sole ruler, but governed with the aid of the great general, **Bardas Phocas,** and under the influence of the Empress Helena and her favorite, Basil.

955. Visit to Constantinople and baptism of **Princess Olga** of Russia

959-963. **ROMANUS II,** the young and dissipated son of Constantine

961. **Reconquest of Crete** from the Saracen pirates A great armada was sent out under Nicephorus Phocas. Candia was stormed, the Moslems expelled from the island or converted to Christianity.

962. **Otto I,** Roman emperor in the west, claimed suzerainty over the Lombards in southern Italy, initiating a period of friction with Constantinople, which was only temporarily broken by the

marriage of Otto II and the Byzantine princess, Theophano (972)

963-1025. BASIL II, an infant at the death of his father The principle of legitimacy was carefully respected, but before Basil II really assumed power, the empire was governed by two great generals associated with him

963-969. NICEPHORUS PHOCAS, who had carried on a successful campaign in the east He seized control and married the widowed Empress Theophano Never popular, especially with the clergy, Nicephorus, by his victories in the field, helped to raise the empire to its greatest glory

964-968. Victorious campaign in the east. Adana was taken (964) and then Tarsus (965) Cyprus was reconquered and in 968 northern Syria was invaded **Aleppo** and even **Antioch** fell into the hands of the Greeks

966-969. The Bulgarian campaign, carried through with the aid of Sviatoslav and the Russians The latter, with their fleets, were so successful on the Danube that the Greeks made peace with the Bulgars

969. Nicephorus Phocas was overthrown by a conspiracy of officers led by his own nephew

969-976. JOHN ZIMISCES, an Armenian by birth and one of the greatest of Byzantine generals

969. Sviatoslav, the Russian, crossed the Balkan Mountains and took Philippopolis John Zimisces marched against him, defeated him near Adrianople, and, with the aid of the Byzantine fleet on the Danube, forced him to evacuate Bulgaria (972) John thereupon annexed eastern Bulgaria as far as the Danube to the empire The Patriarchate of Preslav was abolished

971. A great feudal insurrection, led by Bardas Phocas, was put down only with difficulty.

972-976. Continuation of the campaigns in the east. John took Edessa and Nezib (974), Damascus and Beyrut (976), and advanced to the very gates of Jerusalem, where he was halted by the Moslem forces from Egypt

976. Sudden **death of John Zimisces,** at the early age of 51

976-1025. BASIL II (*Bulgaroktonos* = *Slayer of the Bulgarians*) now became sole emperor. He was only 20 years old, but serious and energetic, cynical and cruel. Until 989 he was much influenced by Basil the Eunuch, the illegitimate son of Romanus Lecapenus. The reign of Basil began with another great feudal upheaval, led by Bardas Skleros, who marched his armies from the east through Anatolia and to Constantinople Basil appealed to Bardas Phocas, defeated leader of the earlier rising, to save the situation, which he did by defeating Skleros at Pankalia (979)

976-1014. Tsar Samuel of Bulgaria. He built up another great Bulgarian empire, with its capital at Ochrid and extending from the Adriatic to the Black Sea and from the Danube to the Peloponnesus In 981 he defeated Basil near Sofia

987. Rising of Bardas Phocas and Bardas Skleros against Basil and the imperial authority The great feudal barons overran Anatolia In 988 they threatened Constantinople, but the movement collapsed with the defeat of Phocas at Abydos (989) and his subsequent death. Skleros then submitted

989. Conversion of Prince Vladimir of Russia, at Cherson This initiated the general conversion of the Russians to eastern Christianity and the close connection between Kiev and Constantinople

992. Extensive trade privileges in the empire were granted to **Venice,** by this time quite independent of imperial control, but in close cooperation with Constantinople in the Adriatic

995. Victorious campaigns of the emperor in the east. Aleppo and Homs were taken and Syria incorporated with the empire

996. Land legislation of Basil II. Many of the great estates were confiscated and divided among the peasants and provision made to prevent the further development of feudalism.

996-1014. THE GREAT BULGARIAN CAMPAIGNS. In 996 Basil defeated Samuel on the Spercheios River and reconquered Greece In 1002 he overran Macedonia. Samuel recovered, however, reconquered Macedonia and sacked Adrianople (1003). In 1007 Basil subdued Macedonia again and after years of indecisive conflict annihilated the Bulgarian army at **Balathista** (1014) He sent several thousand blinded soldiers back to Samuel, who died of the shock The Bulgarians finally submitted (1018), but were left their autonomy and an autocephalous church at Ochrid Many of the Bulgarian noble families settled in Constantinople and merged with the Greek and Armenian aristocracy.

1018. The Byzantine forces won a great victory over the combined Lombards and Normans at **Cannae,** thus assuring continuance of the Greek domination in southern Italy

1020. **The King of Armenia,** long in alliance with the Greeks against the Arabs, turned over his kingdom to Basil to escape the new threat from the Seljuk Turks Thereby the empire became firmly established in Transcaucasia and along the Euphrates

BYZANTINE CULTURE reached its apogee in the late 10th and early 11th centuries The empire extended from Italy to Mesopotamia and its influence radiated much farther Constantinople, indeed, was the economic and artistic center of the Mediterranean world

Government: The emperor was an absolute ruler, regarded almost as sacred Under the Macedonian emperors the idea of legitimacy became firmly established The imperial court reflected the emperor's power and splendor There was an extensive and elaborate ceremonial (cf the *Book of Ceremonies* of Constantine Porphyrogenitus), the administration was highly centralized in Constantinople and was unique for its efficiency, the treasury was full and continued to draw a large income from taxes, customs, and monopolies, the army and navy were both at the peak of their development, with excellent organization and leadership, the provinces were governed by the *strategoi*, there were by this time 30 *themes* (18 in Asia and 12 in Europe), but throughout this period there was a steady growth in the number and power of the provincial magnates (*dunatoi*), feudal barons who acquired more and more of the small holdings and exercised an ever greater influence, even challenging the emperor himself All the legislation of the Macedonian emperors failed to check this development.

The Church was closely connected with the throne, but during this period it too became more and more wealthy and gradually produced a clerical aristocracy The union with Rome, when it existed, was a purely formal thing The Greek patriarchate in practice resented the Roman claim to primacy and the popular dislike of the Latins made any real co-operation impossible

Economic life. This was closely controlled by the state, which derived much of its income from the customs and monopolies Yet it was a period of great commercial development, Constantinople serving as the *entrepôt* between east and west It was also a great center of the industry in luxuries (organization of trades in rigid guilds, etc)

Learning. The University of Constantinople (opened c 850) had quickly become a center of philosophical and humanistic study, in which the emperors took a direct interest In the 11th century there appeared the greatest of the Byzantine scholars, **Psellus,** reviver of the Platonic philosophy and universal genius In the field of literature there was a conscious return to the great Greek models of the early Byzantine period, historians, **Constantine Porphyrogenitus, Leo the Deacon,** etc The great popular epic, *Digenis Akritas*, describing the heroic life of the frontier soldiers (*Akritai*), dates from the 10th century

Art The period was one of extensive construction, especially in Constantinople, full exploitation of the St Sophia type in church architecture, mosaics, ikons, gold and silver work Byzantine influence in this period permeated the entire Mediterranean world, Moslem as well as Christian

(*Cont p* 248.)

b. THE FIRST BULGARIAN EMPIRE TO 1018

The Bulgarians, first mentioned by name in 482 as a people living to the northeast of the Danube, were members of the Finno-Tatar race, probably related to the Huns and at first ruled by princes of Attila's family They were organized on the clan system, worshiped the sun and moon, practiced human sacrifice, etc

584-642. **KURT,** or **KUBRAT,** of the Dulo family, the first authenticated ruler. His dominions lay in the eastern steppes. from the Don to the Caucasus In 619 he visited Constantinople to secure aid against the Avars, at which time he became converted to Christianity, though this step seems to have had no consequences for his people

643-701. **Isperikh** (*Asperuch*), the son or grandson of Kurt. The old Great Bulgaria was disrupted by the attacks of Avars and Khazars, and various tribes of Bulgars moved westward into Pannonia and even into Italy Those under Isperikh crossed the Danube (650–670) and established a capital at Pliska In 680 they defeated a Byzantine army and occupied the territory between the Danube and the Balkan Mountains At the same time they still held Wallachia, Moldavia, and Bessarabia. The amalgamation with the Slavic inhabitants was probably very gradual, the upper, military classes remaining strictly Bulgar for a long time

701-718. **Tervel,** who established friendly relations with the Emperor Justinian II, who paid a subsidy or tribute to the Bulgars, but only after the imperial forces had been defeated at Anchialus (708) and after Tervel had advanced to the very gates of Constantinople (712)

718-724. Ruler unknown

724-739. **Sevar,** during whose reign the peace with the empire was maintained The Dulo dynasty came to an end with Sevar, whose death was followed by an obscure struggle of noble factions

739-756. **Kormisosh,** of the Ukil family Until the very end of his reign he maintained peace with the empire, until further domestic disorders gave the signal for Byzantine attacks (755 ff)

756-761 **Vinekh,** who was killed in the course of an uprising

761-764. **Telets,** of the Ugain family He was defeated at Anchialus by the Byzantines (763) and put to death by the Bulgarians

764. **Sabin,** of the family of Kormisosh He was deposed and fled to Constantinople

? 764. **Pagan,** who finally concluded peace with the emperor

766 **Umor,** who was deposed by

766 **Tokt,** who was captured and killed by the Greeks This entire period is one of deep obscurity, the years 766–773 being a complete blank

? 773-777. **Telerig,** whose family is unknown The Greeks renewed their attacks, which were on the whole successful and resulted in the subjugation of Bulgaria.

777-791. Ruler unknown

? 791-797. **Kardam,** whose reign marked the turning of the tide He took advantage of the confusion in the empire to defeat the Greeks at **Marcellae** (792) and to relay the foundations of the state What happened after his death is unknown.

808-814. **KRUM,** one of the greatest Bulgarian rulers. He appears to have been a Pannonian Bulgar, who rose to power as a result of his victories over the Avars. During his short reign he organized the state and encouraged the Slav elements at the expense of the Bulgar aristocracy His objective seems to have been the establishment of the absolute power of the khan; For five years (808–813) he carried on war with the Byzantine Empire. The Greeks sacked Pliska (809; 811), but Krum defeated and killed the emperor in a battle in the mountains (811) In 812 he took the important fortress of Mesembria and in 813 won another victory at Versinicia In the same year he appeared at Constantinople The city was too strong for him, but he retired, devastating Thrace and taking Adrianople

814-831. **Omortag,** the son of Krum After a defeat by the Greeks (815), he concluded a thirty-year peace with them (817), returning Mesembria and Adrianople Construction of the earthwork barrier (the *Great Fence*) on the Thracian frontier Founding of the new capital, **Great Preslav** (821) During the peace in the east, the Bulgars began systematic raids into Croatia and Pannonia (827–829)

831-852. **Malamir,** the son of Omortag, the period of whose reign is vague, excepting for gradual expansion into upper Macedonia and Serbia (839)

852-889. **BORIS I.** He continued the campaigns in the west, but suffered severe defeats by the Germans (853) and a setback from the Serbs (860) Boris' reign was important chiefly for his

865. **Conversion to Christianity.** The way had undoubtedly been prepared by numerous prisoners of war, but Boris was induced to take the step under pressure from Constantinople, where the government was eager to frustrate a possible German-Roman advance Boris had all his subjects baptized, which led to a revolt and the execution of a number of noble leaders. For some time Boris was undecided whether to lean toward Rome or toward Constantinople To counteract the aggressive Greek influence he accepted the primacy of Rome (866), but then turned to Constantinople (870) when the pope refused to appoint an archbishop for Bulgaria In 885 the Slavonic liturgy was introduced among the Slavs of Bulgaria by the successors of Cyril and Methodius In 889 Boris voluntarily retired to a monastery.

889-893. **Vladimir,** the son of Boris, who was soon exposed to a violent aristocratic, heathen reaction.

893. **Boris** re-emerged from retirement, put down the revolt, deposed and blinded his son, completed the organization of the Church and made the Slavonic liturgy general in its application The capital was definitely moved to Preslav. Boris then returned to his monastery, where he died (907)

893-927. **SYMEON,** another son of Boris, the first Bulgarian ruler to assume

the title *Tsar* Symeon had been educated at Constantinople, as a monk He was deeply imbued with Greek culture and did much to encourage translations from the Greek Splendor of Great Preslav and Symeon's court; development of a second cultural center at Ochrid, under St Clement and St Nahum.

894-897. Symeon's reign was filled with **wars against the Byzantine Empire,** which grew originally out of disputes regarding trade rights and ultimately developed into a contest for possession of the imperial throne. The war began in 894, with the defeat of a Greek army The emperor thereupon induced the Magyars, located on the Pruth River, to attack the Bulgarians in Bessarabia (895) Symeon induced the Greeks by trickery to withdraw and then defeated the Magyars, after which he returned and fell on the Greeks at Bulgarophygon Peace was made in 897, the emperor paying tribute

In the meanwhile the **Magyars,** driven westward by the Patzinaks (Pechenegs), advanced into Transylvania and Pannonia, which were lost to the Bulgars

913. Symeon, taking advantage of the dynastic troubles in the empire, advanced to Constantinople, but withdrew with many presents and the promise that the young emperor, Constantine Porphyrogenitus, should marry one of his daughters Symeon evidently hoped to attain the crown for himself, but was frustrated by the seizure of power by Zoe He thereupon made war (914), raiding into Macedonia, Thessaly, and Albania But the Patzinaks, instigated by the Greeks, invaded and occupied Wallachia (917), while Symeon defeated the Greeks near **Anchialus** (917) In 918 Symeon defeated the Serbs, who had also been aroused by the empress

919-924. Symeon four times advanced to the Hellespont and Constantinople, but was unable to take the city because of his lack of a fleet In 924 he had an interview with the Emperor Romanus Lecapenus and finally made peace

925. Symeon proclaimed himself **Emperor of the Romans and the Bulgars.** The Greek emperor protested, but the pope recognized the title

926. Symeon set up Leontius of Preslav as a patriarch.

926. Conquest and devastation of Serbia.

927-969. Peter, the son of Symeon, a pious, well-intentioned but weak ruler, who married the granddaughter of Romanus Lecapenus. Peace with Constantinople was maintained, the Greek emperor recognizing the Bulgar ruler as emperor and acknowledging the Bulgarian patriarchate. Bulgaria was, during this period, occupied by the constant threat from the Magyars (raids, 934, 943, 958, 962) and the Patzinaks (great raid of 944) Internally the period seems to have been one of unrest and religious ferment (founding of monasteries; St John of Rila, beginning of the **Bogomil heresy,** c. 950, a dualistic creed possibly inspired by the Paulicians settled in the Thracian region by the Byzantine emperors)

967. Invasion of Bulgaria by Sviatoslav and the Russians Tsar Peter roused the Patzinaks, who attacked Kiev in 968 and forced Sviatoslav to withdraw

969-972. Boris II. The reign was filled with the second invasion of Sviatoslav, who took Preslav and captured Boris and his family (969) The Greeks, in alarm, sent an army against him and defeated him at **Arcadiopolis** (970). In 972 the Emperor John Zimisces attacked the Russians by land and sea He took Preslav and destroyed it, besieged Sviastoslav at Dristra on the Danube and finally forced him to evacuate Bulgaria Boris was obliged to abdicate, the patriarchate was abolished, and Bulgaria came to an end as a separate state

976-1014. SAMUEL, son of a governor of one of the western districts, which had been unaffected by the Russian invasion, set himself up as ruler He soon expanded his domain to Sofia, and re-established the patriarchate (ultimately fixed at Ochrid, which was the center of the new state)

986-989. Samuel took Larissa after several annual raids into Thessaly and c 989 took also Dyrrhacium on the Adriatic coast In the east he extended his power to the Black Sea

996-1014. The campaigns of Basil II (*Bulgaroktonos = Slayer of the Bulgarians*) against Samuel Basil proceeded to reduce one stronghold after another Samuel avoided open battle as much as possible, but throughout suffered from defection of his leaders, who were bribed by attractive offers by the emperor. The crowning defeat of the Bulgarians at Balathista (1014) and the sight of his 15,000 blinded warriors brought on Samuel's death

1014-1016. Gabriel Radomir (or *Romanus*), the son of Samuel He tried to make peace, but was murdered by his cousin

1016-1018. John Vladislav, who continued the war, but was killed in a battle near Dyrrhachium He left only young sons. The Bulgar leaders thereupon decided to submit Bulgaria was incorporated into the Byzantine Empire (*themes* of Bulgaria and Paristrium), the patriarchate was abolished, but the Archbishop of Ochrid retained practical autonomy The Bulgarian aristocracy settled in Constantinople and merged with the leading Greek families

(*Cont p* 247)

3. THE MOSLEM WORLD

a. MOHAMMED AND ISLAM

Arabia before the time of Mohammed was inhabited by tribes of Semitic race, those in the desert areas (*Bedouins*) of nomadic, pastoral habits, those in the coastal valleys along the Red Sea (Hedjaz, Yemen) much more settled, engaged in agriculture and trade The towns of Mecca and Medina were centers of considerable commercial and cultural development, in which Greek and Jewish influence was probably quite marked

570-632. MOHAMMED. He was the posthumous son of Abdullah of the Hashimite sept of Mecca. Having lost his mother when about six, he was brought up by his grandfather, Abdul-Muttalib, and his uncle, Abu Talib Mohammed became a merchant in the caravan trade, serving Khadija, a widow of means whom he married when he was about 25, thus achieving for himself a modest independence Given to religious meditation and affected by the Christian and Jewish ideas and practices, he began his prophetic career about 612, preaching the One God, the Last Judgment, Alms, Prayers, and surrender to the will of God (Islam) Gaining a few adherents, but rejected and persecuted by his townsmen, he and his followers fled to Medina, on July 2, 622.

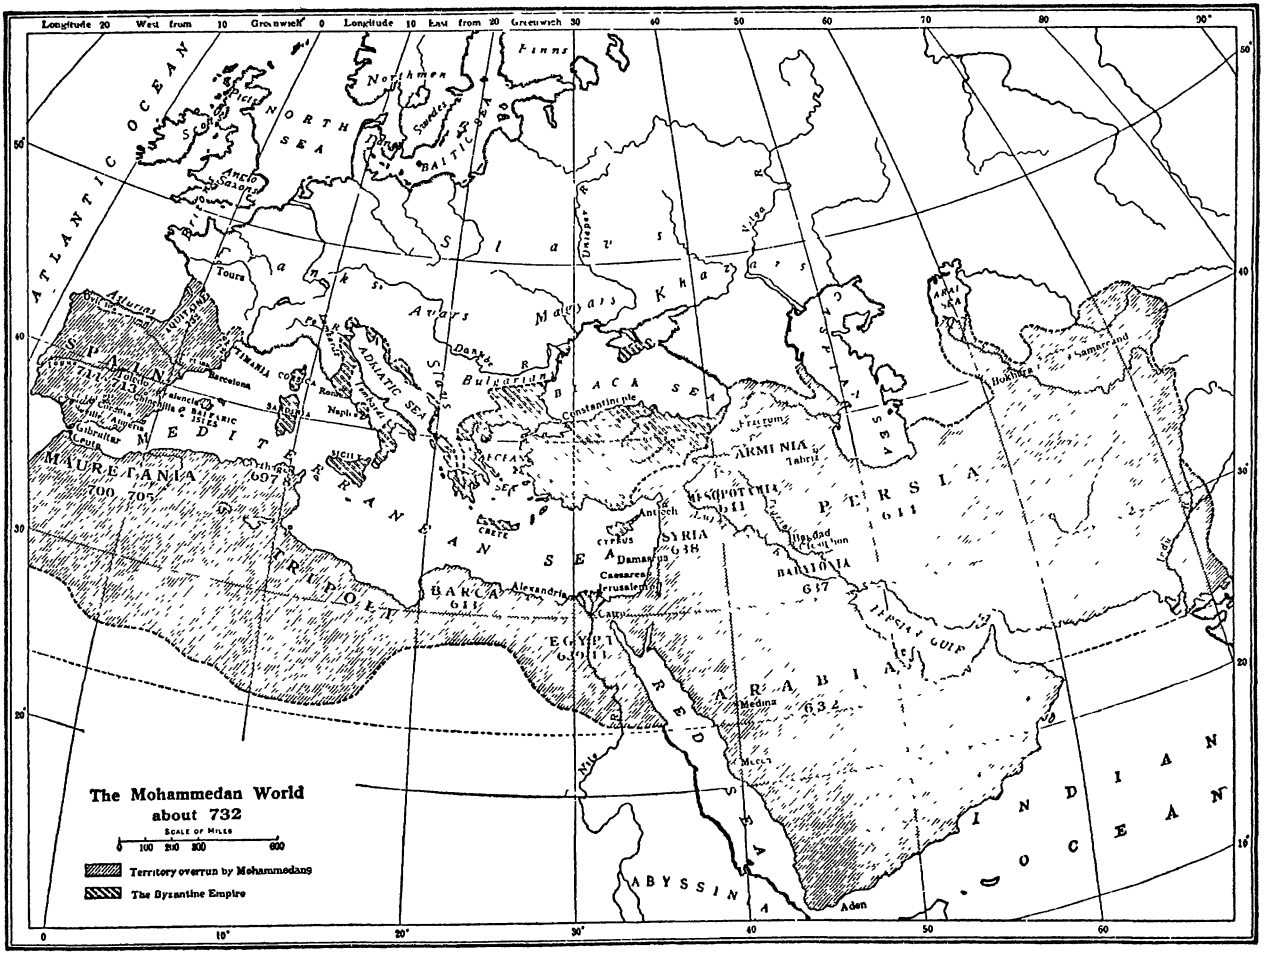
622, July 15. The traditional (though erroneous) date of **Mohammed's flight** (*Hijrah, Hegira*) This date has been adopted as the beginning of the Moslem era

622-632. In Medina, Mohammed organized the **commonwealth of Islam** by welding together the Meccan fugitives and the Medinan tribes in and around the town (the Aus and the Khazraj), and expelling or devoting the Jewish tribes, into a community based on the will of God as revealed to his prophet, and on the common law of the tribesmen. At the same time he carried on war against the Meccans.

624-630. The Moslems defeated the Meccans at **Badr** (624), but were themselves defeated at Ohod (625). The Meccans thereupon besieged Medina (627) but were repulsed By the **Treaty of Hudaybiya** (628) Mohammed and his followers were granted permission to make the pilgrimage to Mecca When the treaty was broken by the allies of the Meccans, the war was resumed and Mohammed took Mecca (630) Many of the Arab tribes were subdued before Mohammed's death (632)

The **six essential articles of the Moslem faith** are Belief in the One God, **Allah,** in his angels, and in his prophet, **Mohammed,** the last of the prophets, belief in his revealed books, of which the *Koran* is the last and the only one necessary, belief in the Day of Resurrection, and in God's predestination, which determines the fate and the actions of men

The **six fundamental duties** are The recitation of the profession of faith, attesting the unity of God and the mission of Mohammed, the five daily prayers, the fast in the month of Ramadhan, the pilgrimage to Mecca, and the Holy War.



632-661. The Orthodox Caliphate, including the first four caliphs

632-634. Abu Bakr, the first caliph or vicegerent of the Prophet, chosen by acclamation Defeat of the so-called false prophets, Tulayha and Musaylima, reduction of the rebellious tribes (632).

632-738. EXPANSION BEYOND ARABIA. First incursion into Iraq (Persia) under **Khalid ibn al-Walid** (633). Hira, the ancient Lakhmid capital, and Obolla taken and put to ransom The main advance, however, was against Syria Defeat of Theodore, brother of the Emperor Heraclius, at Ajnadayn (*Jannabalayn*) between Gaza and Jerusalem (634). Death of Abu Bakr, who appointed as his successor

634-644. Omar, who first assumed the title of *Amir al-Mu'minin* (*Prince of the Faithful*) and established the primacy of the Arabs over their taxpaying subjects.

Conquest of Syria. Defeat of the Byzantines under Baanes at Marj al-Saffar, near Damascus, by Khalid (635) Damascus and Emessa taken, only to be given up, however, under the pressure of superior forces. Decisive defeat of the Byzantines

at **Yarmuk,** south of the Lake of Tiberias (636) Damascus and Emessa retaken Subjugation of northern Syria, Aleppo and Antioch taken Capitulation of Jerusalem (638) Caesarea captured (640) The sea-coast occupied Northern boundary of the caliphate the Amanus Mountains. Subjugation of Mesopotamia (639–641)

Conquest of Persia. After a disastrous defeat at the **Battle of the Bridge,** the Moslems resumed their attack on Persia Invasion and occupation of Iraq (635–637) Defeat of the Persians under Mihran at Buwayb by Muthanna (635) The Persian chancellor, Rustam, defeated by Sa'd ibn-abi-Waqqās at **Qadisiya** (637) Al-Madain (*Ctesiphon*) taken (637) Persians defeated again at Jalula, fifty miles north of Madain (637). Invasion and occupation of central Persia (638–650) Final defeat of the Persians at Nehawand (641).

Conquest of Egypt Invasion of Egypt by the Arabs under Amr ibn al-'As (639) Pelusium taken (640) Byzantines defeated at Heliopolis (640) Death of the Emperor Heraclius (641) Capture of Babylon (642). Capitulation of Egypt arranged by Cyrus, Patriarch of Alexandria (642) Terms security of person and property guaranteed to the inhabitants on payment of a tribute and free exercise of their religion. Omar assassinated (644). His successor was chosen by a body of electors

644-656. Othman, a member of the Omayyad family of Mecca, notorious for his nepotism The official redaction of the *Koran* made by Zayd ibn Thatib in this reign

Occupation of Barqa and the Pentapolis (642–643) Revolt of Alexandria, inspired by the appearance of a Byzantine fleet (645). The city retaken by assault (645) Creation of an Arab fleet by Abdullah ibn Sa'd, governor of Egypt Capture of Cyprus (649) and Aradus (650) Expedition against Constantinople, annihilation of the Byzantine fleet at Dhat al-Sawari on the Lycian coast (655) Disaffection of Arab troops in Iraq and Egypt owing to Othman's nepotism, led to the assassination of Othman in Medina. He was succeeded by

656-661. Ali, the prophet's cousin and son-in-law, whose succession was disputed.

First civil war. Revolt of Talha and Zobayr, two old companions of the Prophet, and 'Aisha, the Prophet's favorite wife, in Iraq They seized Basra, but were defeated by Ali in the **Battle of the Camel,** near that town.

Revolt of Mo'awiya, Omayyad governor of Syria, who demanded revenge for the murder of his kinsman, Othman Indecisive battle of **Siffin** (657). Hostilities suspended by an agreement to arbitrate the dispute Arbitration of Adhroh (658) Rejection of the decision by Ali, who was deserted and opposed by a party of his followers, the Kharijites, whom he decimated at Nahrawan Egypt taken for Mo'awiya by its first conqueror, Amr (658) Murder of Ali by a Kharijite

b. THE OMAYYAD CALIPHATE, 661-750

661-680. Mo'awiya, founder of the Omayyad dynasty.

Hasan, Ali's eldest son, was proclaimed caliph, but abdicated in the face of Mo'awiya's advance on Iraq Mo'awiya, who had been proclaimed caliph in Jerusalem in 660, moved the seat of government to Damascus Expedition against Constantinople, Chalcedon taken, Constantinople besieged (669) Ifriqiya (North Africa from the eastern limits of Algeria to the frontiers of Egypt) invaded and the conquest consolidated by the founding of Qairawan by 'Oqba ibn Nafi' (670) In the east under Mo'awiya's brilliant viceregent, Ziyad ibn Abihi, Sind and the lower valley of the Indus were overrun by Mohallib. Eastern Afghanistan invaded Kabul taken (664) The Oxus was crossed and Bokhara captured (674) Samarcand taken (676). Moslem advance to the Jaxartes.

Blockade of Constantinople by the Moslem fleet (673–678) Failure of the Moslem attack. Peace concluded for thirty years (678). Death of Mo'awiya, who had proclaimed as his successor in 676,

680-682. Yazid I.

The second civil war. Husayn, the second son of Ali, was invited by the Kufans in Iraq to assume the caliphate Advancing from Mecca he was basely deserted by the Kufans, defeated, and slain at the famous **battle of Kerbela** (680), whence the Shi'ite celebration of the martyrdom of Husayn each year in the month of Muharram

Revolt of Abdullah ibn Zubayr, the candidate for the caliphate supported by the Meccans and Medinans Defeat of the Medinans on the Harra near the town. Siege of Mecca, the Ka'ba burned Death of Yazid

The son and successor of Yazid, **Mo'awiya II,** died some months after his father. **Ibn Zubayr's** caliphate accepted in Arabia, Iraq, Egypt, and by the adherents of the Qais tribe in Syria. The Omayyad party with its adherents of the Kalb tribe chose **Marwan ibn al-Hakam,** a cousin of Mo'-

awiya I The Qais were defeated with great slaughter at Marj Rahit (684), north of Damascus, which began the disastrous feud between the so-called northern and southern Arabs, which was largely responsible for the fall of the Arab kingdom of the Omayyads

684-750. THE MARWANIDS.

684-685. Marwan I. Proclaimed caliph in Syria Egypt was recovered from **Ibn Zubayr.** Death of Marwan He was succeeded by his son,

685-705. Abdulmalik, creator of the Arab administration of the empire

Inroads of the Mardaites of the Amanus, encouraged by the Byzantines, occupied Abdulmalik's first years His rival, Ibn Zubayr, was occupied by Shi'ite and Kharijite revolts in Kufa and Basra, Arabia and Persia

The **Shi'ite** sect were supporters of the claims of the "House of the Prophet," the descendants of the Caliph **Ali,** and of the prophet's daughter, Fatima Later they developed the dogma of the **Imamate,** that the Imam (the leader of the people) was the representative or incarnation of the deity and the only seat of authority both religious and civil.

The **Kharijites** held that any Moslem in good standing could be elected by the community as caliph They held that *Works* were an essential part of religion and that those who committed mortal sins were unbelievers Both sects were bitter opponents of both the Omayyad and the Abbasid dynasties

Mus'ab, Ibn Zubayr's brother and governor in Iraq, was defeated by Abdulmalik on the Tigris (690) Medina was captured by Abdulmalik's general, Hajjaj, later his governor in Iraq (691) Mecca was besieged and captured (692). Ibn Zubayr was killed and Abdulmalik became undisputed master of the empire The Kharijites (Azraqites) were crushed in Iraq and Persia by Muhallib (693-698). A rebellion in the east under Ibn al-Ash'ath, who was proclaimed caliph, was put down by Hajjaj (699) Kabul retaken

In Africa **Oqba ibn Nafi,** now a saint, had raided as far as Tangier but had met death on his return march (683) Carthage, however, was finally taken (698), and peace concluded with the Berbers, after they had defeated the Arabs under Hassan ibn No'man near Mons Aurasius (703) Thereupon the Berbers became allies of the Arabs. Death of Abdulmalik. He was succeeded by his son,

705-715. Walid I, who built the cathedral mosque at Damascus Conquest of Transoxania under Qutayba (705-715) Bokhara taken (709), Ferghana (712) It is reported that Qutayba invaded China and reached Kashgar (c 713). Conquest of Sind and part of the Punjab by Mohammed ibn Qasim (708-715)

Invasion of Cilicia (710-711) and of Galatia (714) Preparations for a grand attack on Constantinople by land and sea Subjugation of the western Berbers and pacification of North Africa by Musa ibn Nusayr (708-711)

711-715. CONQUEST OF SPAIN. Invasion of Spain by a mixed force of Arabs and Berbers under Tariq, a freed slave of Musa (711) The Goths under their king, Roderick, were totally defeated in Wadi Bekka, near Rio Barbate (not at Xeres de la Frontera) (July, 711) Fall of Ecija, Cordova, and the capital, Toledo Tariq master of half of Spain The advance of Musa himself (712) Capture of Medina Sidonia, Carmona, Seville (712), Merida (713), and Saragossa Resistance to Arab arms continued only in the mountains of Asturias Death of Walid He was succeeded by his brother,

715-717. Sulayman. Conquest of Jurjan (*Hyrcania*) and Tabaristan by Yazid ibn Mohallib (716) Siege of Constantinople by the caliph's brother, Maslama (717-718), which failed The crossing of the Pyrenees and invasion of southern France by Hurr, the successor of Musa. Sulayman succeeded by his cousin,

717-720. Omar ibn Abdul-Aziz, who attempted to reorganize the finances of the empire Members of the subject races, who had become Moslems, were placed on the same footing as the Arabs in respect to taxation Narbonne in southern France taken by Samh, the successor of Hurr Omar was succeeded by the third son of Abdulmalik,

720-724. Yazid II. Samh was defeated and killed by the Duke Eudo before Toulouse (721). Revolt of Yazid ibn Muhallib in Iraq His defeat at Akra on the Euphrates by Maslama Outbreak of internecine strife between the Yemenites (Kalb) and Modharites (Qais) (the so-called southern and northern Arabs) throughout the empire, especially in Khorasan and Transoxania, where propaganda for the Abbasids (descendants of the prophet's uncle, Abbas) also began Yazid was succeeded by his brother,

724-743. Hisham. Defeat of the Khazars, conquest of Georgia (727-733).

732. Invasion of southern France by Abdurrahman, governor of Spain; his defeat at Poitiers (Tours) by Charles Martel.

738. Kharijite revolts in Iraq, insurrection of Sogdians and Arabs in Khorasan supported by the Turkomans of Transoxania, was quelled by Asad al-Kasri, governor of Khorasan

740. Shi'ite revolt in Iraq under Zayd, grandson of the martyred Husayn; his defeat and death Hisham was succeeded by his nephew

741-742. The Revolt of the Kharijites and Berbers in North Africa was put down by Hanzala, the viceroy in North Africa.

743-744. Walid II, who was killed in a Yemenite revolt led by his cousin, who succeeded him as **Yazid III,** only to die a few months later. He was succeeded by the last Omayyad,

744-756. Marwan II, the grandson of Marwan I Insurrections in Syria at Homs and in Palestine Kharijite revolt in Mesopotamia (745), and in Arabia (745–746) Mecca and Medina seized by the rebels. Shi'ite insurrection in Iraq and Persia under Abdullah, grandson of Ali's brother, Ja'far, which was joined by Kharijites and Abassids (745–747) The black standard of the Abassids was raised by **Abu Muslim** in Khorasan (747) Marwan's governor of Khorasan, Nasr, was defeated at Nishapur and Jurjan by Abu Muslim's general, Kahtaba, who routed the Omayyad forces again at Nehawand and Kerbela Marwan himself was defeated at the **battle of the Zab,** and was pursued to Busir, Egypt, and killed (750). Slaughter of the Omayyad princes Few escaped, but among those was **Abdurrahman,** grandson of Hisham, who later founded the Omayyad Kingdom of Cordova in Spain (755).

c. THE ABBASID CALIPHATE, 750-c.1100

750-1258. THE ABBASID CALIPHATE. Spain never recognized it, nor did Morocco Abbasid authority was re-established in the Province of Africa as far as Algiers in 761, but only for a short period.

750-754. Abu-l-Abbas al-Saffah, the first Abbasid caliph Omayyad revolts in Syria and Mesopotamia Byzantine raids into the northern provinces. Abu al-Saffah was succeeded by his brother,

754-775. AL-MANSUR, the real founder of the dynasty The revolt of his uncle, Abdullah, governor of Syria, was crushed by Abu Muslim, who was then murdered at Mansur's orders (754) Revolt of Abu Muslim's followers in Khorasan (755). A Byzantine invasion was repulsed with great slaughter Cappadocia reoccupied, Malitia (*Melitene*), Mopsuestia, and other cities rebuilt and fortified against Byzantine raids (758) Annexation of Tabaristan (759), Shi'ite revolt in Iraq and Medina under the Hasanids, Mohammed and Ibrahim (762) Foundation of Baghdad (762) Khazar invasion of Georgia repelled (762) Insurrection of Ustad Sis in Khorasan and Sistan (767). Rise of the **Barmecides** to power as viziers of the realm (752–803) Mansur was succeeded by his son,

775-785 AL-MAHDI, noted for his improvement of the communications of the empire, his fortification of important centers, his founding of towns and schools, and his encouragement of the arts

Persecution of the Manichaeans Revolt of the veiled prophet, **Mokanna,** in Khorasan (775–778) Rise of a communistic, nihilistic sect, the Zindiqs, in Khorasan, western Persia, and Iraq Invasion of the Byzantines, who were routed Moslem advance against Constantinople, the Empress Irene forced to sue for peace (783–785). Mahdi was succeeded by his son,

785. Al-Hadi, who reigned only a year and was succeeded by

785-809. HARUN AL-RASHID (of *Arabian Nights'* fame). Kabul and Sanhar were annexed to the empire (787). Khazar invasion of Armenia (799) Fall of the Barmecides (803) Kharijite revolts

791-809. War with the Byzantines. Defeat of the Emperor Nicephorus at Heraclea or Dorylaeum (798) The peace, which was concluded, was broken by Nicephorus, and the Moslems invaded Asia Minor led by the caliph in person Capture of Tyana (806) Advance to Ancyra. Meanwhile Cyprus (805) and Rhodes (807) were ravaged by the Moslem fleet Iconium and Ephesus in Lydia captured, Sideropolis, Andrasus, and Nicaea reduced Heraclea Pontica on the Black Sea taken by storm. Nicephorus again invaded Moslem territory in 808, but troubles in Khorasan compelled Harun to march east, where he died In his reign the **Hanafite school of law** began to assume a systematic form. He was succeeded by his son,

809-813. AL-AMIN, against whom his brother Mamun rebelled and was accepted as caliph in Persia Siege of Baghdad by Mamun's general, Tahir (813). Amin was murdered after surrendering on terms.

813-833. MAMUN THE GREAT.

His reign probably the most glorious epoch in the history of the caliphate The arts and sciences were liberally endowed Two observatories were built, one near Damascus, the other near Baghdad A *House of Knowledge*, provided with a rich library, was erected near the Baghdad Observatory Literary, scientific, and philosophical works were translated from Greek, Syriac, Persian, and Sanscrit A liberal religious attitude adopted **Mu'tazilitism** became the established faith The Mu'tazilites maintained, like the Qadarites of the later Omayyad period, man's free will, also that justice and reason must control God's action toward men, both of which doctrines were repudiated by the later orthodox school of the Ash'arites

Transference of the capital by Mamun from Merv to Baghdad, owing to Omayyad and Shi'ite revolts in Arabia, Iraq, and Mesopotamia To meet this crisis he had proclaimed as his heir-apparent, Ali al-Ridha, a descendant of the Caliph Ali (817)

Conquest of Crete (from Egypt) by Arabs who had been expelled from Spain by the Omayyads (825), of Sicily by the Aghlabites of North Africa (827). Palermo taken (831). Only Syracuse and Taormine left in Byzantine hands.

Terrorization of the northern provinces by the Magian, **Babek,** leader of the communistic Khurramites, from his stronghold in Azerbaijan (816–833). Byzantine invasions in his support were repulsed by Mamun in person (829–833) Death of Mamun In his reign the Tahirids of Khorasan became practically independent (820–872) Mamun was succeeded by his brother,

833-842. Al-Mu'tasim. Transference of the capital to Samarra (836). Formation of a standing military corps composed of Turkish slaves and mercenaries, of whom the later caliphs were the mere puppets

Revolt of the Jats or **Gypsies** on the lower Tigris (834) Babek was defeated by Afshin and put to death (837–838). **War with Byzantium** (837–842) Defeat of the Byzantines at Anzen on the Halys, Ancyra destroyed, Amorium, the place of origin of the Byzantine dynasty, captured (838) Preparations for the siege of Constantinople Arab fleet destroyed by a tempest. Death of Mu'tasim (842) and his succession by his son,

842-847. Wathiq, who continued his father's policy of aggrandizing the Turks at the expense of the Arabs and Persians Interchange of prisoners between the Byzantines and Moslems Wathiq's reign marks the beginning of the decline of the caliphate He was succeeded by his brother,

847-861. Mutawakkil, who sought to re-establish the traditional Moslem faith Mu'tazilite doctrines were abjured, their professors persecuted Shi'ites, Jews, and Christians also persecuted The mausoleum of Husayn, the martyr of Kerbela, was razed to the ground Damietta in Egypt was taken and Cilicia ravaged by the Byzantines Mutawakkil was murdered by his Turkish guard and was succeeded by his son,

861. Muntasir, who reigned only six months, when he was deposed by the Turkoman chiefs of his guard, who raised to the throne another grandson of Mu'tasim, **Musta'in** (862–866), who escaped from the Turks to Baghdad, but was forced by them to abdicate and was later murdered by an emissary of his successor, **Mu'tazz** (866–869), in whose reign Egypt became virtually independent under **Ahmad ibn Tulun,** founder of the Tulunid dynasty Mu'tazz was murdered by his mutinous troops and succeeded by **Muqtadi** (869–870), a son of Wathiq, who was compelled to abdicate by the Turks, who chose as his successor the eldest surviving son of Mutawakkil,

870-892. Mu'tamid, who transferred the court to Baghdad, and for this and the next two reigns the power of the Turkish guard was successfully checked

The Zenj rebellion in Chaldaea (869–883), which devastated this region for fifteen years, was put down finally by the caliph's brother, Muwaffiq A Byzantine invasion of Syria was repelled by the Tulunid governor of Tarsus

In this reign the caliphate lost its eastern provinces The Saffarid dynasty was founded by Ya'qub ibn Layth, who established himself in Sistan, drove out the Tahirids of Khorasan, and became master of the whole of modern Persia The dynasty lasted from 870 to 903, when it was extinguished by the Samanids of Transoxania, who had succeeded the Tahirids there (872), and who, after the overthrow of the Saffarids, ruled from the borders of India to Baghdad and from the Great Desert to the Persian Gulf Their power was finally broken by the Ilak Khans of Turkestan (999), who then ruled over Transoxania, Kashgar, and eastern Tatary from Bokhara (932–1165) Under the Samanids, Bokhara was the intellectual center of Islam.

Mu'tamid was succeeded as caliph by his nephew,

892-902. Mu'tadid, who restored Egypt to the caliphate and reformed the

law of inheritance His successor, Muqtafi (902–908), brought Egypt under his direct control and repulsed the Byzantines, storming Adalia

891-906. The Carmathian revolt These communistic rebels overran and devastated Arabia, Syria, and Iraq, took Mecca, and carried away the sacred **Black Stone.** Muqtafi was succeeded by

908-932 Muqtadir, his brother, during whose reign occurred the **conquest of North Africa** by the Fatimid, Obaydullah al-Mahdi, who also drove out the last Aghlabite, Ziyadatullah, from Egypt Establishment of the Ziyarids in Tabaristan, Jurjan, Ispahan, and Hamadhan as independent sovereigns (928–1024). **Rise of the Buwayhids** (932–1055) under the patronage of the Ziyarids Conquest and division of Persia and Iraq by the three Buwayhid brothers, Imad al-Dawla, Rukn al-Dawla, and Mu'izz al-Dawla. Mu'izz granted the title of Amir al-Umara (Prince of the Princes) by the Caliph Mustaqfi (945). The caliphs became puppets of the Amir al-Umara. The Buwayhid dominions fell piecemeal to the Ghaznawids, the Kakwayhids of Kurdistan (1007–1057), and the Seljuks, owing to divisions among the Buwayhid rulers

962-1186. THE GHAZNAWIDS Founder of the dynasty was Subaktagin, a Turkish slave of Alptagin, himself slave and commander-in-chief of the Samanids in Khorasan and independent prince of the petty fief of Ghazna in the Sulayman mountains Subaktagin defeated the Rajputs and received Khorasan from the Samanids (994). His successor, **MAHMUD** (*the Idol-Breaker*), one of the greatest figures in the history of Central Asia, became master of Khorasan (1000) and invaded India several times His court was the resort of famous scholars and poets, such as Beiruni and Firdausi The Ghaznawids were overthrown by the Seljuks

929-1096 Meanwhile in Syria and Mesopotamia four Arab dynasties and one Kurdish dynasty held sway

929-1003 The Hamdanids of Mosul and Aleppo, the most famous of whom, **Sayf al-Dawla,** took Aleppo from the Ikhshidids of Egypt (944) and warred successfully against the Byzantines His court was one of the brilliant centers of Islam in the 10th century The great Arab poet, **Mutannabi,** was its chief ornament. The Hamdanids were descendants of the Arab tribe of Taghlib Their dominions were absorbed by the Fatimids and the Buwayhids

1023-1079. The Mirdasids of Aleppo, of the Arab tribe of the Banu Kilab, were engaged in continual warfare with the Fatimids and the Buwayhids, and were finally driven out by the

996-1096. 'Uqaylids of Mosul, a division of the Banu Ka'b tribe, who succeeded the Hamdanids in Mosul, and whose dominions under **Muslim ibn Quraysh** extended from the neighborhood of Baghdad to Aleppo. Their domain was ultimately merged in the Seljuk Empire

990-1096. The Marwanids of Diyar-Bakr, established by the Kurd, Abu-l Ali ibn Marwan, ruled over Amid, Mayyarfariqun, and Aleppo. They too fell before the Seljuks

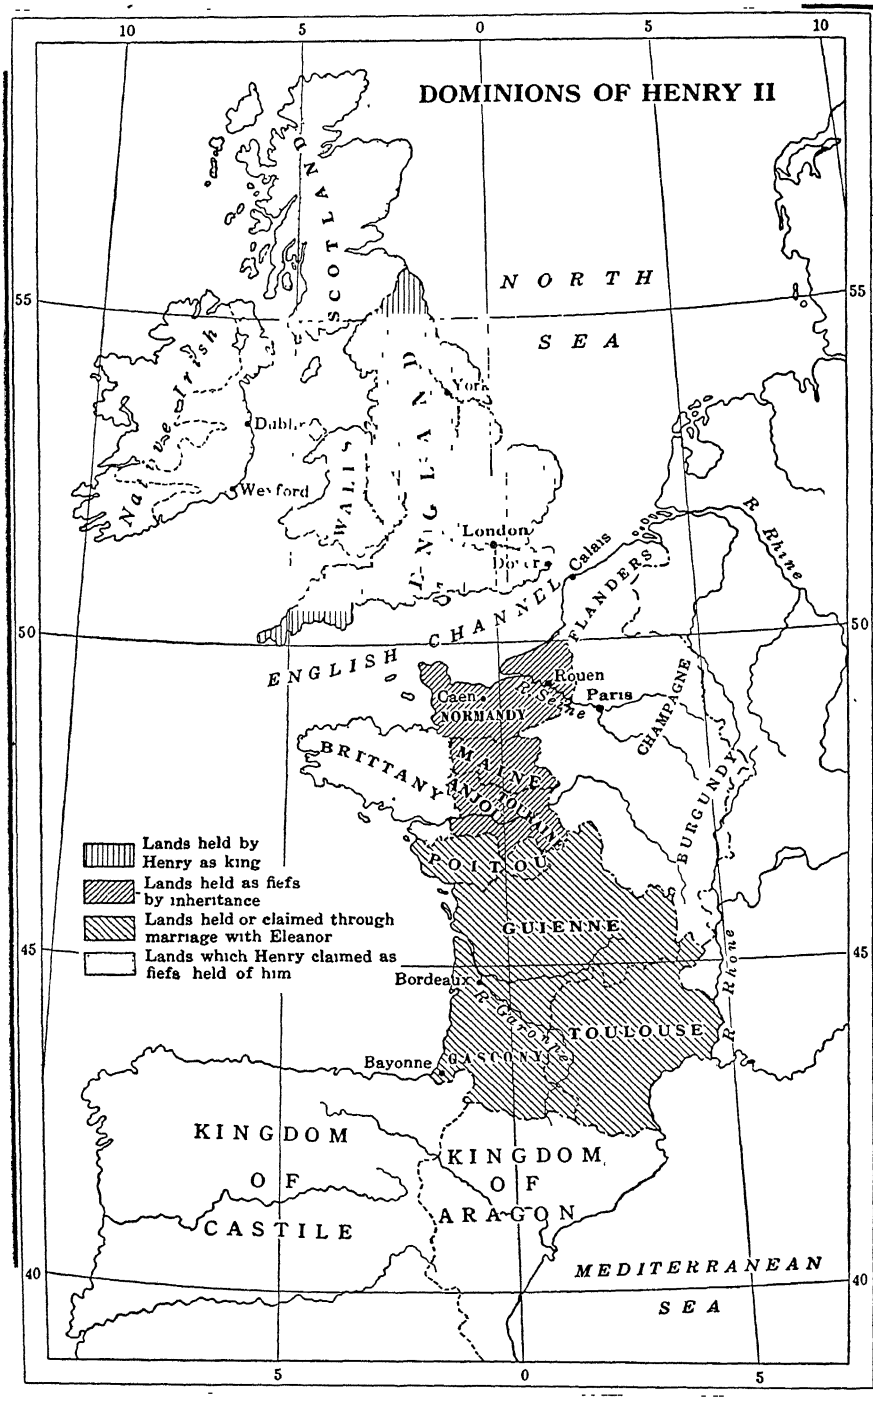
1012-1050. Mazyadids of Hilla, a tribe of the Banu Asad The fourth ruler of this dynasty, The Sadaqa, was one of the great heroes of Arab history The state was ultimately absorbed by the Zanjids.

(*Cont p* 254.)

B. THE AGE OF THE CRUSADES

1. WESTERN EUROPE

a. THE BRITISH ISLES



(1) *England*, 1066-1307

1066-1087. WILLIAM I (*the Conqueror*), of medium height, corpulent, but majestic in person, choleric, mendacious, greedy, a great soldier, governor, centralizer, legislator, innovator

1066-1072. Rapid collapse, speedy submission or reduction of the south and east The Confessor's bequest, acceptance by the Witan, and coronation "legalized" William's title Reduction of the southwest (1068) Reduction of the rest of England (1067-1070) a series of local risings leniently dealt with, construction by forced native labor of garrison castles (Norman mounds) Great **rising of the north** (Edwin and Morca's second) with Danish aid (1069) put down by William in person The "harrying of the north" (1069-1070), a devastation (often depopulation) of a strip from York to Durham (the consequences survived to modern times) ended Scandinavian opposition in England **Reduction of Hereward's last stand** (the "last of the English") in the Isle of Ely (1070-1071); raid into Scotland (1072).

Norman fusion, conciliation, innovation: (1) **Feudalization** on centralized Norman lines (on the ruins of the nascent Saxon feudalism) followed military reduction and confiscation of the rebel lands (1066-1070) Theoretically every bit of land in England belonged to the crown, in practice only the great estates changed hands and were assigned to William's followers on Norman tenures The king retained about one sixth of the land, less than a half of the land went to Normans on feudal tenures. Except on the border few compact holdings survived, the earldoms, reduced in size, became chiefly honorific Some 170 great tenants-in-chief, and numerous lesser tenants emerged A direct oath (the *Oath of Salisbury*) of primary vassalage to the crown was exacted from all vassals, making them directly responsible to the crown (1086) Construction of castles (except on the borders) subject to royal license; coinage a royal monopoly, private war prohibited. (2) **The Anglo-Saxon shires** (34) and hundreds continued for local administration and for local justice (bishops no longer sat in the shire courts and the earls were reduced) under the sheriffs (usually of baronial rank), retained from Anglo-Saxon days, but subject to removal by the king The sheriffs were an essential link between the (native) local machinery and the central (Norman) government Communities were held responsible for local good order, sporadic visitations of royal commissioners. Anglo-Saxon laws little altered (3) Early grant of a charter to London guaranteeing local customs (4) **Innovations of the centralizing monarch:** a royal council, the **Great Council** (*curia regis*), meeting infrequently (three stated meetings annually) replaced the Anglo-Saxon Witan and was of almost the same personnel tenants-in-chief, the chancellor (introduced from Normandy by Edward the Confessor), a new official, the justiciar (in charge of justice and finance, and William's viceroy during his absences), the heads of the royal household staff This same body, meeting frequently, and including only such tenants-in-chief as happened to be on hand, constituted the **Small Council,** a body which tended to absorb more and more of the actual administration

The Church retained its lands (perhaps a fourth of the land in England) Pope Alexander II had blessed William's conquest, and William introduced the (much-needed) Cluniac reforms Archbishop Stigand and most of the bishops and great abbots were deprived or died, and were replaced by zealous Norman reformers, **Lanfranc** (an Italian lawyer, a former Prior of Bec), as Archbishop of Canterbury, carried through a wide reform: celibacy enforced, chapters reorganized, new discipline in the schools, numerous new monastic foundations. By royal decree episcopal jurisdiction was separated from lay jurisdiction and the bishops given their own courts, a decisive step in the evolution of the common law as an independent force William refused an oath of fealty to Pope Gregory VII for his English conquests, and (despite the papal decree of 1075) retained control of the appointment of bishops and important abbots, from whom he drew his chief administrators

Lands held by Henry as king
Lands held as fiefs by inheritance
Lands held or claimed through marriage with Eleanor
Lands which Henry claimed as fiefs held of him

(thereby making the Church, in effect, pay for the administration of the state). No papal bull or brief, no papal legate might be received without royal approval and no tenant-in-chief or royal officer could be excommunicated without royal permission The king retained a right of veto on all decrees of local synods The great prelates were required to attend the Great Council, even to do military service

1086. The great Domesday survey royal commissions on circuit collected on oath (sworn inquest) from citizens of the counties and vills full information as to size, resources and present and past ownership of every hide of land The results, arranged by counties in *Domesday Book*, gave a unique record as a basis for taxation and administration.

Royal finance: (1) non-feudal revenues Danegeld, shire farms, judicial fines, (2) the usual feudal revenues.

Military resources of the crown (1) (non-feudal) the old Anglo-Saxon *fyrd* (including *ship fyrd*) was retained (i e a national non-feudal militia, loyal to the crown, was used, e g against the Norman rebellion of 1075), (2) (feudal) about five thousand knights' fees owing service on the usual feudal terms The prosperity of England under Norman rule was great and an era of extensive building (largely churches, cathedrals and monasteries) began under the Conqueror and continued even through the anarchy of Stephen and Matilda

1087-1100. WILLIAM II (*Rufus*), a passionate, greedy ruffian, second son of the Conqueror, designated by his father on his death-bed (Robert, the eldest, received Normandy, Henry, cash) A Norman revolt (1088) was put down, largely with English aid, and William firmly settled on the throne Justice was venal and expensive, the administration cruel and unpopular, taxation heavy, the Church exploited On Lanfranc's death (1089), William kept the revenues of the See of Canterbury without appointing a successor until he thought himself dying, when he named (1093) Anselm (an Italian, Abbot of Bec, a most learned man, and a devoted churchman), who clashed with William over the recognition of rival popes, Anselm maintained church law to be above civil law and went into voluntary exile (1097) William, deeply hated, was assassinated (?) in the New Forest

1100-1135. HENRY I (*Beauclerc, Lion of Justice*), an educated, stubborn, prudent ruler, a good judge of men, won the crown by a dash to the royal treasury at Winchester and a quick appeal to the nation by his so-called *Coronation Charter*, a promise of reform by a return to the good ways of the Conqueror (a promise often broken) Henry married Edith (of the line of Alfred), whose name became Maud out of deference to the Norman's difficulties with Saxon names Anarchy in Normandy under Robert's slack rule, an invitation from the revolting Norman barons, and the victory of **Tinchebray** (1106), gave Henry Normandy (Robert remained a prisoner until his death), and made a later struggle between the new English kingdom and the rising Capetian power in France inevitable **Anselm**, faithful to the reforming program of the revived papacy, on his recall from exile refused homage for the archiepiscopal estates (i e he refused to recognize lay investiture) and refused to consecrate the bishops who had rendered such homage Henry temporized until firmly on the throne, then seized the fiefs and exiled Anselm Adela, Henry's sister, suggested the **Compromise of 1107** which terminated the struggle by clerical homage for fiefs held of the king, while the king allowed clerical investiture with the spiritual symbols The crown continued to designate candidates for the great prelacies

This reign was marked by a notable expansion, specialization, and differentiation of function in the royal administration (e g. the exchequer, influenced by accounting methods from Lorraine or Laon) Extension of the jurisdiction of royal courts: growing use of royal writs, detailing of members of the Small Council as judges on circuit (hitherto a sporadic, now a regular practice), who not merely did justice but took over increasingly the business formerly done by the sheriffs (e g assessment and negotiation of aids and other levies), and brought the *curia regis* into closer contact with shire and hundred courts.

Prosperity was general and trade in London attracted Norman immigrants The **Cistercians** arrived (1128) and began an extensive program of swamp reclamation, mill and road building, agricultural improvement, and stock-breeding. Henry began the sale of charters to towns on royal domain

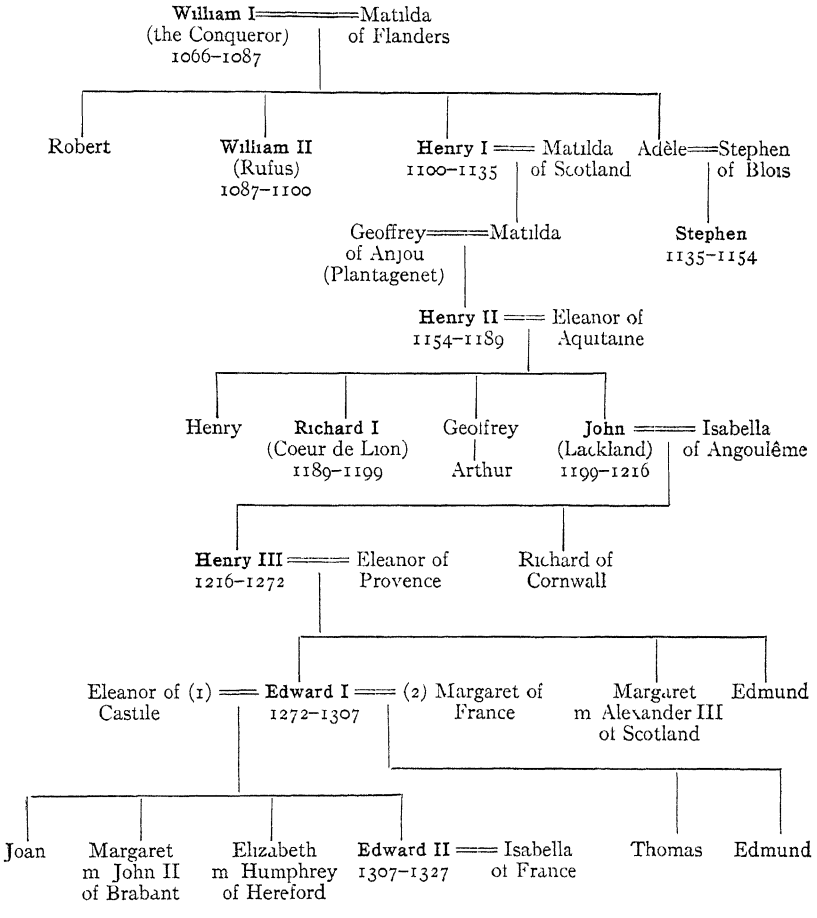
Influence of the Conquest on English culture: (1) Architecture: wide introduction of the Norman (Romanesque) style (e g; St. John's Chapel in the Tower of London, end of the 11th century, Durham Cathedral, c. 1096–1133) (2) **Literary** Anglo-Saxon, the speech of the conquered, almost ceased to have a literary history, rapidly lost its formality of inflections and terminations, and became flexible and simple if inelegant Norman French, the tongue of the court, the aristocracy, the schools, the

lawyers and judges, drew its inspiration from the Continent until the loss of Normandy (1204). The Normans then began to learn English, and the Anglo-Saxon was enriched with a second vocabulary of Norman words, ideas, and refinements

Anglo-Norman culture: (1) **Historical writing: Geoffrey of Monmouth,** *History of the Kings of Britain* (written in Latin, before 1147), created the tale of Arthur for Europe **Walter Map** (c 1140–c 1200), author of Goliardic verse, welded the Grail story into the Arthurian cycle, giving it a moral and religious slant, **Wace** (c 1124–c 1174) *Roman de Brut* and *Roman de Rou*, **Marie de France;** all three were at the court of Henry II (2) **Science: Walcher of Malvern** observed the eclipse of 1092 and attempted to calculate the difference in time between England and Italy Walcher began to reckon in degrees, minutes, and seconds (1120) **Adelard of Bath,** a student of Arabic science in the service of Henry II, observed and experimented (e g the comparative speed of sound and light), translated Al-Khwarizmi's astronomical tables into Latin (1126) and introduced Al-Khwarizmi's trigonometric tables to the west. **Robert of Chester** translated Al-Khwarizmi's algebra into Latin (1145). (3) **Philosophy. John of Salisbury** (d 1180), pupil of Abélard, the best classical, humanistic scholar of his day, attached to the court of Henry II, and later Bishop of Chartres, wrote the *Policraticus*, etc **Beginnings of Oxford University** (c 1167) on the model of Paris, a center of national culture

1135-1154 STEPHEN. Henry's son drowned on the White Ship (1120), and Henry had had his daughter **Matilda** (widow of the Emperor Henry V) accepted as his heir and married to Geoffrey of Anjou, as protector Stephen of Blois (son of Henry's sister Adela) asserted and maintained his claim to the throne at the price of a dynastic war (till 1153) with Matilda, the climax of feudal anarchy, and the ruin of English prosperity Archbishop Theobald finally negotiated a compromise (1153) whereby Matilda's son Henry should succeed to the crown on Stephen's death. The reign was remarkable for a tremendous amount of ecclesiastical building.

1154-1399. THE HOUSE OF PLANTAGENET (Angevin).



1154-1189. HENRY II. Master of a hybrid "empire" (England, Normandy, Anjou, Maine, Touraine, by inheritance; Poitou, Aquitaine, Gascony, by marriage with Eleanor of Aquitaine (1152); Brittany (acquired, 1169), and Wales, Ireland, and Scotland (on a loose bond) without unity save in the person of the ruler. **Dynastic marriages:** daughter Eleanor to the King of Castile, Joan to the King of Sicily, Matilda to Henry the Lion King Henry was a man of education, exhaustless energy, experience as an administrator, realistic, violent of temper

Restoration of England to the good order of Henry I dismissal of mercenaries, razing of unlicensed castles (1000?), reconquest of Northumberland and Cumberland from the Scots, resumption of crown lands and offices alienated under Stephen. Reconstitution of the exchequer and Great Council After 1155 Henry felt free to leave England, and spent less than half his reign in the realm

1155-1172. Struggle to reduce clerical encroachment on the royal courts: Under Stephen anarchy and the theories of Roman law had favored the expansion of clerical courts, extending benefit of clergy to include even homicides. **Thomas Becket** (a deacon and crony of Henry's at the time of his elevation to the chancellorship, 1155) resigned as chancellor when he became Archbishop of Canterbury (1162), and clashed at once with Henry over the criminous clerks The *Constitutions of Clarendon* (1164), largely a restatement of old customs (including the Conqueror's), provided (*inter alia*) for the indictment of clerics in royal courts, their trial in ecclesiastical courts, and their degradation, followed by their sentence and punishment in royal courts They also extended royal (at the expense of clerical) jurisdiction, and asserted royal rights of control in episcopal elections Becket yielded, was dispensed from his oath by the pope, violated the *Constitutions*, and fled to France Reconciled (1170) with Henry, Becket returned, excommunicated certain bishops friendly to Henry, and was murdered in the Cathedral of Canterbury by four knights of Henry's court, spurred by Henry's outbreak of fury against Becket, but not by Henry's orders Henry escaped excommunication by promising to abide by the papal judgment, and was reconciled with the papacy (1172) after an oath denying all share in the crime After this incident Henry had no choice but to tolerate benefit of clergy, which continued to be an increasing scandal in England until the reign of Henry VII. Henry retained the right of presentation and virtual control over episcopal elections The **Assize of Clarendon** (1166) contains the first civil legislation on heresy since Roman days.

1170. Extensive replacement of the (baronial) sheriffs with men of lower

The Norman and Plantagenet Kings

rank, trained in the royal service Henceforth the barons ceased to hold the shrievalty.

1173-1174. Reduction of the last purely feudal revolt; Henry's only use of mercenary troops in England

1181. The Assize of Arms: by this reorganization of the old *fyrd* every freeman was made responsible, according to his income, for his proper share in the defense of the realm The king thus ensured a national militia for the defense against the baronage.

Henry was not a great legislator, but he initiated a remarkable series of innovations in government which fixed the political framework of national unity.

Judicial Reforms: (1) Increasing concentration of judicial business in the Small Council (2) Designation (1178) of five professional judges from the Small Council as a **permanent central court;** extension of the transfer of judicial business to royal courts by the increase and specialization of royal writs (the fees a valuable source of revenue), formalization and regularization (c 1166) of the itinerant justices (*justices in eyre*), the great source of the **Common Law** (a law universal in the realm) One of the judges, **Glanvill,** wrote the *Treatise on the*

Laws and Customs of the Kingdom of England, the first serious book on the Common Law revealing the formal influence of Roman Law, but English in substance The itinerant judges were charged with cases dealing with crimes like murder, robbery (soon forgery and arson), and with financial business as well as judicial (3) **Expansion of the sworn inquest** (probably of Roman origin, introduced into England by the Conqueror) statements by neighbors (freeholders) under oath in the shire courts (a) *jury* (12 members) *of presentment in criminal cases* (Assize of Clarendon, 1166), a process which expanded (after 1219), replacing the ordeal, and (b) the *use of juries* (recognitions) instead of ordeal to determine landownership

Reorganization of the exchequer Nigel, Bishop of Ely (nephew of the original organizer, Roger of Salisbury), restored the exchequer to the general form of Henry I. **Innovations in the raising of revenue:** (a) *tallage*, levied by local negotiations (i e by the itinerant justices) with boroughs and tenants, (b) *hidage* (*carucage*) replaced the Danegeld, (c) *scutage*, levied by Henry I on the clergy, now extended to knights' fees in lieu of military service (due to Henry's need of non-feudal levies across the Channel), (d) *personal property taxes* (the first, 1166), Saladin tithe (1188), assessed by neighborhood juries. *The Dialogue of the Exchequer* written by one of the officials of the exchequer

Extension of trade: German merchants well established in London (1157); large Italian business (wool), extensive development of domestic trade

Foreign affairs: (1) **Norman penetration of Wales** since the Conquest bred a sporadic national resistance, Henry by three expeditions reduced Wales to nominal homage to the English crown. (2) **Ireland,** despite a brilliant native culture, was in political chaos under rival tribal kinglets and economically exhausted. Pope Adrian IV, hoping that Henry would reform the Church in Ireland, "gave" Ireland (1154) to Henry. Richard of Clare's (Strongbow) expedition (1169–1170) established a harsh rule, Henry landed (1171), temporarily reduced the rigors of the baronial administration, and reformed the Irish Church (Synod of Cashel, 1172). **John Lackland** (Henry's son) was appointed Lord of Ireland (1177), arrived (1185) but was soon recalled for incompetence.

Intrigues and revolts (beginning 1173) of Henry's sons, supported by their mother Eleanor, King Louis VII, and later Philip II of France, as well as by disgruntled local barons.

The ruling class continued to speak French during this reign, but the establishment of primogeniture as applied to land inheritance insured that younger sons would mingle with the non-aristocratic sections of society and accelerate the fusion of Norman and native elements Manor houses began to appear in increasing numbers as domestic peace continued Numerous Cistercian houses spread new agricultural methods and especially improved wool-raising

1189-1199. RICHARD I (*Coeur de Lion*). Neither legislator, administrator, nor statesman, but the greatest of knights errant, an absentee ruler who spent less than a year of his reign in England, visiting his realm only twice, to raise money for continental ventures Taxation was heavy. The government remained in the hands of ministers largely trained by Henry II, but there appeared a tendency toward a common antipathy of barons and people toward the crown Richard (having taken the Cross, 1188) went on the Third Crusade with Frederick Barbarossa and Philip II, his most dangerous foe On his return trip Richard was captured by Duke Leopold of Austria and turned over to the Emperor Henry VI, who held him for a staggering ransom John and Philip bid for the prisoner, but Richard finally bought his freedom (1194) with a ransom raised partly by taxation in England The crusade gave Englishmen their first taste of eastern adventure, but drew few except the adventurous portion of the baronage The domestic reflection was a series of anti-Semitic outbreaks John Lackland (despite his known character) was given charge of several counties, his plot against Richard was put down by **Hubert Walter** with the support of London Hubert Walter, Archbishop of Canterbury and Justiciar (1194–1198), ruled England well, maintained the king's peace, and began a clear reliance on the support of the middle class in town and shire Charters were granted towns (London received the right to elect its mayor)—and the knights of the shire were called on to assume a share of county business as a balance to the sheriffs Knights (elected by the local gentry) served as coroners and chose the local juries, a departure looking to the day when local election and amateur justices of the peace would be the basis of government. The first known merchant guild, 1193.

1194-1199. Richard's continental struggle against Philip II, in which Richard more than held his own Château Gaillard, a new departure in castle architecture based on eastern lessons, built by

Richard on the Seine, as an outpost against Philip.

1199-1216 **JOHN** (*Lackland, Softsword*), cruel, mean, licentious, faithless, weak of will, without counterbalancing virtues Crowned with the support of the Norman barons against his nephew Arthur's claims (by primogeniture), he became Arthur's guardian

1202-1204. John's first contest with Philip (to protect his French possessions) struggle over Brittany, Maine, Anjou (temporary acceptance of John's title by Philip, 1200) John's marriage to Isabella of Angoulême (already betrothed to his vassal Hugh of Lusignan), led Hugh to appeal to Philip II as their common overlord John ignored Philip's summons to judgment (1202), his French fiefs were declared forfeit, and Philip began a war with rapid successes The death of Arthur (1203), possibly by John's own hand, ruined John's cause, and Philip, already master of Anjou, Brittany, and Maine, took Normandy (1204) and soon Touraine John's vassals in southern France (preferring an absent Angevin to an encroaching Capetian) resisted Philip's advance south of the Loire John's loss of the lands north of the Loire reduced the power and prestige of the English crown, cut the Norman baronage in England from their French connections, and turned their interests back to the island, with decisive constitutional and social consequences.

1205-1213. John's struggle with Pope Innocent III· after a double election to the See of Canterbury, Innocent rejected both elections (including John's nominee) and named (1207) **Stephen Langton,** a noted scholar and theologian John refused to accept Langton, confiscated the estates of the see, expelled the monks of Canterbury, Innocent laid an interdict on England (1208) John confiscated the property of the English clergy who obeyed Innocent's ban without arousing serious public opposition Innocent excommunicated John (1209), but John, holding as hostages the children of some of the barons, weathered the storm Innocent deposed John (1213) and authorized Philip II to execute the sentence John, aware of treason and mounting hostility, promised indemnity to the clergy, did homage to the pope for England and Ireland, agreed to an annual tribute, and was freed of the ban

1213-1214. Final contest with Philip II (to regain the lands north of the Loire) John's great coalition (including his nephew, Emperor Otto IV, and the Count of Flanders) against Philip, most of the English baronage held aloof Crushing defeat of the coalition at **Bouvines** (1214) ended all hope of regaining the lands north of the Loire (formal renunciation of English claims, 1259).

1215. MAGNA CARTA. The first politico-constitutional struggle in English history in origin this struggle resulted from an effort of the feudal barons, supported by Archbishop Langton (notwithstanding papal support of John) and public opinion, to enforce their rights under their feudal contract with the king, it did not aim to destroy the monarchy or the royal administration Preliminary demands of the barons (1213), John's concessions to the Church and negotiations with Pope Innocent, civil war London opposed John (despite his liberal charter to the city) John's acceptance of the **Great Charter** at Runnymede Magna Carta was essentially a feudal document, exacted by feudal barons from their lord but with national implications in its reforms. (1) concessions to the barons reform in the exaction of scutage, aid, and reliefs, in the administration of wardship and in the demands for feudal service, writs of summons to the Great Council to be sent individually to the great magnates, collectively proclaimed by the sheriffs to the lesser nobles (i e knights); (2) concessions to the agricultural and commercial classes Mesne tenants granted the privileges of tenants-in-chief, uniform weights and measures, affirmation of the ancient liberties of London and other towns, limitation on royal seizure of private property, reform of the forest law, reform of the courts, (3) concessions to the Church (in addition to John's charter of 1214) promise of freedom and free elections

The most significant provisions of the Great Charter. (1) Chapter 12. no scutage or aid (except for the traditional feudal three) to be levied without the consent of the Great Council, (2) Chapter 14 definition of the Great Council and its powers; (3) Chapter 39 "*No freeman shall be arrested and imprisoned, or dispossessed, or outlawed, or banished, or in any way molested; nor will we set forth against him, nor send against him, unless by the lawful judgment of his peers and by the law of the land*" Even these clauses were feudal and specific in background, but centuries of experience transformed them into a generalized formula of constitutional procedure, making them the basis of the modern English constitution At the time their chief significance lay in the assertion of the supremacy of law over the king Careful provisions were made for the enforcement of the charter by

the barons, even by force of arms, but in practice such enforcement was impossible The charter was repeatedly reissued by succeeding rulers The pope, as John's feudal suzerain, declared the Great Charter void Civil war followed, a Francophil section of the barons called Louis, son of Philip II, to the throne (1216) John opportunely died, his young son Henry, with the support of the Anglophil barons, succeeded him, and Louis abandoned his pursuit of the crown (1217)

1216-1272. HENRY III (a boy of nine) Guardianship (1216–1219) of **William Marshal,** Earl of Pembroke, an able, patriotic régime two reissues (1216, 1217) of the (modified) Great Charter, elimination of French influence and interference, opposition to papal encroachments, reduction of feudal castles William Marshal had designated the pope as Henry's guardian, and the government passed on his death (1219) to the papal legate Pandulph, the justiciar Hubert de Burgh, and Peter des Roches, tutor to Henry Arrival of **the Dominicans** (1220) and **the Franciscans** (1224) Henry's personal rule (1227–1258) was marked by a major constitutional crisis

Growth of national consciousness: After a futile but expensive effort (1229) to recover Aquitaine, Henry, always devoted to the papacy, gave free reign to papal exactions At the same time the increase of papal provisions filled the English Church with alien (usually absentee Italian) appointees, to the exclusion of natives. A bitter anti-papal outbreak (perhaps supported by De Burgh) drove De Burgh from office; Des Roches succeeded him (1232–1234), filling the civil offices with fellow Poitevins Henry's French marriage increased the alien influx and public opinion grew bitter. The papal collector was driven out (1244), and the Great Council refused (1242) a grant for Henry's effort to recover Poitou, which failed Henry's acceptance of the crown of Sicily from the pope for his second son Edmund (1254), and his permission to his brother, Richard of Cornwall, to seek election as emperor (1257), both costly ventures, added to public ill-feeling. Finally, in a period of great economic distress, Richard asked the Great Council for one-third of the revenue of England for the pope. This grant was refused and the barons set out to reform the government with public approval (1258) A committee of 24, representing king and barons equally, brought in a proposal,

1258. THE PROVISIONS OF OXFORD, a baronial effort to restore the charter, with strong clerical and middle-class support creation of a council of fifteen (containing a baronial majority) with a veto over the king's decisions, the Great Council to be superseded by a committee of twelve, meeting thrice a year with the permanent council of fifteen, the chancellor, justiciar, and treasurer were to be chosen annually by the council All officials, including the king and his son, took an oath of loyalty to the Provisions

1260-1264. The knights, alienated by the baronial oligarchy, appealed to Edward (Henry's eldest son) Gradually there emerged a group of progressive reformers (younger barons, many of the clergy and knights, townsmen, notably of London and Oxford), the more conservative barons turned to the king Henry obtained papal release from his oaths (1261) and replaced the council of fifteen with his own appointees, chaos was followed by civil war (1263) Papal exactions continued Louis IX (asked to arbitrate the Provisions of Oxford), in the *Mise of Amiens* (1264), decided in favor of the king This decision was rejected by London and the commercial towns, and civil war soon broke out

1264. Simon de Montfort (son of Simon of the Albigensian crusade), Henry's brother-in-law, of French blood and education, a friend of Grosseteste, Bishop of Lincoln (a lifelong champion of ecclesiastical and governmental reform), emerged as leader of the reforming group This group, ahead of its time, manifested strong religious fervor, and even traces of democratic ideas Simon's victory at **Lewes** (1265), capture of Henry and exaction of the *Mise of Lewes* (a return to the reforms of 1258)

In the course of this reign the Great Council came to be called *Parliament* (c 1240) and at various times knights of the shire were summoned to share in its deliberations Parliament was still as much concerned with administration and justice as with "legislation", its membership, control of finance, and specific functions were by no means precisely defined The summoning of the knights in effect merely transformed the negotiation of shire business into a collective negotiation by the same men who managed it locally

1265. De Montfort's parliament: two knights from each shire, and two burgesses from each borough were summoned, probably the first summons to townsmen in parliamentary history

1265. Edward, now leader of the baronial, conservative opposition, defeated

De Montfort at **Evesham** (death of De Montfort).

Henry's return to power was formal, as Edward was the real ruler, and Edward and the barons were aware of the need of reform Edward, on a crusade with Louis IX when Henry died, was proclaimed king while still absent, spent a year in Gascony on the way back, and was not crowned until 1274

1272-1307. EDWARD I (*Longshanks;* the *English Justinian*), an able ruler and a great legislator, fit to rank with Frederick II, Louis IX, and Alfonso the Wise He observed his motto, *Pactum serva* (Keep troth), but tempered it with realism The first truly English king, he surrounded himself with able ministers and lawyers The reign was marked by a frequent consultation of the knights and townsmen, not always in Parliament The institutions of the English state began to take shape

EXTERNAL AFFAIRS:

1276-1284. Reduction of Wales. Wales during the reign of Henry III had gotten out of hand, and a national revival had set in (bardic poetry and tribal union under the Llewelyns around Snowdon in the north) **Llewelyn,** Prince of Wales, joined De Montfort's opposition, refused homage (1276), and, with his brother David, renewed war with the English (1282) Edward marched into Wales, killed Llewelyn and executed David (1283), asserting the full dominion of the English crown. In these wars Edward became aware of the efficiency of the Welsh longbow Edward's second son Edward (later Edward II) was born at Carnarvon (1284), and with him began the customary title, **Prince of Wales,** bestowed on the heir to the English throne. Local government was organized in Wales, and the *Statute of Wales* settled the legal status of the newly disciplined Welsh

1285-1307. Scotland. William the Lion had purchased freedom from homage to the English king from Richard I in 1189, but his successors continued to do homage for their English lands The Scottish nobility were largely Normanized Margaret, the *Maid of Norway* (daughter of Eric of Norway) was granddaughter and heir of King Alexander II of Scotland After Alexander's death (1286), Edward arranged a marriage for her with the Prince of Wales (1290), but she died on her way to England and Edward's hope of a personal union of the two crowns vanished. There were three collateral claimants to the Scottish crown: **John Baliol, Robert Bruce, John Hastings.** Edward, asked to arbitrate, demanded (1291) homage and acknowledgment of paramountcy from the Scots, which was given (the commons protested). He awarded the crown to Baliol (1292), who did homage for Scotland Edward's insistence on appellate jurisdiction alienated the Scots and disposed them toward France, and an alliance began (1295) which endured intermittently for 300 years Edward invaded Scotland, defeated Baliol at **Dunbar** (1296), declared himself King of Scotland, received the homage of the nobles, took away the coronation stone of Scone Oppressive administration by Edward's officials led to the rising of **William Wallace** (1297), who was supported by the gentry and commonalty, but got little aid at first from the nobles. Wallace won a victory at Stirling Edward, using the longbow to open the way for a cavalry charge, defeated Wallace at **Falkirk** (1298), drove him into exile, and completed his second conquest of Scotland (1304) Wallace was taken (1305) and executed, and Scotland incorporated under the English crown. Scottish law was retained, Scottish representatives sat in Parliament, but the nobles had to yield their fortresses, and an English lieutenant was sent to rule Scotland with a council and with power to amend the laws. Scottish nationalism found a leader in **Robert Bruce** (grandson of the claimant to the crown), who was crowned at Scone Edward died (1307) on an expedition against Bruce.

1293-1303. France. Ill-feeling between sailors from the Cinque Ports (Sandwich, Dover, Romney, Hythe, Hastings, and [later] Rye and Winchelsea) and the French, culminated in a victory for the Anglo-Gascon fleet (1293) and Edward's summons to the court of his French overlord, King Philip IV Under a *pro forma* compromise (1294), Edward turned over his Gascon fortresses to Philip, who refused to return them, and declared Gascony forfeited Futile expeditions of Edward (1294, 1296, and 1297, in alliance with the Count of Flanders) against Philip. Philip, busy with his contest against Boniface VIII and other matters, returned Gascony to Edward (1303).

DOMESTIC AFFAIRS:

1290. Expulsion of the Jews: Hitherto the Jews had been protected by the kings, as they were important sources of loans By this time public opinion was hostile to the Jews, and the Italian houses, like the Bardi and Peruzzi, were ready to finance royal loans Foreign trade, like banking, was in the hands of foreigners, and there were few native merchants, except for wool export, where Englishmen did about 35 per cent of the business, Italians 24 per cent. The English

wool staple was established in Antwerp under Edward

1296. The clash with Pope Boniface VIII Winchelsey, Archbishop of Canterbury, in accordance with the bull *Clericis laicos*, led the clergy in refusing a grant to the crown Edward, with the general support of public opinion, withdrew the protection of the royal courts, and thus promptly brought the clergy to an evasion of the bull through "presents" to the crown, the lands of recalcitrant clergy were confiscated, the pope soon modified his stand, and the victory of Edward was complete

Institutional and "legislative" developments: (1) The Parliament of 1275 granted (hitherto permission had not been asked) an increase of the export duty on wool and leather to the king, to meet the rising cost of government (2) **Distraint of knighthood** Various enactments (beginning in 1278) to insure that all men with a given income (e g £20 a year from land) should assume the duties of knighthood Probably primarily an effort to raise money, the acts also ensured a militia under royal control (3) *Statute of Gloucester* (1278), providing for *quo warranto* inquests into the right of feudal magnates to hold public (i e not manorial) courts (4) *Statute de religiosis* (Statute of Mortmain, 1279), forbade gifts of land to the clergy without consent of the overlord (a usual policy elsewhere in Europe) Such consent was often given, the statute frequently evaded (5) *Second Statute of Westminster* (*De donis conditionalibus*, 1285) perpetuated feudal entail (i e conditional grants of lands), and led to the later law of trusts It also reorganized the militia and provided for care of the roads (6) *Third Statute of Westminster* (*Quia emptores*, 1290) forbade new sub-infeudations of land. Land could be freely transferred, but the new vassal must hold direct of the king or from a tenant-in-chief

1295. The Model Parliament. The writs of summons included (probably by accident) the famous phrase, *quod omnes tangit ab omnibus approbetur* (let that which toucheth all be approved by all) Bishops, abbots, earls, barons, knights, burgesses, and representatives of the chapters and parishes were summoned The clergy did not long continue to attend Parliament, preferring their own assembly (*Convocation*) and left only the great prelates, who sat rather as feudal than ecclesiastical persons.

1297. The Confirmation of Charters (*Confirmatio cartarum*), a document almost as important as *Magna Carta*, extorted by a coalition of the barons (angered by taxation and the Gascon expedition) and the middle classes (irritated by mounting taxes) under the leadership of Archbishop Winchelsey In effect the Confirmation included *Magna Carta* (and other charters) with the added provision that no non-feudal levy could be laid by the crown without a parliamentary grant Edward left the actual granting of this concession to his son Edward as regent, and Pope Clement V later dispensed Edward from the promise in exchange for the right to collect (for the first time) annates in England Edward did not surrender tallage, despite the so-called statute *de tallagio non concedendo*

1303. The *carta mercatoria* granted the merchants full freedom of trade and safe conduct, in return for a new schedule of customs dues

1305. The petition from the barons and commonalty of the Parliament of Carlisle to end papal encroachments, notably in provisions and annates. Edward enforced the petition except in the matter of annates.

The reign is remarkable for frequent consultation of the middle class (in Parliament and out), for the encouragement of petition to Parliament (now one of its chief functions), and for frequent meetings of Parliament, which educated the nation not merely in the elements of self-government but in ideas, and kept the crown in close contact with public opinion The word *statute* as used of this reign means any formal royal regulation intended to be permanent, and does not imply formal parliamentary enactment.

Judicial developments. Under Edward the differentiation of the great common law courts is clear (1) **Court of King's Bench** (concerned with criminal and crown cases), (2) **Court of Exchequer** (dealing with royal finance); (3) **Court of Common Pleas** (handling cases between subjects) The **King's Council** (Small Council) still remained supreme as a court by virtue of its residual and appellate jurisdiction, and the councillors were expected to take the councillor's oath to the king Edward began the practice of referring residual cases which did not readily come within the jurisdiction of the common law courts to the chancellor with a committee of assessors from the council. This chancellor's court tended to absorb the judicial business of the council and finally emerged as a court of equity. The **Year Books**, unofficial, verbatim reports in French (the language of the courts) of legal proceedings, a record unique for completeness in the period, began in this reign Coherence and continuity of tradition among the lawyers was greatly facilitated by the

establishment of the **Inns of Court** under the three Edwards Here the lawyers assembled their libraries, lodged, and studied, transmitting with increasing strength the living force of the Common Law, to the virtual exclusion of Roman Law.

PROGRESS OF ENGLISH CULTURE:

Architecture: Early English Gothic (under French influence) Canterbury, begun 1175, Lincoln, 1185–1200, Salisbury, 1220–1258 Decorated Gothic Choir of Lincoln, 1255–1280, York, west front, 1261–1324.

Painting and minor arts: St. Albans at the opening of the 13th century was the greatest artistic center in Europe (manuscript painting by Matthew Paris) The court of Henry III was a mecca for European craftsmen, especially Frenchmen.

Literature: Orm's *Ormulum* (early 13th century), a translation into English of portions of the Gospels, the *Ancren Rewle*, rules for the ascetic life tinged with the cult of the Virgin (c. 1200), **Layamon's** *Brut*, an English verse translation of Wace's *Brut*. Political songs and satires of the Barons' War, etc (e g *Song of the Battle of Lewes;* the *Husbandman's Complaint*) **Matthew Paris** (c 1200–1259), a friend of Henry III, monk of St Albans, in his compilation, the *Historia Maior*, covered the history of the world, but in the portion dealing with the years 1235–1259 produced a work of original research in which he glorified England and things English

Foundation of Cambridge University (1209). Foundation of University College (1249); Balliol (1261); Merton (1264) began the collegiate system of Oxford

Science and learning: Bartholomew Anglicus (c. 1230), *On the Properties of Things*, a popular encyclopedia influenced by Pliny and Isidore, combining accurate observation (e g the domestic cat) with discussion of the fantastic (e g the griffin).

The English Franciscans at Oxford: Robert Grosseteste (d 1253), Bishop of Lincoln: insistence on the study of the sources (the Fathers and the Bible), knew Greek and Hebrew, a precursor of the Christian humanists; student of philosophy, mathematics, astronomy, physics, teacher of Roger Bacon **Roger Bacon** (d. 1292), greatest mediaeval exponent of observation and experiment. Foresaw the application of mediaeval power to transport, including flying; "formula" for gunpowder, author of the *Opus Maius* and *Opus Minus*.

Opponents of the Thomist rationalists: Duns Scotus (c. 1270–1308) and **William of Occam** (c. 1300–1349). (*Cont. p.* 264.)

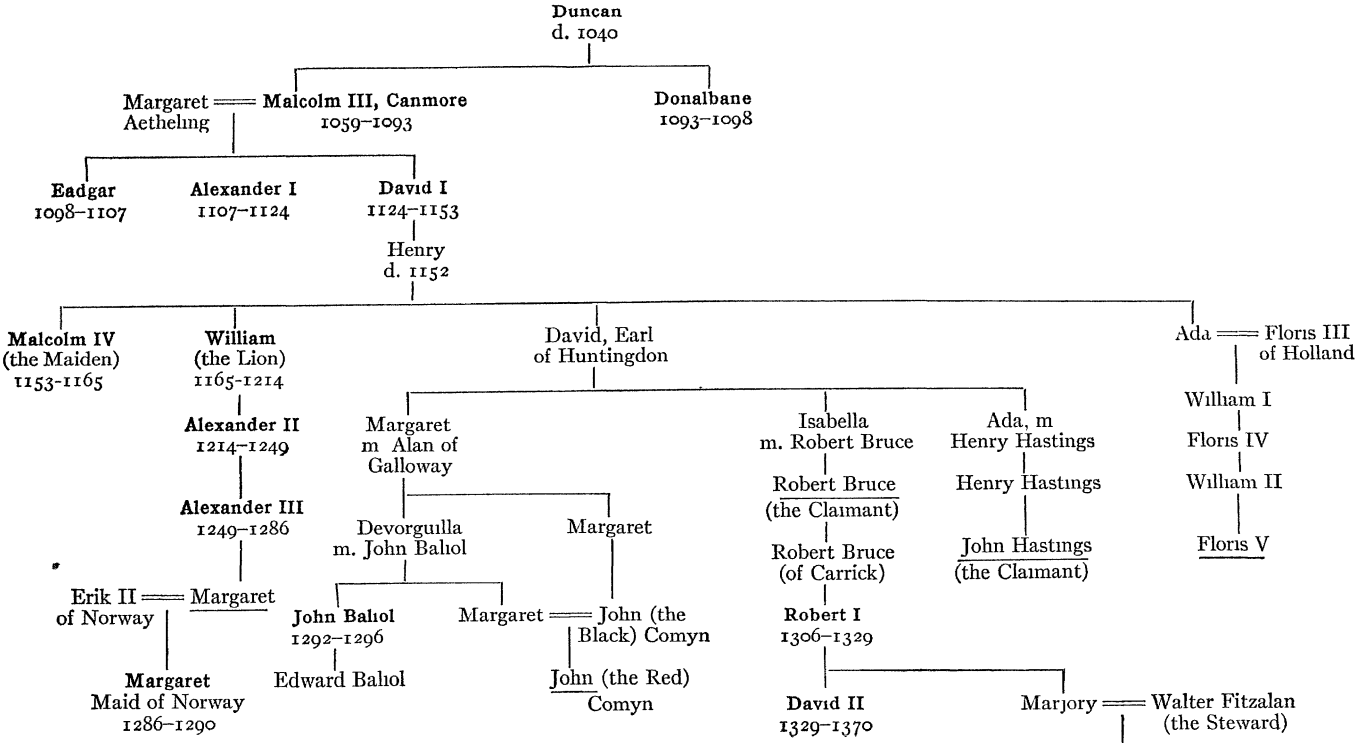
(2) *Scotland*, 1034-1304

1034-1286. Racial and political turmoil. Duncan I was followed by his murderer, the usurper

1040-1057. Macbeth, and his son and avenger

1059-1093. MALCOLM CANMORE. Malcolm was forced to do some kind of homage by William the Conqueror (1072) and by William Rufus (1091), and Anglo-Norman penetration began Malcolm's wife, (Saint) Margaret (sister of Edgar Aetheling, grand-niece of Edward the Confessor), was a masterful and remarkable woman whose Anglicizing influence on Scottish culture, on the national life and the native Church was profound Her three sons, especially

1124-1153. DAVID I, continued the so-called "bloodless Norman conquest," and the new Anglo-Norman aristocracy (e.g Balliols, Bruces, Lindsays, Fitz Alans, i.e. Stewarts) became the bulwark of the crown.



1153-1286 The next four reigns were notable for the consolidation of Scotland, and for signs of impending collision with the English monarchy. William the Lion, captured in a raid by the English, accepted (1174) the feudal lordship of the English crown and did ceremonial allegiance at York (1175). Richard I weakened England's position, John tried to restore it

1249-1286. ALEXANDER III did homage (1278) to the English king for his English lands, "reserving" his Scottish fealty. All of Alexander's issue were dead by 1284, leaving only his granddaughter Margaret, the *Maid of Norway*. Margaret's death (1290) made impossible the personal union of England and Scotland (by Margaret's marriage to Edward I's heir) Thirteen claimants to the Scottish crown were narrowed down to the candidacy of **Robert Bruce** and **John Balliol**. Edward I of England, called upon to arbitrate, awarded the crown to Balliol (1292), but when Baliol ignored a summons to attend Edward and instead embarked upon an alliance with France (1295), the English invaded the country and, after some years of warfare, reduced it in 1304 (p. 199). (*Cont. p.* 272.)

(3) *Ireland*, 1171-1307

The period following the **expedition of Henry I** (1171) was marked by a steadily developing conflict between the feudal system of the incoming Normans and the

The Scottish Succession

Names underlined were claimants to the throne in 1290.

old tribal organization of the Irish. In its later phases this struggle bred centuries of discord and bloodshed. Henry's authority was precariously maintained by a viceroy who had orders to be fair to the natives, a policy which estranged the Norman elements

1185. Henry's son, John Lackland, returned to England after a short and inglorious rule as Lord of Ireland, but his authority was maintained by his representative, **William Marshal,** Earl of Pembroke, who married the daughter of Richard of Clare.

1213. John abandoned Ireland, along with England, to Pope Innocent III

1216-1272. Under Henry III the power and possessions of the Anglo-Norman colony expanded rapidly: bridges and castles were built, towns prospered and guilds were formed

1272-1307. Edward I's revolutionary legislation in England was extended to Ireland, which continued to prosper, at least in the Anglo-Norman sections But the cleavage between the two races had become very marked and the native clans remained restive. (*Cont p* 272)

b. SCANDINAVIA

(1) *Denmark*, 950-1320

c. 950-985. HAROLD BLUETOOTH, whose reign saw a steady advance of Christianity and expansion of Danish power over Schleswig, the Oder mouth, and Norway But the kingship was of little importance until the reign of

985-1014. SVEN I (*Forked-beard*). He defeated the Norwegians, Swedes, and Wends and conquered England (1013).

1014-1035. KNUT THE GREAT (*Canute*), Sven's son, was King of Denmark, Norway (1028), and England (1016–1035), the first "northern empire." Knut's conversion completed the conversion of his people He imported priests, architects, and artisans from his English realm, and new influences spread from Denmark to Norway and Sweden On his death Norway broke away, England passed to Edward the Confessor

1157-1182. Under **WALDEMAR THE GREAT,** the founder of the **Waldemarian dynasty,** a great expansion eastward took place at the expense of the Wends; Copenhagen was established as the capital

1182-1202. KNUT VI made conquests in (Slavonic) Mecklenburg and Pomerania.

1202-1241. WALDEMAR II (*the Conqueror*) led crusading expeditions into Livonia, Estonia (Reval founded), and penetrated the Gulf of Finland, making the southern Baltic a Danish lake (the second "northern empire"). This empire collapsed in 1223, and the advance was in fact more in the nature of a crusade than of permanent imperial expansion. The monarchy was now dominant, the nobles largely feudalized, the clergy (with royal grants) powerful, the bourgeoisie vigorous (fisheries and cattle-raising), the yeoman class strong and independent

1241-1250. ERIC PLOWPENNY, whose reign was taken up with civil war against his brothers Christopher and

1250-1252. ABEL, who was supported by his brother-in-law, the Count of Holstein, and also by the Swedes and by the city of Lubeck

1252-1259. CHRISTOPHER. His effort to tax the Church opened a struggle that lasted nearly a century.

1259-1286. ERIC (V) GLIPPING. He was forced by the nobility to sign a charter, the **Danish Magna Carta** (1282), recognizing the national assembly and initiating the subordination of the king to the law. He continued the contest with the clergy, fought against dynastic rivals, planned expansion in Mecklenburg and Pomerania, and lost Scania and North Halland to Sweden.

1286-1320 ERIC (VI) MENVED, during whose reign the conflict between the crown and the Church came to a head By a compromise (1303) the rights of the Church were guaranteed, but the king's right to levy military service on church lands was upheld (*Cont. p.* 310)

(2) *Sweden*, 993-1319

The origins of the Swedish kingship are obscure, but the kingdom may be dated back to the **union of Gothia and Svealand** (prior to 836) The conversion of the country to Christianity took place in the 9th century and

993-1024. OLAF SKUTKONUNG was the first Christian ruler. He was the son of Eric the Conqueror, the founder of the Northern Kingdom, and brought to Sweden many Anglo-Saxon workers. His wars with St. Olaf of Norway led to some conquests, which were soon lost The century following his death was marked by wars between the Goths and the Swedes and by what appear to have been religious conflicts

1134-1150. SVERKER. Amalgamation of the Swedes and Goths with alternation of rulers from the two peoples (an arrangement which continued for a century) The monarchy gradually became established on a firm basis and the progress of Christianity was marked by the foundation of many bishoprics (including Uppsala, 1163) The first monasteries also belong to this period

1150-1160. ERIC IX (*the Saint*), whose reign was a short golden age He led a crusade into Finland, the first real expansion of Sweden The line of St Eric came to an end with

1223-1250. ERIC LAESPE, whose reign was dominated by his brother-in-law, Jarl (i e Earl) **Birger Magnusson,** the greatest statesman of mediaeval Sweden He controlled the government from 1248-1266 and had his son elected king in 1250, thus founding the **Folkung line.**

1250-1275. WALDEMAR. As regent, Jarl Birger abolished judicial ordeal by fire, ended serfdom by choice, encouraged commerce, favored the settlement of German artisans, checked the power of the baronage. He attempted to introduce typical European feudalism, setting up his other sons in quasi-independent duchies

1279-1290. MAGNUS LADULOS, who had dethroned and imprisoned his brother Waldemar Magnus continued his father's feudal innovations, extended the powers of the clergy and set up an hereditary nobility Town charters became numerous as the burghers became prosperous through trade and mining

1290-1319. BIRGER (son of Magnus) His rule was chaotic, due to civil war with his brothers, whom Birger ultimately captured and executed. This led to a popular uprising and the expulsion of Birger, who was followed by his three-year-old nephew. (*Cont p.* 311)

(3) *Norway*, 872-1319

Norway was a region with little natural unity, which in the earlier mediaeval period was ruled by numerous petty kings

872-930. HAROLD HAARFAGER (*Fairhair*) began the unification of the country by deposing many of the chieftains (traditionally including Hrolf or Rollo). It was in this period that the Norsemen supposedly made their conquests in Iceland, the Faroes, Shetlands, Orkneys, Hebrides, Scotland, and Ireland

935-961. HAAKON THE GOOD, who attempted, prematurely, to convert the country to Christianity.

995-1000 OLAF (I) TRYGVESSON, who, with the aid of English clergy, converted Norway, Iceland, and Greenland. He was defeated by the Kings of Denmark and Sweden, who supported the Norwegian nobility There followed a period of feudal disruption

1016-1028 OLAF II (*St. Olaf*) reunited the country and established Christianity on a firm footing

1046-1066 HARALD (III) HARDRADA, who was defeated by King Harold of England in the **battle of Stamford Bridge** (p 168) There followed another period of confusion, marked by constant wars of succession, and by a struggle against the growing power of the clergy Nevertheless the expansion of trade brought increasing prosperity

1184-1202. SVERRE. He was able to maintain a strong monarchy in the face of aristocratic and clerical opposition, thanks to support from the small landowners. Nevertheless Norway continued to be troubled with dynastic conflict.

1223-1262. HAAKON IV, a strong king, who temporarily restored order, conquered Iceland, but was defeated in a war with Scotland

1262-1299. ERIK THE PRIEST-HATER, whose reign was marked by a war with the Hansa towns, in which he suffered a reverse. As a result he was obliged to grant the towns full privileges in Norway and to join the Hanseatic League.

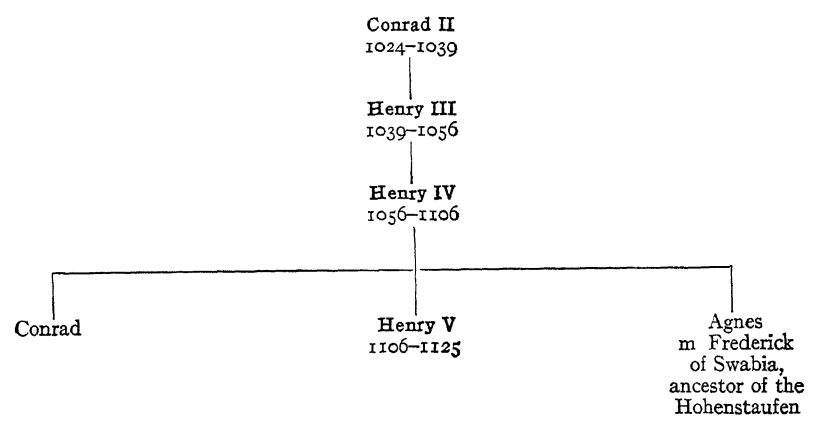
1299-1319. HAAKON V, marking the culmination of decline of the royal power.

The crown in Scandinavia depended on its vassals for soldiers and for administration. The introduction of cavalry (first recorded in Denmark, 1134) accentuated this feudal tendency, and a new nobility emerged. This nobility was a professional military class always ready for war, exempt from taxes, it quickly became a governing class receiving local offices and lands as a reward for military services From Denmark this new society spread to Norway and Sweden. Henceforth the nobles added a further complication to dynastic wars, causing a series of crises, and restricting the normal evolution of royal power

German capital and German merchants began to penetrate Scandinavia, achieving by the second half of the 13th century a dominating position The growth of the Hanseatic League delayed the progress of the native bourgeoisie, but commerce led to the active growth of towns and town life. Population was increasing rapidly, lands were cleared, the arts were advancing in distinction and perfection under the

patronage of wealthy kings and prosperous prelates.

The heroic age of the Icelandic *skalds* (court poets) in the 10th and 11th centuries brought the art to an involved perfection and a concentration on war that ultimately killed it Meantime the kings, interested in politics as well as war (notably Sverre of Norway, c 1185) began to patronize the Norwegian story-tellers, particularly the Icelanders, and the **Sagas** emerged The greatest master of the new form was an Icelander, **Snorri Sturleson** (1179–1241), an active political figure in both Iceland and Norway Snorri's *Younger Edda* in prose and verse, containing the rules of versification, the old myths, and a collection of ancient Icelandic poems, is unique History was written by **Saxo Grammaticus** (died c 1208), whose *Historia Danica* is the chief source for the Hamlet story. Both Snorri and Saxo were preoccupied with the ideals of national unity, strong royal power, and resistance to baronial particularism.



(*Cont. p.* 311)

c. GERMANY UNDER THE SALIAN AND HOHENSTAUFEN EMPERORS, 1024-1268

1024-1125. THE FRANCONIAN (or Salian) **HOUSE.** Dawn of the great imperial age

1024-1039 CONRAD II (the Salian). He continued the general policy of Henry personally interested only in the churches of Limburg and Speyer, he was firm in his dealings with the Church in general and relied on the lesser nobles to balance the clergy and magnates. The *ministeriales*, laymen of humble or even servile origin, were used to replace the clergy in many administrative posts, regalian rights were retained and exploited Dukedoms were not regranted as they fell vacant, but were assigned to Conrad's son Henry, who on his accession to the crown held all but the duchies of Lorraine and Saxony By encouraging the making of fiefs heritable Conrad weakened the dukes and got the support of the lesser nobles, but insured the ultimate feudalization of Germany Conrad's imperial coronation (1027), one of the most brilliant in mediaeval Rome, was witnessed by two kings, Canute the Great and Rudolf III of Burgundy. Burgundy, willed to Conrad by Rudolf III, guardian of one road to Italy, was reincorporated (1033) in the empire on the death of Rudolf Failure of an expedition (1030) against Stephen of Hungary; successful disciplinary expedition (1031) against the Poles, recovery of Lusatia; payment of homage by the Poles.

1039-1056. HENRY III (*the Black*) Imperial authority at its height A period of great town prosperity, due to development of trade. His wife, Agnes of Poitou, was an ardent devotee of Cluny, Henry, an honest reformer, abandoned simony, purified the court along Cluniac lines, but retained a firm hold on the Church Strongest of the German emperors, he asserted his mastery in Poland, Bohemia, and Hungary, Saxony was the only duchy to keep a trace of its original independence, resumption of the dangerous practice of granting duchies outside the royal house made Germany a feudal vol-

cano, use of the *ministeriales* in administration, but retention of the bishops as principal advisers and administrators. Henry's reforms alienated the bishops, the magnates, and the nobles

1043. Henry proclaimed the **"Day of Indulgence,"** forgiving all his foes and exhorting his subjects to do likewise, Bratislav of Bohemia forced (1041) to do homage; pagan reaction in Hungary put down (1044), final peace in Hungary (1052), which became a fief of the German crown Homage of Denmark, repudiated soon after.

1046. Synods of Sutri and Rome: deposition at Henry's instigation of three rival popes and election of his nominee, Clement II, the first of a series (Clement, Leo IX, and Nicholas II) of reforming German popes, reaffirmation of the imperial right of nomination to the papacy

1047. Godfrey the Bearded, Duke of Upper Lorraine, disappointed at Henry's refusal to award him Lower Lorraine, stirred up serious disaffection, and finally joined Baldwin of Flanders in a revolt at first supported by Henry of France (1047); he married (1054) Beatrice, widow of Boniface, Marquis of Tuscany, one of the most powerful Italian supporters of the popes

1056-1106. HENRY IV. (Aged six at his accession, nine-year regency of his pious, colorless mother Agnes) During the regency lay and clerical magnates appropriated royal resources and sovereign rights with impunity, and dealt a fatal blow to the German monarchy

1062. Anno, Archbishop of Cologne, kidnaped the young king and with **Adalbert,** Archbishop of Hamburg-Bremen, governed in his name, dividing the monasteries (one of the chief resources of the crown) between themselves.

1066. The **Diet of Tribur,** thanks to the reaction of the clergy and nobles against Adalbert, freed Henry from Adalbert and his personal government began

Henry was a remarkable but undisciplined man, intelligent, resolute, ill-balanced, and headlong, with the odds against him from the start; under papal pressure he was reconciled (1069) with his wife Bertha, reformed his personal life, and began a vigorous rule. His policy was a return to the Ottonian habit of using the Church as a major source of revenue; simony was open, and the reforming party appealed to Rome against Henry. Henry began the recapture, reorganization, and consolidation of royal lands and revenues, especially in Saxony, and probably planned to consolidate the monarchy in the Capetian manner around a compact core of royal domain in the Harz-Goslar region

1073. A great **conspiracy of the leading princes** led to a rising of virtually all Saxony Henry came to terms with the pope, played one faction off against the other, won the South German baronage, and finally defeated the rebels (1075).

1074. Charter of Worms, the first imperial charter issued direct to citizens without episcopal intervention

1075-1122. THE STRUGGLE OVER LAY INVESTITURE. The German bishops, alarmed at Hildebrand's reform policy (p. 218), opposed his confirmation as pope, but Henry, in the midst of the Saxon revolt, sanctioned it, and apparently promised reforms in Germany. The sudden abolition of lay investiture would have reduced the emperor's power in Germany and would have made government impossible With the end of the Saxon revolt Henry's interest in reform vanished

1075. Pope Gregory, at the Lenten Synod, issued a rigorous reform program and later sent a stern warning to the emperor and the German episcopate. Henry, under pressure from his bishops, called

1076. The Synod of Worms: The bishops repudiated their allegiance to Pope Gregory, addressed a list of (ridiculous) charges to him, and declared him deposed Henry's letter to the pope associated him with the charges and demanded Gregory's abdication in the most insolent and violent terms. Public opinion was shocked at the letter, but the North Italian bishops at Piacenza supported Henry. Gregory at the Lenten Synod (1076) in Rome, suspended and excommunicated the German and Lombard prelates involved, and deposed and excommunicated Henry, absolving his subjects from allegiance and producing political and ecclesiastical chaos in Germany Henry was isolated, the Saxon rebellion broke out again, and a powerful coalition of German magnates eager to regain power was formed against him The **Diet of Tribur** (October) compelled Henry to humble himself and agree to stand trial and clear himself of Gregory's charges before Feb 22, 1077, on pain of the withdrawal of their allegiance. The princes called a synod to meet at Augsburg, inviting Gregory to preside, Gregory accepted and started for Germany.

1077. Henry, after a midwinter dash across the Alps with his wife, was welcomed by the North Italians and avoided the humiliation of a public trial in Germany by presenting himself as a penitent at Canossa (Jan 21). Gregory, outmaneuvered,

hesitated three days, and finally, on the appeals of the Countess Matilda and Abbot Hugh of Cluny (Henry's godfather), accepted Henry's promises and solemn oaths of contrition, and absolved him **The penance at Canossa** is hardly mentioned by contemporaries, and made much less impression in Germany than the excommunication; the chief source on the episode is Gregory's letter of justification to the disappointed German nobles, Gregory, after some months of waiting for a safe conduct into Germany, turned back

1077. A faction of the nobles elected an anti-king, **Rudolph of Swabia,** with the approval of Gregory's legates, but without papal confirmation

1077-1080. Civil war ensued, but Henry, loyally supported by the towns, gained strength steadily; Rudolph of Swabia was defeated and killed (1080), Gregory again excommunicated and deposed Henry, but a synod of German and North Italian prelates then deposed Gregory, naming as his successor Guibert of Ravenna, a reforming bishop and former friend of Gregory (1080).

1083. Henry, at the end of a series of expeditions to Italy (1081–1082), besieged Rome, after futile efforts at reconciliation he gained entrance to the city and Gregory called in his Norman allies Henry, crowned at Rome by his anti-pope, invaded Apulia, **Robert Guiscard** expelled him from Rome and sacked (1084) the city The horrors of the Norman sack made it impossible for Gregory to remain in Rome and he departed with his allies, dying as their "guest" in Salerno (1085) The papal position was justified by **Manegold of Lautenbach's** theory that an evil ruler violates a contract with his subjects and may therefore be deposed by the pope, who is responsible for the salvation of mankind Henry's advocate, **Peter Crassus,** based his denial of this right on historical precedent backed by citations of Justinian (one of the earliest examples of such quotations)

1093-1106. Gregory's successors, unbending champions of reform, supported the revolts of Henry's sons in Germany and Italy: **Conrad** (1093), and the future **Henry V** (1104). Henry was elected king, but his father retained the loyalty of the towns to the end. Henry V shamefully entrapped and imprisoned his father, who abdicated, escaped, and was regaining ground when he died

1106-1125. HENRY V (married to Matilda, daughter of Henry I of England in 1114). A brutal, resourceful, treacherous ruler, Henry continued his father's policies. Skillfully pretending to be dependent on the princes he continued lay investiture, opposed papal interference in Germany, and retained the support of the lay and clerical princes, meantime, relying on the towns and *ministeriales*, he built up the nucleus of a strong power Wars against Hungary, Poland, and Bohemia (1108–1110).

1110-1111. Imposing expedition to Italy to secure the imperial crown, universally supported in Germany In Italy the Lombard towns (except Milan) and even the Countess Matilda yielded to Henry Pope Paschal II (1099–1118) offered to renounce all feudal and secular holdings of the Church (except those of the See of Rome) in return for the concession of free elections and the abandonment of lay investiture, a papal humiliation more than equal to the imperial mortification at Canossa At Henry's coronation the clergy repudiated Paschal's renunciation, there was a scuffle, Henry took the pope and cardinals prisoners, and forced the pope to acknowledge the imperial powers The net result was nil, but papal prestige was badly damaged.

1114-1115 A series of revolts (Lorraine, along the lower Rhine, in Westphalia, and soon in East Saxony and Thuringia) Henry was saved by the loyalty of the South Germans

1115. Matilda, Countess of Tuscany, who had made over all her vast holdings to the papacy, retaining them as fiefs with free right of disposition, willed these lands to Henry on her death, and Henry arrived in Italy to claim them (1116–1118)

Both pope and emperor were weary of the investiture controversy, Europe was preoccupied with the Crusades (p 255), and the time was ripe for compromise The first important compromise negotiated by the pope was with Henry I of England (1107) and provided that the king should not invest with the spiritual symbols (the ring and the staff), but that he was to be present or represented at all elections After due homage the king should then invest with the symbols of temporal authority In France a similar compromise was reached in practice with Philip I (c 1108) Pope Calixtus II convinced Henry that neither Henry of England nor Philip of France had suffered by their compromise.

1122. At the **Synod of Worms,** under the presidency of a papal legate, the **Concordat of Worms** was drawn up in two documents of three brief sentences each which provided that. (1) elections in Germany were to be in the presence of the emperor or his representative, without

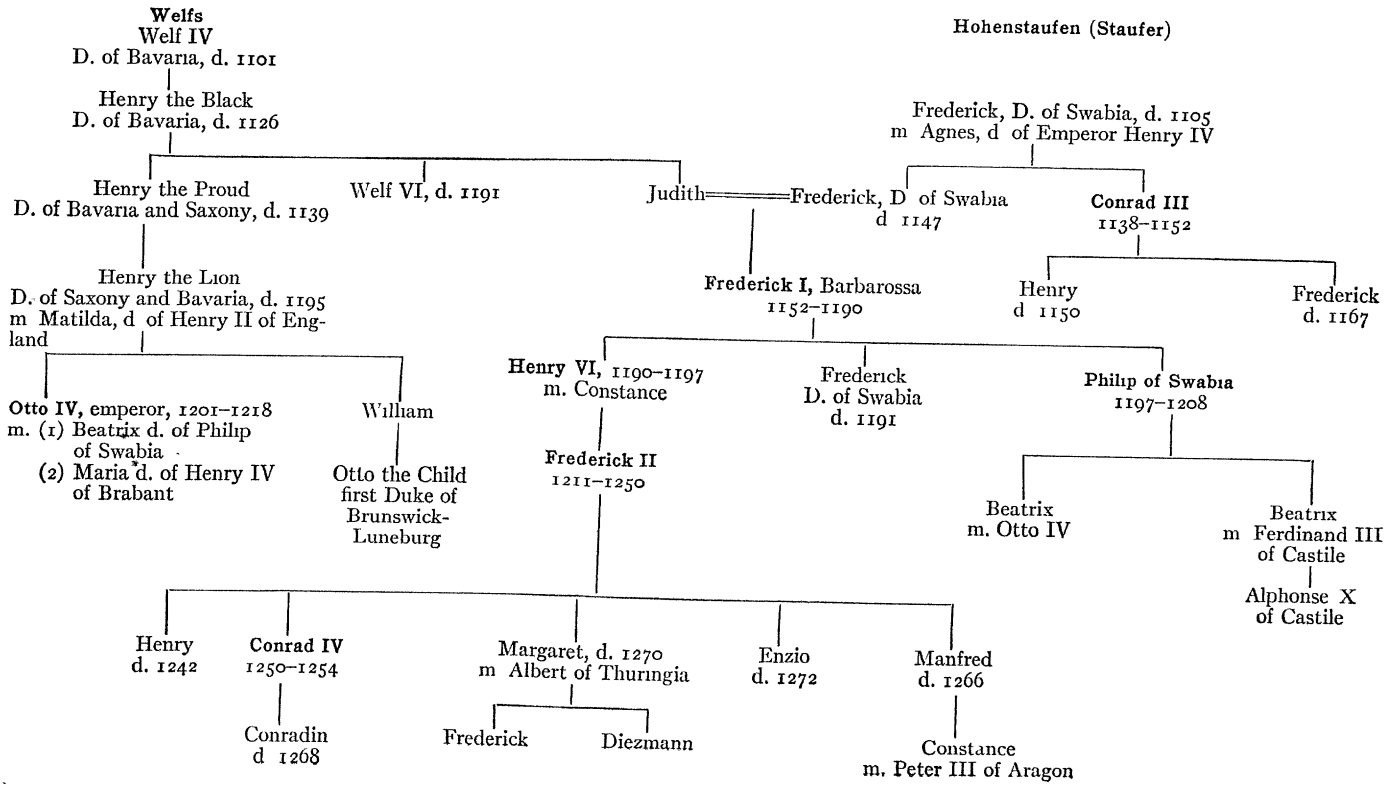
simony or violence, in the event of disagreement the emperor was to decide, the emperor was to invest with the temporalities before the spiritual investiture, (2) in Italy and Burgundy consecration was to follow within six months of election, the emperor to invest with the *regalia* after homage This concordat ended the investiture struggle, but not the bitter rivalry of pope and emperor, for the papacy, now clearly the independent spiritual leader of Europe, could not long tolerate an imperial rival

1125. Henry left no direct heir, and at the bitterly fought election of 1125 the Archbishops of Mainz and Cologne, foes of the anti-clerical Salian line, cleverly prevented, with papal aid, the election of the nearest heir, Frederick of Swabia, of the House of Hohenstauten, on the ground that the hereditary principle was dangerous, and Lothair of Supplinburg, Duke of Saxony, was chosen, opening the great struggle of Welf and Waiblinger (Hohenstaufen) in Germany (**Guelf** and **Ghibelline** in Italy).

1125-1137. LOTHAIR II Elected by the support of the clergy, he remained loyal to the Church, was the first German king to ask papal approval of his election and did not exercise his rights under the Concordat of Worms for some years Bitter civil war against the Hohenstaufens (1125–1135), vigorous policy of German expansion among the Wends and Scandinavians, renewal of Wendish conversions (1127)

1133. Influenced by Bernard of Clairvaux, Lothair decided in favor of Pope Innocent II (against Anacletus II) and went to Italy to settle the papal schism, he was crowned; had the Concordat of Worms confirmed, and received the lands of Matilda as fiefs

1135. The "year of pacification" in Germany — general peace proclaimed Lothair apparently planned to create a vast dynastic holding for his son-in-law, the Welf Henry the Proud, to include Bavaria, Swabia, Saxony, the allodial lands and fiefs of Matilda of Tuscany, and to secure him the imperial crown Lothair died suddenly on his return from an expedition against King Roger II of Sicily, and in the election (1138) the clergy, led by Adalbert of Treves, had the Waiblinger, Conrad of Hohenstaufen, chosen. Conrad almost at once put Henry the Proud under the ban, gave Saxony to Albert the Bear, Bavaria to Leopold of Austria, his half-brother, and reopened the civil war.



1138-1268. The HOUSE OF HOHENSTAUFEN (from Staufen, their Swabian castle). The first German dynasty to be conscious of the full historical implications of the imperial tradition and the significance of Roman law for imperial pretensions Their consequent devotion to a policy of centralization and to the aggrandizement of the lay imperial power in the face of the new spiritual supremacy and political aspirations of the Papacy precipitated a second great struggle between the popes and the emperors, centering in Italy but turning upon a sharp conflict between rival spiritual and political concepts

1138-1152. CONRAD III, a gallant, knightly, attractive, popular hero, but no statesman The Welf, **Henry the Lion** (son and successor of Henry the Proud), acknowledged Conrad's title, but regained Saxony by force and was granted it by the peace (1142), the struggle of Welf and Waiblinger reduced Germany to chaos and Conrad left on the Second Crusade On his return Conrad found Germany in worse confusion.

The most significant development of the reign was the renewal of **expansion against the Slavs and Scandinavians** (chiefly on the initiative of Albert the Bear and Henry the Lion). a regularly authorized German crusade against the Slavs (1147), colonization of eastern Holstein, foundation of Lubeck (1143); conversion of Brandenburg and Pomerania, Albert the Bear began to style himself Margrave of Brandenburg; Henry the Lion began the creation of a principality east of the Elbe Conrad took no share in these developments, was the only king since Henry the Fowler not to attain the imperial title. Alienated from the Church toward the end of his life, Conrad was preparing a more vigorous assertion of the imperial position, and supported the strong imperialist Frederick of Swabia, his nephew, as candidate for the throne On Conrad's death anarchy was so prevalent in Germany that even the magnates favored a strong ruler, and Conrad's candidate, Frederick, Duke of Swabia, was unanimously elected.

1152-1190. FREDERICK I (*Barbarossa*, ie *Red Beard*), a handsome man with flowing golden hair, who could both frighten and charm, the embodiment of the ideal mediaeval German king A close student of history and surrounded with Roman legists, he regarded himself as heir to the tradition of Constantine, Justinian, and Charlemagne (whom he had canonized by his anti-pope), and aimed at restoring the glories of the Roman Empire He began the style *Holy Roman Empire.*

The Welf and Hohenstaufen Families

Policy of consolidation and expansion of royal lands: Burgundian lands regained by marriage (1156) with Beatrice, heiress of the County of Burgundy, purchase of lands from the Welfs in Swabia and Italy, exploitation of regalian rights.

Conciliation of the magnates: (1) **Henry the Lion,** recognized as virtually independent beyond the Elbe, confirmed in Saxony, regranted Bavaria (1156). (2) **Austria made an independent duchy** (1156), granted to Henry of Austria in return for Bavaria (3) **Alliance with the episcopate:** free exercise of rights under the Concordat of Worms, reforming bishops replaced with hard-headed appointees of the old school, loyal to the crown Administration delegated to the *ministeriales* Successful maintenance of public order; Frederick won the title *pacificus.*

Expeditions to Italy (*p* 219, *seq*) (1) 1154–1155; (2) 1158–1162, (3) 1163–1164, (4) 1166–1168; (5) 1174–1177; (6) 1184–1186.

1156-1180. Henry the Lion's "principality" beyond the Elbe military progress against the Slavs and colonization (Hollanders, Danes, Flemings), Bremen taken from the archbishop (1156), Lubeck from Adolph of Holstein (1158); commercial relations with Denmark, Sweden, Norway, alliance with Waldemar II of Denmark, reduction of Slavic pirates; colonization of Mecklenburg, extension of Christianity; war with Albert the Bear; refusal of aid to Frederick in Italy (1176); confiscation of Henry's holdings and exile (1180), dismemberment of Saxony.

1156. Diet of Ratisbon: emergence of the *prince electors* as a substantive body in the German state

1157. Diet of Besançon: emissaries from Rome, France, England, the Spanish princes, Apulia, Tuscany, Venice and the Lombard towns did honor to Frederick. Frederick saved the life of the papal legate, Cardinal Roland, whose statement of papal claims enraged the German nobles (translation of *beneficia* as "fiefs"). Boleslav, Duke of Bohemia, granted the style of "king" (1158)

1174-1177. Frederick's fifth expedition to Italy: vain siege of Alessandria, futile efforts at reconciliation with the pope

1176. LEGNANO: decisive defeat of Frederick by the Lombard League, the first major defeat of feudal cavalry by infantry, herald of the new rôle of the bourgeoisie.

1183. Final peace of Constance between Frederick, the pope, and the Lombard towns. restoration of all imperial confiscations during the papal schism confirmed, recognition of general imperial suzerainty in Italy; the Lombard towns virtually autonomous city-states under a loose administration by imperial legates and vicars. Frederick retained the Matildan lands without a specific definition of their status Henceforth there was no shadow of unity in the empire, as Germany and Italy followed a divergent development

1184. Great Diet of Mainz: a tremendous mediaeval pageant for the knighting of Frederick's two sons in the presence of a great concourse, 70 (?) princes, 70,000 (?) knights.

1186. Marriage of the future Henry VI to Constance (daughter of Roger II of Sicily), heiress of King William II; possibly arranged by the pope in the hope of permanent peace with the empire. The net result of the marriage was the transfer of the center of gravity in the struggle between the popes and the emperors to Sicily, the final destruction of German unity and the ruin of the house of Hohenstaufen. The pope refused imperial coronation to Henry.

1186. Triple coronation at Milan: Frederick as King of Burgundy; Henry as *Caesar* (a deliberate revival of the title), and Constance as Queen of the Germans

1186. Frederick took the Cross, and until his death led the Third Crusade (p 256) in the traditional rôle of the emperor as the knightly champion of Christendom

1190-1197. HENRY VI (already Caesar and regent, crowned emperor, 1191) The Mediaeval Empire at its maximum, ideally and territorially Henry was not robust, and lacked the usual Hohenstaufen good nature. A good soldier, learned, practical, a shrewd diplomat, stern, cruel, but of heroic and original mind.

1190-1195. Intermittent struggles with the Welfs in Germany under Henry the Lion.

1191-1194. Restoration of order in Sicily: struggle with the Norman anti-king, Tancred of Lecce (d 1194); coronation of Henry as King of Sicily (1194); birth of Frederick (later Frederick II) at Jesi (1194).

1192-1194. Henry used the captivity of King Richard I of England to make the crown of England a fief of the empire, and to extort an enormous ransom.

Henry's plans to unite the German and Sicilian crowns, and to crown Frederick without election, thereby establishing the heredity of the German crown, were blocked

by powerful German and papal opposition Frederick was elected King of the Romans (1196) Plans (traditional with the Norman Kings of Sicily) for the foundations of a Mediterranean empire on the ruins of the Byzantine Empire as the basis for a universal dominion, dynastic marriage with the Greek imperial house, active preparations for a crusade, advance in central Italy and conciliation of northern Italy Sicilian outbreak against the German administration brutally crushed. Henry's sudden death was followed by a bitter anti-imperial reaction in Italy, by fourteen years of civil war in Germany

1197-1212. **Civil war in Germany**, chaos in the empire Rival kings; Henry's brother, the Waiblinger **Philip of Swabia** (supported by King Philip II of France) and the Welf **Otto of Brunswick**, son of Henry the Lion (supported by King Richard I of England) The German nobles played one side off against the other. Chaos in Sicily, where Pope Innocent III acted as guardian of Frederick (after 1198). Otto's title validated by Innocent (1201); assassination of Philip (1208), imperial coronation of Otto (1209), papal break with Otto (1210) and support of Frederick (with Philip II); Frederick's second election (1211) and dash to Germany

1211-1250. **FREDERICK II** (*Stupor Mundi*), a valetudinarian of middle height, courteous, amiable, charming, pitiless, arrogant, the most brilliant ruler and one of the most learned men of his day; a legislator of the first order, able soldier, diplomat, skeptic, one of the leading scientific investigators of his time, an astrologer with the mind of a Renaissance rationalist; Sicilian by taste and training, half Norman by blood, with little of the German about him. Crowned King of the Romans, 1212, King of the Germans, at Aachen, 1215; Emperor, at Rome, 1220.

1212. **Alliance with King Philip II of France.**

1213. **The Golden Bull of Eger:** Frederick, who had already sworn an oath to keep his two crowns separate and to support the pope, abandoned the German Church to Innocent (conceding the free election of bishops, the right of appeal to Rome) and undertook to support the pope against heretics

1214. **The battle of Bouvines** (p. 230): Frederick and Philip II completed the defeat of Otto and the Welfs. On the death of Innocent III (1216) Frederick's personal rule may be said to have begun.

1216-1227. Frederick on tolerable terms with Pope Honorius III, his old tutor: election (1220) of Frederick's son Henry as King of the Romans (a violation of Frederick's promise), Frederick allowed to retain Sicily during his lifetime, renewal of his crusading oath; grant of generous privileges (1220) to the clergy. exemption of the Church from taxation and of clerics from lay jurisdiction, making clerical princes virtually independent territorial princes; support of the bishops against the towns; promises to suppress heresy. Crusade postponed until 1225

1222. **First appearance of the Mongols in Europe** (p. 260); capture of Cracow (1241); defeat of the Hungarians and Silesians.

1226. **The conversion of Prussia** undertaken by the Teutonic Order (p. 214).

1226-1232. Renewal of the ancient imperial claims in Lombardy, formation of the **Second Lombard League, and** appearance of the **First League of the Rhineland;** town leagues in central Italy; Pope Gregory alienated.

1227-1229. **Frederick's crusade** (p. 257): return of Frederick due to illness; first excommunication (1227); resumption of crusade (1228), violent papal and imperial propaganda and recrimination; the Teutonic Knights under Hermann of Salza remained faithful to Frederick. Aware of the commerical value of Moslem friendship Frederick negotiated a ten-year truce (1229) with El-Kamil, Sultan of Egypt, which restored Jerusalem, Nazareth, and Bethlehem to Christian hands Frederick crowned himself King of Jerusalem. Papal war (1228–1229) of devastation in Apulia (first known papal mercenaries, the *soldiers of the keys*); Frederick on his return expelled the papal forces and threatened the *Patrimonium Petri* with invasion.

1230. **Hollow peace of San Germano** with Pope Gregory IX: Frederick promised to protect the papal domains, confirmed papal rights over Sicily, and was absolved In preparation for the next struggle Frederick concentrated on Italy, especially Sicily. Frederick's son Henry on his majority (1228) devoted himself to Germany, and favored the towns. Frederick, like Barbarossa, had leaned heavily on the German episcopate, especially Engelbert of Cologne, and had increased the independence of the lay princes and *ministeriales*; administrative offices tended to become hereditary, and after Engelbert's death (1225) the administration had become less efficient Settlement of the Teutonic Knights in Prussia. union (1237) with the Livonian Brothers of the Sword and eastward expansion: foundation of

Thorn (1231), Kulm (1232) and Marienwerder (1233).

1231. Privilege of Worms. Hoping for German support for his Italian policy, Frederick extended to the lay princes his generous grants of 1220 to the clergy; giving them control over local justice, minting rights, roads, and streams, etc From this grant dates a clear emergence in Germany of the territorial sovereignty of both lay and clerical princes. The **Decree of Ravenna** (1232) allowed expansion of the power of the princes at the expense of the towns. Henry objected, revolted (1234), and tried to win the German and Italian towns to his side

1231. Completion of the **reorganization of Sicily:** clean sweep of private titles and royal privileges in the Norman manner, resumption of royal domain; destruction of private garrisons and feudal castles, ban on private war, criminal jurisdiction transferred from feudal to royal courts; towns deprived of magistrates and put under royal officers, clergy taxed and excluded from civil office. Sicily reduced to order (1221–1225): feudal revolts put down, towns brought to heel, large Saracen garrison-colonies (loyal to Frederick and indifferent to papal threats) established at Lucera and Nocera. Recognizing in Sicily the true source of his strength in money and men, Frederick aimed to unify Sicily and Italy into a kingdom of the empire. Local risings (1228–1230 and 1232) in Apulia and Sicily, unrest (1234) in southern Italy.

1231. The Constitutions of Melfi, the most conspicuous and constructive single piece of "legislation" in the Middle Ages, completed the Sicilian reorganization an efficient divine right absolutism (much of it a return to the policy of Roger II) profoundly influenced by Roman law; centralization under an expert departmentalized bureaucracy; clerical jurisdiction limited to ecclesiastical matters; heresy a civil crime; simony in civil office a capital offense, gift or sale of Church land forbidden. Feudal, clerical, and municipal administration replaced by royal officials, supreme court at Capua; justices on annual circuits, careful financial organization. The University of Naples (the first European university on a royal charter) founded (1224) to train state officials, and given a monopoly of higher education; Salerno revived as a school of medicine.

Advanced economic policy in Sicily based on Arab practice: abolition of internal tolls; mercantilistic regulation, state monopolies. Replacement of feudal dues by fixed payments; direct taxation in crises, efficient customs collection and internal prosperity.

1235-1237. Frederick's last visit to Germany: deposition, arrest, and imprisonment of Henry, who committed suicide in prison (1244) and was succeeded by his brother Conrad (1237), conciliation and peace with the Welfs strengthened Frederick in Germany. Great reform **Diet of Mainz** (the German Melfi, 1235); issue of the model *Landfrieden*. Frederick was unable to stem the steady progress of towns (resting on expanding commerce) in Germany or Italy.

1237. Frederick at **Cortenuova** smashed the Second Lombard League and humiliated Milan.

1239. Pope Gregory's second excommunication of Frederick, followed by a tremendous battle of pamphlets and preaching: Frederick painted as a heretic, rake, anti-Christ He retorted with a demand for reform of the Church and an appeal to the princes of Europe, proposing a league of monarchs against the papacy.

Beginning of the amalgamation of northern and central Italy with the imperial administration on Sicilian lines· a system of general vicariates under imperial vicars, each city with an imperial *podestà* (generally Apulians, and often relatives of Frederick).

1241. Gregory's call for a synod at Rome to depose Frederick: Frederick ravaged papal territory, almost took Rome, and his fleet captured a large delegation of prelates off Genoa on their way to the synod; annexation of papal Tuscany to the empire. Gregory's death (1241). During the two-year interregnum in the papacy Frederick intrigued for a friendly pope, and welcomed

1243. The election of Sinobaldo Fiesco (*Innocent IV*), who turned out to be the architect of his ruin.

1244. Frederick's invasion of the Campagna and vain efforts at reconciliation with the pope; Innocent's flight to Lyons, and call for a synod.

1245. The Synod of Lyons: appeal to the Germans to revolt and elect a new king; deposition of Frederick; Louis IX's efforts at conciliation and Frederick's offers rebuffed by the pope: Innocent unleashed the Franciscans and Dominicans in a war of propaganda and proclaimed a crusade against Frederick. Henry Raspe, Duke of Thuringia (d. 1247), was set up (1246) as an anti-king in Germany, followed by

1247-1256. William of Holland, who was supported by a newly formed

league of Rhenish towns. Innocent's ruthless but vain campaign against Frederick's episcopal allies in Germany, bitter warfare in northern Italy with extreme cruelty on both sides, Italian conspiracy to assassinate Frederick (probably with Innocent's knowledge) put down in cold blood; Piero della Vigne, Frederick's most trusted official, supposedly implicated He was arrested, blinded, and died a suicide (1249); capture of Frederick's son Enzio (1249) who died in prison (1272).

1248. **The defeat of Frederick** after a long siege of Parma did not destroy his hold on northern Italy

1250. **Sudden death of Frederick;** burial in the cathedral at Palermo, where his sarcophagus still remains

1254-1273. **THE GREAT INTERREGNUM.**

1250-1268. **Relentless persecution of the Hohenstaufens by the popes:**

1250-1254. **CONRAD IV,** emperor, and King of Sicily by the will of his father, Frederick, Manfred, his illegitimate half-brother, regent of Sicily, Pope Innocent IV's offer (1253) of the Sicilian crown under papal suzerainty to Edmund (son of Henry III of England); renewal of Conrad's excommunication and proclamation of a crusade against him, papal invasion of the kingdom (i e., southern Italy and Sicily).

1255-1261 **Manfred** regained southern Italy (1255) and Sicily (1256), was crowned King of Sicily (1258), and after the Sienese (Ghibelline) victory over Florence at Montaperto (1260) almost dominated Italy, Alexander V's peace offers were rejected by Manfred (1261).

1257. **Double election in Germany** of two foreigners **Richard of Cornwall** (brother of Henry III of England, brother-in-law of Frederick II), and **Alfonso X** of Castile

1266. **Charles of Anjou** (brother of Louis IX of France), accepting Urban IV's offer (1262) of the Sicilian crown under papal suzerainty, invaded southern Italy in accordance with papal plans and with his own ambitions to create a Mediterranean empire He defeated Manfred who fell in the battle (**Benevento,** 1266), ending any hope of a native ruler for Italy.

1268. **Conradin** (Conrad IV's son, aged 15), called from Germany by the Italian Ghibellines, was defeated at **Tagliacozzo,** betrayed to Charles of Anjou, and beheaded at Naples with, at least, the tacit approval of Pope Clement IV. European public opinion was shocked, and Henry III of England and Louis IX of France were aroused. The heir of the house of Hohenstaufen was Constance, daughter of Manfred, whose husband, Pedro III of Aragon, was destined to become the first Aragonese king of Sicily (1282-1285) (p 282).

The imperial title remained (1268-1802) an appendage of the German monarchy, but as the Germans were little interested in the title the way to the imperial throne was opened to ambitious foreigners The bitter struggle of the Hohenstaufens and the popes, followed by removal of the papacy to French soil, alienated the German people from the Roman popes and bred a lasting suspicion of the Latin Church that bore fruit in the nationalism of the Reformation.

The princes of Germany, busy consolidating their own power, were not eager to elect a king, and there was no election until Pope Gregory X, alarmed at the progress of Charles of Anjou and the degeneration of Germany, which reduced papal revenue and indirectly strengthened France, and needing an imperial leader for the crusades, threatened to name an emperor.

The Great Interregnum, an epilogue to the mediaeval struggle of the popes and the emperors, marks the end of the mediaeval Holy Roman Empire and the failure of imperial efforts to establish German unity, it was a prologue to the complete triumph of particularism which dominated German life until well into the 19th century.

SIGNIFICANT ELEMENTS IN 13TH-CENTURY GERMANY:

I **Great tenants-in-chief:** (1) Four ancient princely houses the **Ascanians** (Brandenburg and eastern Saxony with the ducal title), the **Welfs** (Brunswick), the **Wittelsbachs** (Upper Bavaria, the County Palatine of the Rhine, Lower Bavaria), the **Wettins** (Saxony after the 15th century), (2) **Ottokar,** King of the Slavic Kingdom of Bohemia (1253-1278), with claims to Austria, Styria, Carinthia, Carniola.

II. **Great ecclesiastical tenants-in-chief:** especially in the Rhineland (notably the Archbishops of **Mainz, Trier,** and **Cologne**).

III. **Three minor houses** about to emerge into importance. (1) **Luxemburgs,** (2) **Hapsburgs,** (3) **Hohenzollerns.**

IV. **Lesser tenants-in-chief** (the so-called *Ritterschaft*), who regarded the central power as their defense against the great princes.

V **Imperial cities** (*Reichstadte*), growing richer and more powerful and disposed to support the crown against the princes.

Tendency of the cities to organize as leagues

The informal (until the 14th century) constitution of the German monarchy (1) Election of the king (originally by tribal chieftains) devolved upon the tenants-in-chief, then upon a group of them, election to be followed by ratification by the others In the 13th century the group election became final election and was confined to a body of seven electors (of varying personnel)

(2) The ancient feudal *Reichstag* (*curia regis*) became (in the 13th century) the German *Diet* (equivalent to Parliament or the Estates-General) divided into two houses. princes and electors Its functions remained vague and amorphous. Towns were admitted in 1489

The great ecclesiastical states of the Rhineland and their feudal satellites reached the zenith of their power in the 13th century, and strove to maintain their position in the face of the rising lay states to the east (Saxony, Brandenburg, Austria, and Bohemia) by electing to the monarchy feeble princes who could pay well for election and would remain amenable. The lay states became dynastic principalities primarily concerned with their own fortunes and anti-clerical in policy. (*Cont. p.* 299)

The Teutonic Knights

1190-1191. Crusading origin. Merchants of Lubeck and Bremen founded a hospital at Acre which soon became attached to the German church of Mary the Virgin in Jerusalem.

1198. The brethren of this hospital were raised to a military order of knighthood (as the *Order of the Knights of the Hospital of St. Mary of the Teutons in Jerusalem*) by the Germans gathered for Henry VI's crusade Henceforth membership in the order was open only to Germans, and knighthood only to nobles Pope Innocent III gave them the rule of the Templars. Headquarters were successively at Acre (1191–1291), Venice, and (after 1309) Marienburg, clear evidence of the new orientation of the Knights. Intense rivalry existed between the order and the Templars and Hospitalers in the Holy Land until the failure of the Crusades turned them to other fields of action. The robes of the Teutonic Knights were white with a black cross

Reconstitution of the order and **transfer to the eastern frontier** of Germany. The eastward advance (*Drang nach Osten*) of the Germans, begun under Charlemagne, had never wholly ceased, and colonization with Netherlandish farmers and German merchants, coupled with Cistercian efforts during the days of Adolf of Holstein, Albert the Bear (self-styled Margrave of Brandenburg), and Henry the Lion of Saxony, established the Germans firmly in Mecklenburg and Brandenburg Lubeck (founded 1143) early became an important commercial center. The foundation of Riga (1198), as a crusading and missionary center, the establishment of the *Livonian Brothers of the Sword*, and an influx of Westphalian nobles and peasant immigrants insured the continued advance of Germanization and the progress of Christianity (largely under Cistercian auspices) in Livonia The defeat of the Danes at Bornhorde (1227) by the combined princes of North Germany, cost them Holstein, Lubeck, Mecklenburg, and Pomerania, leaving only Estonia to Denmark The Poles had already begun the conversion of the Prussians and East Pomeranians

1210-1239. Under **HERMANN VON SALZA,** the first great grand master, the order, at the invitation of Andrew of Hungary, was established (1221–1224) in Transylvania as a bulwark against the Comans (Cumani) until their progress alarmed the Hungarian monarch.

Hermann was an intimate friend of Emperor Frederick II, and was the real founder of the greatness and prosperity of the (still relatively poor and insignificant) order.

1226. By the **Golden Bull of Rimini,** Frederick laid down the organization of the order (on Sicilian lines) and prepared the Knights for a new career as pioneers of Germanization and as Christian missionaries on the eastern frontier Frederick repeatedly made them generous gifts, used them for his own crusade, and employed individual knights on important missions. The grand master was given the status of a prince of the empire

Organization of the order. Districts, each under a commander; a general chapter, acting as advisers to the grand master, five chief officers, the grand master elected for life by the Knights The order was nominally under the pope and the emperor, but in the days of its might only strong popes exerted any influence

1229. The call to Prussia. (The name *Prussia* is probably derived from a native word *Prusiaskai* and not from *Bo-Russia.*) An appeal (1225–1226) from Conrad of Masovia, Duke of Poland, for aid, coinciding with Frederick's reorganization, was accepted by Hermann of Salza, and the Knights embarked on a unique crusade comparable only with that in the Iberian Peninsula, as champions of Chris-

tianity and Germanism Conrad gave (1230) them Kulmerland, and promised them whatever they conquered from the Prussians. Frederick confirmed their rights.

1234. The Knights transferred all their holdings to the pope, receiving them back as fiefs of the Church and thus had no other lord than the distant papacy.

1237. Union with the Livonian Brothers was followed by notable progress in Livonia and plans for the conversion of the Russians from the Greek Church to the Roman, which led to a serious defeat for the order. Courland was also gained and Memel founded (1252) to hold the conquests Eventually the southern Baltic coast from the Elbe to Finland was opened by the order to the missions of the Church and the trade and colonies of the Germans

A great era of town foundations (some 80 in all) opened under the order Thorn (castle, 1231), Kulm (castle, 1232), Marienwerder (1233), Elbing (castle, 1237), Memel (1252), Konigsberg (1254), *et al.*

1242-1253. A Prussian revolt was put down, and the conquest of Prussia continued with aid from Ottokar of Bohemia, Rudolf of Hapsburg, Otto of Brandenburg.

1260. The battle of Durben, a disastrous defeat of the order by the Lithuanians, was followed by another Prussian revolt which had national aspects and was put down with Polish aid The suppression was marked by deliberate extermination and the virtually complete Germanization of Prussia ensued Castle Brandenburg was built (1266) and the reduction of Prussia completed (1285).

The order allowed great freedom to the towns (especially after 1233), no tolls were collected, only customs dues The large commercial towns joined the Hanseatic League (p 307) The Knights were also generous (after 1236) in charters to German (and Polish) nobles, the peasants were well treated, and mass migrations into territories of the Knights became common

1263 The pope granted the order permission to trade, not for profit, a concession later expanded (by devious means) into full commercial freedom As a result the order, founded as a semi-monastic crusading society, eventually became a military and commercial corporation of great wealth and selfish aims, and a serious competitor of the very towns it had founded. The Knights escaped the fate of the Templars, though temporarily on the defensive.

Great state was kept at the headquarters in Marienburg, and under Grand Master Winrich (1351–1382) the order was the school of northern chivalry, just as later it became a great cultural influence through the foundation of schools everywhere in its domains and the maintenance of its houses as centers of learning (*Cont p* 310.)

d. ITALY AND THE PAPACY, 888-1314

The papacy was a local and secular institution until 1048, Italy was without effective native rule.

888-924. Berengar I, last of the phantom "emperors" (vacancy in the empire, 924–962), was the grandson of Louis the Pious Surviving rival "emperors" were Guido of Spoleto, Lambert his son, and Louis of Provence, who was crowned emperor in 915 **Raids of Saracens** (c 889) and **Magyars** (c 898) into Lombardy, a Saracen stronghold at Freinet controlled the Alpine passes; Saracen settlements in southern Italy, and the **Moslem conquest** (917) **of Sicily** began the isolation of that area, Italian urban life had become almost extinct; the invasions were checked, not by the shadowy monarchs, but by the rise of feudal defenders.

914-963. The nadir of the papacy (the *pornocracy*) the landed aristocracy of Rome, under the leadership of the Senator Theophylact, his wife Theodora, and his daughter Marozia (mistress of Pope Sergius III, and mother of Sergius' son John, later Pope John XI) dominated the Curia.

928. Marozia, having imprisoned Pope John XI, took control of Rome until her son

932-954. Alberic II assumed power; the *Patrimonium Petri* was a plaything of the Crescentii (Marozia's family), who maintained an intermittent supremacy in Rome during the 10th century. The papacy was without political power or spiritual prestige and the Western Church for all practical purposes became a loose organism under its bishops, who gave "national churches" such coherence as they had, and acknowledged a vague kind of allegiance to Rome.

924. Rudolf of (Juran) Burgundy elected king, followed by

926-945. Hugh of Provence.

945. Lothair II (d. 950), Hugh's son and co-regent, was declared sole king. Lothair's rival,

950-961 Berengar II, imprisoned his widow Adelheid, who appealed (according to tradition) to Otto the Great

951-952. Otto the Great's first expedition to Italy.

961-964. Otto's second expedition to Italy, in answer to the appeal of the profligate pope, John XII, for protection against Berengar. Otto's coronation at Pavia as King of Italy and his coronation by the pope as Roman Emperor, marked the

962. REVIVAL OF THE ROMAN EMPIRE. Otto confirmed his predecessors' grants in the *Patrimonium Petri* (probably with additions), but made careful reservation of the imperial right to sanction papal elections, and treated the pope like a German bishop (i e subject to the state). Otto also exacted a promise from the Romans not to elect a pope without imperial consent He established a precedent by calling a synod at Rome which deposed (963) Pope John XII for murder and other crimes, and selected a (lay) successor, Leo VIII (963–964) This synod opened a period of about a hundred years when the papacy was dominated by the German emperors and by the Counts of Tusculum, vassals of the emperors, with the title of *patricius* in Rome In the same period the bishops in the west lost the position they had won in the 9th century, and became increasingly dependent on the kings and feudal nobility, and increasingly secular in outlook The homage of Paldolf I for Capua and Benevento (967) and his investiture with the Duchy of Spoleto, mark the beginning of the long imperial effort to include southern Italy in the empire

964. Leo VIII was expelled by the Romans shortly after his election, and Benedict V was (964–965) elected by the Romans without imperial consent

966-972. Otto's third expedition to Italy: Otto held a synod which deposed Benedict Pope John XIII (elected with imperial co-operation) was soon expelled by the Romans, and Otto, after a terrible vengeance on Rome, restored him. Imperial coronation of the future Otto II (967) by John XIII, coronation of Theophano and her marriage to Otto in Rome (972).

980-983. Otto II's expedition to Italy: Otto crushed Crescentius I, Duke of the Romans, restored the pope (981), and was utterly defeated in his effort to expel the Saracens from southern Italy by a Greco-Moslem alliance (982). Otto nominated Pope John XIV (983-984).

983. Great Diet of Verona: remarkable unity of the Italian and German magnates; resolve on a holy war against the Moslems, election of the future Otto III as successor to his father Venice, already profiting by her Moslem trade, refused ships and defied the emperor

996. Otto III, on his first expedition to Italy deposed the *Patricius*, Crescentius II, and (at the request of the Roman people) nominated as pope his cousin Bruno, Gregory V (996–999), the first German pope, an ardent Cluniac Gregory and Otto compelled Gerbert to yield the Archbishopric of Reims to the German Arnulf, and forced the French episcopate to acquiesce. Gregory censured King Robert of France As the successor to Pope Gregory, Otto named Gerbert of Aurillac.

999-1003. SYLVESTER II (Gerbert of Aurillac), the first French pope, a man of humble origin, one of the most learned men of his day (Arabic, mathematics, and science). An intriguer and diplomat who co-operated with Otto in his mystic renewal of the empire, he was a moderate reformer, asserting that simony was the worst evil of the Church.

1012-1046. The Tusculan popes were either the relatives or the creatures of the Counts of Tusculum Benedict VIII (1012–1024), something of a reformer, John XIX (1024–1032), his brother, and Benedict IX (1033–1044), a debauchee who sold the papacy for cash (i e the Peter's Pence from England) to his godfather, a priest, Gregory VI (1044–1046), who bought the See of Peter in order to reform it. The emperors, preoccupied with German affairs, made only rare visits to Italy.

Notable local efforts were made by the Church to reform itself and society·

(1) Local synods decreed clerical celibacy (e.g Augsburg, 952, Poitiers, 1000; Seligenstadt, 1023, Bourges, 1031), and attacked simony.

(2) Foundation (910) of the Abbey of Cluny by William the Pious, Duke of Aquitaine, as a reformed Benedictine house, wholly free of feudal control, directly under the Holy See Centralization of all daughter and affiliated houses (priories) under a single Abbot of Cluny; rapid spread of Cluniac organization (France, Lorraine, Germany) and ideas of reform into western Europe: celibacy of the clergy, abolition of lay investiture, and of simony.

(3) Gerard, Lord of Brogne, founded (923) a monastery on his own estate which became a center of ecclesiastical reforms among existing foundations in Flanders and Lorraine.

(4) Synods in Aquitaine and Burgundy

(where monarchical opposition to feudal anarchy was weak) pronounced (c. 989) anathema on ravagers of the Church and despoilers of the poor, initiating a long series of clerical efforts throughout Europe to force feudal self-regulation, which go by the name of the **Peace of God.** These decrees, repeatedly renewed and extended, were supplemented (after c. 1040) by the **Truce of God,** an effort to limit fighting to certain days and seasons of the year.

(5) An effort to restore the central authority of the Church by reference to past decrees, of which the most notable were the so-called *Isidorean* (or Forged) *Decretals*, attributed to Isidorus Mercator, and produced (c. 850) by a Frankish cleric. A combination of authentic and forged papal decrees, they aimed to establish the authority and power of the bishops and the position of the pope as supreme lawgiver and judge, and to make him supreme over councils

(6) Notable increase in new ascetic orders in Italy and monastic schools north and south of the Alps, outstanding individual reformers (e.g **Peter Damian,** d. 1072; **Lanfranc,** d 1089, **Anselm,** d 1109).

ITALY AT THE OPENING OF THE 11TH CENTURY. Sicily was in the hands of the Saracens; Apulia and Calabria under the feeble rule of Constantinople; Gaeta, Naples, Amalfi, were city republics, Benevento, Capua, and Salerno the capitals of Lombard principalities Norman pilgrims arriving (1016) at the shrine of St. Michael on Monte Gargano began the penetration of the south by Norman soldiers of fortune in the service of rival states the first permanent Norman establishment was at Aversa (c 1029), the sons of the Norman Tancred of Hauteville (including Robert Guiscard) appeared (after c 1035), and their steady advance at the expense of the Greeks led Benevento to appeal for papal protection (1051). Feudal anarchy prevailed in the north.

1027. Conrad II, in Italy for his coronation, restored order in the north, reducing the Lombard nobles.

1037. On a second expedition he disciplined Archbishop Aribert of Milan, restored order in the south; his *constitutio de feudis* made Italian fiefs hereditary

1044-1046. GREGORY VI purchased the papal throne to reform the papacy, but the end of his reign saw three rival popes (Gregory, Sylvester III, and Benedict IX). All three were deposed by the **Synods of Sutri and of Rome** (1046) under pressure from the reforming emperor, Henry III, who made Suidgar, Bishop of Bamberg, pope as **Clement II** (1046–1047), the first of a series of German pontiffs: Damasus II (1048), Leo IX (1048–1054), Victor II (1055–1057), representing strong Cluniac influences. Henry pacified southern Italy, reaffirmed the imperial right of nomination to the papacy, and left Italy in sound order

1049-1085. Restoration of the independence of the papacy, resumption of papal leadership in the Church and of spiritual supremacy in the west.

1049-1054. LEO IX (Bruno of Toul, a kinsman of Henry III) began the identification of the papacy with Cluniac reforms, and the restoration of the spiritual primacy of the Holy See He insisted on his own canonical election to the papal throne, reorganized the chancery on the imperial model, reformed the Church by personal or legatine visitation, giving reform reality in the west. The **Synod of Rome** (1047) had issued stern decrees against simony and clerical marriage

1052. Henry III granted the Duchy of Benevento to the papacy.

1053. Leo, in his personal effort to enforce papal rights in the south, was utterly defeated by the Normans at Civitate

1054. The long doctrinal controversy with the **Greek Orthodox Church,** which really hinged on fundamental divergences between east and west, ended with the final schism between the eastern (Orthodox) and western (Roman) Church (p. 249)

1054-1057. VICTOR II. Elected at the urging of Hildebrand (later Gregory VII), who dominated this pontificate and the following one and who made the papacy the leader in reform Beatrice, mother of Matilda, and widow of Count Boniface of Tuscany, married (1054) Godfrey the Bearded, Duke of Upper Lorraine, Henry's most dangerous foe in Germany, as Boniface had been in Italy. Henry arrested Beatrice and her daughter Matilda, Boniface's heiress; Godfrey fled; Matilda remained all her life a powerful ally of the papacy, and kept middle Italy loyal to the popes

1057-1058. STEPHEN IX (brother of Godfrey the Bearded), a zealous Cluniac. The **Pataria** (c. 1056), a popular movement (the result of a preaching campaign), gained wide currency in the Milan region for its demands of clerical celibacy, the end of simony and for apostolic simplicity among the clergy. It came into sharp conflict with the bishop and clergy. Peter Damian, sent by the pope, maintained the papal position (1059), and

brought the archbishop to terms, there was a later outbreak of the Pataria.

1058-1061. NICHOLAS II.

1059. **The Synod of the Lateran,** by its electoral decree, replaced the vague traditional rights of the Roman clergy in papal elections by an electoral college of cardinals. the prerogative voice in the election went to the seven cardinal bishops; the cardinal clergy represented the clergy and people at large, a Roman prelate (if worthy) was to be preferred, the election to be at Rome if possible. Henry's rights were provided for, but the provision seems to have been personal rather than general

1059. Under Hildebrand's influence an alliance was made with the Norman, Richard of Aversa, and Nicholas after exacting an oath later invested Robert Guiscard with the Duchy of Apulia and Calabria, and promised him Sicily if he could conquer it, thereby establishing papal suzerainty over southern Italy, the first great expansion of temporal suzerainty by the popes. The **Synod of Melfi** condemned (1059) the marriage of clergy.

1061-1073. ALEXANDER II. His election without consultation of Henry IV created serious tension, the **Synod of Basel** declared the election invalid, and chose an anti-pope. Alexander, on friendly terms with William the Conqueror, blessed the Norman conquest of England

1071. **Robert Guiscard** (d 1085) captured Bari, ending the Greek power in Italy, his capture of Palermo (1072) began the

1072-1091. Norman conquest of Sicily Roger I (d. 1101) succeeded Guiscard as lord of southern Italy (except Capua, Amalfi, and papal Benevento).

1073-1085. GREGORY VII (*Hildebrand*). Short, corpulent, with glittering eyes, the son of an Italian peasant educated at Rome under strong Cluniac influence. Inspired by Gregory the Great, Gregory VI, and the study of the Decretals, he was neither an original thinker nor a scholar, but was intensely practical and of lofty moral stature. After a brilliant career in the *Curia* he was acclaimed pope by the Romans before his election. German bishops protested the election, and Gregory postponed his consecration, awaiting Henry's decision in a sincere effort to live up to his ideal of perfect co-operation between pope and emperor in the interest of peace, reform, and the universal monarchy of the papacy His program was summed up by his *Dictatus*, an informal memorandum which asserted: (1) The Roman Church has never erred, can never err, (2) the pope is supreme judge, may be judged by none, and there is no appeal from him, (3) no synod may be called a general one without his order; (4) he may depose, transfer, reinstate bishops; (5) he alone is entitled to the homage of all princes, (6) he alone may depose an emperor.

1075-1122. THE INVESTITURE STRUGGLE. vindication of the spiritual supremacy and leadership of the papacy (p 206).

The Emperor Henry IV after his Saxon victory forgot his promises of reform in Germany. The **Synod of Rome** (1075) passed severe decrees against simony, clerical marriage, and (for the first time) against lay investiture, providing deposition for clerical offenders, excommunication for laymen Gregory's letter of remonstrance and rebuke to Henry was ignored, and Henry, on the urging of the German bishops, called a **Synod at Worms** (1076) This synod deposed Gregory Henry's first excommunication and the so-called humiliation at Canossa (1077) profited neither party; Henry's second deposition (1080) was without serious effect After a series of invasions (1081–1084), Henry entered Rome and was crowned by his anti-pope, only to be expelled by Gregory's Norman ally, Robert Guiscard, with a motley army which included Saracens, the atrocity of the Norman sack made it impossible for Gregory to remain and he died a virtual exile, almost a prisoner of his allies at Salerno, leaving Henry and his anti-pope master of Rome for the time.

Gregory was on excellent terms with William the Conqueror and responsible for Alexander's blessing of the Conquest (1066), but William, true to the Norman conception of strong monarchy, ignored Gregory's pressure to make England a fief of the papacy, and forbade the circulation of papal bulls in England without his permission Gregory asserted papal suzerainty over Hungary, Spain, Sardinia, and Corsica. After a vacancy of a year, a close friend of Gregory was elected pope, **Victor III** (1086–1087), an aged, unwilling pontiff, soon driven from Rome by Henry's partisans.

1088-1099. URBAN II. A Frenchman of noble blood, long intimate with Gregory; handsome, eloquent, learned, he continued Gregory's policy of maintaining the complete independence of the papacy and vigorous opposition to the emperors. Urban arranged the marriage of Countess Matilda and the son of the (Welf) Duke of Bavaria (1089)

Henry invaded northern Italy success-

fully, but Matilda held out in the hills, Urban, profiting by the anarchy in Germany, urged Henry's son Conrad to a revolt (1093) which was taken up by half of Lombardy Urban at the **Synod of Piacenza** (1095) renewed the decrees against simony and clerical marriage, added a ban on clerical homage to laymen, and received the appeal of the Byzantine emperor for help against the Turks at the **Synod of Clermont** (1095) (p 255) Urban excommunicated King Philip I of France for adultery, and proclaimed the **First Crusade,** directing his appeal to the nobles and peoples rather than the monarchs, most of whom were hostile to the papacy On a visit to southern Italy, Urban made Roger of Sicily his legate (1098), thus exempting him from the visits of an ordinary legate At the **Synod of Bari,** Urban was as much interested in keeping the papal leadership in the Crusade as he was in the debates on the procession of the Holy Ghost The First Crusade was the first great victory for the reformed papacy, the papal dominance of the military effort to defend Christendom is significant of the new prestige of the papacy and the decline of the emperors

1099-1118. PASCHAL II renewed the excommunication of Henry IV, intrigued with Henry, his son; Anselm waged the investiture battle in England (1103–1107), ending in a compromise (1107), followed almost at once by the lapse of lay investiture in France (formerly one of the worst offenders) Paschal's humiliating renunciation (1111) of papal fiefs and secular revenues, his repudiation by his clergy, and his arrest by Henry V made a much more profound impression in Europe than Canossa Paschal recalled (1112) his concessions

1115. The Countess Matilda, having made a donation (1086 and 1102) of her allodial lands (the second great addition to papal holdings) to the papacy (subject to free testamentary disposition), willed them at her death (1115) to Henry V, who came and occupied the Matildine lands (1117), destined to be a bone of contention between the popes and emperors for a century.

1118-1119. GELASIUS II was forced to flee Rome, Henry V appointed his own pope, Gelasius having excommunicated (1118) Henry, was finally driven to France

1119-1124. CALIXTUS II, a Burgundian, related to half the rulers of Europe and a skilled diplomat, arranged the **Concordat of Worms** (1122) which closed the investiture controversy with a compromise. The **Synod of Reims** (1119) renewed the decrees against simony, clerical marriage, and lay investiture, as well as the excommunication of Henry V.

1130-1138. Papal schism: precipitated by the corrupt election of the (Cluniac) Cardinal Pierleone (son of a rich converted Jewish banker of Rome), as **Anacletus II** (1130–1138), and the hostility of the rival houses of Corsi and Frangipani. The rival pope, **Innocent II** (1130–1143), supported by Bernard of Clairvaux and most of Europe, was given military support by Lothair in return for confirmation of his rights under the Concordat of 1122, imperial coronation, and investiture with the Matildine lands Anacletus confirmed Roger II's title as king in return for his support

1139. The Second Lateran Council (the tenth general council in the west) was attended by a thousand bishops It marked the end of the schism

1143. The Commune of Rome: established in opposition to the non-Roman pope, it defied three feeble popes (Celestine II, Lucius II, Eugenius III) **Arnold of Brescia,** pupil of Abélard, emerged as the eloquent leader with bitter denunciations of clerical wealth and papal bloodshed and burning appeals for a return to apostolic poverty and simplicity Temporary restoration of the ancient Roman state, appeal to the emperor's protection **Bernard of Clairvaux** agreed with Arnold's indictment (cf *De Consideratione*, addressed to Pope Eugenius), but saw salvation for the Church in purification from within, not in diminution of its great powers, and opposed Arnold as he had Abélard.

1147-1149. The Second Crusade (p 256).

1154-1159. Adrian IV (Nicholas Breakspear, the only English pope) Son of a poor man, learned, kindly, of high character, he had risen by his own merits; Roman anarchy ended by a stern interdict. Arnold expelled; alliance with **Frederick Barbarossa** against William, King of Sicily; altercation with Frederick over his haughty refusal of ceremonial service to the pope (stirrup episode). The bitter hostility of the Romans to pope and emperor forced a surreptitious coronation and hurried departure from Rome

1155. Frederick executed Arnold as a heretic, but abandoned Adrian to the Normans and forced him to an independent Italian policy (i e alliance with an anti-Norman league of southern barons and with Constantinople) which brought William of Sicily to his knees as the pope's vassal Adrian accepted the Roman Commune and returned to Rome.

1158-1162. Frederick's second expedition to Italy the **League of Pavia** (Brescia, Cremona, Parma, Piacenza) supported Frederick, Milan and its league were reduced to submission. The great **Diet of Roncaglia**. Frederick, using Roman law to justify an extreme assertion of imperial rights and a brusque resumption of imperial regalia, substituted an imperial *podestà* for the consuls in the Lombard cities, drove Milan into open revolt (1159-1162) and turned the towns to alliance with the pope Renewal of the papal alliance with Byzantium, formation of an alliance of Lombard towns under papal auspices

1159-1181. ALEXANDER III (imperialist anti-popes: Victor IV, Paschal III, Calixtus III) Frederick, citing precedents from Constantine, Charlemagne, and Otto the Great, held a synod at Pavia to adjudicate the claims of Alexander III and Victor IV. Alexander ignored the synod, Victor was recognized Alexander, after an exile in France, returned and excommunicated Frederick (1165) Renewal of the town leagues (1164), Milan rebuilt, expulsion of imperial *podestàs*.

1167-1168. Frederick's fourth expedition to Italy Alexander's flight to the Normans; Frederick's capture of Rome, renewal of the Lombard League (1168) promises of mutual aid; organization for federal administration, erection of Alessandria, a great fortress city (named for the pope), to guard the passes (1168); Italy virtually independent.

1174. Frederick's fifth expedition to Italy vain siege of Alessandria, complete **defeat at Legnano** (1176), preliminary peace of Venice (1177, the centenary of Canossa)

1179. The Third Lateran Council decreed a two-thirds vote of the conclave to be necessary for a valid papal election.

1181-1198. A series of unimportant popes, often exiled from Rome by local anarchy until 1188, when papal recognition of the Commune of Rome made peaceful residence again possible.

1183. Peace of Constance: imperial suzerainty in Italy recognized, resumption by the Lombard towns of all *regalia* they had ever enjoyed, including the right to maintain an army, to fortify, to keep the league or expand it, full judicial jurisdiction, control of their own coinage, abolition of the imperial *podestàs* The only relic of imperial control was the reservation of the emperor's right to confirm elected consuls, the right of appeal to the imperial court, and the retention of the *fodrum* as a contribution to military needs The Lombard towns were autonomous for all practical purposes under a very loose system of imperial legates and vicars

1184. Frederick's sixth expedition to Italy utilizing the split in the Lombard League (after 1181) and local feuds in Tuscany and Bologna, Frederick created a strong imperial party in middle Italy and by a liberal charter (1185) even won over Milan

1189-1192. The Third Crusade (p 256)

1198-1216. INNOCENT III A tough-minded Italian patrician of German blood (whose family provided the Church with eight popes), chosen by the cardinals to restore the political power of the papacy Animated by an historical mysticism, he looked on Christendom as a single community in which he aimed to combine moral unity with a world-state under papal guidance He deduced the papal powers from the Petrine Theory, the *Old Testament*, the *Donation of Constantine*, and from the duty of the pope to insure justice, maintain peace, prevent and punish sin, and aid the unfortunate With a clear grasp of essentials, he never lost sight of this concept, but his frequent opportunism destroyed his moral grandeur Insistence, not on moral or theological, but on historical grounds (i e the Translation of the Empire) on the right (claimed by Gregory VII) to pass on imperial elections A brilliant administrator, he first brought the papal chancery into systematic organization (division into four sections under experts, careful systematized treatment of documents) and made a great collection of canons and decretals This pontificate was the zenith of the mediaeval papacy

Restoration of the Papal States (Spoleto, Ancona, Romagna regained); many towns succeeded in escaping and keeping their local autonomy Tuscany. an anti-imperial league under papal auspices; towns like Florence, Lucca, and Siena retained their appropriations of the Matildine lands (a partial foundation of their later power), the rest of the Matildine lands were regained by the Church Innocent used his position first as protector, then as guardian of Frederick II, in an attempt to alienate Sicily from the Hohenstaufens

Steady insistence on a crusade: The Fourth Crusade (p 256) combined opportunity to attack the infidel with a chance to reunite the Roman and Orthodox Churches; Innocent reconciled himself to the sack of Constantinople by the organization of the new Latin Church of Constantinople The Albigensian Crusade (p 229), directed against the spreading heresy of southern

France, drenched that region with blood and exterminated one of the most advanced local cultures in Europe, under revolting circumstances of feudal cynicism and clerical intolerance Simon de Montfort nullified Innocent's efforts to divert the crusaders' ardor to Spain against the Moslems

Vindication of the political claims of the papacy: (1) Asserting his right to pass on imperial elections, Innocent rejected the Hohenstaufen claimant (Philip of Swabia) to the imperial crown, ignored the undoubted rights of Frederick, crowned and supported Otto (in return for large promises of obedience to papal authority), and then procured (in alliance with King Philip II) the election of Frederick II (2) By excommunicating Philip II (1198) he forced him to a formal recognition of his wife Ingeborg, but was coldly rebuffed when he intervened in Philip's struggle with the Angevins (3) Maintaining the rights of his nominee to the See of Canterbury (Langton) Innocent forced King John of England (interdict, 1208) to cede England to the Holy See and receive it back as a fief (1213) (4) Innocent received the homage as papal vassals of the following states Aragon, Bulgaria, Denmark, Hungary, Poland, Portugal, Serbia, and brought the Roman Church to its closest approximation to an ideal Christian, universal commonwealth

The struggle against urban heresy: The Church, long organized to deal with a predominantly rural society, was increasingly out of touch with the rising bourgeoisie and urban proletariat as town life revived and expanded; the anti-clericalism of the cities had become a major problem The Italian, **Francis of Assisi,** and the Spaniard, **Dominic,** organized the spontaneous response within the Church to this crisis Francis (d. 1226), a converted gilded youth, as the joyous "troubadour of religion" began preaching the beauties of humbleness, poverty, simplicity, and devotion, of the brotherhood of man, of man and the animals, of man and nature. His cheerful vernacular hymns won tremendous success in the towns of Italy. Founded as a brotherhood, whence the name **Friars Minor** (*Minorites, Grey Friars*, also *Cordeliers*), the **Franciscans** won cautious support from Innocent, but not formal ratification as a corporation until 1223

The second of the Mendicant Orders, the **Dominicans,** born of Dominic's campaign against the Albigensian heresy, was sanctioned by Innocent (1215) Organized as a preaching order, the Dominicans (*Friars Preachers, Black Friars*, or *Jacobins* in Paris) patterned their constitution on the Franciscan These two mendicant orders were not monastic, rural monks, but town-dwellers devoted to preaching and charity. The conduct of the Inquisition was entrusted to them (1233) and their direct influence on education (especially that of the Dominicans) was enormous

1215. The Fourth Lateran Council was the climax of Innocent's pontificate (attended by 400 bishops, 800 abbots and priors, and the representatives of the monarchs of Christendom) and its decrees were of tremendous significance (1) The Church was pronounced one and universal, (2) the Sacraments were decreed the channel of grace, and the chief sacrament, the Eucharist, (3) the Dogma of transubstantiation was proclaimed, (4) annual confession, penance, and communion were enjoined, (5) careful rules were made as to episcopal elections and the qualifications of the clergy, and (6) injunctions for the maintenance of education in each cathedral and for theological instruction were formulated, (7) the Albigensian and Catharist heresies were condemned, (8) trial by ordeal and by battle forbidden, (9) relic worship regulated, and (10) rules of monastic life were made more rigorous Finally, another crusade was proclaimed

1216-1227. HONORIUS III, a high-minded noble of conciliatory disposition who managed to keep on relatively good terms with Frederick II.

1227-1241. GREGORY IX, a relative of Innocent III, aged and fiery, he never relaxed his relentless pressure on Frederick **Canonization of Francis of Assisi** (1228) and **Dominic** (1234)

1243-1254. INNOCENT IV, a canon lawyer. Supposedly friendly to Frederick, he continued the uncompromising attack on the emperor, and encompassed the final ruin of the Hohenstaufen

1271-1276. GREGORY X (*Visconti*), a high-minded pope with three aims: to pacify Italy, to check Charles of Anjou and the rising power of France, and to pacify Germany. At the **Synod of Lyons** (1274) he provided for the seclusion of conclaves to avoid corruption. His successors were occupied with Italian affairs (the war of Naples and Sicily, baronial anarchy in Rome, etc.), and the advancement of their own houses· **Nicholas III** (*Orsini*) (1277–1280), a foe of Charles of Anjou, **Martin IV** (1281–1285), a puppet of Charles of Anjou; **Honorius IV** (*Savelli*) (1285–1287), **Nicholas IV** (*Colonna*) (1288–1292) The rivalries of the great houses was so close that two years were required to elect Nicholas'

successor, a hermit dragged unwilling (as a result of Cardinal Malabranca's dream) to the Holy See, **Celestine V** (1294), who never saw Rome, a puppet of Charles of Anjou and Cardinal Caetani Induced (probably) by Caetani (the midnight voice, the megaphone over the papal couch) he resigned (*The Great Refusal*, Dante, *Inf* III, 60) and was kept a prisoner by his successor, Boniface VIII (*Caetani*)

1294-1534. THE SECULARIZED PAPACY: absorption in secular politics to the exclusion of spiritual leadership

1294-1303. BONIFACE VIII (*Caetani*) Surpassed all his colleagues in the Sacred College as lawyer, diplomat, and man of affairs. A skeptic in religion, but a believer in amulets and magic, well read in the pagan classics, he was the *last mediaeval pope*, and the last pope to claim the universal authority of the papacy as asserted by Gregory VII and maintained by Innocent III Addicted to low company, he was not as vicious as contemporary propaganda painted him Handsome and vain, he substituted on occasion imperial dress and regalia for papal vestments (*I am pope, I am Caesar*) Rude beyond belief, domineering and well-hated, his chief aim was the aggrandizement of the Caetani family. An intelligent patron of architecture and art Giotto in Rome

1295. Bent on regaining Sicily for the papacy, Boniface continued the support of the Angevin claimant, Charles II of Naples, arranged the **Peace of 1295**, by which James of Aragon exchanged Sicily for the investiture of Sardinia and Corsica, and the extinction of French claims in Aragon

1296. The Bull *Clericis laicos*, designed to bring the kings of France and England to accept papal intervention, forbade the payment of taxes by the clergy to lay rulers without papal consent (a vain attempt to maintain a mediaeval custom in the face of rising national states) Philip IV of France answered with an embargo on the export of bullion; Edward I of England with outlawry of the clergy, both were supported by public opinion expressed in their national assemblies (pp 200, 232)

1297. Angered by the Colonna, their insistence on the validity of Celestine V's election, their appeal to a general council, and their support of the Aragonese in Sicily, the pope began a veritable crusade which exiled the Colonna (Palestrina, the family stronghold, razed)

Recognition of the rights of Robert (second son of Charles II) in Naples (exclusion of Carobert of Hungary). Beginning of the formation of a Caetani *state* as a threat to the barons

1300. THE GREAT JUBILEE, zenith of the pontificate, one of the magnificent pageants of the mediaeval papacy, managed with tremendous pomp by Boniface, huge donations (raked over public tables by papal "croupiers"), the proceeds intended by Boniface for the second Caetani state to be formed in Tuscany and for the subjection of Sicily

1302. Charles of Valois' failure to dislodge Frederick, the Aragonese claimant in Sicily, forced Boniface to the **Peace of 1302** which ended the War of the Sicilian Vespers, left Frederick king, and provided for the ultimate reunion of Naples and Sicily under the Angevins

1302-1303. Boniface's defeat and humiliation by the national states

The Bull *Unam sanctam* (1302) marked the climax of papal claims to superiority over national states and lay rulers Philip IV (his appeal for a compromise rejected) dispatched Nogaret to bring the pope to French soil for trial by a general council called by Philip.

1303. The "Terrible Day at Anagni": Nogaret and Sciarra Colonna penetrated to the papal apartment, found Boniface in bed, threatened him with death, tried to force his resignation, took him prisoner Faced with a public reaction against them as foreigners, Nogaret and Colonna fled, and Boniface died shortly of humiliation. The papacy, so lately triumphant over the empire, found itself defeated by a new force, national feeling supporting national monarchy, and the defeat vindicated the claim of the new states to tax clerics and to maintain criminal jurisdiction over them

1303-1304. BENEDICT XI. Exiled to Perugia by the anarchy in Rome, he promulgated a bull condemning the principals in the affair at Anagni, and died almost immediately (reputedly by poison) The cardinals, almost evenly divided for and against Boniface, after a conclave of ten months, chose a compromise candidate, the French Archbishop of Bordeaux, Bertrand de Got (supposed to be a bitter foe of Philip IV), who assumed the name

1305-1314. CLEMENT V (1305–1314) Clement never entered Italy and became friendly (bribed?) to Philip The **Synod of Vienne** (1311–1312) exonerated Boniface's memory despite Philip's pressure, but Philip had his way with the Templars (1307) (p 232) Italy was in anarchy, but Clement was bent on returning there as soon as he had made peace between England and France and launched a cru-

sade To escape Philip, Clement established the papal court at Avignon. (Avignon was an enclave in the Venaissin which was papal territory). (*Cont. p* 286)

(1) *The Norman Kingdom in South Italy and Sicily*, 1105-1194

1130-1154. The Norman Count **Roger II of Sicily** (1105–1130) succeeded the Norman Duke William of Apulia (1111–1127) and in 1130 assumed the title of King of Sicily, Apulia, and Capua with the approval of anti-Pope Anacletus II Excommunicated by Pope Innocent II (1139) for his alliance with Anacletus, he defeated Innocent (1140), took him prisoner, and forced recognition of his title By skillful diplomacy he prevented a joint invasion of Sicily by the Greek and Roman emperors Planning a Mediterranean commercial empire, Roger established an extensive North African holding (at its maximum, 1153)

1154-1166. **William I,** continuing Roger's policy, defeated (1156) the Byzantine allies of Pope Adrian IV and compelled Adrian to recognize his title in Sicily, Apulia, Naples, Amalfi, and Salerno He supported Pope Alexander III against Frederick I

1166-1189. **William II** continued this policy, but as he planned a Mediterranean empire and wished a free hand, he welcomed the marriage (1186) of Constance (Roger II's daughter), his heiress, to the future Emperor Henry VI He himself married Joan, sister of King Richard I of England, and intended to lead the Third Crusade as part of his imperial plans On his death,

1190-1194. **Tancred of Lecce** (son of Roger, Duke of Apulia, the brother of Constance) led a vigorous native resistance to the Emperor Henry VI (king, 1194–1197) with the support of the pope and Richard I Henry reduced Sicily, southern Italy, and part of Tuscany, with the aid of Pisa and Genoa, retained the Matildine lands in central Italy, organized an imperial administration of his holdings, and planned a great empire with Italy as its base **Purely Norman rule ended with Tancred.**

The Norman kingship in southern Italy and Sicily was theocratic, on Byzantine lines, the administration was an efficient, departmentalized bureaucracy Tremendous prosperity and efficient taxation made the Sicilian monarchs perhaps the richest in Europe. Dealing with a cosmopolitan kingdom containing Italian, Greek, and Saracen elements, and needing settlers, the Norman rulers practiced a tolerant eclecticism which provided for wide racial divergences in law, religion, and culture

Roger II's cosmopolitan court and generous patronage of the learned produced a brilliant circle including: the Arab geographer **Edrisi, Eugenius** the translator of Ptolemy's *Optics*, and **Henry Aristippus,** translator of Plato's *Phaedo* and Book IV of Aristotle's *Meteorologica*

(2) *The Development of Italian Towns*

No continuous tradition of mediaeval and classical town government in Italy can be traced The post-Carolingian anarchy left defense in local hands and rural refuges and town walls were the work of local co-operation The bishops in Lombardy, traditional guardians of their flocks, with large episcopal and comital powers delegated from the monarchs, played a decisive rôle in communal organization for defense (e g Bergamo, 904) The first cases of true urban autonomy were in Amalfi, Benevento, and Naples (1000–1034), a development cut short by the advent of the Normans

The great urban evolution took place in the north, and particularly in Lombardy, where sworn municipal leagues and urban associations appeared (probably) in the 10th century In these cities the nobles (since ancient times town-dwellers for at least part of each year) played an important part, though they were always balanced by the bishops The emperors, busy in Germany or preoccupied with the popes, made wide grants of regalian rights over local coinage, tolls, customs dues, police powers, and justice (diplomas of Henry I, Lothaire III, and Conrad II); there were also considerable delegations of local episcopal powers. Full-fledged communes appeared in the 11th and 12th centuries (e g Asti, 1093; Pavia, 1105, Florence, 1138, and Rome itself, by papal charter, 1188) Expansion in the great maritime and commercial republics was rapid (e g Pisa's new walls, 1081, Florence's second wall, 1172–1174, Venetian expansion in the Adriatic after the capture of Bari from the Saracens, 1002)

As a result of revolt and negotiation the towns of Lombardy were largely self-governing communes by the opening of the 12th century, and the consulate or its equivalent was in full activity by the end of the century Typical town organization: an assembly (legislation, declaration of war and peace, etc), the consuls, core of the magistracy, usually four to twenty in number, serving a one-year term, and chosen from the leading families, the town council and minor magistrates

The development of the merchant and craft guilds led to a vigorous class warfare as the rising bourgeoisie asserted itself, and brought in the podestate (the *podestà*), a kind of local dictator, during the last quarter of the 12th century

In Tuscany the towns treated the counts as the Lombards had treated their bishops Venice, thanks to her peculiar circumstances, evolved a unique commercial oligarchy.

(3) *The Rise of Venice to* 1310

Fugitives from the Huns found refuge among the fishing villages of the lagoons, the permanent establishment of Venice seems to date from the Lombard invasion (568). Venetian aid to Belisarius began the formal connection between Venice and Constantinople and a (largely) theoretical connection with the Eastern Roman Empire The *tribuni maiores* (a central governing committee of the islands) dated from c 568

687. **Election of the first doge.** A salt monopoly and salt-fish trade were the sources of the first prosperity of Venice Two great parties (1) pro-Byzantine aristocrats favoring an hereditary doge; (2) democrats friendly to the Roman Church and (later) the Franks Venice offered asylum to the Exarch of Ravenna fleeing from Liutprand, and gained trading rights with Ravenna. When Charlemagne ordered the pope to expel the Venetians from the Pentapolis and threatened the settlement in the lagoons, Venice turned again to Constantinople, and in a treaty

810. Charlemagne and Nicephorus recognized Venice as Byzantine territory and accepted her mainland trading rights.

1000. After a two-hundred-year expansion in the Adriatic, Venice completely reduced the Dalmatian pirates, and the doge took the title of Duke of Dalmatia Venice was mistress of the sea road to the Holy Land (commemorated in the wedding of the doge and the sea).

1032. The aristocratic effort to establish an hereditary doge was defeated Establishment of a council and senate.

1063. The construction of the **Church of St. Mark** begun; one of the most notable and influential examples of Byzantine architecture in the west.

1063. The first three crusades established Venetian trading rights in a number of Levantine ports (e g Sidon, 1102, Tyre, 1123) and founded the power of a wealthy ruling class. A war with the Eastern Empire (financed by the first known government bonds) was unsuccessful, and led to the institution of a deliberative assembly of 480 members (the germ of the **Great Council**).

1171. Appointment of the doge was transferred to this council, a complete triumph for the commercial aristocracy

1198. A coronation oath (in varying terms) began to be exacted of the doge

1204. **IN THE FOURTH CRUSADE** (p. 256) Venice gained the Cyclades, Sporades, Propontis, the Black Sea coasts, Thessalian littoral, and control of the Morea She administered this vast empire on a kind of feudal tenure, portioning it out to families charged with defense of the seaways Venice had also gained a further foothold in Syrian ports

From this period dates a great epoch of building and increasing oligarchic pressure as the government began to become a closed corporation of leading families.

1253-1299. **THE STRUGGLE WITH GENOA** for the Black Sea and Levantine trade The feud of Genoa and Venice was ancient, and trouble began at Acre (1253) The first war with Genoa ended in the complete defeat (1258) of the Genoese

1261. The Greeks seized Constantinople during the absence of the Venetian fleet, they favored Genoa, turning over Galata to her

1264. The Venetians destroyed the Genoese fleet at **Trepani**, and soon returned to their old status in Constantinople.

1289-1299. The **advance of the Turks** (capture of Tripoli, 1289, of Acre, 1291) led Venice to a treaty with the new masters of Asia Minor Genoa met this by an effort to close the Dardanelles, and won a victory (1294) at Alexandretta; Venice forced the Dardanelles and sacked Galata The Genoese defeated the Venetians at **Curzola** (1299), but Matteo Visconti negotiated an honorable peace (1299) for them.

1284. **The first ducat** was coined.

1290-1300. The perfection of the great galleys Establishment of the **Flanders galleys** (1317)

1297. **The Great Council** was restricted in membership to those who had been members within the preceding four years. A commission added other names and then the council was closed to new members (except by heredity). In effect this excluded a large section of the citizens from any share of the government in favor of a nar-

row, hereditary, commercial oligarchy Popular reaction led to a revolt (1300), the leaders of which were hanged

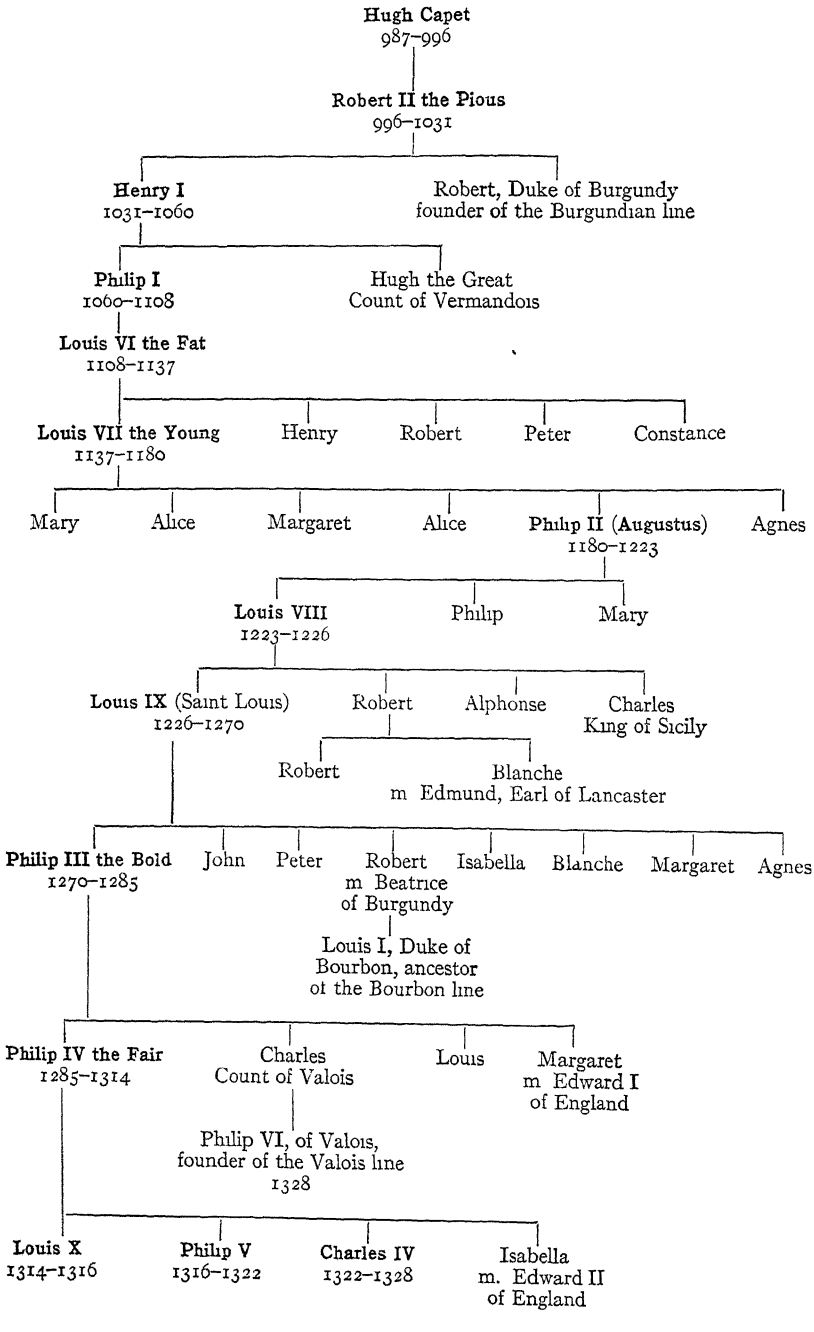
1310. Tiepolo's rebellion, the only serious uprising in Venetian history, was crushed This seems to have been a patrician protest against the extreme oligarchy, and led to the creation of an emergency committee of public safety, the **Council of Ten,** which soon became permanent (1335)

The Venetian government thus consisted of The Great Council (i e. the patrician caste); the Senate (a deliberative and legislative body dealing with foreign affairs, peace, war, finances, trade); the Council of Ten, a secret, rapidly acting body concerned with morals, conspiracy, European affairs, finance, the war department, which could override the Senate, the *Collegio* or Cabinet (the administrative branch); the doge and his council, which, sitting with the Ten, made the Council of Seventeen.

(*Cont. p.* 298)

e. FRANCE, 987-1314

987-1328. DIRECT LINE OF THE CAPETIAN HOUSE (the dynasty continued until 1792).



987-996. HUGH (called *Capet,* from the cloak he wore as lay abbot of St Denis) At Hugh's accession the kingship was at its nadir, such power as Hugh had was feudal; the royal title meant little more than an hegemony over a feudal patchwork, an ill-defined area called France, and the prestige of ancient monarchical tradition sanctified by ecclesiastical consecration Hugh's own feudal domain consisted of the Île de France (extending from Laon to Orleáns, with its center at Paris) and a few scattered holdings The great barons of the so-called royal fiefs recognized Hugh as their suzerain, but never did homage nor rendered service Hugh's special interest was to maintain his control over his chief resources, the Archbishopric of Reims and the great bishoprics (Sens, Tours, Bourges) and abbeys of the Île de France, and to wean northeastern France away from the Carolingian and imperial interest. Despite clerical pressure, he avoided submission to imperial suzerainty, a policy which facilitated the demarcation between France and Germany In defiance of pope and emperor he forced his own candidate into the Archbishopric of Reims Hugh crowned his son shortly after his own coronation and began a practice (*co-optation*) which the early Capetians continued (until Philip II no longer felt it necessary), thus insuring the succession, and weakening the principle (dear to the feudality) of elective kingship

996-1031. ROBERT II (*the Pious*), an active, well-educated, polished, amiable ruler, a good soldier, supported by the Duke of Normandy in constant wars against his neighbors, and by the religious houses of Burgundy in attacks on the Dukes of Burgundy The Duchy of Burgundy escheated to the crown, and was given to Robert, a younger son Robert the Pious, like his father, supported the Cluniac reformers Minor territorial additions signify the revival of royal power

1031-1060. HENRY I, an active, brave, indefatigable ruler, whose reign nevertheless marked the lowest ebb of the Capetian fortunes. The rebellion of his brother Robert, supported by Eudes, Count of Chartres and Troyes, was put down with the aid of the Duke of Normandy, and Robert was pacified by the grant of the Duchy of Burgundy (which continued in his family until 1361) Henry supported the Duke of Normandy (1047), but led a coalition against him two years later, and was defeated He boycotted the pope and his synod at Reims, and, like his son and successor, opposed the reform movement in the Church The *prévôts* were introduced to administer justice and taxation in the royal lands The Kingdom of Burgundy passed (1032) to the empire

1035-1066. RISE AND EXPANSION OF NORMANDY. William I became duke (1035) and until 1047 faced a series of baronial revolts With the aid of his feudal suzerain, King Henry of France, William defeated his revolting barons (1047) and razed their castles The union of Normandy and Maine was completed (1063) against powerful opposition from the Counts of Anjou William's alliance with Henry was broken (1053), and Henry ravaged the heart of Normandy (1058) Normandy was now a fully developed feudal state under firm ducal control. Military service, assessed in knights' fees, was attached to specific pieces of land, no castles could be built or maintained without ducal license Private warfare and blood feud were strictly limited. Coinage was a ducal monopoly. The legal jurisdiction of the duke was wide, local government was under the duke's representatives (the *vicomte*) who commanded the local forces, guarded the castles, did justice, collected the revenue (a large part of which was cash). The Church had been revivified, but here too the duke was supreme, naming bishops, most of the abbots, and sitting in provincial synods.

The Capetian Kings

Norman relations with England had grown closer, and this tendency culminated (1002) in the marriage of Duke Robert's sister Emma with King Ethelred The son of this marriage, Edward the Confessor, educated largely at the Norman court, came to the throne of England (1042), and died without heirs (1066) The Witan at once elected Harold, Earl Godwin's son. **William I** of Normandy with a volunteer force (perhaps 5000–6000) collected from Normandy and the Continent, defeated Harold in the **battle of Hastings** (Oct 14) and was crowned King of England on Christmas Day (p 168) The *Bayeux Tapestry* forms a unique and probably contemporary record of this expedition.

1060-1108 PHILIP I, enormously fat, but active and vigorous, excommunicated and unpopular with the clergy as the result of an adulterous marriage (1092) and because of his hostility to clerical reform He defeated (1079) Duke William of Normandy (the *Conqueror*) and steadily supported **Robert Curthose,** William's son, against Anglo-Norman pressure. Systematic expansion of the resources of his house, and regular annexations to its domains in the face of stubborn feudal resistance The *Chanson de Roland*, the national epic of France, was probably composed during this reign.

The growth of feudalism tended to diminish anarchy and to improve the general security of life, and ultimately led to decisive economic recovery in western Europe, a trend toward urban economy, and the emergence of a bourgeoisie who were beginning to accumulate capital This development was a determining factor in the economic, social, and monarchical evolution of the 13th century The **Peace of God** in the 10th century, and the **Truce of God** (first mentioned, 1027), promoted by the Church with Capetian support, were significant rather than effective attempts to reduce warfare.

1108-1328. A period in which the Capetians reduced the great feudatories north of the Loire and began the transformation of the vague ecclesiastical, judicial, and military rights derived from Carolingian tradition into royal powers over the French people as a whole.

1108-1137. LOUIS VI (*the Fat*) A brave soldier, of tremendous physique, intelligent, affable, avaricious, but liked by the peasantry, commercial class and clergy, the first popular Capetian. Consolidation of his Norman frontier (wars with Henry I of England 1109–1112; 1116–1120), and steady reduction of his lesser vassals as far as the Loire His charters to colonizers (*hôtes*) of waste lands, and frequent if inconsistent support of the communes, especially on the lands of the Church and the baronage, began the long alliance of the Capetians with bourgeois interests; Louis' *charter of Lorris*, widely copied in town charters, was a significant sign of the **great urban development** setting in all over Europe in this period As protector of the Church, Louis gained a foothold in the lands of his vassals Careers at court were opened to talented clergy and bourgeois: great influence of **Suger** (see below) Louis' compromise with the Church over feudal patronage and investiture initiated the King of France's effective rôle as *eldest son of the Church.* He was the first Capetian to intervene effectively outside his own feudal lands. He defeated the alliance of Henry I of England with the Emperor Henry V, and stopped (1124) a German invasion The marriage (1137) of his son Louis to Eleanor, heiress of William X of Aquitaine (i e. Guienne [*Aquitania Secunda*] and Gascony), marked the Capetian effort to balance the Anglo-Norman menace in the north by additions of territory south of the Loire. The Anglo-Norman danger had appeared in aggravated form when in 1129 Geoffrey became Count of Anjou, Maine, and Touraine He had in 1128 married Matilda (daughter of Henry I of England), and proceeded (1135) to conquer Normandy

DEVELOPMENT OF ROYAL ADMINISTRATION UNDER THE EARLY CAPETIANS. The court of the king, usually known as the *curia regis*, consisting as it did of magnates, royal vassals, and court officials (mainly chosen from the baronage), was essentially feudal in spirit and tradition Meeting at royal summons and relatively frequently, its early duties were undifferentiated, its functions judicial, advisory, legislative The royal administration was in control of the great officers of the crown whose aim was to concentrate power in their own hands, a process which culminated in a virtual monopoly of such power by the **Garlande family** early in the 12th century. Louis VI, after a struggle (1128–1130), terminated their dominance, and thenceforth the Capetians relied increasingly on lesser and more docile nobles, clerics, and bourgeois men of affairs Such men were career men devoted to the crown rather than to feudal ambitions, and their presence in the *curia regis* began the differentiation of its functions and its subjection to royal rather than feudal influences. Most notable of these careerists was **Suger,** Louis' old tutor, a cleric of humble origin, who became Abbot of St. Denis (1122). An

able statesman, his influence was decisive in the reign of Louis and his son Louis VII Suger began (c. 1136) the new abbey church of St. Denis, the first edifice wholly Gothic in design.

1100-1400. RISE OF TOWNS. The economic revival of western Europe was paralleled by a resumption of town life and development throughout the west, which was most notable in France, where the movement reached its apogee in the 12th century, before the consistent advance of the Capetian monarchy began to retard its progress. Types of town development were by no means uniform, but important general categories can be distinguished (1) The *commune* proper, a collective person endowed with legal rights and powers (e.g. financial, judicial), able to hold property As a feudal person the *commune* could have vassals, render and exact homage, establish courts for its tenants, and even declare war and make treaties. Symbols of its independence were the belfry, town hall, and seal. Typical *communes* of northern France and Flanders were the *communes jurées* (e g Beauvais, St. Quentin [chartered before 1080], Rouen [chartered 1145], and Amiens [chartered in the 12th century]); in southern France the corresponding *communes* were called *consulates*, which enjoyed even greater rights than in the north, especially in Roussillon, Provence, Languedoc, Gascony, and Guienne. In the south the nobles took an active part in the formation of *consulates* and shared in their government. (2) *Villes de bourgeoisie* (or *communes surveillées*) had elements of communal powers in varying degrees, but lacked full political independence (i e. they were privileged but unfree). They were found all over France, but especially in the center, and were the prevailing type on the royal domain. Citizens enjoyed specific privileges, but the crown retained judicial and other powers in varying degrees (3) *Villes neuves* (characteristic of the commercial north) and *bastides* (typical of the south, and usually strongholds) were small rural creations of kings or feudal lords, given a charter from the first, establishing their status. (4) *Peasant associations* and village federations (influential in the north) which sought to define and guarantee the rights of their citizens. Governmentally town development seems to have been hardly the result of conscious effort to introduce a new political dispensation It was rather an attempt to establish and define the rights of non-feudal groups, and aimed at economic prosperity and personal security. The movement constantly enjoyed royal support, but royal policy toward it was governed by immediate political or financial considerations, and the crown always strove to reduce or control town independence in the interest of its own power. Ultimately monarchy triumphed, but not before the bourgeois groups and the serfs had altered their position to their own advantage.

1137-1180. LOUIS VII (*the Young*), not a strong king, but pious and therefore popular with the clergy. He remained under the influence of Suger until the latter's death in 1151. A papal interdict on the royal lands, resulting from Louis' insistence on his feudal rights, led to intervention by Bernard of Clairvaux.

1147. Louis inspired the **Second Crusade** (p 256) He induced the Emperor Conrad III and Bernard of Clairvaux to join him and, leaving the kingdom in the hands of Suger, he set out for the east He returned (1149) beaten, humiliated, and estranged from his wife Eleanor, who had accompanied him. The marriage was annulled (1152), probably due to lack of a male heir. This step cost the Capetians the territories of Poitou, Guienne, and Gascony, for Eleanor at once married Henry, Duke of Normandy, who in 1151 had succeeded his father as Count of Anjou, Maine, and Touraine The acquisition of Eleanor's domains made Henry master of more than half of France and put him in a position to bring pressure on the holdings of the King of France both from the north and the south When Henry in 1154 became King of England, the so-called Angevin Empire extended roughly from the Tweed to the Pyrenees.

1173. Louis supported **Thomas Becket** (p. 194) against Henry II of England, and was saved from Henry's wrath only through the mediation of the pope, Alexander III, a refugee in France against whom the Emperor Frederick had raised an antipope. It was Louis' interest to support the anti-imperial party, because of the pressure of the emperor upon Burgundy.

During the reign of Louis VII the appointment of non-feudal experts to the *curia regis* continued, and their influence on the administration began to be decisive. Grant of town charters also continued. The period was, moreover, one of marked

Cultural progress: The guild of masters (germ of the University of Paris) was recognized (c 1170) and a number of eminent scholars appeared on the scene: **St. Bernard of Clairvaux** (1090–1153), founder of the Cistercian Order, a great preacher, fervent reformer, and dominant spiritual figure of the west; **Roscellinus** (died c. 1121), champion of nominalism; **Anselm** (d. 1109), Abbot of Bec, later Archbishop of Canter-

bury, champion of realism, **Peter Abélard** (d. 1142), eminent master at Paris (after about 1115), supporter of conceptualism, a middle ground in the great controversy over universals Abélard's *sic et non* presented without solution the conflicting theological arguments on 158 important problems **John of Salisbury** (d. 1180), Bishop of Chartres, favored the humanistic rather than the dialectical approach to knowledge **Peter Lombard**, Bishop of Paris (1159), in his *Sententiae* offered a cautious solution of theological and philosophical problems which became a standard text of the Paris schools In literature the period produced the *chansons de geste* and the troubadour lyrics

1180-1223. PHILIP II (*Augustus*). He began his rule at fifteen and had no time for education (he knew no Latin). A calculating realist, perhaps the outstanding figure of his time, he was the consolidator of the monarchy and the founder of the organized state. As the "maker of Paris" he paved the streets, walled the city, and began the building of the Louvre

1180. A six-year alliance with King Henry II of England enabled Philip to defeat Philip of Artois and the Counts of Champagne, to crush a baronial league against him, and to gain recognition for his title to Artois and Vermandois. Philip intrigued with the sons of Henry, welcomed the rebellious Richard (1187), and, joining him, defeated Henry (1189), who died the same year

1191. Philip, under pressure of public opinion, joined King Richard and Frederick Barbarossa on the **Third Crusade** (p. 256); eclipsed by Richard, he quarreled with him, returned to France, and intrigued against him with John during his (Richard's) captivity (1192–1194).

1194-1199. Richard, in a pitiless war of vengeance, built Château Gaillard on the Seine and restored the Angevin power in northern France.

1198. Excommunicated by Pope Innocent III for his divorce of Ingeborg of Denmark, Philip was forced by public opinion to a reconciliation, but sharply refused Innocent's offer of mediation with John, who succeeded Richard (1199)

1202-1204 The final duel with John for, and conquest of, the Angevin lands north of the Loire. On King John's refusal to stand trial as Philip's vassal on charges by Philip's vassal, Hugh of Lusignan, Philip declared John's French fiefs forfeited (1203), and supported John's nephew, Arthur of Brittany. The murder of Arthur (1203) cost John his French support, Château Gaillard was lost (1204), Normandy and Poitou followed, and Philip emerged master of the Angevin lands north of the Loire.

New royal officials, the *baillis* (*sénéchaux* in the south), paid professionals (often Roman lawyers), superseded the now feudalized *prévôts* as the chief local administrators (financial, judicial, military) on the Capetian lands (c 1190) In the course of the 13th century *baillis* began to be assigned to regular districts (*baillages*), but they continued responsible to and removable by the king. As the royal domain expanded, royal administration was extended to it, and the foundation laid for a national, specialized, professional system

Philip, henceforth master in the north, left the conquest of the south to his successors and devoted himself to statecraft rather than war. He played the barons off against each other, used his position as protector of the Church to weaken them further, and sought the support of the towns and rich bourgeoisie as a balance to the feudality Part of this process involved the systematization of the royal finance, the regular exaction of feudal aids and obligations due to the crown as well as the systematic collection of customs, tolls, fines, and fees, though as yet there was no such thing as taxation in the modern sense. The levy of the Saladin tithe (1188) was, however, a forerunner of true taxation. Philip's reign also saw the formation of a semi-permanent royal army

1208-1213. The Albigensian-Waldensian Crusade. The Albigensians (Catharists of Albi) and the Waldensians (followers of Peter Waldo) represented originally a reaction of the lower classes against clerical corruption, but the movement was soon espoused by the nobles, who saw in it a chance to appropriate church lands. Innocent III, after a vain appeal to Philip, proclaimed a crusade against these heretics Philip took no direct part in the action, but allowed his northern vassals to begin the penetration of the south and thus prepare the way for the advance of the Capetian power. **Simon de Montfort** (the elder), a baron of the Île de France, emerged as the leader of the crusaders. His **victory at Muret** (1213) sealed the fate of the brilliant Provençal culture, of the leading southern barons, and of the heretics After a long chapter of horrors the conquest was finally completed in a campaign by Louis VIII (1226). In the reign of Louis IX the County of Toulouse passed under Capetian administration and the royal domain was extended to the Mediterranean.

1213-1214. **The great anti-Capetian Alliance** (John of England, Emperor Otto IV, the Courts of Boulogne and Flanders, and most of the feudality of Flanders, Belgium, and Lorraine)

1214, July 27. BATTLE OF BOUVINES. Philip, in alliance with Emperor Frederick II, defeated the coalition near Tournai and thereby established the French monarchy in the first rank of the European powers, at the same time ruining John of England, assuring Frederick II of the imperial crown, and bringing Flanders under French influence Militarily speaking the battle was a triumph of Philip's professional cavalry and bourgeois militia over the older infantry

1223-1226. **LOUIS VIII,** a pallid reflection of his father The first Capetian king not crowned in his father's lifetime

1224. Temporary conquest of the lands between the Loire and the Garonne, the English soon regained all but Poitou, the Limousin, and Perigord (1225)

1226. Renewal of the Albigensian Crusade and Louis' **conquest of the south.** Louis began the dangerous practice of bestowing great fiefs as appanages of the princes of the blood, a practice which later had almost fatal consequences to the monarchy (the case of Burgundy).

1226-1270. **LOUIS IX** (*St. Louis*, canonized 1297). The most chivalrous man of his age and the ideal mediaeval king. Handsome and lofty in character, Louis' careful education prepared him for a unique reign, in which ethics dominated policy. His justice won him national support and made him the arbiter of Europe His reign was the golden age of mediaeval France.

1226-1234. **Minority of Louis IX** and regency of his able and devout mother, Blanche of Castile. With the support of the Church, the royal officials and the people, Blanche was able to suppress a number of feudal rebellions (1226–1231). By the **Treaty of Paris** (1129) Raymond of Toulouse surrendered, and his heiress was betrothed to Louis' brother, Alfonso. Louis himself was married to Margaret of Provence and thus began the severance of that province from the empire

1233. As part of the campaign against heresy, Pope Gregory IX granted independent authority to investigate heresy to the **Dominicans,** requiring the bishops to co-operate with them Louis later supported the **Inquisition,** despite episcopal objections.

1241. Louis induced the Emperor Frederick II to release the prelates and delegates captured off Genoa while *en route* to a synod at Rome, but, without directly attacking the Church, he associated himself with Frederick's grievances against the pope and refused to intervene against the emperor (1247)

1242. **Invasion of France** by Henry III of England, in coalition with the rebellious feudal lords of southern France. The whole movement collapsed and was followed by the final submission of Aquitaine and Toulouse (1243)

1244. Louis took the Cross, against his mother's advice, and sailed on his first crusade (1248). His aim was to free Palestine by the capture of Egypt, but the expedition was poorly managed, Louis was captured (1250), and most of his army was put to the sword Louis himself was ransomed and returned to France

1258. **The Treaty of Corbeil,** representing a peaceful adjustment of conflicting claims between France and Aragon, to the advantage of France. Louis' son, Philip, was betrothed to Isabella of Aragon.

1259. **Treaty of Paris.** Louis, in the interest of amity, yielded Perigord and the Limousin to the King of England, despite protests from both provinces In return he received the renunciation of English claims to Normandy, Maine, Poitou. Henceforth Guienne became distinct from Aquitaine. This pacific gesture displeased opinion in both countries and weakened the French position in the south as the Hundred Years' War approached

1265. Louis permitted his brother, Charles of Anjou, to accept the crown of Sicily, a step which later involved France in Italian problems, with decisive consequences

1270. **Louis' second crusade.** Probably influenced by Charles of Anjou, who cherished far-reaching Mediterranean ambitions, Louis set out for Tunis He died of pestilence, without accomplishing anything

Louis' reign was marked by rigorous insistence on inherent royal rights even at the expense of the Church, and despite episcopal protests Royal justice was notably efficient and was constantly expanded The right of appeal from feudal to royal courts was clearly established The old *curia regis* had already become somewhat differentiated a *chambre des comptes* and a *parlement* (i.e high court) were already recognizable. Louis introduced the *enquêteurs*, itinerant investigators, to supervise the *baillis* and *sénéchaux*, but he made few other administrative innovations. Many of

his diplomats, *baillis*, and other officials were chosen from the royal household, notably from the so-called *chevaliers du roi*, and from the clergy Assemblies of royal vassals, irregularly held, gave such "national" sanction as there was to royal policy. Louis was the first king to issue *ordonnances* (i e legislation) for the whole realm on his sole authority. By *ordonnance* he outlawed private warfare, the carrying of arms and trial by battle as part of the royal judicial process, and extended the royal coinage to the whole realm. By 1270 the communal movement was already in decline and the crown profited by enforcing a more rigorous control over the towns. Only one new charter (to the port of Aigues Mortes) was granted during the reign. The bourgeois oligarchy of the towns got on increasingly bad terms with the lower orders, often reducing the town finances to chaos Louis took advantage of this state of affairs to introduce a town audit (1262) The country at large was prosperous in this period, but the financing of the two crusades and of the grandiose schemes of Charles of Anjou led to complaints that royal taxation was leading to bankruptcy and formed a bad precedent for Philip IV.

A brilliant cultural advance accompanied the general material and political progress of the time of Philip II and Louis IX; Perfection of the **French Gothic:** Cathedral of Chartres (c. 1194, Romanesque and Gothic), Amiens (c 1200); Reims (1210), Louis IX's *Sainte Chapelle*; progress of naturalism in Gothic sculpture. **University of Paris:** Foundation charter (1200); regulations of Innocent III (1215); endowment of Robert de Sorbon (hence Sorbonne) in 1257. Advance of **vernacular literature: Villehardouin's** (died c. 1212) *Conquest of Constantinople* (the first vernacular historical writing), **Chrêtien de Troyes** and the Arthurian romances; Gothardic verse (with pagan touch), *fabliaux* (risqué, semi-realistic bourgeois tales); *Aucassin and Nicolette* (a *chante fable* marked by irony and realism), **Jean de Meun's** (d. 1305) completion of William of Lorris' *Roman de la Rose* (a satire on the follies of all classes, especially women and clergy); **Jean de Joinville's** *Histoire du roi Saint Louis* (1309), the first vernacular classic of lay biography. **Paris the center of 13th-century philosophy:** harmonization of the Greek philosophy, especally Aristotle (newly recovered during the Renaissance of the 12th century in Latin translations) with Christian orthodoxy: **Vincent of Beauvais'** (d. 1264) *Speculum Maius* (a compendium of contemporary knowledge); **Albertus Magnus** (a German, d. 1280), chief of the great Dominican teachers in Paris; **Thomas Aquinas** (an Italian, d. 1274), the pupil of Albertus Magnus Thomas Aquinas' *Summa Theologiae* reconciled reason and religion, completed the integration of the classical learning and the Christian theology and remains to this day the basis of all Catholic theological teaching.

1270-1285. PHILIP III (*the Rash*), a hasty, ill-balanced king, victim of his favorites The death of Philip's uncle, Alfonso of Poitiers, brought Languedoc under royal sway and established the royal power firmly in southern France (1272). The walls of Carcassonne and Aigues Mortes were built, the latter place giving access to the Mediterranean. Unsuccessful candidacy (1273) of Charles of Anjou for the imperial crown Crusade (1282) against the King of Aragon, Philip acting as papal champion against the successful rival of the House of Anjou in Sicily

1281-1285. The pontificate of Martin IV brought to an end an anti-French period of papal policy; papal support of Charles of Anjou's ambitious dreams of Byzantine conquest until the **Sicilian Vespers** (p. 290). There followed another period of papal opposition to French ambitions.

1285-1314. PHILIP IV (*the Fair*) His reign had a distinctly modern flavor and was marked by ruthless expansion of the royal power and notable consolidation of the monarchy royal finance superseded the feudal, Roman lawyers (trained at Bologna and Montpellier) rather than clerics dominated the government; papal pretensions were reduced and the national Church made virtually autonomous under royal domination.

1286. Edward I of England did homage for Guienne

1293. Philip treacherously confiscated Gascony, which had been temporarily surrendered by Edward as a pledge, after a Gascon-Norman sea-fight.

1294-1298. War with Edward I over Guienne Philip announced a war levy on the clergy and followed a protest with a violent anti-papal pamphlet campaign. To finance the war Philip debased the coinage He first made an alliance with the Scots (1295) and excluded English ships from all ports. In 1297, Edward invaded northern France, in alliance with the Count of Flanders, but the war was brought to a close by a truce negotiated by Pope Boniface VIII.

1296-1303. Philip's conflict with Pope Boniface VIII, who put forward extreme claims to papal supremacy. The

bull *Clericis laicos* (1296) forbade secular rulers to levy taxes on the clergy without papal consent. Philip retorted by forbidding the export of precious metals (a serious threat to the papal finances) and by a vigorous propaganda campaign Boniface, engaged in a feud with the Colonna in Rome and absorbed in Sicilian affairs, gave way and practically annulled the bull (1297) But the great papal jubilee of 1300 was followed by a resumption of the quarrel, culminating in 1302 in the bull *Unam sanctam*, the most extreme assertion of the doctrine of papal theocracy in the Middle Ages On the **"Terrible Day" of Anagni** (1303, p. 222), Nogaret and Sciarra Colonna attacked the papal palace, demanded the resignation of the pope, and had a violent scene with Boniface. The death of the aged pontiff followed shortly.

1302. The first well-authenticated convocation of the **Estates-General,** including representatives of the towns in their feudal capacity The meeting was called mainly to insure national support for the king's struggle with the pope.

1302, July 11. Battle of the Spurs (at Courtrai), brought about by the troubles in Flanders Philip had antagonized the Count of Flanders by his efforts to penetrate his territory, and the count had turned to Edward I of England for support. The Flemish nobility betrayed him (1300) and he lost both his liberty and his county. But French rule soon alienated the independent burghers and led to the massacre of the French (*Matin de Bruges*), followed by the **battle of Courtrai,** in which the burghers defeated the flower of the French chivalry

1305. Election of Clement V (a Frenchman) as pope Clement reluctantly accepted French royal domination, lingered in France after his election, and finally took up his residence at Avignon, thus beginning the **Babylonian** or **Avignonese Captivity** of the papacy (p 223). During the Captivity (1309–1376) the French monarchy exercised an important influence on the papacy. Clement was obliged to quash the bulls of Boniface, to absolve the assailants of Anagni, and to support Philip's suppression of the Knights Templar (see below). Philip may properly be called the founder of **Gallicanism** (i.e of the autonomy of the French Church)

1306. The Jews were arrested, despoiled, and expelled from France.

1307. The Order of the Knights Templar, a rich, decadent organization which acted as banker to the popes and which was a creditor of Philip, had become almost a state within the state Philip now launched an attack upon it He had its lands occupied by royal officers and its property sequestrated The country was stirred up against the Order by a vigorous propaganda campaign and by an appeal to the States-General (1308). Clement was obliged to co-operate and the Inquisition was made use of in the trial, the entire affair being conducted with unparalleled ruthlessness and horror (torture freely used to extort confessions).

1312. The Order of the Templars was abolished by the **Synod of Vienne.** Its property was transferred to the Hospitalers (except in Spain, and in France where it passed to the crown). Philip made the Temple treasury a section of the royal finance administration

New economic and social alignments. The rapid expansion of France and especially the wars of Philip III and Philip IV against England and Flanders, raised an acute financial problem. Philip IV tried every device to raise money (feudal *aides*, war levies to replace military service, tallage of towns, special levies on clergy and nobles, "loans" and "gifts," the *maltôte* or sales tax, debasement of the coinage, attacks upon the Jews and Templars), but without finding an adequate solution It was this situation primarily that explains the emergence of the

Estates-General. Levies on the nobles and clergy had long been arranged in meetings of representatives of these two orders; by negotiations between the towns and the royal agents the burghers had been brought to contribute Provincial estates had been called frequently during the 13th century. The convocation of the Estates-General simply meant the substitution of national for provincial or local negotiation, and implied no principle of consent or control over royal taxation The royal revenue was increased perhaps tenfold between the time of Louis IX and the time of Philip IV, but this meant overtaxation of all classes, harmful effects upon economic life, and estrangement of public opinion. Anti-tax leagues were organized and local assemblies drew up lists of grievances. Philip was obliged to call the Estates-General again in 1314, but as the bourgeoisie and the nobility distrusted each other, no effective measures were taken and no permanent constitutional development took place. Characteristic of the period was

Pierre Dubois' *De Recuperatione Sanctae Terrae* (c. 1306), ostensibly an appeal to Philip to undertake a crusade to recover the Holy Land from the Saracens, in reality an

extensive program of reform in the interests of stronger national monarchy. Dubois envisaged the formation of a European league to enforce peace through common military action and economic boycott, disputes between parties to be settled by judicial methods. He called also for a system of universal education and for the secularization of church property. (*Cont. p. 275*)

f. THE IBERIAN PENINSULA, 1037-1284

(1) *Moslem Spain*

1037-1086. THE MULUK AL-TAWA'IF (i.e. *Party Kings*). These were petty dynasties founded on the ruins of the Omayyad Caliphate the Hammudids of Malaga (from 1016 onward) and of Algeciras (1039–); the Abbadids of Cordova (1031–); the Zayrids of Granada (1012–), the Jahwarids of Cordova (1031–); the Dhul-Nunids of Toledo (1035–), the Amirids of Valencia (1021–), the Tojibids and Hudids of Saragossa (1019– and 1031–) Most of these dynasties were absorbed by the most distinguished of them, the **Abbadids,** who summoned the Almoravids from Africa to aid them against Alfonso VI of Castile

1056-1147. THE ALMORAVIDS, a Berber dynasty, founded by the Berber prophet **Abdullah ibn Tashfin.** They conquered Morocco and part of Algeria and were called into Spain by the Abbadids to help in the defense against the Christians. They defeated Alfonso of Castile at **Zallaka** (1086) and proceeded to annex Moorish Spain, with the exception of Toledo and Saragossa.

1130-1269. THE ALMOHADES, a dynasty founded by the Berber prophet **Mohammed ibn Tumart.** His successor, Abdul-Mu'min, annihilated the Almoravid army (1114), after which Morocco was conquered (1146).

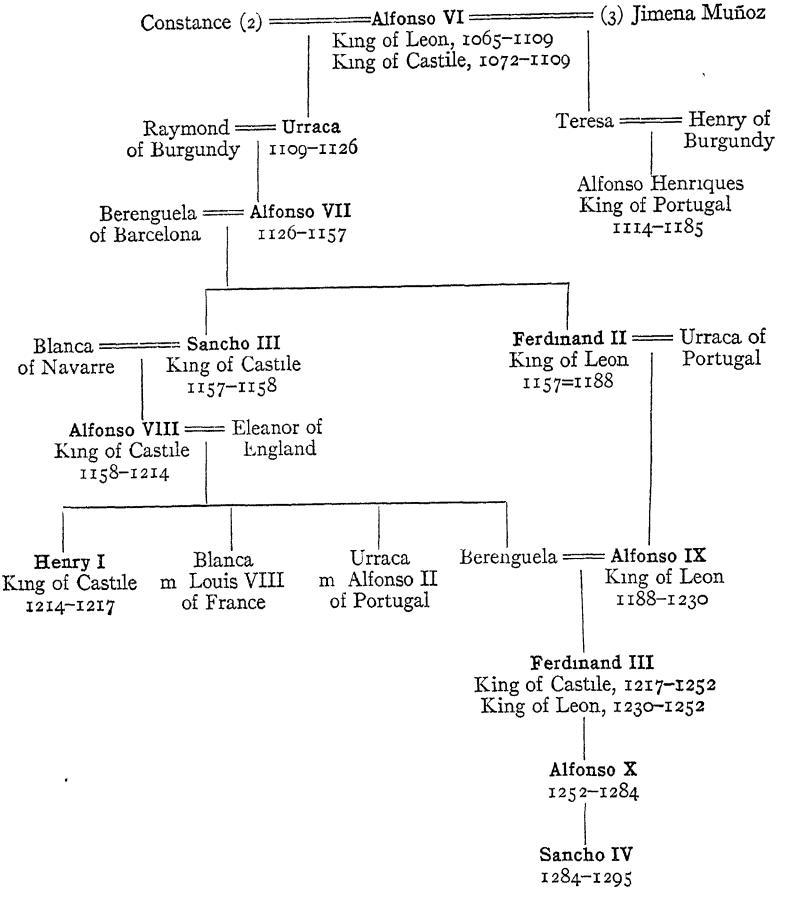
1145-1150. The Almohades invaded and conquered Moorish Spain, after which they conquered Algeria (1152) and Tunis (1158) They were finally defeated by the Christian kings of Spain in

1212, July 16 The battle of Las Navas de Tolosa, which was followed by their expulsion from Spain. Thereafter only local Moslem dynasties remained, of which the **Nasrids of Granada** (1232–1492) alone offered much resistance to the Christians until union of the Christian states brought about their defeat.

(2) *Castile*

1072-1109. ALFONSO VI, OF CASTILE. He captured Toledo from the Moors (1085) and created his son-in-law, Henry of Burgundy, Count of Portugal (1093).

1086. The Moslems, alarmed by Alfonso's progress, called from Africa the great **Yusuf ibn Tashfin** (d. 1106), leader of the newly dominant sect of Berber fanatics, the Almoravids. Ibn Yusuf landed at Algeciras (1086), and with the support of Seville, began a successful counter-thrust against the Christians (defeat of Alfonso at **Zallaka,** 1086) Yusuf, recalled by the African situation, did not at once exploit his advantage, but on his return to Spain his energetic, puritanic reforms strengthened the Moslems and brought them into an integral relation (c. 1091) with his great African empire which was centered in Morocco. This empire quickly disintegrated on Yusuf's death



Alfonso resumed the Christian reconquest with the aid of **Rodrigo (Ruy) Diaz** of Bivar, the Cid (*Cid* as applied by the Moslems means *lord* or *master*) Alfonso's style of "emperor" represented personal prestige and a vague hegemony rather than political reality.

The Cid, a Castilian originally in the service of Sancho II of Castile, later passed to that of Alfonso VI; was exiled (1081); returned to Castilian service (1087–1088); went over to the Moslem king of Saragossa after his second exile. Eventually he became ruler of Valencia. The Cid served both sides, was cruel, selfish, and proud. Despite these characteristics the legendary figure of the man became the great national lay hero of Spain. On his death (1099) Valencia was soon abandoned to the Almoravids.

In the course of the 11th century French influence began to penetrate the peninsula The Cluniacs, already (1033) strong in Catalonia, Castile, and Aragon, reinforced French influence, and stimulated clerical reform and the reconquest. A literary reflection of this is to be found in the *Cantar de mio Cid* (c. 1140), which already shows French elements in the cycle of the Cid (a cycle which continued into the 15th century).

1126-1157. ALFONSO VII, crowned "emperor" (1135) on the basis of military ascendancy and an intense feeling of equality with rival monarchs, especially the Holy Roman emperors The weakening of the Almoravids by luxury, and the rise

Rulers of Leon and Castile

of rivals (the Almohades) in Africa (c. 1125), made possible a resumption of the reconquest (1144–1147) with wide raids into Andalusia. The Almohades, summoned from Africa (1146), completed (1172) the second restoration of Moslem unity, and made Moslem Spain a province of their African empire, reducing the Arab influence in Spain to nothing in favor of Berber fanatics. Alfonso's death was followed by a minority and an eight-year dynastic crisis from which his son Alfonso VIII finally emerged as master.

1158-1214. ALFONSO VIII. After a series of successful attacks on the Moslems, Alfonso was overwhelmingly defeated (**Alarcos,** 1195) by the Almohades, then at the zenith of their power. Leon and Navarre promptly invaded Castile, but Alfonso triumphed over them, and, with the aid of Pope Innocent III and the clergy, began the preparation of a unified general assault on the Moslems which led to the greatest victory of the reconquest, **Las Navas de Tolosa** (1212), soon followed by the decline of the Almohade power in Spain and Africa and by Christian dissension.

1179. Portugal's independence and royal title were recognized by Pope Alexander III

1217-1252. FERDINAND III ended the dynastic war in Castile and attacked the Moors in the Guadalquivir Valley, taking Cordova (1236) and Seville

(1248). On the appeal of the Almohade emperor he sent aid to him, gaining in return a line of African fortresses, and permission to establish a Christian church at Marrakah. His plans for an invasion of Africa were cut short by death After the capture of Jaen (1246), the emir was allowed to establish himself at Granada, the last Moorish stronghold, as Ferdinand's vassal.

The long history of guerrilla warfare in Castile disorganized tillage, made the people averse to agriculture, led to a concentration of population in the towns, and accounts for the poverty of Castilian agriculture, the tremendous influence of municipalities in mediaeval Castile, the development of a race of soldiers, and the isolation of Spanish thought from general European currents In general the Moors were not disliked, and intermarriages were not unusual until the 13th century Then the preaching of crusades as part of the reconquest and papal propaganda prepared the Spanish mind for the burst of intolerance and fanaticism which began in the second half of the 15th century.

The war of Christian reconquest gave birth to three great native military orders, modeled partly on Moorish societies for border defense, partly on the international crusading orders, notably the Templars already established in the Peninsula. Some members took the regular monkish vows, others did not. Two Cistercian monks assumed (1158) the defense of Calatrava (when the Templars gave it up), and the **Order of Calatrava** which grew up was confirmed by the pope (1164). The **Order of Santiago** (established 1171) was the largest and richest, the **Order of Alcântara** (founded c 1156) an offshoot of Calatrava, was the most clerical in type. By 1493 these orders had grown to stupendous size (the largest, Santiago, having 700,000 members and vassals, and an annual income of close to a million dollars, present value).

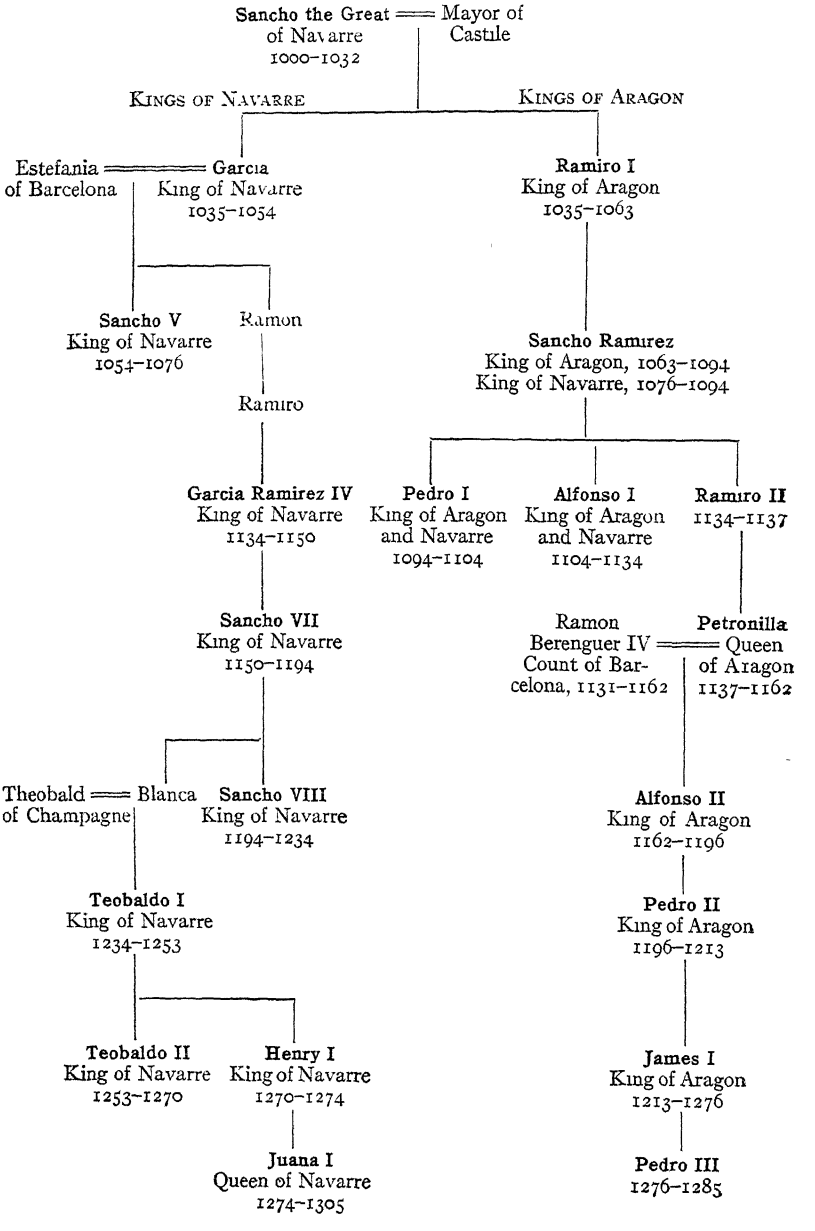
In the period following 1252 fear of the infidel was no longer a dominant force in Iberian politics and the nobles turned from assaults on the Moors to attacks upon the monarchy. The struggle between crown and baronage (which found a parallel all through Europe) was notable in Spain for the depth of governmental degradation which it produced The new elements in the situation were clearly indicated in the reign of

1252-1284. ALFONSO X (*the Learned*), a versatile savant, distinguished as an astronomer (*Alfonsine Tables*), poet, historian, patron of learning, a pre-eminent lawyer and codifier (*las Siete Partidas*), devoted to the Roman ideal of centralized absolute monarchy, but a futile, vacillating monarch. Lavish concessions to the nobles (1271) to avoid civil war established the aristocracy in a position from which it was not dislodged until the reign of Ferdinand and Isabella. Debasement of the coinage to relieve poverty produced economic crises, alternate alliance and war with the vassal King of Granada, and hostilities with Aragon, accomplished nothing The Kingdom of Murcia was regained (1266) with the aid of James I of Aragon, and was then incorporated with Castile

In foreign affairs Alfonso abandoned the long peninsularity of Spanish sovereigns, made a series of dynastic alliances, and attempted to give Castile an important European position.

1263-1267. Efforts to rectify the Portuguese boundary with advantage to Castile ultimately produced an actual loss of territory (in Algarve), Alfonso began the long effort to regain Portugal, which finally succeeded under Philip II (1580). Claims to (English) Gascony were revived (1253) and abandoned (1254); desultory wars fought with France. A twenty-year effort to win the crown of the Holy Roman Empire (despite papal opposition and public opinion) met with two defeats (1257 and 1273) The death of Alfonso's eldest son Ferdinand (1275) led at once to a bitter struggle over the succession organized by Alfonso's son Sancho.

(3) *Barcelona and Catalonia*



The **Spanish Mark** was established as a result of the conquest of Catalonia by Charlemagne (785–811). The County of Barcelona (erected 817) under the Frankish crown became independent, perhaps as early as the 9th century. By the beginning of the 12th century the Counts of Barcelona had large holdings north of the Pyrenees (notably in Provence), to which they added for a brief period (1114–1115) Majorca and Iviza, and permanently Tarragona.

1137. The union of Catalonia and Aragon, begun by Raymond Berenguer IV of Catalonia, was epochal, for it created a powerful state with access to the sea. Catalonian territories included Cerdagne, a large part of Provence, etc., with the later addition of Roussillon (1172), Montpellier (1204, under French suzerainty), Foix, Nîmes, Béziers (1162–1196)

1213. The battle of Muret (see below) definitely turned Catalonia back into the Spanish orbit

In the 13th century **Barcelona,** utilizing the skill of her native sailors and the local (mostly Jewish) accumulations of capital,

The Houses of Navarre, Aragon, and Barcelona

and profiting by Italian commercial pioneering, began an extensive slave trade in Moorish prisoners Aragonese imperial expansion in the Mediterranean (Sicily and the Greek Archipelago, pp. 284, 290) gave Barcelona further commercial advantages and made it one of the most active Mediterranean ports.

Ramon Lull (1232–1315) was the greatest Catalonian intellectual figure of the Middle Ages, a vernacular poet, novelist, missionary, mystic, educator, reformer, logician, scientist, and traveler

(4) *Navarre*

Navarre gained its independence from Carolingian rule in the 9th century and fell heir to the Carolingian rights in Aragon, which was absorbed by Navarre in the 10th century. **Sancho the Great** (970–1035) secured the succession of Castile, conquered most of Leon and temporarily united the Iberian kingdoms. By his will Aragon passed to his son Ramiro (d. 1063) and the union came to an end. On the death of **Alfonso the Warrior** (1104–1134), Navarre returned to its old ruling house until it passed under French control (1234) for two centuries

(5) *Aragon*

Aragon, beginning as a county on the river Arago under Carolingian control, emerged from Carolingian domination in the middle of the 9th century, passed under the control of Navarre, and then became independent under Ramiro (d. 1063). The period from 1063 to 1134 is marked by confusion, intrigue, some progress against the Moors, and the annexation of Navarre (1076).

1104-1134. ALFONSO I (*the Warrior*) advanced to the Ebro, captured Saragossa (1118), and made raids to the Mediterranean On Alfonso's death, Aragon chose his brother, **Ramiro,** a monk who emerged from retirement long enough to marry and produce a daughter, Petronilla, whom he married off to Raymond Berenguer IV (1131–1162), Count of Catalonia. He then returned (1137) to his monastery, leaving Petronilla under the guardianship of her husband, and the succession settled. The resulting union of Catalonia and Aragon was a decisive event in Spanish history.

After the union the Aragonese kings, preoccupied with Spanish affairs, let Provence drift, and on the death of Alfonso II (1162–1196) it passed to his son Alfonso, nominally under the suzerainty of his brother Peter II (1196–1213), but, in fact, lost for good. Alfonso tried to keep his Provençal holdings clear of the Albigensian heresy, but Raymond, Count of Toulouse, a supporter of the heresy, sought to win Peter II to his views. Peter went to Rome (1204) for a papal coronation, declared himself a vassal of the Holy See, and bore an honorable part at Las Navas de Tolosa, but was forced by the horrors of the Albigensian Crusade and the legitimate appeals of his vassals to oppose Simon de Montfort at Muret, where he fell.

1213. The battle of Muret marked the real end of Aragonese interests north of the Pyrenees.

1258. By the Treaty of Corbeil the King of France renounced his claims to Barcelona, Urgel (etc), Cerdagne, Roussillon (etc). Aragon ceded Carcassonne, Foix, Béziers, Nîmes, Narbonne, Toulouse (etc). All rights in Provence passed to Margaret, wife of Louis IX, a marriage was arranged between Louis' son Philip and Isabella, daughter of James I of Aragon

1213-1276. JAMES I (*the Conqueror*). After the weakness and anarchy of his minority, James, one of the greatest soldiers of the Middle Ages, conquered Valencia in an intermittent campaign (1233–1245), took the Kingdom of Murcia for Castile (1266), and freed the Aragonese frontier of the Moslem menace. James also attempted to establish his overlordship over Tlemcen and Bugia in North Africa, and to secure a hold in Tunis. Against the will of his Aragonese nobles, but with the support of his Catalonian and French vassals, James conquered the Balearic Islands (1229–1235), thus beginning the creation of an Aragonese Mediterranean empire

SPANISH CULTURE in the middle ages was very largely conditioned by external influences

Architecture. (1) **Pre-romanesque** architecture revealed traces of Visigothic, Carolingian, Persian, Byzantine, and Moslem traditions (2) **Romanesque architecture** showed particularly the influence of Auvergne and Languedoc (e g. second church of Santiago de Compostella). (3) **The Gothic** was marked by strong elements of the Burgundian style, brought by the Cluniacs The full tide of the Gothic was probably introduced by the Cistercians (e g cathedrals of Toledo, c. 1230; Burgos 1126; Leon, c. 1230). Catalan Gothic shows German influences (cathedrals of Barcelona, 1298; Gerona, 1312). The later Spanish Gothic revealed French, German, and Flemish currents (e.g. cathedral of Seville,

begun 1401; west towers of Burgos cathedral, 1442) (4) **Moorish architecture** had a development of its own. the great mosque of Cordova (completed 1118), the Alcazar, Seville (c. 1181), and the Alhambra (mostly 14th century).

Foundation of the first universities Salamanca (1242); Alcala (1293)

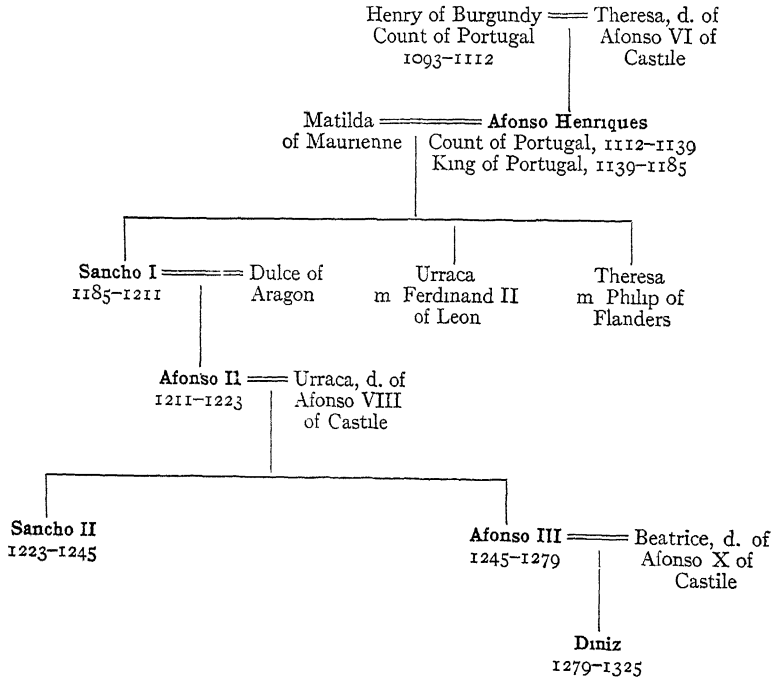
(*Cont p* 280)

(6) *Portugal to* 1279

1055- Reconquest from the Moors of much of present-day Portugal by **Ferdinand the Great** of Leon and Castile Ferdinand organized the territory as a county, with Coimbra as the capital.

1093-1112. Henry of Burgundy, a descendant of King Robert of France, came to Spain with other knights-adventurers, to fight against the Moors In return the King of Castile granted him the County of Portugal and gave him the hand of his (illegitimate) daughter, Theresa Henry himself was a typical crusader, restless and enterprising, whose main hope appears to have been to establish a dynasty in Castile.

1112-1185. AFONSO HENRIQUES, the founder of the Portuguese monarchy and of the Burgundian dynasty. Afonso was only three years old at the death of his father. His mother Teresa ruled as regent, but soon became involved in a struggle with Galicia and Castile. Being defeated, she agreed to accept Castilian domination, but



1128. Afonso assumed authority, repudiated the agreement, and, after defeating the Spaniards, drove his mother into exile.

1139. Afonso, one of the most famous knights of his age, began a long series of struggles against the Moors by defeating them in the **battle of Ourique.**

1143. Afonso was proclaimed king by the Córtes. The pope arranged the **Treaty of Zamora** between Portugal and Castile, the latter recognizing Portuguese independence, while Portugal accepted the suzerainty of the pope

---

Kings of Portugal, Burgundian House

1147. The Portuguese took Lisbon and established a frontier on the Tagus.

1169. Further conflicts with Castile led to Afonso's attack on Badajoz. He was defeated and captured, but soon released.

1185-1211. SANCHO I, the son of Afonso Henriques. His reign was noteworthy for the development of towns and for the establishment of military orders of knighthood Sancho did much to settle colonists on the lands that were won back in the prolonged wars against the Moors

1211-1223. AFONSO II. Beginning of the king's conflict with the clergy, which led to interference by the pope and to restlessness among the nobility.

1223-1245. SANCHO II. His trouble with the clergy and nobility led ultimately to his deposition by the pope, who offered the crown to

1245-1279. AFONSO III, the brother of Sancho II and Count of Boulogne His title being weak, Afonso was much dependent on the Córtes, in which the commons were for the first time represented. **War with Castile** was ended by a peace in 1253. (*Cont p* 284.)

2. EASTERN EUROPE

a. THE SLAVS

The **Slavs,** an eastern branch of the Indo-European family, were known to the Roman and Greek writers of the 1st and 2d centuries A D under the name of *Venedi* as inhabiting the region beyond the Vistula The majority of modern scholars agree that the "original home" of the Slavs was the territory to the southeast of the Vistula and to the northeast of the Carpathian Mountains, in the upper basins of the Western Bug, the Pripet, and the Dniester In the course of the early centuries of our era the Slavs expanded in all directions, and by the 6th century, when they were known to Gothic and Byzantine writers as *Sclaveni*, they were apparently already separated into three main divisions: (1) the western Slavs (the present-day Poles, Czechs, Slovaks, and Moravians); (2) the southern Slavs (the Bulgarians, Serbs, Croats, and Slovenes), (3) the eastern Slavs (the Russians, subsequently subdivided into the Great Russians, the Little Russians or the Ukrainians, and the White Russians).

However, some recent theories insist that the "original" settlements of the Slavs extended much farther south and west than the area indicated above, and thus minimize the importance of the subsequent Slav migrations.

Closely related to the Slavs were the Lithuanians who, together with the Letts and the ancient Prussians, formed the Baltic branch of the Indo-European family They inhabited the southeastern coast of the Baltic Sea, between the present location of Memel and Estonia.

b. BOHEMIA AND MORAVIA, TO 1306

The earliest recorded attempt at the construction of a Slavic state was that made by

c. 623-658. Samo, who appears to have been a Frankish tradesman traveling in central Europe Probably taking advantage of the defeat of the Avars by the Greeks in 626, he managed to unite the Czechs and some of the Wends, and succeeded in repulsing not only the Avars, but also the Franks under King Dagobert (631). But on the death of Samo the union of the tribes disintegrated.

870-894. Sviatopluk, a Moravian prince, succeeded in uniting under his authority Moravia, Bohemia, and present-day Slovakia and managed to maintain his position as against the Germans. During his reign the western Slavs were converted to Christianity by the Greek missionaries, **Cyril and Methodius** (d 885 in Moravia), but in the last years of the century the German clergy redoubled its efforts and won Bohemia and Moravia for the Latin Church, thus establishing the ecclesiastical dependence of the western Slavs on Rome

906. The Kingdom of Moravia was dissolved as the result of a great defeat by the Hungarians

929. Death of St. Wenceslas, of the house of Premysl, which had emerged in the late 9th century. Wenceslas was murdered by his younger brother, representing the forces of the heathen reaction, who ascended the throne as

929-967. BOLESLAV I. He seems to have carried on constant warfare against the encroaching Germans, until forced (950) to accept German suzerainty To the eastward he made many conquests and included Moravia, part of Slovakia, part of Silesia, and even Cracow in his kingdom. Furthermore, he appears to have established a

fairly strong royal power over the old tribal chiefs

967-999. BOLESLAV II, son of the preceding He apparently continued the policies of his father and saw to the final victory of the Christian faith (foundation of the Bishopric of Prague, 973) Missionaries from Bohemia took an active part in the conversion of Hungary and Poland.

The entire 11th and 12th centuries were filled with repeated dynastic conflicts between members of the Premysl family and the various claimants appealing to Poland and more particularly to the German emperors for support The result was an ever-increasing German influence and the gradual integration of Bohemia with the empire.

999-1000. Boleslav the Brave of Poland took advantage of the anarchy in Bohemia to conquer Silesia, Moravia, and Cracow. In 1003 he became Duke of Bohemia, but was driven out in the next year by a German army There followed another period of disorder, marked only by

1031. The reacquisition of Moravia, which thenceforth remained connected with Bohemia

1034-1055. BRETISLAV I (*the Restorer*), who overran Silesia, took Cracow (1039) and for a time ruled Poland, which had now entered upon a period of disruption

1041. Emperor Henry III, alarmed by the expansion of the Bohemian power, invaded the country and advanced to Prague Bretislav agreed to give up his Polish conquests and pay tribute to the emperor.

1055-1061. Spytihnev, son of Bretislav, whose reign was uneventful

1061-1092. VRATISLAV II, who, throughout his reign, loyally supported the German emperor, Henry IV, in his struggle with the papacy and took part in the Italian campaigns He was rewarded by Henry with a crown (1086), but only for his own person.

1092-1110. Bretislav II.

1111-1125. Vladislav I.

1125-1140. Sobeslav I.

1140-1173. VLADISLAV II. Like his predecessors, he supported the German emperors in the main, and was rewarded (1156) by Frederick Barbarossa with an hereditary crown for his aid against the Italian cities.

1173-1197. Another period of dynastic conflict, during which there were no less than ten rulers

1197-1230. OTTOKAR I. He took full advantage of the struggles for the succession which now began to wrack the German Empire Siding now with one party, now with another, he made the Bohemian king (an imperial elector since the early 12th century) one of the decisive powers in German affairs On the other hand, a long-drawn conflict with the clergy (1214–1221) led to the almost complete independence of the Church

1212. The Golden Bull of Frederick II recognized the right of the Bohemian nobility to elect its own ruler

1230-1253. WENCESLAS (VACLAV) I. His reign was marked by large-scale immigration of Germans, encouraged by the ruler, possibly to counteract the growing power of the nobility Germans had been coming in for a long time (chiefly clergy and nobility), but they now began to open up large forested tracts and to build cities, which were given practical autonomy under German (Magdeburg) law.

1247-1250. Rising of the nobility against the king, possibly in protest against the favor shown the Germans.

1251. The Austrian estates, after the death of the last Babenberg duke, elected Ottokar, son of Wenceslas, as duke.

1253-1278. OTTOKAR II (*the Great*) whose reign marked the widest expansion of Bohemian power and was characterized by great prosperity (opening of the famous silver mines, which made Bohemia one of the wealthiest countries in the later Middle Ages).

1255. Ottokar carried on a successful campaign in support of the Teutonic Knights against the heathen Prussians.

1260. After defeating the Hungarians, Ottokar took from them the province of Styria

1267. A second northern campaign, against the Lithuanians, achieved little.

1269. Ottokar, taking advantage of the interregnum in the German Empire, extended his power over Carinthia, Carniola, and Istria.

1273. Election of **Rudolph of Hapsburg** as emperor. Ottokar refused to recognize him. The Diet of Regensburg (1274) therefore declared all Ottokar's acquisitions void The emperor, supported by the Hungarians and by some of the

Bohemian nobility, attacked Ottokar, who agreed to give up all but Bohemia and Moravia, and to recognize Rudolph's suzerainty even over these

1278. New war between Rudolph and Ottokar Ottokar was decisively defeated on the **Marchfeld** (Aug. 26) and killed

1278-1305. **Wenceslas II,** a boy of seven, for whom Otto of Brandenburg at first acted as regent

1290. Wenceslas was elected and crowned King of Poland

1301. His son, Wenceslas, was elected King of Hungary (ruled to 1304)

1305-1306. **Wenceslas III.** He gave up the claim to Hungary and was murdered while en route to Poland to suppress a revolt of the nobles **End of the Premyslid line.** (*Cont. p.* 304)

c. POLAND, TO 1305

The Polish state emerged in the 10th century, the result of the unification of some six tribes under the **Polani,** who were ruled by the members of the semi-mythical **family of Piast.** From the outset the Poles were obliged to fight against the encroachment of the Germans from the west, the Prussians from the north, the Bohemians from the south, and the Hungarians, also in the south

c. 960-992. **MIESZKO I,** of the house of Piast, the first historical ruler He conquered the territory between the Oder and the Warthe Rivers, but was defeated by Markgraf Gero and obliged to recognize German suzerainty (973).

966. Mieszko was converted to Christianity by Bohemian missionaries, probably for political reasons, to deprive the Germans of any further excuse for aggression The acceptance of Latin Christianity meant the connection of Poland, like Bohemia and Hungary, with western European culture

992-1025 **BOLESLAV I** (*Chrobry = the Brave*) He ascended the throne at 25 and was the real organizer of the Polish state An energetic, but at times treacherous and cruel ruler, he built up an efficient military machine, laid the basis for an administrative system (*comites = castellani = Burggrafen*, with civil and military powers), organized the Church (establishment of Benedictine monasteries, etc). Politically his aim appears to have been the union of all western Slavs under his rule He conquered eastern Pomerania and gained access to the Baltic (992–994), added Silesia, Moravia, and Cracow to his domain (999), and induced Otto III to erect an independent Archbishopric of Gnesen (1000). On the death of Otto he took advantage of the confusion in Germany to occupy Lusatia and Meissen, and in 1003 made himself Duke of Bohemia The new emperor, Henry II, carried on long wars against Boleslav to break his power (1004–) and ultimately forced the abandonment of Bohemia and Lusatia (1005) But by the **Treaty of Bautzen** (1018) Boleslav was given Lusatia as an imperial fief, and just before his death Boleslav was able to make himself King of Poland (1025)

1025-1034. **MIESZKO II,** a much weaker ruler The Poles, like the other Slavs, divided the domain among the various sons of a deceased king, thus creating endless dynastic conflict and ample opportunity for intervention by neighboring rulers During Mieszko's reign most of the territorial gains of Boleslav were lost St Stephen of Hungary conquered Slovakia (1027); Bretislav of Bohemia took Moravia (1031); Iaroslav of Russia acquired Ruthenia (1031), Canute of Denmark took Pomerania (1031) In 1032 the Emperor Conrad actually divided Poland between Mieszko and two of his relatives.

1034-1040. A period of violent dynastic struggle and general insurrection, including a heathen reaction (burning of monasteries, massacre of the clergy) and a peasant uprising against the landlords In the meanwhile Bretislav of Bohemia seized Silesia (1038)

1038-1058. **CASIMIR I** (*the Restorer*), who succeeded, with the aid of the Emperor Henry III, in reconquering his domain, re-establishing Christianity and restoring order Silesia was recovered (1054) In return Casimir was obliged to give up the royal title (becoming merely a *grand duke*) and to make numerous concessions to the nobility and clergy, thus initiating a baneful practice

1058-1079. **BOLESLAV II** (*the Bold*), one of the great mediaeval rulers. In the great struggle between the emperor and the pope he consistently supported the latter, as a counterweight to German influence. At the same time he did his utmost to throw off the pressure of the nobility In his countless campaigns he reconquered upper Slovakia (1061–1063) and marched as far as Kiev, to put his relative upon the Russian throne (1069) In 1076 he reassumed the royal crown, with the pope's approval. But his entire policy estranged the nobility, which ultimately drove him from his throne.

1079-1102. **Vladislav I** (*Ladislas*), **Hermann,** an indolent and unwarlike ruler, brother of Boleslav. He resigned

the royal title and attempted to secure peace by supporting the Emperor Henry IV, as well as by courting the nobility and clergy.

1102-1138. BOLESLAV III (*Wry-mouth*), who acquired the throne only after a violent struggle with his brother Zbigniew He was one of the greatest Polish kings, who defeated the Pomeranians (**battle of Naklo,** 1109) and, by the incorporation of Pomerania (1119–1123), re-established the access to the sea At the same time he defeated the Emperor Henry V (1109, **battle of Hundsfeld,** near Breslau) and checked the German advance On the other hand, his campaigns in Hungary (1132–1135) had no definite results

Boleslav completed the organization of the state, in which the great landlords (*nobiles* = magnates), gentry (*milites* = knights = *szlachta*) had become well-defined social classes, the peasantry having steadily lost in the periods of confusion The Church was reorganized under the Archbishop of Gnesen, by the papal legate Walo In order to avoid dispute, Boleslav fixed the succession by seniority Poland was divided into **five principalities** (Silesia, Great Poland, Masovia, Sandomir, Cracow) for his sons, Cracow was established as the capital, and was to go, with the title of *grand duke*, to the eldest member of the house of Piast. In actual fact this arrangement by no means eliminated the dynastic competition, but introduced a long period of disruption, during which the nobility and clergy waxed ever more powerful and the ducal or royal power became insignificant Only the weakness of the neighboring states saved Poland from destruction

1138-1146. Vladislav II (Ladislas)

1146-1173. Boleslav IV, an ineffectual ruler, during whose reign the Germans, under Albert the Bear and Henry the Lion, supported by Waldemar of Denmark, drove back the Poles from the entire territory along the Baltic and west of the Vistula (1147) The Emperor Frederick Barbarossa intervened and forced the humble submission of Boleslav (1157)

1173-1177 Mieszko III, a brutal and despotic prince who antagonized the nobility and was soon driven out by them.

1177-1194. CASIMIR II (*the Just*) was practically elected by the magnates, who extorted privileges from him. In the **Assembly of Lenczyca** (1180) the clergy was also given far-reaching concessions. Casimir attempted to preclude further strife by making Cracow and the primacy hereditary in his own line.

1194-1227. Leszek I (*the White*), whose reign was punctuated by constant wars against Mieszko III, who attempted to regain the throne (d 1202), and against the latter's son Vladislav Laskonogi (1202–1206) The period was one of complete feudal anarchy, with the nobility and clergy controlling the situation.

1227-1279. Boleslav V, an unhappy reign marked by complete disruption and by constant aggression by neighboring states.

1228. Arrival of the **Teutonic Knights,** called to Prussia by Duke Conrad of Masovia (p 214) Within the next 50 years they conquered Prussia and erected a most formidable barrier to Polish access to the sea

1241. Beginning of the great **Mongol invasions** (p 262), of which there were constant renewals throughout the rest of the century The Poles managed to stave off Mongol domination, but the country was devastated One result was the calling in of large numbers of German settlers, some of whom cleared forest land and colonized new areas in Silesia and Posen, others of whom settled in the towns In all cases large concessions in the direction of autonomy were made (*Magdeburg law*) The German influence meant greater and more efficient exploitation of the soil, development of trade, cultural advance

1279-1288. Leszek II (*the Black*).

1288-1290. Further dynastic and feudal warfare, with the brief reign of Henry Probus

1290-1296. Przemyslav II. He was crowned king with the consent of the pope (1295), but was murdered soon afterward

1300-1305 Wenceslas I, son of the King of Bohemia, elected by the nobility but challenged by claimants of the Piast family He soon resigned the position and returned home (*Cont. p.* 313)

d. RUSSIA, TO 1263

The **eastern Slavs** settled on the territory of present-day European Russia in the period from the 5th to the 8th century A D Little is known of their political history during these centuries, but undoubtedly there were attempts at political organization in the shape of both tribal principalities and city-states formed around important commercial centers In the 8th century some of the eastern Slavs were under the protectorate of the **Khazars,** a Turkish tribe which established a strong and prosperous

state along the lower Volga After the end of the 8th century the northern part of Russia began to be penetrated by the Scandinavian vikings called in the old Russian chronicles **Varangians** or *Rus* (hence the name of *Russia*) In the course of the 9th century the Varangians constantly moved southward along the main waterway leading from the Baltic to the Black Sea, gradually establishing their political domination over the Slav communities. According to tradition, the Scandinavian chieftain Riurik (Rorik?) ruled in Novgorod in the 860's. Later he was recognized as the founder of the Russian princely dynasty

860. The first recorded appearance of the Russians (*Varangians*) at Constantinople This was a raid not unlike those of the Norsemen on Britain and France at the same period

c. **880-912.** **PRINCE OLEG,** who succeeded in uniting under his control both Novgorod and Kiev (on the Dnieper River) Kiev subsequently became the political center of a loose federation of Russian states.

911. The Russians again appeared at Constantinople and extracted trade privileges from the Byzantine emperor Trade became a leading occupation of the Russian princes, who, with their followers (*druzhina*), protected the merchant ships Russians also began to take service with the Greek emperors in considerable number and came to play an important rôle in the mercenary corps

945. Further trade agreements with the Greek Empire testify to the ever closer economic connections and no doubt to an increasing cultural contact

957. The Russian princess, Olga, visited Constantinople and was converted to the Christian faith This was, however, a purely personal conversion, and may in fact have been Olga's second

964-972 **SVIATOSLAV,** the son of Olga He was the first of the great conquering princes In 965 he defeated the Khazars on the lower Volga and proceeded to establish a Russian state in place of the Khazar Empire. Called to the Balkans to aid the Greek emperor against the powerful Bulgars, he carried on a successful campaign (967) and decided to establish himself on the lower Danube At this time his power extended from Novgorod in the north to the Danube in the southwest and to the lower Volga in the southeast. He was forced to abandon Bulgaria in order to resist the **Patzinaks** (*Pechenegs*), who had entered southern Russia from the east and were threatening Kiev Having repulsed them (968), Sviatoslav returned to Bulgaria, but he was no more welcome to the Greeks than were the Bulgars. In 971 he was defeated and driven out by the Emperor John Zimisces (p 180) Sviatoslav was defeated and killed by the Patzinaks on his way back to Kiev (972).

972-978. A dynastic struggle between the sons of Sviatoslav ended in the victory of

978-1015. **VLADIMIR THE SAINT,** in whose reign (c 990) the Russians were converted in mass to Christianity in the eastern (Byzantine) form The Russian Church was organized on the Greek pattern and was considered to be under the canonical authority of the Patriarch of Constantinople From this time on the cultural relation between Constantinople and Kiev was very close.

1015-1019. Further dynastic conflict between the sons of Vladimir

1019-1054. **IAROSLAV** (*the Wise*), the greatest ruler of Russia in the Kievan period He was finally successful in the struggle with his brother Sviatopolk, but was obliged to leave to another brother, Mstislav, that part of the principality east of the Dnieper River until Mstislav's death in 1036 Iaroslav was then supreme ruler of all Russia Extensive building activity at Kiev (Cathedral of St Sophia) Religious activity (metropolitan Hilarion and the Monastery of the Caves) Promotion of education Revision of the *Russian Law* (the earliest known Russian law code), under Byzantine influence Dynastic alliances with western states (Iaroslav's daughter, Anna, married Henry I of France).

The period following the death of Iaroslav the Great was one of disintegration and decline Technically the primacy of Kiev continued and the power remained concentrated in the family of Iaroslav Actually Kiev continued to lose in importance, and authority became divided between members of the princely family on a system of seniority and rotation, leading of necessity to much dynastic rivalry and countless combinations, sometimes with Poles and Hungarians.

At the same time the Kievan state was subjected to ever greater pressure from the nomads (Patzinaks and Cumans) moving into southern Russia from the east The period witnessed also a shifting of the older trade routes, due to the decline of the Baghdad Caliphate and the conquest of Constantinople (1204) by the Latin crusaders

Emergence of new political centers · Galicia and Volynia in the southwest, principalities characterized by a strongly aristocratic form of government; Novgorod the Great, in the north, controlling territory to the east to the Urals In Novgorod the assembly of freemen (*Viecche*) reached its fullest development, Suzdal-Vladimir in central Russia, the precursor of the Grand Duchy of Moscow. In this region the princely power was dominant

1113-1125. VLADIMIR MONOMAKH, Prince of Kiev He carried on numerous campaigns against the Cumans of the steppes and his reign marked the last period of brilliance at Kiev, which soon thereafter became a bone of contention between the Princes of Volynia and Suzdal

1147. First mention of **Moscow** in one of the chronicles

1157-1174. ANDREI BOGOLIUBSKI, Prince of Suzdal He repressed the rising power of the nobles (*boyars*), united a large block of territory and established his capital at Vladimir

1169. Andrei conquered Kiev, which became part of the Vladimir principality. But the new state underwent a marked decline on the death of the ruler.

1199-1205. Zenith of the Galician principality under Prince Roman

1198. Foundation of Riga, which became the center of German missionary enterprise and commercial expansion.

1202. Foundation of the German Order of Swordbearers by Bishop Albert of Livonia (Latvia).

1219. Conquest of Estonia by Waldemar II of Denmark.

1223. BATTLE OF THE KALKA RIVER, near the Sea of Azov The Mongols (Tatars, see p 260), under Sabutai, invaded southern Russia from the Transcaucasus region and completely defeated a coalition of Russian princes and Cuman leaders. They retired, however, without pressing their conquests.

1226. The Teutonic Knights (p 214) were commissioned to conquer and convert Prussia They united with the Swordbearers in 1237

1236-1263. ALEXANDER NEVSKI, prince first of Novgorod and after 1252 of Vladimir.

1237-1240. THE MONGOL CONQUEST, under the leadership of Batu The great armies of the invaders swept over southern and central Russia and into Europe, coming within 60 miles of Novgorod They took Kiev (1240) and ultimately established themselves (1242) at Sarai on the lower Volga The **Khanate of the Golden Horde** for two centuries thereafter acted as suzerain of all Russia, levying tribute and taking military contingents, but for the rest leaving the princes in control, respecting the Russian Church and interfering little

1240. Alexander Nevski defeated the Swedes under Birger Jarl on the Neva River and thus broke the force of the Swedish advance

1242. Alexander defeated the Teutonic Knights in a **battle on Lake Peipus**

1252 As Prince of Vladimir, Alexander Nevski did his utmost to prevent insurrections against Tatar rule and built up a system of protection based upon submission and conciliation

1253. Daniel of Volynia attempted to organize a crusade against the Tatars In order to secure papal aid he accepted the union of the Russian Church with Rome, but his efforts came to nothing

1263. Death of Alexander Nevski on his way back from the Golden Horde.

RUSSIAN CULTURE in this period was still primarily religious and largely Byzantine in character Noteworthy churches were built at Kiev, Novgorod, and Cernigov in the 11th and 12th centuries, decorated with fine frescoes Church literature was active and there appeared further the first chronicles and epics of fights against the nomads. (*Cont p.* 316.)

e. HUNGARY, TO 1301

896. The Hungarians, organized in a number of tribes, of which the **Magyars** were the leading one, occupied the valley of the middle Danube and Theiss Under **Arpad** (d 907) they had come from southern Russia by way of Moldavia, driven on by the Patzinaks (Pechenegs) and other Asiatic peoples The Hungarians were themselves nomads of the Finno-Ugrian family For more than half a century after their occupation of Hungary they continued their raids, both toward the east and toward the west

906. The Hungarians destroyed the rising Slavic kingdom of Moravia

955. Battle of Augsburg, in which Emperor Otto I decisively defeated the raiding Hungarians From this time on the Hungarians began to settle down and establish a frontier.

972-997. Geza, Duke of the Magyar tribe, and the organizer of the princely power. He began to reduce the tribal leaders and invited Christian missionaries from Germany (Pilgrim of Passau, 974, St. Adalbert of Prague, 993) Christianization had already begun from the east, and was furthered by large numbers of war prisoners.

997-1038. ST. STEPHEN (I), greatest ruler of the Arpad dynasty He suppressed eastern Christianity by force and crusaded against paganism, which was still favored by the tribal chiefs Stephen took his stand definitely by the west, married a Bavarian princess, called in Roman churchmen and monks (Benedictines) and endowed them with huge tracts of land With the help of the clergy he broke the power of the tribal chieftains, took over their land as royal domain, administered through counts (*Ispan*), placed over counties (*Comitat*) The counts and high churchmen formed a royal council Every encouragement was given to agriculture and trade and a methodical system of frontier defense was built up (large belt of swamps and forests, wholly uninhabited and protected by regular frontier guards, as time went on this frontier was gradually extended)

1001. **Stephen was crowned** with a crown sent by the pope. He was canonized in 1083

1002. Stephen defeated an anti-Christian insurrection in Transylvania

1030. Attacks of the Germans under Conrad II, who tried to enforce German suzerainty over Hungary, were repulsed.

1038-1077. A period of dynastic struggles over the succession, every member of the Arpad family claiming a share of the power, and sometimes calling in the Germans for support.

1038-1046. **Peter Urseolo,** son of Stephen's sister and the Doge of Venice, succeeded to the throne He called in German and Italian favorites, aroused the hostility of the Hungarians and was driven out (1041) For a few years Samuel Aba, the brother-in-law of Stephen, occupied the throne, but he in turn was expelled by Peter, who returned with the Emperor Henry III, to whom he swore fealty.

1046. Peter was overthrown in the course of a great **pagan rising** of the tribal chiefs under Vatha, who massacred the Christians and destroyed the churches This was the last serious revolt of the kind

1047-1061. **Andrew I,** who managed to restore the royal power

1049-1052. The three campaigns of Emperor Henry III against the Hungarians Andrew managed to hold his own, and in 1058 the emperor recognized Hungary's independence of the empire

1061-1063. **Bela I,** brother of Andrew and popular hero of the campaigns against the Germans

1063-1074. **Solomon,** the son of Andrew the candidate of the German party. He was defeated by his cousin

1074-1077 **Geza I.**

1077-1095. **ST. LADISLAS I** (canonized 1192), the first great king after St Stephen He supported the pope in his conflicts with the emperor, and at home restored order and prosperity

1091. Ladislas conquered Croatia and Bosnia, but left these regions self-government under a *ban*

1095-1114. **Coloman** (*Kalman*) **I.** Another strong ruler, who, in

1097-1102. Conquered Dalmatia from the Venetian Republic.

1114-1131. **Stephen II,** in whose reign the dynastic struggles were resumed

1131-1141 **Bela II.** He had been blinded by Coloman, and now took a horrible revenge on his opponents.

1141-1162. **Geza II.** The intestine conflicts were greatly complicated by the efforts of the Greek emperor, Manuel, to extend his sway over Hungary But a number of campaigns carried out to this end (1097-1102) led to no success, though at one time (1156) the Hungarians recognized Byzantine suzerainty.

1150. **Saxon** (i e Germans from the Moselle region) **settlement** in the Zips and southern Transylvania regions They were called in to help defend the frontiers against Poland and against the Greeks, and had much to do with developing agriculture, trade, and town-building In this period many Pechenegs and Szeklers were also established for frontier protection.

1162-1172. **Stephen III.**

1172-1196. **BELA III,** who had been educated at Constantinople He married the sister of Philip Augustus of France and established a close dynastic connection with France Bela was a strong ruler who successfully defended Dalmatia against Venice.

1196-1204. **Emeric I,** whose position was challenged by his brother Andrew

1204-1205. **Ladislas III,** dethroned by Andrew

1205-1235. **ANDREW II.** The most disastrous reign in the Arpad period.

Andrew was renowned for his extravagance and for his generosity to his foreign favorites. A crusade to the Holy Land (1217) cost him much money, which he raised by alienating huge tracts of the royal domain, thus paving the way for the emergence of large landed magnates or oligarchs

1222. THE GOLDEN BULL, forced upon Andrew by the lesser nobility or gentry, led by Andrew's own son, Bela. This document became the charter of feudal privilege. It exempted the gentry and the clergy from taxation, granted them freedom to dispose of their domains as they saw fit, guaranteed them against arbitrary imprisonment and confiscation and assured them an annual assembly to present grievances. No lands or offices were to be given to foreigners or Jews.

1224. The privileges of the Transylvanian Saxons were set down. They were given practical self-government, directly under the king

1235-1270. BELA IV. A strong ruler who tried desperately to make good the losses of the preceding reign The magnates, in reply, attempted to set up a rival ruler, and Bela in turn allowed some 40,000 families of the Cumans, who were driven westward by the Mongol invasions, to settle in the Theiss region in the hope of securing support against the magnates

1241. THE GREAT MONGOL INVASION, which took the country by surprise in the midst of its dissensions Bela's army was overwhelmingly defeated at Muhi on the Theiss and he was obliged to flee to the Adriatic. The Mongols followed him, but suddenly gave up their conquests when news arrived of the death of the **Great Khan.** But the Mongol invasion left the country devastated For defense purposes the nobility was allowed to build castles and these soon became bases for feudal warfare and for campaigns against the king himself

1246. Bela defeated Frederick of Austria, the last of the Babenbergs, who had taken advantage of the Mongol invasion to appropriate some of the western provinces.

1265-1270. Wars of Bela against Ottokar II of Bohemia.

1270-1272. Stephen V, a weak ruler.

1272-1290. Ladislas IV. His efforts to curb the feudal aristocracy were of little avail, but in alliance with Rudolph of Hapsburg he succeeded in breaking the power of Ottokar in the **battle of Durnkrut** (1278).

1290-1301. Andrew III, last of the native dynasty He continued the struggle against the domination of the feudal aristocracy, but with little success

(*Cont. p.* 317.)

f. SERBIA, TO 1276

650. Approximate date of the completion of the Slav occupation of the Balkan area. Part of the Slav people extended as far west as Carniola and Carinthia, but these (the Slovenes) were conquered by the Franks in the early 9th century and were thenceforth part of the German Empire

818. The Croats, who had also been conquered by the Franks, revolted, but were again subdued

924. Tomislav became King of Croatia, accepting his crown from the pope. He ruled over later-day Croatia and over the territory as far south as Montenegro, though the coastal towns were mostly under Byzantine control

960. Death of Chaslav, who made the first effort to unite the Serbs. The Serbs, inhabiting a mountainous area, were divided into tribes and clans, under headmen or *zupans*. The grand zupan held an honorary pre-eminence. Technically the territory was under Byzantine suzerainty, which, when the Eastern Empire was strong, was effectively exercised By the end of the 10th century the inhabitants of present-day Serbia and eastern Bosnia had for the most part accepted eastern Christianity, while western Bosnia and Croatia leaned toward Roman Catholicism But the conflict of the churches drew the southern Slavs this way and that, becoming frequently an important political as well as religious issue.

1077. Mikhail of Serbia was crowned by a papal legate

1081-1101. Bodin established a Serbian state in Zeta (i e Montenegro)

1102. Croatia was joined with Hungary in a dynastic union, after the defeat of the last ruler, Petar, by King Ladislas. This involved the definitive victory of the western orientation in Croatia and the separation from the other southern Slavs

1168-1196. STEPHEN NEMANYA, founder of the Nemanyid dynasty in the Raska (i e *Rascia* or Serbia proper). Though only grand zupan, Stephen appears to have made considerable progress in uniting the various clans He definitely adopted the Greek Orthodox faith and persecuted the Bogomils, who were forced across the frontier into Bosnia, which at

that time was ruled by a strong prince, Kulin (d. 1204) The death of Manuel I Comnenus (1180) and the subsequent decline of the Eastern Empire gave Stephen an opportunity to establish his independence of Constantinople and to conquer extensive territories to the south In 1196 he retired to a monastery on Mt. Athos which had been founded by his son, **St. Sava.** Stephen died in 1200.

1196-1223. STEPHEN NEMANYA II, the son of the preceding The beginning of his reign was marked by a struggle with his elder brother, Vukan, to whom Montenegro had been assigned The Hungarians, who became an ever greater menace to Serbia, supported Vukan, and Stephen was forced to flee to the Bulgarian court. He returned with an army of Cumans supplied by Kaloyan (see below), who appropriated for himself most of eastern Serbia, including Belgrade and Nish Stephen's brother, St Sava, finally mediated between the two contestants and Stephen became ruler of Serbia proper

1217. Stephen was crowned king by a papal legate (hence *Stephen the First-Crowned*).

1219. St Sava, fearful of the Roman influence, visited Nicaea and induced the Greek patriarch to recognize him as archbishop of all Serbia and as head of an autocephalous church

1222. Stephen was recrowned by St Sava with a crown from Nicaea, thus re-establishing the eastern orientation

1223-1234. Radoslav, the son of Stephen, a weak ruler, who was deposed by his brother

1234-1242. Vladislav. He married a daughter of Tsar John Asen II of Bulgaria and during this period much of eastern Serbia was under Bulgarian domination.

1242-1276. Urosh I, brother of the preceding two rulers He married a daughter of the deposed Latin emperor, Baldwin II, and established an alliance with Charles of Anjou, heir of the Latin claims to Constantinople

1254. The Hungarians, who already held part of northern Serbia, established their suzerainty over Bosnia and Herzegovina (*Cont p* 318)

g. THE SECOND BULGARIAN EMPIRE

Following the collapse of the First Bulgarian Empire in 1018, Bulgaria was, for 168 years, an integral part of the Byzantine Empire The more stringent taxation and other grievances led to a serious revolt in 1040, led by **Peter Deljan,** a son of Gabriel Radomir, and confined to the northwest and western parts of the former empire Delyan had himself proclaimed *tsar*, but the movement suffered from his rivalry with Tikhomir of Durazzo In 1041 Delyan was defeated and captured by the imperial troops Another uprising, led by **George Voitech,** in 1072–1073, never assumed the same proportions and was suppressed without much difficulty During the Byzantine period the country was constantly exposed to marauding raids by the Patzinaks (1048–1054), many of whom settled in northeastern Bulgaria, and by invasions of the Cumans (1064) The **Bogomil heresy** continued to spread, despite persecution by the government (1110 ff.). Under the leadership of the monks it became to a certain extent a reaction to the Greek influence exerted by the higher clergy

1185. RISING OF JOHN AND PETER ASEN, two Bulgarian lords from the vicinity of Tirnovo Defeated by the Emperor Isaac Angelus (1186) they fled to the Cumans and returned with an army of the latter. After raiding into Thrace, they accepted a truce which left them in possession of Bulgaria north of the Balkan Mountains.

1189. The Asens attempted to effect an alliance with Frederick Barbarossa and the leaders of the Third Crusade, against the Greeks This came to nothing, but the Bulgarians resumed their raids into Thrace and Macedonia An imperial army under Isaac Angelus was completely defeated in **a battle near Berrhoe.**

1196. Peter Asen succeeded to leadership of the movement after the murder of John by boyar (i e noble) conspirators

1197. Peter himself fell a victim to his boyar rivals

1197-1207. KALOYAN (*Joannitsa*), the younger brother of John and Peter He made peace with the Greeks (1201) and then engaged (1202) in campaigns against the Serbs (taking of Nish) and the Hungarians, whom he drove back over the Danube

1204. The collapse of the Eastern Empire (p 254) gave Kaloyan an excellent opportunity to reaffirm his dominion. By recognizing the primacy of the pope, he succeeded in securing the appointment of a primate for Bulgaria and in getting himself crowned *king* by the papal legate. At the same time he took over the whole of western Macedonia

1205. Supported by the Cumans and the local Greeks, Kaloyan completely defeated the Frankish crusaders near Adrianople and captured the Emperor Baldwin I.

1206. Kaloyan put down a revolt of the Greeks and besieged Adrianople and Thessalonica He was murdered in 1207.

1207-1218. **Boril,** the nephew of Kaloyan, whose position was not recognized by all other leaders, some of whom attempted to set up independent principalities

1208. Boril was completely defeated by the Franks under Henry I in the **battle of Philippopolis,** and ultimately (1213) was obliged to make peace.

1217. **Ivan** (*John*) **Asen,** son of Kaloyan, supported by the Russians, began a revolt in northern Bulgaria. He besieged and took Tirnovo, and captured and blinded Boril (1218)

1218-1241. **JOHN ASEN II,** whose reign marked the apogee of the Second Bulgarian Empire John was a mild and generous ruler, much beloved even by the Greek population

1228-1230. Owing to the youthfulness of the Emperor Baldwin II, a number of Frank nobles at Constantinople projected making John Asen emperor and thereby securing themselves against the aggression of Theodore of Epirus (p 260) The scheme was opposed by the Latin clergy and ultimately came to nothing

1230. John Asen defeated Theodore of Epirus at **Klokotnitsa** on the Maritza River and captured him He then occupied all of western Thrace, Macedonia, and even northern Albania, leaving Thessalonica and Epirus to Theodore's brother Manuel, who became his vassal

1232. John broke with Rome and the Bulgarian Church became independent

1235. Alliance of John with the Greek emperor of Nicaea against the Franks The Greeks recognized the patriarch of Tirnovo. Together the allies besieged Constantinople, which was relieved by a fleet and forces from Achaia.

1236. The Hungarians, instigated by the pope, began to threaten the Bulgarians and forced John to withdraw from operations against the Latin Empire

1241-1246 **Kalıman I,** the son of John Asen II His reign was distinguished chiefly by the great incursion of the Mongols, returning from the expedition into central Europe (1241)

1246-1257. **Michael Asen,** the youngest son of John, and a mere child The Nicaean emperor, John Vatatzes, took advantage of the situation to conquer all southern Thrace and Macedonia, while Michael of Epirus appropriated western Macedonia

1254. On the death of John Vatatzes, Michael Asen attempted to recover the lost territories, but was badly defeated by Theodore II Lascaris at **Adrianople** and later (1256) in Macedonia

1257-1258 **Kalıman II,** who, with support of the boyars, drove out Michael Asen, only to be deposed and expelled in his turn. He was the last ruler of the Asen dynasty

(*Cont p.* 325)

3. THE NEAR EAST

a. THE EASTERN EMPIRE, 1025-1204

The period of the later Macedonian emperors (to 1050) and the succeeding thirty years was a period of decline, marked by the rule of women, barbarian invasions in the Balkans, the advance of the Normans in Italy and the expansion of the Seljuk Turks (p. 254) in Anatolia. Within the empire there was a steady development of the clerical and bureaucratic nobility in the capital and of the feudal baronage in the provinces, leading ultimately to sharp conflict between the two interests.

1025-1028 **CONSTANTINE VIII,** the younger brother of Basil II, a man suspicious of the military commanders, who granted many high offices to court favorites

1027. **The Patzinaks,** who had invaded the Balkans, were finally driven back over the Danube by the general, Constantine Diogenes

1028-1050. **ZOË,** empress. She was the third daughter of Constantine and, though 48 years old at her accession, married three times, associating her husbands in the imperial office.

1028-1034. ROMANUS III (*Argyropolus*), an official 60 years old, first husband of Zoë. He made great efforts to gain popularity by catering to the populace, the nobility, and especially the Church. The patriarchate was permitted to persecute the Monophysites of Syria, thousands of whom fled to Moslem territory. The hatred engendered by this policy helps to explain the Seljuk advance in subsequent years.

1030. Romanus suffered a severe defeat in a campaign against the Moslem emirs who attacked Syria

1031. The situation was saved by the victories of **Georgios Maniakes**, greatest imperial general of the period

1032. A combined Byzantine-Ragusan fleet completely defeated the Saracen pirates in the Adriatic

1034-1041 MICHAËL IV (*the Paphlagonian*), second husband of Zoe. He was a man of lowly origin, who promptly established his brothers (mostly men of energy and ability) in high office.

1034-1035. The Byzantine fleets, manned by the Norseman Harald Hardrada and Scandinavian mercenaries, repeatedly defeated the Saracen pirates off the Anatolian coast and ravaged the coasts of North Africa.

1038. Maniakes and Hadraade, with Scandinavian and Italian mercenaries and with the support of the Byzantine fleets, stormed Messina and defeated the Sicilian Saracens, first at **Rametta** (1038), then at **Dragina** (1040)

1040. Revolt of the Bulgarians under Peter Deljan, a descendant of Tsar Samuel. The revolt was directed against the harsh fiscal policy of the government. The Bulgars attacked Thessalonica, but the city held out. Ultimately the movement collapsed, as the result of dissension among the leaders. Bulgaria was then incorporated in the empire and the autocephalous church of Ochrid became a prey of the patriarchal hierarchy

1041-1042. MICHAEL V (*Kalaphates*), one of Zoe's favorites. He attempted to secure sole power by shutting the empress in a cloister, but this led to a rising of the Constantinople nobility and to the incarceration of Michael in a monastery

1042-1054. CONSTANTINE IX (*Monomachus*), the third husband of Zoe, a scholarly person, wholly out of sympathy with the army and with the military aristocracy. He systematically neglected the frontier defenses and the forces.

1042. Maniakes totally defeated the Normans, who had begun the attack on southern Italy, in the **battle of Monopoli** (near Naples).

1043. Revolt of Maniakes, representing the disaffection of the military classes. Maniakes landed at Durazzo and prepared to march on the capital, but he was accidentally shot and killed on the way.

1046. The Byzantine forces occupied Ani and took over the government of Armenia, which became another field for clerical exploitation

1047. Another military uprising, led by Leo Tornikios, failed.

1048. The imperial generals defeated the advancing Seljuk armies at **Stragna.**

1050 Death of Zoe. Her husband Constantine continued to reign alone.

1051. Expulsion of the Patzinaks from Bulgaria, after years of ravaging and unsuccessful Byzantine campaigns.

1054-1056. THEODORA, empress. She was the elder sister of Zoe, an intelligent, vigorous, and popular ruler, but already advanced in age

1054. Final schism between Rome and Constantinople. The long-standing friction between the papacy and the eastern patriarch had come to a head with the conquest of parts of southern Italy by the Normans, who were supported by the papacy. The Patriarch Michael Kerularios disputed the claim of Pope Leo IX to jurisdiction in southern Italy Negotiations were opened, but each side assumed an uncompromising attitude and the rift became unavoidable The enmity it left behind was of the utmost importance for the development of the next years

1056-1057. MICHAEL VI (*Stratioticus*), who was overthrown almost at once by a revolt of the Anatolian feudal barons.

1057-1059. ISAAC COMNENUS, proclaimed by the insurgents. He was an able and energetic army man, who promptly abolished a host of sinecures, undertook the reform of the finances, etc. Isaac, already advanced in years, soon found his work too arduous and abdicated in favor of

1059-1067. CONSTANTINE X (*Dukas*), a high official of the finance department. Constantine introduced a period of domination by the civil officials, Church and scholars, during which the army was viewed with suspicion, neglected, and driven into hostility.

1060. The Normans took Rheggio, completing the conquest of Calabria

1064. The Seljuks, under Alp Arslan, took Ani and ravaged Armenia.

1065. The Cumans, having crossed the Danube, flooded the Balkan area as far as Thessalonica They were finally driven back by local forces

1067-1071. ROMANUS DIOGENES, who, on Constantine's death, married the widowed empress, Eudoxia Romanus was an ambitious soldier, who did his best to check the advance of the enemy in the east and the west

1068. The Normans took Otranto, and then Bari (1071), the last Byzantine outpost. This marked the end of the Byzantine rule in Italy

1068-1069. Romanus succeeded in repulsing the Seljuks, though they repeatedly raided through the whole of eastern Anatolia

1071. BATTLE OF MANZIKERT (north of Lake Van) Romanus had concentrated huge forces for a decisive battle, and he rejected all offers of a settlement In the course of a hard-fought battle he was deserted by Andronicus Dukas and other Byzantine magnates. Romanus was defeated and captured, but then released by the Seljuks He attempted to regain the Byzantine throne, but was defeated by his opponents and blinded He died very soon afterward

1071-1078. MICHAEL VII (*Parapinakes*), a son of Constantine X. His elevation meant another victory for the bureaucratic group. Michael made the great scholar, **Michael Psellus,** his chief adviser and devoted himself to the pursuit of learning The military system was again allowed to fall into neglect.

1074. The emperor concluded a **treaty with the Seljuks** in order to secure their aid against his uncle, who had set himself up as a pretender. The Seljuks defeated the pretender, but took advantage of the situation to spread themselves over a large part of Anatolia

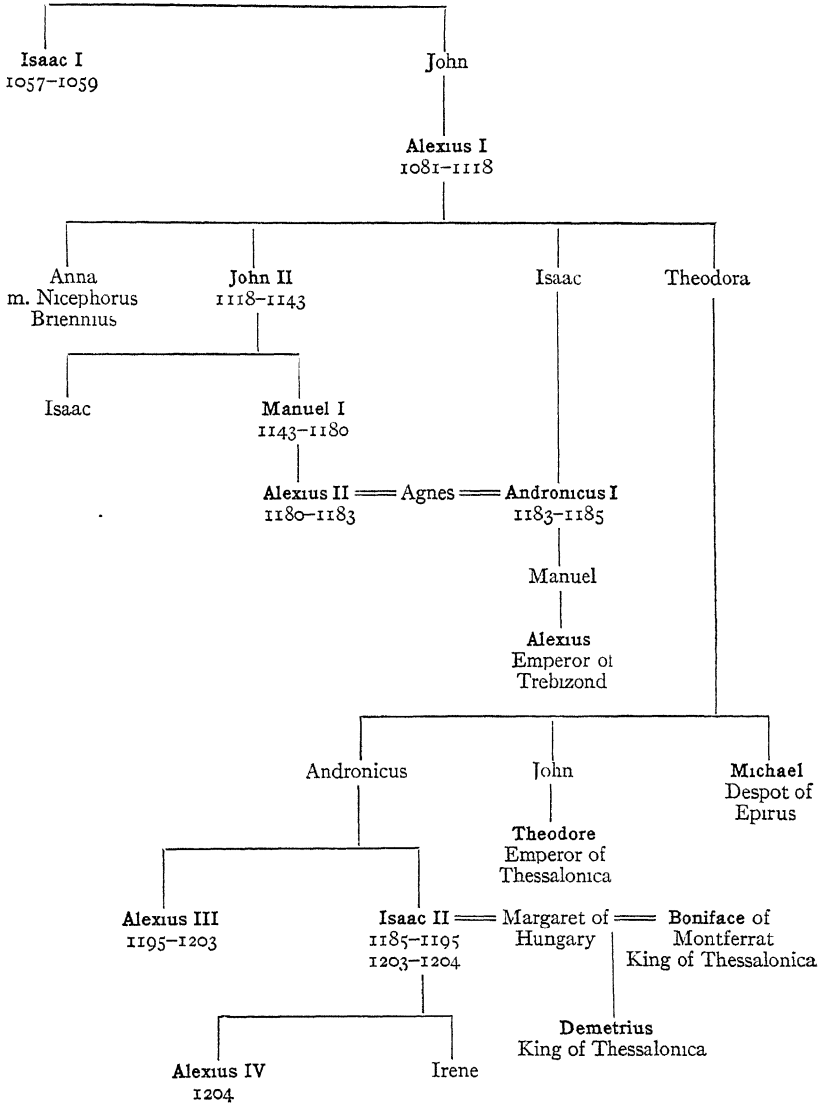
1078. Revolt of Nicephorus Briennius in Albania. Another military revolt broke out in Anatolia, led by Nicephorus Botaniates, who was supported by the Seljuks

1078-1081. NICEPHORUS III (*Botaniates*), emperor after Michael's abdication His accession was greeted by a number of insurrections in various parts of the army, but these were suppressed by the able general Alexius Comnenus

1081. Revolt of Alexius Comnenus himself. He seized Constantinople with a force of mercenaries, who thereupon plundered the capital The victory of Comnenus meant the final success of the military aristocracy and the beginning of a new period of military success.

1081-1118. ALEXIUS COMNENUS, an able general, vigorous administrator, conscientious ruler and shrewd diplomat. Having to rely upon the great feudal families, he attempted to win their support by lavish grants of honors and ranks At the same time he tried to use the high clergy to counterbalance the influence of the nobility He reformed the judicial and financial systems and systematically used his resources in money to buy off the enemies he could not conquer

1081-1085. The war against the Normans under **Robert Guiscard.** The latter landed in Epirus with a large force and besieged Durazzo (*Dyracchium*). Alexius bought the support of the Venetians with extensive trade privileges (1082), but Guiscard defeated the emperor in the **battle of Pharasalus,** after which he took Durazzo. The war was continued by Robert's son, Bohemund, who again defeated Alexius and in 1083 conquered all Macedonia as far as the Vardar But the advance was broken by the resistance of Larissa, by the guerrilla tactics of the natives (who hated the heretical Latins), and by the Seljuk cavalry employed by the emperor. In 1085 the combined Byzantine and Venetian fleets defeated the Normans near Corfu. The death of Robert Guiscard at the same time led to dissension among his sons and the abandonment of the Balkan project.



1086-1091. Revolt of the **Bogomils** in Thrace and Bulgaria. The heretics were supported by the Patzinaks and Cumans and were able to defeat Alexius and a large army (**battle of Drystra** or Dorostolon, 1087). The Cumans then ravaged the entire eastern Balkan region as far as Constantinople until Alexius bought them off, took them into imperial service and used them (1091) to annihilate the Patzinaks (**battle of Leburnion**).

1092. Death of Malik Shah, ruler of the Seljuk empire of Iconium, which controlled almost all of Anatolia The death of Malik led to disputes as to the succession and paved the way for the partial reconquest of Anatolia.

1094. **Constantine Diogenes,** a pretender to the throne, crossed the Danube with an army of Cumans and besieged Adrianople, but was then defeated in the battle of **Tauro-comon.**

1096-1097. THE FIRST CRUSADE (p. 255). The crusaders, of whom

The Comneni and Angeli

Bohemund was one of the leaders, were looked upon with great suspicion in the east, where there was little interest in a movement organized by the heretical Latin pope But Alexius was unable to stop the crusaders, and therefore devoted himself to managing the movement. He induced them to promise to do homage to the empire for all territory reconquered from the infidel. The crusading **victories at Nicaea**

and **Dorylaeum** (1097) enabled Alexius to recover the entire western coast of Anatolia.

1098-1108. Second war with the Normans. The crusaders, having regained Antioch (lost to the Turks only in 1085), turned it over to Bohemund, who refused to recognize Alexius' suzerainty War broke out. Bohemund returned to Italy and raised a huge army, with which he appeared in Epirus (1104) He failed in his siege of Durazzo, and Alexius wisely avoided open battle. Ultimately (1108) Bohemund agreed to make peace, recognizing Byzantine suzerainty over Antioch.

1110-1117. War against the Seljuks, who again advanced to the Bosporus In 1116 Alexius won a resounding victory at **Philomelion,** which induced the Turks to make **peace at Akroinon** (1117) they abandoned the entire coastal area of Anatolia (north, west, and south) and all of Anatolia west of a line from Sinope through Ancyra (Ankara) and Philomelion

1111. Trade privileges granted to the Pisans This was part of the emperor's effort to draw the Pisans away from the Normans and at the same time to counterbalance the extensive trade position of the Venetians in the empire

1118-1143. JOHN COMNENUS, a ruler of high moral integrity, mild, brave, and sincere He devoted his attention chiefly to the east, with the object of recovering the old frontier of the Euphrates and of subjecting the Latin states of Syria to the empire

1120-1121. In a successful campaign against the Seljuks, John recovered southwestern Anatolia. He was diverted from further conquests by continued incursions of the Patzinaks in the Balkans.

1122. The Patzinaks were completely defeated and thenceforth were no longer a threat to the empire

1122-1126. War with Venice, resulting from John's refusal to renew the extensive trading privileges, which the Venetians had been exploiting to the full The Venetian fleets ravaged the islands of the Aegean, occupied Corfu and Cephalonia, and ultimately (1126) forced John to renew the privileges.

1124. Intervention of the emperor in behalf of Bela II in Hungary, initiating a policy which continued throughout the century. The objective of the Comneni was to prevent the Hungarians from establishing control over the Slavic regions of Dalmatia, Croatia, and Serbia. By the **Peace of 1126** the emperor secured Branicova, a vital bridgehead on the Danube

1134-1137. Conquest of Cilician (Little) Armenia, which was allied with the Latin Kingdom of Antioch. John forced Raymond of Antioch to do homage for his domain

1143. John died from a wound incurred while hunting He was just about to renew his campaigns in Syria

1143-1180. MANUEL COMNENUS, the son of John, a noble, intelligent, chivalrous idealist, and yet an adroit statesman and ambitious soldier He was the greatest of the Comneni and the most splendid In his reign Constantinople came to be accepted as the capital of the world and the center of culture Its brilliant art was imitated in the east as in the west. Manuel married a Latin princess (Maria of Antioch) and throughout his career cherished the hope of resurrecting a universal empire Hence his association with and employment of Latin nobles, who intermarried with the Greek aristocracy, his constant toying with the idea of reunion with Rome, his designs on Italian territory and his antagonism to the Hohenstaufen emperors All this tended to arouse much hostility among the Greeks (accentuated by the high-handed activities of the Italian traders), cost the empire inordinate sums of money and involved repeated conflict with the Normans The emperor's preoccupation in the west at the same time forced him to neglect the east, where the Seljuk Sultanate of Iconium (Rum) was able to effect a marked recovery.

1147-1158. War with Roger of Sicily. The Norman fleets ravaged Euboea and Attica, took and plundered Thebes and Corinth, carried away large numbers of the silk-workers, who were established at Palermo The emperor, having neglected the Byzantine fleet, was obliged to buy the aid of Venice with extensive trading rights (1148). The Venetians helped to reconquer Corfu (1149) and paved the way for the Byzantine conquest of Ancona (1151). But efforts to extend the Greek power in Italy met with failure (1154) and Manuel in the end had to agree to an inconclusive peace (1158).

1147-1149. THE SECOND CRUSADE (p 256) The crusaders, having plundered the Balkan region, almost came to blows with the Greeks at Constantinople, but Manuel by diplomacy prevented a clash The Greeks did nothing to prevent the defeat of the crusaders in Anatolia

1152-1154. Successful war against the Hungarians, who attempted to

make good their claims to Serbia and Bosnia Peace was made in 1156, the Hungarians recognizing the emperor's suzerainty

1155. Trade privileges granted to Genoa, the emperor hoping thereby to counteract the domination of the Venetians

1158-1159. An expedition against Raymond of Antioch forced the latter to renew his homage

1161. **Kilidj Arslan IV,** Sultan of Rum, made peace with the empire, recognizing the emperor's primacy

1165-1168. War with the Hungarians. The imperial forces took Dalmatia and in the final peace (1168) received also part of Croatia The following years Manuel interfered actively in Hungarian dynastic affairs Bela III (1173-1196) was practically his vassal

1170-1777. War with Venice, the natural result of the Byzantine acquisitions in Dalmatia and in Italy The emperor arrested all Venetian traders in Constantinople and confiscated their goods, but with a neglected fleet he was able to do little The Venetians conquered Ragusa (1171) and Chios (1171), though they failed in an attack on Ancona (1173). In 1175 the Venetians made an alliance with the Normans against the empire and thereby forced Manuel to yield By the **Peace of 1176** the trade privileges were renewed and the emperor paid a heavy indemnity.

1176-1177. War against the Seljuks. The Byzantines were defeated at **Myriocephalon** (1176), but in the next year Manuel defeated the enemy in Bithynia, while John Vatatzes drove them out of the Meander Valley

1180-1183. **MANUEL ALEXIUS II,** the son of Manuel, who ruled under the regency of his mother, Maria of Antioch The regent relied almost entirely upon Latins in her service

1182 Revolt of the populace of Constantinople against the Latins, officials, and traders, who were brutally cut down in a great massacre. The mob forced the proclamation of

1182-1185. ANDRONICUS COMNENUS, an uncle of the boy-emperor, who ruled first as co-emperor, but in 1183 had Alexius strangled and became sole ruler. Andronicus had intrigued innumerable times against Manuel and was renowned for his lack of principle But he was a man of great personal charm, intelligent, vigorous, unscrupulous, and cruel. Through persecution, confiscations, and executions he cleaned the court circle, got rid of the hated Latins, abolished sale of offices, sinecures, etc ; reformed the judiciary, lightened the taxes All this was a policy directed against the powerful official and landed aristocracy and might, had it been carried through, have led to a thoroughgoing reform of the empire.

1185. The Norman attack. The Normans took Durazzo, sent an army and a navy against Thessalonica, which they stormed, and massacred the Greeks This attack led to a revolt of the Greek nobility against Andronicus, who was deposed, tortured, and executed.

1185-1195. **ISAAC ANGELUS,** leader of the insurgents His accession meant a return of the old negligence and corruption. Within a brief space the entire empire began to go to pieces. In the provinces the powerful feudal families (i e Sguros in Greece; Gabras at Trebizond) began to set up as independent potentates

1185. Victory of the Byzantine general, Alexius Branas, over the Normans at Demetritsa By 1191 the Normans were driven out of the Balkans and even out of Durazzo and Corfu

1186-1188 The great insurrection in Bulgaria, led by Peter and John Asen. This was due primarily to the extortion of the imperial fiscal agents The revolt was supported by the Cumans and resulted in the devastation of much of the Balkan region, with the annihilation of much of the Greek population Though at times successful, the Greek commanders were unable to suppress the movement, which resulted in the formation of a new Bulgarian state north of the Balkan Mountains (1188)

1187. Fall of Jerusalem. Isaac, in fear of another crusade, allied himself with Saladin

1189. **THE THIRD CRUSADE** (p 256). Frederick Barbarossa was welcomed in Bulgaria by John Asen, who offered him an army for use against the empire But Frederick avoided friction as well as might be, and Isaac did not oppose the crossing of the crusaders into Anatolia. The death of Saladin (1193) relieved the danger from the east

1190-1194. Continuation of the war in Bulgaria The Byzantine forces were defeated at Berrhoe (1190) and at Arcadiopolis (1194).

1195-1203. **ALEXIUS III,** the brother of Isaac, whom he deposed and blinded.

1196. The western emperor, Henry VI, heir to the Norman domains, demanded Durazzo and Thessalonica Alexius settled for a huge money payment, and Henry's death (1197) removed the immediate threat from that quarter

1201. Peace with the Bulgars, who were allowed to retain most of the eastern Balkan area, under the younger brother of the Asens, John (*Joanntsa, Kaloyan,* 1197–1207)

1202-1204. THE FOURTH CRUSADE (p. 256) The leaders were the Venetian doge, **Enrico Dandolo,** and **Boniface of Montferrat.** Alexius, the son of Isaac, appealed for aid against his uncle and promised great concessions Dandolo succeeded in diverting the expedition against Constantinople The crusaders took Durazzo (1203) and arrived at Constantinople (June, 1203) The emperor thereupon fled to Adrianople (July) His deposed brother, Isaac, was set upon the throne with his son, the accomplice of the crusaders

1203-1204. ALEXIUS IV. He was wholly under the control of the crusaders and was forced to pay a heavy tribute Popular discontent led to

1204, Jan. 25. A revolution and the proclamation of

1204. Alexius V (*Dukas*). Alexius IV was killed The new ruler refused payments to the crusaders and demanded their withdrawal

Apr. 12. The crusaders stormed the city, which was given over to a merciless sack The emperor succeeded in escaping. (*Cont p* 258)

b. THE SELJUK TURKS

1037. The Seljuks, a sept of the Ghuzz Turks, under the brothers Tughril Beg and Chagar Beg, invaded Khorasan and defeated the Ghaznawid armies They then conquered Balkh, Jurjan, Tabaristan, and Khwarizm

1055. Entry of Tughril Beg into Baghdad, where he was proclaimed *sultan,* with the title *King of the East and the West.* Invasion of Byzantine Cappadocia and Phrygia by Tughril Beg

1063-1073. Alp Arslan, brilliant nephew of Tughril, succeeded the latter He conquered Georgia and Armenia.

1071. BATTLE OF MANZIKERT (Malaz Kard). Alp Arslan defeated the Byzantine emperor, Diogenes Romanus, and virtually destroyed the Byzantine power in Asia Minor.

1073-1092. Malik Shah, son of Alp Arslan His vizier, **Nizam al-Mulk,** was one of the ablest administrators ever produced by Asia At the same time he was a patron of learning, founder of colleges in Baghdad (the Nizamiya) and other principal cities Under him was undertaken the reform of the calendar by the famous poet, **Omar Khayyam.**

1084. The Seljuks took Antioch

1090. Rise of the Ismailian fraternity of the **Assassins,** founded by Hasan Sabbah, a schoolfellow of Nizam al-Mulk, and a Fatimid propagandist He captured the mountain stronghold of Alamut in the Elburz range in Mazendran The Assassins later became masters of many mountain fortresses in northern Persia, Iraq, and Syria. The crusaders came into contact with the Syrian branch

1091. Nizam al-Mulk was murdered by one of Hasan's emissaries, after two expeditions against the Assassins had failed.

1092. Barkyaruk (Rukn al-Din), son of Malik Shah, sultan Civil war broke out between the new ruler and his brother, Mohammed, over Iran and Khorasan, and separate branches of the Seljuk family attained virtual independence in different parts of the empire, although the main line still preserved the nominal sovereignty down to 1157. The **Seljuk Empire of the East** ultimately fell before the attack of the Khwarizm Shah (1157) The Seljuks of Kirman (1041–1187) were overthrown by the Ghuzz Turcomans, the Seljuks of Syria (1094–1117) by the Burids and Ortuqids, the Seljuks of Iraq and Kurdistan (1117–1194) by the Shahs of Khwarizm The Seljuks of Rum (Iconium, Konieh), who ruled most of Anatolia, absorbed the Danishmandid principedom in Cappadocia, but were ousted by the Mongols and the Othmanli (Ottoman) Turks (p. 325)

1100-1200. During the 12th century the whole of the Seljuk Empire, excepting Rum, fell into the hands of captains of the Seljuk armies, the so-called *Atabegs* (regents) The **Burid dynasty** of Damascus (1103–1154) was founded by Tughtugin The **Zangid dynasty** of Mesopotamia and Syria (1127–1250) by Imad al-Din Zangi, whose son, Nur al-Din, was famous as an opponent of the crusaders The Zangids absorbed the Burids (1154) The **Ortuqid dynasty** of Diyar-Bakr (Diarbekr) was founded by Ortuq ibn Akrab (1101), whose sons, Sukman and Il-Ghazi, both won renown in the wars against the Latin princes of Palestine The dynasty lasted until 1312 Sukman Qutbi was the first of the

Shahs of Armenia (1100–1207). The Atabeg house of Azerbaijan (1136–1225) was founded by Ildigiz, whose son, Mohammed, was the actual ruler of the Seljuk Kingdom of Iraq. The Salgharids held Fars (1148–1287), the Hazaraspids Luristan (1148–1339), and Anushtigin, a Turkish slave of Balkatigin of Ghazna, was the grandfather of the first independent Shah of Khwarizm, Atsiz At one time the rule of the Khwarizm Shah was almost co-terminous with the Seljuk Empire.

1095. The crusaders, having invaded the dominions of the Sultan of Rum, took Antioch, with frightful slaughter They stormed Jerusalem (1099) and founded the Latin Kingdom of Jerusalem. By 1109 Caesarea, Tripoli, Tyre, and Sidon were captured. Constant warfare between the crusaders and the Moslems (Fatimids, Burids, Zangids, Ortuqids, and finally Saladin, the Sultan of Egypt) (*Cont. p* 325)

c. THE CRUSADES

PRECURSORS OF THE CRUSADES: (1) **Penitentiary pilgrimages** probably dating from the days of Helena, mother of Constantine, after the Arab conquest of Jerusalem (638) the Holy City was a joint shrine of Christian and Moslem, protectorate of Charlemagne over the Holy Places (recognized by Harun-al-Rashid, 807); abrogated by the mad Caliph Hakim (1010), (2) **Charlemagne's war** of Christian reconquest in Spain, (3) **the Cluniac revival** and its stress on pilgrimages led to a steady increase of pilgrimages (117 known in the 11th century) without serious opposition from the tolerant Moslems until the advent of the Seljuks, (4) **Wars of Christian reconquest** in the west began European reaction to Moslem pressure, Pisan reconquest of Sardinia (c 1016) with papal support; alliance of Castile and Aragon in the reconquest of Spain (c 1050), Norman reconquest of Sicily (1060–1090).

1087. **Genoa and Pisa,** by capture of Mahdiyah in Africa, gained command of the western Mediterranean from the Moslems Appeal of the Greek emperor after Manzikert (1071) to Pope Gregory VII, preparation of an army (alliance with Roger Guiscard) by Gregory (1074) to aid the Greeks

Transformation by Pope Urban II of military assistance to Constantinople into a new kind of holy war (a sort of ecclesiastical imperialism) under the auspices of the revived and regenerated papacy

1095. Appeal from the Greek emperor at the **Synod of Piacenza;** Urban's call at the **Synod of Clermont** (1095). Urban, a Cluniac and a Frenchman, speaking to Frenchmen, recited the glorious deeds of the French and tales of Moslem atrocities, made open allusions to the chances of profit and advancement, attacked feudal violence at home, and brought the audience to wild enthusiasms, he himself distributed crosses Urban's propaganda journeys and the preaching of **Peter the Hermit** and others stirred the west, but had the greatest effect in France and Lorraine, the area most under Cluniac influence The great rulers were all at odds with the papacy or busy at home, the rest of Europe indifferent, and the Crusades began as they continued, largely under French auspices

1096-1099 **THE FIRST CRUSADE.** Five popular, aimless mass migrations (1096), emptying whole villages and often accompanied by pillage and anti-Semitic outbreaks, of which two (perhaps 7000 under Peter the Hermit and perhaps 5000 under Walter the Penniless) reached Asia Minor and were annihilated The Norman-French baronage flocked to the Cross and converged in three divisions on Constantinople the Lorrainers under **Godfrey of Bouillon** and his brother Baldwin, via Hungary, the Provençals under Count **Raymond of Toulouse** and the papal legate, Adhemar of Puy, via Illyria, the Normans under **Bohemund of Otranto** (the most effective leader) via Durazzo by sea and land Perhaps they were 30,000 in all

The Greek emperor, Alexius Comnenus, expecting mercenaries and unprepared for crusaders, provided food and escort and punished the plunderers He exacted an oath of fealty from the leaders (Raymond refused) in an effort to insure his title to any recovered "lost provinces" of the Greek Empire

The Moslem opposition: the Seljuks had merely garrisoned Syria and were not popular with the native population. Moslem unity in Asia Minor ended with the death of Malik Shah (1092), and Syria was divided politically, racially, and theologically (Sunnite *vs* Shi'ite, the Fatimite capture of Jerusalem (1098) from the Shi'ites).

1097. **Nicaea,** the Seljuk capital in Asia Minor, taken by the combined Greek and crusading force, defeat of the Moslem field army at Dorylaeum; excursion of Baldwin and Tancred, and rivalry in Cilicia, Bohemund established himself in the Antioch area Siege and capture (by treachery) of Antioch (1097–1098), countersiege of the Christians in Antioch by the Emir of Mosul, election of Bohemund as leader Baldwin's conquest of Edessa (1097), death of Adhemar of Puy (1098),

Christian divisions· rivalry of Norman and Provençal (the *Holy Lance*).

1099. March to Jerusalem (Genoese convoy and food supply), siege, capture, and horrors of the sack The death of the papal legate left the organization of the government of Jerusalem to feudal laymen **Godfrey of Bouillon,** elected king, assumed the title of *Advocate of the Holy Sepulcher* (for pious reasons) The main body of the crusaders soon streamed back home. The Norman effort to dominate the government through their patriarch Dagobert led to his deposition by the anti-Norman party and Jerusalem became a feudal kingdom rather than theocracy under papal domination The government (as revealed by the *Assizes of Jerusalem,* the most complete feudal code extant) was narrowly feudal, the king a feudal suzerain, not a sovereign, the tenants-in-chief dominant. Besides the feudal organization there were burgher and ecclesiastical organizations, with their own courts.

Continued divisions among the Moslems and the weakness of the Greeks favored the progress of the Latin states: the **Kingdom of Jerusalem,** in close commercial alliance with the Italian towns (Genoa, Pisa, and later Venice), profited by the commerce through its ports and extended south to tap the Red Sea trade The other states the **County of Edessa** (established by Baldwin), the **Principality of Antioch** (established by Bohemund), and the **County of Tripoli** (set up by Raymond of Toulouse), were fiefs of Jerusalem (divided into four great baronies and into lesser fiefs) The departure of the main body of the crusaders left the Franks without enough reinforcement to prevent their orientalization and decline After the capture of Jerusalem (1187) the Kingdom of Jerusalem ceased to be an organized state.

Moslem unification in Syria was completed by the *Atabegs* (regents) of Mosul and signalized by the capture of Edessa (1144). Mosul soon mastered Egypt; Saladin emerged supreme in Egypt (1171), quickly reduced Damascus and Aleppo, and brought Syria and Egypt under a single efficient rule

1147-1149. THE SECOND CRUSADE. Bernard of Clairvaux, persuaded by Pope Eugenius III, somewhat against his will, preached (1145) the Second Crusade. Emperor Conrad III and King Henry VII of France took the Cross. To avoid conflicts the two monarchs went by separate routes; there never was coherent direction or unity of command The Norman Roger of Sicily profited by the Second Crusade to seize the Greek islands and to attack Athens, Thebes, and Corinth Nothing of importance was achieved by the Second Crusade and the movement was discredited throughout Europe

1184. Saladin's steady advance led to a great appeal to the west, King Philip II of France and Henry II of England declined the crown of Jerusalem, but levied a **Saladin tithe** (1188) to finance a crusade. Christian attack on a caravan (said to be escorting Saladin's sister) provoked Saladin's holy war (1187–1189) **capture of Jerusalem** (1187) without a sack (Saladin's humanitarianism) and reduction of the Latin states to the cities of Antioch, Tyre, Tripoli, and a small area about each

1189-1192. THE THIRD CRUSADE Precipitated by the fall of Jerusalem, a completely lay and royal affair despite the efforts of the papacy to regain control It was supported partly by the Saladin tithe, and was led by the three greatest monarchs of the day. (1) **Frederick Barbarossa** (a veteran of the Second Crusade) as emperor, the traditional and theoretical military leader of Christendom, headed a well-organized and disciplined German contingent starting from Regensburg (1189), which marched via Hungary, entered Asia Minor, and disintegrated after Frederick was drowned (1190), (2) **King Richard I of England** and (3) **King Philip II of France,** who went by sea Already political rivals, they quarreled in winter quarters in Sicily (1190–1191), Richard turned aside in the spring and took Cyprus which he sold to Guy de Lusignan The quarrels of Philip and Richard continued in the Holy Land, and Philip returned to France after the capture of Acre (1191) Richard's negotiations with Saladin (Richard proposed a marriage of his sister Joanna to Saladin's brother, who was to be invested with Jerusalem) resulted (1192) in a three-year truce allowing the Christians a coastal strip between Joppa and Acre and access to Jerusalem. Captivity of Richard (1192–1194) and heavy ransom to the Emperor Henry VI. The Third Crusade ended the golden age of the crusades

1202-1204. THE FOURTH CRUSADE. Emperor Henry VI, King of Sicily (by virtue of his marriage to the Norman Constance) and heir of the traditional Norman plan of creating an empire on the ruins of the Greek Empire, was determined to continue his father Frederick's crusade, and began to encroach on the Greek lands homage of Cyprus and Lesser Armenia (1195), the marriage of Henry's brother Philip to Irene, daughter of the deposed

Emperor Isaac Angelus, established a Hohenstaufen claim to the Greek throne. Henry died 1197.

Pope Innocent III determined to regain control of the crusading movement, and hoping to unite the Greek and Latin Churches, issued a call to the monarchs, it was ignored (Philip II and King John of England were at odds, Germany in chaos, the Spanish rulers busy with the Moors), and the brunt fell again on the French baronage Egypt, the objective, could only be reached by water, negotiations with Venice (1201). terms, 85,000 marks and half the booty **Meeting of Hagenau** (1201) between Philip (brother of Henry VI), Boniface of Montferrat, and (?) Alexius, decision to divert the crusade to Constantinople (a return to the plans of Henry VI), Venice may have shared in the decision As it was impossible to raise 85,000 marks, Venice agreed to fulfill her bargain if the Christian city of Zara were taken by the crusade Despite Innocent's furious opposition, Zara was taken and sacked (1202), Innocent excommunicated the crusade Constantinople was entered (1203), Isaac Angelus and his son Alexius IV were restored, Greek opinion was furious at the new exactions to pay the clamorous crusaders, and Alexius V soon succeeded Isaac The crusaders stormed and took Constantinople (1204), the first **capture of Constantinople** in history, and sacked it with unparalleled horrors The Latin Empire of the East (*Romania*) replaced the Greek Empire at Constantinople from 1204 to 1261, the first emperor, Baldwin of Flanders, a Latin patriarch, a Venetian (Morosini), replaced the Greek patriarch, and technically the schism was ended, actually the Greeks refused all union Venice acquired three-eighths of the city, Adrianople, Gallipoli, Naxos, Andros, Euboea, Crete, and the Ionian islands Innocent III was horrified and helpless The government of the Latin Empire was completely feudal under the *Assizes of Romania* (copied from the *Assizes of Jerusalem*). The Greek emperors ruled at Nicaea (1204–1261) until Michael VIII surprised and took Constantinople, 1261 The Fourth Crusade shocked Europe, discredited the papacy and the whole crusading movement, and facilitated the advance of the Turks

1208. THE ALBIGENSIAN CRUSADE, a European crusade against the Albigensian heretics in southern France, proclaimed by Innocent III (1208) (see p 229).

1212. The so-called **Children's Crusade,** preached by the lad Stephen of Vendôme and by Nicholas of Cologne in Germany. Stephen's contingent reached Marseilles and was sold into slavery. Nicholas' company was turned back. The whole episode is supposed to have been the origin of the story of the Pied Piper.

1218-1221. THE FIFTH CRUSADE. Innocent III, unwilling to let the crusading idea lapse, preached the Fifth Crusade at the Fourth Lateran Council. Egypt was to be the objective, the date 1217; John of Brienne, King of Jerusalem, was replaced by the papal legate Pelagius as leader (1218) Capture of Damietta (1219), rejection (in the expectation of Frederick II's arrival) of the offers of the sultan (1219) to exchange Jerusalem for Damietta, failure of the march on Cairo; **Treaty of 1221.** eight-year truce, Damietta lost; retreat.

1228-1229. THE SIXTH CRUSADE, of the Emperor Frederick II. Essentially lay, the crusade continued the policy of Frederick's father, Henry VI Frederick, King of Jerusalem by his marriage (1225) to Yolande of Brienne, sailed (1227) after careful preparation, returned ill with fever, and was excommunicated. He sailed again (1228), the pope proclaimed a crusade against Frederick's Sicilian lands and renewed the excommunication, Hermann of Salza, Master of the Teutonic Order, remained loyal to Frederick Frederick, the first crusader to understand the Moslems, negotiated a treaty (1229) with Malik-al-Kamil, nephew of Saladin, Sultan of Egypt, peace for ten years, grant of Nazareth, Bethlehem, Jerusalem, etc., and a corridor from Jerusalem to the coast for the Christians The Patriarch of Jerusalem opposed Frederick at every turn, and Frederick had to crown himself king (1229) in the Church of the Holy Sepulcher. He returned home at once to repel the papal crusade in his lands The capture of Jerusalem by a rush of Moslem mercenaries (1244) led to the crusades of King Louis IX of France, but Jerusalem was not again in Christian hands until General Allenby captured it (1917)

The crusades of Theobald of Navarre (1239) and **Richard of Cornwall** (1240–1241) were forbidden by the pope and were fruitless.

1248-1254. THE SEVENTH CRUSADE, the first of King Louis IX of France. Poorly organized, Damietta taken without a blow, march to Cairo (1249), rout of the army, capture of Louis, massacre of the army, loss of Damietta. Louis, ransomed, spent four years on a pilgrimage to Jerusalem (1251–1254)

1267. Charles of Anjou, aiming at the conquest of Constantinople, be-

came heir (by treaty) to the Latin Empire He planned to unite Sicily and Jerusalem, but was balked by the Sicilian Vespers (1282)

1269. **James the Conqueror,** of Aragon, under papal pressure, made a futile crusading expedition to Asia Minor

1270. **THE EIGHTH CRUSADE, the second of King Louis IX** and Edward of England (the last of the western crusaders who arrived (1271) and did nothing permanent) Attack on Tunis, possibly at the insistence of Charles of Anjou, death of Louis, the expedition continued by Charles, nothing accomplished

1274. Preaching of a crusade at Lyons by Pope Gregory X, every ruler took the Cross, Gregory's death ended the project. Acre fell, 1291

Local and specific crusading expeditions were subsequently undertaken under various circumstances at different times, there was a revival of crusading zeal with the fall of Constantinople (1453) under papal urging, but the true crusades were over

The crusades gave rise to great orders of knighthood which combined chivalry and monasticism

THE KNIGHTS OF ST. JOHN or the *Hospitalers* (black mantle with a white cross), originally a Chilian order founded at Jerusalem by Amalfitan merchants (c. 1070) to care for the Hospital of St John, militarized (c 1130) on the model of the Knights Templar, transferred to Cyprus (1291), to Rhodes (1310–1522) (the *Knights of Rhodes*) and then to Malta (*Knights of Malta*) Noble blood was a requisite to knighthood in the order

THE KNIGHTS OF THE TEMPLE (their house in Jerusalem stood near the Temple) or *Templars* (white mantle with a red cross) founded (c 1120) by Hugh of Pajens to guide and protect pilgrims, confirmed by the **Synod of Troyes** (1128) and Pope Honorius III. Bernard of Clairvaux drew up their rule, a modification of the Cistercian, they took the threefold monastic vows of poverty, chastity, and obedience, and their rule in general was that of the canons regular They consisted of knights, men-at-arms, and chaplains Admission to knighthood in the order was open only to those of noble blood Organization by commanderies under a grand master. Transferred to Cyprus (1291), the order was dissolved by the **Synod of Vienne** (1312) (see p. 232)

The other great orders were associated with national or racial influences, and do not represent the older international aspects of knighthood:

The Knights of the Hospital of St. Mary of the Teutons in Jerusalem (*Teutonic Knights*) (white mantle with a black cross) founded (c 1190), headquarters at Acre. (For their history in Germany, see p 214)

The great Spanish orders **Calatrava** (founded, 1164), **Avis** (Portuguese, founded 1166), **St. James of Compostella** (founded 1175), **Alcantara** (founded, 1183).

Famous orders of chivalry of royal foundation: The **Order of the Garter** (English), founded c. 1344. The **Order of the Star** (French) founded 1351, replaced by the **Order of St. Michael** (1469–1830) The **Order of the Golden Fleece** (Burgundian) founded, 1429, became Hapsburg, 1477.

d. LATIN AND GREEK STATES IN THE NEAR EAST, 1204-1261

Division of the Eastern Empire after the fall of Constantinople: A council, composed equally of crusaders and Venetians, decided to award the imperial crown to **Count Baldwin of Flanders,** while a Venetian (Pier Morosini) was made Patriarch of Constantinople **Boniface of Montferrat** was made King of Thessalonica and the remaining parts of the empire were assigned to various feudal barons as vassals of the emperor. In Anatolia the crusaders were never able to establish themselves excepting in a part of Bithynia near the Bosporus In Europe they were constantly exposed to the attacks of the Bulgarians The Kingdom of Thessalonica at first extended over part of Thrace, Macedonia, and Thessaly, but to the westward the Greek, **Michael Angelus Comnenus,** set himself up as Despot of Epirus and soon began to expand his dominion eastward Attica and the Peloponnesus were conquered by crusading barons in a short time, and these territories were organized on a feudal basis as the **Lordship of Athens** (Otto de la Roche, 1205–1225, Guy I, 1125–1263, John I, 1263–1280), and the **Principality of Achaia** (conquered by Guillaume de Champlitte and Geoffroy de Villehardouin in 1205). Achaia was in turn divided into twelve feudal baronies, a perfect example of the French feudal system Under the Villehardouin family (Geoffroy I, 1209–1218, Geoffroy II, 1218–1246, Guillaume, 1246–1278) it was well-governed and popular with the Greco-Slavic population, which was considerately treated.

The Venetians took as their share of the empire most of the islands and other important strategic or commercial posts They kept for themselves part of Constantinople, Gallipoli, Euboea, Crete, the southwestern tip of the Peloponnesus (Coron

and Modon), Durazzo, and other posts on the Epiran coast, as well as the islands of the Ionian and Aegean Seas For the most part these possessions were granted as fiefs to the leading Venetian families (Triarchies of Euboea, Duchy of the Archipelago, etc).

1204-1205. BALDWIN I, Latin emperor.

1204-1214. MICHAEL ANGELUS COMNENUS, Despot of Epirus.

1204. Theodore Lascaris, with most of the Byzantine leaders, established himself in Bithynia, Theodore Mancaphas set himself up at Philadelphia, Leo Gabalas took over Rhodes, Manuel Maurozomes established himself in the Meander Valley, Alexius and David Comnenus organized a state on the north coast of Anatolia, with David at Sinope and Alexius at Trebizond, thus founding the **Empire of Trebizond,** which lasted until the Ottoman conquest of 1461

1204. Theodore Lascaris made an alliance with the Sultan of Rum and with Mancaphas of Philadelphia to resist the advance of the crusaders into Anatolia, but was defeated by the latter under Peter of Bracheuil.

1205. The Bulgars, under Kalojan, defeated Emperor Baldwin and Doge Dandolo in **battle near Adrianople.** Baldwin was captured and died in captivity. The Bulgars then overran much of Thrace and Macedonia, exterminating a large part of the Greek population.

1205-1216. HENRY I, Latin emperor. He was the brother of Baldwin, and the ablest of the Latin emperors

1206-1222. THEODORE I (*Lascaris*), proclaimed emperor at Nicaea and founder of the Nicaean Empire

1207. Kalojan and the Bulgarians besieged Thessalonica, but in vain Kalojan died suddenly, probably murdered

1207. Theodore Lascaris, allied with the Seljuks of Rum, defeated David Comnenus and drove him back to Sinope Theodore then concluded a truce with the Emperor Henry, in order to oppose the advance of Alexius of Trebizond, who was now allied with the Seljuks

1209. Theodore repulsed a second attempt by Peter of Bracheuil and the crusaders to conquer Bithynia

1210. The Parliament of Ravennika, at which the feudal lords of Greece finally recognized the suzerainty of the emperor at Constantinople In practice this meant little, and the emperor was left to shift for himself, with such support as the Venetians saw fit to give him

1211. Theodore Lascaris defeated Alexius of Trebizond and the Sultan of Rum, both of whom were captured. As a result a large part of the Anatolian coast was added to the Empire of Nicaea.

1212. Henry I defeated Theodore at Luparcos and began the invasion of Anatolia Theodore made peace, abandoning to the Latin Empire part of Mysia and Bithynia.

1214-1230. THEODORE DUKAS ANGELUS, brother of Michael, became Despot of Epirus. He began the work of expansion at the expense of the Latins and Bulgars, taking Durazzo and Corfu from the Venetians (1214)

1216-1217. PETER OF COURTENAY, Latin emperor. He was the brother-in-law of Baldwin and Henry and was in Europe when Henry died. On the way from Durazzo to Thessalonica he was captured by Theodore Dukas of Epirus He died in 1218.

1217-1219. Regency of Yolanda, the wife of Peter of Courtenay

1218-1228. ROBERT OF COURTENAY, Latin emperor His domain was reduced to Constantinople and he spent most of his time soliciting aid in the west.

1222. Theodore Dukas of Epirus captured Thessalonica and extinguished the kingdom. He then had himself proclaimed *Emperor* of the West, and before long had extended his conquests to the vicinity of Philippopolis and Adrianople.

1222-1254. JOHN DUKAS VATATZES, emperor at Nicaea. He proved himself a great ruler as well as an able general During his reign agriculture was encouraged, trade and industry developed, the finances reformed The Nicaean Empire enjoyed a period of real prosperity and power.

1224. John Vatatzes defeated the Franks at Poimanenon. In succession he took the islands near the Anatolian coast (Samos, Chios, Lemnos) and subjected Rhodes. An army was even sent across the Straits to capture Adrianople.

1224. Theodore of Epirus defeated an army of the Latin emperor at Serres and then drove the invading Nicaean army away from Adrianople.

1228. On the death of Robert of Courtenay, it was proposed that a regency be established under the Bulgarian ruler, John Asen II (1218–1241), but this suggestion was frustrated by the Latin clergy.

1228-1261. BALDWIN II, Latin emperor He was the eleven-year-old son of Peter of Courtenay. The reign was a helpless one, during which the emperor was reduced to the point of peddling the Constantinople relics through Europe

1229-1237. Regency of John of Brienne, former King of Jerusalem, for the boy-emperor. John became co-emperor in 1231.

1230. Theodore of Epirus was defeated and captured by John Asen in the **battle of Klokotnica.** The Bulgarian ruler thereupon appropriated most of the eastern sections of the Empire of the West. Thessalonica and Thessaly passed to

1230-1236. MANUEL, the brother of Theodore

1235. An expedition sent by John Vatatzes against the Venetians in Crete failed to achieve anything.

1236. An attack of the Nicaean Greeks, allied with John Asen of Bulgaria, on Constantinople The city was saved by the Venetians and by a force sent by the Duke of Achaia

1236-1244. JOHN, the son of Theodore Dukas of Epirus, became Despot of Thessaly and Emperor of the West.

1236-1271. MICHAEL II, Despot of Epirus.

1242. John Vatatzes, in company with Theodore, who had been liberated by the Bulgarians, set out with an army and besieged Thessalonica He failed to take the city, owing to his lack of sea-power, but John, the Despot of Thessaly, was obliged to give up the title Emperor of the West and to recognize the suzerainty of the Nicaean emperor.

1244. The Mongol invasion of Anatolia, after the defeat of the Seljuks in the **battle of Erzingan.** The Mongols reached Ancyra (Ankara) John Vatatzes established friendly relations with them and succeeded to much of the Seljuk territory in central Anatolia.

1246. Second Expedition of John Vatatzes to the Balkans. He conquered northern Macedonia and finally took Thessalonica, deposing Demetrius Angelus, despot since 1244.

1254. Michael II, of Epirus, recognized Nicaean suzerainty, after a defeat by the forces of John Vatatzes.

1254-1258. THEODORE II (*Lascaris*), Greek emperor at Nicaea.

1255. Theodore defeated the Bulgarian armies of Michael Asen in northern Macedonia.

1257. Revolt of Michael II of Epirus, who managed to defeat the Nicaean forces sent against him.

1258-1261. JOHN IV (*Lascaris*), emperor. He was a mere child and his accession led to a military uprising, led by Michael Paleologus, who became regent

1259-1282. MICHAEL VIII (*Paleologus*), who was first co-emperor with the boy John, whom in 1261 he had imprisoned and blinded. Michael was an able and energetic general, whose great objective was to re-establish the Greek power at Constantinople.

1259. Michael II of Epirus, allied with the King of Sicily and with the Prince of Achaia, attacked Thessalonica, but was defeated and driven back by the Nicaeans (battle of Pelagonia).

1261. RECONQUEST OF CONSTANTINOPLE. Michael made an alliance with the Bulgarians and concluded the **Treaty of Nymphaion** with Genoa, promising the Genoese all the privileges hitherto enjoyed by the Venetians. On July 25 a Greek army under **Alexius Stragopulos,** taking advantage of the absence of the Venetian fleet, crossed the Bosporus and retook Constantinople without much difficulty. Baldwin II fled (d 1273). End of the Latin Empire (*Cont p.* 320)

e. THE MONGOLS

Under the last caliphs, the caliphate had regained its temporal power in Iraq, Mesopotamia, and Fars, and its spiritual authority was greater than at any time since the death of Wathiq (847), but the caliphate was soon threatened by the Mongols, who, in the late 12th century, had advanced from Mongolia.

1206. The Mongol chief, **Temujin** (1162–1227), was proclaimed supreme ruler, *Jenghiz Khan* (Very Mighty King), of all the Mongols Under his leadership the Mongol armies swept over northern China and over Azerbaijan, Georgia, and northern Persia Transoxania was invaded and Bokhara taken (1219); Samarcand captured (1220) and Khorasan devastated. Destruction of Merv and Nishapur. Capture of Herat.

1223. Battle of the Kalka River, in southern Russia. The Mongols defeated a strong force of Russians and Cumans, but after their victory returned to Asia.

1237-1240. Mongol armies under **Batu** (actually commanded by Subutai) overran and conquered southern and cen-

The Mongol Empire

tral Russia and then invaded Poland and Hungary

1241. The Mongols defeated the Poles and Germans in the **battle of Liegnitz** (Wahlstatt) in Silesia, while another army defeated the Hungarians But because of political complications arising from the death of the Great Khan, Batu withdrew from western Europe, subjugating, on the way back, Bulgaria, Wallachia, and Moldavia Subsequently he settled on the lower Volga, where a Mongol (Tatar) state was organized under the name of **Golden Horde**, with Sarai as the capital. The Golden Horde, like other Mongol khanates, recognized the supreme authority of the Great Khan, whose capital was first at Kara-Korum in Mongolia, then at Khanbalyk (present-day Peiping) in China But after the death of **Kublai Khan** (1294) the unity of the empire was purely nominal

1245-1253. Continued ravages of the Mongols in Mesopotamia, Azerbaijan, Armenia, and Georgia

1256-1349. THE IL-KHANS OF PERSIA. Hulagu, the grandson of Jenghiz Khan, was sent by his brother, Mangu, to crush the Assassins and extirpate the caliphate

1256. Suppression and extinction of **the Assassins.**

1258. CAPTURE AND SACK OF BAGHDAD. Hulagu executed the caliph, Musta'sim He then invaded Syria and took Aleppo

1260. Great victory of the Mamluks of Egypt, under Baybars, at **Ain Jalut.** This victory checked the Mongol advance and saved Egypt, the last refuge of Moslem culture. Baybars revived the caliphate by inviting to Cairo Ahmad Abu-l-Qasim, a scion of the Abbasid house, who was acknowledged as caliph under the title of *Mustansir l' Illah*

1344-1349. Reign of Nushirwan, last of the Il-Khans of Persia. The dynasty was succeeded by a number of lesser families.

f. MOSLEM EGYPT

868-905. Dynasty of the Tulunids.

935-969. Dynasty of the Ikhshidids. Both these dynasties also ruled Syria

968-1171. THE FATIMID DYNASTY, under which Egypt became the most brilliant center of Moslem culture The Fatimids claimed to be descendants of the Caliph Ali, and of Fatima, the daughter of the Prophet. They rose to power as a result of Shi'ite (Ismailian) propaganda among the Berbers, begun about 894 and directed from Yemen Abu Abdullah, an Ismailian missionary, had won over the powerful Kitama tribe and had overthrown the Aghlabids (909). Obaydullah, son of the Ismailian hidden Imam, then appeared and was proclaimed caliph and mahdi in Qairowan (910). In 922 he reduced the Idrisids, but an attempt to conquer Egypt failed. His son, Al-Qa'im, who succeeded him in 934, was defeated again and again and was besieged in his capital by the Kharijite, Abu Yazid Makhlad Al-Qa'im's son, Al-Mansur, finally defeated Abu Yazid (947), and brought the whole of North Africa, Sicily, and Calabria under Fatimid rule, though he lost Morocco to the Omayyads of Spain He was succeeded by his son, Al-Mu'iz, in 952. The latter recovered Morocco and drove the last Byzantine forces out of Sicily (966).

968. Al-Mu'iz took Egypt and transferred the seat of the Fatimid government to Cairo (founded 969).

975-996. Al-Aziz, son of Al-Mu'iz, sultan He conquered Syria and part of Mesopotamia, and ruled from the Euphrates to the Atlantic.

996-1020. Al-Hakim, son of Al-Aziz, sultan He was known as the *Mad Caliph*, having affirmed his own divinity He tried to make Shi'ism the orthodox religion of Egypt The cult of Hakim as an emanation of deity still survives among the Druses of Syria.

1020-1035. Reign of **Al-Zahir,** marking the beginning of the decline of the Fatimid power. Most of Syria was lost

1035-1094. Reign **of Al-Mustansir.** The holy cities of Mecca and Medina disclaimed their allegiance (1047) and North Africa threw off the Fatimid yoke On Al-Mustansir's death civil war broke out among his sons, Nizar and Ahmad Nizar was defeated and killed, and Ahmad reigned as

1094-1101. Al-Musta'li. He lost Jerusalem to the crusaders (1099) The Fatimid power continued to decline.

1167. Shirkuh, general of the Zangid Nur al-Din of Damascus, entered Egypt to assist the second-last Fatimid, Al-Mustanjid Shirkuh was appointed vizier, in which office he was succeeded by his nephew, **Salah al-Din** (*Saladin*), who founded the

1169-1250. Ayyubid dynasty. Saladin ruled at first as viceroy of Nur al-Din, but on the latter's death (1173) asserted his independence and consolidated his power over Egypt, part of Nubia, Hijaz, and Yemen.

1172. Saladın drove the Normans out of Trıpolı.

1174. Invasıon of Syria and conquest of Damascus Aleppo taken (1183).

1185-1186. Saladin seızed Mosul and reduced Mesopotamıa

1187. Battle of Hıttın. Saladin destroyed the crusadıng Kıngdom of Jerusalem

1190-1193 Saladin defended his conquests agaınst the Third Crusade.

g. MOSLEM DYNASTIES OF NORTH AFRICA

788-985. The Alıd dynasty of the Idrısids ın Morocco, founded by Idrıs ıbn Abdullah, a great-grandson of the Calıph Alı's son Hasan. Thıs dynasty was overthrown by the Mıknasa Berbers.

801-909. The Aghlabıd dynasty in Tunis, founded by Ibrahim ıbn Aghlab, the Abbasid governor of Africa Thıs dynasty conquered Sıcily (827-878), took Malta and Sardinia and ınvaded southern Italy. The dynasty was ultimately destroyed by the Fatimids.

1056-1147. The Almoravıds, a Berber dynasty founded by Abdullah ıbn Tashfin, conquered Morocco and part of Algeria and ıntervened actıvely in the affairs of Spain.

1130-1269. THE ALMOHADES, another Berber dynasty founded by the prophet, Mohammed ibn Tumart His successor, Abdul-Mu'min, annıhılated the Almoravıd armies (1114). Morocco was conquered (1146) and Spain invaded. Algerıa was subjugated in 1152, and the Normans drıven out of Tunıs (1158). Trıpoli too was annexed. But ın 1235 the Almohades were defeated and gradually ejected from Spaın

1228-1534. The Hafsid dynasty, which succeeded the Almohades ın Tunıs.

1235-1339. The Zıyanıds, successors of the Almohades ın Algerıa They were ultımately absorbed by the

1296-1470. Marınıds of Morocco, a dynasty founded in 1195 which took the Moroccan capıtal from the Almohades ın 1296.

C. THE LATER MIDDLE AGES

1. WESTERN EUROPE

a. THE BRITISH ISLES

(1) *England*, 1307-1485

1307-1327. EDWARD II. Married to Isabella, daughter of Philip IV of France. Ignorant of his task and bored with the business of kingship, Edward was dominated by his favorite, **Piers Gaveston**, a Gascon. The Scottish war was continued in desultory fashion The baronage, angered by Gaveston, followed the leadership of Edward's nephew, Thomas, Duke of Lancaster, an ambitious, incompetent person They forced Edward to accept a committee of reform, the twenty-one **Lords Ordainers** (1310), whose reform ordinances, suggestive of the Provisions of Oxford, were confirmed by Parliament (1311). The ordinances required a baronial consent to royal appointments, to a declaration of war and to the departure of the king from the realm, this consent to be given through Parliament. Gaveston was captured and slain (1312).

1313-1314. The Scottish War. By 1313 only the castle of Stirling remained in the hands of the English Edward set out (1314) to relieve the castle, Lancaster and the baronial party refused to support the expedition. At **Bannockburn** (1314) Edward was overwhelmingly defeated, and Scottish independence won.

In Gascony the French kings began a policy of egging Edward's vassals on to resistance, a process which culminated in the French conquest of Gascony and its retention by the French with the consent (1327) of the regents who ruled after Edward's abdication.

1314-1322. Supremacy of Lancaster. Lancaster offered no opposition to Scottish raids, private wars broke out in England; Edward was under a new favorite, Hugh le Despenser. Parliament exiled Despenser (1321). Edward defeated Lancaster at **Boroughbridge** (1322) and beheaded him. The Parliament of York repealed the Ordinances.

1322-1326. Rule of the Despensers, father and son: Scottish truce (1323), decline of the popularity of the Despensers, alienation of Queen Isabella Isabella went to France (1325), arranged the marriage of her son, the future Edward III, to Philippa of Hainault, and returned (1326) with Mortimer and foreign troops Supported by the barons, Isabella gained London, the Despensers were hanged, and the **Parliament of Westminster** (1327), dominated by Isabella and by Edward's enemies, forced an abdication that was tantamount to deposition Edward was brutally murdered in prison eight months later.

Baronial reform was cynical and selfish in aim, but made no effort to destroy the monarchy. Burgesses and knights sat in the parliaments of 1311, 1322, and 1327, and retained a share in the grant of taxes.

1327-1377. EDWARD III (aged fifteen at his accession). Council of regency and rule (1327–1330) under Mortimer, Isabella's paramour, Bruce's invasion of England forced the acknowledgment of Scottish independence (1328) Edward led the baronial opposition to Mortimer (hanged, 1330) and opened his personal rule (1330).

1337. OUTBREAK OF THE HUNDRED YEARS' WAR. Edward did homage (1329) for his French lands and renewed it (1331). French support of Scottish aggression continued and Edward, profiting by civil war in Scotland, supported Baliol, after a series of expeditions he avenged Bannockburn at **Halidon Hill** (1333) French intrigues to alienate Aquitaine continued; Edward sought allies in the emperor, the German princes, and his wife's relatives in Hainault and Holland, but could not win the Count of Flanders, the vassal of Philip VI. The economic interdependence, due to the wool trade, of England and the Flemish cities, made an English alliance with them inevitable Philip continued his advance into the English lands south of the Loire (1337) and open hostilities broke out (1338). Edward ravaged northern and eastern France without a decisive battle Urged on by the Flemings, Edward proclaimed himself King of France (in right of his mother Isabella), and enabled the Flanders towns under Jan van Arteveldt to support him without violating their oaths

1340. The naval victory of Sluys transferred the mastery of the Channel from France to England (until 1372). Intermittent truces (1340–1345) were followed by Edward's invasion of France, and

1346, Aug. 26. Great **VICTORY AT CRÉCY** where English longbowmen, supported by dismounted horsemen, routed the undisciplined chivalry and mercenary crossbowmen of France. This tactical innovation, the result of English experiences in Wales and Scotland, began the joint participation of the yeomanry and the aristocracy in war, and gave the English a unique military power and new social orientation. Artillery may have been used in Crécy.

1346. The invasion of Philip's Scottish allies was halted at **Neville's Cross,** and the King of Scotland captured.

1347. **Calais was taken** after a long siege in which artillery was used (Philippa's intervention in behalf of the burghers of Calais) Calais remained an English military and commercial outpost in France until 1558

1347-1355. A series of truces with France was ended by the expedition of Edward's son, **Edward, the Black Prince,** to Bordeaux, followed by ruthless plundering raids from there as a base, which enriched the English and alienated the populace.

1356, Sept. 19. BATTLE OF POITIERS. The Black Prince, using the tactics of Crécy, defeated King John, capturing him, his son, and the King of Bohemia, as well as the flower of French chivalry.

1359-1360. Edward's last expedition to France penetrated to the walls of Paris; the south had been so devastated that the English could hardly find food.

1360. PEACE OF BRETIGNY, ending the first period of the war (1) France, utterly exhausted and in chaos, surrendered the full sovereignty of Aquitaine, Calais, Ponthieu; and (2) fixed John's ransom, (3) Edward waived his claims to the crown of France.

THE BLACK PRINCE IN THE SOUTH. The Black Prince, ruling as Duke of Aquitaine, supported Pedro the Cruel of Castile against Henry of Trastamara (allied with Charles V and aided by Du Guesclin). Having defeated Du Guesclin and Henry (**Navarrete,** 1367), the Black Prince, disgusted at Pedro's character, his army dissipated by illness, and seriously ill himself, withdrew. Taxation in Aquitaine to pay for the expedition led the southern baronage to appeal to Charles V, who summoned the Black Prince to answer to him as his feudal lord (alleging a technical defect in the **Peace of Bretigny**). The prince defied Charles, and Parliament advised Edward to resume his claims to the French crown Du Guesclin avoided open battle, pursuing a warfare of attrition which wore out the Black Prince and alienated the Aquitanians from the English. After the hideous **sack of Limoges** (1370) the Black Prince returned to England (1371) and was replaced (1372–1374) by his brother, **John of Gaunt,** Duke of Lancaster, an incompetent soldier, who lost town after town until only Calais, Cherbourg, Brest, Bayonne, and Bordeaux remained in English hands (1375).

Edward's personal rule and domestic developments in England. Edward, a majestic, affable man, opened his reign with generous concessions to the baronage, and a courteous welcome to the complaints of the middle class He grew steadily in popularity. He was fond of war and the war was popular, the nation backed him.

Progress of Parliament. The necessities of war finance played into the hands of Parliament, and (after 1325) the knights and burgesses began to establish a privileged position for their common petitions. Without immediate redress when the king broke promises of reform, they were able to apply financial pressure in crises The king could still legislate outside Parliament by ordinances in council, but Parliament was gaining the initiative· non-feudal levies and changes in levies require parliamentary sanction (1340), a money grant made conditional on redress, and auditors of expenditure appointed (1340–1341); all ministers of the king declared (1341) to be subject to parliamentary approval (soon repealed); demand that a grant be spent as directed (1344), a specific grant voted for defense against the Scots (1348), appointment of parliamentary treasurers and collectors (1377). Parliament continued to sit as a single body, but deliberated in sections: the magnates and prelates sitting in the parliament chamber with the King's Council (thus forming the **Great Council**), the knights and burgesses met separately until 1339–1349, when they began joint sessions (i e emergence of **the Commons**) and designated (before 1377) a representative, the speaker, to voice their views in debate. Royal officials ceased to attend the Council-in-Parliament, leaving the council to the prelates and magnates (now sitting virtually by hereditary right). The

outline of the House of Lords began to appear.

Development of justices of the peace. The conservators of the peace established under Henry III to keep the peace had no judicial powers, the Statute of 1327 allowed them to receive indictments for trial before the itinerant judges In 1332 their jurisdiction was made to include felonies and trespass. Established as police judges in each county (1360) they were also charged with price and labor regulation By 1485 they had absorbed most of the functions of the sheriffs. Chosen from the local gentry, under royal commission, they constituted an amateur body of administrators who carried on local government in England until well into the 19th century

1348-1349. The ravages of the Black Death may have reduced the population one-half, coupled with tremendous war prosperity, this dislocated the wage and price structure, producing a major economic and social crisis Wages and prices were regulated by a royal ordinance (1349) followed by the **Statute of Laborers** (1351) fixing wages and prices, and attempting to compel able-bodied unemployed to accept work when offered. The labor shortage accelerated the transition (already begun) from servile to free tenures and fluid labor, the statute in practice destroyed English social unity without markedly arresting servile emancipation or diminishing the crisis

War prosperity affected everybody and led to a general surge of luxury (e g. the new and generous proportions of contemporary Perpendicular Gothic) Landowners, confronted with a labor shortage, began to enclose for sheep-raising, and the accumulation of capital and landholdings founded great fortunes, which soon altered the political and social position of the baronage The yeomanry, exhilarated by their joint military achievement with the aristocracy, and their share of war plunder, lost their traditional passivity, and a new ferment began among the lower sections of society

Growth of national and anti-clerical (antipapal) feeling. Hostility to the Francophil papacy at Avignon **Statute of Provisors** (1351), an effort to stem the influx of alien clergy under papal provisions (renewed several times), **Statute of Praemunire** (1353), forbidding appeals to courts (i e. Avignon) outside England (renewed several times); rejection (1366) by Parliament of the papal request that John's tribute (intermitted by Edward, 1333) be renewed, and declaration that no king could make England a papal fief without Parliament's consent; Parliament declared bishops unfit for state offices (1371). **Progress of the vernacular.** English became, by statute (1362), the language of pleading and judgment in the courts (law French retained in documents) English began to be taught in the schools (1375). Parliament was opened (1399) with a speech in English.

c. 1362. Growth of social tension. Langland's *Piers Plowman*, a vernacular indictment of governmental and ecclesiastical corruption, and an appeal (unique in Europe) in behalf of the poor peasant, appeared. Langland, a poor country parson, typical of the section of the Church directly in contact with public opinion, was the voice of the old-fashioned godly England bewildered and angered by a new epoch. Preaching of scriptural equalitarianism by various itinerant preachers (e g John Ball); growing bitterness against landlords and lawyers.

c. 1376. John Wiclif, an Oxford don and chaplain of Edward, already employed (1374), by the government in negotiations with the papacy over provisions, published his *Civil Dominion*, asserting in curious feudal terms that, as Christians hold all things of God under a contract to be virtuous, sin violates this contract and destroys title to goods and offices. Wiclif made it plain that his doctrine was a philosophical and theological theory, not a political concept, but extremists ignored this point. A remarkable precursor of the Reformation, Wiclif advocated a propertyless Church, emphasizing the purely spiritual function, attacked the Caesarian clergy, and insisted on the direct access of the individual to God (e g. abolition of auricular confession, reduction of the importance of the sacraments, notably penance) and the right of individual judgment. He also was responsible (with Purvey and Nicholas of Hereford) for the first complete, vernacular **English Bible.** He wrote pamphlets, both in Latin and English, and carried on a wide agitation through his poor priests for his doctrines (**Lollardy**) until it was said every fourth man was a Lollard

1369-1377. Edward, in his dotage, was under the domination of Alice Perrers; the Black Prince (after his return, 1371) was ill and lethargic; government in church and state was sunk in the depths of corruption, society in an orgy of luxury.

1374. John of Gaunt, returning from France, struck a bargain with Alice Perrers, became the leader of the state, set out to use the strong anti-clerical feeling and social unrest for his own ends, and probably aimed at the succession.

1376. **The Black Prince,** awakened from his lethargy, led the **Good Parliament** in a series of reforms: the Commons refused supply until an audit of accounts, two notorious aristocratic war profiteers (Lyons and Latimer) were impeached before the King's Council (i.e. the future Lords), the first impeachment of officials by Parliament in English history

1377. After the death of the Black Prince (1376) John of Gaunt's packed Parliament undid the reforms and passed a general poll tax (*4d.*).

1377. Gaunt, aiming at the confiscation of clerical estates, supported Wiclif, but the bishops, unable to touch Gaunt, had Wiclif called to account A violent scene between Gaunt and Bishop Courtenay ended with public opinion on the bishop's side and Gaunt in flight. Attempts to discipline Wiclif failed because of public opinion, but his denial of transubstantiation (1380) alienated Gaunt and his aristocratic supporters

ART AND LITERATURE.

Perpendicular Gothic: Gloucester, transepts and choir (1331–1335); cloisters (1351–1412) Minor arts: *Louterell Psalter* (opening of the 14th century), illuminations English influence on craftsmen of the Rhineland, Paris, Lorraine

Popular songs: Anti-French songs in celebration of victories at Halidon Hill, Sluys, the capture of Calais, etc., c. 1377 first mention of Robin Hood.

Historical writing: Higden's *Polychronicon* (before 1363), a brilliant universal history in Latin, Walsingham of St Albans' (end of the 14th century) *Chronicle*, in Latin, rivaling Froissart in brilliance of description English translation (1377) of the fictional account of the *Travels of Sir John Mandeville* by Jean de Bourgogne.

The Pearl, a mystical poem of lament for a dead daughter, influenced by the *Roman de la Rose*, and suggestive of Dante's mystical visions

Geoffrey Chaucer (c. 1340–1400), son of a London burgher, a layman, attached to the circle of John of Gaunt, a diplomat, active at court, later member of Parliament, combined observation with learning Translator of Boethius' *Consolatio*, etc Representative of the new cosmopolitanism of English society, he was under Italian and French influences; probably knew Petrarch. Creator of English versification, recaster of the English vocabulary by adding continental grace to the ruder Anglo-Saxon word-treasury. The influence of Wiclif, Oxford, Cambridge, the court, and above all, Chaucer, fixed Midland English as the language of the English people The *Canterbury Tales* are a witty, sympathetic, sophisticated, realistic picture of contemporary society (omitting the aristocracy). **John Gower** (d 1408), last of the Anglo-Norman poets, wrote in both Latin and French, and later (perhaps due to Chaucer) in English: *Confessio Amantis; Vox Clamantis* (expressing the alarm of a landowner at the Peasants' Revolt)

Foundation of Winchester School (St. Mary's College) by William of Wykeham (1393).

1377-1399. **RICHARD II** (son of the Black Prince, aged ten at his accession).

1377-1389. **Minority** Marriage to Anne of Bohemia (1382); rule by the council under the domination of John of Gaunt; activity of Parliament insistence by the Commons on the nomination of twelve new councillors. Renewal of war in France (1383) loss of the Flanders trade, complaints at the cost by Parliament. Poll taxes (1370 and 1380), sporadic violence, growing tension in the lower orders of society.

1381. **PEASANTS' REVOLT.** Efforts by the landlords to revert to the old servile tenures culminated in a peasant rising, the burning of manors, destruction of records of tenures, game parks, etc, assassination of landlords and lawyers, and a march (100,000[?] men) from the south and east of England on London led by **Jack Straw, Wat Tyler,** and others (release of John Ball from prison). London admitted the marchers, lawyers and officials were murdered, their houses sacked, the Savoy (John of Gaunt's palace) burned. Significant **demands:** commutation of servile dues, disendowment of the Church, abolition of game laws The Tower was seized, Archbishop Sudbury (mover, as chancellor, of the poll taxes) was murdered Richard met the rebels (Mile End), rapidly issued charters of manumission, and started most of them home After the murder of Wat Tyler, Richard cleverly took command of the remnant (possibly 30,000), deluded them with false promises, and dispersed them. Cruel reaction ensued. Richard and Parliament annulled the charters; terrible repression followed, and a deliberate effort was made to restore villeinage. This proved impossible and serfdom continued to disappear

1381. **Passage of the first Navigation Act,** followed by clear signs of growing national monopoly of commerce.

1382. **Wiclif,** who had alienated his upper-class supporters by a denial of transubstantiation, was discredited by the Peasants' Revolt, and condemned by the Church, and withdrew to Lutterworth

(1382–1384), where he continued to foster Lollardy until he died (1384) His body, by order of the Council of Constance, was dug up and burned (1428).

1382. **Archbishop Courtenay** purged Oxford of Lollardy, thus separating the movement from the cultured classes and destroying academic freedom, with serious results alike for reform and education in England Parliament refused to allow persecution of the Lollards The position of the English Church was not wholly due to its own corruption nor to the paralysis of the Avignonese Captivity, but was partly a result of the fact that secular learning, secular society, and the secular state had overtaken the position of the Church.

1385. **Futile expedition of Richard to Scotland;** threatened French invasion (1386); general demands for reform in government Parliament blocked Richard's effort (1385) to set up a personal government, and appointed a commission of reform. The Lords Appellant (led by Richard's uncle, the Duke of Gloucester) secured the impeachment and condemnation (1388) of five of Richard's party (in the *Wonderful*, or *Merciless Parliament*).

1389-1397. **Richard's personal and constitutional rule.** Truce with France (1389), peace negotiations, marriage to Isabella, infant daughter of Charles VI (1396). Richard was on good terms with Parliament, England prosperous and quiet Livery and maintenance forbidden by statute (1390); re-enactment of the Statutes of: Provisors (1390), Mortmain (1391), Praemunire (1393).

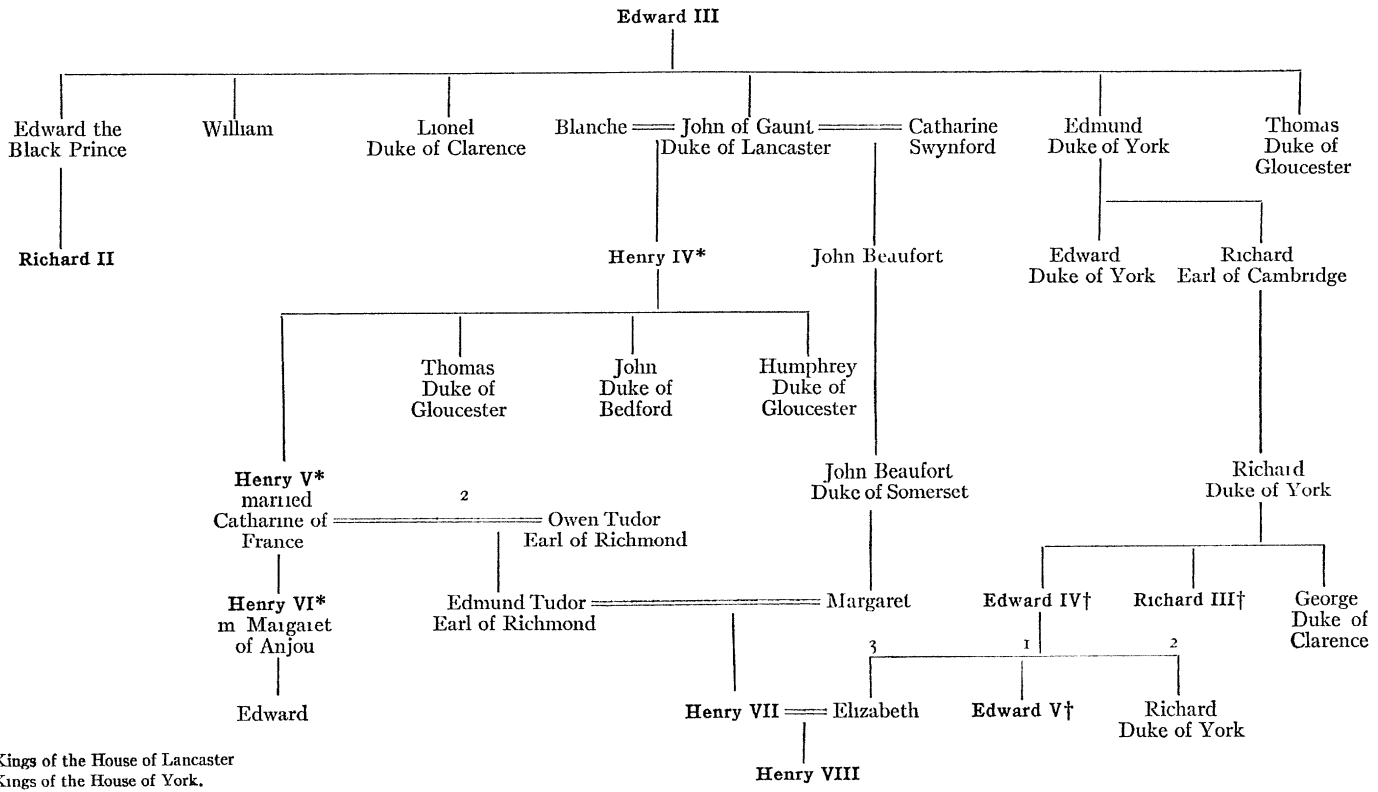
1397-1399. **Richard's attempt at absolutism.** Richard, furious at a parliamentary demand for financial accounting, had the mover (Haxey) condemned for treason (not executed) In the next Parliament (Commons, packed for Richard, Lords friendly) three of the Lords Appellant were convicted and executed for treason, Richard was voted an income for life (1398) and the powers of Parliament delegated to a committee friendly to Richard Heavy taxation, ruthless exactions, and a reign of terror opened the way for the **conspiracy of Henry of Bolingbroke** (exiled son of John of Gaunt).

1399. Bolingbroke landed while Richard was in Ireland, got him into his power on his return, and forced him to abdicate. Richard was thrown into the Tower and later died (murdered?) in prison (1400) Parliament accepted the abdication and, returning to the ancient custom of election, made Henry king. Henry's title by heredity was faulty, his claim was based on usurpation, legalized by Parliament, and backed by public opinion.

1399-1461. THE HOUSE OF LANCASTER.

1399-1413. **HENRY IV.** The reign, in view of the nature of Henry's title to the throne, was inevitably a parliamentary one. Henry, an epileptic, was not a great king, but a national monarch was now a necessity to England To retain the support of the Church, Henry opposed the demand (1404) of the Commons (perhaps a reflection of Lollardy) that church property be confiscated, and applied to poor relief. The request was renewed (1410). The statute, *de Heretico Comburendo* (1401), increased the power of the Church over heresy (primarily, of course, against Lollardy) and was the first law of its kind in England.

1400-1406. **Rebellions and invasions:** (1) Revolt in behalf of Richard (1400); (2) Scottish invasion (1402) stopped by the Percies, the leading barons of Northumberland, at **Homildon Hill**, (3) Owen Glendower's revolt in Wales (1402–1409) joined by (4) the revolt of the Percies (1403–1404), (5) French landing in Wales (1405), (6) Archbishop (of York) Scrope's rebellion (1405); (7) attack by the Duke of Orléans in Guienne (1406).



1413-1422. **HENRY V,** a careful king, whose military achievements brought England to the first rank in Europe. Bent on the revival of the Church, he led a strong attack on Lollardy. **Sir John Oldcastle** (Lord Cobham), the leading Lollard, was excommunicated by Archbishop Arundel, but escaped, a Lollard plot against the king's life was discovered; Henry attacked (1414) and captured a Lollard group, most of whom were hanged, anti-Lollard legislation allowing seizure of their books, Oldcastle, the last influential Lollard, executed (1417) Henceforth Lollardy was a lower-class movement driven underground until the Reformation.

1415. Henry, in alliance with Burgundy, reasserted his claims (such as they were) to the throne of France Relying on the anarchy in France and hoping by military successes to unite the English behind the house of Lancaster, he advanced into France.

1415, Oct. 25. **BATTLE OF AGINCOURT.** Henry's great victory over vastly superior forces opened the way to

1417-1419. **The reconquest of Normandy** and an advance to the walls of Paris (1419). The temporary union of the

Lancaster and York

*Kings of the House of Lancaster
†Kings of the House of York.

Armagnac and Burgundian factions in France was broken by the assassination (1419) of the Duke of Burgundy, followed by the renewal of Anglo-Burgundian alliance and

1420. The Treaty of Troyes. The dauphin (later Charles VII) was disinherited; Henry V was designated regent of France and successor to the mad Charles VI, was given control of northern France, and was married to Charles' daughter Catherine Henry, busy in the reconquest of France, died suddenly, followed shortly by Charles VI (1422)

1422-1461. Henry VI (aged nine months on his accession), acclaimed King of France, his uncle, the Duke of Gloucester, regent (under the council) in England, another uncle, the Duke of Bedford, regent in France

1424. Bedford defeated the French at **Verneuil,** but his ally the Duke of Burgundy was angered by Gloucester's foolish invasion of Hainault Bitter feud of Gloucester and Beaufort, Bishop of Winchester and chancellor

1428-1429. English failure at Orleans (**Joan of Arc,** p. 278), coronation of Charles VII at Reims (1429).

1431. The English burned Joan of Arc at Rouen and crowned Henry VI King of France in Paris. Steady advance of Charles VII, unpopularity of the war in England; parliamentary resistance to grants; loss of the Burgundian alliance (1435) and of Paris (1436).

1436-1437. Richard, Duke of York (heir to throne), regent in France. He was replaced, after a few successes, by the Earl of Warwick (1437–1439), but later returned to France (1440–1443). Continued rivalry of Beaufort and Gloucester Beaufort, supported by the king, who liked his peace policy, attended the conference of Calais (1439).

1442. French conquest of Gascony except Bordeaux and Bayonne.

1444. The king's new favorite, the Duke of Suffolk, arranged the marriage of Henry and Margaret of Anjou, concluded a truce of two years, and promised to surrender Maine to Charles VII Margaret was unpopular in England and Maine was not turned over.

1448. Charles VII, in a vigorous renewal of the war, took Maine, completed the conquest of Normandy (1450), and regained Bordeaux and Bayonne (1451). The English effort to reconquer Gascony failed (1453), leaving only Calais in English hands at the end of the Hundred Years' War.

Domestic disorders. Henry, declared of age (1437), was unfit to rule; the council continued in power, factions and favorites encouraged the rise of disorder. The nobles, enriched by the war and the new sheep farming and progress of enclosures, maintained increasing numbers of private armed retainers (livery and maintenance) with which they fought one another, terrorized their neighbors, paralyzed the courts, and dominated the government. The government lost prestige, Gloucester, arrested (1447) for treason, died in prison, Suffolk (impeached 1450) was killed as he sailed into exile

1450. Cade's rebellion: a revolt of perhaps 30,000 men of Kent and Sussex, including many respectable small landowners, who marched on London to demand reform in government and the restoration of the Duke of York to power Admitted to London, the marchers were finally crushed after they resorted to violence **Richard of York** returned from Ireland and forced his admission to the council (1450) York was regent during Henry's periods of insanity (1453–1454; 1455–1456), but on his recovery (1454) Somerset returned to power

1455-1485. THE WARS OF THE ROSES. a dreary civil war between the houses of Lancaster and York (the Yorkists wearing a white rose, the Lancastrians [later] a red rose) The nation as such took little part. **Battle of St. Albans** (1455): Somerset defeated and killed **Battle of Northampton** (1460) the Yorkists defeated the royal army and took Henry prisoner. York asserted his hereditary claim to the throne, and the Lords decided that he should succeed Henry on his death (excluding Henry's son, Edward).

1460. Queen Catherine raised an army in the north, defeated Richard of York, who fell on the field (Wakefield, 1460). Southern England rallied to Richard's son Edward (aged nineteen) who defeated the Lancastrians at **Mortimer's Cross** (1461), but was defeated at the **second battle of St. Albans** (1461), and lost possession of King Henry London stood firm against Margaret, admitted Edward to the town, and after his victory at Towton acclaimed him king (1461).

Growth of the powers of Parliament under the Lancastrians: Profiting by the cloud on the royal title and by the pressing needs for war supply, Parliament reached the zenith of its influence (1) Grant of supply delayed until the end of the session after redress of grievances, agreement by the king not to alter petitions when drafted into statutes Petitions began to take the form of bills, which when approved by the king became statutes in the modern sense.

(2) Beginnings of the Commons' control over the initiation of financial legislation (3) Enforcement of reform (1404) in the royal administration, members of the council named in Parliament; appointment of the new council enforced (1405) (4) Parliament forced a reversal of the Haxey judgment (1399), establishing its right to freedom of speech in debate (5) Opposition to packing began to develop and a statute was padded defining the franchise for elections (1430), this statute was in force until the Great Reform Bill of 1832

The king could still legislate by ordinances in council Under Henry VI the autocratic council ruled, and in the end dominated Parliament; finally the chaos of the Wars of the Roses saw the temporary eclipse of Parliament as well as of ordered government

1461-1485. THE HOUSE OF YORK.

1461-1483 EDWARD IV. Parliament declared the three Lancastrian kings usurpers and Henry VI, his wife, son, and chief adherents, traitors Edward closed the session with a speech of thanks to the Commons, the first time an English king had addressed that body The mass of Englishmen now wanted a monarch to keep order in the state, and allow them to attend to trade, industry, and agriculture. Civil war continued intermittently, and Henry VI was finally captured (1465) and put in the Tower Edward's marriage to the commoner, Elizabeth Woodville, and the beginnings of the creation of a new nobility, angered the older nobles, especially the Earl of Warwick. Edward's sister Margaret was married to Charles the Bold, Duke of Burgundy, and master of the Netherlands (1468) Warwick abandoned the king for his brother, the Duke of Clarence, and began to foment trouble for Edward, now increasingly unpopular (1469–1470) Edward's **victory** (partly due to artillery) **at Stamford** (1470) was followed by the flight of Warwick and Clarence

1471. Warwick next turned to the Lancastrians (under the astute guidance of King Louis XI of France), returned to England with Lancastrian support Edward's victory at Barnet (1471), where Warwick was killed Edward then turned on Queen Margaret at Tewksbury, and defeated her Henry VI died (in all probability murdered) in the Tower. The only surviving claimant to the crown was Henry, Earl of Richmond, an exile aged 14, descended from John of Gaunt and his mistress, Catherine Swynford.

Edward's vigorous plans for war against Louis XI: Parliamentary grants were too small so he began a new practice — benevolences (supposedly free, but in fact forced gifts).

1475. Landing in France, Edward got no support from Charles the Bold, and was bought off by Louis XI. Charles the Bold was killed (1477) and Edward was left without an ally.

1483. EDWARD V, aged twelve. **Richard, Duke of Gloucester,** Edward's uncle, an able man, good soldier, cruel and cynical, skilled at winning popular support, had been appointed guardian by Edward's will Fearing the Woodvilles (family of Edward's mother), Richard struck at them, taking Earl Rivers and Sir Richard Grey prisoners, the queen mother took sanctuary at Westminster; assassination of Lord Hastings (a supporter of the queen); execution of Grey and Rivers, attacks on the legitimacy of Edward, Parliament declared Gloucester the heir and he was crowned Richard III Edward was sent to the Tower

1483-1485. RICHARD III. The Duke of Buckingham, a former supporter of Richard, led (under the skilled direction of Morton, Bishop of Ely) a rebellion in behalf of Henry, Earl of Richmond. The rebellion failed, Buckingham was beheaded, Edward and his brother were murdered in the Tower (1483), and universal indignation was aroused Richard and the Earl of Richmond were both candidates for the hand of Elizabeth of York, daughter of Edward IV, now heiress to the throne. As she was Richard's niece, even his own followers were shocked

1485. Henry, Earl of Richmond, landed at Milford Haven, there were open defections from Richard by the nobles, and Henry defeated Richard on **Bosworth Field** (Aug 22), where Richard fell. The crown of England was found on a bush and passed to the first ruler of the great **house of Tudor,** by virtue of his victory in arms and a later act of Parliament.

Cultural movements. The Italian humanist, Poggio Bracciolini's visit (1418–1423) to England *The Paston Letters* (1422–1509), a remarkable collection of the correspondence (in the vernacular) of a middle-class English family *The Libel of English Policie* (c 1436), a militant nationalistic exposition of the economic value of sea-power. **Eton founded** by Henry VI.

Humphrey, Duke of Gloucester (d. 1447), influential patron of classical learning and Italian humanism, was the donor of 279 classical manuscripts to Oxford, the nucleus of the university library **Sir John Fortescue** (d. c 1476), chief justice of the

King's Bench, a Lancastrian exile during the anarchy of the Wars of the Roses, wrote *On the Governance of the Kingdom of England*, and *De Laudibus Legum Angliae*, contrasting the "political" (i e constitutional) spirit of the English Common Law with the absolutism of the Roman Law, and comparing the French monarchy unfavorably with the English Many of his ideas foreshadowed the policies of Henry VII, in form if not in spirit.

Caxton's printing press set up at Westminster (1476) under the patronage of Edward IV. Malory's *Morte Arthure* printed (1484), the first book in poetic prose in the English language

(*Cont p* 369)

(2) *Scotland*, 1305-1488

1305. The conquest of Scotland by Edward I of England saved the country from civil war Edward's plan of union seemed possible for a brief period until the emergence of Bruce's grandson, Robert, who turned against the English and maintained himself until the incompetence of Edward II gave him a chance to extend the opposition to the English.

1311-1313. **Bruce** began a great advance into England and besieged Stirling (1314)

1314, June 24. **BATTLE OF BANNOCKBURN.** Bruce completely defeated the English and established himself on the throne, thus postponing for centuries the union with England Bruce's daughter, Margaret, married Walter "the Steward" and became the founder of the house of Stuart

1315-1318. **Edward Bruce**, brother of the king, led an unsuccessful invasion of Ireland.

1323. A truce of five years with England was followed by the **Treaty of Northampton**, which recognized Robert Bruce's title and provided for the marriage of his son David to Joanna, daughter of Edward III.

1329-1371. **DAVID II**, son of Robert, king. His minority was followed by an incompetent rule

1332. **Edward Baliol**, with English support, was crowned, and Bruce fled to France. After Baliol's recall to England, Bruce returned and was defeated and captured at

1346. **The battle of Neville's Cross**, in an effort to aid France by invading England. He was not ransomed until 1357.

This futile reign gave the Scottish Parliament its chance; the burghs had sent representatives to the Parliament of 1326, but the practice was not a regular one until 1424 On at least two occasions the parliamentary majority went home (1367, 1369), leaving the session to commissions, thus establishing the **Lords of Articles**, who assumed deliberative functions and soon became tools of the crown. Nevertheless, Parliament managed to establish a considerable control over royal acts, and kept its hand on the declaration of war and peace and the coinage. The lower clergy began sending representatives to Parliament (e g 1367, 1369, 1370).

1356. Edward Baliol handed over his crown to Edward III

1363. David Bruce's scheme for a union with England if he died childless was blocked by Parliament's refusal to approve it (1364).

1371. **THE STUART LINE** was established on the Scottish throne by the accession of

1371-1390. **ROBERT II**, grandson of Robert Bruce It maintained itself for three centuries despite a succession of futilities and minorities. The rival **house of Douglas** was finally extinguished (1488)

1390-1424. **ROBERT III**, king The arrival of James I (1424) after a long imprisonment (since 1405) in England began a vigorous, if premature reform, reduction of violence, restoration of the judicial process, and new legislation which ended anarchy and disciplined the Church. The country lairds were given representation in Parliament as a support to the crown (1428) James was assassinated, 1437.

1437-1460. **JAMES II.**

From James I to Charles I (1625) every sovereign was a minor on his accession The reduction of the Earls of Douglas (1452), followed by confiscation of their lands, enriched the crown Rosburgh was taken from the English, leaving only Berwick in alien hands

1460-1488. **JAMES III**, a feeble figure, was kidnaped (1466) by Lord Boyd, who ruled as governor (by vote of Parliament). The Orkneys and Shetlands were acquired from Norway (1472). France kept Scotland in contact with the Continent.

(*Cont p.* 369).

(3) *Ireland*, 1315-1485

1315. **Edward Bruce**, brother of Robert Bruce of Scotland, landed in Ireland and, with the aid of native chieftains, had himself crowned (1316). But he was able to maintain himself only until 1318.

The Anglo-Norman colony began to weaken from internal quarrels while Edward III was preoccupied with the Hundred Years' War. The chieftains thereupon seized their opportunity to encroach still further upon the position of the outsiders From this period dates the gradual ebb of English influence. The Black Death (1348–1349) made matters even worse

1366. **The Statute of Kilkenny** (passed during the viceroyalty of Lionel, Duke of Clarence) had two aims (1) to maintain the allegiance of the English colony and keep it to the English tradition, and (2) to reduce the grounds of racial conflict Marriages with the Irish were forbidden, though this was not an entirely new measure English was enjoined as the speech of the colonists, and English law was insisted on Nevertheless, the viceroys and governors were unable to maintain order

1398. **Expedition of Richard II** to reduce Ireland This was without permanent results Under Henry V misery in Ireland reached a new peak and perhaps half of the English colony returned home The danger in this situation is mentioned in the *Libel of English Policy* (c. 1436) Fear that Ireland might pass into other hands was widespread

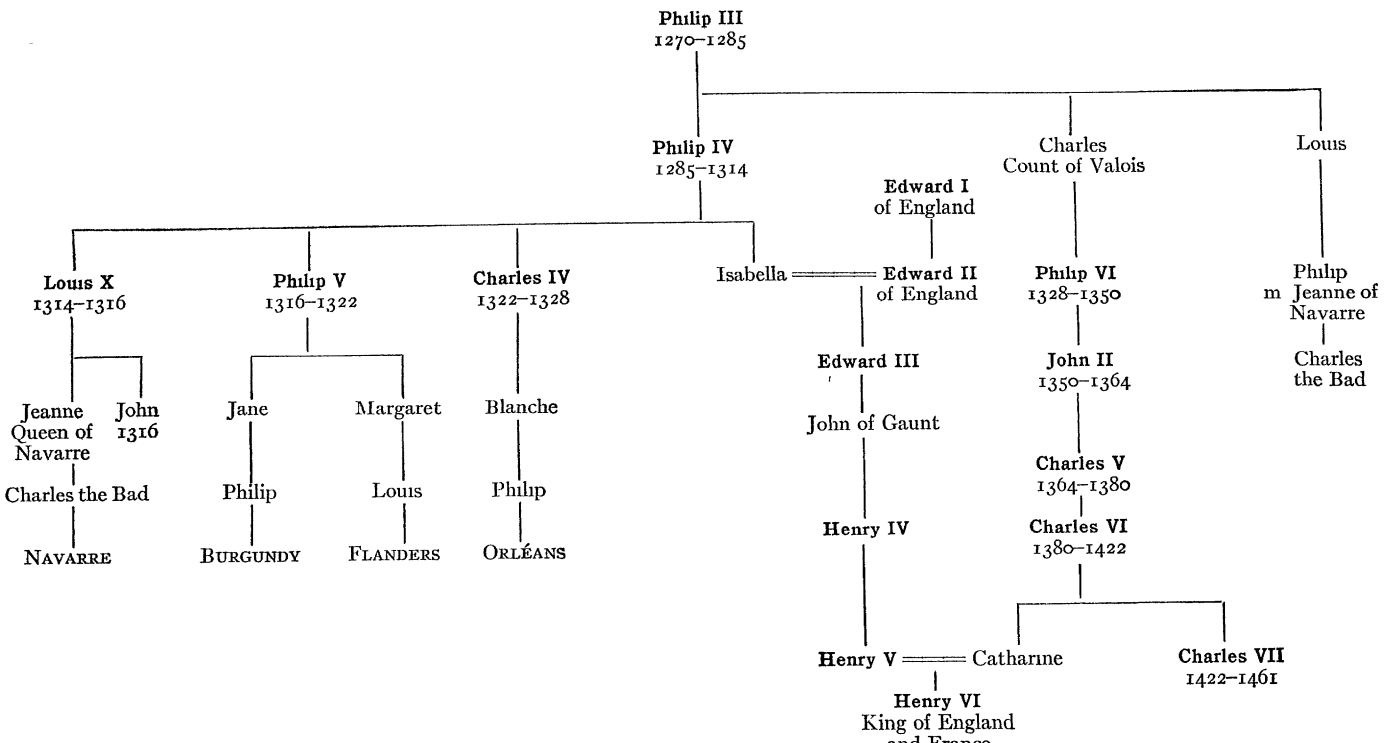
1449. **Richard of York** arrived as viceroy and ingratiated himself equally with colonists and natives He departed to England in 1450, but on his return made Ireland virtually independent, with the approval of the Irish Parliament English rule was repudiated and a separate coinage established Richard continued this policy until his death, but Edward IV resumed a harsh and anarchic policy Under Richard III the strongest figure in Ireland was **Kildare,** leader of the Yorkists (*Cont p* 369)

b. FRANCE, 1314-1483

1314-1316. **LOUIS X** (*the Quarrelsome*) The real ruler was Louis' uncle, Charles of Valois. A reaction against the monarchy forced concessions from the king. Louis' daughter, Jeanne, was an infant, there was no male heir. A great national council (1316) decreed that there could be no queen regnant in France, and gave the crown to Louis' brother, Philip

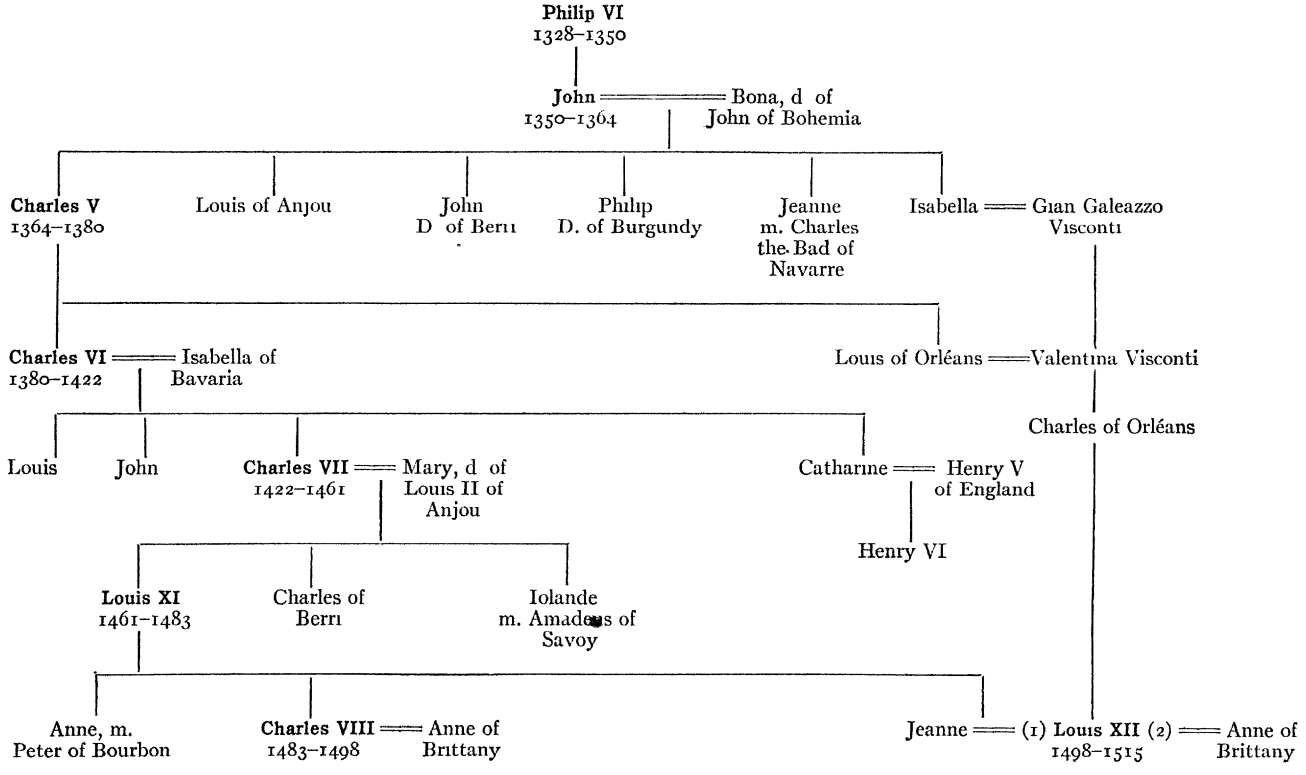
1316-1322. **PHILIP V** (*the Tall*) There were frequent meetings of assemblies which included burghers Philip, in an enormous number of royal ordinances, gave definitive form to the Capetian government. He left no male heir.

1322-1328. **CHARLES IV** (*the Fair*), the last Capetian of the direct line, succeeded his brother Philip, to the exclusion of Edward III of England, grandson of Philip IV This established the principle, later called the **Salic Law,** that the throne could pass only through males On Charles' death, an assembly of barons declared that "no woman nor her son could succeed to the monarchy"



1328-1498. In this period the **Capetian house of Valois** freed the soil of France from the alien occupation of the English, completed the creation of French national unity and the establishment of a strong national monarchy, prepared France for its brilliant political and cultural rôle in the Renaissance, and began French expansion south of the Alps.

1328-1350. **PHILIP VI** (nephew of Philip IV, son of Charles of Valois), the nearest male heir. Jeanne, daughter of Louis X, became Queen of Navarre. Edward III did homage for his French fiefs (1329 and 1331) Brittany, Flanders, Guienne, and Burgundy remained outside the royal sway The papacy was located in France under powerful French influence; rulers of the Capetian house of Anjou were seated on the thrones of Naples, Provence, and Hungary, French interests were firmly established in the Near East, French culture was dominant in England and northern Spain, and was making headway on the fringes of the empire, Dauphiné, the first important imperial fief added to French territory, was purchased (1336). The king had become less accessible, the kingdom, regarded as a possession rather than an obligation, was left to the administration of the royal bureaucracy.



1338-1453. **THE HUNDRED YEARS' WAR.** English commercial dominance in Flanders precipitated a political crisis The communes made the Count of Flanders, Louis of Nevers, prisoner (1325–1326), Philip marched to his relief, massacred the burghers on the field of Cassel (1328), and established French administration in Flanders Edward III retorted with an embargo on wool export from England (1336), the weavers of Ghent, under the wealthy James van Artevelde, became virtual masters of the country and made a commercial treaty with England (1338) On Van Artevelde's insistence, Edward declared himself King of France, the Flemings recognized him as their sovereign, and made a political alliance with him (1340).

1338. Philip declared Edward's French fiefs forfeited and invested Guienne Edward was made Vicar of the Empire and his title as King of France was recognized by the emperor. Thus began the **Hundred**

The French Succession, 1328

The Valois House

Years' War, really a series of wars with continuous common objectives the retention of their French "empire" by the English, the liberation of their soil by the French

1340. Philip, by dismissing two squadrons of Levantine mercenary ships, lost his mastery of the Channel until 1372 and was overwhelmingly defeated by Edward at the **naval battle of Sluys** (June 24) This opened the Channel to the English and gave them free access to northern France.

1341-1364. A dynastic contest in Brittany, in which both Edward and Philip intervened

1341. First collection of the *gabelle* (salt tax) in France; increasing war levies and mounting dissatisfaction

1346 Edward's invasion of Normandy and overwhelming **VICTORY AT CRÉCY,** Aug 26 (10,000 English defeated some 20,000 French) The French military system was outmoded, the people unaccustomed to arms, and the chivalry inefficient. Blind King John of Bohemia was slain Artillery came into use (1335–1345) Continued war levies led to open refusal (1346) of a grant by the Estates-General of Langue d'Oil, and a demand for reforms The king attempted some reforms

1347. Edward's siege and **capture of Calais** gave the English an economic and military base in France which was held until 1558.

1348-1350. The Black Death penetrated northern Europe, reducing the population by about a third, and contributing to the crisis of 1357–1358 in France

1350-1364. JOHN II (*the Good Fellow*), a "good knight and a mediocre king," a spendthrift who repeatedly debased the currency

1355. English renewal of the war in a triple advance into Brittany, from the Channel; and from Bordeaux by the Black Prince Virtual collapse of French finance The Estates-General of Languedoc and Langue d'Oil (the latter under the leadership of **Etienne Marcel,** the richest man in Paris, provost of the merchants), forced the king (ordinance of 1355) to agree to consult the Estates before making new levies of money, a policy already in practice, and to accept supervision of the collection and expenditure of these levies by a commission from the Estates. Charles cleverly induced the Estates to adjourn, debased the coinage in the interest of his treasury, and organized his opposition to the Estates.

1356. The Black Prince (the English "model of chivalry") defeated John, the last "chivalrous" King of France, at **Poitiers** (Sept. 19) King John, his son Philip, and two brothers were taken prisoner with a multitude of the French aristocracy The royal authority in France was reduced to a shadow, civil chaos reigned. Charles the eighteen-year-old son of John, became regent

1357. Climax of the power of the **Estates-General:** The Estates-General again had to be called and passed the **Great Ordinance** which provided for supervision of the levy and expenditure of taxes by a standing committee of the Estates, regular and frequent meetings of the Estates, poor relief, and many other reforms, but did not attempt to reduce the traditional powers of the monarchy. The Estates had met too frequently, were divided, and had no real coherence or skill in government. They were discredited by Marcel's alliance with Charles the Bad of Navarre (a son of Jeanne, daughter of Louis X) who had a better claim to the throne than Edward III Charles V fled from Paris and created a powerful coalition against the Estates and Charles the Bad.

1358. The *Jacquerie* (a violent peasant reaction against war taxes, the weight of the ransoms of the captives at Poitiers and the pillage of the free companies) led to a merciless reaction by the nobles Marcel, already distrusted, was further discredited by intrigues with the revolted peasantry and with the English Charles, after the murder of Marcel (1358), returned to the capital, repressed disorder with a firm hand, and refused to approve John's preliminary peace (1359), which virtually restored the old Angevin lands in France to Edward.

1360. THE PEACE OF BRETIGNY (Calais) (virtually a truce of mutual exhaustion): Edward practically abandoned his claims to the French crown, Charles yielded southwestern France (Guienne), Calais, Ponthieu, and the territory immediately about them, and promised an enormous ransom for John King John was released on partial payment of the ransom, but returned after the flight of a hostage to die in his luxurious and welcome captivity in England. The southern provinces protested their return to English rule, and there were clear signs of national sentiment born of adversity.

1361. The Duchy of Burgundy escheated to the crown, and John handed it to his son Philip as an appanage (1363). Charles negotiated (1369) the marriage of Duke Philip to Margaret, daughter and

heiress of Louis de Male, last Count of Flanders, in order to keep Flanders out of English hands. As Mary brought Flanders, the County of Burgundy, Artois, Nevers, and Rethel under control of the Dukes of Burgundy, this marriage added a new danger on the east and north to the Plantagenet threat in the west. Philip further strengthened his house by marriage alliances with the children of the Wittelsbach, Albert of Bavaria, which added holdings in Hainault, Holland, and Zealand

1364-1380. CHARLES V (*the Wise*), neither strong of body, handsome, nor chivalrous; a pious, refined, realistic statesman of modern cast He saved France and made it plain to the nation that national well-being depended on the monarchy rather than on the Estates-General.

The reign opened with a bad harvest, plague, and pillage by the free companies (discharged soldiers) The Breton, **Bertrand du Guesclin**, the first great soldier on the French side in the Hundred Years' War, was sent with some 30,000 of these men to support Henry of Trastamara against Pedro the Cruel of Castile, who had become an ally of the Black Prince.

Charles managed to dominate the new financial machinery set up by the Estates-General, continued the war levies (e g hearth-tax, *gabelle*, sales taxes) and utilized the peace for general reform and reconstruction castles were rebuilt, and royal control of them strengthened, permanent companies of professional cavalry and infantry were established; artillery was organized and supported by pioneers and sappers, a military staff and hierarchy of command established in the army (1374), the navy was reorganized, and French seapower restored. New walls were built around Paris.

The government and finance were reorganized and the general frame of the financial structure fixed until 1789. The grant of the Estates-General of Langue d'Oil (1360) for John's ransom had been for a term of six years; their grant of a hearth-tax (1363) was without a time limit Following these precedents, Charles was able (1369) to induce the Estates to agree to the general principle that old grants of funds need not be renewed by the Estates unless their terms were to be changed This freed the king from control by the Estates unless new taxes were needed and meant that the Estates no longer had a vital function. The financial control established by the Estates (1357) was transferred to the royal *chambre de comptés* in Paris.

1369. The appeal of the Count of Armagnac to Charles against the Black Prince and the Black Prince's refusal to appear at Charles' court served as an excuse for the **resumption of the war.** Du Guesclin became (1370) Constable of France (a title usually reserved for great nobles), abandoned chivalrous tactics, and allowed the English to parade through France. Avoiding pitched battle, he harassed the invaders with a picked force. The reconquest of Poitou and Brittany (1370–1372) was followed by the death of the Black Prince (1376); the French fleet, supported by the Castilian, regained control (La Rochelle, 1372) of the Channel, and blocked English transport in the north By 1380 the English held only Bordeaux, Bayonne, Brest, Calais, Cherbourg, Valais, and their immediately surrounding territory. France was cleared of the enemy, but was in ruins.

1378. With the end of the Avignonese Captivity (1376) the **Great Schism** in the Church began; Charles and his successors supported the French line of popes. On his deathbed Charles forbade the hearth-tax.

1380-1422. CHARLES VI. A minority accompanied by the disruptive rivalry of the king's uncles (the Dukes of Anjou, Berry, and Burgundy, the "Princes of the Lilies"), who exploited France for their own ends This was followed by the intermittent insanity of the king, and paralysis in the government.

General economic distress, popular unrest, and general revolts, usually against taxes (vigorously repressed). the *Tuchins* (1381) in Languedoc, the *Maillotins* (1382) in Paris, and elsewhere, and the outbreak in Flanders (1382) under Philip (son of James) van Artevelde The French feudality, under leadership of the Duke of Burgundy, ended this revolt by the victory of **Roosebeke** (1382), following it up with atrocious repression. Flanders on the death of the Count (1384) passed to Burgundy; its pacification was completed in 1385. The hearth-tax was renewed and taxation remained heavy.

1388. The death (1384) of the Duke of Anjou had left the Duke of Burgundy in a position of great power, and Charles, angered at Philip of Burgundy's policies, began his personal rule by replacing the duke by his own brother, Louis, Duke of Orléans, and by restoring (1389) his father's old advisers, men of humble birth (whence their nickname, the *Marmousets*) Louis of Orléans was a refined, talented spendthrift, unpopular in Paris, and Philip of Burgundy (supported by

Queen Isabella) was able to pose as a reformer and lead the opposition, bringing the rivalry of Burgundy and Orléans into the open.

1392. **Charles' first (brief) attack of insanity** was soon followed by longer seizures; Philip of Burgundy (as regent) replaced Louis of Orléans in power and the situation returned to what it was before 1389.

1396. **Twenty-year truce with England;** annihilation of the French knights on a crusade to free Hungary from the Turk (Nicopolis, p 326).

1404. **John** (*the Fearless*), an able, ambitious man, became **Duke of Burgundy.** After the sudden transfer of Isabella's support to Louis of Orléans, John's orders led to the assassination of Louis, Duke of Orléans (1407) John became the hero of Paris, but caused the emergence of two great factions in France and began the civil war of the **Armagnacs** against the Burgundians The Armagnacs, named for their head, the Count of Armagnac (father-in law of Charles, the new Duke of Orléans), were strong among the great nobles, drew their strength from the south and southeast, were a reactionary, anti-English, war party The Burgundians, supported by the people, the University of Paris, and the Wittelsbachs, were strong in the north and northeast, favored peace, were pro-English, and supported Pope Clement VII and his papal successors

1413. **The Cabochian revolt** (named for the skinner, Simon Caboche) in Paris forced attention to reform, and led to the **Cabochian Ordinance** (1413), inspired by the University of Paris and aimed at efficiency in government rather than democracy It provided for three councils to conduct public business, and a general detailed program of reform. The Armagnacs returned to control in Paris and led a feudal reaction, which destroyed all hope of reform and opened the way for the English. The Duke of Armagnac (Constable, 1415) repeated the traditional military errors of the feudal class, which understood tournaments but not war.

1415, Oct. 25. **THE BATTLE OF AGINCOURT:** Henry V, with 10,000 men, defeated three times that number of French, the Duke of Orléans was taken prisoner; **Normandy was reconquered** (1415–1417) by the English, undoing for the time the work of Philip Augustus; the dauphin (later Charles VII) fled to the south of France (1418), the Burgundians returned to power and there was a massacre of Armagnacs in Paris (1418).

1419. Rouen fell, the Burgundians, alarmed at the English advance, began negotiating with the Armagnacs; John of Burgundy was assassinated at a conference with the dauphin at the Bridge of Montereau, and the Burgundians returned to the English alliance.

1420. Charles, under Burgundian influence, and supported by his wife Isabella, accepted the **Treaty of Troyes** (which repudiated the dauphin as illegitimate), adopted Henry V of England as his heir and immediate regent (with the approval of the University of Paris and the Estates-General, 1421). Charles' daughter, Catharine, was married to the future Henry V and, also under the treaty, the English were allowed to retain all their conquests as far as the Loire King Henry V drove the forces of the dauphin across the Loire and began the steady conquest of France which continued uninterrupted until his death (1422). The dauphin remained at Bourges (whence his nickname, *the Roi de Bourges*).

1422-1461. **CHARLES VII** (*the Roi de Bourges*, not crowned until 1429) Physically weak, bowed and lethargic from misfortune, the puppet of unscrupulous advisers until the advent of a better group (including Dunois, Richemont, brother-in-law of the Duke of Burgundy, La Hire, *et al*), after 1433, when he became known as "Charles the Well-Served." **Regency of the Duke of Bedford** (1422–1428) for the infant Henry VI of England, who was recognized as King of France in the north, supported by the Burgundians, and crowned in Paris (1436).

1424. **Bedford's decisive victory at Cravant** was followed by the defeat of the Armagnacs and the Scots at Verneuil.

1428. **The English began the siege of Orléans. Jeanne Darc** (later D'Arc in Charles' patent of nobility), born in 1412 at Domrémy, was of comfortable village family, illiterate, but a good seamstress. A devout mystic, she began to have visions at the age of thirteen.

1429. Jeanne presented herself to the king at Chinon, and was allowed to lead an army (with the empty title of *Chef de Guerre*) to the relief of Orléans The relief of the city, followed by **Charles' coronation** (1429) at Reims, was the turning point of the war and marked a decisive change in the spirit of the king and the nation. Jealous ministers (e.g. *La Trémoille*) of Charles soon undermined Jeanne's position, despite the progress of the royal cause.

1430. **Jeanne was captured at Compiègne** by the Burgundians, ransomed by the English. Without intervention by Charles on her behalf, she was tried for witchcraft The process was probably a typical ecclesiastical trial. After her confession and its repudiation she was burned (1431) by the English at Rouen ("We have burned a saint"), and Charles returned to his old ways.

1432. Charles favored the **Council of Basel,** which was pro-French and anti-papal.

1435. **Separate Peace of Arras,** reconciliation with Burgundy. Charles agreed to punish the murderers of Duke John of Burgundy and recognized Philip as a sovereign prince for life Burgundy was to recognize Charles' title, the Somme towns were to pass to Burgundy (subject to redemption). The English refused to make peace on acceptable terms. **Charles recovered Paris** (1436).

1436-1449. Period of military inaction, utilized by Charles for reforms of the army paid for from the *taille* The Estates-General agreed to permanent taxation for support of the army. Charles entered Paris and was welcomed (1437)

1437-1439. Famine, pestilence, the anarchy of the *écorcheurs*, but steady progress against the English.

1438. **THE PRAGMATIC SANCTION OF BOURGES:** assertion that a church council is superior to a pope, suppression of the annates, provision for decennial councils, maintenance of the autonomy of the French national Church (*Gallicanism*) and its isolation from Rome

1440. **The Praguerie,** part of a series of coalitions of great nobles against the king, with support from the dauphin (later Louis XI), was put down; the dauphin was ordered to the Dauphiné, where he continued his intrigues

1445-1446. **Army reforms: establishment of the first permanent royal army** by the creation of 20 companies of élite cavalry (200 *lances* to a company, 6 men to a *lance*) under captains chosen by the king; a paid force, the backbone of the army, assigned to garrison towns; regularization of the auxiliary free archers (*francs-archers*), a spontaneous body dating from the reign of Charles V (opposed by the nobles), under royal inspection (1448) and under territorial captains (1451). Establishment of artillery (the Bureau brothers).

1444. Charles the dauphin made a **treaty of alliance with the Swiss cantons.** The alliance was strengthened (1452) and an alliance made with the towns of Trier, Cologne, *et al.* (1452), and with Saxony, as part of a developing anti-Burgundian policy. Intermittent support for the house of Anjou in Naples and the house of Orléans in Milan. Under **Jacques Coeur,** the merchant prince of Montpellier, royal finances were reformed, control of the public revenue by the king established, and French commercial penetration of the Near East furthered (c 1447).

1449-1461. **Expulsion of the English:** Normandy and Guienne regained; Talbot slain (1453)

1456. Retrial and **rehabilitation of Jeanne Darc,** to clear Charles' royal title.

1461-1483. **LOUIS XI** (*the Spider*), of simple, bourgeois habits, superficial piety, and feeble, ungainly body, the architect of French reconstruction and royal absolutism. He was well-educated, a brilliant diplomat, a relentless statesman, an endless traveler throughout his kingdom He perfected the governmental system begun under Charles V (revived by Charles VII), and established the frame of the constitution until 1789 The recognized right of the king to the *taille*, the *aides*, and the *gabelle* made a good revenue available for defense and diplomacy. Louis improved and perfected the standing army with added emphasis on the artillery, but seldom waged war. Feudal anarchy and brigandage were stopped, a wise economic policy restored national prosperity despite grinding taxes.

1461. **Louis'** first step in the reconstruction of the kingdom was a *rapprochement* with the papacy by the formal **revocation of the Pragmatic Sanction of Bourges.** Little of the royal power was sacrificed, and the national Church remained under the firm control of the crown. Louis steadily reduced urban liberties and began the extinction of local and provincial administrative independence in the interests of royal centralization.

1462. **Acquisition of Cerdagne and Roussillon,** redemption of the Somme towns (1463) revealing the resumption of national expansion

1465. **League of the Public Weal,** a conspiracy against Louis by the Dukes of Alençon, Burgundy, Berry, Bourbon, Lorraine.

1465. **Louis'** defeat by the league at Montl'héry. The **Treaty of Conflans** restored the Somme towns to Burgundy, and Normandy to the Duke of Berry Louis began to evade the treaty at once, and split the league by diplomacy.

Louis' greatest rival was **Duke Philip the Good** of Burgundy. Philip was head of the first union of the Low Countries

since the days of Charlemagne, a curious approximation of the ancient Lotharingia, which included. the Duchy and County of Burgundy, Flanders, Artois, Brabant, Luxemburg, Holland, Zealand, Friesland, Hainault. The dukes lacked only Alsace and Lorraine and the royal title

1467. The accession of **Charles the Bold** as Duke of Burgundy opened the final duel with Burgundy.

1468. Anglo-Burgundian alliance; marriage of Charles the Bold to Margaret of York.

1468. The affair at Péronne Charles, assuming Louis' treachery in the revolt of Ghent, arrested him at a conference at Péronne.

1469. The Emperor Sigismund ceded Charles' rights in Alsace; Charles occupied Alsace and Lorraine (1473) Louis formed an alliance with the Swiss (1470) and seized the Somme towns (1471).

1474. Louis formed the **Union of Constance** (a coalition of the foes of Burgundy, under French subsidies) which opened the war on Charles.

1475. **Edward IV,** an ally of Charles, invaded France, Louis met him at Piquigny and bought him off.

1476. Charles' conquest of Lorraine and war on the Swiss cantons· defeat of Charles at Granson and Morat

1477, Jan 5. DEFEAT AND DEATH OF CHARLES AT NANCY (triumph of the Swiss pikeman over cavalry); end of the Burgundian menace. Louis united the Duchy of Burgundy to the crown and occupied the County of Burgundy (Franche Comté). Flanders stood by the daughter of Charles, Mary of Burgundy, and was lost to France forever. Mary hurriedly married the Hapsburg Prince Maximilian, the "heir" to the empire.

1480. On the **extinction of the house of Anjou,** Anjou, Bar, Maine, and Provence fell to the French crown. Bar completed Louis' mastery on the eastern frontier.

The most significant internal fact of the reign is the development of a clear basis for royal absolutism. Only one meeting of the Estates-General was held (1469), and on that occasion the Estates asked the king to rule without them in future Legislation was henceforth by royal decree, a situation which facilitated Louis' thoroughgoing reform of the government and administration

Philippe de Commines, a Fleming who left the service of Charles the Bold for that of Louis, produced in his *Memoirs* the finest piece of critical history since the days of the great historians of antiquity, and was a precursor of Machiavelli.

François Villon (b. 1431), a lyric poet of the first rank.

Jan (d. 1440) **and Hubert van Eyck,** Flemish painters in the service of the court of Burgundy, perfected oil technique; religious painting, portraiture, raising the painter's art to the highest stage of proficiency and perfection. (*Cont. p.* 381.)

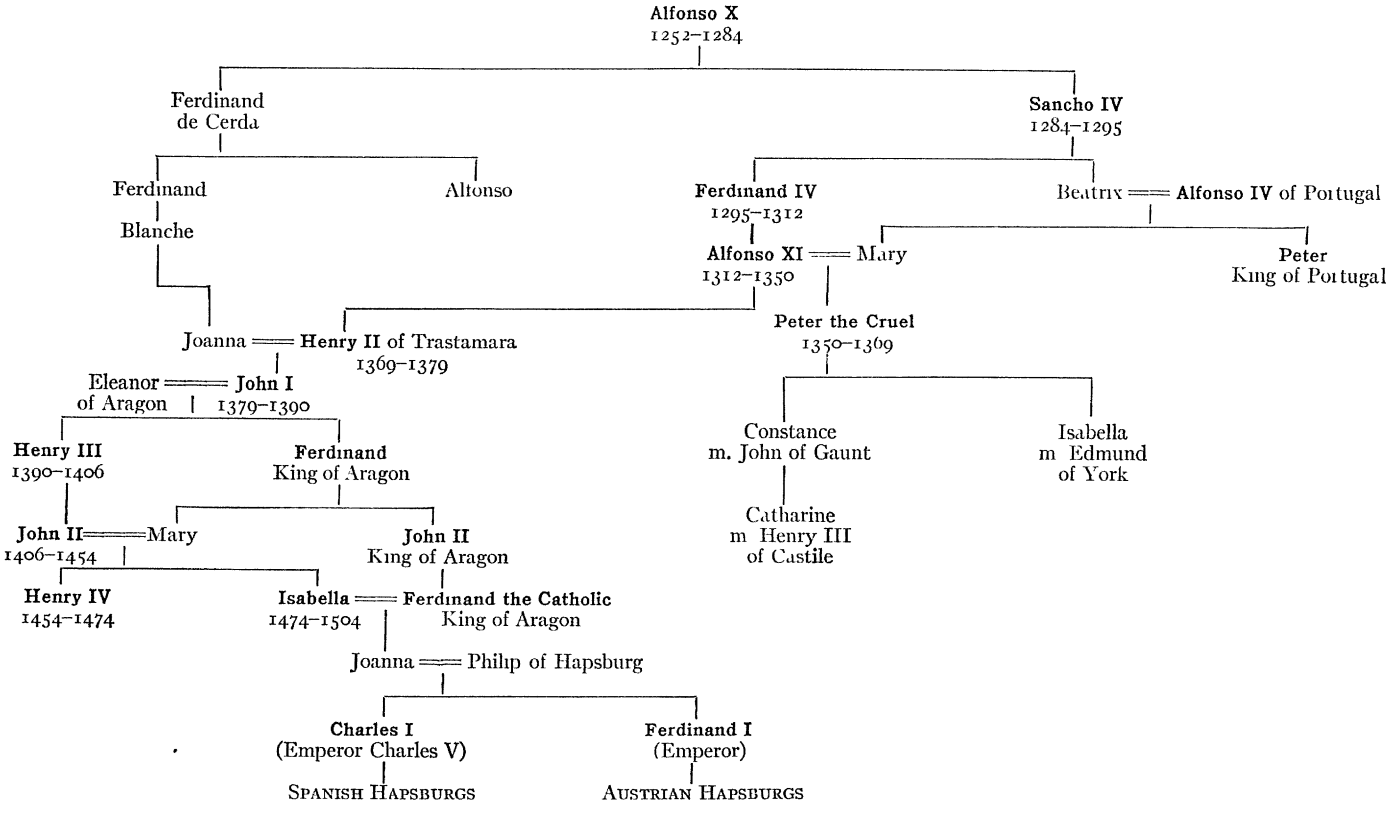
c. THE IBERIAN PENINSULA

(1) *Castile,* 1312-1492

The successors of Alfonso X were not conspicuous for capacity Frequent minorities and constant dynastic contests still further weakened the authority of the crown. Most outstanding of the Castilian rulers in this period was

1312-1350. ALFONSO XI, who decisively defeated the joint attack of the Spanish and Moroccan Moslems. His **victory at Rio Salado** (Oct 30, 1340) ended the African menace forever and was the chief battle in the whole history of the reconquest.

Throughout the **Hundred Years' War** (p 273) Castile supported France, but attempted to avoid hostility with England as much as possible



1350-1369. PETER (*Pedro, the Cruel*) His reign was in fact little more than a nineteen-year dynastic conflict with his half-brother, the bastard **Henry of Trastamara.** The French, alienated by Peter's outrageous treatment of his wife, Blanche of Bourbon, supported Henry and sent Du Guesclin to Spain The English (the Black Prince) supported Peter. Henry was defeated at **Navarrete** (1367), but the English were soon estranged by Peter's vicious character Ultimately Henry defeated and killed Peter (1369)

1369-1379. HENRY II (Trastamara), who renewed the alliance with France The Castilian fleet, by its victory over the English in the **battle of La Rochelle** (1372), restored command of the Channel to the French. Peace between Castile on the one side and Portugal and Aragon on the other concluded at **Almazan** (1374)

1375. Rapprochement of Castile and Aragon, through the marriage of Henry's son, John, to Eleanor, daughter of Peter the Cruel

Castilian leadership in the reconquest of Moslem Spain led to a maximum of local and municipal self-government between the middle of the 12th and the middle of the 14th century. The Córtes apparently originated from councils of nobles dating from Visigothic days. The Castilian rulers freely

The House of Castile

granted *fueros* (charters of self-government) to towns in the early stages of the reconquest, and definite elements of democracy appeared in municipal government in this period. By calling the burghers to the Córtes, the kings found allies against the baronage, and this process began in Castile and Leon at least as early as 1188 (in Aragon probably not before 1250) The Córtes reached its zenith in the 14th and 15th centuries, but petitions to the crown were received and embodied in legislation as early as the 13th century.

Urban groups, the *hermandades* (brotherhoods), sworn to defend the laws of the realm and the lives and property of their members, were clearly developed in the 13th century (e g Sancho's, 1282, directed against his father, Alfonso X) and usually supported the kings in periods of crisis (minorities, succession struggles, baronial assaults). The decline of the *hermandades* is associated with the municipal decline and the appearance of the royal *corregidores* in the towns (14th century), but it is not clear whether the crown hastened the decay of the towns and the brotherhoods or sought to stave it off.

Despite all this support, the battle of the kings with the aristocracy, firmly entrenched during the early stages of the reconquest, was a losing one. The nobles were exempt from taxes and from many laws; in general the same was true of the clergy, and some of the great bishops were virtual sovereigns.

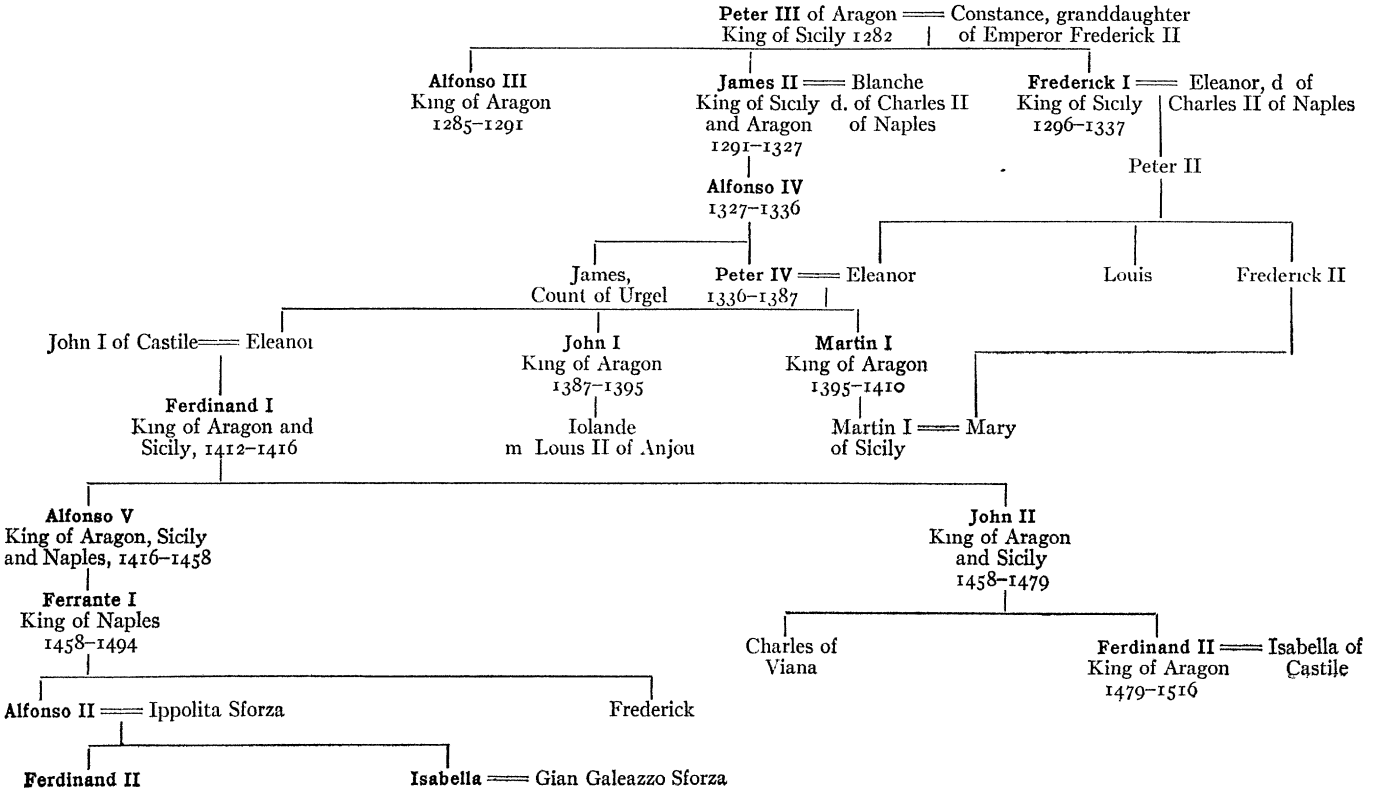
The status of the lower classes of Castile was, however, far from desperate: Jew and Moslem were protected for their economic value, though the tendency toward jealousy and toward the segregation of the Jews was already appearing and the Jewish population was declining. The status of rural workers and serfs tended to improve by the definition and limitation of the landlord's rights. Slavery had probably disappeared by the 15th century.

1454-1474. HENRY IV, during whose reign the feudal anarchy reached its apogee. The monarchical power was saved primarily through the support of the towns.

1469. Marriage of Isabella, stepsister and heiress of Henry IV, to **Ferdinand,** heir of the King of Aragon.

1474. ISABELLA succeeded to the Castilian throne. Isabella's succession was challenged by the daughter of Henry IV, supported by Alfonso V of Portugal. But the Córtes of Segovia (1475) recognized Isabella and Ferdinand and the latter defeated the Portuguese in 1476 **(battle of Toro).**

1479. FERDINAND succeeded to the rule of Aragon, Catalonia, Valencia A form of dyarchical government was set up for the united Castilian and Aragonese crowns. Rule of the Catholic kings (Ferdinand and Isabella). Restoration of the royal power in Castile by revising the town charters, the towns were made centers of resistance to feudal aggression, formation of the *Santa Hermandad,* a union of Castilian towns in the interest of royal authority and order. The great feudal magnates were deprived of many of their possessions and rights and a royal administration was gradually established. The *Libro de Montalvo* (1485), the first codification of Spanish law **Concordat of 1482** with the pope, carefully restricting the power of Rome over the Spanish Church: the king became grand master of the powerful religious orders of knighthood. **The Inquisition** (established in 1478) wholly under royal control, used primarily for the persecution of the Marranos (converted Jews secretly practicing their old faith). Confiscations of property did much to increase the financial power of the rulers and to strengthen them in the work of subduing the feudal opposition.



1492. Fall of Granada, marking the end of the reconquest of Spain from the Moors. This was speedily followed by a spiritual reconquest, the work of the Inquisition The **expulsion of the Jews** (possibly as many as 200,000) in 1492 was followed by that of the Moors in Castile (1502).

Art and literature. Castilian painting showed the influence of the school of Giotto (after c. 1380), and in the 15th century came under Flemish inspiration (visit of Jan van Eyck, 1428–1429). In general literature and learning followed the same foreign tendencies as architecture and painting: French influence came in early, followed later by Italian and English (notably Dante, Petrarch, Boccaccio, Gower). Introduction of printing at Valencia (c. 1474) and in Castile (c 1475).

(2) *Aragon,* 1276-1479

1276-1285. PETER III, who was married to Constance, daughter of Manfred and heir of the Hohenstaufen In 1282 he sailed on a long-planned expedition for the **conquest of Sicily** (which he disguised as an African crusade) He landed at Collo, was called to the throne, defeated Charles at Anjou and became Peter I of Sicily (1282–1285), refusing to do homage to the pope for his island kingdom. This expansion of the Aragonese Kingdom gave Ara-

The House of Aragon

gon for a time predominance in the western Mediterranean But it estranged the Aragonese aristocracy, as well as the towns The nobility therefore formed the **Union for Liberty** and, in the Córtes of 1283, extorted from Peter a **General Privilege** which defined the rights and duties of the nobles, affirmed the principle of due process of law, and provided for annual meetings of the Córtes.

1285-1291. ALFONSO III was obliged to make a sweeping regrant of the Privileges of Union (1287), the so-called *Magna Carta of Aragon*

1291-1327. JAMES II (King of Sicily, 1285–1295) He exchanged the investiture of Sardinia and Corsica for that of Sicily (1295), which thereupon passed to his brother Frederick, who established the separate Sicilian dynasty. James began the expulsion of the Genoese and Pisans from Sardinia (1323–1324), a process not finally completed until 1421. For a period Aragon held the Duchy of Athens (first indirectly through Sicily, 1311–1377, then directly, to 1388), thanks to the activity of the **Grand Catalan Company** (p. 322)

1327-1336. ALFONSO IV.

1336-1387. PETER IV. He was virtually a prisoner of the revived union of the nobility and had to confirm their privileges. But, after a victory over the union (at **Epila,** 1348), he broke up the coalition and gradually restricted the power of the aristocracy in Aragon and Valencia. The clergy and the towns had far less power than in Castile, while the rural workers and serfs suffered a much harder lot.

1377. On the death of Frederick III of Sicily, Peter IV, as the husband of Frederick's sister, sent his son Martin as viceroy to Sicily.

1387-1395. **John,** king.

1395-1410. **Martin,** king. He reunited Aragon and Sicily (1409). On his death the native dynasty came to an end.

1410-1416. **Ferdinand I,** of Castile, a grandson of Peter IV, succeeded to the throne.

1416-1458. ALFONSO V (*the Magnanimous*). His attention was engrossed by the desire to conquer Naples After long diplomatic intrigues and occasional combats, he succeeded (1435), being recognized as king by the pope in 1442. Alfonso, a lover of Italy and passionate *dévoté* of the Renaissance, shifted the center of gravity of the Aragonese Empire and subordinated the interest of Aragon to that of Naples Aragon was ruled by his brother John, as viceroy On the death of Alfonso, Naples passed to his son Ferrante (1458–1494).

1458-1479. **John II,** king.

1479-1516. **FERDINAND II,** king. **Union of Aragon with Castile.**

(*Cont p.* 387)

(3) *Portugal*, 1279-1495

1279-1325. DINIZ (*the Worker*), the best-known and best-loved king of mediaeval Portugal. An ardent poet, he did much to raise the cultural level of the court. His interest in agriculture and constant effort toward economic development (commercial treaty with England, 1294) resulted in greater prosperity. Beginning of **Portuguese naval activity** (under Venetian and Genoese guidance) Foundation (1290) of the University of Lisbon, which was soon (1308) moved to Coimbra.

1325-1357. AFONSO IV (*the Brave*), whose reign was scarred by dynastic troubles. The **murder of Inez de Castro** (1355), the mistress and later the wife of Afonso's son Peter, at the behest of Afonso. This episode, the subject of much literature, led to a revolt of Peter

1340. The Portuguese, in alliance with Castile, defeated the Moors in the **battle of Salado.**

1357-1367. **PETER I** (*the Severe*) a harsh and hasty, though just ruler, who continued his predecessor's efforts in behalf of the general welfare

1367-1383. **FERDINAND I** (*the Handsome*), a weak ruler whose love for Leonora Telles led him to repudiate his betrothal to a Castilian princess and so bring on a war with Castile.

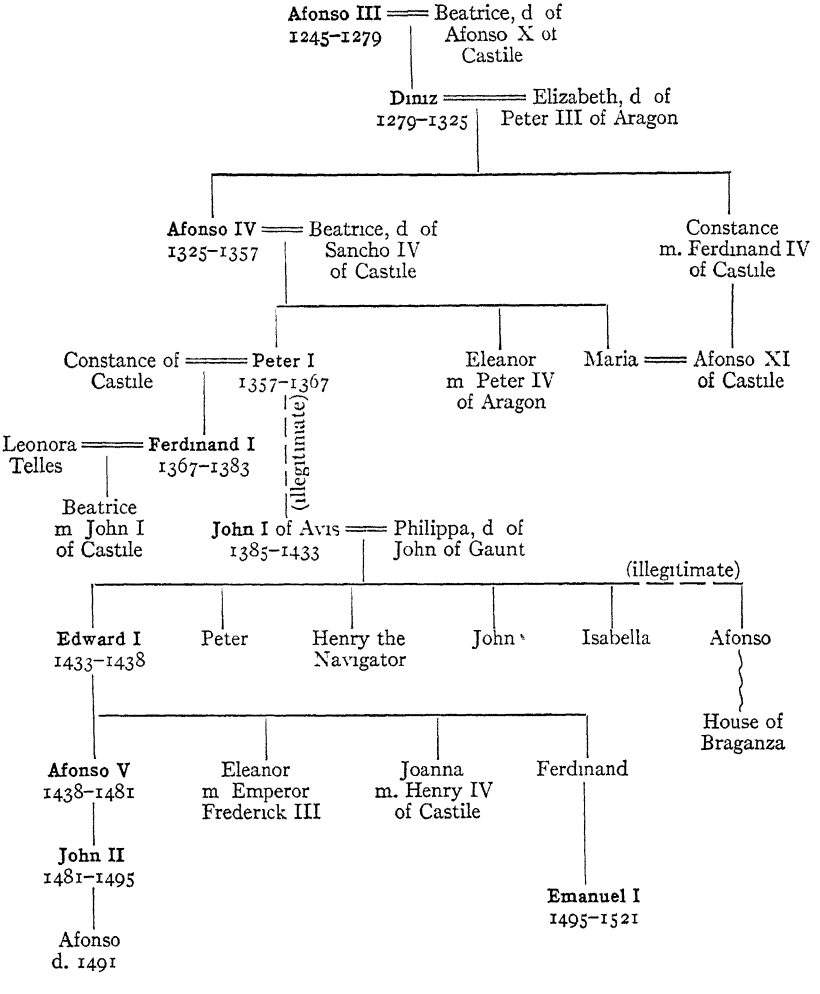
1383. Regency of Queen Leonora in behalf of Ferdinand's daughter, Beatrice, who was married to John I of Castile. This arrangement led to strong opposition among the Portuguese, who detested both the regent and her lover and resented all control from outside.

1385-1433. JOHN I, an illegitimate son of Peter I, established the **Avis dynasty** after leading a successful revolt and driving the regent out of the country. He was proclaimed king by the Córtes of Coimbra, but his position was at once challenged by the Castilians, who twice invaded Portugal and besieged Lisbon.

1385, Aug. 14. THE BATTLE OF ALJUBARROTA, in which the Portuguese defeated the Castilians. A decisive date in the history of the country, this battle established the independence of Portugal beyond all possibility of challenge. With the Avis dynasty Portugal entered

upon the greatest period of her history The king himself was an able and enlightened ruler, who enjoyed the aid of five outstanding sons, of whom **Henry the Navigator** (1394–1460) became the greatest figure in the history of the epoch-making discoveries of the 15th century (p 363)

1386, May 9. The Treaty of Windsor, by which England and Portugal became permanently allied King John married Philippa, the daughter of John of Gaunt. The dynasty thereby became part English.



1411. Peace was finally concluded with Castile.

1415, Aug. 24. The Portuguese took **Ceuta** from the Moors, thus initiating a policy of expansion on the African mainland.

1433-1438. Edward (Duarte) **I,** a learned and intelligent prince, eldest son of John. His short reign was marked by a terrific epidemic of the plague and by

1437. The disaster at Tangier, where the Portuguese were overwhelmingly defeated. They were obliged to promise to

Kings of Portugal

return Ceuta, and to leave in Moorish hands the youngest brother of the king, **Ferdinand** (*the Constant Prince*), who died in captivity after five years of suffering. Ceuta was not returned.

1437-1481. AFONSO V (*the African*), an attractive and chivalrous ruler, but lacking the hard-headed realism of his predecessors. The reign began with the regency of the king's mother, Eleonora, a Spanish princess, who again was confronted with Portuguese opposition to a Spanish connection The nobility revolted, the regent fled, and the king's uncle, Peter, was made regent. His able and enlightened rule came to an end when the king, having reached his majority, allowed himself to be persuaded by favorites to make war on Peter The latter and his son were defeated and killed in the **battle of Alfarrobeira** (1449).

1446. The Ordenaçoes Affonsinas, the first great law code of the Portuguese, representing an amalgam of Roman, Visigothic, and customary law.

1463. Campaigns against the Kingdom of Fez. The Portuguese captured Casablanca and

1471. Tangiers.

1476. Battle of Toro. Defeat of the Portuguese by the Castilians, after Afonso, who had married a sister of Isabella, attempted to dispute the latter's succession to the throne

1481-1495. JOHN II, an energetic prince who at once undertook to restrict the property and power of the nobility, which had become very great during the preceding reign. This led to a revolt of the nobles, led by **Ferdinand of Braganza** and supported by the Catholic Kings of Castile and Aragon. The revolt was suppressed in 1483; Braganza and many of his followers were executed. The royal power thenceforth was more firmly established than ever before. (*Cont. p.* 390)

d. ITALY AND THE PAPACY

(1) *The Papacy*, 1305-1492

1305-1378. THE AVIGNONESE PAPACY (*Babylonian Captivity*): during seven pontificates the popes, exiled from the spiritual capital of the west, preferred to contend against the pressure of the French crown rather than face the disorder of Rome and Italy.

1310-1313. Expedition of the Emperor Henry VII to Italy (p. 301). Henry asserted his independence of the spiritual power and claimed control of Italy. Clement V and Philip IV (opposed to him as a rival of the Angevins) combined against him.

1316-1334. JOHN XXII, who supported the Angevins in Naples. His attempt to decide the validity of Emperor Louis IV's title led to a long struggle (1323-1347). Louis was supported by the German people, who resented the Avignonese papacy, and by the Franciscans John was unable to return to Italy because of the continued anarchy.

1334-1342. Benedict XII, and

1342-1352. CLEMENT VI, whose pontificate was marked by the

1347. REVOLUTION OF COLA DI RIENZI at Rome. With the support of the populace, Cola overthrew the rule of the patricians, set himself up as tribune of the people and summoned an Italian national parliament. Expelled by his opponents (1348), he returned in 1352 and was appointed senator by the pope (1354), but was in the same year slain by his baronial opponents. The lords of the Papal States resumed control and were, to all intents and purposes, independent of papal authority.

1352-1362. INNOCENT VI. He sent the Spanish cardinal, Albornoz, to Italy and the latter succeeded in reducing the powerful barons to obedience, thus making possible an eventual return of the pope.

REFORM OF THE CURIA during the Avignon period. General work of centralization and departmentalization: (1) the *camera apostolica*, (2) the chancery, (3) justice; (4) the penitentiary (punishments and dispensations) Centralization put important clerical appointments throughout Europe under direct papal control through an extraordinary extension of the papal rights of reservation and provision, made a virtual end of local elections, filled ecclesiastical offices with aliens and strangers, and outraged public opinion everywhere. A parallel reorganization and departmentalization of the papal financial administration led to a new efficiency in the levy and collection of papal taxes, fees, etc., which bore hard on the clergy, and drained large sums from the national states, stirring public opinion still further, especially in England Significant items of the budget of John XXII: war, 63.7%; upkeep and entertainment, 12 7%, alms, 7.16%; 0.4% stables; 0.33% art; library, 0.17%.

Vying with the growing magnificence of the monarchies of Europe, the Avignonese popes and cardinals became proverbial for their pomp and luxury, and these tendencies

Italy in the 15th Century

spread to the episcopate despite the thunders of the Franciscans and the decrees of local synods. The insubordination of outraged reformers like the **Fraticelli**, the Bohemian preachers, and Wiclif soon penetrated to the masses.

Virtually every pope (notably Clement V and John XXII) made serious and honest efforts to combat these alarming developments, but the general anarchy in Europe made success impossible. There was a notable **expansion of missions to the Far East:** China (an archbishop and ten suffragans, 1312; fifty Franciscan houses, 1314, missions to Persia) Rome, the ancient spiritual center of the west, was reduced to an anarchic, poverty-stricken, provincial city, and clamored for the return of the popes Petrarch's extreme denunciations of the Avignonese popes had little justification.

1362-1370. URBAN V. Return to Rome with the co-operation of Emperor Charles IV, the city a dismal ruin, return to Avignon on the entreaties of the cardinals (a majority of whom were French).

1370-1378. GREGORY XI visited Rome and died before he could leave The conclave, under threat of personal violence from the Roman mob, yielded to demands for an Italian pope, electing

1378-1389. URBAN VI, a blunt, avaricious man, who alienated the cardinals by announcing that his reform of the Church would begin with the Sacred College.

1378-1417. THE GREAT SCHISM: the papacy divided and dishonored. Thirteen cardinals, meeting at Anagni, elected

1378-1394. CLEMENT VII, thus dividing western Christendom into obediences·

The Roman Line	The Avignonese Line
Urban VI (1378–1389)	**Clement VII** (1378–1394)
Boniface IX (1389–1404)	**Benedict XIII** (1394–1423)
Innocent VII (1404–1406)	
Gregory XII (1406–1415)	

Allegiance to the rivals was determined partly by practical considerations, but often was settled after careful study of the claims of each and consultation with the clergy (e.g. King Charles V of France, John of Castile); England's decision was based largely on hostility to France; Scotland's on its hostility to England, in Naples and Sicily the rulers and their subjects took opposite positions.

EMERGENCE OF THE CONCILIAR MOVEMENT: The basic ideas were inherent in such writers as **Marsiglio of Padua;** specific arguments that a general council is superior to a pope, can be called by a king, and is competent to judge a pope or call a new conclave, were advanced in 1379 (**Henry of Langenstein**) and from then on grew in importance. King Charles VI of France (influenced by the University of Paris) called a **national synod** (1395), which voted overwhelmingly to urge the resignation of both popes The Avignonese cardinals approved with only one negative; the popes refused to resign The French clergy voted (1398) to withhold papal taxes and dues, and were endorsed by the king. Benedict's cardinals deserted him in panic and he fled, producing a reaction of public opinion against the King of France. Two Roman popes were elected with the understanding that they would resign if Benedict XIII would do so The two colleges of cardinals joined in a call for a general council to meet at Pisa, 1409.

1409. THE COUNCIL OF PISA: attended by 500 prelates and delegates from the states of Europe Two parties: (1) a moderate majority with the sole aim of ending the schism, (2) radical reformers (including d'Ailly and Gerson from Paris), who were compelled to accept postponement of reform to a council supposed to meet in 1412. After hearing specific charges against both popes, the council deposed both. The conclave chose **Alexander V** (d. 1410) and then the ecclesiastical *condottiere,* Cardinal Baldassare Cossa, a man without spiritual qualities Neither the Roman nor the Avignonese pope resigned, and the schism was a triple one

1410-1415. JOHN XXIII, expelled from Rome by Ladislas of Naples, was forced by the Emperor Sigismund to issue a call for the **Council of Constance** (1414) in return for protection. This marked the passing of the initiative in reform from the King of France to the Roman Emperor, a return in theory to the days of the Ottos.

1414-1417. THE COUNCIL OF CONSTANCE: one of the greatest assemblies of mediaeval history; three aims: (1) **restoration of unity to the Church;** (2) **reform in head and members;** (3) **extirpation of heresy,** particularly the Hussite heresy (p. 305). Following university practice, voting was by nations and the numbers of the Italian prelates did no good to Pope John. John, seeing a chance to divide the council and the emperor, allowed

the imprisonment of Hus (in violation of the imperial safe-conduct).

Hus, heard three times by the whole council (and cleverly induced to expand his doctrine that sin vitiates a clerical office to include civil office as well), lost Sigismund's support, was condemned and executed (1415) as was his companion, Jerome of Prague (1416).

John XXIII, having agreed to resign if his rivals did so, fled the council, was brought back, tried, and deposed (1415), **Gregory XII** resigned (1415), Sigismund, unable to induce Benedict XIII to resign, won away his supporters, and isolated him Reform was again postponed, but two decrees are significant *Sacrosancta* (1415), asserting that a council is superior to a pope; and *Frequens* (1417) providing for stated meetings of general councils

The conclave elected Cardinal Colonna as Martin V. Christendom ignored the obstinate Benedict, and the schism was over

1417-1431. MARTIN V (Colonna), a Roman of Romans, declared it impious to appeal to a general council against a pope and dissolved the **Council of Constance.** Evasion of general reform and the threat of general councils supported by powerful monarchs, through the negotiation of concordats with the heads of states (i e. by dealing with the bishops through lay rulers, a complete negation of the theory of a universal papal absolutism, and a virtual recognition of national churches) **Recovery of the Papal States:** most of the cities were under their own lords who bore *pro forma* titles as papal vicars but were in fact independent Concentration on Italian political problems at the expense of the universal spiritual interests of Christendom

1431-1447. EUGENIUS IV, an obstinate Venetian who favored summoning the **Council of Basel.**

1431-1449. THE COUNCIL OF BASEL, dominated by strong anti-papal feeling. Dissolved by Eugenius because of negotiations with the Hussites, the council ignored the order and decreed (with the support of the princes) that no general council can be dissolved without its consent, continued in session, and summoned Eugenius and the cardinals to attend Eugenius ignored the summons, but was forced (1433) to accept the council Temporary compromise with the Hussites registered in the *Compactata.* **Reforms voted:** abolition of commendations, reservations, appeals to Rome, annates, etc.; provision for regular provincial and diocesan synods; confirmation of the right of chapter elections; appeal from a general council to a pope pronounced heresy. Already divided over these reforms, the council split over reunion with the Greek Church Eugenius and his cardinals ignored a second summons, were pronounced contumacious, Eugenius dissolved the council and called another to meet at Ferrara; the papalists left Basel. The rump council continued to meet, deposed Eugenius (1439), elected Amadeus of Savoy,

1440-1449. FELIX V, because he could pay his own way. Moved to Lausanne, the council continued with dwindling numbers and prestige.

1438-1445. THE COUNCIL OF FERRARA-FLORENCE (under the presidency of Eugenius) After months of futile discussion (over the *filioque* question, unleavened bread at the sacrament, purgatory, and papal supremacy), the Greeks were forced to accept the Roman formula for union (1439) and the schism between east and west, dating from 1054, was technically healed. As the Greeks at home repudiated the union, it was of no effect. Isidore of Kiev and Bessarion remained as cardinals of the Roman Church.

1438. A French national synod and King Charles VII accepted the *Pragmatic Sanction of Bourges* embodying most of the anti-papal decrees of the Council of Basel (basis for the Gallican Liberties). The *Pragmatic* checked the drain of money from France to the papacy

1439. The Diet of Mainz accepted the *Pragmatic Sanction of Mainz,* abolishing annates, papal reservations, provisions, and providing for diocesan and provincial synods.

Aeneas Sylvius Piccolomini, sent to win Germany back for the papacy, came to an agreement with Emperor Frederick III on such cynical terms that the German princes flocked to Felix V, but a provisional concordat, embodying the *Pragmatic of* 1439 enabled Aeneas Sylvius to detach the princes one by one.

1448. Concordat of Vienna, Eugenius' greatest triumph, accepted the supremacy of a general council, but restored the annates and abandoned most of the restrictions on papal patronage.

1449. Dissolution of the Council of Basel: abdication of Felix V (who became a cardinal). Papal celebration of the triumph over the conciliar movement in the **Jubilee of 1450.** Postponement of moderate reform made the radical Reformation of the 16th century inevitable.

1447-1455. NICHOLAS V, former librarian of Cosimo de' Medici, scholar,

humanist, collector of manuscripts, founder of the **Vatican Library.** Rome temporarily a center of humanism: Nicholas' circle included: **Poggio Bracciolini, Alberti,** and **Lorenzo Valla** (a scientific humanist and critic who had just demolished the *Donation of Constantine* as a forgery). Plans for a new St. Peter's.

1453. **The Turkish capture of Constantinople** (p 327) ended the Greek Empire of the East and removed all serious rivalry by the patriarch to the position of the Roman pope

1455-1468. **CALIXTUS III** (an Aragonese), an aged invalid, anti-humanist, energetic supporter of war against the Turk, an ardent nepotist (three Borgia nephews, one of them later Pope Alexander VI)

1458-1464. **PIUS II** (Aeneas Sylvius Piccolomini). In his youth a gay dog, in later life austere; most brilliant and versatile of the literary popes, a humanist, lover of nature, eloquent essayist, orator, and Latin stylist. A short, bent man with smiling eyes, a fringe of white hair, seldom free of pain, a tireless worker, always accessible. Advocate of papal supremacy, obstinate foe of conciliar reform. His appeals for a crusade ignored by a preoccupied Europe, he gallantly took the Cross himself to shame the princes of Christendom, and died at Ancona His family was large and poor and he was a nepotist

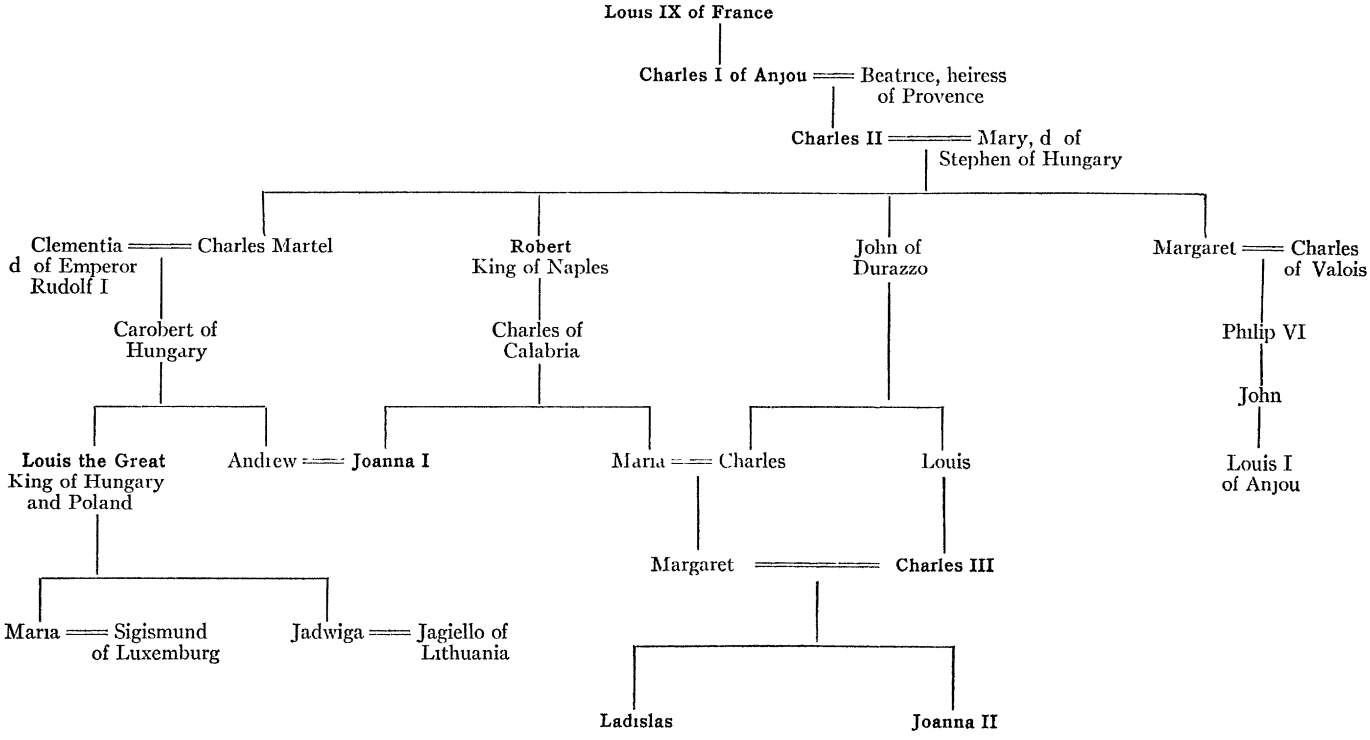
1467-1471. **PAUL II,** a Venetian, rich, kindly, handsome, a collector of jewels and carvings, founder of the Corso horse-races. A strong centralizer, supporter of the Hungarian crusade. The Turkish victory at **Negropotone** (1470) gave the Turks mastery of Levantine waters.

1471-1484. **SIXTUS IV** (della Rovere) aimed to consolidate the Papal States and reduce the power of the cardinals; methodical nepotist (three nephews, the Riarios, one of them later Pope Julius II)

1475. Rapprochement with Ferrante of Naples, alienation of the Medici who were replaced as papal bankers by the Pazzi. The Riarios organized with Sixtus' knowledge, if not approval, the **Pazzi Conspiracy** (assassination of Guliano de' Medici, 1478). This destroyed the alliance of Florence, Naples, Milan, to maintain the Italian balance of power and led to a war involving most of Italy; the war was terminated by the capture of Otranto (1480) and by the diplomacy of Lorenzo de' Medici. Sixtus' coalition with Venice led to the Ferrarese War (1482–1484). Sixtus and Julius II were the great beautifiers of Rome. **Sistine Chapel** (c. 1473), paving and widening of streets and squares, patronage of **Ghirlandaio, Botticelli, Perugino, Pinturicchio,** *et al*

1484-1492. **INNOCENT VIII,** a kindly, handsome Genoese, a compromise cipher, the first pope to recognize his children and to dine publicly with ladies. A baronial revolt (1485–1487) in Naples (supported by Innocent and, *secretly*, by Venice) led to a revival of the Angevin claims to Naples. Florence and Milan, fearing French intervention in Italy, opposed the war, and peace and amnesty were arranged. Ferrante's cynical violation of the amnesty led the exiles (on Ludovico Sforza's advice) to call in King Charles VIII of France. Sforza struck an alliance with Charles to protect Milan and opened the road into Italy to this alien invader (1494) Italy was not again to know full independence from foreign domination until the end of the 19th century

Girolamo Savonarola (1452–1498), a Dominican, Prior of San Marco in Florence (1491), eloquent reforming preacher and precursor of the Reformation, was already denouncing the new paganism of the Renaissance, the corruption of the state and the papacy, and foretelling the ruin of **Italy.**



(*Cont. p.* 395.)

(2) *Sicily and Naples*, 1268-1494

1268-1285. **CHARLES I,** (Angevin) King of Naples and of Sicily (1268–1282). His grandiose scheme for the creation of a Mediterranean empire in succession to the Byzantine (a revival of the Latin Empire under French auspices) was frustrated by the **Sicilian Vespers** (1282) and the war in Sicily which continued until 1302. Sicily maintained its independence and offered the crown to **Peter III of Aragon** (husband of Constance, heiress of the Hohenstaufen), an ally of Constantinople against Charles. Peter accepted the offer (1282), ejected the Angevins and established the house of Aragon on the throne

1282- **SICILY UNDER ARAGONESE RULE: Peter** (1282–1285), **James** (1285–1295). James exchanged the investiture of Sardinia and Corsica for that of Sicily, and Sicily passed to his brother, **Frederick** (1295–1337) Frederick brought to a close the war with Naples (**Peace of Caltabelotta,** 1302), marrying the daughter of Charles I and accepting the stipulation that the Sicilian crown should pass to the Angevins on his death. This agreement was not fulfilled, with the result that the struggle continued until, in 1373, Joanna of

The House of Anjou

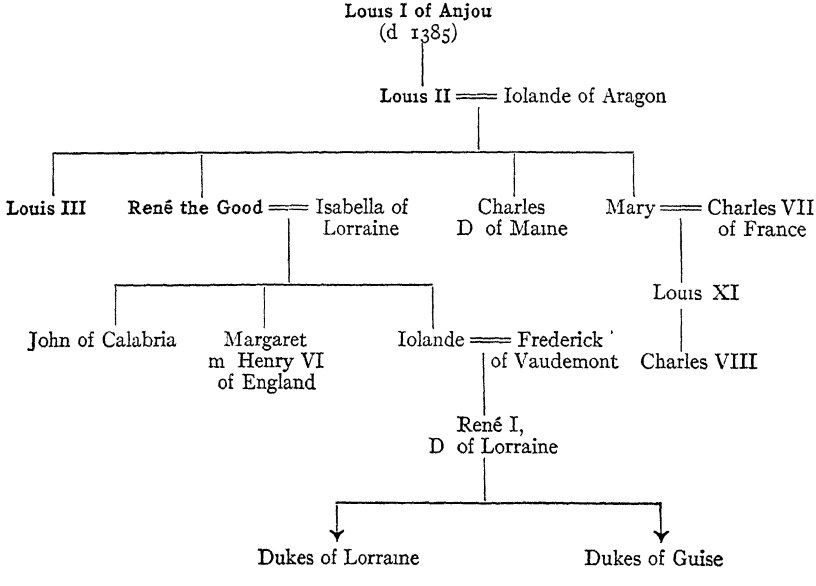
Naples abandoned Sicily to the Aragonese in return for tribute. Sicily was ruled as a viceroyalty until the reunion with Aragon in 1409.

1285-1309. Charles II (Angevin) of Naples.

1309-1343. Robert (Angevin) of Naples He was the leader of the Italian Guelfs and, having been appointed imperial vicar on the death of Emperor Henry VII, planned to create an Italian kingdom

1343-1382. Joanna I, Queen of Naples.

1382-1386. Charles III, a grandnephew of Robert.



1386-1414. Ladislas, son of Charles III, finally succeeded in establishing some measure of order in the kingdom and began a vigorous campaign of expansion in central Italy. In 1409 he bought the States of the Church from Pope Gregory XII, but his designs were blocked by Florence and Siena

1415-1435. JOANNA II, sister of Ladislas The amazing intrigues of this amorous widow with her favorites, successors designate, and rival claimants to the throne kept Italian diplomacy in a turmoil, and culminated in a struggle between **René**, the Angevin claimant (supported by the pope), and **Alfonso V of Aragon** (supported by Filippo Maria Visconti) This conflict ended in the triumph of Alfonso, who secured Naples in 1435 and was recognized as king by the pope in 1442.

1435-1458. ALFONSO (*the Magnanimous*) reunited the crowns of Naples and Sicily and made Naples the center of his Aragonese Mediterranean empire (p 284) He supported Filippo Maria Visconti of Milan, who apparently willed his duchy to him on his death Alfonso avoided arousing Italy by claiming the duchy, but Ferdinand of Aragon later revived the claim Alfonso's pressure drove Genoa into the arms of France. Loyal to the pope, Alfonso supported Eugenius IV against Francesco Sforza He centralized the administration, reformed taxation, and arranged a series of dynastic marriages in Italy But he failed to subdue his barons entirely. He preferred Italy to Aragon, was a passionate *dévoté* of Italian culture and acted as a Renaissance Macecenas, the patron of Lorenzo Valla The **Academy of Naples** was composed mostly of poets. Alfonso divided his domain, Aragon and Sicily passing to his brother, John, and Naples (correctly called the Kingdom of Sicily) going to his illegitimate son

1458-1494. FERRANTE (Ferdinand I), one of the most notoriously unscrupulous Renaissance princes. He triumphed in his struggle for the succession

The Neapolitan Anjous

with the aid of Francesco Sforza and Cosimo de' Medici (who was alarmed at the presence of the French in Genoa). Ferrante generally supported the triple Italian alliance (p 295) except for the period 1478–1480. Pope Innocent V, angered at Ferrante's suspension of tribute, supported the Angevin pretender, and Ferrante made a hollow peace until he could crush a baronial revolt. Then, supported by the Colonna and Orsini in Rome, he turned on Innocent, who was saved only by Lorenzo de' Medici. Innocent (1492) guaranteed the succession in Naples Alexander VI stood by the bargain, and opposed Charles VIII's demand for investiture.

THE CLAIMS OF THE VALOIS KINGS TO NAPLES. Based on (1) the marriage of Margaret (daughter of Charles II of Naples) and Charles of Valois, the parents of King Philip VI, and on (2) the claims of the so-called "second" house of Anjou founded by Duke Louis I (d 1385) of Anjou, Count of Provence Louis was grandson of Philip VI, and grandfather of (1) Mary, wife of Charles VII of France, mother of Louis XI, and of (2) Duke Louis III (d. 1434) and his brother René of Lorraine (d. 1486) (*Cont. p.* 398.)

(3) *Florence, to* 1492

EARLY HISTORY. The **Margraviate of Tuscany,** set up by the Carolingians, extended from the Po to the Roman state under the Margrave Boniface (d. 1052) whose daughter, the great **Countess Matilda** (1052–1115), was probably the strongest papal supporter in Italy Associated with her in the government was a council of *boni homines,* whose administration during her frequent absences, and after her death, laid the foundation for the emergence of the commune Florence, already a great commercial center, opposed the Ghibelline hill barons, who preyed on her commerce The burghers continued Guelf in sympathy, trade and financial connections with France made them Francophil and friendly to Charles of Anjou Under Matilda the **guild organization** emerged, which came to form the basis of the city government. Control of the government was concentrated in the hands of the great guilds (one of which included the bankers). Consuls appeared after 1138. The populace was divided into two great groups, the *grandi* (nobles) and the *arti* (guilds). Consuls were chosen by the *grandi.*

On the breakup of the margraviate following Matilda's death, Florence began her advance, and by 1176 was master of the dioceses of Florence and Fiesole. The institution of the *podestate* after 1202 was favored by the feudal elements and the lesser guilds. Intermittent rivalry of the noble houses continued Wars were fought with Pisa, Lucca, Pistoia, Siena Under the *podestà* the commune developed a strong organization paralleled by the growth of the *popolo* under its *capitano.*

The great struggle of **Guelf and Ghibelline** was reflected in Florentine civil strife. After a Guelf régime, Frederick of Antioch (son of Frederick II) as imperial vicar instituted the first mass expulsion in Florentine history by driving out the Guelfs (1249).

1252. The first **gold florin** was coined, and soon became the standard gold coin in Europe

1260. **Siena,** with the aid of Manfred and the Florentine Ghibellines, inflicted a great defeat on the Florentine Guelfs (**Montaperti**), beginning a Ghibelline dominance which lasted until Manfred's death (1266) This was followed by a reaction, and the expulsion of the Ghibellines. Under the Ghibelline régime the *popolo* lost all share in the government.

In the reaction following the Ghibelline régime, Ghibelline property was confiscated to support persecution of the Ghibellines. Under Charles of Anjou the formulae of the old constitution were restored, the party struggle continued The Sicilian Vespers (1282) weakened Charles, strengthened the commune, and the Florentine "republic" became in effect a commercial oligarchy in the hands of the greater guilds

1282. By the **Law of 1282** nobles could participate in the government only by joining a guild. The last traces of serfdom were abolished (1289) and the number of guilds increased to 21 (7 greater, 14 lesser).

1293. **The Ordinance of 1293** excluded from the guilds anyone not actively practicing his profession, and thus in effect removed the nobles from all share in the government.

Two factions arose: the Blacks (*Neri*), extreme Guelfs led by Corso Donati, **the Whites** (*Bianchi*), moderate Guelfs (and later Ghibellines) under Vieri Cerchi The Neri favored repeal of the Ordinance of 1293.

Emperor Henry VII was unable to capture Florence, but

1320-1323. **Castruccio Castracani,** Lord of Lucca, humiliated the city in the field. Growing financial troubles, partly the result of Edward III's repudiation of his debts to the Florentine bankers, culminated in the failures of the Peruzzi (1343)

and Bardi (1344), and damaged Florentine banking prestige. The government was discredited and civil war ensued. **Walter of Brienne** (Duke of Athens) was called in, reformed the government, began a usurpation, and was expelled (1343). The restored commune was under the domination of the business men who had three objectives access to the sea (hence hostility to Pisa), expansion in Tuscany (to dominate the trade roads), and support of the popes (to retain papal banking business) Social conflict continued and grew as the oligarchy gained power and the Guelfs opposed the increasing industrial proletariat The lesser guilds were pushed into the background, the unguilded were worse off The first social revolt came in 1345.

1347-1348. Famine followed by the **Black Death** reduced the population seriously, but recovery was rapid

1351. The commutation of military service for cash marked the decline of citizen militia and the golden age of the *condottieri*. War with Milan resulted (1351) from Giovanni Visconti's attempt to reduce Florence and master Tuscany.

1375-1378. Papal efforts to annex Tuscany led Florence into a temporary alliance with Milan.

1378. Continued pressure by Guelf extremists to exclude the lesser guilds, led to a series of violent explosions. **Salvestro de' Medici**, Gonfalonier, ended the *admonitions* which were the basis of the Guelf terrorism, and a violent **revolt of the *ciompi*** (the poorest workmen) broke out. The *ciompi* made temporary gains, but Salvestro was exiled, and by 1382 the oligarchy was back in the saddle and even *admonitions* were revived.

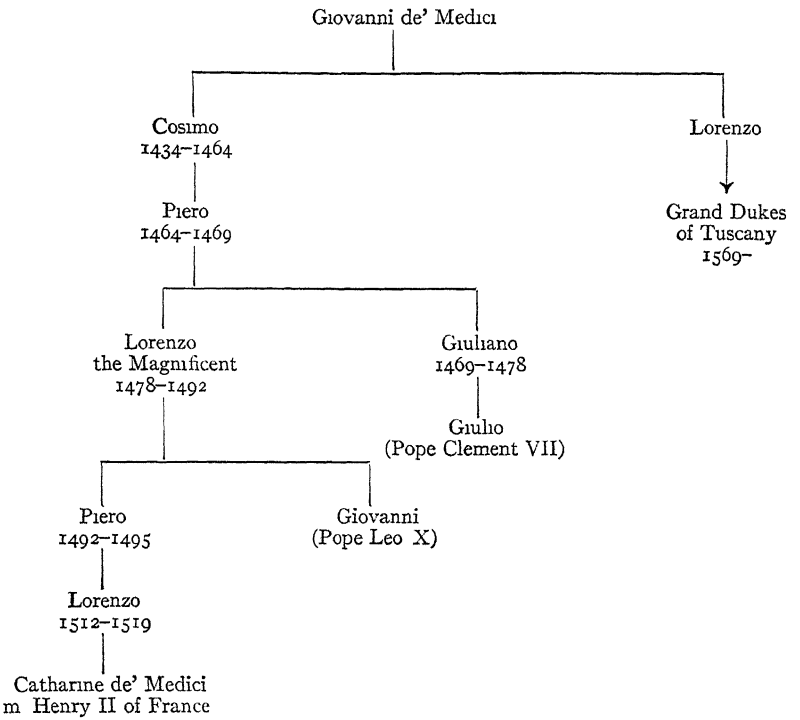
FLORENTINE CULTURE: Precursors of the Renaissance. (1) **Dante** (1265–1321). *Vita Nuova*, in the Tuscan vernacular; the *Divine Comedy*, a brilliant poetic synthesis of mediaeval ideas and culture which established Tuscan as the literary vernacular of Italy; *De Vulgare Eloquentia*, a defense of the vernacular, written in Latin. **Petrarch** (1304–1374), of Florentine origin, greatest of Italian lyrists, brilliant Latinist, the first great humanist; he never mastered Greek. Interested in every aspect of humanity, a lover of nature, a universal mind. **Boccaccio** (1313–1375), friend of Petrarch, knew both Greek and Latin, the first modern student of Tacitus, collector of classical manuscripts, first lecturer on Dante (1373). His *Decameron*, an epitome of bourgeois sophistication. Founder of Italian prose. **Giotto** (1276–1337), architect (employed on the cathedral), sculptor, painter, revealing Renaissance tendencies. **Villani** (d. 1348), *Chronicle* with clear bourgeois elements. **Chrysoloras** (called from Constantinople), the first public lecturer on Greek in the west (1396–1400); he had many famous humanists as pupils.

1382-1432. A half-century of oligarchic domination in Florentine politics, in many ways the zenith of Florentine power Constitutional reform (1382) broadened popular participation in government, but nothing much was done for the *ciompi*, and sporadic revolts continued as the Guelfs slowly regained power.

1393. **Maso degli Albizzi's** long control of the government began with the exile or disenfranchisement of the Alberti and their supporters. Capitalism had destroyed the guild organization as a vital political force, and Albizzi ruled for the advantage of his own house and the *Arte della Lana* (wool) with which he was associated. Democratic elements in the state had vanished.

1397-1398. Florence resisted the **Visconti** advance into Tuscany.

1405. **Pisa was bought** and reduced to obedience (1406), giving Florence direct access to the sea. Leghorn was purchased (1421) and the *Consuls of the Sea* established. Filippo Maria Visconti's drive into Tuscany led Florence to declare war The peace party was led by **Giovanni de' Medici**, a wool dealer and international banker, probably Italy's richest man Several defeats of Florence were accompanied by a decline of Florentine credit and a number of serious bankruptcies. Alliance with Venice and defeat of the Visconti, who accepted peace on onerous terms (1429); Venice monopolized the gains of the war.



1427. **Taxation reform**, the *catasto*, an income tax intended to be of general and democratic incidence, supported (?) by the Medici.

1433. The fiasco of the war on **Lucca** (1429–1433) led to Cosimo (son of Giovanni) de' Medici's imprisonment as a scapegoat, and his sentence to ten-year exile. The next election to the Signory favored the Medici, and Cosimo was recalled (1434). Rinaldo degli Albizzi, Rodolfo Peruzzi, *et al.*, were in turn exiled, and the Medici dominance in Florence began, opening three centuries of close identity between the fortunes of the family and those of Florence. Cosimo, without holding office, dominated the government, determining who should hold office

1434-1494. DOMINATION OF THE MEDICI.

1434-1464. COSIMO (*Pater Patriae*).

The Medici Family

1440. Florence and Venice in alliance defeated Filippo Maria Visconti at **Anghiari.** The *catasto* was replaced by a progressive income tax designed to lighten the burdens of the poor (i.e. the Medici adherents). Cosimo supported Francesco Sforza's contest for the Duchy of Milan and aided him in his war with Venice. For commercial reasons he favored France, but backed Ferrante of Naples against the Angevin claims. He was thus the real creator of the **triple alliance** of Florence, Milan, and Naples in the interest of the Italian equilibrium and security.

1464-1469. Piero the Gouty, son of Cosimo, a semi-invalid who was opposed by Luca Pitti.

1469-1478. Lorenzo and Giuliano de' Medici, and

1478-1492. LORENZO DE' MEDICI (*the Magnificent*) alone. Lorenzo continued the general policy of Cosimo He enjoyed the power and prestige of a prince, though he had neither the title nor the office. His marriage to Clarice Orsini was the first princely marriage of the Medici.

1471. Lorenzo's effort to conciliate Pope Sixtus IV netted him a confirmation of the Medici banking privileges and the appointment as receiver of the papal revenues

1474. Pope Sixtus and Ferrante of Naples were asked to join the alliance of Florence, Venice, and Milan (concluded in 1474), but Ferrante, feeling isolated, and Sixtus, angered at Lorenzo's opposition to his nephews, the Riarios, drew together. Italy became divided into two camps. The Pazzi family, rivals of the Medici, were given the lucrative position as receivers of the papal revenues.

1478. The Pazzi Plot. The Riarios (apparently not without Sixtus' knowledge), plotted to have Lorenzo and Giuliano assassinated in the cathedral at Easter mass. Giuliano was killed, Lorenzo wounded. The Medici almost exterminated the Pazzi and hounded the fugitives all over Italy. Sixtus laid an interdict on

Florence, excommunicated Lorenzo; Alfonso of Calabria invaded Tuscany. Venice and Milan stood by Florence, Louis XI sent Commines as his representative. Ferrante engineered a Milanese revolt, the Turks diverted Venice at Scutari, plague broke out. Desperate, Lorenzo visited Ferrante (the cruelest and most cynical despot in Italy), and by his charm and the threat of a revival of Angevin claims, arranged (1480) a peace Florence suffered considerable losses, but Lorenzo was a popular hero and succeeded in establishing the *Council of Seventy*, a completely Medici organ, the instrument of *de facto* despotism, but a source of real stability in government.

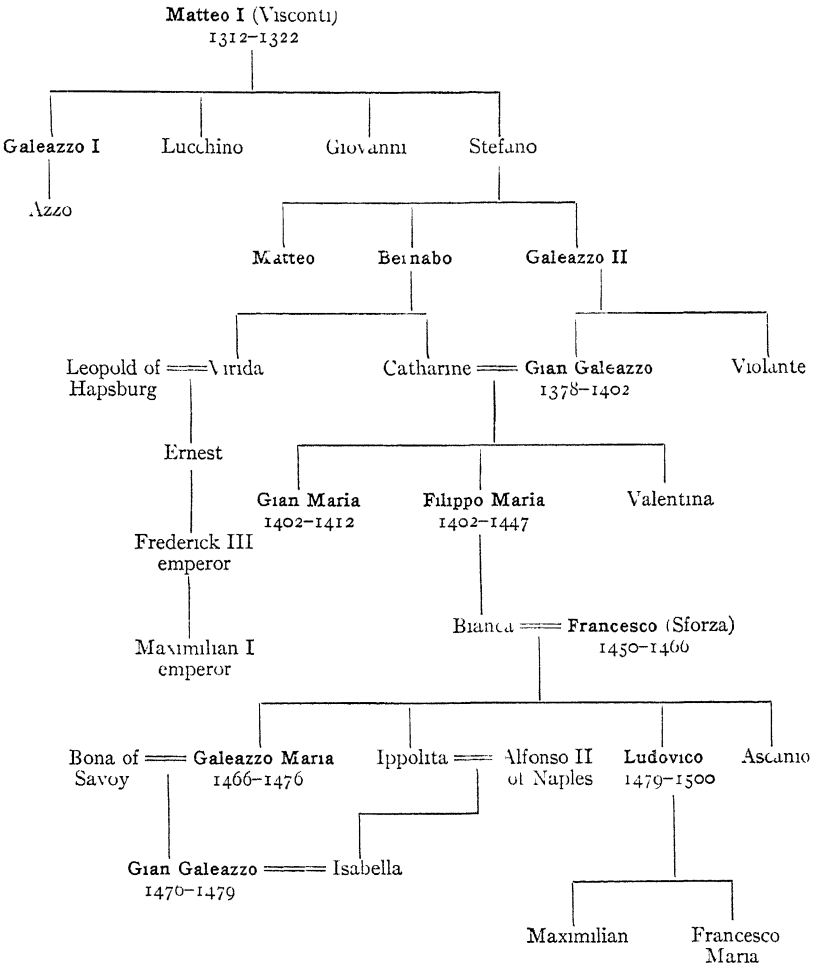
Lorenzo's brilliant foreign policy was costly, he had neglected the family business, and apparently used some of the state money for Medici purposes, he also debased the coinage Florentine prosperity, under the pressure of rivals, heavy taxation, and business depression, was declining Nonetheless, Lorenzo, the leading statesman of his day, brought a twelve-year calm before the storm to Italy, resuming the Medici alliance with Naples and Milan to balance the papacy and Venice, and to keep a united front against alien invasion Florence, on good terms with Charles VIII, regained most of her Tuscan losses. **Savonarola,** Prior of San Marco (1491), had already begun his denunciations of Florentine corruption and his attacks on Lorenzo (p 290).

1492. **PIERO** succeeded Lorenzo on his death Son of an Orsini mother, married to an Orsini, he supported Naples, angered Florence, and threw Ludovico Sforza into alliance with the Neapolitan exiles who summoned Charles VIII

1494. **Charles' invasion** began the age-long subjugation of Italy to alien invaders who dominated the national evolution until 1870 Piero, alarmed at public opinion, fled the city.

Florence, center of the Italian Renaissance. For over a century the Medici were the greatest patrons of the Renaissance, and led the rich bourgeoisie of Florence in fostering the most brilliant development of culture since the days of Pericles **Cosimo** was an enthusiastic patron of manuscript collectors, copyists, and humanists, established the **library of San Marco** and the **Medici library.** The Council of Ferrara-Florence sat in Florence (1439) and brought a number of learned Greeks who stimulated Platonic studies in Florence. Under Cosimo's auspices **Ficino** was trained to make his great translation of Plato (still ranked high) and the **Platonic Academy** was founded. **Lorenzo,** a graceful poet (carnival songs, etc.), ardent champion of the vernacular, and lover of the countryside, a generous patron, drew about him a brilliant circle. He continued the support of Ficino Florentine leadership in Renaissance: (1) **painting: Massaccio** (1401–1429?), **Botticelli** (1444–1510), **Leonardo da Vinci** (1452–1519) (sculptor and polymath); (2) **architecture: Brunelleschi** (1377–1446), **Alberti** (1405–1471), (3) **sculpture: Donatello** (c 1378–1455), **Ghiberti** (1386–1466); **Verocchio** (1435–1488), **Michelangelo** (1475–1564) (also painter, poet, architect), (4) **history and political theory: Machiavelli** (1469–1527); **Guicciardini** (1485–1540), (5) **romantic poetry: Pulci** (1432–c. 1487). (*Cont p.* 398)

(4) *Milan,* to 1500



EARLY HISTORY. **Milan,** ancient center of the agriculture of the Lombard Plain, self-sufficient in food, master of important passes (Brenner, Splugen, St Gothard) of the Alps, was for a long time surpassed in wealth only by Venice.

Establishment of Pavia as the Lombard capital (569) Emergence of Milan as the center of Italian opposition in the Lombard Plain to alien and heretical domination Rise of the archbishop as defender of native liberty and orthodoxy laid the basis for the evolution of archepiscopal temporal power (military, administrative, judicial) exercised through his viscounts. The end of Lombard domination (774), followed by Carolingian destruction of the great Lombard fiefs, strengthened the episcopal power still further.

The spirit of municipal independence emerged from intense rivalries for the archepiscopal see and the necessities of defense, Milan became an island of safety and justice in the Lombard Plain, a populous, self-sufficient, city-state Under **Archbishop Heribert** (1018–1045) the *carroccio* (arc of municipal patriotism) was set up, expansion in the Lombard Plain began (reduction of Lodi, Como, Pavia) The moat was dug after Emperor Frederick I's destruction (1162); the city was rebuilt by its allies, Bergamo, Brescia, Mantua, and Verona. (For the Lombard League and the wars with Frederick, see p. 220) Rapid growth, extension of the walls (after 1183). Chief industry armor manufacturing and the wool trade, later silk manufacture; irrigation made the plain productive.

Government: (1) *Parlamento* (*consiglio grande*) (membership successively reduced

Rulers of Milan

to 2000, 1500, 800) (2) *Credenza*, a committee of twelve for urgent and secret business. (3) *Consuls* (the executive) elected for a year, responsible to the assembly.

Rise of the Della Torre and the Visconti Bitter warfare between populace and nobles led to the rise of two great families, the Della Torre (lords of the tower, i e castle) and the Visconti (i e the viscounts)

1237-1277 Rule of the (Guelf) **DELLA TORRE.** Martino established the *catasta*, a tax of democratic and uniform incidence The title *signore*, i e Lord of Milan, established (1259): defeat and capture of the (Ghibelline) Visconti and their adherents Milan established her power over Bergamo, Lodi, Como, and Vercelli.

1277-1447. Rule of the **VISCONTI.** Established by Archbishop Otto Visconti Brief restoration of the Della Torre (1302) in a Guelf reaction with outside support Establishment (1312) of the Visconti supremacy (Matteo designated

imperial vicar). Ruthless Visconti rule and expansion over northern Italy (including Genoa). Stefano's sons, Bernabo, Galeazzo, Matteo, divided the domains but ruled jointly until Matteo was assassinated (1354) by his brothers Intolerably harsh joint rule of Bernabo (1354–1385) at Milan and Galeazzo (1354–1378) at Pavia; ostentatious patronage of learning and art.

1378-1402. GIAN GALEAZZO succeeded his father Galeazzo and did away with Bernabo (1385), thereafter ruling alone (1385–1402) Gian Galeazzo married Isabella, daughter of King John of France, one of his daughters married Lionel, son of Edward III of England; another, Valentina, married Louis of Orléans (the source of Louis XII's claims to Milan). Gian Galeazzo began the creation of a northern Italian kingdom mastery of Verona, Vicenza, Padua (1386–1388); Tuscan advance blocked by Florence (1390–1392) and by the rebellion of Padua Created hereditary duke (1395) by Emperor Wenceslaus, he added Pisa and Siena (1399), Assisi and Perugia (1400) to his domains, and routed (1401) Elector Rupert III (in Florentine pay). The *Certosa* and *Duomo* were begun. Gian Galeazzo's death (1402) saved Florence and opened a period of anarchy in Milan under his sons Gian Maria (1402–1412) and Filippo Maria (1402–1447), which undid much of their father's work.

1402-1447. FILIPPO MARIA, after the assassination (1412) of Gian Maria, regained Gian Galeazzo's lands (even Genoa). Venice joined Florence against Filippo and took Bergamo, Brescia (1425). Filippo, last of the Visconti, was followed by

1447-1450. The Republic and the supremacy of Francesco Sforza, the condottiere, son-in-law of Filippo, who fought his way to mastery, defeating Venice and conquering the Lombard Plain

1450. Francesco Sforza was invested with the ducal title by popular acclaim.

1450-1500. Rule of the **SFORZA.** Francesco, eager for peace, came to terms with Cosimo de' Medici and Naples (the so-called triple alliance for the Italian balance of power). Louis XI was on intimate terms with Francesco and made him his political model. Francesco completed the Certosa and the Duomo with Florentine architects under Renaissance influence and began the *Castello*. Patron of the humanist Filelfo, Francesco gave his son Galeazzo and his daughter Ippolita a humanist education; Ippolita was famous for her Latin style. His court was full of humanists and learned Greeks.

1466-1476. GALEAZZO MARIA SFORZA was assassinated after a cruel but able rule His son

1476-1479. GIAN GALEAZZO, husband of Isabella of Naples, under the regency of his mother, supported Florence against Naples after the Pazzi conspiracy (1478) Gian Galeazzo's uncle Ludovico usurped the duchy (1479)

1479-1500. LUDOVICO (*il Moro*), alarmed at his isolation after the death (1492) of Lorenzo de' Medici, supported the appeals of Neapolitan refugees to Charles VIII of France, whose expedition (1494) began the destruction of Italian independence. In Charles' train came Louis of Orléans, who, as Louis XII (1498–1515), added claims to Milan to his other Italian claims, took Milan (1499) and captured Ludovico (1500), who ended his days (1508) as prisoner of Louis.

Ludovico's generous patronage marked the **golden age of the Renaissance in Milan.** Ludovico, an artist, man of letters, economist, and experimenter, beautified the city, improved irrigation, bettered agriculture. He was the patron of Bramante and Leonardo. (*Cont. p.* 397.)

(5) *Venice*, 1310-1489

In the early 14th century Venice already dominated the trade of the Adriatic and possessed many colonies throughout the Near East. Her position in the eastern trade was challenged primarily by Genoa, at that time at the height of her power

1353-1355. War between Venice and Genoa. The Venetians were defeated at **Sapienza** (1354) and suffered the loss of their fleet. Peace was mediated by Milan.

1378-1381. THE WAR OF CHIOGGIA between Venice and Genoa. This grew out of the grant, by John V Palaeologos, of the island of Tenedos, key to the Dardanelles Luciano Doria, the Genoese admiral, defeated the Venetians at **Pola,** seized Chioggia and blockaded Venice. The Venetians, under **Vittorio Pisano,** blocked the channel and starved out the fleet of Pietro Doria, forcing its surrender. From this blow Genoa never recovered. Henceforth Venice was mistress of the Levantine trade, which made an outlet for her goods over the Alpine passes more urgent than ever. The war with Genoa had demonstrated the importance of a mainland food supply and thereby inaugurated an inland advance which had a decisive influence on Italian politics. Venice had already taken

Padua from the Scaligers of Verona (1339), but by agreement had turned it over to the Carrara family. Treviso and Belluna, however, were retained.

1388. **Treaty of the Venetians with the Ottoman Turks,** the first effort to assure trade privileges despite the rise of the Turkish power.

1405. Venice seized Padua, Bassano, Vicenza, and Verona after the breakup of the Visconti domains (1402) and the defeat of the Carrara family.

1416. **First war of Venice against the Ottoman Turks,** the result of Turkish activity in the Aegean The **Doge Loredano** won a resounding victory at the Dardanelles and forced the sultan to conclude peace.

1423. The Venetians took over Saloniki as part of a plan of co-operation with the Greek emperor against the Turks.

1425-1430. **Second war against the Turks.** The Turkish fleets ravaged the Aegean stations of the Venetians and took Saloniki (1430). The Venetians were obliged to make peace in view of

1426-1429. **The war with Filippo Maria of Milan,** by which the Venetians established a permanent hold over Verona and Vicenza, and gained in addition Brescia (1426), Bergamo (1428), and Crema (1429)

1453. Participation of the Venetians in the **defense of Constantinople** against Mohammed II (p 327). After the capture of Constantinople, Mohammed proceeded to the conquest of Greece and Albania, thus isolating and endangering the Venetian stations

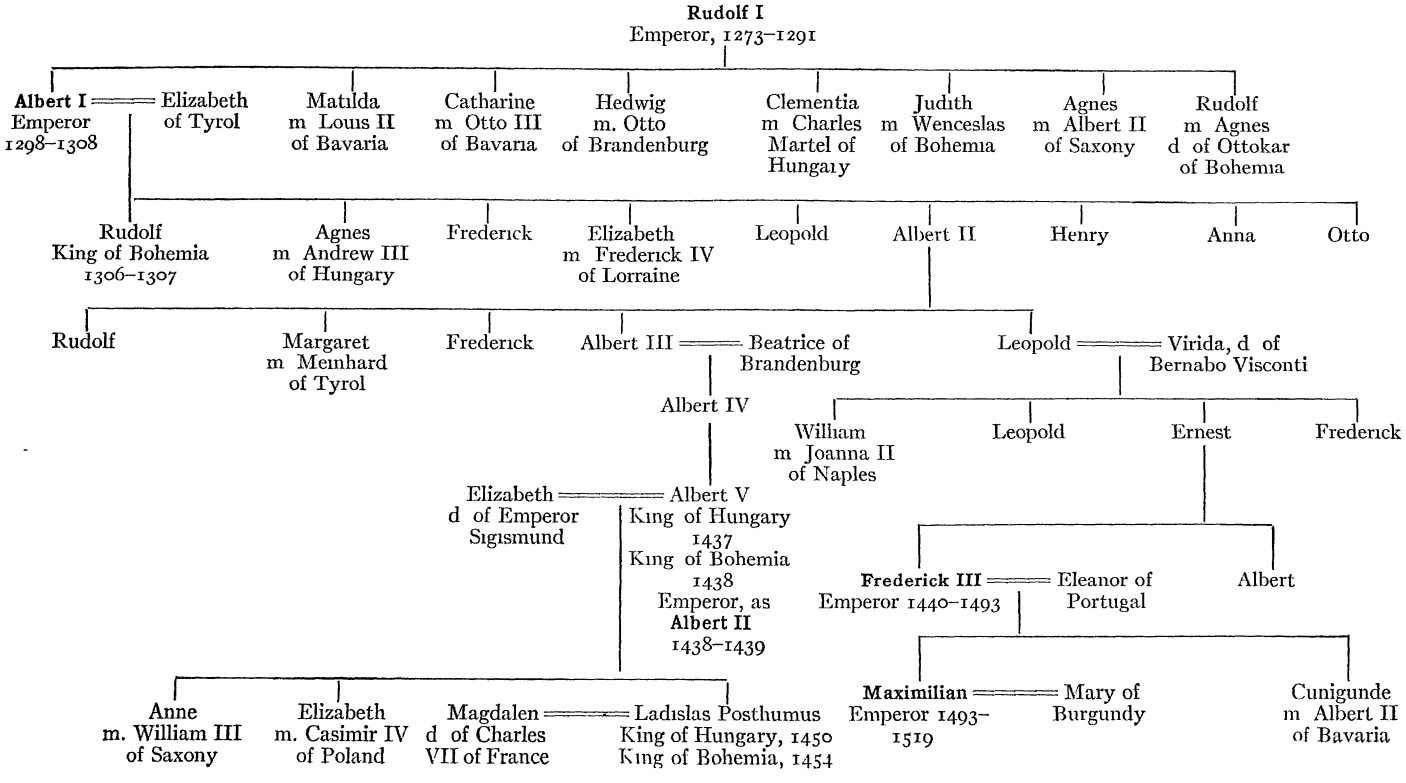
1463-1479. **THE GREAT WAR AGAINST THE TURKS.** Negroponte was lost (1470) The Turks throughout maintained the upper hand and at times raided to the very outskirts of Venice. By the **Treaty of Constantinople** (1479) the Venetians gave up Scutari and other Albanian stations, as well as Negroponte and Lemnos. Thenceforth the Venetians paid an annual tribute for permission to trade in the Black Sea.

1482-1484. **War with Ferrara,** as a result of which Venice acquired Rovigo. This marked the limit of Venetian expansion on the mainland. The frontiers remained substantially unaltered until the days of Napoleon.

1489. **Acquisition of Cyprus** (partly by gift, partly by extortion), from Catharine Cornaro, widow of James of Lusignan.

Venetian culture in the Renaissance. Preoccupied with her commercial empire, her expansion on the mainland, and the advance of the Turk, Venice, despite her wealth, unique domestic security, and the sophistication of wide travel, long stood aside from the main currents of the early Renaissance. Her architecture remained under Gothic and Byzantine influences until the end of the 15th century, and the Palazzo Vendramini (1481) is perhaps the first important example of the new style **The Bellinis** (Jacopo, 1395–1470, and his two sons) were the most notable early Venetian painters, and there was little promise of the brilliant if late achievement of the 16th century. The printing press apparently appealed to the practical Venetian nature and the Senate decreed (1469) that the art should be fostered Much of the finest early printing issued from the Venetian presses of the 15th and 16th centuries. *(Cont. p. 397.)*

e. THE HOLY ROMAN EMPIRE



1273. The election fell to **Rudolf of Hapsburg** (b. 1218), who ranked as a prince, wished to restore and retain in his family the Duchy of Swabia, and had three daughters to marry off The Hapsburgs (from *Habichts-Burg*, Hawk-Castle) originally (10th century) of the district of Brugg (junction of the Aar and Reuss) had steadily expanded their lands in the Breisgau, Alsace, and Switzerland, emerging as one of the leading families of Swabia.

1273-1291. **RUDOLF I.** Indifferent to the Roman tradition, he concentrated on the advancement of his own dynasty, and founded the greatness of the Hapsburgs on territorial expansion of the family holdings and dynastic marriages. Edicts for the abolition of private war and support of local peace compacts (*Landfrieden*).

1276-1278. **Struggle with Ottokar,** King of Bohemia, over the usurped imperial fiefs of Austria, Styria, Carinthia, Carniola (p 240) Rudolf expelled Ottokar from Austria by force (1276), but allowed him to retain Bohemia and Moravia (after homage) as a buffer against Slavdom; dynastic alliance with the Hapsburgs. Ottokar was ultimately defeated and killed (1278, Aug 26, **battle of the Marchfield**), investiture of Rudolf's sons with the imperial fiefs of Austria, Styria, Carniola (1282) established the Hapsburgs on the Danube until 1918.

Rudolf threw away the last remnants of Frederick II's great imperial fabric: confirmation of papal rights in Italy and Ange-

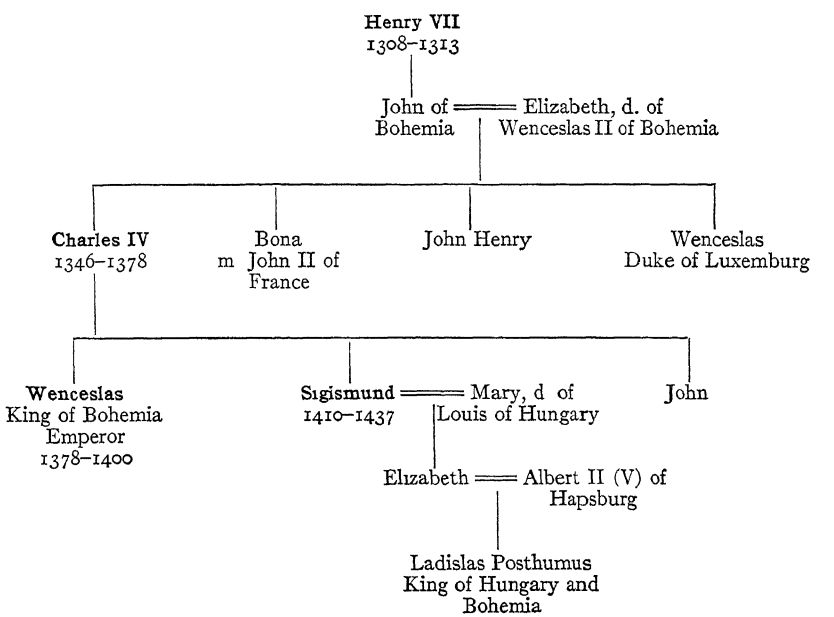
The House of Hapsburg

vin rights in southern Italy (1275); renunciation of all imperial claims to the Papal States and Sicily (1279).

1291. Alarmed at the rapid rise of the Hapsburgs to first rank, the electors passed over Rudolf's son, choosing instead **Adolf of Nassau** in return for substantial considerations.

1291. **Revolt of the three Forest Cantons,** Uri, Schwyz, and Unterwalden, and formation of a (Swiss) confederacy (p 306)

1292-1298. **ADOLF,** a strong imperialist, and able He supported the towns and lesser nobles and entered into alliance with Edward I of England against Philip IV of France to protect the imperial fiefs of Franche Comté, Savoy, Dauphiné, Lyonnais, and Provence, long under French pressure, the alliance came to nothing, as the German princes were indifferent. The princes, alarmed at Adolf's advance in Meissen and Thuringia, deposed him (1298), electing Rudolf's rejected son Albert.



1298-1308. **ALBERT I** (Albrecht). Firm reduction of the ecclesiastical electoral princes (aid of the French and the towns); double dynastic marriage with the Capetians, acquisition of the crown of Bohemia (on the extinction of the Premyslids, 1306); Albert supported the Angevin Carobert's acquisition of Hungary; the Rhineland was filled with Francophil clerical appointees of the pope, and the election of 1308 was dominated by French influence Charles of Valois procured the election of Henry of Luxemburg, brother of the Archbishop of Trier

1308-1313. **HENRY VII** (*Luxemburg*), Francophil, devoted to Italian culture, and bent on restoring the empire. The marriage of his son John to the sister of King Wenceslas of Bohemia brought the throne of Bohemia to the house of Luxemburg (1310-1489)

1310-1313. **Expedition to Italy** at the urging of Pope Clement V and the Ghibellines; order restored, Milan, Cremona, Rome reduced, imperial coronation (1312), alliance of the pope and King Philip IV of France to save Naples from Henry.

1314-1347. **LOUIS IV** (*Wittelsbach*). A Hapsburg anti-king, **Frederick the Handsome,** and civil war (until 1322). Bitter papal opposition (1323-1347, refusal of confirmation of Louis' title to the empire); Louis, backed by the German people, against the Avignonese pope. Violent war of propaganda· **Marsiglio of Padua** (*Defensor Pacis*, 1324) and **William of Occam,**

The House of Luxemburg

defending the imperial position, gave wide currency to pre-Reformation ideas, **Dante's** *De Monarchia*, papal supporters, **Augustino Trionfans** and **Pelagius.**

1327-1330. Louis' futile expedition to Italy and "lay" coronation (1328), his demand for a general council welcomed by the Italian Ghibellines.

Effort to give the German monarchy a formal constitution

1338. The Day at Rense: formation of a strong electoral union (*Kurverein*), declaration by the electors that election by a majority of the electors without papal confirmation is valid The **Diet of Frankfurt:** declaration (the *Licet juris*) that the electors are competent to choose an emperor (i e papal intervention is not necessary); in effect the Holy Roman Empire was divorced entirely from the papacy

1346. Louis was deposed, but fought against his successor, Charles (son of King John of Bohemia, who had been elected after an open alliance with the pope)

1347-1378. CHARLES IV (*Luxemburg*) Concentration on the advancement of his dynasty (in Silesia, the Palatinate, Lusatia, Brandenburg) and on the progress of Bohemia. Prague became one of the chief cities of the empire (the University founded, 1348) The **Black Death** (1348–1349), the Flagellants; anti-Semitic massacres Promulgation of the Swabian League and numerous *Landfrieden* reduced private warfare. Dauphiné and Arles continued to drift into the French orbit.

Further elaboration of a formal constitution of the empire.

1356. THE GOLDEN BULL (in force until 1806) transformed the empire from a monarchy into an aristocratic federation, to avoid the evils of disputed elections Seven **electors,** each a virtual sovereign the Archbishops of Mainz, Trier, and Cologne, the Count Palatine of the Rhine, the Duke of Saxony, the Margrave of Brandenburg, the King of Bohemia. Secular electorates to be indivisible and pass by primogeniture. Elections to be by majority vote and without delays; urban leagues forbidden without specific license; other restrictions on the towns. No mention of papal rights or claims The electors to exercise supervision over the empire, a new function The crown to remain in the house of Luxemburg.

Charles openly regarded the empire as an anachronism, but valued the emperor's right to nominate to vacant fiefs.

1364. Treaty of Brunn with the Hapsburgs, whereby either house (Luxemburg or Hapsburg) was to succeed to the lands of the other upon its extinction.

Little improvement in internal anarchy; climax of localism and the *Faustrecht*; the only islands of order and prosperity were the walled towns, the only basis of order were the town leagues (e.g. revival of the **Rhine League** [1354], the **Swabian League**); bitter warfare of classes, and princely opposition to the towns Charles' vain appeal to the princes of Europe to resist France and end the Avignonese Captivity.

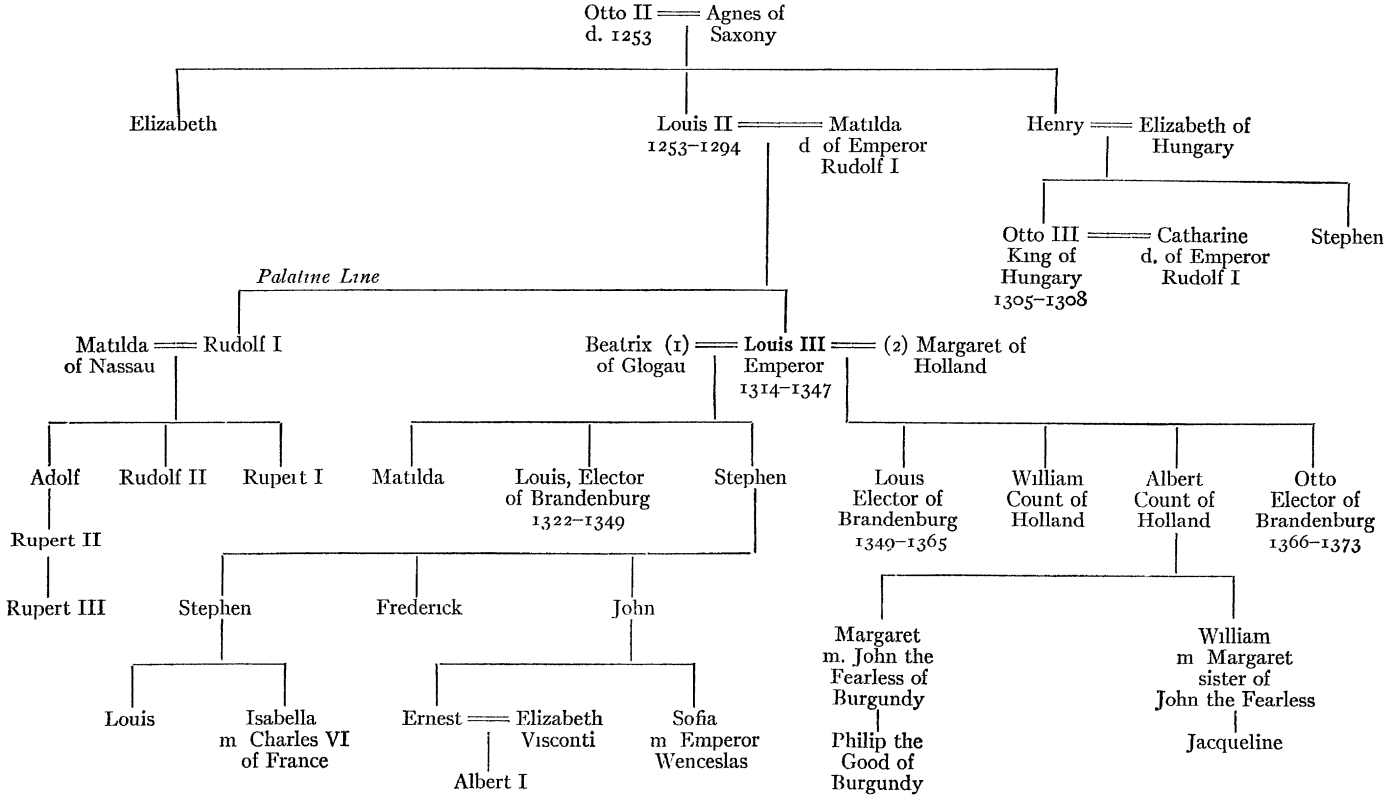
Apogee of the **Hanseatic League** (p. 307)

1378-1400. WENCESLAS (Wenzel, son of Charles IV, King of Bohemia, 1378–1419) Formation of the **Knights' League** (*League of the Lion*) followed by a series of political quarrels between the knights and lords on one side and the towns on the other, ending in the town war (1387–1389) and the defeat of the towns, but not their ruin Rising Bohemian nationalism: revolts, 1387–1396.

1400. Deposition of Wenceslas for drunkenness and incompetence He refused to accept the decision, and the result was that at the end of the confused period (1400–1410) there were **three rival emperors** (Sigismund, Jobst, and Wenceslas) to correspond to the three rival popes.

1410-1437. SIGISMUND (*Luxemburg;* King of Bohemia, 1419–1437; King of Hungary by marriage) His main concern was to end the Great Schism, and he succeeded the King of France as protagonist of conciliar reform by forcing Pope John XXIII to call the **Council of Constance** (p 288) Establishment of the **House of Wettin** in Saxony (1422); the **Hohenzollerns (Frederick)** in Brandenburg (1415) Sigismund's failure at Constance not merely alienated Bohemia, but also ended any hope of German unification.

1410. Utter defeat of the Teutonic Knights by the Polish-Lithuanian army at **Tannenberg;** beginning of the decline of the Teutonic Knights.



1411. Peace of Thorn, halting of the Slavic advance.

1420-1431. Emergence of **BOHEMIAN NATIONALISM** and the **HUSSITE WARS** (p. 305)

1433. Called to the **Council of Basel** (p. 289), the Hussites finally accepted the *Compactata* (which embodied the *Four Articles*), but the Church by its devious dealings alienated them, and they began a final break from the Roman Church. Bohemian nationality asserted itself increasingly in the 15th century, and Bohemia never returned to the German orbit.

Sigismund struggled against the Turkish advance (1426–1427) and was crowned at

The House of Wittelsbach

432). In the election of 1438, [illegible] of Brandenburg (candidate of political reformers in Germany) withdrew, making the choice of Albert of Hapsburg (Sigismund's son-in-law) unanimous. Albert also succeeded Sigismund on the thrones of Hungary and Bohemia. Henceforth the imperial crown in practice became hereditary in

1438-(1740) 1806. THE HOUSE OF HAPSBURG.

1438-1439. ALBERT II.

1439. The Pragmatic Sanction of Mainz (abolition of annates, papal reservations, and provisions), a preliminary agreement between the papacy and the emperor, left the German Church under imperial and princely control and postponed reform till the days of Martin Luther.

1440-1493. FREDERICK III. The last emperor crowned (1452) at Rome by the pope, a handsome, placid *fainéant*, amateur astrologer, botanist, mineralogist, he ignored the existence of diets, debates, and appeals for crusades

Ladislas Posthumus (d 1457), nephew and ward of Frederick, became Duke of Austria (1440), was acknowledged King of Hungary (1445) and elected King of Bohemia (1440) with a council of regency **George Podiebrad** (champion of the *Compactata*) emerged (1452) from the Bohemian civil war (Catholics vs Utraquists) as regent of Bohemia, and later king (1458–1471) (p 305).

1448. The Concordat of Vienna: a compromise on cynical terms between the pope and the emperor on the reform issue: The papacy triumphed over the conciliar movement for reform, by dividing profits with the princes and emperor; external episcopal jurisdiction was excluded, the princes retained rights of presentation, obtained a share in episcopal taxation, and established an authority over the German Church which survived even the Reformation.

1453. The capture of Constantinople (p. 327) and end of the Eastern Empire left the Roman Empire without a rival and brought the Turkish menace to the frontier of Germany.

c. 1455. The Mazarin **Bible printed at Mainz,** the first book printed from movable type in Europe.

1456. Hunyadi (without imperial support) repulsed the Turk from Belgrade.

1458. Election **of Hunyadi's son Mathias Corvinus,** King of Hungary (to 1490) and **George Podiebrad,** King of Bohemia (to 1471), the climax of national spirit in Bohemia and Hungary.

1462. Pius II's annulment of the Compactata and the excommunication and deposition (1466) of Podiebrad reopened the Bohemian religious wars **Ladislas** (elected 1468) succeeded on Podiebrad's death, as King of Bohemia (1471–1516), becoming King of Hungary in 1490 (see below).

1473. Frederick, faced with the threat of (French) Burgundian expansion in the empire, avoided giving Charles the Bold, Duke of Burgundy, the royal title (p 280), and married his son Maximilian to Charles' daughter Mary (1477), bringing the Hapsburg fortunes to their zenith, and giving reality to his own monogram **A.E.I O.U.** (*Austriae est imperare orbi universo*, or, *Alles Erdreich ist Oesterreich unterthan.*)

1485. Expelled from Vienna by Mathias Corvinus, Frederick became a cheery imperial mendicant.

1486. Maximilian, elected King of the Romans, became the real ruler of Germany and began the creation of the Hapsburg dynastic empire. (*Cont. p.* 398)

(1) *Bohemia*, 1306-1471

1306. The Premyslid dynasty came to an end with the death of Wenceslas (Vaclav) III There followed an interregnum, during which the Bohemians were driven out of Poland The interregnum ended with the election of

1310-1346. JOHN OF LUXEMBURG, son of the Emperor Henry VII The circumstances of his accession forced John to issue a charter guaranteeing the rights and privileges of the nobility and clergy. Thus limitations of the royal power were fixed by written law. At the same time the national diet, theretofore called only on special occasions, became a regular institution. During this reign Bohemian overlordship over Upper Lusatia and Silesia was established

John supported the Teutonic Knights against the Lithuanians and participated in three campaigns (1328, 1337, 1346) For a time (1331–1333) he ruled western Lombardy, as well as the Tyrol (1336–1341) John found his death in the **battle of Crécy,** where he fought on the side of the French. While he had shown little concern for Bohemian domestic affairs, he had made Bohemia a power in international politics.

1347-1378. CHARLES I (Charles IV as German Emperor), the son of John of Luxemburg. His reign is regarded as

the "golden age" of Bohemian history A series of charters issued in 1348 established an order of dynastic succession and determined Bohemia's place in the Holy Roman Empire Moravia, Silesia, and Upper Lusatia were to be indissolubly connected with the Bohemian crown. By the **Golden Bull** (1356, see p. 302) the King of Bohemia was given first place among the empire's secular electors At the same time Bohemia's internal independence was guaranteed. Acquisition of Lower Lusatia (1370) and Brandenburg (1373). Charles ruled as a constitutional king and spared no effort to promote material well-being and cultural progress A new code of laws, the *Maiestas Carolina*, was published Prague was rebuilt and beautified The **University of Prague** founded (1348), the first university in central Europe.

1378-1419. WENCESLAS (Vaclav) IV, son of Charles. Gradual weakening of the connection with the German Empire. Loss of Brandenburg (1411) Continued conflicts with the barons. This was hastened by the development (since the end of the 14th century) of a national-religious movement which culminated in **Hussitism. John Hus** (1369–1415), a professor at the University of Prague and a popular preacher in the vernacular, was deeply influenced by the teaching of Wiclif and the Lollards in England He attacked sale of indulgences, demanded reforms in the Church, challenged the primacy of the pope, and emphasized the supreme authority of the Scriptures. He also supported the native element in the university in the struggle which ended in the exodus of the alien Germans (1409), becoming rector of the university. Excommunicated by the pope and eager for vindication, he went to the **Council of Constance** (1415) under a safe-conduct from the emperor His arrest in violation of this guaranty, his trial and burning (July 6), identified religious reform with Bohemian nationalism and split the empire in the

1420-1433. HUSSITE WARS. Refusal to recognize Sigismund as king The reformers divided into two groups: (1) The moderate **Calixtines,** with the university as a center, favored separation of religious and political reform and formulated their program in the **Four Articles of Prague** (1420) full liberty of preaching, the cup to the laity (*Utraquism*), exclusion of the clergy from temporal activity and their subjection to civil penalties for crime (2) The radical **Taborites,** under extreme Waldensian, Catharist, and Wiclifite influences, with a program of democracy and apostolic communism. The papal proclamation of a **Bohemian Crusade** (not opposed by the Emperor Sigismund) united the nation behind **John Ziska,** a brilliant soldier, who led the Hussites in a series of victories (1420–1422). Ziska's "modernization" of tactics. improved, mobile artillery, use of baggage wagons for mobile cover Ziska's death (1424) did not affect the movement. Under a priest, **Procop the Great,** the Hussites defeated one crusade after another (1426, 1427, 1431) and carried the war into neighboring regions of Germany, on one occasion (1432) advancing as far as the Baltic Then civil war broke out between the Calixtines and the Taborites (led by Procop the Great), the latter suffering defeat (1434)

1431-1436. The Council of Basel. The Hussites finally accepted a compromise, the *Compactata* (1436), recognizing them as true sons of the Church and conceding them the cup in the communion.

1436. Sigismund was finally accepted as king by all parties He attempted a Catholic reaction, which was cut short by his death in the following year Disputes continued between the Catholics and the Hussites, complicated by factional struggles between Hussite moderates and radicals and by social tension between nobility, townsmen and peasantry

1437-1439. ALBERT OF AUSTRIA (son-in-law of Sigismund), elected king. An opposition group chose Ladislas, King of Poland Albert died in the course of a civil war.

1439-1457. LADISLAS POSTHUMUS, the son of Albert The Emperor Frederick III acted as his guardian, and for many years kept him from Bohemia In the midst of continued factional conflict, a young nobleman, **George of Podiebrad,** rose to power.

1448. George seized Prague and became head of the Hussites He was recognized as administrator of the kingdom (1452) and devoted himself to the task of reconciling Catholics and Hussites. The radical wing of the latter was completely suppressed by the **capture of Tabor** (1452). George ultimately succeeded in bringing the young king to Prague, but Ladislas died before he could accomplish much in behalf of the Catholics

1459-1471. GEORGE PODIEBRAD elected king Policy of conciliation· vigorous persecution of the Bohemian Brotherhood, a puritanical sect with outspokenly democratic leanings, dating from the teaching of **Peter of Chelchich** (d 1460), and, like the Taborites, rejecting all subordination to Rome. George, an avowed

Hussite of the moderate school, was technically a heretic and soon found himself in conflict with the pope.

1462. The pope denounced the agreements of Basel, and deposed George (1465). Thereupon the Catholic nobility of Bohemia elected **Mathias of Hungary** as king. George defeated him in a series of engagements, but the issue was undecided when George died. (*Cont p.* 418)

(2) *The Swiss Confederation, to* 1499

Lake Lucerne and the original **Forest Cantons** belonged to the Duchy of Swabia, and the expansion of powerful Swabian families during the Great Interregnum led the Forest Cantons to a determined effort to replace feudal allegiances to various nobles with a single direct allegiance to the emperor. Most powerful of the Swabian families was the rising **house of Hapsburg** (whose original lands expanded in the 13th century into the Aargau, Breisgau, and Alsace). **Rudolf III** (b. 1218) of Hapsburg sought to restore the Duchy of Swabia under his house.

The Forest Cantons of Uri (already acknowledged independent of any but a loose imperial allegiance in 1231), **Schwyz,** and **Unterwalden,** emerged as champions of local independence and masters of the St. Gotthard Pass into Italy Rudolf during the Interregnum expanded his suzerainty, but as emperor was too busy to assert it

1291. First (known) **League of the Three Forest Cantons,** an undertaking for mutual defense, a kind of constitution, but not an independent federal league, as the cantons did not claim independence Emperor Adolf confirmed the status of Uri and Schwyz, Henry VII that of Unterwalden, and henceforth the three Forest Cantons were thought of as a unit. The Swiss sent Henry VII three hundred soldiers for his Italian expedition, the first recorded use of Swiss troops outside their own borders.

1315, Nov. 15. Battle of Morgarten. Leopold of Austria, in an effort to crush the Swiss and punish them for support of Louis IV against the Hapsburg Frederick the Handsome, was thoroughly beaten at Morgarten, a battle which began the brilliant career of the Swiss infantry in Europe Renewal and strengthening of the league and its confirmation by Louis IV.

1332-1353. Additions to the three Forest Cantons: Canton of Lucerne (1332); Canton of Zurich (1351); Canton of Glarus (1352); Canton of Bern (1353), bringing the number to seven, half of which were peasant cantons, the other half urban.

1386, July 9. BATTLE OF SEMPACH. The confederation, supported by the Swabian League, defeated the Hapsburg Leopold II of Swabia. In 1388 another victory was won at **Nafels.**

1394. Twenty-year truce between the confederation and the Duke of Austria. Austria abandoned claims on Zug and Glarus. The confederation became solely dependent on the empire, which amounted to practical independence.

The confederation was controlled by a **federal diet** (1393), but the cantons retained the widest possible autonomy. Throughout the succeeding period there was but little evidence of union The various cantons followed their own interests (Lucerne and Schwyz looked to the north, Bern to the west, Uri to the south) and wrangled among themselves Only the threat from Austria invariably united them against the common enemy. In the meanwhile the 15th century was marked by continual struggles and conflicts with neighbors, as a result of which further territories were brought into the confederation and some approach was made to natural frontiers.

1403. The Canton of Uri began expansion southward, to get control of the passes to the Milanese In 1410 the whole Val Antigorio was conquered, with Domodossola. The Swiss were driven out by the Duke of Savoy in 1413, but in 1416 regained mastery of the country.

1415. Conquest in the north of the Aargau, from Frederick of Austria, at the behest of his rival, the Emperor Sigismund

1419. Purchase of Bellinzona, which, however, was seized by the Visconti of Milan (1422)

1436-1450. Civil war between Zurich and some of the neighboring cantons over the succession to the domains of the Count of Toggenburg Zurich allied itself with Emperor Frederick IV (1442), but was defeated by Schwyz (1443); Zurich besieged (1444) Frederick called in the French, but after a defeat near Basel, the French withdrew. The emperor made **peace at Constance** (June 12, 1446) and in 1450 peace was made within the confederation. The general effect of the war was to strengthen the confederacy

1460. Conquest of the Thurgau from Austria gave the confederation a frontier on Lake Constance.

1474-1477. The great war against **Charles the Bold of Burgundy,** whose de-

signs on Alsace were regarded as a menace to the confederation The Swiss allied themselves with the South German cities This combination was joined by the emperor (perpetual peace, Mar 30, 1474 Austria again renounced claims to Swiss territory) Louis XI of France also joined, but in 1475 both the emperor and the king withdrew again. Great victories of the Swiss at **Grandson** (Mar 2, 1476), **Morat** or Murten (June 22, 1476), and at **Nancy** (Jan. 5, 1477) sealed the fate of Charles' plans and established the great military reputation of the Swiss, who were thenceforth sought far and wide as mercenaries.

1478. **War with Milan.** Victory of the Swiss at **Giornico** (Dec 28). Alliance with the pope, who was allowed to engage Swiss forces

1481. **Solothurn and Fribourg** were admitted to the Confederation after a long dispute among the members. The **Diet of Stans** drew up a covenant by which federal relations were regulated until 1798 Henceforth the urban cantons were in a majority.

1499. **War with the emperor** over disputed territories in the east The emperor was supported by the South German cities, while the Swiss enjoyed the support, especially financial, of the French The Swiss won a series of victories (especially **Dornach,** July 22) and forced the emperor to conclude the **Treaty of Basel** (Sept. 22) which granted the confederation independence of the empire in fact, if not formally (this came only in 1648). By the inclusion of **Basel and Schaffhausen** (1501) and later **Appenzell** (1513), the confederation rounded out its northern frontier.

The Swiss at the end of the 15th century enjoyed immense military prestige, but within the confederation there was much social unrest, especially among the peasants, and a good deal of demoralization in the towns **Hans Waldmann,** burgermeister of Zurich (1483–1489), was only the most outstanding of the typical ruthless, mercenary, cynical figures which dominated the scene and which remind one of the contemporaneous Italian despots

(*Cont p* 408)

(3) *The Hanseatic League*

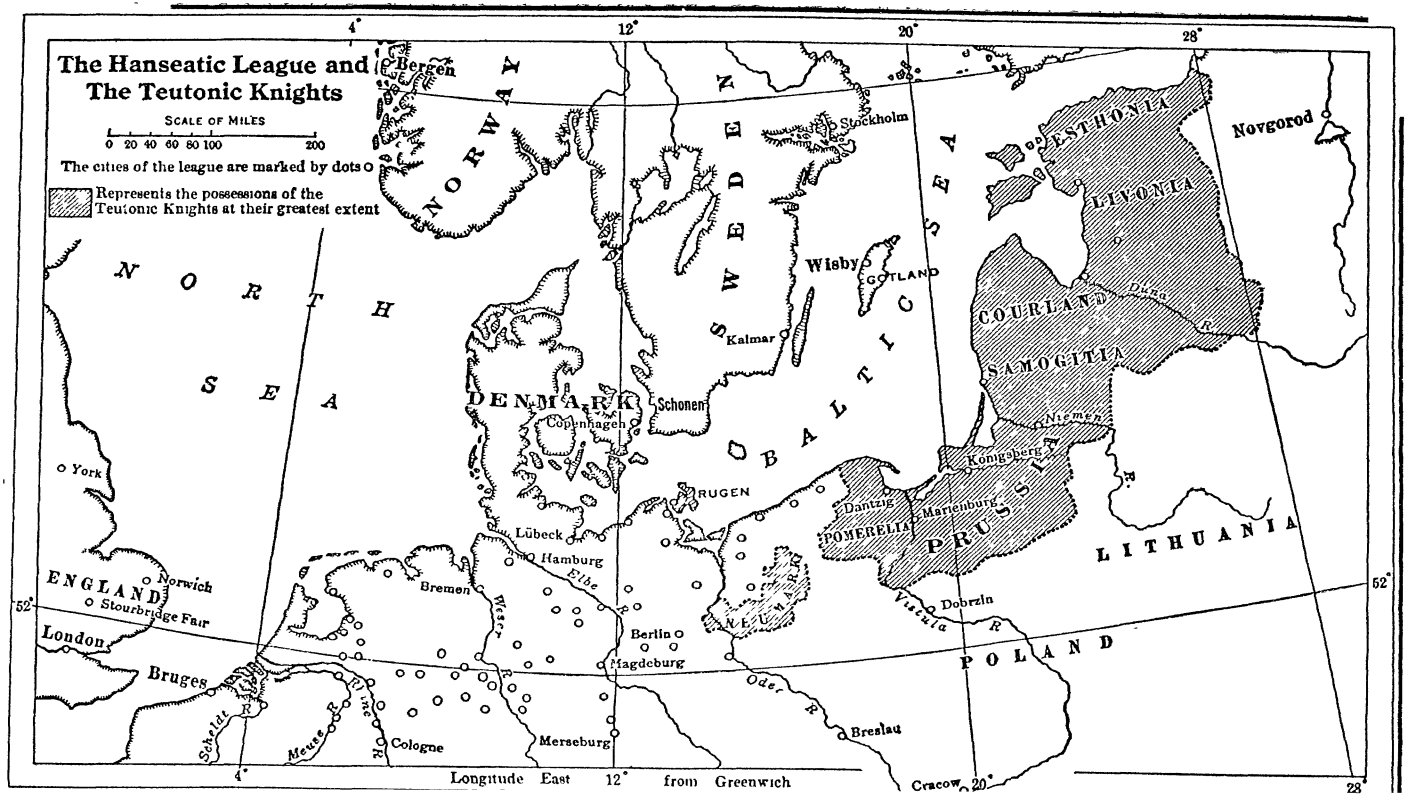
Hansa (Old French *Hanse*, Med Latin *Hansa*), meaning a group, company, or association.

Associations (*Hansas*) and partial unions of North German towns date from the 13th century and were an important aspect of the great town development of Germany in that period

c. 1000. German traders were established on the island of Gothland and in London.

c. 1150-c. 1250. Revival of the German river trade, notably along the Rhine, centering in the towns of Cologne, Dortmund, Soest, and Munster. At the same time the German expansion toward the Slavic east extended the sphere of German trade along the Baltic coasts In the later 12th century the German settlement on Gothland (**Wisby**) became autonomous and established an offshoot at **Novgorod** (*St Peter's Yard*) which became the focus of the important Russian trade

1226. **Lubeck** (founded 1143) secured an imperial charter from Frederick II. Hamburg followed in 1266–1267.



1237. Wisby secured trading rights in England, and soon afterward in Flanders.

1241. Lubeck and Hamburg formed an alliance to protect the Baltic trade routes

1256. **The Wendish towns** (Lubeck, Stralsund, Wismar, Rostock, Greifswald, and later Luneburg) held their first recorded meeting Lubeck began to emerge as the dominant North German town, a position which it retained throughout the history of the Hanseatic League. Most of the commercial towns followed the *Code of Lubeck*, which was an early source of unity between them. By the end of the century the Wendish towns had taken the leadership from the Gothland merchants

1282. The **Germans in London** formed a corporation and established their own guildhall and steelyard Other German yards were opened at York, Bristol, Yarmouth, Lynn, and Boston The London trade was dominated by Cologne, but the yards at Lynn and Boston were under the control of Lubeck and Hamburg.

THE HANSEATIC LEAGUE. No date can be fixed for its organization, which was evidently the result of the lack of a powerful German national government able to guarantee security for trade Its formation was no doubt facilitated by the mediaeval affinity for co-operative action and for monopoly The term *Hanseatic League* was first used in a document in 1344 The exclusion of Germans abroad (1366) from the privileges of the Hansa indicates a growing sense of unity, but league members spoke of the association merely as a *firma confederatio* for trade, and throughout its history it remained a loose aggregation. This looseness of organization allowed a

maximum of independence to its members and was not modified until the league was put on the defensive in the 15th century. The league never had a true treasury or officials in a strict sense, its only common seal was that of Lubeck; it had no common flag. Assemblies of the members (*Hansetage*) were summoned by Lubeck at irregular intervals and were sparsely attended, except in times of crisis. The objectives of the league were mutual security, extortion of trading privileges, and maintenance of trade monopoly wherever possible. The chief weapon against foreigners or recalcitrant members was the economic boycott and (rarely) war. Primarily concerned with the North European trade, the Hansa towns dealt chiefly in raw materials (timber, pitch, tar, turpentine, iron, copper), livestock (horses, hawks, etc.), salt fish (cod and especially herring), leather, hides, wool, grain, beer, amber, drugs, and some textiles. The four chief *kontors* were Wisby, Bergen, London, and Bruges.

1340-1375. WALDEMAR IV of Denmark, who freed his country of the German domination and took up the struggle against the powerful Hansa towns. He threatened the Hanseatic monopoly of the herring trade by his seizure of Scania, and in 1361 cut the Russian-Baltic trade route by his capture of Wisby. In 1362 he defeated the German fleets at **Helsingborg.** By the **Peace of Wordingborg** (1365) the Hansa was deprived of many of its privileges in Denmark.

1367. THE CONFEDERATION OF COLOGNE, effected by a meeting of representatives of 77 towns, organized common finance and naval preparations for the struggle. Reconstruction of Scandinavian alliances to meet the threat from Waldemar. After a series of victories, the German towns extorted from the Danish *Reichsrat*

1370. THE PEACE OF STRALSUND, which gave the league four castles in Scania (dominating the Sound), control of two-thirds of the Scanian revenues for 15 years, and the right to veto the succession to the Danish throne unless their monopoly was renewed by the candidate. The treaty marked the apogee of Hanseatic power and virtually established control over the Baltic trade and over Scandinavian politics. The Baltic monopoly was not finally broken until 1441, after a war with the Dutch. Wisby itself never recovered from Waldemar's sack, and was long a nest of pirates (e.g. the famous **Victual Brothers**).

FLANDERS. The Germans in Bruges received a special grant of privileges in 1252, which allowed them their own ordinances and officials. They later (1309) established exemption from the usual brokerage charges levied on foreigners and eventually won an influential voice in the affairs of the city, notably in foreign policy. The revised statutes of the Bruges Kontor (1347) recognized the division of the Hanseatic League into thirds: The Wendish-Saxon, the Prusso-Westphalian, and the Gothland-Livland thirds. Bruges was the most ardent champion of Hanseatic unity, and, with Lubeck, was the chief source of such cohesion as the League attained. A boycott in 1360 brought the town into complete submission to the League.

ENGLAND. The Hansa towns, by maintaining friendly relations to the crown, were able to ignore the growing national hostility to alien traders (directed at first mainly against the Italians) and to avoid granting reciprocal privileges to the English in return for their own exclusive rights (notably those claimed under Edward I's *Carta Mercatoria* of 1303). One source of Hanseatic influence derived from loans to the crown, especially during the Hundred Years' War. The English themselves began to penetrate into the Baltic (c. 1360) and growing public resentment against the league led to increased customs dues, but Richard II in 1377 renewed the privileges of the league, thus firmly establishing the Hanseatic power in England. The Sound was opened to the English in 1451, and the league, profiting by the Wars of the Roses, secured full title to the steelyard in London (1474) and the renewal of rights in Boston and Lynn. Not until the days of Elizabeth were the Hanseatic privileges finally reduced.

DECLINE OF THE LEAGUE. Externally the league was weakened by the disorders of the Hundred Years' War, by the rise of Burgundy and the new orientation thereby given to Dutch trade (e.g. Brill wrested the monopoly of the herring trade from the league), and by the great discoveries and the opening of new trade routes. But above all, the monopolistic policies of the league aroused ever-sharper opposition in the countries where the league operated (notably in England, Holland, Scandinavia, and Russia; Ivan III destroyed the Novgorod Kontor in 1494). **Internally** the league continued to suffer from lack of organization. The inland towns held aloof from the Baltic policy and Cologne sent no representatives to the assembly until 1383. The assembly itself was summoned only at irregular intervals. The delegates were strictly bound by their mandates and their votes were subject to

review by their home towns. Decisions were not binding on all members until 1418. In the 15th century the league was further weakened by the struggle within the member towns between the democratic guildsmen and the patrician oligarchy. The league threatened the expulsion of "democratic" towns The German princes (notably the Hohenzollerns of Brandenburg) gradually reduced the freedom of various powerful members of the league and rivalries broke out within the league itself (Cologne and the Westphalian towns stood together, as did Danzig and the Prussian towns, especially after 1467). The South German towns opened direct trade relations of their own with Flanders, Breslau, Prague, and other centers, and began to establish their own fairs. Leipzig, for example, replaced Lubeck as the center of the fur trade

1629. The Assembly entrusted the guardianship of the common welfare to Lubeck, Hamburg, and Bremen.

1669. The last assembly (attended by five towns) was held. The league by this time was the merest shadow of its former self, but its Kontors survived in Bergen until 1775, in London until 1852, and in Augsburg until 1863

(4) *The Teutonic Knights*

The 14th century marked the apogee of the power of the **Teutonic Order** in eastern Europe. The Knights began the penetration of Poland, where Germans settled some 650 districts and where the middle class of the towns became German in speech and law, much to the alarm of the rulers and nobles. At the same period the Knights advanced into Lithuania, a huge region extending from the Baltic to the Black Sea, the last heathen area in Europe German colonization and town-building first opened and civilized this region.

1326-1333. THE FIRST POLISH WAR, marking a sharp reaction to German penetration and putting the order for the first time on the defensive. With the aid of John of Bohemia, Louis of Hungary, Albert of Austria, Louis of Brandenburg, and others, the order emerged triumphant and the Poles were obliged to conclude a truce

1343. PEACE OF KALISCH. The Poles, despite papal support of their claims to Pomerelia, were obliged to recognize the Order's possession of the territory, in return for a promise of aid against the Lithuanians. Poland was thus cut off from the Baltic.

1343-1345. The Estonian Revolt, one of the worst *jacqueries* of the Middle Ages Estonia was taken by the Order from the Danes in 1346.

1385. Union of Poland and Lithuania under Jagiello and Jadwiga, thus creating a strong barrier to the further advance of the Germans and indeed, sealing the ultimate fate of the Order.

1410, July 15. Defeat of the Knights in the **battle of Tannenberg** by a huge army of Poles and Lithuanians. Poland, unable to exploit the victory, concluded

1411. THE FIRST PEACE OF THORN, which cost the Knights only Samogitia and an indemnity.

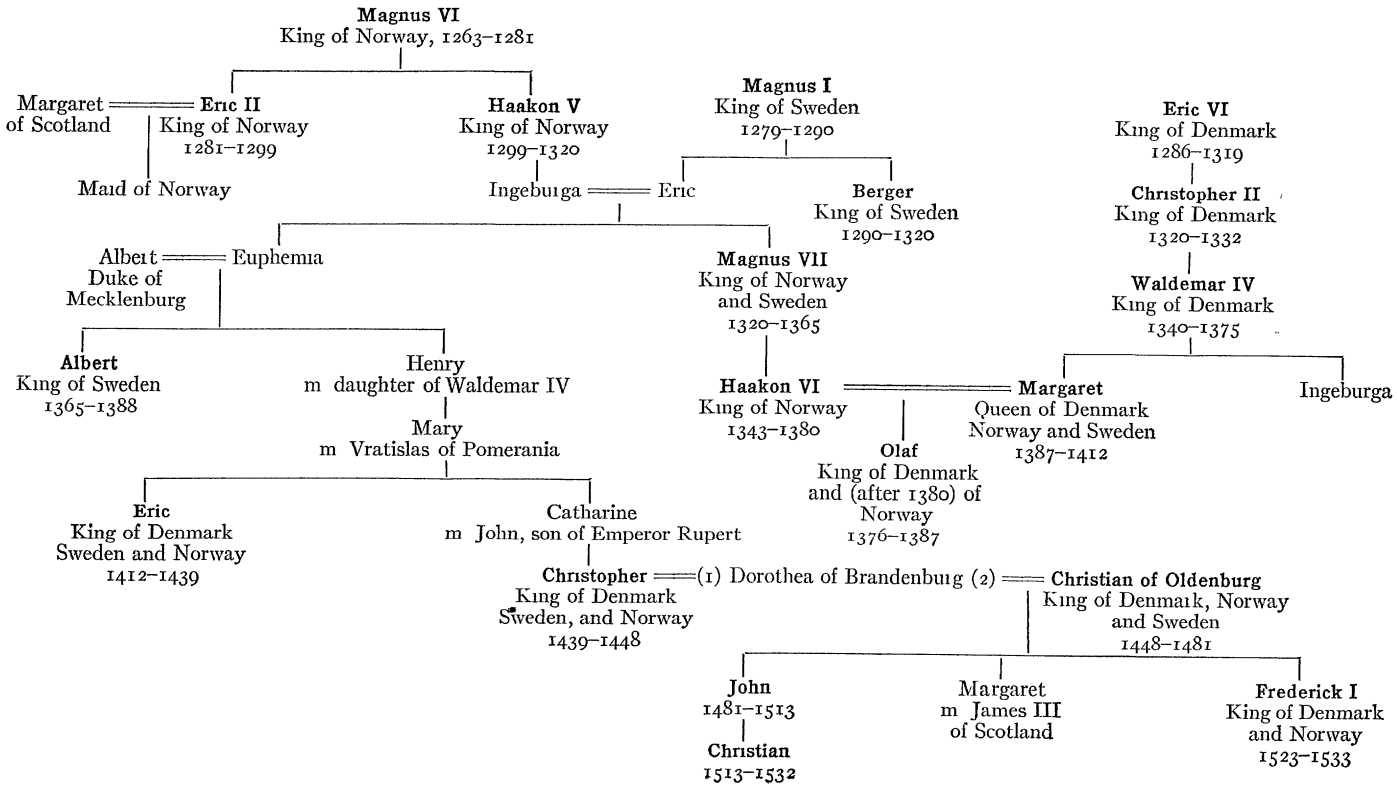
1454. The Prussian Revolt, a great uprising against the oppressive rule of the Order in which the Prussian nobility and towns took part The movement was supported by the Poles, and Casimir of Poland declared war on the Order

1466. SECOND PEACE OF THORN. Prussia was divided: (1) **West Prussia** (including Danzig, Kulm, Marienwerder, Thorn, and Ermeland) went to Poland, thus cutting East Prussia off from the rest of Germany and securing for Poland access to the sea. (2) **East Prussia** was retained by the Order, with Konigsberg as capital East Prussia, Brandenburg, and Memel were all to be held as Polish fiefs. The Order was opened to Polish members. This peace marked the definitive end of the German advance until the partitions of Poland.

The decline of the Order continued (growing commercialization, exclusiveness, lack of new blood, loss of discipline, Slavic pressure) despite efforts at reform by various grand masters.

1525. East Prussia was finally secularized by the grand master, Albert (Hohenzollern) of Brandenburg, and became a fief of the Hohenzollerns under the Polish crown.

1561. The **Livonian holdings** were similarly transformed and became the Duchy of Courland



The Order itself survived in Germany until 1809 and was later revived in 1840 under Hapsburg auspices with its original functions (e g ambulance service in war).

f. SCANDINAVIA

(1) *Denmark*, 1320-1387

The active and on the whole successful reign of **Eric Menved** (1286–1320) was followed in Denmark by a period of weakness

Rulers of Denmark, Norway, and Sweden (1263-1533)

and decline, marked by the ascendancy of the nobility and the constant advance of German influence.

1320-1332. CHRISTOPHER II, elected king after a capitulation, the first in Danish history, limiting the royal power in the interest of the nobility and clergy The Hansa towns, having acquired a monopoly of trade in Denmark, soon became dominant in Danish politics

1332-1340. A period of complete anarchy Christopher was driven from the throne by Gerhard, Count of Holstein, who parceled out the territories of the crown, established German nobles in all the important fortresses, and gave the German traders full rein. Gerhard was murdered in 1340.

1340-1375. WALDEMAR IV, the youngest son of Christopher and one of the greatest Danish kings At home he did his utmost to break the German influence and to restrict the power of the nobility and the clergy. The Church was subordinated to the royal power and the nobles and towns obliged to perform their military obligations. Abroad Waldemar devoted himself to the reconquest of the territories lost by his father. In wars with Sweden, Holstein, and Schleswig he regained Zeeland (1346), most of Funen and Jutland (1348), and Scania (1360). His seizure of Gothland (1361) brought him into direct conflict with the powerful Hansa towns, which were supported by Sweden.

1361-1363. First War against the Hansa. Copenhagen was sacked, but Waldemar defeated the Hansa fleets at **Helsingborg** (1362) and forced the Hansa to accept peace (1363) which greatly curtailed their privileges.

1368. A revolt against heavy taxation led to Waldemar's flight. His return (1370) was purchased by tremendous concessions. Meanwhile

1368-1370. THE SECOND WAR WITH THE HANSA had broken out The German towns were supported by Sweden, Norway, Holstein, Mecklenburg, and even by some of the Danish nobles Waldemar, badly defeated, was obliged to accept

1370. THE PEACE OF STRALSUND, renewing the privileges of the German Hansa, turning over the larger part of the revenues of four places, and accepting interference in the royal succession. This treaty marked the ascendancy of the Hansa in the Baltic.

1376-1387. Olaf, grandson of Waldemar, who, until his death, ruled with his mother Margaret as regent.

1387-1412. Margaret, mother of Olaf, was queen, ruling at the same time Norway and Sweden and thus uniting Scandinavia

(2) *Sweden*, 1319-1387

1319-1365. MAGNUS VIII (*Smek*), aged three at his accession and, until 1333, ruler under the regency of his mother. He was a weak and ineffectual ruler, but through his mother succeeded (1319) to the Norwegian crown and, during the troubled period in Denmark, managed to acquire, temporarily, Scania, Halland, and Bleking (given up again in 1360, to Waldemar IV) His long minority and his reliance on unworthy favorites led to a striking weakening of the royal power and an equally striking rise of the aristocratic party (first *Riksdag*, including burghers 1359) Magnus was ultimately deposed, and was succeeded by

1365-1388. Albert of Mecklenburg, who from the outset was merely a tool of the nobility The magnates eventually deposed him and defeated him, calling to the throne

1388-1412. MARGARET, the regent of Denmark

(3) *Norway*, 1320-1387

1320-1343. Magnus VII, who was also King of Sweden In 1343 he turned over Norway to his son

1343-1380. Haakon VI, who was married (1363) to Margaret of Denmark.

1380-1387. Olaf, the son of Haakon and Margaret, already King of Denmark, succeeded to the throne. His death ended the Norwegian line

1387-1412. MARGARET, mother of Olaf, was elected to the throne, thus introducing into Norway the system of election already in practice in Denmark and Sweden

(4) *The Union of Kalmar to* 1483

1387-1412. MARGARET OF DENMARK, ruler of all three Scandinavian kingdoms. She had her grand-nephew, Eric of Pomerania, elected king of all three countries in 1389, but retained effective power herself

1397. Coronation of Eric. Margaret presented a draft for the union of the three kingdoms. Vague and incomplete, the plan provided for a single king, established rules of succession, and set up a system of common defense. It was never

ratified by the councils of the three kingdoms, but as long as Margaret lived, it worked relatively well. The union left the internal government of each kingdom much as it was Margaret, an able despot (the Lubeck delegates called her "the lady king"), repressed the nobles, maintained order, and began the recovery of the Danish royal domain In general the Danes profited by the union, and Danes and Germans were gradually insinuated into power in Sweden and Norway Effective government of Scandinavia was centered in Denmark

1412-1439. ERIC, Margaret's successor, proved himself less able His efforts to regain control in Schleswig led to a long contest with the Dukes of Holstein, who, in alliance with the Hansa towns, finally conquered Schleswig completely (1432) At the same time much unrest developed among the peasantry (especially in Sweden, where **Engelbrecht Engelbrechtson** emerged as a leader of the lower classes).

1434. Engelbrecht marched through eastern and southern Sweden, seizing castles and driving out bailiffs, until the **Diet of 1435** recognized his demands, electing him regent This diet included representatives of all four orders and for four hundred years continued to be an important institution The movement of revolt spread to Norway, where it was taken up and controlled by the nobles. Eric finally took flight and the Danish council called in

1439-1448. CHRISTOPHER of Bavaria, cousin of Eric, who again ruled all three countries (elected in Sweden, 1440; in Norway, 1442) His reign marked the nadir of the monarchy, for Christopher was entirely dependent on the Hansa towns and was obliged to renew all their privileges, despite protests from the Danish burghers

1448-1481. CHRISTIAN I (of Oldenburg) was elected by the Danish council under a capitulation which left all real power in the hands of that body He had to accept a similar engagement on assuming the crown of Norway. The Swedish nobility, on the other hand, elected **Knut Knutsson** as king with the title of **Charles VIII** (1449-1457). Charles tried to secure the throne of Norway, but was ousted by Christian.

1457. Charles VII was driven out of Sweden by a revolt inspired by the Church. Christian I was then crowned, but the real power was in the hands of the Stures (Sten, Svanee, and Sten the Younger). Christian kept a great state, but his court, like that of Christopher and Eric, was filled with Germans, and he was financially dependent on the Hansa cities The **union of Schleswig and Holstein,** each autonomous under the crown of Denmark, was arranged in 1460 Christian founded the **University of Copenhagen** (1479).

Sweden in the later 15th century: The crown was a plaything of the nobles, while the clergy supported the King of Denmark. A rising commerce and industry was, however, creating a burgher class which was soon to assert itself Sten Sture the Younger, who came into power with the death of Charles VIII, repulsed Christian of Denmark (1471) with the aid of the towns (especially Stockholm) and returned to the reforms of Engelbrecht. The **University of Uppsala** was founded (1477) and **printing** was introduced soon afterward

(*Cont. p.* 410)

2. EASTERN EUROPE

a. POLAND, 1305-1492

The history of Poland in this period was concerned chiefly with the efforts of the kings to reunite the various duchies and to establish the royal power This policy was opposed, with success, by the nobility, which, as elsewhere in Europe, managed to extract countless privileges and to erect a type of oligarchical government Externally the Poles were involved in a long struggle with the Teutonic Knights, designed to secure an outlet to the Baltic This conflict alternated with a policy of expansion to the southeast, toward the Black Sea.

1305-1333. VLADISLAV IV (*Lokietek*), under whom Poland regained its independence after a brief period of Bohemian domination Vladislav was obliged to continue the struggle against Bohemia, and was not crowned until 1320 For protection he concluded dynastic alliances with Hungary (his daughter married Charles Robert of Anjou) and Lithuania (his son Casimir married the daughter of Gedymin). He did much to reunite the various duchies and established a new capital at Cracow. But he failed to secure Pomerania, which in 1309 passed from Brandenburg to the Teutonic Order. A papal decision in 1321 awarded the region to Poland, but the Knights ignored

the order to turn it over, and continued their raids into Polish territory (1326–1333).

1333-1370. CASIMIR III (*the Great*), an astute and cautious statesman He introduced an improved administration, reduced the influence of the German town law (a new law code published), developed national defense and promoted trade and industry (extensive privileges to the Jews, 1334) In 1364 he founded a school at Cracow, which became a university in 1400 and the chief intellectual center of eastern Europe.

In **foreign affairs** Casimir abandoned claims to Silesia and Pomerania, turning his attention toward the southeast, where dynastic problems in the Ukraine called forth dangerous rivalry between Poles, Lithuanians, and Hungarians By an agreement with Hungary (1339), Casimir, who had no direct heir, promised that on his death the Polish crown should pass to Louis, the son of Charles Robert of Hungary. Louis was to reconquer the lost territories and to respect the privileges of the Polish nobility This marks the beginning of the disastrous elective system, which gave the magnates an unequaled opportunity for extracting further rights (first real diet — *colloquia* — in 1367) In 1340 Casimir seized Halicz, Lemberg, and Volhynia. War ensued with Lithuania over Volhynia, and ultimately the Poles retained only the western part (1366).

1370-1382. LOUIS (of Anjou). He paid but little attention to Poland, which he governed through regents. To secure the succession to his daughter Maria (married to Sigismund, son of Emperor Charles IV) he granted to the nobility the *Charter of Koszyce* (Kaschau), the basis of far-reaching privileges

1382-1384. Opposition to Sigismund led to the formation of the **Confederation of Radom** and civil war between the factions of the nobility

1384-1399. JADWIGA (Hedwig), a daughter of Louis, was elected queen.

1386. Marriage of Jadwiga to Jagiello, Grand Duke of Lithuania, who promised to become a Christian and to unite his duchy (three times the size of Poland) with the Polish crown As a matter of fact, though the marriage prepared the way for union, Jagiello was obliged to recognize his cousin, **Witold,** as Grand Duke of Lithuania, and the connection continued to be tenuous.

1386-1434. JAGIELLO (title **Vladislav V**). He had great difficulty in keeping his fractious nobility in order and in 1433 was obliged to grant the *Charter of Cracow*, reaffirming and extending their privileges.

1410, July 15. BATTLE OF TANNENBERG (Grunwald), a great victory of the Poles, using Bohemian mercenaries under John Ziska and supported by the Russians and even the Tatars, against the Teutonic Knights. The Poles thereupon devastated Prussia, but Jagiello, unable to keep his vassals in order, concluded the

1411, Feb. 1. FIRST PEACE OF THORN, which left matters much as they were and failed to secure for the Poles an access to the Baltic.

1434-1444. VLADISLAV VI, son of Jagiello, succeeded to the throne Since he was only ten years old, the country was ruled by a regency Vladislav's brother, Casimir, was offered the Bohemian throne by the Hussites (1438), and Vladislav himself became **King of Hungary** (1440) Thenceforth he devoted himself to Hungarian affairs, leaving Poland in the hands of the magnates Vladislav lost his life in 1444 at the **battle of Varna** (p 326) against the Turks.

1444-1447. An interregnum, followed by the reign of

1447-1492 CASIMIR IV, brother of Vladislav He was able to make use of a rift between the great nobles (magnates) and the gentry (*szlachta*) The *Statute of Nieszawa* greatly limited the power of the former and granted substantial rights to the latter (no laws to be passed, no war to be declared without their consent). At the same time the independence of the church was curtailed (bishops to be appointed by the king).

1454-1466. War against the Teutonic Order. The Poles took advantage of the Prussian Union (Prussian nobles and towns in opposition to the Order). The war was carried on in desultory fashion, marked by constant shifting of the feudal forces and of the mercenaries from side to side, but the Poles ultimately gained the upper hand and secured

1466, Oct. 19. THE SECOND PEACE OF THORN, by which Poland finally secured an outlet to the Baltic. Poland acquired Kulm, Michelau, Pomerania, Marienburg, Elbing, and Christburg. The Order became a vassal of the Polish crown, and half its membership became Polish.

1471-1516. Vladislav, the son of Casimir, became King of Bohemia, which involved a long and indecisive war with Hungary (1471–1478) Eventually Vladislav became King of Hungary also (1490)

(*Cont p* 413)

b. LITHUANIA

Of the early history of Lithuania little is known. The numerous heathen tribes were first brought to some degree of unity by the threat of the German Knights (after 1230)

c. **1240-1263. Mindovg**, one of the Lithuanian chieftains, in order to deprive the Knights of their crusading purpose, accepted Christianity and was given a crown by Pope Innocent IV. He later broke with the Teutonic Order (1260) and relapsed into paganism. He was killed by one of his competitors Of the following period almost nothing is known

1293-1316 Viten re-established a Lithuanian state.

1316-1341. GEDYMIN, the real founder of Lithuania. Blocked by the Germans on the Baltic, he took advantage of the weakness of the Russian principalities to extend his control to the east and south (acquisition of Polotsk, Minsk, and the middle-Dnieper region). **Vilno** became the capital of the new state.

1341-1377. OLGERD, the son of Gedymin, was the ablest of the dynasty. Defeated by the Knights (1360) he too turned eastward Siding with Tver in the dynastic conflicts of Russia, he advanced several times to the very outskirts of Moscow. During his reign the domain of Lithuania was extended as far as the Black Sea, where Olgerd defeated the Tatars (1368).

1377-1434. JAGIELLO, the son of Olgerd, married Jadwiga of Poland (1386) and established the **personal union with Poland.** Through him Lithuania became converted to Roman Catholicism and the Polish and Lithuanian nobility gradually became assimilated In 1387 and 1389 Moldavia and Wallachia, and in 1396 Bessarabia accepted Lithuanian suzerainty.

1398. Jagiello was obliged to recognize his cousin, **Vitovt** (Witold) as Grand Duke of Lithuania Vitovt hoped to re-establish the independence of the country from Poland, but his failure in a crusade against the Tatars greatly weakened him.

1447. Casimir IV of Poland, having been Grand Duke of Lithuania before his accession, once again united the grand duchy and the Polish kingdom.

(*Cont. p.* 413)

c. RUSSIA, 1263-1505

The period following the death of **Alexander Nevski** (1263) was marked by the continued and repeated disruption of the Russian lands, due to the complicated and unfortunate system of succession in the princely family. Russia was under the **suzerainty of the Tatars,** who played off one candidate against another, thus increasing the confusion and perpetuating the weakness of the country. The **rise of Moscow** (first mentioned 1147) to prominence among the Russian principalities was perhaps the most important development looking toward the future. Centrally located, Moscow was in the most favorable position to serve as nucleus for a revived Russian state.

1325-1341. IVAN I KALITA (*Moneybag*), Grand Prince of Moscow. His was the first of a series of noteworthy reigns. Extremely cautious and parsimonious, Ivan bought immunity from Tatar interference and was ultimately entrusted by the Tatars with the collection of tribute from the other princes

1341-1353. Simeon I continued the policy of his predecessor and was placed, by the Tatar overlord, above all the other princes.

1353-1359. Ivan II Krasnyi (*the Red*).

1359-1389. DMITRI DONSKOI (of the Don), who ascended the princely throne at the age of nine His reign was filled with a struggle against **Michael of Tver,** his chief rival, who was supported by Olgerd of Lithuania At the same time he began the conflict with the Tatars, whose power was fading, but who also enjoyed the support of Lithuania.

1380, Sept. 8. THE BATTLE OF KULIKOVO. Dmitri completely defeated the Tatar armies before the Lithuanians arrived The victory was in no sense decisive, for the Tatars on several occasions thereafter advanced to the very gates of Moscow. But Kulikovo broke the prestige of the Tatar arms and marked the turning point

1389-1425. Basil I. He annexed Nishni-Novgorod and continued the struggle with the Tatars and the Lithuanians, without forcing a decision.

1425-1462. Basil II, whose reign was distinguished by a relapse into anarchy. A long civil war with his rivals, Yuri and Shemyaka, was followed by Tatar invasion (1451, the Tatars beaten back from Moscow). Nevertheless the Moscow principality managed to maintain itself. In 1439 Basil refused to accept the union of the Eastern and Western Churches, arranged for at the Council of Florence. Thenceforth the Russian metropolitan, who had moved to Moscow in the time of Ivan Kalita, became more and more the head of an independent Russian Church.

1462-1505. IVAN III (*the Great*), who may be regarded as the first national sovereign of Russia. By a cautious but persistent policy he annexed most of the rival principalities and, after a series of wars, subjected Novgorod, where the patrician elements tended to side with Lithuania In 1471 Novgorod was obliged to renounce the alliance of Lithuania and to pay tribute. After a second war, in 1478, Novgorod's independence was ended and the troublesome upper classes were deported to central Russia In 1494 Ivan drove out the German merchants and closed the Hanseatic Kontor. Thus he acquired the huge territory of Novgorod, extending eastward to the Urals Indirectly he greatly reduced the danger of Lithuanian interference. The annexation of Tver (1485) put an end to the most formidable rival of Moscow.

1472. Marriage of Ivan with Zoe (Sophia), niece of the last Greek emperor of Constantinople. This was arranged by the pope in the hope of bringing the Russians into the Roman Church, but all efforts in that direction failed The marriage was of importance in establishing the claim of Russian rulers to be the successors of the Greek emperors and the protectors of Orthodox Christianity (theory of the Three Romes, of which Moscow was to be the third and last). It also served to introduce into Moscow the Byzantine conception of the autocrat (Ivan took the title of *Tsar*, i.e. Caesar) and the practice of court ceremonial. Rebuilding of the grand ducal palace (Kremlin) with the assistance of Italian architects brought in by Zoé. The court hierarchy (precedence in rank of princes and nobles, etc)

1480. Ivan threw off the Tatar yoke after a last Tatar advance on Moscow. Ivan avoided open warfare, but took advantage of the disunion among the Tatars. The Khan of the Crimea (Mengli Girai) became his ally against the Lithuanians.

1492. Invasion of Lithuania, made possible by dynastic troubles in Lithuania and Poland. A **second invasion** (1501) led to the conclusion of peace in 1503, which brought Russia many of the border territories of White Russia and Little Russia. Moscow had by this time become an important factor in European affairs and enjoyed a considerable prestige. Resumption of active diplomatic relations with western countries (*Cont. p.* 415)

d. HUNGARY, 1301-1490

At the beginning of the 14th century Hungary was already an essentially feudal country, in which the great magnates and the bishops, richly endowed with land, ruled as virtually independent potentates ("little kings"), while the lower nobility, organized in the *Comitats* (provincial governments), had, to a large degree, control of the administration. The nobility, freed of taxation, was responsible for defense, but acted only as it saw fit

1301-1308. The extinction of the Arpad dynasty led to a period of conflict, during which Czech, German, and Italian parties each attempted to put their candidates on the throne. **Wenceslas,** son of the King of Bohemia, only thirteen years old, was first elevated, but could not maintain himself The same fate befell **Otto of Bavaria.**

1308-1342. CHARLES I (Charles Robert of Anjou), a grandson of Mary, the daughter of Stephen V, was elected and founded the brilliant and successful **Anjou line.** Charles established his capital at Visegrad and introduced Italian chivalry and western influences. After 15 years of effort he succeeded in subduing the "little kings" of whom **Mathias of Csak** and **Ladislas of Transylvania** were the most powerful. Recognizing the hopelessness of suppressing the nobility entirely, he regulated its position and obliged it to furnish specified contingents to the army. Regulation of taxation (first direct tax); encouragement of towns and trade Charles left the royal power well entrenched, but only as part of an avowedly feudal order.

1342-1382. LOUIS (*the Great*), the son of Charles, a patron of learning who established a brilliant court at Buda. He attempted to solidify the position of his house in Naples and embarked on a successful expedition to Italy to avenge the murder of his brother Andrew (1347). In conjunction with Genoa he carried on a long struggle with Venice, which ended in the **Peace of 1381:** Venice ceded Dalmatia and paid tribute In the east the Hungarian power made itself felt throughout the Balkans. Serbia, Wallachia, and Moldavia recognized the suzerainty of Louis; foundation of the border districts (*banats*) south of the Danube and the Save, as protection against the Turkish advance. **War against the Turks:** Hungarian victory in northern Bulgaria (1366).

1370. Louis became King of Poland but paid little attention to his new obligations. In Hungary he continued the work of his father. the *jus avaticum* (1351) restricted the freedom of the great magnates to dispose of their property.

1382-1385. Mary of Anjou, queen She was married to Sigismund of Luxemburg, who became guardian of the kingdom. His position was challenged by

Charles of Durazzo and Naples, who had many adherents, especially in southern Hungary and Croatia

1385-1386. **Charles II** (of Naples). He was assassinated after a very brief reign, which led to a new revolt in Croatia.

1387-1437. **SIGISMUND** (of Luxemburg), who became German Emperor in 1410 and King of Bohemia in 1436 His reign marked a great decline in the royal power, due in large measure to Sigismund's constant absence from the country and his practice of selling royal domains in order to get money for his far-reaching schemes elsewhere. In general Sigismund relied on the towns and lesser nobility against the great magnates (who imprisoned him for four months in 1401). Hence the grant of ever greater rights to the Comitats

1396. The disastrous **crusade of Nicopolis** against the Turks (p. 326). Loss of Dalmatia to the Venetians. Hussite invasions of Hungary, resulting from Sigismund's attempts to gain the Bohemian throne.

1437-1439. **Albert of Hapsburg,** the son of Sigismund, also German Emperor and King of Bohemia. He was obliged to sign far-reaching capitulations (nobles not obliged to fight beyond the frontiers).

1437. **First victory of John Hunyadi** over the Turks. Hunyadi was a powerful frontier lord of uncertain origin

1440-1444. **Vladislav I** (Vladislav VI of Poland), a weak ruler, whose reign was distinguished chiefly by the continued victories of Hunyadi (1443) Crusade against the Turks

1444, Nov. 10. **Disaster at Varna** and death of Vladislav.

1444-1457. **Ladislas V,** the son of Albert of Hapsburg, also King of Bohemia. He was only four years old at his accession and Hunyadi was therefore appointed governor of the kingdom until 1552

1456. **Crusade against the Turks,** preached by John of Capistrano and led by Hunyadi. The Turks were turned back from the siege of Belgrade, but Hunyadi died in the same year

1458-1490. **MATHIAS CORVINUS** (*the Just*), the son of John Hunyadi and one of the greatest of the Hungarian kings. He was fifteen at his election, but soon distinguished himself as a soldier, statesman, and patron of art and learning. Intelligent, firm, crafty, yet just and noble, he re-established the power of the crown and made Hungary the dominant power in central Europe, if only for the brief space of his reign. He once again broke the power of the oligarchs and drew on the support of the lesser nobility. Development of a central administration; regulation and increase of the taxes Great wealth and luxury of the court. The *Bibliotheca Corvina*, consisting of more than 10,000 manuscripts and books, many beautifully illuminated by Italian artists. Mathias the patron of Renaissance learning. Famous law code (1486). Creation of a standing army (*Black Troop*), composed first of Bohemian, Moravian, and Silesian mercenaries. This gave Mathias one of the most effective fighting forces in the Europe of his day. **Mathias' aims:** to secure the Bohemian throne and ultimately the empire and then to direct a united central Europe against the Turks Long struggles against **George Podiebrad** of Bohemia ended with George's death in 1471, after Mathias had been proclaimed King of Bohemia (1470). Equally prolonged struggle against Emperor Frederick III, who had been elected King of Hungary by a faction of nobles in 1439. Frederick was finally bought off (1462), but trouble continued. Mathias, disposing of much greater funds and forces than Frederick, conquered not only Silesia and Moravia, but also lower Austria His capital established at Vienna (1485). Mathias died at 47, leaving Hungary the dominant state in central Europe and a decisive factor in European diplomacy (*Cont p.* 419.)

e. THE SERBIAN STATES, 1276-1499

By the end of the 13th century the Serbian states, like others of eastern Europe, had evolved a strong secular and clerical aristocracy which, to a large extent, controlled even the more outstanding rulers. In view of the general unsettlement of the law regarding succession and inheritance, the tendency toward dynastic conflict and territorial disruption was very pronounced In the western Balkans the situation was further complicated by the rivalry of the western and eastern forms of Christianity, to say nothing of the persistence of the heretical Bogomil teaching, especially in Bosnia.

1276-1281. **Dragutin,** with the aid of the Hungarians, seized the Serbian throne from his father, **Urosh I.** Having been defeated in battle

by the Greeks, he abdicated after a short rule

1281-1321. **Milyutin** (*Stephen Urosh II*), the brother of Dragutin He was a pious and yet dissolute ruler, but above all a political and religious opportunist Taking full advantage of the growing weakness of the Byzantine Empire, he gradually extended his possessions in Macedonia, along the Adriatic, and, in the north, toward the Danube and the Save.

1321-1331. **Stephen Dechanski** (*Stephen Urosh III*), the illegitimate son of the preceding. His reign was marked chiefly by the great victory of the Serbs over the Greeks and Bulgarians near **Kustendil** (Velbuzhde) in 1330. The Serbs now held most of the Vaidai Valley.

1331-1355. **STEPHEN DUSHAN** (*Stephen Urosh IV*), the greatest of the Serbian rulers in the Middle Ages Dushan began his career by deposing his father, who was strangled soon afterward For most of his reign he attempted to maintain friendly relations with Hungary and Ragusa, in order to have a free hand to exploit the dynastic war in the Byzantine Empire between the Palaeologi and John Cantacuzene By 1344 he had subjected all of Macedonia, Albania, Thessaly, and Epirus. His daughter was married to the Bulgarian tsar and Bulgaria was under Serbian supremacy

1346. **Dushan** set up his capital at Skoplye (Uskub) and proclaimed himself *Emperor of the Serbs, Greeks, Bulgars, and Albanians* At the same time he set up a Serbian patriarchate at Peč (Ipek), for which he was anathematized by the Greek patriarch. Dushan established a court wholly Byzantine in character, with elaborate titles and ceremonial In the years 1349–1354 he drew up his famous law code (*Zabonnik*), which gives an invaluable picture of Serbian conditions and culture at the time

1349. Attack upon Dushan by the ruler of Bosnia This led to the invasion of Bosnia by the Serbs, who found much support among the Bogomils, resentful of the Catholic proclivities of their rulers. The conquest of Bosnia was not completed because of Dushan's diversion elsewhere

1353. Dushan defeated Louis of Hungary, who had been instigated by the pope to lead a Catholic crusade. The Serbs now acquired Belgrade.

1355. Dushan died at the age of 46 as he was en route to Constantinople. Thus perished his hope of succeeding to the imperial throne and consolidating the Balkans in the face of the growing power of the Ottoman Turks (p 325).

1355-1371. **Stephen Urosh V,** a weak ruler who was faced, from the outset, by the disruptive ambitions of his uncle Simeon and other powerful magnates He was the last of the Nemanyid house.

1358. Hungary obtained most of Dalmatia, after defeating Venice. Ragusa became a Hungarian protectorate.

1371. **Battle of the Maritza River,** in which the Turks, having settled in Thrace, defeated a combination of Serbian lords

1371. Zeta (Montenegro) became a separate principality under the Balsha family (until 1421).

1371-1389. **Lazar I,** of the Hrebelyanovich family, became *Prince* of Serbia.

1375. The Greek patriarch finally recognized the Patriarchate of Peč.

1376. **TVRTKO I,** Lord of Bosnia from 1353–1391, proclaimed himself *King of Serbia and Bosnia*, taking over parts of western Serbia and controlling most of the Adriatic coast, excepting Zara and Ragusa. Tvrtko was the greatest of the Bosnian rulers and made his state for a time the strongest Slavic state in the Balkans

1389, June 20 (traditional June 15). **BATTLE OF KOSSOVO,** a decisive date in all Balkan history Prince Lazar, at the head of a coalition of Serbs, Bosnians, Albanians, and Wallachians, attempted to stop the advance of the Turks under Murad I Murad was killed by a Serb who posed as a traitor, but his son Bayazid won a victory. Lazar was captured and killed, due to the reputed desertion of Vuk Brankovich. Henceforth Serbia was a vassal state of the Turks

1389-1427. **STEPHEN LAZAREVICH,** the son of Lazar I He was a literary person, but withal an able statesman During the early years of his reign he loyally supported the Turks, being present with his forces at the **battles of Nicopolis** (1396) and **Angora** (1402). In return the Turks recognized him as *Despot of Serbia*, and supported him against Hungary and other enemies.

1391. **Death of Tvrtko I** of Bosnia; gradual disintegration of the Bosnian Kingdom.

1392. Venice acquired Durazzo, beginning the process of establishment on the Dalmatian and Albanian coasts. Scutari was acquired in 1396, and when, in 1420, Venice secured **Cattaro,** she pos-

sessed practically all the fortified coast towns

1393. Hungary recovered Croatia and Dalmatia from the Bosnian Kingdom Hungarian campaigns against Bosnia itself continued for years, until the native elements in 1416 called in the Turks

1427-1456. GEORGE BRANKOVICH, the nephew of Stephen Lazarevich, Despot of Serbia He built himself a new capital at Semendria (Smederovo) on the Danube and attempted, with Hungarian support, to hold his own against the Turks This policy led to a Turk invasion (1439) and conquest of the country, the Hungarians, however, saving Belgrade. But in 1444 Brankovich, with the aid of **John Hunyadi** (p 318), recovered his possessions and the Serbian state was recognized in the **Treaty of Szegedin.** Thereafter Brankovich deserted Hunyadi and tried to maintain himself through close relations with the Turks

1456-1458. Lazar III, the son of George Brankovich On his death he left his kingdom to

1458-1459. Stephen Tomashevich, the heir to the Bosnian throne Stephen, as a Roman Catholic, was much disliked by the Serbs, who consequently offered less resistance to the Turks

1459. The Turks definitively conquered and incorporated Serbia with the empire

1463. The Turks overran and conquered Bosnia

1483. Turkish conquest of Herzegovina (Hun).

1499. Conquest of Zeta (Montenegro) by the Turks.

f. THE EASTERN EMPIRE, 1261-1453

After the recapture of Constantinople by the Greeks in 1261, the **Empire of the Palaeologi** was still a relatively small domain, consisting of the former Nicaean Empire, the city of Constantinople and its immediate surroundings, the coastal part of Thrace, southern Macedonia with Thessalonica, the islands of Imbros, Samothrace, Lesbos, and Rhodes. In Anatolia the northeastern part was still held by the Greek Empire of Trebizond, which in the course of the 13th century had managed to hold a balance between the Seljuk Turks and the Mongols and had become the great entrepôt of the eastern trade coming to the Black Sea by way of Persia and Armenia. The city and the court reached its highest prosperity and brilliance under the Emperor **Alexius II** (1297–1330), whose reign was followed by a period of dynastic and factional struggle, marked by unbelievable degeneracy and cruelty. The reign of **John Alexius III** (1350–1390) marked a second period of splendor, but the 15th century was one of decline. The empire came to an end with the Ottoman conquest in 1461 (last ruler, **David,** 1458–1461).

The European territories of the earlier empire were divided between the Greek Despotate of Epirus and the Greek Duchy of Neopatras (Thessaly, Locris), the Latin Duchy of Athens, the Latin Principality of Achaia, and the Venetian Duchy of the Archipelago

1261-1282. MICHAEL VIII (*Palaeologus*). He was the ablest of the Paleologi, a man who devoted himself to the restoration of Byzantine authority throughout the Balkan area, persisting despite many setbacks

1261 Michael established a foothold in the southeastern part of the Peloponnese (Morea), which was widely expanded in the ensuing period. **Mistra** (Misithra) became the capital of a flourishing principality and one of the great centers of late-Byzantine culture.

1262. Michael II of Epirus was forced to recognize the suzerainty of the Constantinople emperor. In a series of campaigns much of the despotate was regained for the empire (Janina taken, 1265)

1264-1265. Constant raids of the Bulgars into Thrace led to a formidable campaign against them and the reconquest of part of Macedonia.

1266. Charles of Anjou became King of Sicily. He made an alliance with Baldwin II, the last Latin emperor, and, through the marriage of his son with the heiress of the Villehardouins, extended his authority over Achaia He soon became the most formidable opponent of the Greeks, for by the **Treaty of Viterbo** (1267) he took over the claims of Baldwin II.

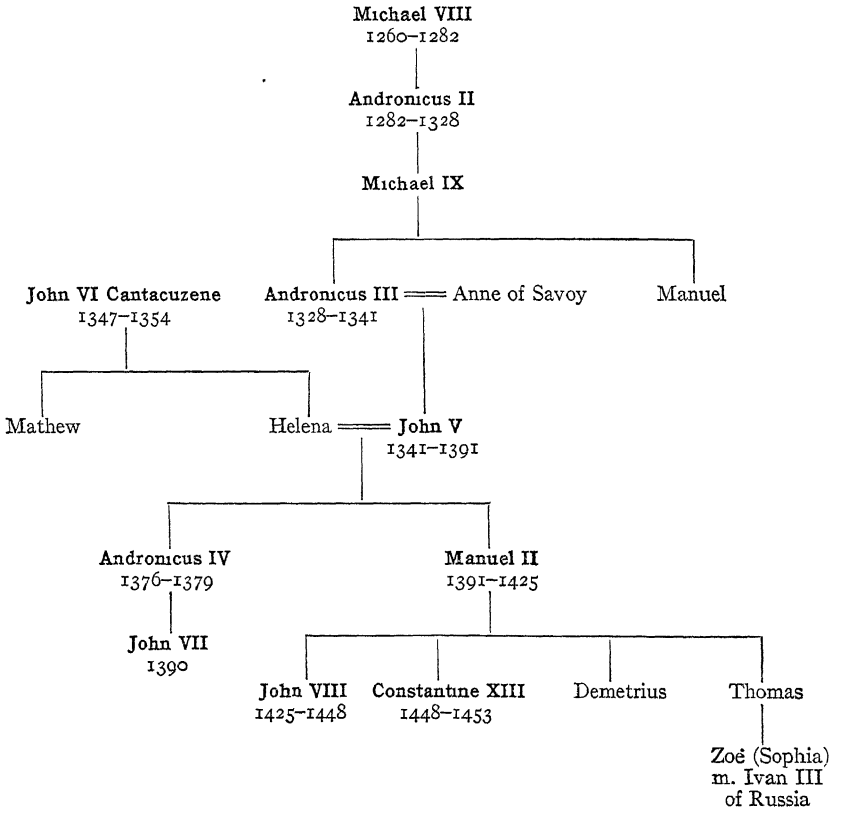
1267. Michael permitted the Genoese to establish themselves at Galata, across from Constantinople This was part of his policy of encouraging the Genoese at the expense of the Venetians, to whom, however, he had to grant privileges also (1268).

1271. Death of Michael II of Epirus. Charles of Anjou had already taken Corfu (1267) and now undertook the conquest of the Epiran coast, the essential base for any advance on Thessalonica and

Constantinople. Durazzo was taken in 1272. **John Angelus,** driven out of Epirus, set up as Lord of Neopatras (to 1295) **Nicephorus I** was the titular ruler of a much-reduced Epiran state (to 1296) Charles of Anjou proclaimed himself *King of Albania* and entered into alliance with the Serbs, who had begun the construction of a large state by advancing down the Vardar Valley

1274. THE COUNCIL OF LYON. Michael, in order to escape from the Angevin danger, accepted the Roman creed and the primacy of the pope, thus effecting the reunion with Rome. This move, purely political in intent, met with vigorous resistance on the part of the Orthodox Greek clergy and in the long run only served to accentuate the antagonism of Greek and Latin

1274. Campaigns of Michael against the Angevins in Epirus. These campaigns were carried on year after year, with varying success



1278. The death of William of Villehardouin, Prince of Achaia, gave the Greeks an opportunity to expand their holding in the south-eastern part.

1281. Michael VIII won a great victory over the Angevins at Berat. Thereupon Charles made an alliance with the papacy and with Venice, with which the Serbs and Bulgars were associated. Michael in reply effected a rapprochement with Peter of Aragon

1282. **The Sicilian Vespers** (p 290). This blow at the Angevin power in Sicily served to relieve the pressure on the Greek Empire.

1282-1328. ANDRONICUS II, the son of Michael, a learned, pious, but weak ruler, whose first move was to give up the hated union

The Palaeologi

with Rome and conciliate the Orthodox clergy.

1285. Venice deserted the Angevin alliance and made a ten-year peace with the Greeks.

1295-1320. MICHAEL IX, son of Andronicus, co-emperor with his father.

1296. The Serbs, continuing their advance, conquered western Macedonia and northern Albania. Andronicus was obliged to recognize these losses (1298)

1302. Peace between the Angevins and the Aragonese. Andronicus, once again exposed to Angevin ambition, engaged **Roger de Flor** and 6000 Catalan mercenaries (the *Catalan Company*) to fight against the Italians. They raised havoc at Constantinople, where 3000 Italians are said to have been killed in the disorders

1304. The Catalans repulsed an attack of the Turks on Philadelphia, but they then turned and attacked Constantinople (1305–1307), without being able to take it.

1305. Murder of Roger de Flor. The Catalan Company became a veritable scourge, roaming through Thrace and Macedonia and laying the country waste.

1311. The Catalans, having advanced into Greece, took the Duchy of Athens, where they set up a dynasty of their own

1321-1328. Civil war between the emperor and his grandson Andronicus. In the course of the struggle much of the empire was devastated

1325. Andronicus was obliged to accept his grandson as co-emperor.

1326. RISE OF THE OTTOMAN TURKS in northwestern Anatolia. In 1326 they took Brusa from the Greeks, and in 1328 Nicomedia (p 325)

1328-1341. ANDRONICUS III, the grandson of Andronicus II, who finally forced the emperor's abdication (d. 1332) Andronicus III was a frivolous and irresponsible ruler, wholly unequal to the great problems presented by the rise of the Turkish and Serb powers (Sultan Orkhan, 1326–1359; Tsar Stephen Dushan, 1331–1355)

1329. The Greeks managed to take the important island of Chios from the Genoese.

1330. The Serbs defeated the Bulgars in a decisive battle and put an end to the Bulgar power.

1334-1335. Andronicus conquered Thessaly and part of Epirus from the despot, John II Orsini.

1336. The Greeks reconquered Lesbos

1340. Stephen Dushan, having conquered the Albanian coastal territory (as far as Valona) from the Angevins, drove the Greeks out of the interior and took Janina.

1341-1376. JOHN V, the son of Andronicus III, ascended the throne as a child, under the regency of his mother, Anna of Savoy

1341-1347. CIVIL WAR IN THE EMPIRE. John Cantacuzene, supported by the aristocratic elements, set himself up as a rival emperor. John V was supported by the popular elements. In the ensuing war much of Thrace and Macedonia was ravaged. The war proved to be the undoing of the empire, since both sides freely called in Serbs or Turks to support them.

1341-1351. THE HESYCHAST CONTROVERSY in the Greek Church, which added to the confusion. The controversy was really a conflict between the mystic teachings emanating from the monasteries of Mt Athos (founded 962 ff.) and the rationalism of the clergy. The Hesychasts (*Zealots*) supported Cantacuzene and were victorious with him In the interval the dispute led to a great popular, almost socialistic rising in Thessalonica, where the extremists set up an almost independent state (1342–1347).

1343. The Venetians, taking advantage of the civil war, seized Smyrna.

1346 Stephen Dushan was crowned Emperor of the Serbs and the Greeks and made preparations to seize Constantinople and replace the Greek dynasty

1347. Cantacuzene managed to take Constantinople, through treachery

1347 1354. JOHN VI (*Cantacuzene*), sole emperor. He made his son Manuel despot of the Morea (1348). The Serbs held all of Macedonia

1351. Stephen Dushan besieged Thessalonica.

1353. The **Ottoman Turks,** called in by Cantacuzene, defeated the Serbs.

1354. The Turks established themselves in Europe, at Gallipoli, thus beginning their phenomenal career of expansion (p 325).

1355. John V took Constantinople and forced the abdication of Cantacuzene (d. 1383). At the same time Dushan, having taken Adrianople, was advancing on the capital. His sudden death (1355)

led to the disintegration of the Serb Empire and to the removal of a great threat to the Greeks. On the other hand, it left the Christians an easier prey to the advancing Turks.

1365. The Turks, having overrun Thrace, took Adrianople, which became their capital.

1366. John V, who had been captured by Tsar Shishman of Bulgaria, was liberated by his cousin, Amadeo of Savoy

1369. John V appeared before the pope at Avignon and agreed to union of the churches, in order to secure the aid of the west against the Turks

1376-1379. ANDRONICUS IV, the son of John V, who dethroned his father with the aid of the Genoese.

1379-1391. John V, supported by the Turks, managed to recover his throne.

1386. The Venetians recovered Corfu, which they held until 1797.

1388. The Venetians purchased Argos and Naupha

1389. **Battle of Kossovo** (p. 319). End of the great Serb Empire.

1390. **John VII,** a grandson of John V, deposed the latter, but after a few months the old emperor was restored by his second son, Manuel

1391-1425. MANUEL II, an able ruler in a hopeless position By this time the empire had been reduced to the city of Constantinople, the city of Thessalonica, and the province of Morea. The Turks held Thrace and Macedonia

1391-1395. The Turks, under Bayazid I, blockaded Constantinople, and only the Christian crusade that ended in the disastrous **battle of Nicopolis** (1396) gave the Greeks some respite

1397. **Bayazid** attacked Constantinople, which was valiantly defended by Marshal Boucicault. This time the advance of the Tatars under Timur distracted the Turks The defeat and capture of Bayazid in the **battle of Angora** (1402), led to a period of confusion and dynastic war among the Turks.

1422. The Turks again attacked Constantinople, because of Manuel's support of the Turkish pretender Mustapha, against Murad II

1423. The Venetians bought the city of Thessalonica.

1425-1448. JOHN VIII, the son of Manuel, whose position was, from the outset, desperate.

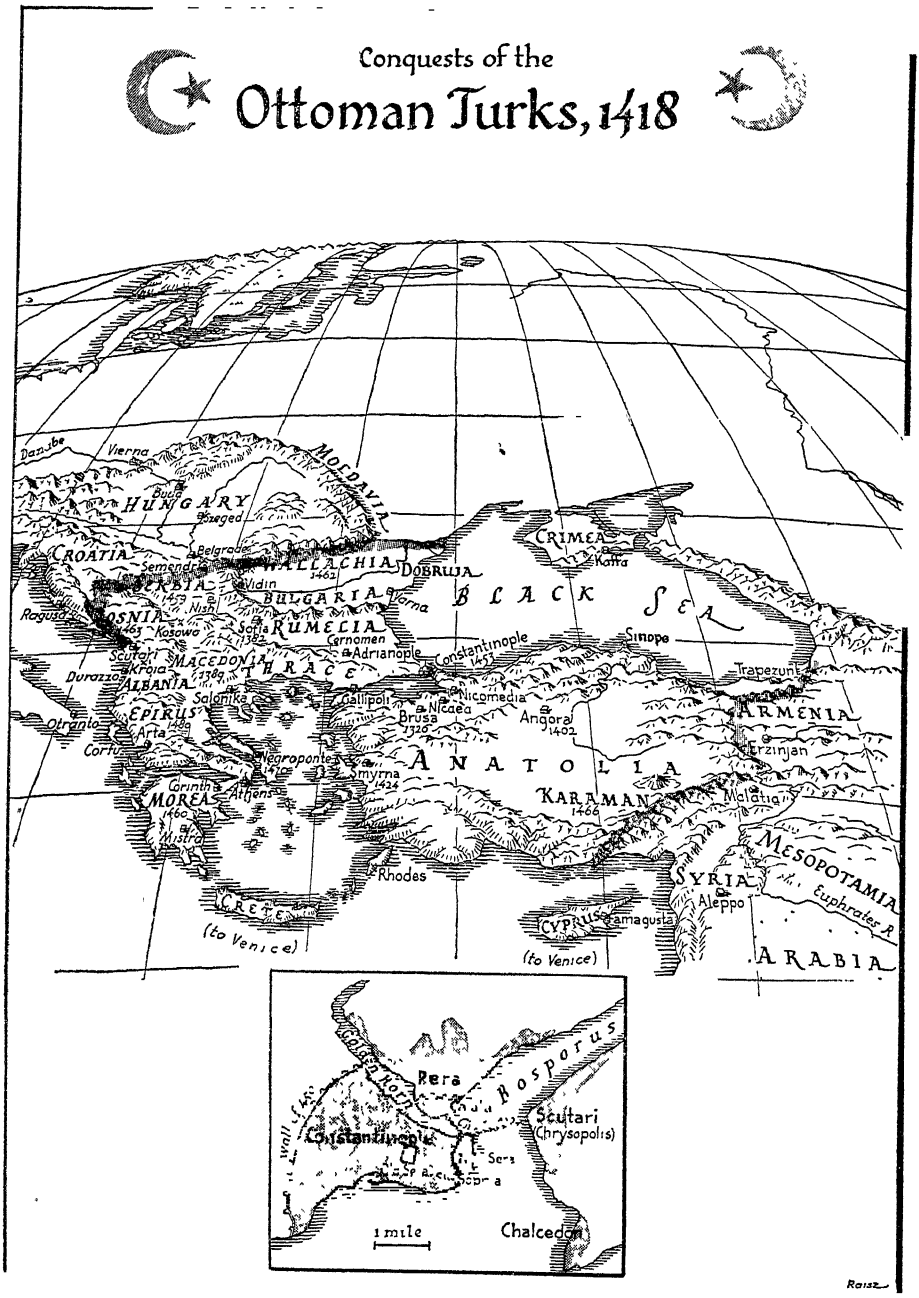
1428. Constantine and Thomas Palaeologus, brothers of the emperor, conquered Frankish Morea, with the exception of the Venetian ports. In these last years the Morea was the most extensive and valuable part of the empire.

1430. The Turks took Thessalonica from the Venetians

1439. THE COUNCIL OF FLORENCE. John VIII, having traveled to Italy, once again accepted the union with Rome and the papal primacy. As on earlier occasions this step raised a storm of opposition among the Greeks and to some extent facilitated the Turk conquests

1444. A second crusade from the west ended in disaster when the Turks won a decisive victory at **Varna.**

1446. The Turks frustrated an attempt of the Greeks to expand from the Morea into central Greece. Corinth fell into Turkish hands.



1448-1453. CONSTANTINE XIII, the last Byzantine emperor.

1453. The siege and capture of **Constantinople** by **Mohammed the Conqueror** (p. 326) **End of Eastern Empire** after a thousand years of existence

1460. Conquest of the Morea by the Turks. End of the rule of the Palaeologi in Greece

1461. Conquest of the Empire of Trebizond, the last Greek state, by the Turks

BYZANTINE CULTURE in the time of the Palaeologi The territorial and political decline of the empire was accompanied by an extraordinary cultural revival, analogous to the Renaissance in Italy The schools of Constantinople flourished and produced a group of outstanding scholars (philosophy **Planudes, Plethon, Bessarion).** In theology the dominant current was one of mysticism (**Gregory Palamas** and the *Hesychasts*, **George Scholarius**) Historical writing reached a high plane in the work of **John Cantacuzene, Nicephorus Gregoras,** and, in the last years of the empire, of **Phrantzes, Ducas, and Chalcocondylas.** Art, especially painting, was distinctly humanized and three different schools (Constantinople, Macedonia, and Crete) cast a flood of splendor over the closing years of the empire. **Mistra,** the capital of the Morean province, became in the early 15th century the center of a revived Greek national feeling and a home of scholars and artists.

g. THE OTTOMAN EMPIRE, 1300-1481

The presence of the Turks in central Asia can be traced back to at least the 6th century A D (**Orchon inscriptions**, dealing with the period 630–680) These Turks, of the Oghuz family, were conquered by the Uighurs in 745 and continued under their rule until 840, when they in turn were conquered by the Kirghiz, coming from the west. In the 9th and 10th centuries the Turks were converted to Islam, and in the 11th century, having pushed their advance into southeastern Russia and Iran, began to attack the Byzantine Empire. The **Seljuks**, a branch of the Turks, took Baghdad in 1055, and in the following two centuries built up an imposing empire in Anatolia and the Middle East (p 254).

1243. The **Mongols**, under **Jenghiz Khan**, defeated the Seljuks at **Kosedagh**. Anatolia under Mongol suzerainty; disintegration of the Seljuk Empire in Anatolia; appearance of local dynasties in many places, especially along the Aegean coast.

1289. Traditional date of the **death of Ertogrul**, half-legendary leader of a Turkish tribe serving as frontier guards on the border of the Byzantine Empire

1290-1326. **OSMAN** (Othman) **I**, traditional founder of the Ottoman dynasty. He continued the work of his father, but gradually extended his territory at the expense of the Byzantine Empire, which was weakened by the transfer of many of its frontier guards to the Balkans. The Turks were almost certainly more civilized and less nomadic than has generally been supposed There is evidence to show that Osman had at his command well-organized forces (*Akhi*, a type of semi-religious and possibly mercantile as well as military society). But the Turkish advance seems to have taken the form of gradual infiltration more than outright conquest

1317-1326. Siege of Brusa by the Ottoman Turks. The town was finally starved into submission.

1326-1359. **ORKHAN I**, the first well-authenticated ruler and obviously the organizer of the empire.

1329. The Turks defeated a Byzantine force under Andronicus III at **Maltepe.**

1331. Nicaea taken by the Turks

1337 or 1338. Nicomedia (Ismid) taken by the Turks.

1345. The Ottomans first crossed into Europe, called in by the Emperor John Cantacuzene, to support his claims against the Empress Anna. Orkhan married Theodora, daughter of Cantacuzene

1349. The Turks again called in by Cantacuzene, to aid him against the Serbian conqueror, Stephen Dushan

1354. **First settlement of the Turks in Europe** (Tzympe, on Gallipoli), as a result of a third appeal by Cantacuzene for aid. They spread rapidly through Thrace. On Orkhan's death the state was already well-organized (first Ottoman coins) and the Turkish ruler was able to dictate to the Byzantine emperors.

1359-1389. **MURAD I.**

1365. Adrianople taken by the Turks, who soon made it their capital (1366), replacing Brusa Organization of the **Janissary corps** (date uncertain) composed of captives taken in war, and later of levies of Christian children.

1365. Ragusa made a commercial treaty with the Turks, paying tribute

1366. **Crusade of Amadeus of Savoy.** He took Gallipoli, but was soon obliged to abandon it. Victory of Louis of Hungary near Vidin.

1369-1372. Conquest of Bulgaria to the Balkan Mountains. Shishman, ruler of Bulgaria, became a vassal of the Turks

1371. Defeat of the Serbs by the Turks at **Cernomen** on the Maritza River; conquest of Macedonia by the Turks. Raids into Albania and Greece. Continued interference of the Turks in Byzantine affairs.

1385. Capture of Sofia by the Turks

1386. Capture of Nish. Lazar of Serbia became a Turkish vassal.

1387. Genoa made a treaty with Murad

1388. Venice made a treaty with the Turks

1389, June 20 (June 15 traditional). **BATTLE OF KOSSOVO.** Murad defeated a coalition of Serbs, Bulgars, Bosnians, Wallachians, and Albanians Lazar was killed in battle, Murad assassinated just after it, by a Serb.

1389-1402. **BAYAZID I.** He began his career by having his brother Yakub strangled The Serbs were treated leniently and Bayazid turned his attention to Anatolia.

1391. Invasion of Karamania (the leading Anatolian emirate) by Bayazid, who conquered part of it. Several of the other emirates peacefully absorbed By 1395 the Ottoman Empire extended east to Sivas.

1391-1398. First siege of Constantinople by the Turks Bayazid made and unmade emperors and extracted a heavy tribute.

1396. **CRUSADE OF NICOPOLIS,** led by Sigismund of Hungary, supported by Balkan rulers and by French, German, and English knights, as well as by the Roman and Avignon popes Venice and Genoa negotiated with both sides The knights assembled with great pomp at Buda and proceeded along the Danube of Nicopolis, pillaging and slaying On Sept. 25 they met the Turks about four miles south of Nicopolis. The knights ignored all advice and pressed forward, after an initial success they were completely overwhelmed and many captured Forces were about 20,000 on each side

1397. Invasion of Greece by the Turks, who advanced as far as Corinth, though they did not take Athens.

1400. Invasion of Anatolia by the Mongols under **Timur** (p 330). They took Sivas. Provocative attitude of **Bayazid.**

1402, July 20. **BATTLE OF ANGORA** (Ankara) Bayazid, deserted by most of his Turkish vassals, was completely defeated and captured Timur restored many of the Turkish emirs and advanced to Nicaea and Brusa. The Ottoman Empire on the verge of dissolution. Dispute of Bayazid's sons for the succession.

1403. **Mohammed** defeated his brother **Musa** and became sultan of the remaining Asiatic possessions (retirement of Timur from Anatolia, 1403). **Suleiman** became sultan of the European territory.

1405. Suleiman crossed to Anatolia and drove Mohammed into the mountains Most of the emirs reinstituted by Timur were reduced to obedience.

1406. On Suleiman's return to Europe, Mohammed regained control in Anatolia. He sent his brother Musa to Wallachia to attack Suleiman from the north.

1410. Musa took Adrianople, but was defeated by Suleiman.

1411. Suleiman, having returned to Anatolia, was captured and strangled. His place in Europe was taken by Musa

1413. Mohammed crossed to Europe, defeated and killed Musa, and reestablished his power over the whole empire

1413-1421. **MOHAMMED I** (*the Restorer*). He devoted most of his energy to consolidating his authority.

1416. **First war with Venice,** due chiefly to Turkish activity in the Aegean. The Doge Loredano destroyed a Turkish fleet off Gallipoli, whereupon Mohammed wisely made peace

1421-1451. **MURAD II.**

1422 **Mustafa,** a supposed son of Bayazid, supported by the Greek emperor, John VIII, defeated Murad's troops near Adrianople, but failed to get any support from Anatolia He was ultimately captured and executed. Murad, in revenge, began to besiege Constantinople, but soon gave up the attempt.

1423. The Venetians took over Saloniki from the Greeks, as part of a plan of co-operation against the Turks.

1425-1430. **War between Venice and the Turks.** A Turkish fleet ravaged the Aegean stations of Venice, and in 1430 the Turks took Saloniki. They then conquered most of Albania and Epirus. The Venetians, having become involved in war with Milan, were forced to make peace

1442. The Turks, having invaded Hungary, were defeated by **John Hunyadi,** a frontier lord of uncertain origin, most famous of the fighters against the Turks.

1443. **Crusade against the Turks,** instigated by the pope and composed of Hungary, Poland, Bosnia, Wallachia, and Serbia The crusaders, led by Hunyadi, took Nish and advanced to Sofia Murad thereupon made the ten-year **Truce of Szegedin,** with **Vladislav** of Hungary, by it Serbia was freed and Wallachia abandoned to Hungary

1444. Murad voluntarily abdicated in favor of his fourteen-year-old son, Mohammed The Hungarians, encouraged by the pope, thereupon broke the truce and renewed the crusade (Sept). They advanced through Bulgaria to Varna, where they were to meet the ships of Venice that were to carry them to Constantinople. But the Venetians stayed at Gallipoli and did not even prevent Murad from crossing from Anatolia. Murad resumed the throne and on Nov. 10 completely defeated the crusaders at **Varna** (Vladislav killed).

1448, Oct. 17. **Second battle of Kossovo.** Murad defeated Hunyadi, who had again invaded Serbia

1451-1481. **MOHAMMED II** (*the Conqueror*). He was only 21 when he succeeded his father, but seems to have been unusually well-educated and, like others of the early sultans, a man of pronounced intellectual tastes. From the very outset he devoted his attention to the

capture of Constantinople, the center of intrigue against Turkish rule.

1452. Mohammed completed the **Castle of Europe** (*Rumili Hissar*) at the narrowest point of the Bosporus, opposite the older **Castle of Asia** (*Anadoli Hissar*). This assured freedom of passage between Anatolia and Europe and at the same time controlled the supplies of Constantinople Its erection led to war with the Byzantine emperor, Constantine

1453, Feb.-May. SIEGE OF CONSTANTINOPLE, at that time largely depopulated and very poor Constantine had only some 10,000 men at his command and was unpopular because of his efforts to reunite the eastern and western churches He received some aid from the Venetians and Genoese, but his chief asset was the tremendous wall-system of the city. The Turks concentrated between 100,000 and 150,000 men outside the city They had a substantial fleet, but this was shut out from the Golden Horn by an iron chain. Most important was the heavy artillery, built by a Hungarian renegade, Urban, for Mohammed. The walls were continually bombarded, but the defenders managed to close the breaches Finally Mohammed had some 70 light ships dragged overland from the Bosporus to the Golden Horn. These forced the defenders to divide their attention. On May 29 the Turks delivered a great attack on the Romanos Gate and forced an entry Constantine was killed in the mêlée and many of the defenders escaped on Venetian and Genoese ships. The city was given up to pillage for three days Mohammed tried at first to populate it with Turks, but had indifferent success He then repopulated it with Greeks and other Christians, chiefly artisans, and gave the Greek patriarch, **Gennadios,** considerable civil as well as religious authority over the Orthodox inhabitants throughout the empire Somewhat later similar authority over the Armenian community was given to the Armenian patriarch (millet system) Constantinople (Istambul) soon became the Turkish capital Churches were transformed into mosques (notably **Santa Sophia**) and palaces built (**Old Serai,** completed 1458, **New Serai,** completed 1467). The seat of government became more firmly fixed and Mohammed evolved a complete administrative system, with an elaborate system of training (palace school, slave household). Much of the court ceremonial was borrowed from the Greeks, though the institutions were fundamentally Turk

1456. Mohammed besieged Belgrade, after repeated raids by Hunyadi, who relieved the city, but died soon afterward (Aug). Thereupon Mohammed subdued Serbia (1456–1458) and Bosnia and Herzegovina (1458–1461), where many of the upper classes accepted Islam. In the same years the Turkish fleet took most of the Genoese stations in the Aegean and an army overran the Morea, deposing the last Palaeologi.

1456-1463. The Albanian campaign, against **Scanderbeg** (George Castriota), a *condottiere* educated at the Turkish court, who had escaped in 1443. Scanderbeg was in the pay of Alphonse of Aragon-Naples until 1458 and thereafter in the pay of Venice. He was repeatedly driven back by the Turks, but from his stronghold at Kroia he maintained a vigorous resistance. When he died (1467), Albania was quickly conquered and incorporated in the empire

1463-1479. FIRST GREAT WAR BETWEEN THE TURKS AND VENICE, resulting from interference with trade and from the Turkish threat to the Venetian stations on the Greek and Albanian coasts. The humanist pope, Aeneas Silvius (Pius II), attempted to organize a crusade and Hungary joined Venice. But only a small and miscellaneous force was collected at Ancona

1468. The Turks raided Dalmatia and invaded Croatia.

1470, July. The Turks, with a huge fleet and landing force, conquered Negroponte (Euboea) from the Venetians

1473. The Venetians induced the Persians to attack the Turks, while they raided the Anatolian coasts. The Persians were defeated at Erzingan.

1477-1478. The Turks took Kroia, Alessio, and Drivasto in Albania. Scutari was twice besieged and Turkish raiders reached the very outskirts of Venice.

1479. Peace between Venice and the Turks. The Venetians gave up Scutari and their Albanian stations, but they kept Dulcigno, Antivari, and Durazzo, they gave up Negroponte and Lemnos and paid an annual tribute of 10,000 ducats for permission to trade in the Black Sea

1480. A Turkish force occupied Otranto in southern Italy.

1480-1481. Siege of **Rhodes,** held by the Knights of St John, last Christian outpost in the eastern Mediterranean. Mohammed died before the siege could be successfully completed.

(*Cont p.* 420)

D. AFRICA DURING THE MIDDLE AGES

AFRICA

(*For the history of Mediterranean Africa see pp.* 262-263)

The earliest history of Africa is shrouded in obscurity. In the north the original inhabitants appear to have been of some white stock (the ancestors of the Berbers), while south of the Sahara the country was populated by Negrillos, a small race of Negroes of whom the Pygmies, Bushmen, and Hottentots are probably the descendants The Negrillos were evidently pushed to the northwest and south by a great invasion (possibly c. 30,000 B.C.) of a larger Negro race arriving from the other side of the Indian Ocean and landing on the central part of the eastern coast. From the newcomers the Bantu derive. A second great invasion from overseas followed and pushed the Negrillos even farther to the west, though there seems to have been much intermixture in the region north of the equator, forming the various Sudanese tribes. In all likelihood there was also a good deal of infiltration of Semitic stocks into the northern part of the continent, both west (Carthage) and east (Syria). The earlier inhabitants were chiefly hunters, but the Negro invaders brought pastoral and agricultural pursuits and introduced polished stone and iron. Very few monuments of the earlier ages have survived The great stone ruins (**Zimbabwe**) of Rhodesia have been variously dated from the 10th century B.C to the 15th century A.D They may have been built by the Bantu, though the weight of expert opinion seems to favor the Sabeans from the Yemen (10th century A D) or Dravidians from India

c. 1st to 6th century A.D. The Kingdom of Axum in northern Ethiopia and in southwestern Arabia (obelisks of Axum), direct contact with the Greek world, conversion of the country to Christianity by **Frumentius** (early 4th century). The connection with the Christian east was broken by the Arab conquests (640–)

640-710. CONQUEST OF NORTH AFRICA BY THE ARABS, beginning with Egypt and spreading westward (p. 184 et seq).

c. 980. Settlement of Arabs from Muscat and Persians from Shiraz and Bushire along the eastern coast, south as far as Cape Corrientes They founded the towns of Mogdishu, Melinde, Mombasa, Kilwa (Quiloa), and Sofala and traded with the natives of the interior in slaves, ivory, and gold that was shipped to India and Arabia

10th century. Apogee of the Kingdom of Ghana (capital Kumbi), which had been founded in the 4th century, supposedly by people of Semitic extraction. It extended from near the Atlantic coast almost to Timbuktu and was an essentially Negro state consisting of a group of federated tribes with a surprisingly developed culture (visits of the Arabs Ibn Haukal and Masudi in the late 10th century). There appears to have been an active trade with Morocco by way of the Sahara

1054. Beginning of the **Islamic conquest** of West Africa by the Almoravids under Abdallah ben Yassin Several of the native dynasties were converted, though the masses appear to have retained their original beliefs

1076. The Almoravids pillaged Kumbi, the capital of Ghana, which never entirely recovered Its decline was evidently hastened by the growing barrenness of the region The **breakup of the Ghana Empire** led to the formation (11th century) of succession states (Diara, which existed till 1754), Soso, the two Mossi states south of the bend of the Niger, and Manding. The ruler of Manding was converted to Islam, as was also the ruler of Songhoy, a great empire which sprang up (c 690) on the middle Niger and came to divide West Africa with Manding

1203. Sumanguru, greatest of the rulers of Soso, plundered Kumbi.

1224. Sumanguru conquered and annexed Manding.

1235. Sun Diata, powerful king of the Mandingos, defeated the ruler of Soso and re-established his independence. In 1240 he destroyed Kumbi

1307-1332. Apogee of the Mandingo Empire under **Gongo Musa,** who extended his dominions until they covered

most of West Africa, after defeating and subjecting the Songhoy Empire (1325) Brilliant culture of Timbuktu (founded 12th cent)

1352-1353. The great Arab traveler, **Ibn Batuta,** having crossed the Sahara, visited the Mandingo Empire, of which he wrote a description

1433. The Tuaregs from the Sahara took and sacked Timbuktu

1433. **The Portuguese explorers** first rounded Cape Bojador, beginning a long series of expeditions along the coast (p 363)

1468. The Songhoy ruler recaptured Timbuktu from the Tuaregs

1471. The Portuguese founded the post of San Jorge d'el Mina on the Guinea coast

1487. The Portuguese reached Timbuktu overland from the coast

1490. The Portuguese ascended the Congo for about 200 miles and converted the King of the Congo Empire (14th cent.–) They established a post at **São Salvador** and exercised a wide influence in the region until the end of the 16th century.

1493-1529. **Greatness of the Songhoy Empire** under **Askia Mohammed,** who conquered the larger part of the Mandingo Empire and pushed his conquests to the east beyond the Niger. Visit of Leo Africanus (1507)

1505-1507. The Portuguese took Sofala and Kilwa from the Arabs and founded Mozambique In 1513 they ascended the Zambezi, establishing posts at Sena and Tete Missionaries probably penetrated much of the hinterland, but details are not known.

(*Cont p* 363)

E. ASIA DURING THE MIDDLE AGES

1. PERSIA

1349. The end of the troubled reign of **Nushirwan** was also the end of the dynasty of the Il-Khans of Persia They were succeeded by

1336-1411. The Jalayrs, in Iraq and Azerbaijan,

1313-1393. The Muzaffarids in Fars, Kirman and Kurdistan,

1337-1381. The Sarbadarids in Khorasan. The Muzaffarids and Sarbadarids were overthrown by Timur, and the Jalayrs by

1378-1469. The **Turkomans of the Black Sheep,** who ruled Azerbaijan and Armenia until they were succeeded by

1387-1502. The **Turkomans of the White Sheep.**

1369-1405. TIMUR (*Tamerlane*), the vizier of the Mongol Chagatay Khan Suyurghatmish, usurped the power of his master Between the years 1380 and 1387 he overran Khorasan, Jurjan, Mazandaran, Sijistan, Afghanistan, Fars, Azerbaijan, and Kurdistan In 1391 he completely defeated Toqtamish, the Khan of the Golden Horde.

1393. Timur took Baghdad and reduced Mesopotamia After an invasion of India (1397) he marched against Anatolia and routed the Ottoman Turks at **Angora** (p. 326) The empire of the Timurids (until 1500) was soon restricted to Transoxania and eastern Persia

1404-1447. SHAH RUKH, fourth son of Timur, whose reign was noted for its splendor. He carried on successful campaigns against Kara Yusuf, head of the Turkoman dynasty of the Black Sheep (1390–1420), who ruled Azerbaijan, Shirvan, and other regions of the northwest Kara Yusuf was obliged to recognize the suzerainty of the Timurids, though Kara Yusuf and his successor, Kara Iskender (1420–1438), and Jehan Shah (1435–1467) were effective rulers of all northwestern Persia Jehan Shah for a brief period (1458) held even Herat.

1452-1469. Abu Said, last of the Timurid dynasty This period was marked by the great expansion of the Turkoman power under

1453-1478. UZUN HASAN, of the dynasty of the White Sheep This dynasty had established itself under Hasan's grandfather, Osman Beg Kara Iluk (d 1435) and ruled the territory about Diabekr Hasan rapidly extended his authority over Armenia and Kurdistan His defeat by the Ottoman Turks (1461) turned his attention eastward, and led to five large-scale raids into Georgia

1467. Uzun Hasan defeated and killed Jehan Shah of the Black Sheep and took over his territories

1469. Uzun defeated, captured, and killed Abu Said, the Timurid sultan, who had marched against him Thereupon Hasan became effective ruler of Armenia, Kurdistan, Azerbaijan, and Iran. He entered with Venice into a treaty directed against the Ottoman Turks, but the artillery that was sent him never reached him, and he was defeated by Mohammed II in

1473. The battle of Terchan. On his death he was succeeded by his son

1478-1490. JAQUB, who continued his father's policies and gave the country firm and enlightened rule

1492-1497. RUSTAM SHAH, who succeeded to the throne after a severe dynastic conflict His death was followed by confusion and by the emergence of the new Safavid dynasty, under Shah Ismail.

(*Cont. p* 526.)

2. INDIA

a. NORTHERN INDIA

The **White Huns** or Hephthalites, a branch of the Mongol Juan-juan who dominated Central Asia (407–553), had occupied Bactria (425) and, after defeat by Sassanid Bahram Gor (428), Gandhara Victory over Sassanid Peroz (484) freed them for raids from the Punjab into Hindustan.

c. **500-502.** **Toramana** ruled as far as Eran (E Malwa, inscrip. of his 1st year)

502-c. 528. **Mihirakula** from Sialkot controlled Gwalior (inscrip. of 15th year) and Kashmir Bhanugupta probably expelled him from Eran (510) Yasodharman of Mandasor (?) boasts (533) of victory over him. Although the Huns in Central Asia were crushed by Turks and Sassanians (553–567), their chiefs kept rank in the Punjab and Rajputana till the 11th century.

606-647. **HARSHA,** fourth King of Thaneswar north of Delhi (new era Oct. 606), succeeded his brother-in-law as King of Kanauj (royal title 612), and quickly conquered an empire across northern India, to which he left no heir He received an embassy (643) from the Emperor T'ang T'ai-tsung A poet and dramatist, he patronized men of letters He is well known through **Bana's** poetic romance *Harshacharita*, which is fashionably studded with recondite vocabulary drawn from lexicons of rare words, and by the *Hsi yu chi* (*Record of Western Lands*) of his guest, the pilgrim **Hsuan-tsang,** whose exact observations in India (630–643) have given priceless guidance to modern archaeology Hsuan-tsang too, after long study at Nalanda, brought together in his *Vijnaptimatratasiddhi*, the classic anthology of texts and comment of the Yogachara or Dharmalakshana school.

Tantrism meanwhile sought to secure for its adepts in magic arts, through esoteric texts (*tantra*) and charms, rapid attainment of Buddhahood or at least supernatural powers Partial syncretism with Sivaism led to a cult of Vairochana and various new divinities, largely terrible or erotic Spells (*dharanis*) appear early (Ch. trans. 4th cent), but the *Panchakrama* is in part the work of Sakyamitra (c 850) Tantrism seems to have flourished chiefly along the northern borderland Buddhism, however, progressively disappeared from India from the 9th century, lingering in Bengal and Bihar until the Moslem conquest (1202). It was largely absorbed by Hinduism or united with it

647. **A second Chinese embassy,** under Wang Hsuan-tse, having been attacked by a usurper on a local throne (Tirhut, north of Patna ?), secured 7000 troops from Amsuvarman, King of Nepal, and 1200 from his son-in-law, Srongtsan-sgampo, King of Tibet, captured the malefactor, and haled him to Ch'angan (648).

c. **730-c. 740.** **YASOVARMAN,** King of Kanauj, an author, patronized the Prakrit poet **Vakpatiraja** and **Bhavabhuti,** a Sanskrit dramatist ranked by Indian criticism next to **Kalidasa.**

c. **725-1197.** The Pala Buddhist kings ruled Bengal (till c. 1125) and Magadha. Leading rulers Dharmapala (c 770–c. 833), and Devapala (c 883–c 881), who endowed a monastery founded at Nalanda by Balaputradeva, King of Sumatra

c. **1125-c. 1225?** Senas from the Carnatic gradually advanced from North Orissa into Bengal

c. **1169-c. 1199.** Lakshmanasena patronized Jayadeva, whose *Gitagovinda*, mystic call to love of Krishna, is hailed by Keith as a world masterpiece in union of sound with sense Tightening of caste restrictions was accompanied by origin of **kulinism:** prohibition of marriage of any girl below her own caste, which led to infanticide, and rise in caste by marriage to man of higher caste, which led to polygamy of high-caste husbands to collect dowries.

b. WESTERN INDIA

Western India, thanks to many impregnable fortresses in Rajputana, was usually divided among local dynasties from the time of the Gupta power to the advent of the Mohammedans

c. **490-766.** **A dynasty of Maitrakas,** foreigners of the Rajput type, usually independent at Valabhi in Surashtra, created a Buddhist scholastic center which rivaled Nalanda Their gifts reveal that Buddhist images were honored with *puja* of the kind devoted to Hindu gods.

c. **550-861.** **THE GURJARA** horde of central Asiatic nomads established a dynasty of twelve kings at Mandor in central Rajputana. Two retired to Jain contemplation, and a third to self-starvation.

712- **Arab raids** from Sind devastated Gujerat and Broach (724–743) and finally shattered the Maitraka dynasty (766).

c. **740-1036.** **THE GURJARA-PRATIHARA DYNASTY,** by uniting much of northern India, excluded the Moslems till the end of the 10th century Prominent early rulers were Nagabhata I (c. 740–c 760), who defeated the Arabs, Vatsaraja (c 775–c 800), and Nagabhata II (c 800–836), conqueror of Kanauj.

746-c. 974. The Chapas (or Chapotkatas), a Gurjara clan, founded Anahillapura (or Anandapura, 746), the

principal city of western India until the 15th century.

831-1310. A Dravidian dynasty of Chandellas (in present Bundelkhand) built numerous Vaishnava temples, notably at Khajuraho, under Yasovarman (c 930–954) and Dhanga (954–1002)

c. 840-c. 890. Mihira, or Bhoja, devoted to Vishnu and the Sun, ruled from the Sutlej to the Narmada, but failed to subdue Kashmir

c. 950-c. 1200. The Paramaras of Dhara, near Indore, were known for two rulers. Munja (974–c. 994) who invaded the Deccan, and Bhoja (c. 1018–1060), author of books on astronomy, poetics, and architecture, and founder of a Sanskrit college

c 974-c. 1240. The Chalukya or Solanki Rajput clan, led by Mularaja (known dates 974–995) ruled from Anahillapura over Surashtra and Mt Abu

977-1186. The Ghaznavid (Yamini) **dynasty** ruled at Ghazni and Lahore It was founded by **Subaktagin** (977–997), a Turkish slave converted to Islam, who extended his rule from the Oxus to the Indus and broke the power of a Hindu confederacy which included King Jaipal of Bhatinda, the Gurjara-Prathihara King of Kanauj, and the Chandella King Dhanga.

998-1030. MAHMUD OF GHAZNI made 17 plundering raids into the Punjab (defeat of Jaipal, 1001) to Kangra (1009), Mathura and Kanauj (1018–19), Gwalior (1022), and Somnath (1024–26) Vast destruction, pillage of immensely rich Hindu temples, and wholesale massacre resulted only in enrichment of Ghazni and annexation of the Punjab Ghazni, heir to the rich artistic heritage of the Samanids of northeastern Persia, was now one of the most brilliant capitals of the Islamic world **Alberuni** (973–1048) of Khiva, the leading scientist of his time, followed Mahmud to the Punjab, learned Sanskrit, and wrote the invaluable *Tahkik-i Hind* (*Inquiry into India*).

1093-1143. The Chalukya ruler, **Jayasimha Siddharaja,** a patron of letters, although himself a Saiva, organized disputations on philosophy and religion, and favored a Jain monk, **Hemachandra,** who converted and dominated

1143-1172. Kumarapala. As a good Jain, he decreed respect for life (*ahimsa*), prohibited alcohol, dice, and animal fights, and rescinded a law for confiscation of property of widows without sons. He also built (c 1169) a new edifice about the Saiva temple of Somanatha, which had been reconstructed by **Bhimadeva I** (1022–1062) after destruction by the Moslems

1151-1206. The Shansabani Persian Princes of Ghur (Ghor) having burned Ghazni (1151), drove the Yamini to the Punjab and deposed them there (1186)

1172-1176. Ajayapala, a Saiva reactionary, ordered the massacre of Jains and sack of their temples until he was assassinated, when Jain rule was restored under a mayor of the palace whose descendants displaced the dynasty (c 1240)

Two Jain temples at Mt. Abu are the work of a governor, **Vimala Saha** (1031), and a minister **Tejpala** (1230) Built of white marble with a profusion of ornamented colonnades, brackets, and elaborately carved ceilings, they are the most elegant version of the northern or Indo-Aryan architectural style

Kashmir, already (c 100 A D) an important home of the Sarvastivadin Buddhist sect, remained a center for Buddhist studies (till the 10th cent, degenerate before the Moslem conquest, 1340) and of Sanskrit literature (until today). Its history from c 700 is rather fully known through the *Rajatarangini* of **Kalhana** (c 1100), the sole early Indian historian who consulted literary sources and inscriptions but accepted even absurd tradition without criticism

1175-1206. Mohammed of Ghur, Mu'izz-ud-Din, undertook conquest of Hindustan by capture of Multan and Uch. He ruled from Ghazni as governor for his elder brother, **Ghiyas-ud-Din Mohammed,** whom he succeeded as ruler of Ghur (1203)

1192. A battle at Taraori (14 m from Thanesar) decisively crushed a new Hindu confederacy led by the Chauhan King of Ajmer and Delhi. Cumbersome traditional tactics, disunited command, and caste restrictions handicapped the Hindu armies in conflict with the mounted archers from the northwest Victory led to occupation of Delhi (1193), to conquest of Bihar where the organized Buddhist community was extinguished (c 1197), Bengal (c 1199), and the Chandella state in Bundelkhand Mohammed appointed **Kutb-ud-din Aibak,** a slave from Turkestan, viceroy of his Indian conquests, and left him full discretion (1192, confirmed 1195).

1206-1266. A dynasty of slave kings, the first of six to rule at Delhi (until 1526), was founded by Aibak (killed playing polo, 1210).

The numerically weak early Moslem rulers in India were forced to employ Hindu troops and civilian agents, welcome allegiance of Hindu landholders, and afford their native subjects much the same limited protection (including tacit religious toleration) and justice to which they were accustomed. Rebels, both Hindu and Moslem, were slaughtered with ruthless barbarity.

1211-1236. Shams-ud-din Iltutmish, ablest slave and son-in-law of Aibak, succeeded to his lands in the Ganges Valley only, but recovered the upper Punjab (1217), Bengal (1225), the lower Punjab with Sind (1228), and Gwalior after a long siege (Feb–Dec 1232) He advanced to sack Ujjain (1234)

1229. He was invested as Sultan of India by the Abbasid Caliph of Baghdad

Islamic architects brought to India a developed tradition of a spacious, light, and airy prayer chamber covered by arch, vault, and dome, erected with aid of concrete and mortar, and ornamented solely with color and flat linear, usually conventional, decoration. This formula was applied with recognition of local structural styles and of the excellence of Hindu ornamental design. Aibak built at Delhi (1193–96) with the spoils of 27 temples a mosque of Hindu appearance to which he added (1198) an Islamic screen of arches framed with Indian carving. He began (before 1206) a tower for call to prayer, which was finished (1231–32) and named *Kutb Minar* to honor a Moslem saint (d 1235) by Iltutmish, who also enlarged the mosque in strictly Islamic style.

Upon the death of Iltutmish actual power passed to a group of 40 Turks who divided all offices save that of sultan, and controlled the succession

1266-1290. A new dynasty at Delhi was founded by **Balban** (d 1287), a slave purchased by Iltutmish (1233); made chamberlain (1242), father-in-law and lieutenant (1249–52 and 1255–66) of King Mahmud (1246–1266). Balban as king, aided by an effective army and corps of royal news-writers, repressed the 40 nobles, ended highway robbery in south and east, and rebellion in Bengal His son repelled the Mongols established in Ghazni (since 1221), but was killed by them (1285).

The **tomb of Balban** is the first structure in India built with true arches instead of Hindu corbelling

1290-1320. The Khalji dynasty of Delhi was founded by **Firuz** of the Khalji tribe of Turks, long resident among the Afghans. Senile mildness led him to release in Bengal 1000 Thugs (murderers in honor of Siva's consort Kali) captured in Delhi.

1296-1316. Ala-ud-din, his nephew and murderer, bought allegiance with booty secured by surprise attack upon Devagiri in Maharashtra (1294–95). He consolidated the empire.

1297. He conquered and despoiled Gujarat with its rich port Cambay. Frequent revolts prompted a program of repression which included espionage, confiscation of wealth (esp of Hindus), endowments and tax-exempt lands, prohibition of liquor and all social gatherings. Mongol invasions (1299 and 1303) led to

1303. Decrees which by fixing low prices for all products permitted reduction of army pay and increase of strength to nearly 500,000 cavalry Mongol armies were destroyed (1304 and 1306) and expeditions, usually led by a eunuch, Kafur, entitled Malik Naib, effected

1305-1313. Conquest of Malwa (1305) and the Deccan· Devagiri (1306–1307, annexed 1313), Warangal (1308), the Hoysala capital at Dvarasamudra and that of the Pandyas at Madura (1310–11), and the central Deccan (1313), with enormous treasure.

The *Alai Darwaza* (1311), southern gateway of a proposed vast enlargement of Aibak's mosque, represents the finest ornamental architecture of the early Delhi sultanate, fortunately continued in Gujarat **Amir Khusrav** (1253–1325), greatest Indian poet to write in Persian, was son of a Turk who had fled before Jenghiz Khan to Patiala He was prolific as court poet to Ala-ud-din and later in religious retirement Another excellent Persian poet of Delhi was **Hasan-i-Dihlavi,** who died at Daulatabad (1338)

1320-1413. The Tughluk dynasty was founded by the old but vigorous **Ghiyas-ud-din Tughluk** (d 1325), a pure Turk who boasted 29 victories over the Mongols He reduced to provincial status Warangal (1323) and eastern Bengal (1324) He encouraged agriculture, corrected abuses in tax collection, and perfected a postal system by which runners covered 200 miles a day At Multan he erected a splendid octagonal tomb of Persian character for the saint, Rukn-i-Alam Increasing austerity marked the architecture of his house.

1325-1351. Mohammed Tughluk hastened to the throne by deliberate parricide A half-mad military genius, his administrative measures were warped and defeated by his own unwisdom, inordinate

pride, inflexibility, and ferocious indiscriminate cruelty. Revolt of a cousin in the Deccan (1326) led to

1327. Transfer of the capital to Devagiri, renamed *Daulatabad*, handsomely rebuilt with European feudal fortifications about an impregnable rock citadel. As a punitive measure

1329. All remaining citizens of Delhi were forced to move thither He raised taxes so high in the Doab as to force rebellion and then destroyed both fields and cultivators.

1330. Emission of copper fiat money equivalent to the silver *tanga* of 140 grains failed because of easy counterfeiting

1334. **Ibn Batuta**, a Moorish traveler, was welcomed with fantastic gifts like other foreigners who might help in world conquest. He left on a mission to China (1342).

1334-1378. Madura revolted under a Moslem dynasty, ended by Vijayanagar

1337-38. An army of 100,000 horse, sent through Kangra into the Himalaya to conquer Tibet and China, was destroyed by rains, disease, and hill-men, and with it resources needed to avert

1338. **Loss of Bengal** to the house of Balban, independent until 1539. Moslem architects used at Gaur, its capital, local brick and terra cotta to build, e g., the bold Dakhil Gateway (1459–74?)

1340. Mohammed sought recognition (received 1344) from the caliph in Egypt He vainly tried to restore prosperity by redistricting, and appointing undertakers to supervise fixed (unscientific) crop rotation, and to maintain a mounted militia Increased penal severity culminated when he began

1344-45. Wholesale extermination of his centurions, revenue collectors who usually failed to meet his quotas. Rebellion begun by them in Gujarat led to permanent loss of the whole South.

1346-1589. **Shah Mirza** (1346–1349) founded a Moslem dynasty in Kashmir. He substituted the usual land tax of one-sixth for the extortionate rates of the Hindu kings.

1347-1527. **The Bahmani dynasty**, founded by rebels against Mohammed Tughluk, who elected **Bahman Shah** (1347–1348), at first ruled four provinces. Gulbarga, Daubatabad, Berar, and Bidar. The capital at Gulbarga and many other fortresses were built or strengthened with European science to serve against Gujerat, Malwa, and Khandesh in the northwest, the Gonds, Orissa, and Telingana in the northeast, and Vijayanagar in the south.

1351-1388. **Firuz Tughluk** (b 1305) restored rational administration. He exacted tribute from Orissa (1360), Kangra (1361), and Sind (1363) He refused to disturb the Bahmani Kingdom of the Deccan, its tributary Warangal, or the rebels from it, the Khans of Khandesh between the Tapti and Narbada (independent 1382). He built several towns, notably Jaunpur north of Benares (1359), many mosques, palaces, hospitals, baths, tanks, canals, and bridges, but with cheap materials and little artistic quality. His successors were too weak to prevent further dissolution of the empire.

1358-1375. The Bahmani **Mohammed I** gave lasting organization to the government of the new dynasty.

1363-1364. Warangal was forced to cede Golconda, with much treasure.

1367. Victory of the Bahmani over immense but ineffectual armies of Vijayanagar It was the first of several successes and was won with artillery served by Europeans and Ottoman Turks. The subsequent massacre of 400,000 Hindus led to agreement to spare noncombatants The **Great Mosque at Gulbarga** was completely roofed with domes.

1392-1531. Malwa (formally independent in 1401) was ruled by the Ghuris and the Khaljis (1436) **Hushang Shah** (1405–1435) fortified the capital at Mandu above the Narbada, and erected there the durbar hall *Hindola Mahall*, together with a great mosque. These buildings are impressive through structural design rather than surface ornament.

1394-1479. Jaunpur, with Oudh, became independent under the Sharki (eastern) dynasty, founded by the eunuch, Malik Sarvar, and his adopted sons, probably of African Negroid descent. The second ruler, **Ibrahim Shah** (1402–1436), was a cultured and liberal patron of learning.

1396-1572. Gujerat prospered under a Moslem Rajput dynasty.

1398-1399. **INVASION OF TIMUR** (*Tamerlane*) of Samarkand, who had already conquered Persia, Mesopotamia, and Afghanistan (p. 330). He desolated the whole Kingdom of Delhi. Crossing the Indus (Sept. 24), he marched 80 miles a

day for two days (Nov. 6–7) to overtake fugitives at Bhatnair, massacred 100,000 Hindu prisoners before Delhi (Dec 12), sacked the city (Dec. 17), stormed Meerut (Jan. 9), and fought his way back along the Himalaya to the Indus (Mar 19).

1411-1442. **Ahmad Shah** built Ahmadabad as a capital and beautified it with the *Tin Darwaza* (Triple Gateway) and *Great Mosque*, one of the most imposing structures in the world

1414-1526. **THE KINGDOM OF DELHI,** reduced to the Jumna Valley, with tenuous control over the Punjab, was ruled by the Sayyids, who laid nebulous claim to Arab descent from the Prophet, but could collect their revenues only by force. Later the Afghan **Buhlul Lodi** (1451–1489) founded the Lodi dynasty

1420-1470. **Zain-ul-Abidin,** learned and tolerant, recalled the exiles, permitted Brahman rites, employed convicts on public works, and exacted communal responsibility for order.

1422-1436. **Ahmad Shah** enrolled 3000 foreign mounted archers, who, like the Turks, Arabs, Mongols, and Persians, when employed as ministers, earned by superior qualities and disdain the envy and hostility (massacre 1446) of the native-born Deccanis, Africans, and Muwallads, half-breed offspring of the latter

1429. **Bidar,** rebuilt under Persian decorative influence, became capital

1458-1511. **Mahmud I,** called *Begarha* (*Two Forts*) because of his conquest of Girnar (with Kathiawar, 1469–1470) and Champanir (near Baroda, 1483–1484), when 700 Hindu Rajputs preferred ritual death (*jauhar*) to Islam He built magnificently and in exquisite taste. the Great Mosque at Champanir, the palace at Sarkhej, the step-well at Adalaj; and the pierced stone window-screens of Sidi Sayyid's mosque The tiny Rani Sipari mosque at Ahmanabad (1514) displays harmonious perfection of the ornamental style.

1463-1482. **Mohammed III** conquered the Konkan and Teligana to both coasts He died at 28 of drink, the curse of nearly all his house, and of remorse at having slain (while drunk) his best minister, Mahmud Gavan, the builder of the large quadrangular college at Bidar

1490. Ahmadnagar (1490–1633), Bijapur (1490–1686), and Berar (1490–1574) became in fact independent of Mahmud (1482–1518), the incompetent prisoner of his minister, Kasim Barid, whose dynasty mounted the throne of Bidar in 1527 (till 1619)

c. SOUTHERN INDIA

100-200. **King Karikalan** of early Tamil poems is credited with construction of a great irrigation dam on the Kaveri River, east of Trichinopoly

c. 300-888. **The Pallava warrior dynasty** of foreign (Pahlava?) origin, using Prakrit and later Sanskrit, held from Kañchi (near Madras) hegemony of the Deccan, which it disputed with the Chalukyas of Vatapi (550–753), the Rashtrakutas of Malkhed (753–973) and the Chalukyas of Vengi (611–1078).

c. 500-753. **The first Chalukya dynasty** in Maharashtra advanced from Aihole on the upper Kistna to near-by Vatapi (or Badami, c. 550) and to Banavasi (566–597) at the expense of the Kadambas. Construction of the earliest temples at Aihole was followed by that of Mahakutesvara (c. 525) and completion of the cave-temple to Vishnu at Vatapi (578).

c. 575. The Pallava **Simhavishnu** seized the Chola basin of the Kaveri, which his family held until after 812.

c. 600-625. The Pallava **Mahendravarman I,** converted from Jainism to Sivaism, destroyed a Jain temple, but dug the first (Saiva) cave-temples in the south (at Trichinopoly, Chingleput, etc.) From his reign date **Buddhist monasteries** (in part excavated) and *stupas* on the Samkaram Hills (near Vizagapatam).

609-642. The Chalukya **Pulakesin II** placed his brother on the throne of Vengi, where he ruled as viceroy (611–632), repulsed an attack by Harsha of Kanauj (c 620), sent an embassy to Khosroes II of Persia (625), and enthroned a son, who headed a branch dynasty in Gujerat and Surat (c 640–740) Hsuan-tsang (641) describes the prosperity of the country just before the Pallavas pillaged the capital (642), a disaster which was avenged by pillage of the Pallava capital, Kañchi, by Vikramaditya (c 674)

611-c. 1078. **The Eastern Chalukyas** of Vengi (independent after 629–632), were continually at war with Kalinga on the north, the Rashtrakutas on the west, and the Pandyas on the south.

c. 625-c. 645. The Pallava **Narasimhavarman** defeated Chalukya Pulakesin II (c 642) and took Vatapi He defeated also his southern neighbors and enthroned Manavalla in Ceylon (?) He improved the port of Mamallapuram, near Kañchi, and cut there the first of five *raths*, mono-

lithic sanctuaries in the form of cars, the earliest monuments of the Dravidian style, also the cliff-relief depicting the descent of the River Ganges from Heaven.

c. 675-c. 705. The Pallava **Narasimhavarman II** built in stone and brick the Shore temple at Mamalla, and the central shrine of the Kailasa temple at Kañchi, completed by his son.

c. 700. Conversion of King Srimaravarman to Sivaism by Tirujnana Sambandhar, the first of 63 *nayanmars* or Tamil saints, led the king to impale 8000 Jains at Madura in a single day, since celebrated by the Saivas Another saint, Manikka Vasagar (9th cent.) wrote poems of his own religious experience which correspond to our *Psalms* The Tamil Vaishnavas, too, had their saints, twelve *alvars*, who also expressed emotional religion and whose works were collected c 1000–1050.

733-746. The Chalukya **Vikramaditya II** thrice took Kañchi, and distributed presents to the temples. He imported Tamil artists and his queen commissioned Gunda, "the best southern architect," to build the temple of Virupaksha The frescoes of Ajanta caves 1 and 2 are believed to date from this period So too the Saiva and Vaishnava sculptures of the Das Avatara cave-temple at Ellora

c. 735-c. 800. Nandivarman II, a collateral kinsman twelve years of age, accepted the Pallava throne offered him by the ministers and elders, who defended him against rival claimants

753-973. The Rashtrakuta dynasty of Canarese kings, already enthroned in North Berar (631) and in Gujerat (c. 700) was elevated to empire by Dantidurga, who soon overthrew the Chalukyas

758-772. Rashtrakuta **Krishnaraja I** cut from the cliff and decorated with Saiva sculpture the Kailasa(natha) temple at Ellora to rival that of Kañchi To the same Canarese dynasty if not to the same reign belong the equally classic Saiva sculptures of the cave-temples at Elephanta (an island in Bombay harbor) The successors of Krishnaraja were Govinda II (779) and Dhruva (783), who defeated the Pallava Nandivarman II and the Gurjara Vatsaraja

774-13th cent. The Eastern Gangas ruled Kalinga, waging constant war with the Chalukyas of Vengi and the Princes of Orissa

c. 788-c. 850. Samkara of Malabar revitalized the Vedanta, creating an unobtrusively new but consistent synthesis of tradition, which he speciously traced to the *Upanishads* and to Badarayana, author of the *Brahma'sutra* His doctrine became accepted as orthodox Brahmanism He taught a rigorous monism (*advaita*) which admits release for the soul only in union with *brahman* through the higher knowledge that the phenomenal world (and individual personality) do not exist save for those who think objectively For these latter, however, engrossed in worldly phenomena (*maya*), he recognized that a simpler kind of knowledge was necessary, and for them he was a practical apostle of Sivaism Although he denounced Buddhism he imitated its moral teaching by opposition to sectarian extravagance, its ecclesiastical strength by organization of an ascetic order for zealous youth (hitherto debarred till later life from religious activity). He founded four scholastic monasteries (*maths*) which still survive at Sringeri (Mysore), Puri (Orissa), Badrinath (the Himalaya), and Dwaraka (western Kathiawar). Ramanuja (c. 1055–1137) of Kañchi (Conjeeveram, near Madras) also interpreted the Vedanta. For him souls are distinct from *brahman*, whose representatives they are, and from the material world with which they are entangled It is through piety toward Vishnu and his saving grace that they may recover their divine nature

c. 790. The Chalukya **Vikramaditya II** was defeated by the Rashtrakuta Dhruva (779–794)

794-813. Rashtrakuta **Govinda III** seized Malwa with Chitor from the Gurjaras, and enthroned his brother as head of a second Rashtrakuta dynasty in Gujerat (till c 900) He took from the Pallava (c 800) tribute and territory as far as the Tungabhadra

c. 812-844. Pallava **Nandivarman III** helped Govinda III to crown Sivamara II as Ganga King of Mysore At the same time

c. 812- Pandya **Varaguna I** imposed suzerainty on the Pallavas

817-877. Rashtrakuta **Amoghavarsha I** moved the capital from Nasik to Malkhed, the better to carry on war against the Vengi He abdicated and died in saintly Jain fashion. The last of his line found death in Jain starvation (982)

c. 825-1312. The Yadavas, early suzerains of a score of petty vassal kings, occupied in turn three capitals (modern) Chandor and Sinnar (1069), both near Nasik, and the fortress of Devagiri (c 1111) renamed Daulatabad (1327) They fell heir to the northern possessions of the Chalukyas of Kalyani.

843-1249. The **Silaharas,** another petty dynasty, under Chalukya or Rashtrakuta suzerainty, provided forty-five kings in three different areas along the west coast north of Goa The Parsis (Parsees), refugees in Kathiawar, had probably already reached Thana near Bombay during the 8th century

844-888. Gunaga **Vijayaditya III** fought successfully against western and northern enemies and by the defeat of the Pallava Aparajita and the Pandya Varaguna II helped the rising Chola to supersede both His association of two brothers as kings-consort led ultimately to succession struggles which placed eight kings on the throne in ten years (918-927)

c. 844-870. Pallava **Nripatungavarman** recovered Tanjore and obtained the submission of Varaguna II (862-) and of Ganga Prithivipati I.

c. 870-888. Pallava **Aparajitavarman,** with Ganga Prithivipati, crushed Varaguna II, but was himself defeated and killed by the Chola Aditya I Numerous Pallava chiefs continued to rule locally Perungina, in the Tamil South, claimed imperial titles for at least 31 years

888-1267. **The Chola dynasty of Tamil kings** from Tanjore, under **Aditya** I (870-c. 906), with the aid of the Chalukyas of Vengi, replaced the Pallavas at Kañchi The Chola territory extended along the east coast from Telugu to the Pandya lands

927-934. A royal inscription is the earliest extant specimen of Telugu literature It records the erection of a Saiva temple and sectarian hostel

973-c. 1190. The Chalukyas of Kalyani (near Bombay) were restored to power by Taila II (or Tailapa), who spent his reign fighting the Cholas and Paramaras

985-1014. Chola **Rajaraja I** acquired hegemony over the Deccan.

994. Conquest of the Cheras and Pandyas justified the title *Thrice-crowned Chola*, marking the first historical union of the southern peninsula

999. The conquest of Vengi drove a usurper from the East Chalukyan throne and was extended (1000) to Kalinga.

1001-1004. A successful **invasion of Ceylon** permitted assignment of Singhalese revenues to the Saiva Great Pagoda of Rajarajesvara, which Rajaraja I built at Tangore, the masterpiece of baroque Dravidian architecture He also endowed a Buddhist monastery built at Negapatam by a king of Srivijaya (Sumatra).

1014-1042. Rajendra Choladeva, who had helped his father since 1002

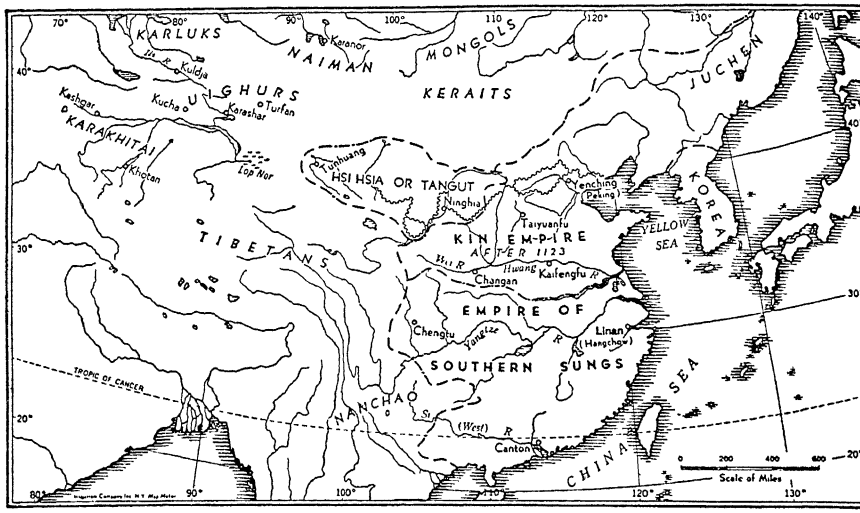
1014-1017. A second invasion of Ceylon secured the regalia and treasure of the Pandya kings, so that a son of the Chola could be consecrated king of Pandya

1024. An **invasion of Bengal** enabled the Chola to assume a new title and establish a new capital near Trichinopoly

c. 1030. By use of sea-power, the Chola exacted tribute from Pegu, Malayur (Malay Peninsula), and the empire of Srivijaya

1040-1068. Rashtrakuta **Somesvara I** founded Kalyani, the capital until c 1156 He drowned himself with Jain rites in the Tungabhadra, a sacred river of the south

1042-1052. Chola **Rajadhiraja I,** who had aided his father since 1018 He was killed in battle at Koppam against Somesvara I of Kalyani.



1062-1070. Chola **Virarajendra** defeated the Chalukyas and gave his daughter to Vikramaditya VI He founded a vedic college and a hospital His two sons fell into conflict and extinguished their line by assassination (1074)

1073-1327. **The Hoysalas,** at first a petty dynasty, ruled at Dvarasamudra (Halebid) in Mysore

1074-1267. **The Chalukya-Chola dynasty,** founded by Rajendra, son and grandson of Chola princesses, King of Vengi (1070-), who took the vacant throne of Kañchi (1074) and thenceforth ruled Vengi through a viceroy His authority was recognized by the Ganga King of Kalinga

1075-1125. **Vikramaditya VI** of Kalyani began a new era in place of the Saka era, but with small success. One of his many inscriptions is at Nagpur in the northern Deccan, while in the south one of his generals repelled the Hoysalas His people enjoyed unwonted security He built temples to Vishnu, but made gifts also to two Buddhist monasteries which must have been among the last in the south to withstand Hindu reaction and absorption **Bilhana of Kashmir,** in return for hospitality, a blue parasol, and an elephant, wrote the *Vikramankacharita* in praise of his host.

1076-1147. **Anantavarman Codaganga** extended his authority from the Ganges to the Godavari, and built at Puri (south of Cuttack) the temple of Jagannath (Vishnu) which, at first open to all Hindu castes, is now barred to fifteen. The great

MAPS FROM STEIGER'S *A HISTORY OF THE FAR EAST* USED BY PERMISSION OF THE PUBLISHERS, GINN AND COMPANY

Sun temple, in form of a solar car, known as the *Black Pagoda*, at Konarak, may be earlier than its attribution to Ganga Narasimha (1238–1264).

1111-1141. **Bittideva,** independent, fought successfully against Chola, Pandya, and Chera. As viceroy before accession he was converted from Jainism to Vishnu by Ramanuja, at that time a refugee from Saiva persecution by the Cholas He began construction at Belur and Halebid of temples in a distinctively ornate Hoysala style, featured especially by a high, richly carved plinth of stellate plan

c. 1150-1323 **The Kakatiyas** reigned in the east at Kakati or Warangal between the Godavari and the Kistna. They held an important kingdom under **Ganapati** (1197–1259) and his daughter (1259–1288), whom Marco Polo knew

c. 1156-1183. A revolt against the Rashtrakuta ruler **Taila III** (known dates 1150–1155) led to usurpation by a general who was soon assassinated by Basava, who was in turn compelled to commit suicide Basava created and organized the Lingayat sect of fanatic, anti-Brahman worshipers of Siva under a phallic emblem The movement at the outset appeared in the form of a religious and social (equalitarian) war

1183. Taila's son **Somesvara IV** regained Kalyani, but was unable to resist the Hoysalas (last date 1189).

1292-1342. The Hoysala ruler **Viraballala III** inherited an empire comprising most of southern India

1327. After sack of Halebid by **Mohammed Tughluk,** Viraballala moved his capital to Tiruvannamalai (South Arcot).

c. 1335-1565. **Vijayanagar** (present Hampi), founded by two brothers from the region of Warangal, fought steadily against the Moslem sultans north of Kistna and Tungabhadra. It became an important center for Brahman studies and for Dravidian nationalism and art. **Madhava** wrote at Sringeri (c. 1380) the *Sarva darsana samgraha,* which remains the classic summary of the various Brahman philosophical points of view.

1520 Division of the Moslems into five rival sultanates (late 15th cent.) gave Krishnadeva (c 1509–1529) a chance to win a victory over the Sultan of Bijapur.

1542-1565. Ramaraja sought to profit by further division of the Moslems but provoked a coalition which crushed him and razed Vijayanagar.

d. CEYLON

846. The capital was moved south to Polonnaruva to escape Tamil invasions, which later culminated in

1001-1017. **The two great invasions** (1001–1004 and 1014–1017) by Chola Rajaraja and his son Rajendra

1065-1120. **Vijayabahu** ruled prosperously despite further incursions (1046, 1055)

1164-1197. **Parakramabahu I** repelled the Tamils (1168), invaded Madura and united the two rival monasteries

1225-1260. **Parakramabahu II** repelled two attacks (c 1236 and c. 1256) by a King of Tambralinga (Ligor on the Straits of Malacca), with Pandya help.

1284. The king sent a relic of the Buddha to Kublai Khan. (*Cont p* 530)

3. CHINA, 618-1471

618-907. **THE T'ANG DYNASTY,** founded by

618-626. **LI YUAN** (T'ai Tsu) and his son Li Shih-min. The T'ang used Loyang and Ch'ang-an as eastern and western capitals Sui institutions were in general retained. The central administrative organization remained essentially unchanged from this time until 1912. The emperor ruled through daily audience with a grand council composed of (1) heads of a secretariat and chancery, which for safety divided transaction of business (a feature later discarded); (2) representatives of the six ministries of civil office, finance, ceremonial, war, justice, and public works, and (3) specially appointed dignitaries. The censorate and nine independent offices, notably a clan court and a criminal high court, together with three technical services including the national college and flood-prevention bureau, reported to him directly. Although the empire was divided into ten (627), later fifteen (733) districts for supervisory purposes, the prefectures (*chou*) depended directly from the central administration, the prefect being responsible for duties corresponding to those of the six ministries. Each prefecture sent an annual quota of candidates to join graduates of two state universities in civil-service examinations. These led to the eighth or

ninth (bottom) ranks in the official hierarchy. Appointment to a corresponding office depended on a further searching examination before each term until the sixth rank was reached Promotion was based on performance.

627-649. **The reign of T'AI TSUNG** (Li Shih-min) is illustrious not alone because of the military conquests which established stimulating contacts with Iranian and Indian civilizations, but still more for the liberal, tolerant spirit of the emperor and his patronage of art and letters.

630. The Eastern Turks, who had attacked Ch'ang-an in 624 and 626, were crushed.

631-648. Chinese suzerainty was acknowledged by the petty states of western and eastern Turkestan. The Western Turks were divided and defeated (641).

635. A Nestorian missionary, A-lo-pen, was officially welcomed to Ch'ang-an; and given (638) both freedom of the empire and an imperial church at the capital

641. A Chinese princess was married to the first King of Tibet, Srong-tsan-sgam-po, and helped convert Tibet to Buddhism, later (after 749) modified by Padmasambhava towards Tantrism

645. **Hsuan-tsang,** returned from a pilgrimage to India, recorded his precise observations, and headed a commission which translated 75 books in 1335 volumes, creating for the purpose a consistent system for transcription of Sanskrit. He introduced the scholastic doctrine of **Vasubandhu** (which still survives), that the visual universe is only a mental image The **Pure Land** or **Lotus School** of Buddhism for the next seventy years enjoyed far more popular favor Based on texts translated in the 2d and 5th centuries, it is called the *Short-Cut School* because it teaches direct salvation by faith in Amitabha and invocation of his name Religious **Taoism,** fully organized on the Buddhist model, now also received imperial patronage on the ground that Lao-tzu, whose surname legend gives as Li, was the ancestor of the ruling house. A 4th century apocryphal text, *Hua Hu Ching,* which claims Lao-tzu to be a prior avatar of Buddha, was actively debated. It was proscribed (668) but again tolerated (696). Imperial commissions completed or newly compiled eight standard histories to bring the series down to date from the Three Kingdoms. Another prepared the first literary encyclopedia, *I Wen Lei Chü*

657-659. **Dispersal of the Western Turks** (T'u-chueh), some of whom eventually migrated across southern Russia to Hungary while others followed Mahmud of Ghazni to India

671-695. I-ching made the pilgrimage to India by sea, stopping to learn Sanskrit in Srivijaya (southeastern Sumatra), a state which became tributary (670–73), and remained powerful until the close of the 14th century

684-704. **Empress Wu** temporarily altered the dynastic title to *Chou* (690–704), and decreed use of capriciously deformed written characters.

712-756. **HSÜAN TSUNG,** popularly known as Ming Huang, ruled over a court of brilliant High Renaissance literary and artistic attainment. He founded the **Academy of Letters** (725) and established schools in every prefecture and district in the empire (738). **Li Po** (705–762) and **Tu Fu** (712–770) created and excelled in lyric verse In painting, continuous composition was substituted for episodic treatment. **Wu Tao-hsuan** (c. 700–760) ranks foremost among figure-painters. **Li Ssu-hsun** (651–c. 720) and **Wang Wei** (698–759) created two of the first and most influential landscape styles. Slackening of genuine religious enthusiasm is conspicuous alike in the tone of Buddhist votive inscriptions and in the monumental realism of the sculpture which becomes increasingly secular, then perfunctory. T'ang potters freely borrowed forms of Iranian flask and ewer, Indian ritual drinking vessel, and Greek amphora They made these resplendent with new colors in soft lead glaze applied over slip with new technical versatility. From about this time dates probably also the first true porcelain with high-fired felspathic glaze. The Buddhists, too, now enlarged the seal and produced wood blocks for printing on paper (earliest extant printed book dated 868).

732. **Manichaeism** was condemned as perverse doctrine, but was permitted to Persians and Tokharians who had introduced it (694 and 719) and who were favored for their competence in astronomy and astrology.

738. The title *King* was conferred on a T'ai ruler who (730) united six principalities as **Nan Chao** with capital at Ta-li (741). After two disastrous efforts at conquest (750 and 754), the T'ang made peace (789–794), leaving the kings of Nan Chao full autonomy. They still had to be repelled, twice from Ch'eng-tu (829 and 874), once from Hanoi (863)

745. Uighur Turks overthrew the Eastern Turks and set up their own empire on the Orkhon, ruling from Ili to Tibet and the Yellow River. Their *kaghan* was given a title and a Chinese princess (758)

747. **Kao Hsien-chih** led an army across the Pamirs and Hindukush, but

751. **Defeat by the Arabs** at Talas lost Turkestan to China.

751-790. Wu-k'ung made the pilgrimage to India through Central Asia on the eve of displacement of Buddhism by Islam

755. **Revolt of An Lu-shan,** a Turkish adventurer who had been adopted by the emperor's favorite concubine, Yang Kuei-fei, and had united three military commands, plunged the empire into particularly sanguinary and destructive civil war

756-757. The emperor fled to I-chou (renamed Ch'eng-tu) which was developed rapidly as a cultural center. He there abdicated in favor of his son. Despite gradual suppression of the rebellion by Kuo Tzu-i and Li Kuang-pi, power remained in hands of territorial military leaders.

762-763. The Uighur kaghan sacked the eastern capital at Loyang, then in rebel hands, but was himself there converted to Manichaeism, which became the Uighur state religion

763. The Tibetans, by a surprise attack, sacked Ch'ang-an. Through fear of the Uighur, who tried to convert the T'ang, Manichaeans were allowed to build temples in the capitals (768) and seven other cities (771 and 807). The kaghans were given rich gifts of silk, and a princess (821)

840-846. **Overthrow of the Uighur Empire** by the Turkish Kirghiz and Karluk led to migration of many tribes from the Orkhon to the Tarim basin, where they carved out a second Uighur empire in which the Turkish language extinguished the Indo-European dialects.

841-846. **The reign of Wu Tsung,** under Taoist influence, was filled with persecution of Manichaeans (843), Buddhists, Nestorians, and Mazdeans (845) Buddhism alone was now naturalized and able to survive. The most prominent place in an epoch of increasing anarchy was taken by the **Ch'an** (Skt. *Dhyana*, Jap. *Zen*) **sect** which offered refuge in introspective contemplation. **Bodhidharma,** an aged Persian who had come to Loyang from India prior to 534, was now hailed as fabulous founder of the school, although in fact he was still obscure as late as 728.

CULTURAL PROGRESS continued despite military alarms. **Wei Pao** was commanded (744) to prepare an authentic version of the *Canon of History* by collation of variant manuscripts It was included, together with all three competing rituals and all three commentaries on the *Annals,* among twelve classics which were cut in stone at Ch'ang-an (836–841). **Han Yü** (768–824) not only wrote excellent poetry, as did **Po Chu-i** (772–846), but created and set the classic model for the essay style The first historical encyclopedia, the *T'ung Tien,* was compiled (766–801) by **Tu Yu;** and the practice of writing monographs on individual prefectures and districts was begun

907-959. **Five dynasties** of short duration asserted imperial authority but seldom exercised it outside the Yellow River Basin Later Liang (907–923), Later T'ang (923–936), Later Tsin (Chin) (936–947), Later Han (947–950), and Later Chou (951–960) Among ten competing secession states the most considerable were southern Han at Canton (904–971), and southern T'ang which from Nanking ruled much of the east and south (937–975)

932-953. **Nine classics were first printed** from wood blocks, as cheap substitute for stone engraving, at the Later T'ang capital at Loyang by **Feng Tao,** who had seen the process in Shu (Szechuan) The text was that of the stone inscriptions of 836–841

907-1123. **KHITAN MONGOLS** under their dynastic founder Ye-lu A-pao-chi (907–926) conquered all Inner Mongolia, the Kingdom of Po Hai in the Liao Valley, and 16 northern districts of China His suzerainty was recognized even by the Uighurs. His son Ye-lu Te-kuang (927–947) both helped set up the Later Tsin dynasty at Ta-liang (modern K'ai-feng) and destroyed it. He took Yen-chou (Peking) as his own southern capital (938), and adopted the Chinese dynastic name *Liao* with periodic reign-titles (947–1125).

960-1279. **THE SUNG DYNASTY** marks the advent of modernity, not only in governmental and social organization, but in thought, belief, literature, and art; not least in the diffusion of learning through print. It was an age of humanism, of scholar statesmen who were at once poets, artists, and philosophers. The first half of the dynasty is often distinguished as the Northern Sung (960–1127) when the capital

was at K'ai-feng, then variously called Ta Liang, more properly Pien-liang, or Pien-ching

960-976. **Chao K'uang-yin** or (Sung) T'ai Tsu gradually restored unity and order under accustomed forms with the help of a paid army.

965. The Annamese secured independence before South China could be subdued and shortly (c 982) sacked the Cham capital Indrapura before Chinese pressure forced them to peace. Although the Chams (c. 1000) moved their capital south to Vijaya (Cha-ban, near Binh-dinh), the Annamese resumed the war (1043) and sacked it also

967. The emperor deliberately refused to invade the territory of the native kings of Nan Chao in Yunnan, a policy observed by his successors He permitted temporary autonomy to the King of Wu Yueh (modern Chekiang) who had retained his throne (897–978) by pledging loyalty to each Chinese dynasty

972 ff. **The Buddhist canon** was printed in Szechuan by imperial order from 130,000 blocks. It was reprinted with additions in Fukien (1080–1104), and elsewhere thereafter

976-997. **T'ai Tsung** completed reunion of the empire (979), but was twice repulsed from Peking by the Liao (979 and 986)

997. Division of the empire into 15 provinces (*lu*) later extended to 18 (1023–31) and 23 (1078–85)

990-1227. **The Western Hsia** (Hsi Hsia) Kingdom of Tangut on the northwest frontier with capital at Ning-hsia appealed often to arms (996, 1001–1003, 1039–1042) despite grant of the imperial surname *Chao* and office (991, 997, 1006) and royal investiture (1044).

1004. An invasion by the Liao reached the Yellow River near Pien-Liang. They were granted annual tribute. These payments, increased in 1042, and the hire of a large standing army bade fair to bankrupt the treasury.

1006. Granaries for emergency relief were established in every prefecture In 1069 grain so stored was valued at 15 million strings of cash

1069-1074. **WANG AN-SHIH** (1021–1086) carried out a program of radical reform with the full confidence of Shen Tsung (1068–85), and in face of bitter opposition of conservative statesmen.

Through a new **financial bureau** (1069) he cut the budget 40% and raised salaries to make honesty possible for ordinary officials. To avoid excessive transport costs and to control prices he empowered the chief transport officer to accept taxes in cash or kind, to sell from the granaries, and to buy in the cheapest market, using capital of 5 million strings of cash. Further to protect poor farmers against usurers and monopolists, loans of cash or grain were offered in spring against crop estimates to be repaid in autumn with interest of 2% a month (moderate in China). Ambitious officials forced these loans upon merchants and others who did not want them Objection to both principle and administration of these measures, which were accompanied by alarming centralization of power and disregard for precedent, led to wholesale resignations and transfers of the best officials whose help alone might have made them successful. **Conscript militia** were organized (1070) and trained for police purposes and national defense The standing army of over a million inefficient men was gradually cut in half By 1076 the militia, volunteer guards, and border bowmen numbered over 7 million men. **Cash assessments** graded in proportion to property were substituted (1071) for compulsory public services which had borne too heavily upon thrifty rural families. The exemption of officials, clergy, and small families was reduced by half. Necessary local services were now performed by paid volunteer agents. **State banking and barter offices** were opened (1072) first at the capital and later in every prefecture, with the object of controlling prices for the popular benefit.

1074-1085. The reform program was continued, despite complaints of excessive cash levies and other malpractices, until the emperor's death, for a time (1075–1076) by Wang himself.

1085-1093. Regency of the hostile grand dowager empress (under the reign title Yuan Yu) and recall of Ssu-ma Kuang, Su Shih, and the conservative faction to rescind the whole of the reform scheme (1085–1086) Extreme reaction in turn provoked reaction On the death of his grandmother,

1093-1100. Che Tsung again favored reform, as did his younger brother

1101-1125. **Hui Tsung** who permitted Ts'ai Ching to proscribe (1102) 98 of the Yuan-Yu partisans, finally (1104) 309 conservatives, living and dead, headed by Ssu-ma Kuang Eventually much that was good in the measures of 1070 and 1071 was retained. Hui Tsung, himself an able painter, was an active patron of the arts and letters He founded the imperial academy of painting, and sponsored catalogues

of his collections of painting and of archaic bronzes, some of which were obtained by excavation.

The Northern Sung is the golden age of **landscape painting**, when compositions of majestic breadth and exquisite detail were rendered in monochrome and color on long rolls or broad panels of silk **Tung Yuan** (late 10th cent.) and **Kuo Hsi** (c 1020–90) combined mastery of continuous composition and linear technique with that of suggestion of atmosphere through gradations of ink-tone **Li Kung-lin** (c. 1040–1106) excelled in vigorous contrasts of light and shade, of broad and delicate line, and in airy architectural renderings in ruled and measured style **Mi Fei** (1051–1107) used hardly any lines, building mountains and forests from graded accumulations of blobs of ink

Scholarship flourished no less Two great encyclopedias were compiled by imperial order, the *T'ai P'ing Yu Lan* (977–983) and the *Ts'e Fu Yuan Kuei* (1005–1013) **Ou-yang Hsiu** (1007–1072), a prominent statesman, prepared the *New History of the T'ang*, the first repertory of early inscriptions, and a monograph on the peony. **Ssu-ma Kuang's** greatest work is an integrated history of China, 403 B C–A D 959, compiled 1066–1084. **Su Shih** (1036–1101), better known as **Su Tung-p'o**, was distinguished as an independent statesman, and one of China's greatest essayists, poets, and calligraphers **Wang An-shih** held his own with these as a brilliant writer of state papers and classical expositor.

Use of tea, first mentioned as substitute for wine under the Wu dynasty (222–280), spread through North China

It is not known when or by whom the **principle of magnetic polarity**, known to the Chinese at least since the 1st cent. A D, was applied in the mariner's compass with floating needle The Malays in the 16th century employed, like the Chinese, a compass rose with 24 points, in contrast to the Arab rose of 32 points; which suggests, but does not prove, that the Malays received both compass and rose from the north The compass is plainly mentioned by Chinese writers of the early 12th century The volume of maritime commerce swelled greatly as Arabs in the 9th and 10th centuries entered into competition with Persians at Canton and Ch'uan-chou (Zayton), later at Lin-an It was trade in cotton goods which brought 70 families of Jews from Persia and India to settle at the capital Pien-liang, where they remained unmolested until gradually absorbed

1114-1234. Jurchen Tungus tribes overthrew their Khitan rulers in Manchuria (1114–16) and, with short-sighted Chinese aid, seized all the Liao lands in China (1122–23). Ye-lu Ta-shih of the Khitan led the remnant of his people to found a new state, Kara-Khitai, in eastern Turkestan (1130) and Turkestan proper (1141–1211). Meantime

1122. The Jurchen prince declared himself emperor of the **Chin (or Kin) dynasty.** He attacked the Sung so vigorously that although

1125 Hui Tsung abdicated in favor of his son,

1126. Ch'in Tsung and his father were both captured with the entire court in the capital. Hui Tsung died in captivity (1135).

1127-1279. THE SOUTHERN SUNG. A junior prince fled southeastward across the Long River from city to city, even by sea to Wen-chou, but, when the Chin retired north of the Long River (1130) and set up the puppet buffer state of Ch'i (1130–37), the capital was established (1135) at Lin-an (modern Hang-chou). The gallant general Yueh Fei won several successes until put to death by Ch'in Kuei who made

1141. A peace dictated by economic exhaustion, accepting as frontier the line of the Huai and upper Han rivers.

1161. Explosives were used by **Yu Yün-wen** in defeating the Chin at Ts'ai-shih (in Anhuei near Nanking) The Chin, like the Liao before them, avidly absorbed and adopted Chinese culture.

Early Chinese philosophers devoted nearly all their effort to the practical study of ethics. Buddhism, however, insistently raised the problems of ontology and epistemology. It is the merit of the Sung philosophers to have achieved a synthesis of ancient ethics with a new rationalized metaphysics. **Chou Tun-i** (1017–1073) revived a diagram of the ancient diviners to illustrate his conception of causation: emergence of paired forces from primal unity, and differentiation of natural phenomena by their interaction. **Ch'eng Hao** (1032–1085), the leading member of a commission which initiated the valuable Public Services Act of 1071, was in philosophy a mystic synthesist who found benevolence in all things. His brother **Ch'eng I** (1033–1107) was an analyst who discovered in the *Li Chi* the *Ta Hsueh* or "Great Learning," a short work on method which stresses knowledge as essential to self-improvement on which all human welfare depends. Ideas of the school were systematized and crystallized by **Chu Hsi** (1130–1200), who equated as universals

Primary Unity, an impersonal but just and benevolent Heaven, and Righteousness, which correspond to the physical, metaphysical, and ethical spheres From these proceed as co-ordinates the dual modes of production, the decrees of Heaven, and the processes of self-improvement. The final products are, respectively, the diversity of natural phenomena, conscience, and character. All these activities of parallel evolution are expressions of a universal divine law. Acceptance of knowledge as an element in self-improvement, and consequent emphasis on objective study, pointed the way towards scientific research; but this tendency was promptly combated by **Lu Chiu-yuan** (1139–1192), who stressed the teaching of Mencius that goodness springs from within.

Painters under the Southern Sung reproduced most often the mild misty landscapes of the Hang-chou region rather than the beetling crags found south of Ch'ang-an which had often inspired northern artists **Ma Yüan** (1190–1224), **Hsia Kuei** (c. 1180–1230), and their school placed special emphasis on economy of line and representation of mists and clouds Secular painters came increasingly under domination of conventions which grew up in the academy founded by Hui Tsung, and elegance, charm, and impeccable taste tended to replace more virile virtues; but religious painters, both Buddhist and Taoist, continued to produce vigorous work until the close of the dynasty **Ch'en Jung** (c. 1235–1255) ranks as China's greatest painter of dragons.

Sung ceramists applied to pottery and porcelain in forms of subtle and sophisticated elegance both incised and molded decoration, together with a wide variety of high-fired glazes, some of which have never since been equaled. Although most wares were ostensibly monochrome, the potters learned to control color-transmutation of their pigments. The potters of Tz'u-chou for the first time employed penciled decoration both under and over glaze

c. 1190-1294. THE MONGOLS. In central Asia Temujin (c. 1155–1227) created a new Mongol empire which was rapidly expanded by strategy and a military machine employing discipline, extreme mobility, espionage, terrorism, and superior siege equipment.

1194. **The Yellow River,** after repeated alterations of its bed, flowed south of the Shantung massif until 1853

1206. **Temujin was proclaimed *Jenghiz Khan*** ("Emperor within the Seas") at Karakorum. He employed as chancellor a Uighur scholar Tatatonga, who applied to Mongol the Uighur script which was derived from Phoenician through Aramaic, Old and New Sogdian. Enforcement of peace and order within the empire promoted both commerce and cultural exchanges

1211-1222. The Chin were driven south to the Yellow River (from Yen-ching, 1215)

1227. After several campaigns (1205, 1207, 1209) the Hsi Hsia Kingdom was destroyed, with massacre at Ning-hsia. Temujin bequeathed the empire to a grandson and three sons to **Batu,** son of his eldest Juchi, Kipchak in Russia; to **Chagatai,** the former Kara-khitai empire, to **Ogedei,** Outer Mongolia, and to Tului (regent 1227–1229), eastern Mongolia and North China

1229-1241. **Ogedei** was elected khan by plenary kurultai on the Kerulen

1231. **Ye-lu Ch'u-ts'ai** (1190–1244), a sinicized scion of the Khitan royal house and adviser to Temujin since 1215, proved his ability to collect taxes in China by traditional methods, and was appointed chancellor Korye (Korea) was conquered and placed under 72 Mongol residents

1233. Pien-liang fell after a flanking campaign by Tului through Han-chung and Szechuan (1231–1232), and a long siege by Sabotai in which the Chin defenders used explosive bombs.

1234. The Chin Empire was annexed. Belated Chinese attack provoked Mongol seizure of Szechuan (1236–1238)

1237. **Ye-lu Ch'u-ts'ai** secured 4030 scholars, one quarter of whom were freed from slavery, through civil service literary examinations, and restored full civilian administration.

1237-1241. Sabotai subjugated Russia and led an invasion through Hungary to Cattaro which was recalled only by death of Ogedei (p. 244)

1246-1248 or 1249. **Guyuk,** son of Ogedei and his widow Turakina (regent 1242–1246), was elected khan in presence of Plano Carpini, envoy of Innocent IV

1251-1259. **Mongka,** son of Tului, was elected over the son of Guyuk's widow (regent 1249–1251).

1252-1253. Mongka's brother Kublai crushed Nan Chao The king was named *maharaja* and hereditary adminis-

trator under the eyes of a Mongol garrison commander and Chinese resident. More autonomy and an imperial princess were conferred in 1284.

1254. Mongka, the son of a Nestorian woman and employer of a Nestorian chancellor, told William of Rubruck, envoy of Louis IX of France, that religions are like the fingers of one hand He yet favored Buddhism, and after public disputation (1255) proscribed Taoist books for forgery Kublai shortly followed this example (1258)

1257. The capital was transferred to Shang-tu, north of present Peking

1258. The Mongols pillaged Hanoi, while, at the other end of the empire, Hulagu with a Nestorian wife and general destroyed the Abbasid Caliphate of Baghdad.

1260-1368. THE YÜAN DYNASTY (as distinguished from the Mongol Empire) was effectively founded when **Kublai** (1214–1294) had himself elected khan by his own army at Shang-tu (1260), although he adopted the dynastic title only in 1271. He ruled in China according to Chinese precedents. His dynastic name is Shih tsu

1264. **The Mongol Empire** was reunited by capture of Kublai's brother Arikboga, who had been proclaimed khan at Karakorum (1260) Twice (1277 and 1287–1288) its unity was defended against Khaidu, head of the house of Ogedei Kublai's authority was respected by his brother Hulagu and the succeeding Ilkhans of Persia, and in theory by the Golden Horde on the Volga. He transferred (1264) the winter capital to Yen-ching where he constructed Khanbaligh, modern Peking (1267). He erected an astronomical observatory on the city wall, wherein were installed bronze instruments cast by Kuo Shou-ching (1279).

1268-1273. A siege of Hsiang-yang and Fan-ch'eng on the Han was ended after 4 years 5 months only by engineers and machines from Mesopotamia. Thereafter the Mongols were free to descend towards the sea

1276. Capitulation of the empress-regent and boy-emperor at Lin-an (Hang-chou) was followed by capture of Canton (twice, 1277) and destruction of a fleet carrying the last youthful Sung pretender (1279)

1281. **Disastrous attack upon Japan.** An assault in 1274 having failed, a Mongol army of 45,000 from Korea joined (June) a tardy armada with 120,000 men from the southern Chinese coast in landing at Hakozaki Bay The invaders were repulsed by the well-prepared Japanese until (Aug 15) a typhoon destroyed their fleets, leaving them to death or slavery.

1282-1283. An army sent by sea from Canton to subdue Champa took the capital Vijaya, but was forced by epidemics to withdraw.

1285 and 1287-1288. Abortive expeditions against Annam and Champa by land and sea were massacred and repulsed, but secured admission of vassalage

1287. The Mongols pillaged Pagan, capital of Burma, received homage (1297), and returned (1300) to pacify competing Shan chiefs.

1292-1293. A naval **expedition to Java**, after temporary success, was forced to re-embark

1294 Tribute was received from the Siamese kingdoms of Xieng-mai and Sukhotai.

1295-1307. **Temur Oljaitu**, grandson of Kublai, was the second and last effective ruler of the Yuan dynasty.

1296. A Mongol embassy accompanied by Chou Ta-kuan found Chen-la (Cambodia) much weakened by the attacks of Sukhotai, which had now become a powerful state under its second ruler Rama Kamhing

ECONOMIC DEVELOPMENTS. Kublai devoted special attention to economic matters: The Grand Canal was restored (1289–1292) from the former Sung capital, Lin-an at Hang-chou (the Kinsay of Marco Polo), now a great and rich city, to the Huai River, and carried north to the outskirts of Peking. Imperial roads were improved, and postal relays of 200,000 horses established Charitable relief was organized (1260) for aged scholars, orphans, and the sick, for whom hospitals were provided (1271). Imperial inspectors every year examined crops and the food supply with a view to purchase when stocks were ample for storage against famine

The T'ang first employed paper money orders, to which the Sung and Chin added various bills of exchange. When issue of paper currency was suggested to Ogedei (1236), Ye-lu Ch'u-ts'ai secured limitation to value of 100,000 oz of silver. Under Kublai, a Mohammedan financier, Saiyid-i Edjill Chams al-Din Omar (1210–1279), kept annual issues at an average of 511,400 oz. (1260–1269) His successor Ahmed Fenaketi increased emissions (1276–1282) to 10,000,000 oz. annually. After Ahmed's murder, inflation increased until a Uighur,

Sanga, reduced the rate of printing to 5,000,000 oz. (1290–1291). Circuit stabilization treasuries (1264 and 1287) were given reserves inadequate to redeem the flood of bills at 2½% discount, the official rate of 1287 The issue of 1260 depreciated until replaced 1 for 5 by that of 1287, which again was replaced 1 for 5 in 1309. All printing was discontinued in 1311; but the credit, financial and moral, of the dynasty was already on the wane The southern provinces of the empire rapidly fell from its control.

Marco Polo, in the service of the khan (1275–1292), traveled widely in Cathay (from Khitai, hence North China), and Manzi (South China), and to Burma (p 362). Through his "Division of the World" he first brought detailed and accurate knowledge of eastern Asia to Europe In his time, and even in that of the Arab, Ibn Battuta (c. 1345), Zayton (Ch'uan-chou) was the busiest deep-sea port in the world, leading Kinsay (Lin-an), Foochow (Fu-chou), and Canton in shipping silks and porcelains to Java, Malaya, Ceylon, India, and Persia in exchange for spices, gems and pearls The itineraries given by Chao Ju-kua (1225) imply in the precision of their bearings the use of a compass needle mounted on a dry pivot

THE MOSLEM COMMUNITIES of Persian and Arab traders at these ports were small compared to those which now grew up in North China and in Yunnan Saiyid-i Edjill as governor of Yunnan (1274–1279) built the first two mosques in what became a stronghold of Islam. Most popular religion with all the Mongols was Buddhism Kublai welcomed a gift of relics of the Buddha from the raja of Ceylon. He conferred the title *Teacher of the State* upon a Tibetan lama Phags-pa, whom he employed to convert the Mongols and to whom he entrusted government of the three provinces of Tibet

NESTORIAN CHRISTIANS enjoyed full protection. The Patriarch of Baghdad created an archbishopric at Peking (1275); churches were built in Chen-kiang (1281), Yang-chou, and Hang-chou, and a special bureau was created (1289) to care for Christianity. **Mar Yabalaha,** pilgrim from Peking to Jerusalem, was elected patriarch (1281), and his companion Rabban Sauma was sent by him and Argun, Ilkhan of Persia, to Rome and France. He negotiated with Pope Nicholas IV an entente between the Nestorian and Roman churches **John of Montecorvino** was the first of several Roman missionaries to China (1294–1328). He baptized 5000 converts and was named by the pope (1307) Archbishop of Peking. He received a three-year visit from **Oderic of Pordenone** who reported to Europe the custom of foot-binding, which had spread through South China under the Southern Sung, but which was unknown to the Chin and early Yuan

LITERATURE: the Mongol period introduced the novel and the drama, the latter accompanied by raucous percussion music. Although neither was at once admitted as a form of polite letters, both are now recognized to possess artistic merit

PAINTING. one group of artists continued traditions of the Southern Sung while another boldly swept away the mists which had shrouded landscape **Ch'ien Hsuan** (1235–c 1290) is perhaps the greatest painter of flowers and insects. **Chao Meng-fu** (1254–1322) was particularly adept at depicting the horses and other live-stock which were prominent in Mongol economy Yuan porcelain reveals in arabesques no less than in the technique of penciling in cobalt blue directly on clear white paste the debt of Chinese potters to Persian models. From these also is derived the Byzantine form of cloisonné enamel

1368-1644. THE MING DYNASTY was founded by **Chu Yuan-chang** (Ming T'ai Tsu, 1328–1398), a monk turned insurgent amidst anarchy, who seized Chiang-ning (Nanking) in 1356, set up there an orderly government, and proceeded to annex the holdings of surrounding southern war-lords until in 1368 he was strong enough to drive the Mongols from Peking with Shensi, Kansu (1369) and Szechuan (1371). Like all the emperors of this and the following dynasty he ruled under a single reign-title, *Hung-wu* (1368–1398), which is accordingly often used instead of his personal name.

1382. Yunnan was completely conquered, and its prince executed at Nanking The whole territory of China was now under direct government.

1388. The Mongols were driven from Karakorum and defeated on the Kerulen.

1392-1910. The Li dynasty was founded in Korea upon the ruins of that of Wang, which had reigned since 918 (p. 349)

1403-1424. The Yung Lo reign of Ch'eng Tsu was established by violence against his nephew, who disappeared in a palace fire (1402).

1403-1433. A series of naval expeditions through the southern seas was motivated by desire for commerce and military prestige, but also by uneasiness

lest the deposed nephew emerge thence to claim his throne. Secret inquiry by Hu Jung within the empire also was protracted (1407–1416, 1419–1423). A claimant actually appeared in Honan in 1440

1405-1407. **Cheng Ho,** the chief eunuch (a Mohammedan whose real surname was Ma), brought back in chains the Prince of Palembang (Sumatra), who had been defeated in battle, as he did

1408-1411. **The King of Ceylon** and his family, who had attacked the mission. As a result of

1412-1415. **A third cruise** as far as Hormuz, sixteen southern states sent tribute. Cheng Ho was appointed to lead three more embassies during this reign 1416–1419 (as far as Aden), 1421–1422, and 1424 Other eunuchs led additional missions

1410, 1414, 1422-1424 Campaigns into Outer Mongolia were directed at destruction of whatever chieftain or group momentarily possessed sufficient prestige to threaten recreation of the Mongol power

1421. **Transfer of the capital to Peking** was mooted in 1409, decreed in 1420. Wisdom of the move is reflected by the fact that the northern frontier was never successfully violated during the five centuries Peking remained capital, save when the Manchus were invited in.

1428-1788. **The later Le dynasty in Annam,** after a quarter century of fighting, secured recognition of independence (1431) from Hsuan Tsung in the Hsuan Te reign (1426–1435) The royal title was conferred in 1436.

1431-1433 **Cheng Ho** led a seventh and final embassy to twenty states. As result tribute was sent by Mecca and ten others

1449. **Emperor Ying Tsung** (1436–1449 and 1457–1464) was captured in battle by the chief of a new Mongol confederation (Oirat) of four tribes Although released next year, he recovered his throne from his brother Ching Ti only in 1457.

c. 1470-1543. **Dayan,** a descendant of Jenghiz, restored unity to Mongolia, but divided it among his own descendants

1471. Annam finally annexed its southern neighbor, Champa. (*Cont. p.* 536.)

a. BURMA

From early times Burma was under Indian influence. By the 3d century A D expanding Hindu peoples had established commercial settlements on the Tenasserim coast and at the principal river mouths which developed into small kingdoms in contact with the Tibeto-Burman tribes of the Irrawaddy Valley. Commercial relations with China were less influential, although an embassy from a Burmese state reached Ch'ang An in 802.

1044. **Anawrata** seized royal power at Pagan and by his patronage of Hinayana Buddhism and conquests, both north and south, made it the political, religious, and cultural center of Burma; the Burmese written language was developed and Buddhist scriptures translated; architectural monuments followed the inspiration of Ceylon and southern India; able rulers succeeded Anawrata.

1106. A Burmese embassy at the Sung capital in China was received as from a fully sovereign state.

1287. Following the rejection of Mongol demands for tribute (1271 and later), Burmese raids into Yunnan, and the death of Narathihapate (who ruled 1254–1287), Mongol forces looted Pagan and destroyed its power The invasion of Shan tribes, forced southward by the Mongols, led to the division of Burma into a number of petty states, chief among them being Toungoo (estab. 1280), Pegu in southern Burma, and Ava in the middle and lower Irrawaddy Valley (estab. as capital 1365). (*Cont. p.* 541)

b. SIAM

During the early centuries of the Christian Era, the Khmer peoples of the Menam Valley came under the influence of Hindu civilization, and about the 6th century there was organized, in the region of Lopburi, the **Kingdom of Dvaravati,** which was Buddhist rather than Brahman in religion, and from which during the 8th century migrants to the upper Menam Valley established the independent and predominantly Buddhist Kingdom of Haripunjaya, with its capital near the present Chiengmai. Early in the 11th century Dvaravati was annexed to Cambodia; but Haripunjaya retained its independence until the 13th century, when it was overrun by a migration of Tai, or Shan, peoples from the north. This migration, accelerated by the Mongol conquest of the Tai state of Nanchao (in modern Yunnan and southern Szechuan) in 1253, led eventually to the suppression of the Khmer kingdoms and the setting up of the Tai Kingdom of Siam with its capital at Ayuthia, founded by Rama Tiboti in 1350. The early Siamese state was from the first under the influence

both of Hinayana Buddhism and of Chinese political institutions. Toward the end of the 13th century a form of writing had been invented for the Siamese language

1350-1460. Siamese **invasions of Cambodia** finally led to the abandonment of Angkor and collapse of the Khmer Empire.

1371. A Siamese embassy at Nanking inaugurated tributary relations with the newly founded Ming dynasty

1376-1557. Intermittent friction between Siam and the Tai state of Chiengmai in the northern Menam Valley ended only with the destruction of Chiengmai by the Burmese.

During the 14th and 15th centuries strong Siamese influence was exerted over the disunited states of Burma and the northern part of the Malay Peninsula

(*Cont. p.* 541)

c. MALAYSIA

Early Indian commercial settlements in Sumatra and Java, at first Brahman in religion and later influenced by Buddhism, became the centers of organized states Toward the end of the 7th century A D, **Srivishaya** became the dominant state of Sumatra and built up a commercial empire which at its height (c. 1180) controlled the Straits of Malacca and of Sunda, all of Sumatra and the Malay Peninsula, and the western half of Java, its authority was recognized as far away as Ceylon and Formosa, and in many colonies throughout the East Indies. The **Sailendra dynasty,** rulers of Srivishaya, were ardent patrons of Buddhism, as is shown in the great Borobudur victory monument in central Java. The consolidation of petty Javanese states, begun after the middle of the 9th century, led to the rise of **Singosari** in eastern Java, which under Kartanagara (who ruled 1268–1292) challenged and finally destroyed the power of Srivishaya

1293. A Mongol expedition, sent to avenge insult offered by Kartanagara, was forced out of Java by a new kingdom, **Madjapahit,** which during the 14th century built up a commercial empire with authority extending over Borneo, Sumatra, and parts of the Philippines and of the Malay peninsula, and profited by an extensive trade with China, Indo-China, and India After the

1389. Death of Hayam Wuruk, the power of Madjapahit disintegrated

1405-1407. The first Chinese expedition under Cheng Ho established tributary relations between many Malay states and the Ming Empire; and the authority of Madjapahit rapidly gave way to that of the Mohammedan Arabs During the 15th century Mohammedan commercial operations, based chiefly on Malacca, were extended to the whole archipelago, and some 20 states accepted Islam as the state religion.

(*Cont. p.* 541.)

4. KOREA

612. Emperor Yang-ti of the Sui dynasty of China invaded Koguryŏ, but was repulsed.

645-647. Two T'ang expeditions against Koguryŏ failed.

663. The T'ang destroyed Paekche.

668. The T'ang and Silla together destroyed Koguryŏ.

670. Silla robbed the T'ang of Paekche and southern Koguryŏ, but did not break its allegiance to China

670-935. SILLA PERIOD.

670-780. Height of Silla power and culture, when Buddhism and art flourished, particularly at the capital near the modern Kyŏngju (J. Keishū).

780-935. Period of political decline, but of closer relations with and increasing imitation of China.

c. 880. Serious rebellions broke out.

918. The state of **Koryŏ** was founded in west central Korea.

935. Silla peacefully submitted to Koryŏ.

935-1392. KORYŎ PERIOD.

935-1170. Height of Koryŏ power and culture centering around the capital, Kaesong (modern Sŏngdo, J. Kaijō) in west central Korea and P'yŏngyang, the secondary capital.

936. Koryŏ destroyed Later Paekche, thus uniting Korea once more.

996. **The Khitan** (Liao dynasty) forced Koryŏ to recognize them, and not the Sung dynasty of China, as overlords of Korea.

1044. A great wall was completed across northern Korea as a defense against the Manchurian peoples.

1123. **The Juchên** (Chin dynasty) forced Koryŏ to recognize their suzerainty

1170. Military officers seized the government and proscribed Buddhism.

1196. **The Ch'oe family** established its control over the government with the title of *Kongnyŏng*

1223. Beginning of over 200 years of attacks on coastal regions by Japanese pirates.

1231. **The Mongols** invaded Korea, and the Ch'oe removed the government to the island of Kanghwa off the west coast

1258. The Im (Lim, J. Rin) family supplanted the Ch'oe as *Kongnyŏng*.

1259. Koryŏ submitted to the Mongols, and the Koryŏ kings through intermarriage became merely a branch of the Mongol imperial family and their representatives in Korea. This situation and the rise of Confucianism at this time led gradually to the unquestioning acceptance of Chinese suzerainty and leadership in political and cultural matters.

1356. Koryŏ revolted successfully against the Mongols.

1356-1392. Period of great disorder. The Koryŏ kings, who had depended on Mongol prestige for their authority, were unable to suppress their unruly vassals, and the Japanese pirates were at their worst

1369. Koryŏ submitted to the Ming dynasty of China.

1392. I (Li, J. Ri) **Sŏnggye** declared himself king after a series of *coups d'état* and assassinations, thus founding the

1392-1910. I (Li, J. Ri) **DYNASTY** with its capital at Kyŏngsŏng (modern Sŏul [Seoul], J. Keijō). This new dynasty based its claims to legitimacy on its championing of the Ming cause as opposed to the Mongols, considered by them not to be the legitimate rulers of China. Like their predecessors they remained unswervingly loyal and subservient to China.

1392-1494. Period of greatest prosperity and cultural development.

1419-1451. **King Sejong** was a patron of learning, and in his time the native phonetic script called *ŏnmun* was introduced. During this reign the Japanese pirates ceased to ravage the Korean coast, and the northeastern corner of present-day Korea was brought under Korean rule.

(*Cont. p* 542.)

5. JAPAN, 645-1543

645-784. PERIOD OF THE IMITATION OF CHINA. An edict outlining the general principles of national reorganization was promulgated as early as 646 (the *Taika Reform*), but it was only in the course of several decades that the principles were put into practice and even then the reforms often remained on paper. The major features of the new system were: (1) the nationalization of the land, in theory, (2) the adoption of the T'ang system of land distribution and taxation; (3) the reorganization of local government and other measures intended to increase the authority of the central government in the provinces and its income from them, and (4) the reorganization of the central government. The principles and many of the details of the reforms were borrowed directly from China, but in Japan, dominated as it was by an hereditary aristocracy, it was well-nigh impossible to carry them out in full, and from the start they were basically modified in practice (1) Although the land was nationalized in theory, in actuality the large hereditary estates of the clan chiefs were returned to them as lands held as salary for their official positions and ranks (2) The land was to be periodically divided among the agriculturalists in accordance with the membership of each family as determined by census, and uniform taxes were to be levied on all alike. These were (a) the land tax (*so*), paid in rice, (b) the corvée (*yōeki*), often commuted at a fixed rate into a textile tax, and (c) the excise (*chō*) levied on produce other than rice The system was too closely patterned after the Chinese and functioned badly in Japan from the beginning Powerful families and institutions, hungry for land, were always ready to deprive the public domain of taxpaying lands, and the peasants, impoverished by taxes, were often anxious to transfer themselves and their lands from the taxpaying public domain to the care of privately owned manors (*shōen*). As a result the history of economic development during the next several centuries is primarily the story of the return of the land into private hands and the emergence of large tax-free estates owned by the court nobility and great religious institutions. (3) The improvement of means of communication helped in the centralization of government and in the collection of taxes, but, although the officials of the provincial governments were to have been appointees of the central government, in practice local leaders retained their supremacy by occupying the lower posts, and it soon became the accepted custom for the high provincial officials to remain at the capital and to delegate their powers to underlings in the provinces. (4) An essential and permanent feature of the reforms was the complete

reorganization and great elaboration of the central government. A department of religion (*jingikan*) and a great council of state (*dajōkan*) were established as two parallel organs controlling the spiritual and political aspects of the state. Below the great council were eight ministries, and below them in turn many smaller bureaus The organization was too ponderous for the Japan of that day Moreover, with the collapse of the economic supports of the central government through the growth of tax-free estates, this elaborate organism was literally starved to death Although in theory it continued little changed until the 19th century, actually during most of that period it was merely a skeleton devoid of most of its former powers In adopting the Chinese form of government the Japanese made one significant change. The official hierarchy of Japan remained a hereditary aristocracy, and with rare exceptions there was little opportunity for the able or learned of low rank to rise far in this hierarchy

This period was the **classic era of Japanese culture.** Poetry and prose in pure Chinese were composed, and native Japanese poetry reached an early flowering Japan in the preceding century had already been imitating continental artistic styles, and now the art of T'ang China found fertile soil in Japan and produced there many of the greatest extant examples of Far Eastern art of that day in the fields of architecture, sculpture, painting and the applied arts

663. The Japanese withdrew from Korea, after the defeat of a Japanese army and fleet, sent to the aid of Paekche, by a combined force from China and Silla (662) Thus ended the first period of Japanese continental expansion. The fall of Paekche in 663 and of Koguryŏ (a North Korean kingdom) in 668 left Silla supreme in the peninsula and resulted in a great immigration of Korean refugees into Japan

697. **The Empress Jitō** (686–697) abdicated in favor of her grandson, **Mommu** (697–707). This was the first case of the accession of a minor and the second of the abdication of a ruler, but both were soon to become the rule

702. **New civil and penal codes** known as the *Taihō Laws* were promulgated. This may have been the first complete codification of the laws embodied in the reforms commenced in 646, although there is mention of an earlier code These laws, together with a revision of 718 (*Yōrō Laws*, not enforced until 757), have come down to us only through later commentaries, the *Ryō no Gige* of 833 and the *Ryō no Shūge* of 920 A supplementary code, the *Engishiki*, was completed in 928.

710. **Heijō** (or Nara) was laid out on the model of Ch'ang-an, the T'ang capital, as the first permanent capital of Japan. The period during which it was the capital is known as

710-784. THE NARA PERIOD.

712. The *Kojiki*, which records the history of the imperial line since its mythical origins, was written in Chinese characters (used to a large extent phonetically) to represent Japanese words This is Japan's oldest extant book

720. The *Nihonshoki* (or *Nihongi*), a more detailed history of Japan written in Chinese, was compiled. It was continued to 887 by five other official histories written in Chinese, which together with it constitute the **Six National Histories** (*Rikkokushi*)

724-749. **Shōmu's reign,** which included the brilliant Tempyō year period (729–748). This and the period during which Shōmu dominated the court as the retired emperor (749–756) marked the apogee of the Nara Period and its classic semi-Chinese culture

737. The death of the four grandsons of Kamatari delayed for several decades the complete domination of the imperial court by the Fujiwara clan.

741. Government monasteries and convents (*Kokubunji*) were ordered erected in each province

752. The dedication of the **Great Buddha** (*Daibutsu*) at Nara marked the completion of the devout Shōmu's most cherished project The 53-foot bronze figure of the Buddha Rushana (Skt. *Vairocana*) and the huge hall built over it was a tremendous undertaking for the Japanese court and gave witness to the great Buddhist fervor of the time. Many of the objects used in the dedication service together with the personal belongings of Shōmu form the basis of the unique collection of 8th century furniture and art preserved at the imperial treasury in Nara (the *Shōsōin*, commenced in 756)

Shortly before the erection of the Great Buddha the famous monk, **Gyōgi** (670–749), is said to have propagated the concept that Buddhism and Shintō were two aspects of the same faith Such beliefs served as a justification for the growing amalgamation of the two religions, which was to lead by the 12th century to the development of **Dual Shintō** (*Ryōbu Shintō*), in which Shintō gods were considered to be manifestations

of Buddhist deities Faced with a highly developed foreign religion backed by all the prestige of the more advanced Chinese civilization, the simple native cult became for a period of almost 1000 years the handmaiden of Buddhism in an unequal union

754. The Chinese monk **Ganjin** (also pronounced Kanshin, etc , Ch ,*Chien-chên*, d. 763), after five unsuccessful attempts to reach Japan, finally arrived at Nara, where he set up the first ordination platform (*kaidan*) and firmly established the **Ritsu** (Skt *Vinaya*) **Sect,** which stressed discipline rather than doctrine. The Ritsu Sect together with five other sects formed the so-called **Nara Sects,** the oldest sectarian divisions of Japanese Buddhism. These others were the **Sanron** (Skt. *Madhyamika*) **Sect,** said to have been introduced in 625, the **Hossō** (Skt *Dharmalaksana*) **Sect,** brought from China by Dōshō (d 700), who had gone there to study in 653, the **Kegon** (Skt *Avatamsaka*) **Sect,** which was largely responsible for the cult of Rushana, the universal and omnipresent Buddha, the **Kusha** (Skt *Abhidharmakosa*) **Sect;** and the **Jojitsu** (Skt *Satyasiddhi*) **Sect;** which last two may never have existed as independent religious bodies in Japan.

759. The *Man'yōshū*, a collection of over 4000 poems in pure Japanese, composed largely by the court nobility between 687 and 759, was compiled shortly after the latter date. It was followed in later centuries by similar anthologies In 751 the *Kaifusō*, a small collection of poems in Chinese, had been compiled, it likewise was continued by similar works.

764. A clash for power between **Fujiwara Nakamaro** (also known as Emi Oshikatsu), the leading statesman during Junnin's reign (758–764), and Dōkyō, the monk favorite of the retired nun empress, Kōken (749–758), led to the death of Nakamaro, the exile of Junnin, his subsequent assassination and the reascension to the throne of Kōken as the Empress Shōtoku.

764-770. **Dōkyō** was all-powerful during Shōtoku's reign and may even have aspired to the throne. Strong opposition and Shōtoku's death led to his ultimate downfall Perhaps because of the memory of Dōkyō's influence over Shōtoku, for almost nine centuries thereafter no woman occupied the throne

781-806. The reign of the energetic **Kammu** witnessed the conquest of much of northern Hondō in a prolonged but successful border struggle with the Ainu After several initial failures the natives of this region, both Ainu and intractable Japanese frontiersmen, were definitely brought under the imperial sway by **Sakanoue Tamuramaro** (d. 811) His campaigns concluded centuries of slow advance into Ainu territory. After a final outbreak in 812 the Ainu menace in the north never again assumed major proportions.

794. Kammu moved the capital from Nagaoka, where it had been since 784, to Heian, the modern Kyōto, where it remained until 1868 The reasons for his abandoning of Nara are not definitely known but were probably (1) a desire to make a new departure politically and economically, (2) a desire to escape the oppressive influence of the powerful Nara monasteries, (3) the superior location of Nagaoka and Kyōto, which had better water communications with the sea, and (4) the influence of the Hata family (?), which had lands in that region The reasons for the sudden removal of the capital from Nagaoka to Kyōto, a few miles farther inland, are still more obscure, but may have been connected with Kammu's fear that the first site had incurred the curse of certain spirits. The establishing of the capital at Kyōto marked the beginning of

794-1185. THE HEIAN PERIOD, a long era marked by few violent upheavals but one in which the transition from the period of the imitation of China to the feudal and more strictly Japanese Kamakura period was slowly made These centuries were characterized by a somewhat effete dilettantist court society, becoming increasingly divorced from political and economic realities, the gradual decline and collapse of the economic and political system borrowed from China, the growth of tax-free manors, the slow emergence of a new military class in the provinces, the full glory and subsequent decline of the Fujiwara family, the appearance and development of the Buddhist sects and cults which dominated much of Japan's religious history, a sounder understanding of the borrowed Chinese civilization and a greater ability to synthesize it with what was natively Japanese, or to modify it to fit the peculiar needs of Japan, a resultant growing cultural independence of China, and the reappearance of more purely Japanese art and literature

800-816. New offices in the central government, which were to affect profoundly the whole administration, appeared at this time These were· (1) the *kageushi* (audit office) (c. 800), which in time usurped the prerogatives of the original audit and revenue offices, (2) the *kurōdo-dokoro* (bureau of archivists) (810), which gradually attained control of palace affairs and became the organ for issuing imperial decrees; (3) the *kebiishichō* (police commission) (c 816),

which in time became the primary law enforcement organ of the state and eventually created outside of the official codes its own code of customary law.

804. **Tendai** and **Shingon,** the two leading sects of the Heian period, were founded by **Saichō** (Dengyō Daishi 767–822) and **Kūkai** (Kōbō Daishi 774–835) respectively Both monks accompanied the eleventh embassy to the T'ang in 804. Saichō returned to Japan the next year to found the Tendai Sect, named after Mt. T'ien-t'ai in China The syncretistic inclusive nature of the philosophy of the sect appealed to the Japanese, and its central monastery, the Enryakuji, which Saichō founded on Mt Hiei overlooking Kyōto (788), became the center from which sprang most of the later significant movements in Japanese Buddhism Kūkai returned from China in 806 bringing with him the Shingon or Tantric Sect, a late esoteric and mystic form of Indian Buddhism. Because of his tremendous personality and the natural appeal of Shingon to the superstitious propensities of the people, the new sect won considerable popular support, and the Kongōbuji monastery on Mt. Kōya, which Kūkai founded (816), became one of the great centers of Buddhism. Tendai and Shingon were more genuinely Japanese in spirit than were the Nara sects, and the Shingon Sect in particular furthered the union of Shintō and Buddhism.

838. The twelfth and last embassy to the T'ang was dispatched When in 894 Sugawara Michizane (845–903) was appointed to be the next envoy, he persuaded the court to discontinue the practice on the grounds that China was disturbed and no longer able to teach Japan. Although some unofficial intercourse continued between the two countries, this brought to an end the three centuries of the greatest cultural borrowing from China and marked the beginning of a period in which peculiarly Japanese traits asserted themselves increasingly in all phases of Japanese life.

858. The complete **domination of the Fujiwara clan** over the imperial family was achieved by Yoshifusa (804–872) when he became the *de facto* regent of the child-emperor, Seiwa (858–876). In 866, after Seiwa had attained his majority, Yoshifusa assumed the title of regent (*sesshō*), becoming the first non-imperial regent. Seiwa was the first male adult emperor to have a regent. The typical inner family control which the Fujiwara exercised over the emperors can be seen in the relationship that existed between Seiwa and Yoshifusa, for the latter was both the grandfather and the father-in-law of the young ruler. It was the definite policy of the Fujiwara to have a young imperial grandson of the head of the clan occupy the throne and to have him abdicate early in favor of another child The period of the domination of the Fujiwara family is often called

866-1160. THE FUJIWARA PERIOD.

880. **Fujiwara Mototsune** (836–891) became the first civil dictator (*kampaku*), a post thereafter customarily held by the head of the clan when an adult emperor was on the throne, while the post of regent came to be reserved for the clan head in the time of a minor emperor

889. The branch of the warrior **Taira clan** which was to rule Japan for part of the 12th century was founded when a great-grandson of Kammu was given this surname. The clan was established in 825 by another imperial prince. In 814 the rival military **clan of Minamoto** was founded by other members of the imperial clan, and in 961 the princely progenitor of the later Minamoto rulers received this surname. The descendants of such imperial princes, reduced to the rank of commoners, often went to the provinces to seek their fortunes, and there some of them merged with the rising class of warriors, who were soon to dominate the land

891. **The Emperor Uda** (887–897), who was not the son of a Fujiwara mother, made a determined effort to rule independently without Fujiwara influence and refused to appoint a new civil dictator after Mototsune's death To further this end he used the brilliant scholar, **Sugawara Michizane** (845–903), as his confidential minister, but after Uda's abdication (d 931), Fujiwara Tokihira (871–909) managed to obtain the removal of Michizane to a provincial post, where he soon died He was posthumously loaded with honors and deified because it was believed that his vengeful spirit had caused certain calamities Tokihira throughout his official career strove valiantly but in vain to stem the tide of governmental corruption and disintegration.

905. The *Kokinshū*, an anthology of over 1000 poems in Japanese, was compiled by Imperial order in a revival of interest in Japanese poetry. For over a century almost all literary effort and scholarship had been devoted to prose and poetry in the Chinese language, but **Ki Tsurayuki** (d. 946) wrote the preface to the *Kokinshū* in Japanese and followed it in 935 by a travel diary (*Tosa Nikki*) also in Japanese. Within the short compass of a century Japanese prose was to rise to great heights of literary achievement. An important contributing factor to the revival of

Japanese literature at this time was the fact that in the preceding century a simple syllabary for writing Japanese phonetically had been evolved from the complicated Chinese characters

930. The offices of regent and civil dictator were revived after a lapse of four decades when **Fujiwara Tadahira** (880–949) became regent in 930 and civil dictator in 941

935-941. Civil strife in the provinces broke out on an unprecedented scale, giving witness to the rise of the provincial military class From 936 until his death in 941 Sumitomo, a member of the Fujiwara clan and a former provincial official, controlled the Inland Sea as a pirate captain, while in eastern Japan an imperial scion, Taira Masakado, after waging war on his relatives and neighbors, declared himself emperor (940), but was presently killed.

949. **The Emperor Murakami** (947–967) did not appoint a successor to Tadahira, but after the former's demise

967-1068. The successive heads of the Fujiwara clan occupied the posts of regent and civil dictator almost uninterruptedly for a full century. This was the heyday of the Fujiwara clan and the core of the so-called Fujiwara period. Court life was ostentatious and extravagant and was characterized by amatorial dilettantism and moral laxity At the same time petty jealousies and intrigues disrupted the Fujiwara clan, members of the provincial warrior class began to appear on the capital stage as petty military officers and came to be used by the court nobles in their disputes, manors continued to grow apace, further limiting government resources and the general collapse of the central government continued unabated.

985. The *Ōjōyōshū* by the monk **Genshin** (942–1017) gave literate expression to new religious currents which were stirring the nation. A belief had sprung up that the age of *mappō* ("the latter end of the law"), a period of degeneracy to come 2000 years after the Buddha's death, had already commenced There was a growing belief in the **Pure Land** (*Jōdo*), Paradise of Amida (Skt. *Amitabha*) and salvation through his benign intervention in favor of the believer and not only through one's own efforts, as earlier Buddhism had taught. Emphasis was increasingly placed on *nembutsu*, the repetition of Amida's name or a simple Amidist formula **Kūya** (903–972), an itinerant preaching monk, was the first articulate voice to express this new religious movement, and Genshin gave it sound literary formulation. It continued to develop, and in the 12th and 13th centuries produced important new Buddhist sects.

995-1028. **FUJIWARA MICHINAGA'S** (966–1028) rule over clan and state saw the zenith of clan power and some of the most brilliant decades of artistic and literary achievement of the epoch. Although he was never officially civil dictator and was regent for only a short period prior to his official retirement in 1017, he was perhaps the most powerful leader the Fujiwara produced. At this time the classic prose literature of Japan reached its height in the *Genji Monogatari* (c 1008–1020), a long novel by **Murasaki Shikibu,** a court lady, and in the *Makura no Sōshi* (Pillow Book) (c. 1002), a shorter miscellany by another court lady, **Sei Shōnagon.** The refined and somewhat feminine art of the epoch also was at its height. **Jōchō** (d 1057), a famous Buddhist sculptor, was already active, and Michinaga's successor, **Yorimichi** (992–1074, regent 1017–1020, civil dictator 1020–1068), built the *Byōdōin*, the outstanding architectural work remaining from the age

1039. Armed Enryakuji monks invaded Kyōto to force their will upon the government, but were driven off by Taira troops at Yorimichi's command. Such descents upon the capital, known as "forceful appeals" (*gōso*), were common during the 11th and later centuries and sometimes led to actual fighting The turbulence of the monks, who fought fiercely among themselves as well as with the court, made it necessary for the court to appeal to the Taira and Minamoto for military aid, and the warrior clans consequently became more influential at court.

1051-1062. In the **Earlier Nine Years' War** Minamoto Yoriyoshi, on imperial command, destroyed the **Abe,** a powerful military clan of northern Japan. Thereby he firmly established the prestige of his branch of the Minamoto clan in eastern and northern Japan. Yoriyoshi's ancestors had already started the military renown of the house, and its status at court as "the claws and teeth of the Fujiwara" greatly increased its power

1068-1073. The **Emperor Sanjō II,** who was not the son of a Fujiwara mother, ruled directly without the interference of the Fujiwara. Although the latter continued to occupy the posts of regent and civil dictator, they never again gained full control of the government. Sanjō II established a records office (*kirokujo*) to examine title deeds of manors in an effort to check

their growth, but in this attempt he was blocked by the opposition of the Fujiwara.

1083-1087. In the **Latter Three Years' War** Minamoto Yoshiie (1041–1108) destroyed the Kiyowara family of northern Japan, thereby increasing Minamoto prestige in that region

1086-1129. The **Emperor Shirakawa** (1073–1086) continued to rule after his abdication as a retired emperor (*jōkō*) and after 1096 as a priestly retired emperor (*hōō*) He built up a complete governmental organization of his own (*insei*, camera government) which was continued during much of the next two and a half centuries by other retired emperors and priestly retired emperors, but after 1156 they lost control of the government to the warrior clans

1129-1156. The **Emperor Toba** (1107–1123) ruled after Shirakawa's death as a priestly retired emperor.

1156. **Civil war** (the *Hōgen no Ran*) broke out between the reigning emperor **Shirakawa II** (1155–1158), and the retired emperor, Sutoku (1123–1142). Both were supported by prominent members of the Fujiwara, Minamoto, and Taira clans Shirakawa II's partisans, among whom were numbered Minamoto Yoshitomo (1123–1160) and Taira Kiyomori (1118–1181), were victorious. Sutoku was exiled, and many of his supporters were executed This war brought no lasting peace and was soon followed by

1160. **A second civil war** (*Heiji no Ran*), in which Minamoto Yoshitomo and an adventurous young Fujiwara noble, Nobuyori (1133–1160), gained temporary control of the capital by a successful *coup d'état*, but were soon crushed by the Taira This war left

1160-1181. **Taira Kiyomori** in control of the nation The two wars of 1156 and 1160 had not been a struggle for power between the court and the military clans, but the result had been to make a single victorious warrior, backed by personal troops, the dominating figure in Japanese politics Shirakawa II as retired emperor (1158–1192) had some influence in the government, but in 1167 Kiyomori had himself appointed prime minister (*dajōdaijin*), and gave important posts in the central and provincial governments to his clansmen. Kiyomori married his daughters into both the imperial and the Fujiwara families In 1180 his infant grandson, Antoku, was placed on the throne Thus he attained the same hold over the imperial family that the Fujiwara had once had.

1175. **The Pure Land** (*Jōdo*) **Sect** was founded by Genkū (Hōnen Shōnin) (1133–1212) It was the first of the Amidist Sects, and this event marked the beginning of a great new sectarian movement.

1179. **The death of Shigemori** (1138–1179), Kiyomori's eldest son and perhaps the wisest of the Taira, removed a stabilizing check on Kiyomori, whose desire for more power was leading him to excesses which were alienating the sympathies of the imperial family, the court nobility, and the Buddhist monasteries The rapid adoption on the part of Kiyomori and his family of the customs and mentality of the court nobles also estranged many of the provincial supporters of the clan

1180. An abortive uprising against the Taira led by an imperial prince and by Minamoto Yorimasa (1106–1180), together with certain monasteries, started a general uprising of the remnants of the Minamoto clan under the leadership of Yoshitomo's son, Yoritomo (1147–1199), backed by Taira and other clansmen of eastern Japan

1183. The Taira were driven out of Kyōto by Yoshinaka (1154–1184), a cousin of Yoritomo A long campaign in the Inland Sea region followed and culminated in

1185. **The battle of Dan no Ura**, at the western outlet of the Inland Sea, where Yoritomo's younger brother, Yoshitsune (1159–1189), annihilated the Taira The child-emperor, Antoku, whom the fleeing Taira had taken with them, died in the battle The elimination of the Taira left Yoritomo, as head of the Minamoto clan, the virtual ruler of the nation and marked the beginning of the first period of feudal rule in Japan known as

1185-1333 THE KAMAKURA PERIOD. The outstanding feature of the era was the clear division between the now powerless civil and religious government of the imperial court at Kyōto and the military government (*Bakufu*) of the Minamoto established at Kamakura, near the clan estates in eastern Japan and away from the enervating influence of the court nobility. The transition from civil to feudal military rule had begun with the Taira and was not completed until centuries later, but it was in the Kamakura Period that the most drastic changes occurred and the political and economic institutions of the next several centuries began to take shape

Feudalism. The usurpation of the powers of the imperial court was largely unconscious and developed naturally out of the economic and political conditions of

the late Heian period Primary factors in this evolution were. (1) The wars of the 11th century had hastened the transfer of the prerogatives of ownership of the great manors of the nobles to the military men who resided on these manors as bailiffs or wardens and who often had feudal ties with the warrior clans. The actual ownership of the estates usually remained unchanged, but ownership was robbed of most of its meaning by a complicated series of feudal rights (*shiki*) which ranged from rights to cultivate the land up through an ascending scale of rights to the income from it. (2) Because of the breakdown of the old centralized government and the need for self-defense feudal military groups had grown up in the provinces with their own "house laws," governing the conduct and the relations of the members of a single group. Moreover, a feudal code of ethics had been developed which emphasized personal loyalty to a feudal chief rather than to a political ideal. (3) Minamoto prestige had for long induced landed warriors to commend themselves and their lands to the Minamoto for the sake of protection. The victory over the Taira greatly increased Minamoto feudal authority both through new additions of this sort and through the confiscation of vast Taira lands The single Minamoto feudal union consequently had grown so large that it now controlled the nation, and its military government, and not the impotent Kyōto administration, was the real government of the land

Foreign Relations. For four and a half centuries only a few Japanese monks had gone abroad, and foreign trade had been in the hands of the Koreans and Chinese, but in the Kamakura period the Japanese once more began to take part in foreign commerce. At the same time they began to raid and plunder the coasts of both Korea and China, and in time they became a serious nuisance and occasionally even a national menace to both countries.

Art. Kyōto, though remaining the scene of a colorful court life, was forced to share honors with Kamakura as a center of art and culture Many Kyōto scholars moved to Kamakura to aid in the civil administration of the military government, and the warrior class brought a new creative energy to art and literature, which were approaching sterility in the late Heian period Significant artistic trends were: (1) a final great flowering of sculpture before its gradual extinction in following centuries; (2) the introduction from China of two new architectural styles known as the Chinese (*Karayō*) and the Indian (*Tenjukuyō*) styles, which came to blend with the traditional style (*Wayō*); and, (3) the perfection of the narrative picture scroll (*emakimono*). Significant literary trends were. (1) the increasing use of Japanese in preference to Chinese, (2) the revival of native poetry in the *Shin-kokinshū*, an imperial anthology of 1205; and, (3) the popularity of historical military tales written in rhythmical prose

Religion. The Kamakura period was one of great religious and intellectual ferment. It witnessed the birth and development of new sects growing out of the popular movements of the late Heian period. It saw the introduction of the **Zen Sect** from China and the growth of a military cult glorifying the sword, Spartan endurance and loyalty. From these two elements was born the combination of the aesthetic and mystical penchants of the Zen monk with the qualities of the Kamakura warrior — a combination which remains one of the chief characteristics of the Japanese people

1185-1199. Yoritomo, as the feudal military dictator, organized the new military government with the aid of Kyōto scholars like Ōe Hiromoto (1148–1225). Already in 1180 he had created a *Samurai-dokoro* to perform police duties and to control affairs of the warrior class. In 1184 he had established an administrative board, renamed the *Mandokoro* in 1191 In 1184 the *Monchūjo* had also been established as a final court of appeal Impartial administration of justice characterized the rule of the Kamakura military government and was one of the chief reasons for its long duration.

In 1185 Yoritomo appointed constables (*shugo*) in some of the provinces and placed stewards (*jitō*) in many of the large manors. A few such appointments had been made in preceding years, but now this system was expanded in order to strengthen his influence in regions over which he had hitherto had no direct control. The constables were special military governors in charge of the direct vassals of the Minamoto. The stewards, who represented Yoritomo on estates not otherwise under his control, levied taxes on the estates for military purposes Thus the fiscal immunity of the manors was violated, and Kamakura retainers were scattered in key positions all over the country. The constables and stewards gradually grew in importance in the economic and political life of the provinces and in time developed into the feudal lords of later centuries.

1189. Yoshitsune was killed at the orders of Yoritomo, who apparently was jealous of the fame the latter had won as the

brilliant general responsible for the greatest victories over the Taira. Yoritomo similarly disposed of other prominent members of the family, including his cousin Yoshinaka (1184), who as a warrior ranked next only to Yoshitsune, his uncle Yukiie (1186), who was one of the prime movers in the Minamoto uprising, and his brother Noriyori (1193), who also was one of the clan's great generals. His cruel treatment of his own relatives contributed to the early extinction of the family

1189. **Yoritomo** crushed the powerful Fujiwara family of northern Japan on the grounds that they had killed Yoshitsune, albeit at his own command The northern Fujiwara in the course of the previous century had become a great military power and had made their capital, Hiraizumi, a brilliant center of culture Their elimination removed a serious menace to Minamoto supremacy

1191. **Eisai** (1141–1215) propagated the Rinzai branch of the Zen (Skt *Dhyana*) Sect after his return from a second study trip to China. The Zen Sect enjoyed the official patronage of Kamakura and the special favor of the warrior class in general

1192. **Yoritomo** was appointed *Seiidaishōgun* ("barbarian-subduing great general"), or *shōgun* for short. He was not the first to bear this title, but he was the first of the long line of military dictators called *shōgun*

1199-1219. Transition period from Minamoto to Hōjō rule. Yoritomo was succeeded as head of the Minamoto by his eldest son, Yoriie (1182–1204), who was not appointed *shōgun* until 1202, but his mother, Masako (1157–1225), actually ruled with the aid of a council headed by her father, **Hōjō Tokimasa** (1138–1215) The latter, though a member of the Taira clan, from the start had cast his lot with Yoritomo and had exercised great influence in the Kamakura councils before Yoritomo's death The Hōjō, though loyal to the military government, unscrupulously did away with Yoritomo's descendants and crushed their rivals among the other Minamoto vassals.

1203. Yoriie was exiled and his younger brother, Sanetomo (1192–1219) was made *shōgun* by Tokimasa The following year Yoriie was murdered.

1205. Tokimasa was eliminated from the government by Masako and his son, Yoshitoki (1163–1224), who then became regent (*shikken*) of the *shōgun*, a post held by successive Hōjō leaders, who were the real rulers.

1219. The Minamoto line came to an end when Sanetomo was assassinated, probably with Hōjō connivance, by his nephew, who in turn was executed

1219-1333. THE PERIOD OF HŌJŌ RULE as regents for weakling *shōgun* of Fujiwara and imperial stock was characterized by administrative efficiency and by justice

1221. An uprising under the leadership of the retired emperor, **Toba II** (1183–1198), was the gravest menace the Hōjō had to face, but was quickly crushed. Two prominent Hōjō leaders were left in Kyōtō as joint civil and military governors of the capital region (*Rokuhara Tandai*). The estates confiscated from the defeated partisans of Toba II gave Kamakura much needed land with which to reward its followers, and the abortive uprising gave the Hōjō a chance to extend the system of constables, stewards and military taxes to regions hitherto unaffected by it.

1224. **Shinran Shōnin** (1173–1262), a disciple of Genkū, founded the **True Pure Land** (*Jōdo Shin*) **Sect** as an offshoot from the Pure Land Sect of his master. The True Pure Land Sect introduced innovations such as marriage for the clergy. It was destined to become the most popular of all Japanese Buddhist sects with Zen its only close rival

1226-1252. Fujiwara nobles as figurehead *shōgun*.

1229. **Dōgen** (1200–1253) introduced the Sōtō branch of the Zen Sect after his return from study in China

1232. The *Jōei-shikimoku*, a law code based primarily on custom rather than on earlier sinicized law codes, was adopted for all those directly under the feudal rule of Kamakura. It remained the basis of law codes until modern times

1252-1333. Imperial princes as figurehead *shōgun*.

1253. **Nichiren** (1222–1282) **founded the Lotus** (*Hokke*) **Sect,** popularly known as the *Nichiren Sect*. In it the Lotus Sutra was venerated much as the Amidist Sects venerated Amida. A fiery religious and political reformer, Nichiren was an ardent nationalist, and his writings illustrate the gradual emergence of a definite national consciousness at this time. Imbued with the turbulent nature of its founder, the sect had a stormy career.

1274. **FIRST MONGOL INVASION.** The Mongols, already masters of Korea and most of China, repeatedly sent embassies (1268–1273), enjoining the Japa-

nese to submit, but the Kamakura government under the bold leadership of the regent, Hōjō Tokimune (1251–1284), refused. Finally in 1274 the Mongols dispatched an expedition aboard a Korean fleet. The islands of Tsushima and Iki were reduced, a landing was made in Hakata (Hakozaki) Bay in northern Kyūshū, and an inconclusive encounter, in which superior weapons and military organization gave the Mongols the advantage, was fought with the local warriors. But the same night, because of their insecure position and the threat of a storm, the invaders set sail for Korea

1281. SECOND MONGOL INVASION. Mongol envoys sent to Japan in 1275 and again in 1280 were summarily executed, and the military government hastily prepared defense works in western Japan. In 1281 the Mongols embarked a huge force on two large fleets, one Korean and one Chinese, and again, after capturing Tsushima and Iki, landed in northern Kyūshū. Although the invaders numbered some 150,000, the Japanese checked their advance on land with walls they had prepared for this emergency and worsted them on the sea because of the greater mobility of their smaller craft in close quarters After almost two months of fighting a terrific storm destroyed a large portion of the invading armada, and the remainder departed with serious losses The Mongols continued plans for another invasion of Japan until the death of their emperor, Kublai (1294), and the Japanese continued their defense preparations still longer.

The Mongol invasions no doubt spurred on Japan's nascent national consciousness, but it also contributed greatly to the final collapse of the Kamakura government. Military preparations against the Mongols had seriously taxed the nation's resources, and at the end of the two invasions the military government, lacking land confiscated from the enemy, was without the usual means of rewarding its vassals for their valiant efforts. This state of affairs helped undermine the loyalty of the warrior retainers of Kamakura. At the same time the monasteries were becoming increasingly unruly, the court nobility was beginning again to intrigue with disaffected warriors against the Hōjō, and the latter themselves had lost the virtues of frugality and justice which had once characterized the family.

The Hōjō during the final decades of their rule began to resort to **Acts of Grace** (*Tokusei*) cancelling certain indebtedness in an effort to save the lands of their vassals from mortgages, but such obviously unfair measures antagonized certain powerful interests and failed adequately to protect the Kamakura vassals.

1331-1333. THE IMPERIAL RESTORATION of Daigo II and the fall of the Hōjō. The energetic and able emperor, Daigo II (1318–1339), after bringing to an end in 1322 the domination of the court by retired emperors, organized an abortive plot to overthrow the Hōjō as early as 1324. In 1331 open warfare broke out between Daigo II, supported by his able sons, some of the large monasteries in the capital region, and various local nobles and warriors like **Kitabatake Chikafusa** (1292–1354) and **Kusunoki Masashige** (1294–1336), the two outstanding patriot heroes of mediaeval Japan The following year the emperor was captured and exiled to Oki, but in 1333 he escaped Most of western Japan declared for the imperial cause. Ashikaga Takauji (1305–1358), one of the two chief generals dispatched by the Hōjō from eastern Japan, deserted to Daigo II's standards, and the sudden capture of Kamakura by another prominent Hōjō vassal, Nitta Yoshisada (1301–1338), brought the military government of Kamakura to an end

1333-1336. Daigo II in a short period of personal rule, failing to face economic and political realities, attempted to revive the civil imperial rule of the 8th century. However, he did make his able son, Morinaga (1308–1335), *shōgun* and appointed his leading generals military governors of large sections of the land. Because of his dissatisfaction with his share of the spoils in northeastern Japan,

1335. Takauji revolted against the throne. Defeating the Nitta, Kitabatake, and other loyal families,

1336. Takauji drove Daigo II out of Kyōto and set up a new emperor from a branch of the imperial family which had been jealously contending the throne with Daigo II's branch for several decades. He thereby became the virtual dictator of the central government, and, although he was not appointed *shōgun* until 1338, with his capture of Kyōto commenced

1336-1568. THE ASHIKAGA (or Muromachi) **PERIOD.** The Ashikaga *shōgun* continued the outward forms of the military rule of the Minamoto and Hōjō, but during most of the first and last centuries of the period open warfare disrupted the nation, and at best the Ashikaga exercised only a shadowy control over the great feudatories who made their appearance at this time The age was characterized by

quickly shifting allegiances and by political instability, which at times amounted to anarchy There was a general redistribution of feudal and economic rights, and the Kyōto nobility, which now lost most of its few remaining lands and provincial sources of income, was reduced to penury. The complicated feudal relations of the Kamakura period broke down into simpler, more compact divisions with practically independent lords, often the former provincial constables, ruling large territories, which were in turn subdivided into smaller units administered by their direct vassals The collapse of clan unity and an organized feudal system necessitated stronger solidarity within the smaller family and feudal units The division of patrimonies among heirs was abandoned, and women were reduced to the subordinate status they are still allotted. Lords exercised a closer paternalistic supervision over their vassals, and the latter in turn served their lords with greater personal loyalty

The **overseas trade** and pirate enterprises of the Japanese increased in the Ashikaga Period, the central government once more established official relations with China, and another important period of borrowing from abroad commenced. Foreign trade stimulated the growth of towns and provincial ports, such as Sakai (part of the modern Ōsaka), Hyōgo (the modern Kōbe), and Hakata (part of the modern Fukuoka) Despite political disruption and incessant warfare, a phenomenal economic development took place Nascent industries grew and expanded, and trade guilds (*za*), usually operating under the patronage of some religious institution, appeared and flourished However, the unrestricted multiplication of various levies and of customs barriers proved a serious curb to the development of trade.

Kyōto was once more the undisputed political and cultural capital, and there the warrior class and the court nobility tended to fuse. Constant warfare made the period in some respects the intellectual dark ages of Japan, but political disunity helped to diffuse learning throughout the land. Zen monks dominated the intellectual and artistic life of the nation and through their intimate contacts with China, where many had lived and studied, expanded Japan's intellectual and artistic horizons. Although this was a great age of Zen, the other sects, particularly the Amidist sects, flourished and sometimes developed powerful military organizations. It was still a thoroughly Buddhist age, but intellectual life began to free itself from the bonds of Buddhism, Sung Confucian philosophy was introduced from China, and stirrings of new life appeared in Shintō, where for the first time systematic syncretic philosophies were developed

Despite the violent internecine strife of the early and late Ashikaga period, in the middle decades literature and art, ruled by Zen standards of restraint and refinement, flourished The *Literature of the Five Monasteries*, as the Zen school at Kyōto was called, revived poetic composition in Chinese, and a great lyric drama called *Nō* appeared. The Sung style of painting, often in monochrome and usually of landscapes, reached its height in Japan with such great masters as **Shūbun** (c. 1415) and **Sesshū** (1420–1506), and the two greatest Japanese schools of painting, the **Tosa** and **Kano,** flourished. The independent architectural styles of the Kamakura period were blended to form a composite style. Minor arts like landscape gardening and flower arrangement grew up, and the tea ceremony was popular among the upper classes Under Zen tutelage there developed a refined simplicity of taste and a harmony with nature which has had a lasting influence on Japanese art and psychology

1336-1392. CIVIL WARS OF THE YOSHINO PERIOD. When Takauji drove Daigo II out of Kyōto and set up a rival emperor, Daigo II and his partisans, the Kitabatake, Kusunoki and others, withdrew to the mountainous Yoshino region south of Nara, where Daigo II and three imperial successors maintained for almost six decades a rival court, called the *Southern Court* because of its location. During this period, known as the *Yoshino period* or the *Period of the Northern and Southern Dynasties*, civil war convulsed Japan In support of the legitimacy of the southern court

1339. **Kitabatake Chikafusa** wrote the *Jinnōshōtōki*, a history of Japan imbued with extreme nationalistic and patriotic sentiments. It is an important landmark in the growth of a national consciousness and the imperial cult

1392. The reunion of the two courts. Although at times the Yoshino warriors even captured Kyōto, the hopes of the southern court gradually waned. Eventually in 1392 peace was made, and Kameyama II (1383–1392) of the southern line abdicated in favor of **Komatsu II** (1382–1412) of the northern line, with the understanding that the throne should henceforth alternate between members of the two branches of the imperial family, as it had done for several reigns preceding that of Daigo II However, the northern line never yielded the throne to its rivals

despite futile uprisings in their behalf Official history regards the southern line as the legitimate rulers during the Yoshino period.

1395-1408. Rule of Yoshimitsu as retired *shōgun.* Yoshimitsu, the third Ashikaga *shōgun* (1369–1395), after crushing his principal opponents, uniting the two imperial courts and bringing the Ashikaga power to its apogee, passed on the title of *shōgun* to his son and retired as a monk to his Kitayama estate on the outskirts of Kyōto. The **Golden Pavilion** (*Kinkaku*) he erected there is the outstanding remaining architectural work of the day, and his coterie of artists was the center of the artistic movements of the most creative epoch of the Ashikaga Period. There **Kan-ami** (1333–1384) and his son **Se-ami** (1363–1444) perfected the highly refined *Nō* drama from earlier dramatic and Terpsichorean performances The luxurious but artistically creative life of the Kitayama estate was continued for several decades after Yoshimitsu's death by his successors

1449-1490. Rule of Yoshimasa as *shōgun* (1449–1474) and retired *shōgun.* This was the second great creative period of Ashikaga art In his Higashiyama estate on the edge of Kyōto, Yoshimasa built the **Silver Pavilion** (*Ginkaku*), which as an architectural work ranks second only to the Golden Pavilion of Yoshimitsu, and here he and a brilliant group of artists and aesthetes, presided over by Nō-ami (1397–1476), enjoyed a life of luxury and artistic elegance

At the same time the complete collapse of what little authority the Ashikaga exercised over the nation became apparent, and there was great social unrest, resulting in numerous popular uprisings. Under the pressure of popular demands, Yoshimasa, like other Ashikaga *shōgun*, repeatedly issued Acts of Grace (*Tokusei*), which, unlike those of the Kamakura period, were sweeping debt cancellations for the benefit of the whole debtor class.

1465. The monks of the Enryakuji destroyed the Honganji, the central monastery of the True Pure Land Sect in Kyōto. Such affrays between the great monasteries were common at this time. Rennyō (1415–1499), the eighth hereditary head of the sect, fled to the region north of Kyōto, where his teachings met with great success and his numerous followers built up a military organization to defend their interests

1467-1477. The Ōnin War, ostensibly a contest over the succession in the Ashikaga and other great military families, was actually a reshuffling of domains and power among the feudal lords, who divided into two camps under the leadership of two great war lords of western Japan, **Yamana Mochitoyo** (Sōzen) (1404–1473) and his son-in-law, **Hosokawa Katsumoto** (1430 [1425?]–1473), long the chief minister (*kanryō*) of the military government (1453–1464, 1468–1473) Kyōto was soon laid waste, but both leaders died in 1473, and exhaustion eventually brought peace in 1477. However, local struggles went on unabated In fact, the Ōnin War was merely the prelude to over a century of almost uninterrupted warfare This period, which is aptly called the *Epoch of a Warring Country,* witnessed a continual shifting of fiefs and power, the elimination of many of the old feudal families, and the emergence of a new group of territorial lords, now known as *daimyō*

1488. The True Pure Land Sect believers north of Kyōto defeated and killed a local lord. This is considered the first of the *Ikkōikki,* or Uprisings of the Ikkō Sect, another name for the True Pure Land Sect Such uprisings became increasingly common and acted as a medium for popular manifestations of discontent

1493. Hosokawa Masamoto (1466–1507) drove the *shōgun,* Yoshitane (1490–1494, 1508–1521) out of Kyōto and set up a puppet *shōgun* (1494), acts which were repeated by his adopted son, Takakuni (1484–1531), in 1521. Yoshitane's successors suffered similar indignities as the prestige of the Ashikaga dwindled further.

(*Cont. p.* 542.)

F. PRE-COLUMBIAN AMERICA

The aborigines of America, varying among themselves in certain racial characteristics, migrated from Asia to North America in successive waves by way of the Bering Strait. These migrations began at a very early date, and apparently continued until relatively recent times The migrants, when they arrived, were in a very primitive state. Becoming isolated from other peoples, they slowly expanded throughout both continents and developed autochthonous cultures which ranged from savagery to a relatively high degree of civilization. Many groups at a comparatively early date attained the agricultural stage, and the Inca of Peru achieved the use of bronze The use of iron and the principle of the wheel were unknown. The dog universally, the turkey, the duck, and, in the Peruvian highlands, the llama, alpaca, and guanaco were the only existing domestic animals, the llama being the sole beast of burden

At the time of the discovery the peoples of highest culture, most complex society, and greatest political importance were the Aztec, with their center in the Valley of Anáhuac, the Maya of Yucatan and portions of Mexico and Central America, the Chibcha of the Colombian plateau, and the Inca, whose empire centered in the highlands of Peru Between the higher civilizations of Mexico, Yucatan, and Central America and between those of the Andean region there was extensive interchange of culture over a lengthy period, and it is possible that there was cultural interchange between the peoples of Central America and those of the Andean region The civilizations of the Aztec and the Inca were built upon preceding cultures of a high order.

THE AZTECS were originally a minor tribe of the great Nahua group This group evolved the high Toltec civilization which, receiving through cultural transmission mathematical and astronomical knowledge and a calendar from a lowland people, possibly the Maya, reached its height in the 13th century and declined thereafter, being followed by the transitional Chichimec culture Reaching the shores of Lake Tezcuco in 1325, the Aztecs erected an impregnable capital, **Tenochtitlán**, in the marshes of the lake and, through superior political and military capacity and alliance, extended their control over central and southern Mexico from the Gulf to the Pacific and established colonies in Central America. In 1519 Tenochtitlán was a city of some 60,000 householders and the Aztec Empire included perhaps 5,000,000 inhabitants. The government was relatively centralized, with an elective monarch, provincial governors appointed by the central authority, a well-organized judicial system, and a large and efficient army The Aztecs attained a high degree of development in engineering, architecture, art, mathematics, and astronomy. Principal buildings were of mortar and rubble faced with stucco. There existed a body of tradition, history, philosophy, and poetry which was orally transmitted. Picture writing which was rapidly approaching phonetic was evolved Music was rudimentarily developed Agriculture was far advanced and commerce and simple industry flourished. The working of gold and silver and the production of pottery and textiles were highly developed. The religion of the Aztecs was polytheistic, and although it included many lofty concepts the deity of war, Huitzilopochtli, was the principal god and his worship led to the development of one of the most extensive systems of human sacrifice which has ever existed The priesthood constituted a powerful group, political as well as religious. Certain of the peoples subjected by the Aztecs were restive under their domination and were prepared to rebel at the first opportunity In the mountains to the east of Lake Tezcuco there existed the powerful republic of Tlaxcala, which, maintaining its independence, regarded the Aztec as hereditary enemies These conditions created a situation favorable to the Spaniards during the conquest

THE MAYA before the Christian Era established themselves in the peninsula of Yucatan, Tabasco, Chiapas, northern, central, and eastern Guatemala, and western Honduras They developed a civilization which, reaching its apogee well before 1000 A D , was in certain cultural aspects the highest in the New World The Maya culture in the earlier period extended with considerable uniformity throughout the greater part of their general area, but after about 1000 A D , tended to center in the northern part of the peninsula of Yucatan. During the period of highest development the Maya did not evolve a unified empire, the area being divided into city states governed by politico-religious rulers or ruling groups. Art, architecture, mathematics, engineering, and astronomy were far advanced, and the Maya had evolved the conception of zero, a vigesimal numerical system, and a

calendar more accurate than the Julian Temples and other major buildings were constructed of stone and mortar and were faced with carved stone. A system of causeways existed. Codices were formed for religious and astronomical purposes, but writing did not exist A body of traditions, history, and religious prophecies were orally preserved. Religion was polytheistic and relatively humane, and the priestly class, exercising political authority as well as religious, possessed, with the ruling groups, a monopoly of learning. Widespread commerce existed, and weaving and pottery making were well developed Agriculture was on an exceedingly high level. Civil war occurred during the 13th century and certain Mexican groups conquered the Maya of northern Yucatan. Mexican cultural influences were consequently introduced, especially in art, and religion. In the same century a greater degree of political cohesion appears to have been established in the northern part of the peninsula, and this resulted in a period of peace which endured until the 15th century, when internecine strife led to the destruction of Mayapan in 1451 and the abandonment of the great cities Chichen Itzá and Uxmal The Maya civilization was decadent culturally and politically when the Spaniards arrived, although certain of the independent provinces were relatively powerful militarily The Maya of Yucatan numbered perhaps 400,000 to 500,000 on the eve of the Spanish conquest.

THE CHIBCHA. The political organization of the Chibcha, who numbered some 1,000,000, was comparatively cohesive The Zipa at Bacatá and the Zaque at Tunja were the political rulers, and supreme religious authority was held by the high-priest known as the *Iraca*. The Chibcha possessed a well-developed calendar and numerical system and employed pictographs. Extensive commerce and simple industry existed, ceramics and textiles being highly developed In gold working the Chibcha were in certain respects unequaled The Chibcha employed wood and thatch in the construction of buildings.

THE INCA, with their capital at Cuzco, successors to the high coastal and upland cultures of Chimú, Nasca, Pachacamac, and Tiahuanaco, which flourished during the early centuries of the Christian Era, extended their control over the area from Ecuador to central Chile along the coast and inland to the eastern slopes of the Andes including the Bolivian plateau. Expansion was particularly rapid from the 14th century onward and one of the greatest of the conquerors, **Huayna Capac,** lived until the eve of the Spanish conquest. The empire, with a population of perhaps 6,000,000 to 8,000,000, was a thoroughly organized absolute, paternal, socialistic, and theocratic despotism. All power emanated from the Inca as the ruler and representative of the Sun Deity, whose worship constituted the religion of the Inca. There existed a close-knit and graduated system of provincial and local administration Each individual had a fixed place in society, and the state benignly provided for the welfare of all The army was large and well organized, and a system of post and military roads extended to all portions of the empire In mathematics and astronomy the Inca were not as accomplished as the Maya and Aztec, but in engineering, architecture, and the production of textiles and ceramics they were far advanced. The Inca did not evolve writing, but possessed a device to aid memory in the form of the *quipu*, through which governmental records were kept, tradition was preserved, and messages were sent. In gold working a high degree of skill was attained. Commerce, entailing extensive navigation along the coast, was well developed. A great body of oral tradition and poetry existed, and music was comparatively well developed Principal buildings were of stone Politically the Inca were the most advanced of the peoples of the New World. At his death Huayna Capac, contrary to practice, divided the empire between Huáscar, his son by a lawful wife, and Atahualpa, his son by a concubine. A civil war followed, in which Atahualpa, shortly before the arrival of the Spaniards, triumphed and imprisoned his half-brother.

G. THE GREAT DISCOVERIES

1. ASIA

The Crusades left Europe with a greatly expanded horizon, with much more extensive trade interests and connections, and with an accentuated hostility toward Islam The great conquests of the Mongols in the 13th century (**Jenghiz Khan,** 1206–1227, period of greatness under **Kublai Khan,** 1259–1294), in uniting most of Asia, the Near East, and eastern Europe under one sway opened direct communication between Europe and the Orient and raised the prospect of an alliance against the Moslems

1160-1173. Rabbi **Benjamin of Tudela** (in Navarre) traveled through Persia, central Asia, and to the very confines of China, but for religious reasons his records had little influence on Christian Europe. The same was true of the researches of the great Arab geographer **Yaqut,** who lived in the late 12th and early 13th centuries and wrote a great geographical dictionary.

1245-1247. Travels of **John of Pian de Carpine,** an Umbrian sent to the court of the Great Khan to propose an alliance against Islam and if possible to convert the Mongols Traveling by way of southern Russia and the Volga, Carpine crossed central Asia and reached the Mongol court at Karakorum Though well received his mission proved abortive.

1253-1255. Mission of **William of Rubruck,** a Fleming sent by St Louis of France to the court of the Great Khan. Rubruck followed much the same route as Carpine and left one of the finest travel accounts of the Middle Ages.

1255-1266. First journey of the Polo brothers, Nicolo and Maffeo, Venetian traders in the Black Sea, who traveled to central Asia, spent three years in Bokhara and proceeded thence to China They returned to Acre in 1269, bearing letters to the pope from the Mongol ruler

1271-1295. Second journey of the Polos, accompanied this time by Nicolo's seventeen-year-old son, **Marco,** greatest of all mediaeval travelers. They took the route Mosul-Baghdad-Ormuz-Kerman-Khorasan-Pamir-Kashgar and thence across the Gobi Desert to the court of the Great Khan. The Mongol ruler was so favorably impressed that he took them into his service. During the next fifteen years Marco became acquainted with much of China, Cochin-China, Burma, and India The Polos returned by sea by way of Sumatra, India, and Persia Marco's famous *Book of Various Experiences* was dictated, probably in 1297, while he was a prisoner in Genoa It was almost immediately popular and colored the whole geographic outlook of the succeeding period Marco died in 1324.

1290-1340 During this period lively trade relations sprang up between Europe and Asia Specific records are few, but such as they are they indicate the existence of commercial colonies and missionary groups in Persia (Tabriz), in India (Gujerat and Malabar coast), and in China (Peking and other cities) The great trade routes from Central Asia through southeastern Russia and the Black Sea, and from Trebizond through Persia were wide open. Embassies were constantly passing between western rulers and the Ilkhans of Persia, whose emissaries on various occasions came as far as England (1287, 1289, 1290, 1307).

1289. The pope sent out Friar **John of Monte Corvino** to take charge of the newly established Archbishopric of Peking John remained at his post until his death in 1328 and seems to have built a flourishing Christian community.

1324-1328. Friar **Oderic of Pordenone** traveled to China, leaving one of the best accounts of the country

1328. The pope established a Bishopric of Quilon and sent out **Jordanus of Severac** to take charge.

1338-1346. John Marignolli was sent out to Peking as legate of the pope.

1340. Francesco Pegolotti, a Florentine trader at the Genoese station at Kaffa (Black Sea, founded 1266), wrote his *Merchants' Handbook* (*Della Pratica della Mercatura*), most valuable business manual of the time, which gives an unrivaled account of the commercial communications with Asia

1368. Overthrow of the Mongol domination in China. Under the succeeding Ming dynasty foreigners were again excluded The conquests of Timur the Great, shortly after, served to block the Near-Eastern trade channels once more.

2. AFRICA

During the Middle Ages much of Africa was familiar to the Arabs. **Ibn Batuta,** greatest of Arab travelers, between the years 1325 and 1349 journeyed from his home in Morocco across northern Africa, through Egypt, the Near East, Arabia, eastern Africa, and thence to India. Later he traveled northward to the Crimea and thence through central Asia to India. After spending eight years at Delhi, he went on to Ceylon and China. On his return to Morocco in 1349, he set out across the Sahara and visited Timbuktu and the Niger region His remarkable journeys serve to record not only the Arab trade from Egypt down the east coast to Africa and to India and beyond, but also the regular caravan trade from southern Morocco across the desert to the **Kingdom of Ghana** (i e. Guinea) in Nigeria

1225. Under the tolerant rule of the Almohades and Marinides in Morocco, the Franciscans and Dominicans were allowed to establish their missionary centers in the country By the end of the 13th century Christian and more particularly Jewish European merchants were engaged in the trans-Saharan trade, dealing chiefly in gold and ivory In 1447 the Genoese Antonio Malfante penetrated far to the south

1316. Having heard of a Christian king in East Africa (legend of **Prester John,** widespread in Europe after the spurious letter of 1165), the pope sent eight Dominicans to Ethiopia Others seem to have been sent in the course of the century

1402. **An Ethiopian embassy** reached Venice. There were others in 1408 and 1427. In 1452 Ethiopian emissaries arrived at Lisbon and in 1481 at Rome The object of these embassies, and of those sent in return (especially by the pope in 1453) was to establish a Christian alliance against the Moslem Mamelukes in Egypt and later against the Ottoman Turks Nothing came of this project, but the exchange of missions served to acquaint Europe with that part of Africa

1270. **Beginning of Portuguese exploration** of the west coast of Africa. The Portuguese Malocello visited the Canary Islands (1340–1341). These were assigned by the pope to the crown of Castile (1344).

1291. The two Genoese, Doria and Vivaldo, set out to find a route to India by sea, they never returned and nothing is known of their explorations

1394-1460. PRINCE HENRY THE NAVIGATOR, the greatest patron of cosmography and discovery Through his mother a grandson of John of Gaunt. Prince Henry, as general of the *Order of Christ,* was able to turn the crusading enthusiasm as well as the funds of the order into the fields of science and discovery. From 1418 onward the prince sent out, almost annually, expeditions carefully prepared and ably conducted. There can be little doubt that the religious factor dominated the work of the prince, though the scientific and commercial factors were hardly less important That Prince Henry hoped to open up direct communications with Guinea by sea is clear That he hoped ultimately to find a sea-route to Ethiopia and thence to India has been questioned by some, but is reasonably certain.

1418-1419. Exploration of the **Madeira Islands,** some of which had been known before. The **Azores,** some of which appear on the *Medicean Portolano* of 1351, but probably as imaginary islands, were discovered by Diogo de Seville in 1427–1431

1425. Expedition sent by Prince Henry to conquer the Canaries from Castile Thereafter the prince tried hard to secure the islands by negotiation and so exclude Castile from any share in the West African trade. Further attacks were made upon them in 1450–1453, but by the **Treaty of Alcaçovas** (1480, Mar. 6) they were definitely assigned to Castile, while West Africa, Guinea, and the islands of the ocean were assigned to Portugal

1433. After more than ten years of repeated efforts, the Portuguese (under Gil Eannes) succeeded in doubling **Cape Bojador.** The advance then became rapid Gold and natives were brought back and slave-raiding (later forbidden by Prince Henry) began

1444. **Nuño Tristam** reached the Senegal River.

1445. **Dinis Dias** rounded Cape Verde. By this time the most barren part of the coast was passed and a lively trade with West Africa (c. 25 caravels a year) developed.

1455-1457. **Alvise da Cadamosto** (Cà da Mosto), a Venetian in the service of Prince Henry, explored the Senegal and Gambia Rivers and discovered the Cape Verde Islands.

1469. After the death of Prince Henry there was a slackening of activity and the King, Afonso V, for financial reasons leased the Guinea trade for five years to **Fernão Gomes,** with the stipulation that exploration be carried forward at least 100 leagues annually

1470-1471 Under Gomes' auspices, **João de Santarem** and Pedro de Escolar reached Mina on the Gold Coast, where the Portuguese established a factory (fort, 1482) and did a rich trade in gold

1472. **Fernando Po** discovered the island which bears his name. Lopo Gonçalves crossed the equator and Ruy de Sequeira reached latitude 2° south.

1481. With the accession of **John II** (1481–1495) the crown once more took in hand the work of exploration, and with greater energy than ever

1482-1484. **Diogo Cão** reached the mouth of the Congo River and Cape St Augustine In 1485–1486 he advanced to Cape Cross and Cape Negro

1487. King John organized expeditions by land and by sea in the hope of reaching Ethiopia and India. **Pedro de Covilhã** and Alfonso de Paiva were sent out by way of Cairo and Aden. Covilhã reached India and on his return followed the east coast of Africa as far south as the mouth of the Zambesi

1487, Aug–1488, Dec. VOYAGE OF BARTOLOMEU DIAS. Having followed the African coast, Dias was driven by a great storm (Dec.–Feb.) south of the tip of Africa He turned east and soon discovered hills running to the northeast, showing him that he had rounded the **Cape of Good Hope.** He followed the east coast of Africa as far as Mossel Bay and the Great Fish River and then was obliged by his crew to return

1497, July 8–1499, Aug. 29 or Sept 9. VOYAGE OF VASCO DA GAMA. This would have been undertaken sooner, excepting for internal troubles in Portugal and disputes with Castile arising from the discoveries of Columbus Da Gama left with four ships to find the way to India, the feasibility of the route being perfectly clear after the discoveries of Covilhã and Dias He rounded the Cape in Nov 1497, reached Quilimane (Jan. 1498), Mozambique (Mar.), and then Mombasa. Despite trouble with the jealous Arab traders, he was finally able to get a pilot from Melindi. He reached Calicut on the Malabar coast (May 22) He started for home in Aug. 1498, touched Melindi (Jan. 1499) and rounded the Cape (Mar) The exact date of his arrival at Lisbon is disputed

1500, Mar. 9.–1501, June 23. VOYAGE OF CABRAL, who set out with 13 ships to establish Portuguese trade in the east. After touching Brazil (p 368) he went on to India, which he reached in Sept. The fleet loaded pepper and other spices and arrived safely in Lisbon From this time on Portuguese trading fleets went regularly to India, and Lisbon soon became the chief entrepôt in Europe for oriental products

1501. **Vasco da Gama** was sent out with 20 ships to punish the Arabs and to close the Red Sea, in order to cut the trade route through Egypt to Alexandria

1505. **Francisco de Almeida** sent out as first governor of India He took Quiloa and Mombasa on the African coast and established forts at Calicut, Cananor, and Cochin on the Malabar coast.

1509, Feb. 2. **Almeida** destroyed the fleet of the Moslems in the **battle of Diu,** thus definitely establishing Portuguese control in Indian waters

1509-1515. Governorship of **Afonso de Albuquerque,** who in 1507 had conquered Ormuz on the Persian Gulf Albuquerque made Goa the capital of the Portuguese possessions (1510), and in 1511 took Malacca He opened communication with Siam, the Moluccas, and China.

1513. **Jorge Alvarez** first landed near Canton

1517. **Fernão Peres de Andrade** appeared with a squadron at Canton

1542. **Antonio da Mota** and two companions, driven by a storm, first reached Japan

1557. The Portuguese established themselves at Macão (near Canton) and initiated regular trade with China

The opening of the direct route to India at once began the revolution in the conditions of trade between Europe and Asia The Mamelukes in Egypt had controlled the main routes, from the Persian Gulf to Syrian ports and from the Red Sea to Alexandria, and from these ports the Venetians shipped to western Europe The Egyptian sultan kept the consignments small (210 tons of pepper per year) and the prices were

therefore high. By 1503 the price of pepper in Lisbon was only one-fifth what it was in Venice. When the Portuguese succeeded in blocking the Red Sea route, the Egyptian-Venetian trade was more or less ruined The conquest of Syria and Egypt by the Turks (1516–1517), though frequently described as a stimulus to the discovery of new routes, had almost nothing to do with the situation. On the contrary the Turkish sultans (notably Suleiman, 1520–1566) did what they could to reopen the Near-Eastern routes.

3. AMERICA

a. PRE-COLUMBIAN DISCOVERIES

790. **Irish Monks,** searching for religious retreats and for new fields of missionary enterprise, reached Iceland, after discovering the Faroe Islands in the 7th century.

874. **The Norsemen** (Normans, Vikings) arrived in Iceland and settled.

981. The Norsemen, under **Erik the Red,** discovered Greenland and settled on the southwest coast (985–986).

1000. **LEIF ERICSSON,** returning from Norway to Greenland, was driven onto the American coast, which he called *Wineland* (Vinland), from the grapes he found there. Wineland was probably Nova Scotia

1003-1006. **THORFINN KARLSEFNI** set out from Greenland with three ships to settle Wineland. He and his party spent three winters on the American continent. There is no general agreement regarding the localities visited by him, which have been placed by different authorities as far apart as Labrador and Florida. One recent writer puts the *Helluland* (Flat-stone Land) of the Greenlandic-Icelandic sagas in northeastern Labrador; *Markland* (Wood Land) in southern Labrador, *Furdustrand* (Wonder Strand) on the north side of the Gulf of St. Lawrence; *Straumfjord* (Stream Fjord), where the first and third winters were spent, on Chaleur Bay (New Brunswick), and *Hop* (Lagoon) on the New England coast, either north or south of Cape Cod Another recent writer is convinced that Karksefni visited only the Labrador coast and both sides of the northern peninsula of Newfoundland, Straumfjord being, perhaps, in the vicinity of Hare Bay Wineland was first mentioned in the *Hamburg Church History* of **Adam of Bremen** (1074 ff.), but most of our knowledge derives from the Norse sagas written down in the 14th century. Supposed Norse remains on the American continent (*Dighton Rock, Old Stone Mill* at Newport) have all been rejected by scholars as spurious, with the exception of the Kensington Stone, found near Kensington, Minnesota, in 1898, under the roots of a tree 70 years old The stone contains a long runic inscription recording the presence there of a group of Norsemen in 1362 The stone and the inscription are clearly not forgeries, and a majority of geographers as well as many historians are disposed to accept the authenticity of the record The philologists are less favorable, because of irregularities in the language that are hard to explain Within recent years a Norse grave, with sword, shield, and two axes, is reported to have been found in Ontario

How long the Norsemen continued to visit America is obviously an open question. The last definite mention, apart from the Kensington Stone evidence, is for 1189 A.D., but there is some reason to believe that they came at least as far as southern Labrador for ship's timber as late as 1347 After that date the Greenland colonies declined, though the West Colony (in southeast Greenland) continued to exist until at least the mid-15th century and ships appear to have gone there periodically, probably trading in walrus hides and tusks

1470-1474. Between these years two Germans in the Danish service, **Didrick Pining** and **Hans Pothorst,** undertook a voyage to Iceland and the west, supposedly at the request of the King of Portugal Pining was a great seaman and the terror of the English, from 1478 to 1490 he was governor of Iceland There is no reason why he should not have been able to reach America, but the evidence does not show that he and Pothorst went beyond Greenland. On a map of 1537 it is stated that a famous pilot, **Johannes Scolvus** (claimed by some to have been a Pole — Jan Szkolny), reached Labrador at this time It has been held by some scholars that he must have accompanied Pining and Pothorst, but, since Labrador at this time was a name generally used for Greenland, it seems unlikely that Scolvus went beyond the old Norse settlements. From the Portuguese connection with the expedition

it has been concluded by some that **João Vaz Corte Real** went along. There is no satisfactory evidence of this, but in 1474 Corte Real was rewarded with the captaincy of one of the Azores Islands for having made a voyage to the "Land of the Codfish" (?Newfoundland), so that some scholars are well-disposed toward the theory that he may have reached America. But the markings on early maps make it seem likely that he too failed to get beyond Greenland It is not unlikely, though there is no real evidence, that Breton, Gascon, or Basque fishermen regularly visited the Grand Banks in this period In any event there is no proof of realization of any pre-Columbian discovery, or of any influence on later attempts

A great many theories have been advanced in recent years, notably by the Portuguese, but also by others, to show that the Portuguese knew of the existence of America before Columbus sailed Most of the theories rest upon conjecture and clever deductions All we can say is that, after the translation of Ptolemy's *Geography* into Latin (1410), the idea of the sphericity of the earth (never entirely lost during the Middle Ages, cf. Roger Bacon's *Opus Majus* of the late 13th century) spread rapidly in scientific circles and revived the idea of reaching Asia by sailing westward Prince Henry the Navigator, for all his interest in the African route, sent expeditions to the west. In 1427–1431 Diogo de Seville discovered seven of the Azores, which may have been known to the Italians as early as 1351. Flores and Colvo were discovered in 1451–1452. The map of Andrea Bianco (1448) shows land of the proper conformation where Brazil lies. It is clear that after 1450 many Portuguese expeditions set out in search of legendary islands (St Brandan's, Brazil, Antillia, Island of the Seven Cities, etc) and, according to some scholars, the Lisbon government enforced a policy of rigorous secrecy with regard to new findings. Nevertheless, no present evidence of Portuguese knowledge of America before 1492 can be regarded as conclusive.

b. THE VOYAGES OF COLUMBUS

1451, bet. Aug. 26 and Oct. 31. CRISTOFORO COLOMBO (Span. Cristóbal Colón) born near Genoa, the son of Domenico Colombo, a weaver. Almost nothing definite is known of his youth (general unreliability of the biography by his son Fernando) He was probably himself a weaver and probably went to sea only in 1472, when he made a trip to Scio. He seems to have come to Portugal in 1476 and to have made a voyage to England in 1477 (the story of his visit to Iceland is rejected by almost all authorities) In 1478 he appears to have made a voyage to the Madeiras and in 1482 possibly to the Guinea coast. In 1480 he married the daughter of Bartholomew Perestrello, hereditary captain of Porto Santo, near Madeira. By this time Columbus must have learned much about Portuguese discoveries and certainly about the ideas current in Lisbon His appeal to the great Florentine geographer, **Paolo Toscanelli**, and the latter's reply (1474) urging a voyage to the west, have been called in question by some writers and may be spurious In any event the idea of seeking India or China in the west was not novel

1483 or 1484. Columbus appealed to King John II of Portugal to finance a voyage to the west, but whether to seek new islands or a route to Asia is not clear At this very time the king was authorizing self-financed expeditions to the west of the Azores (1486, Ferman Dulmo) and he might have licensed Columbus had the latter been willing to finance himself Others maintain that the Portuguese already knew that Asia could not be reached in this way. Apparently Columbus, whose geographical knowledge appears to have been very incomplete, was regarded as a vain boaster. His project was rejected.

1486. Columbus, through the mediation of some Franciscan monks, was able to submit his project to **Ferdinand and Isabella** of Spain His religious fervor and personal magnetism impressed the queen, but the project was again rejected by experts. In the following years Columbus met the three Pinzón brothers, wealthy traders and expert navigators, from whom he doubtless learned much.

1492. After being recalled to court, Columbus finally induced the queen to finance his expedition It is not yet clear whether he set out to discover new islands and territories, or whether his object was to find a route to the Indies He was made admiral and governor of the territories to be discovered, but also carried letters to the Great Khan, which makes it probable that his purpose was twofold.

1492, Aug. 3–1493, Mar. 15. THE FIRST VOYAGE. Columbus left Palos with three ships, of which Martin Pinzón commanded one, and the famous pilot Juan de la Cosa another. He left the Canaries (Sept. 6) and reached land in the Bahamas (probably Watling's Island) (Oct 12),

naming it *San Salvador*. He then discovered Cuba, which he thought was the territory of the Great Khan, and Santo Domingo (Española). A post, Navidad, was established on Santo Domingo, after which Columbus returned (1493, Jan. 4), touching at the Azores (Feb. 15), landing at Lisbon (Mar. 4) and finally reaching Palos (Mar. 15). He announced that he had discovered the Indies, news of which spread over Europe with great rapidity and caused much excitement.

1493, May 4. The Line of Demarcation. At the instance of the Spanish rulers, who feared counterclaims by Portugal, Pope Alexander VI granted to the Catholic kings exclusive right to and possession of all lands to the south and west toward India, not held by a Christian prince on Christmas Day, 1492, beyond a line drawn one hundred leagues west of the Azores and Cape Verde Islands.

1493, Sept. 25–1496, June 11. SECOND VOYAGE OF COLUMBUS. He left with 17 caravels and 1500 men to establish Spanish power. On this voyage he discovered Dominica, Puerto Rico, and other of the Antilles and Jamaica, explored the southern coast of Cuba and circumnavigated Española, where he founded the town of Isabella. He left his brother Bartholomew in charge, who in 1496 transferred the settlement to the southern coast (Santo Domingo)

1494, June 7. TREATY OF TORDESILLAS, between Portugal and Spain. The line of demarcation was moved 270 leagues further west, Portugal to have exclusive rights to all lands to the east of it, and Spain of all lands to the west. The making of this treaty is not entirely clear, and it has often been used as an argument to prove that Portugal already knew of Brazil, which, by the treaty, was brought into the Portuguese sphere

1498, May 30–1500, Nov. 25. THIRD VOYAGE OF COLUMBUS. Discovery of Trinidad Island (1498, July 31) and South America (Aug. 1) near the mouth of the Orinoco. He explored the coast westward as far as Margarita Island. He then went to Española, where a revolt broke out against him He requested the crown to send out a judge. The government sent out to the Indies **Francisco de Bobadilla** (1499), who sent Columbus and his brother to Spain as prisoners. Columbus was released and treated with distinction, but, despite the earlier rights granted him, was never restored to his former authority or monopolistic grants. With Bobadilla direct royal control was established.

1502, May 11–1504, Nov. 7. FOURTH VOYAGE OF COLUMBUS. He reached the coast of Honduras and passed south to Panama, returning after having suffered shipwreck at Jamaica.

1506, May 21. Columbus died in relative obscurity at Valladolid It is reasonably clear that he believed to the end of his days that he had discovered outlying parts of Asia, despite the fact that ever since 1493 the conviction had spread among experts (e g. **Peter Martyr**) that a New World had been discovered.

c. POST-COLUMBIAN DISCOVERIES

1497, May 2–Aug. 6. VOYAGE OF JOHN CABOT. Cabot was a wealthy Italian merchant (born in Genoa, resident in Venice) who had traveled in the east (Black Sea, Alexandria, Mecca) and who settled in England about 1490. For several years he sent out expeditions from Bristol to seek the island of Brazil, in the hope of securing the valuable Brazil wood used in dyeing Columbus' supposed discovery of Asia in the west spurred him on The expedition reached land (June 24) evidently on Cape Breton Island, whence it then cruised along the southern coast of Newfoundland Cabot was convinced that he had discovered the country of the Great Khan and intended to return, passing south along the coast to the region of Brazil wood and spices

1498, May John and Sebastian Cabot sailed with six ships on a second voyage. They went north, coasted along the east coast of Greenland, thence passed to Labrador and went south by Newfoundland, Nova Scotia, and the New England coast, as far as perhaps Delaware. Thence they returned to England. The date of their arrival is not known Having found no spices, their efforts evidently no longer interested the king or country John Cabot is not heard of after March, 1499.

1498. King John of Portugal sent out the famous captain, explorer, and scientist, **Duarte Pacheco Pereira,** to investigate the lands in the west Duarte's account (written in 1505 but published only in 1892) indicates that he may have reached the South American coast. He speaks of a vast continent extending from 70° N.L. to 28° S L.

1499, May–1500, June. Voyage of **Alonso de Ojeda** and **Amerigo Vespucci** in the service of Spain. They landed in French Guiana, discovered the mouth of the Amazon and proceeded as far as Cape

St. Roque, after which they returned north and west along the coast as far as the Magdalena River and reached home by way of Española. An earlier voyage (1497–1498) by Vespucci, of which he himself tells in the confused and probably spurious sources, has been generally rejected by scholars Vespucci (1451–1512) was a Florentine resident in Seville, probably an agent of the Medici banking firm.

1499, Sept.–1500, Dec. Voyage of **Vicente Yañez Pinzón.** Pinzón made a landfall near Cape San Roque (1500, Jan) and thence followed the coast northwestward. At about the same time the Spaniard, **Diego de Lepe,** explored the Brazilian coast from Cape San Roque to about 10° S L

1500, Apr. 21. The Portuguese commander, **Pedrálvarez Cabral,** sailing to India with 13 caravels, and accompanied by such distinguished captains as Dias and Duarte Pacheco, landed in Brazil, coming from the Cape Verde Islands The party stayed only about ten days, but took official possession of the country which Cabral named *Tierra de Vera Cruz.* The idea of Cabral having been the first to discover Brazil, like the idea that his landing there was accidental, has now been given up by some scholars, but the evidence is quite inadequate and the question remains open

1500. The Portuguese, **Gaspar de Corte Real,** son of João Vaz, voyaged to the east coast of Greenland and to Labrador. In 1501 he set out on a second expedition, exploring Labrador and thence turning south. He himself was lost on this expedition, but his brother Michael carried out yet another voyage in 1502 to the Newfoundland coast. He too was lost at sea

1501, May–1502, Sept. SECOND VOYAGE OF AMERIGO VESPUCCI, this time in the service of Portugal. The voyage took him south along the Brazilian coast to about 32° S L if not farther. It was from the published account of this voyage and from Vespucci's conviction that what had been found was a *New World* that the geographer **Martin Waldseemüller** was led to propose that this New World be called *America* (1507). The name was at first applied only to South America and the use of it spread slowly until its general adoption toward the end of the 16th century.

Further explorations need not be listed in detail **De Bastidas** traced the coast from Panama to Port Manzanilla (1500–1502), **Vicente Pinzón** followed the mainland from the Bay of Honduras to beyond the easternmost point of Brazil (1508), **Ocampo** circumnavigated Cuba (1508), which was conquered by **Diego Velázquez** (1511), **Juan Ponce de Leon,** the governor of Puerto Rico, discovered Florida (1512).

1513, Sept. 25. Vasco Nuñez de Balboa crossed the Isthmus of Panama and discovered the Pacific Ocean

1515-1516. Juan Diaz de Solis, chief pilot of Spain, searching for a strait to the Pacific, explored the coast of South America from near Rio de Janeiro to the Rio de la Plata, where he was slain.

1517. Francisco Hernández de Córdoba discovered Yucatan, finding traces of large cities and great wealth

1518. Juan de Grijalva followed the coast north from Yucatan to the Panuco River

1519. Alvârez Pineda completed exploration of the Gulf of Mexico by coasting from Florida to Vera Cruz and back. **Francisco de Gordillo** ad[illegible] Atlantic coast to South Car[illegible] and **Pedro de Quexos** as far [illegible] (1525). At the same time (15[illegible] **Esteban Gómez,** sailing from Sp[illegible] lowed the coast from Nova Scotia north to Florida in the south was

1519-1522. CIRCUMNAVIGATION OF THE GLOBE BY FERDINAND MAGELLAN (Fernão de Magalhães, 1480–1521). Magellan was sent out by the Spanish crown to find a strait to the Moluccas. He reached the Brazilian coast near Pernambuco, explored the estuary of the Rio de la Plata and, after wintering at Port St Julian, passed through the strait which bears his name and entered the South Sea, to which the name *Mare Pacificum* was given After following the coast to about 50° S L he turned northwest and after months of sailing reached the Ladrones and Philippines. In the latter place he was killed in a skirmish with the natives. One of his vessels, under **Sebastian del Cano,** continued westward and reached Spain, thus completing the circumnavigation of the globe.

IV. THE EARLY MODERN PERIOD

A. EUROPE AND THE NEAR EAST, 1500-1648

1. ENGLAND, SCOTLAND, AND IRELAND, 1485-1649

1485-1603. HOUSE OF TUDOR.

1485-1509. HENRY VII. Henry's first act was to imprison the **Earl of Warwick**, son of the Duke of Clarence His first Parliament (1485) confirmed the crown to him and his heirs. Though the traditional mediaeval checks on the power of the crown were maintained in theory, in practice Henry went a long way toward developing royal absolutism — establishment of the administrative court later called the **Star-Chamber** (1487), suppression of private feudal armies, development of an efficient, if arbitrary, royal financial system (Empson, Dudley, "Morton's Fork")

1487. The pretended Earl of Warwick (Simnel) landed in England, but was defeated at **Stoke** (June 16, 1487), and became one of the king's scullions

1488-1499. Attempts of **Perkin Warbeck**, a Fleming who personated the Duke of York, to overthrow Henry. Disavowed by Charles VIII in the **Peace of Étaples** (Nov. 9, 1492), which ended the war in which Henry had engaged on account of the annexation of Brittany by Charles VIII (1491), Warbeck found a warm reception in Flanders from the Duchess of Burgundy, sister of Edward IV Expelled from Flanders, he fled to Scotland, where his claim was recognized. Warbeck and James IV of Scotland invaded England in 1496. In 1497 a formidable insurrection broke out in Cornwall on occasion of an imposition of a tax by Parliament It was suppressed by the defeat at **Blackheath** (June 22, 1497), and the leaders executed (Flammock). **Peace with Scotland** (Sept 1497) Warbeck was soon taken and imprisoned in the Tower, whence he escaped, but was recaptured. Plotting another escape with the Earl of Warwick, both Perkin and Warwick were executed (1499).

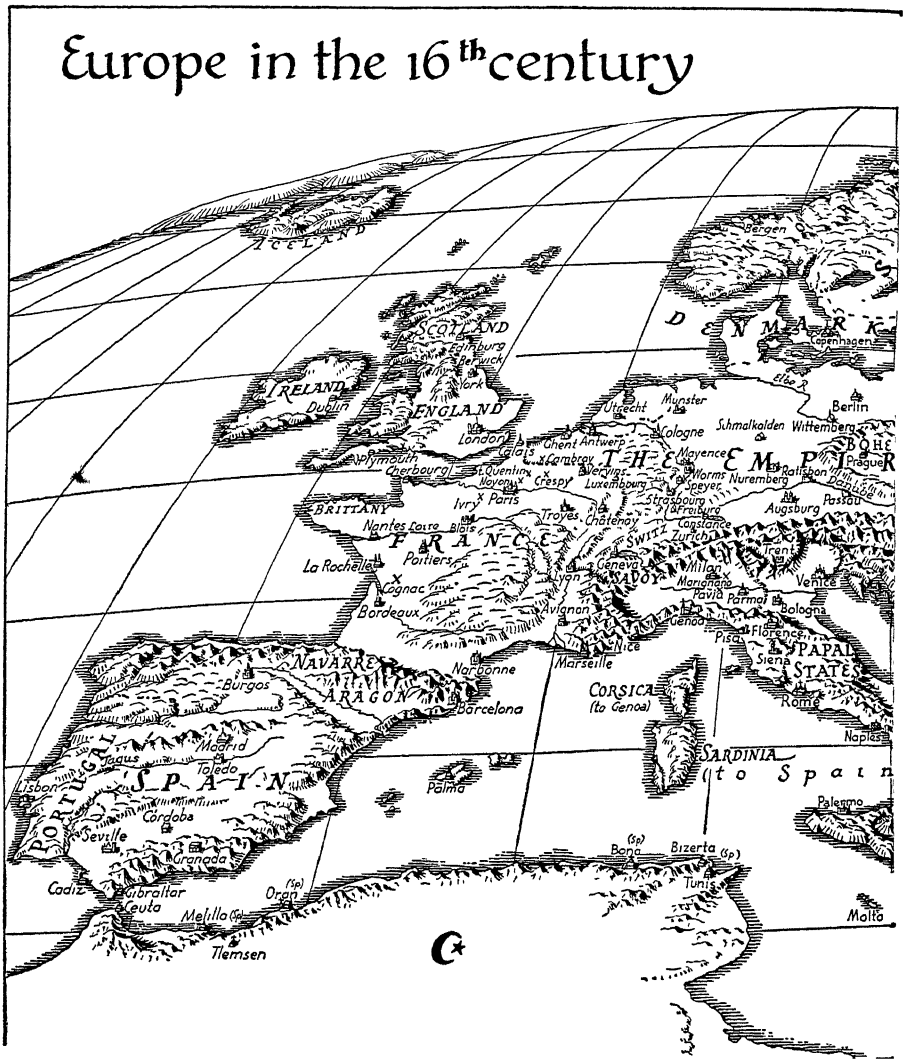
1495. STATUTE OF DROGHEDA (*Poynings' law*): (1) No Irish Parliament should be held without the consent of the King of England. (2) No bill could be brought forward in an Irish Parliament without his consent (3) All recent laws enacted in the English Parliament should hold in Ireland.

1496. *Intercursus magnus*, commercial treaty with Netherlands, granted mutual privileges to English and Flemings and provided fixed duties.

1502. Marriage of Henry's eldest daughter, Margaret, with James IV, king of Scotland

1509-1547. HENRY VIII. He was six times married. (1) **Catharine of Aragon**, widow of his brother Arthur, mother of Mary the Catholic (married June 3, 1509, divorced March 30, 1533). (2) **Anne Boleyn**, mother of Elizabeth (married Jan 25, 1533, beheaded May 19, 1536) (3) **Jane Seymour** (married May 20, 1536, died after the birth of her son Edward VI, Oct. 24, 1537). (4) **Anne of Cleves** (married Jan. 6, 1540, divorced June 24, 1540). (5) **Catharine Howard** (married Aug. 8, 1540, beheaded Feb 12, 1542). (6) **Catharine Parr** (married July 10, 1543, outlived the king). Henry united in his person the claim of both Lancaster and York

1511. Henry a member of the **Holy League** (pp. 394, 398). Having laid claim to the French crown, he sent troops to Spain, which were unsuccessful (1512). In 1513 the king went to France in person and with Emperor Maximilian won the bloodless victory of



1513, Aug. 17. Guinegate, the *Battle of the Spurs*

1513, Sept. 9. Battle of Flodden Field. Defeat and death of James IV of Scotland, who was allied with France

1514, Aug. Peace with France (Tournay ceded to England, afterward [1518] bought by France for 600,000 crowns) and with Scotland.

1515. THOMAS WOLSEY (1471–1530), the king's favorite, cardinal and chancellor, papal legate.

1520, June 7. Meeting of Henry VIII and Francis I of France near Calais (*Field of the Cloth of Gold*).

1521. Execution of the **Duke of Buckingham** on a charge of high treason Buckingham was descended from Edward III.

1521. Henry wrote the *Assertion of the Seven Sacraments* in reply to Luther, and received the title of *Defender of the Faith* from Pope Leo X.

After the **battle of Pavia** (p. 394), the relations between Henry and the emperor, which had been weakened by the double failure of the emperor to secure the promised election of Wolsey as pope, became so strained that war seemed inevitable, and a forced loan was assessed on the kingdom, which brought in but little. In 1523 an attempt to force a grant from Parliament met with no success, but a rebellion was provoked which was suppressed only by abandoning the demand

1527. Henry, desiring to divorce his wife in order to marry **Anne Boleyn**, alleged the invalidity of marriage with a deceased brother's wife, and appealed to Rome The delays of the pope and the scruples of Wolsey enraged the king, who in 1529 deprived the latter of the great seal and gave it to **Sir Thomas More** (1478–1535, published *Utopia* in Latin, 1516) Sentence and pardon of Wolsey, who, however, died in disgrace (1530). At the suggestion of **Cranmer** (1489–1556) the question was referred to the universities of England and Europe, and a number deciding in the king's favor, Henry married Anne Boleyn. Henry also broke with the Church of Rome. Confiscation of the annates, followed by the resignation of Sir Thomas More (1532).

The pope excommunicated Henry and annulled his divorce from Catharine, which Cranmer, now Archbishop of Canterbury, had pronounced. After the birth of **Elizabeth,** Parliament confirmed the divorce, recognized Elizabeth as heir to the throne (1534), and secured the succession to other children of Anne in case of the death of the princess

1534. ACT OF SUPREMACY, appointing the king and his successors *Protector and only Supreme Head of the Church and Clergy of England* This may be taken as the decisive beginning of the **English Reformation.** The break with Rome had political and personal origins; at first there were no real differences in dogma and liturgy. Refusal to take the oath of supremacy was made high treason, under which vote Sir Thomas More was condemned and beheaded (1535).

Thomas Cromwell (1485?–1540), a former servant of Wolsey and his successor in the favor of the king, now vicegerent in matters relating to the Church in England, issued a commission for the inspection of monasteries which resulted in the suppression, first of the smaller (1536), and afterward (1539) of the larger monasteries, and the confiscation of their property Abbots now ceased to sit in Parliament.

1536. Execution of Anne Boleyn on a charge of adultery. Princess Elizabeth proclaimed illegitimate by Parliament. The crown was secured to any subsequent issue of the king, or should that fail, was left to his disposal

1536. Publication of **Tindale's translation of the Bible,** by Coverdale, under authority from the king

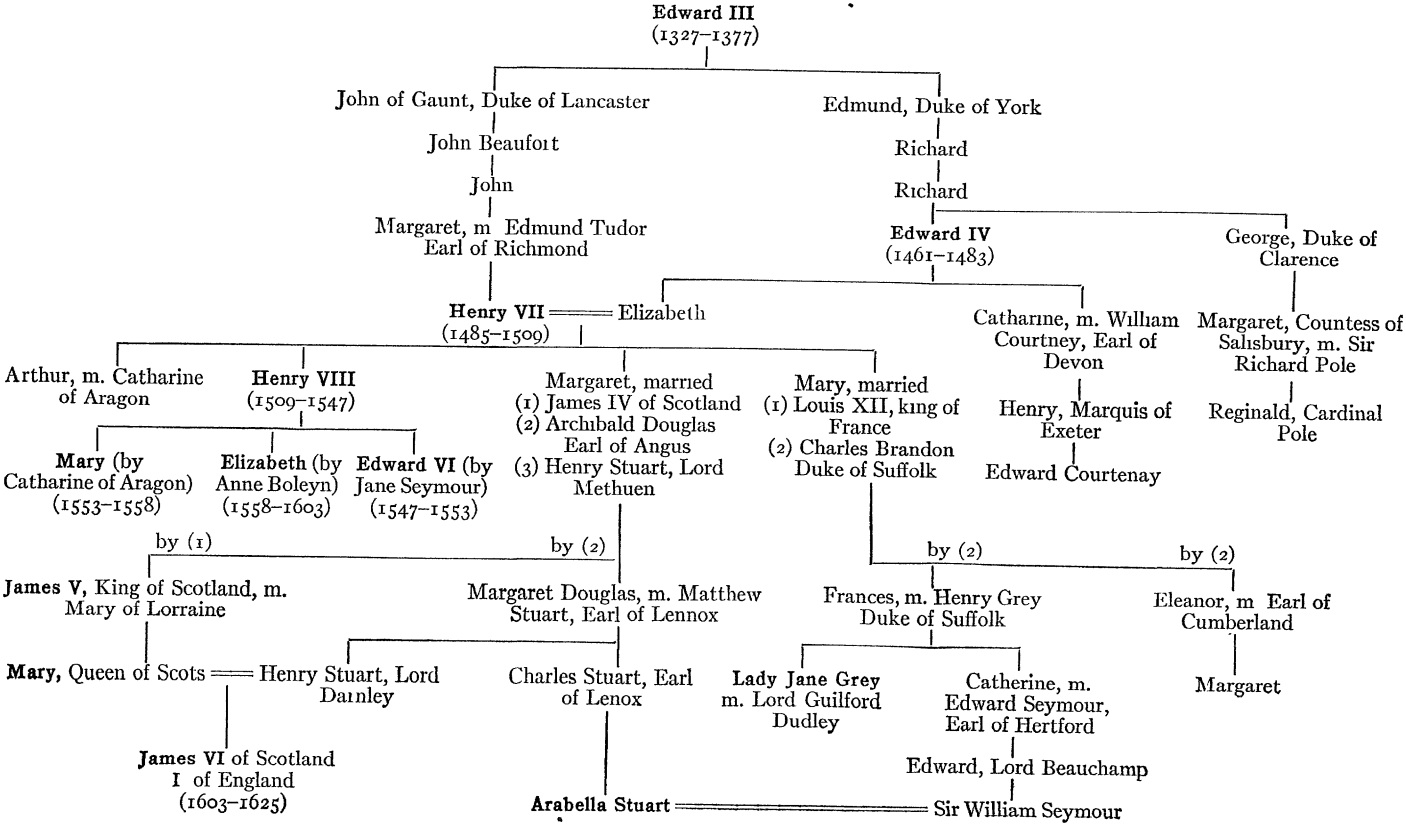
1536. Suppression of the Catholic rebellion of **Robert Aske,** aided by **Reginald Pole,** son of Margaret, Countess of Salisbury

1539. STATUTE OF THE SIX ARTICLES, defining heresy; denial of any of these positions constituted heresy: (1) transubstantiation; (2) communion in one kind for laymen; (3) celibacy of the priesthood, (4) inviolability of vows of chastity, (5) necessity of private masses, (6) necessity of auricular confession

1540. Execution of Cromwell, on a charge of treason. Cromwell had fallen under Henry's displeasure by his advocacy of the king's marriage with **Anne of Cleves,** with whom the king was ill-pleased

1542. IRELAND MADE A KINGDOM.

1542. War with Scotland. James V defeated at the **battle of Solway Moss** (Nov 25). James V died shortly afterward Henry proposed a marriage between his son, **Edward,** and James' infant daughter, **Mary,** but the Scottish court preferred an alliance with France, whereupon Henry concluded an alliance with the emperor



1544. Parliament recognized **Mary** and **Elizabeth** as heirs to the crown in the event of the death of Edward without issue.

1547. Execution of the **Earl of Surrey,** on charge of high treason.

Henry VIII died Jan. 28, 1547, leaving a will, wherein the crown was left to the heirs of his sister, **Mary, Duchess of Suffolk,** in the event of failure of issue by all of his children

1547-1553. EDWARD VI, ten years of age; his uncle, Earl of Hertford, was appointed lord protector and **Duke of Somerset,** and assumed the government. **Repeal of the Six Articles** (1547). Introduction of Protestant doctrines (1549). Execution of Seymour, brother of the Duke of Somerset, who wished to marry the

Succession to the English Crown, 1553-1603

Princess Elizabeth. Establishment of uniformity of service by act of Parliament, introduction of Edward VI's **first prayer-book** (1549) (second, 1553).

1550. **Fall of the protector,** Somerset, who was superseded by Lord Warwick, afterward **Duke of Northumberland.** Execution of Somerset (1552)

1551. **Forty-two articles** of religion published by Cranmer. These were essentially the basis of Anglican Protestantism, though their form was not final until the thirty-nine articles of Elizabeth's reign

1553. Edward assigned the crown **to Lady Jane Grey,** daughter of his cousin, Frances Grey, eldest daughter of Mary, daughter of Henry VII, to the exclusion of Mary and Elizabeth, daughters of Henry VIII. Lady Jane was married to the son of the Duke of Northumberland. **Death of Edward VI** (July 6).

1553-1558. **MARY,** who had been brought up a Catholic.

The proclamation of **Lady Jane Grey** as queen by Northumberland meeting with no response, Northumberland, Lady Jane, and others were arrested **Execution of Northumberland** (Aug. 22, 1553) Restoration of Catholic bishops. **Gardiner,** Bishop of Winchester, author of the Six Articles, lord chancellor.

1553. Marriage treaty between **Mary** and **Philip of Spain,** son of Charles V, afterward Philip II. Philip was to have the title of *King of England,* but no hand in the government, and in case of Mary's death could not succeed her. This transaction being unpopular, an insurrection broke out, headed by Sir Thomas Carew, the Duke of Suffolk, and Sir Thomas Wyatt. The suppression of the rebellion was followed by the **execution of Lady Jane Grey** (Feb. 12, 1554) and her husband. Lady Jane was an accomplished scholar (pupil of **Roger Ascham**) and had no desire for the crown. Imprisonment of Elizabeth, who was soon released on the intercession of the emperor.

1554. **July 25.** Marriage of **Mary** and **Philip.**

1555. **Return to Catholicism** and persecution of the Protestants (**Bonner,** Bishop of London). Oct. 16, **Ridley** and **Latimer;** March 21, 1556, **Cranmer burnt at the stake.** About 300 are said to have been burnt during this persecution. **Cardinal Pole,** Archbishop of Canterbury and papal legate (1556).

1557. **England drawn into the Spanish war with France.** Defeat of the French at the **battle of St. Quentin** (Aug 10, 1557).

1558, Jan. 7. **Loss of Calais,** which was captured by the Duke of Guise.

1558-1603. **ELIZABETH,** brought up a Protestant. **Sir William Cecil** (Baron Burleigh, 1571), secretary of state. **Sir Nicholas Bacon,** lord privy seal. Repeal of the Catholic legislation of Mary, re-enactment of the laws of Henry VIII relating to the Church; **Act of Supremacy, Act of Uniformity.** Revision of the prayer-book

1559, Apr. 2. **Treaty of Cateau-Cambrésis** with France. Calais to be ceded to England in eight years

On the accession of Francis II, King of France, Mary, his wife, assumed the title of *Queen of England and Scotland.* Conformity exacted in Scotland. **Treaty of Berwick** (Jan 1560), between Elizabeth and the Scottish reformers. French troops besieged at Leith. **Treaty of Edinburgh** between England, France, and Scotland (1560, July 6). French interference in Scotland withdrawn. **Adoption of a Confession of Faith** by the Scotch Estates. Return of Mary to Scotland (1561) after the death of Francis II, where she was at once involved in conflict with the Calvinists (**John Knox**).

1563. **Adoption of the Thirty-Nine Articles,** in place of the forty-two published by Cranmer. Completion of the **establishment of the Anglican Church** (*Church of England, Episcopal Church*). A compromise Church, largely Protestant in dogma (though many of the thirty-nine articles are ambiguous), but with a hierarchical organization similar to the Catholic, and a liturgy essentially that of the Roman Church translated into English. Numerous **dissenters** or **nonconformists: Puritans** — even then a broad, inexact term, covering various groups who wished to "purify" the Church; to substitute a simple early-Christian ritual for the existing ritual, to make the Church more "Protestant"; **Separatists,** Puritans who left the Anglican Church entirely to organize their own churches, **Presbyterians,** Puritans who sought to substitute organization by presbyters and synods for organization by bishops within the Anglican Church: **Brownists,** extreme leftist Puritans religiously, the nucleus of the later **Independents** or **Congregationalists;** Brownists and Catholics, alone of the Elizabethan religious groups could not be brought under the Queen's policy of toleration within the Anglican Church. Elizabeth therefore did not "tolerate" and did "persecute" Catholics, Brownists, and, of course, Uni-

tarians (who denied the doctrine of the Trinity).

1564. **Peace of Troyes** with France. English claims to Calais renounced for 222,000 crowns.

In Scotland Mary married her cousin **Darnley,** who caused her favorite Rizzio to be murdered (1566) and was himself murdered (Feb 10, 1567) by Bothwell. The exact part played by Mary in these intrigues is still debated by historians. Marriage of Mary and **Bothwell** (May 15, 1567) The nobles under Murray, Mary's natural brother, revolted, defeated Mary at **Carbury Hill,** near Edinburgh, and imprisoned her at Lochleven Castle Abdication of Mary in favor of her son, by Darnley, **James VI** (July 24, 1567). **Murray,** regent In May, 1568, Mary escaped from captivity; defeated at **Langside,** May 13, she took refuge in England, where, after some delay, she was placed in confinement (1568)

1577. Alliance of Elizabeth and the Netherlands.

1583-1584. Plots against the queen (Arden, Parry); Spanish plot of Throgmorton; execution of the **Earl of Arundel** for corresponding with Mary. **Bond of Association.**

1585. Troops sent to the aid of the Dutch Republic under the **Earl of Leicester. Victory of Zutphen** (Sept. 22, 1586), death of **Sir Philip Sidney.**

1586. Expedition of **Sir Francis Drake** to the West Indies, sack of St. Domingo and Carthagena; rescue of the Virginia colony.

1586. Conspiracy of **Savage, Ballard, Babington,** etc., discovered by the secretary of state, **Walsingham;** execution of the conspirators. The government involved Mary, Queen of Scots, in the plot. She was tried at Fotheringay Castle (Oct), and convicted on the presentation of letters which she alleged to be forged. She was convicted Oct 25 and executed Feb. 8, 1587

1588. **WAR WITH SPAIN.** Construction of an English fleet of war. The Spanish fleet, called the *Invincible Armada* (132 vessels, 3165 cannon), was defeated in the Channel by the English fleet (**Howard, Drake, Hawkins**), July 21–29, and destroyed by a storm off the Hebrides.

1597. Rebellion of the Irish under **Hugh O'Neill, Earl of Tyrone;** the failure of the Earl of Essex to cope with the insurrection led to his recall, and his successor Lord Mountjoy quickly subjugated the country (1601). Capture of Tyrone, flight of the **Earl of Desmond.** A rebellion of **Essex** in London was followed by his execution (1601).

1600. **Charter of the East India Company.**

1601. **Elizabethan Poor Law,** preceded by various measures regulating apprenticeship (1563), vagrancy, etc. This famous law charged the parishes with providing for the needy

1603-1649 (1714). THE HOUSE OF STUART. Personal Union of England and Scotland.

1603-1625. **JAMES I** (as King of Scotland **James VI**), son of Mary Stuart. The Scotch had brought him up in the Protestant faith. He was rather pedantic, and not popular with a people used to the hearty Tudors. Divine right of kingship, divine right of the bishops (*no bishop, no king*). In this century the after-effects of the Reformation made themselves felt in England as on the Continent, and in both places resulted in war In England, however, owing to the peculiar circumstances of the Reformation, these effects were peculiarly conditioned; the religious questions were confused and overshadowed by political and constitutional questions. Under stress of their quarrel, both the first two Stuarts and the parliamentarians sought to bend the mediaeval English constitution, the Stuarts toward royal absolutism, the parliamentarians toward government by an oligarchy of great nobles and city merchants. Only at the end of the struggle, in the 1640's, did advanced democratic ideas, coupled usually with extreme religious doctrines, appear in minority groups (**Levelers, Fifth Monarchy Men**).

1603, Mar. 24. **James I** was proclaimed king; he entered London on the 7th of May, and was crowned July 25. Presentation of the **millenary petition** immediately after James' arrival in London, signed by 1000 (800) ministers, asking for the reform of abuses

The Main and the Bye. The *Main* was a plot to dethrone James in favor of **Arabella Stuart** (see gen. table), concocted by Lords Cobham, Grey, and others. Sir **Walter Raleigh** was also implicated and imprisoned till 1616 (*History of the World* written in prison) The *Bye* or the *surprising treason* was a plot to imprison the king. **Alliance with France,** negotiated by Sully.

1604, Jan. **Hampton Court Conference,** between the bishops and the Puritans, James presiding The Puritans failed to secure any relaxation of the rules of the Church. James issued a proclamation en-

forcing the **Act of Uniformity**, and another banishing Jesuits and seminary priests. Friction between the king and parliament over a disputed election in Bucks (**Goodwin and Fortescue**).

1604, Mar. 19-1611, Feb. 9. First Parliament of James I. The king's scheme of a real union of England and Scotland unfavorably received. Appointment of a commission to investigate the matter.

Convocation (ecclesiastical court and legislature, at first established [Edward I] as an instrument for ecclesiastical taxation, afterward convened by archbishops for the settlement of church questions, since Henry VIII, convened only by writ from the king, and sitting and enacting [canons] only by permission of the king) adopted some new canons which bore so hardly upon the Puritans that 300 clergymen left their livings rather than conform.

1604. Peace with Spain. James proclaimed *King of Great Britain, France, and Ireland* (Oct. 24). Punishment of many recusants (under the recusancy laws of Elizabeth, whereby refusing to go to church, saying mass or assisting at mass was severely punished).

1605. Nov. 5. GUNPOWDER PLOT, originating in 1604 with **Robert Catesby,** after the edict banishing the priests. Preparations for blowing up the houses of Parliament with thirty-six barrels of gunpowder Disclosure of the plot through an anonymous letter Arrest of **Guy Fawkes** in the vaults on Nov. 4, the day before the meeting of Parliament. Trial and execution of the conspirators.

1606. Penal laws against papists. Plague in London. **Episcopacy restored in Scotland.** James urged the union anew, but in vain

Impositions. The grant of customs duties made at the beginning of every reign (*tonnage* and *poundage*, established by Edward III) proving insufficient to meet James' expenditure, he had recourse to impositions without parliamentary grant, which Mary and Elizabeth had used to a small extent. Trial of Bates for refusing to pay an imposition on currants. The Court of Exchequer decided in favor of the king

1610. The Great Contract; in return for the surrender of some feudal privileges, the king was to receive a yearly income of £200,000. The agreement was frustrated by a dispute over the impositions. **Dissolution of Parliament** (Feb 9, 1611).

1611. Plantation of Ulster, which was forfeited to the crown by the rebellion of Tyrone.

1611. Completion of the translation of the Bible, which was authorized by the king and had occupied 47 ministers since 1604.

1613. Robert Carr, the king's favorite (Viscount Rochester in 1611), created Duke of Somerset and lord treasurer, on the death of the Earl of Salisbury (Robert Cecil). Death of Henry, Prince of Wales (Nov. 1612)

1614, Apr. 5-June 7. Second Parliament of James I. Three hundred new members, among whom were **John Pym** (Somersetshire), **Thomas Wentworth** (Yorkshire), **John Eliot** (St. Germains). The whole session was spent in quarreling with the king over the impositions, and Parliament was dissolved without making an enactment, whence it is called the *Addled Parliament.*

1615. Renewal of the negotiation for the marriage of James' son to a Spanish princess (opened in 1611). **Imposition of a benevolence,** which was resisted by Oliver St John and condemned by the chief justice, **Sir Edward Coke,** who was afterward dismissed from office. **Rise of George Villiers** in the king's favor, Viscount Villiers, Earl, Marquis, **Duke of Buckingham.**

1617. Sir Walter Raleigh, released from the Tower, allowed to sail for the Orinoco, where he hoped to discover a gold mine. Failing in this he attacked the Spanish towns on the Orinoco. On his return to England in the following year, he was executed under the old sentence, as reparation to Spain

1621, Jan. 30-1622, Feb. 8. Third Parliament of James I. The Parliament granted a supply for the prosecution of the war in the Palatinate (p 404), in which James was half-hearted, and then took up the subject of grievances Impeachment of Mompesson and Mitchell, who had bought monopolies of inn-licensing and the manufacture of gold and silver thread; they were degraded, fined, and banished. Impeachment of **Francis Bacon** (1561–1626), famous essayist and writer on scientific method, lord chancellor since 1618. Bacon admitted that he had received presents from parties in suits, but denied that they had affected his judgment He was fined £40,000 (which was remitted) and declared incapable of holding office in the future. Petition of the Commons against popery and the Spanish marriage The angry rebuke of the king for meddling in affairs of state

("*bring stools for these ambassadors*") drew from the Parliament

1621, Dec. 18. THE GREAT PROTESTATION: "That the liberties, franchises, privileges, and jurisdictions of Parliament are the ancient and undoubted birthright and inheritance of the subjects of England, and that the arduous and urgent affairs concerning the king, state, and defense of the realm . . . are proper subjects and matter of council and debate in Parliament." The king tore the page containing the protestation from the journal of the Commons, dissolved Parliament (Feb. 8, 1622), and imprisoned **Southampton, Coke, Pym,** and **Selden.**

1623. Charles, Prince of Wales, and the **Duke of Buckingham** went to Spain and negotiated a marriage treaty, the provisions of which were so favorable to the Catholics as to excite great dissatisfaction in England; finally, being unable to secure any help from Spain in regard to the Palatinate, Charles and Buckingham returned in anger.

1624, Feb. 12-1625, Mar. 27. Fourth Parliament of James I. The Spanish marriage was broken off, but even the anger of Buckingham could not drive the Parliament into a declaration of war with Spain Supplies voted for defense. Mansfeld raised 1200 men in England who reached Holland, but nearly all perished there from lack of proper provisions. This was, in fact, a breach with Spain. Marriage treaty with France for the marriage of Prince Charles with **Henrietta Maria,** sister of Louis XIII

1625-1649. CHARLES I.

1625, May 11. Marriage of Charles I and Henrietta Maria. Ships sent to Louis XIII secretly engaged not to fight against the Huguenots

1625. First Parliament of Charles I. (Assembled June 18, adjourned to Oxford July 11, dissolved Aug. 12) Grant of tonnage and poundage for one year only, and of £140,000 for the war with Spain. Proceedings against Montague Unsuccessful expedition of Wimbledon against Cadiz

1626, Feb. 6-June 15. Second Parliament of Charles I. Charles had hoped for a more pliable Parliament, as he had appointed several of the leaders of the first Parliament sheriffs, and so kept them out of the second But this Parliament, under the lead of **Sir John Eliot,** was more intractable than the last. Lord Bristol, to whom no writ had been sent by order of the king, received one on the interference of the Lords, but was requested not to appear He took his seat and brought charges against **Buckingham,** on which that lord was impeached (May). Imprisonment of Sir John Eliot and Sir Dudley Digges, who were set at liberty upon the refusal of Parliament to proceed to business without them

1626-1630. War against France. Inglorious expedition of Buckingham to the relief of Rochelle (1627)

Exaction of a forced loan to raise money for the French war, and for the subsidy which Charles had agreed to supply to Christian IV of Denmark.

1628, Mar. 17-1629, Mar. 10. Third Parliament of Charles I. (May): Passage of the **PETITION OF RIGHT:** (1) Prohibition of benevolences, and all forms of taxation without consent of Parliament. (2) Soldiers should not be billeted in private houses. (3) No commission should be given to military officers to execute martial law in time of peace (4) No one should be imprisoned unless upon a specified charge Assent of the king (June 7) Grant of five subsidies

Charles having, after the first year of his reign, continued to levy tonnage and poundage, the Commons drew up a remonstrance against that practice **Prorogation of Parliament** (June 26) Seizure of goods of merchants who refused to pay tonnage and poundage.

Assassination of Buckingham (Aug 23), by Felton

1629, Jan. New session of Parliament. The Commons at once took up the question of tonnage and poundage; claim of privilege in the case of Rolle, one of the merchants, whose goods had been seized, and who was a member of Parliament. Turbulent scene in the House of Commons; the speaker held in the chair while the **resolutions of Eliot** were read Whoever introduced innovations in religion, or opinions disagreeing with those of the true Church; whoever advised the levy of tonnage and poundage without grant of Parliament; whoever voluntarily paid such duties, was an enemy of the kingdom.

1629. Eliot and eight other members were arrested (Mar 5), Eliot died in the Tower in Nov. and the others made submission. **Parliament dissolved** (Mar. 10). For eleven years (1629–1640) Charles governed without a Parliament, raising money by hand-to-mouth expedients, reviving old taxes, old feudal privileges of the crown, selling monopolies. These were rarely wholly illegal, but seemed to parliamentarians contrary to recent constitutional developments. **Charles' advisers: William Laud** (1573–1645), Bishop of Lon-

don, 1628, Archbishop of Canterbury, 1633, **Thomas Wentworth** (1593–1641), Earl of Strafford and Lord Lieutenant of Ireland, 1639. Both were extremists. Strafford's policy of *thorough* further embittered Ireland. **Peace was made with France** (Apr 1630) **and with Spain** (Nov 1630) Conformity was enforced, and the communion table inrailed

1634. The tax which focused hatred on Charles was **ship-money,** by which a writ issued in 1634 extended to the whole country a tax hitherto levied only on seaboard towns. **John Hampden,** a Buckinghamshire country gentlemen, defying the tax, was tried in June, 1634, and lost his case in court, but won it with the public.

1637. An attempt to read the English liturgy in Edinburgh, ordered by Charles, produced a **riot at St. Giles'** (June 23). This was followed by the organization of the Scotch Presbyterians to resist episcopacy. On Feb 28, 1638 was signed the **Solemn League and Covenant** (whence *Covenanters*) for the defense of the reformed religion. In Nov a general assembly at Glasgow abolished episcopacy, settled liturgy and canons, and gave final form to the **Scottish Kirk.**

1639. The First Bishops' War. The Scots seized Edinburgh Castle and raised an army. Charles marched to meet them near Berwick, but concluded with them, without battle, the **Pacification of Dunse** (June 18) After the armies had been disbanded, the questions were to be referred to a new general assembly and a new (Scotch) Parliament. At the Edinburgh assembly the work of the Glasgow assembly was confirmed, and Parliament proved intractable.

1640. Charles, in trouble in Scotland and financially distressed in England, now called his **fourth Parliament,** the *Short Parliament* at Westminster (Apr. 13–May 5). This Parliament, refusing to vote money until grievances were settled, was immediately dissolved. Riots, attacks on Laud's palace The Scotch trouble broke out in the **Second Bishops' War,** and the royalists were beaten in a skirmish at **Newburn on the Tyne** (Aug. 28). By the **Treaty of Ripon** (Oct. 26) Charles agreed to pay the Scotch army £850 a day until a permanent settlement could be made. These obligations made the calling of a Parliament inevitable

1640. THE LONG PARLIAMENT, the fifth Parliament of Charles I (Nov 3, 1640–Mar 16, 1660) First session until Sept. 8, 1641.

The fact that the Scotch army was not to be disbanded until paid gave the Commons an unusual hold over Charles On Nov 11, **Strafford** was impeached, followed by **Laud,** and both were sent to the Tower. At the trial of Strafford in the following March, the result of impeachment being uncertain, it was dropped, and a bill of attainder introduced, which passed both Commons and Lords in April. Strafford was executed on May 12 Meanwhile, Parliament passed the revolutionary **Triennial Act,** requiring the summoning of Parliament every three years even without the initiative of the crown (May 15, 1641). This was followed in May by a bill to prevent the dissolution or proroguing of the present Parliament without its own consent, which Charles reluctantly signed, along with Strafford's attainder. The culmination of radicalism was the introduction of a bill for the abolition of bishops. This was the **Root and Branch Bill,** on which the moderate Puritans split with the more radical Presbyterians

1641, July. Abolition of the courts of Star Chamber and **High Commission.** These courts were a part of the constitution of England, and their abolition shows that Parliament was determined to effect a revolution In August, a **treaty of pacification** with Scotland was made, and Scotch and English armies were paid with the proceedings of a special poll-tax granted by Parliament. Charles took refuge with the Scotch. On the proroguing of Parliament in Sept , each house appointed a committee to sit in the vacation (**Pym,** chairman of the Commons' committee). Charles attempted to conciliate the moderate parliamentarians by giving office to their leader, Lucius Cary, Lord Falkland

In Scotland, the **Marquis of Montrose** plotted the seizure of the **Earl of Argyle,** Presbyterian leader. The discovery of the plot seemed to involve Charles himself, who was thus thrown into the hands of Argyle. Charles practically surrendered all control over Scotland to Argyle and the Presbyterians, receiving from the latter only a promise not to interfere in English religious affairs (Oct 1641).

1641, Oct. 21. Parliament assembled and heard the news of the **massacre of Protestants in Ulster** (30,000 killed). Still unwilling to entrust Charles with an army, it presented him with the **Grand Remonstrance** (Dec. 1) passed in the Commons in Nov. by eleven votes, a summary of all the grievances of his reign. It was ordered printed by Parliament on Dec. 14.

1642, Jan. 3. Charles ordered the impeachment of Lord Kimbolton, and of **Pym, Hampden, Haselrig, Holles, Strode,** of the Commons, for treasonable correspondence with the Scotch in the recent troubles. The Commons refusing to order the arrest, Charles with a few hundred soldiers went to the House and attempted to seize the five members (Jan. 4). Failing to find them, he withdrew The five members had taken refuge in London, where the Commons followed them, and formed a committee at the Guildhall under the protection of the citizens of London Charles left London on Jan. 10 and the five members returned The victorious Commons, emboldened, put before the king bills excluding bishops from the Lords and giving command of the militia to Parliament. From York he refused to sign the latter (March) and there he was joined by 32 peers and 65 members of the Commons. He also had the great seal. The Parliament at Westminster now was obliged to pass ordinances which were not submitted to the king and did not appear under the great seal

June 2. Parliament made a final approach to Charles, submitting the **nineteen propositions:** that the king should give his assent to the militia bill, that all fortified places should be entrusted to officers appointed by Parliament, that the liturgy and church government should be reformed in accordance with the wishes of Parliament; that Parliament should appoint and dismiss all royal ministers, appoint guardians for the king's children, and have the power of excluding from the upper house at will all peers created after that date. The propositions were rejected.

July. Parliament appointed a **committee of public safety,** and put Essex in charge of an army of 20,000 foot and 4000 cavalry. When on Aug. 22 Charles raised the royal standard at Nottingham, the military phase of the **Great Rebellion** began

1642-1646. THE CIVIL WAR. Roughly, northern and west-central England stood by the king, East Anglia, London, and the south with Parliament. Socially, the gentry, the Anglican clergy, and the peasantry were royalist, the middle classes, the great merchants, and many great nobles were parliamentarians. But neither *Roundhead* (parliamentarian, Puritan) nor *Cavalier* (royalist) describes completely an economic or social class. Armies were small Until Cromwell's *Ironsides* the royalist cavalry was superior. The war was relatively free from excesses.

1642. After the drawn **battle of Edgehill** (Oct. 23), where **Prince Rupert** (royalist cavalry leader, son of the Elector Palatine and Elizabeth of England) distinguished himself, the king marched on London, but turned back at Brentford when confronted by Essex (Nov. 12)

The associated counties of Norfolk, Suffolk, Essex, Cambridge, Hertfordshire, and Huntingdonshire raised a force entrusted to **Oliver Cromwell** (1599–1658), which as the *Ironsides* finally became the best troops in the war. Meantime, the war was a series of raids and indecisive battles **Capture of Reading** by Essex (Apr. 27, 1643), skirmish at **Chalgrove Field** in which Hampden was mortally wounded (June 18) **Capture of Bristol** by Rupert (July 25), counterbalanced by Essex's **relief of Gloucester** (Sept.), gallantly defended by Massey **First battle of Newbury** (Sept 20).

1643, July 1. Through all this the **Westminster Assembly,** which sat until 1649, debated religious and theological problems

Sept. 25. THE SOLEMN LEAGUE AND COVENANT, signed by 25 peers and 288 members of the Commons, agreeing to make the religions of England, Ireland, and Scotland as nearly uniform as possible and to reform religion *"according to the word of God, and the examples of the best reformed churches"* All civil and military officials were required to sign the covenant (nearly 2000 clergymen refused and lost their livings). The Scotch now consented to help the English parliamentarians; a Scotch army crossed the Tweed (Jan 1644). Charles rashly enlisted Irish Catholic insurgents with whom he concluded peace, thus alienating many Englishmen

1644, Jan. Charles convened a **royalist Parliament at Oxford.** His opponents established (Feb. 15) a joint committee of the two kingdoms of Scotland and England. At the **battle of Nantwich** (Jan 25) the royalist Irish were beaten by Sir **Thomas Fairfax,** who, in junction with the Scotch, besieged York while Essex and Waller besieged Oxford.

July 2. BATTLE OF MARSTON MOOR. Prince Rupert, after defeating the Scotch, was decisively beaten by Cromwell and his Ironsides. This was the crucial battle of the war, and gave the north to Parliament York surrendered (July 16); Newcastle (Oct 16). In the south Waller was beaten at **Cropredy Bridge** (June 29) and Essex's infantry surrendered to Charles in Cornwall. The indecisive **second battle of Newbury** (Oct.

27), in which Charles was pitted against Essex, Waller, and Manchester, prefaced the so-called **Treaty of Uxbridge**, a truce in Jan and Feb. 1645, during which Parliament's proposals were rejected by Charles, who had hitherto had the best of the war in south and southwest.

In Scotland, **Montrose**, after slipping into the country in disguise (Aug 1644), raised highland clans for Charles and gained several victories over the Covenanters (**Tippamuir**, Sept 1, **Inverlochy**, Feb 2, 1645, **Auldcarn**, May 1, **Alford**, July 2) At one time he held most of Scotland, but his armies melted away when the Parliament sent General Leslie into Scotland after Naseby, and at **Philiphaugh** (Sept. 13, 1645) the Stuart partisans were decisively beaten. Montrose fled to the Continent

1645, Jan. Laud, tried in March, 1644, was attainted and executed. England was fast moving toward extreme Protestantism. With Cromwell, the **Independents** rose to leadership **Presbyterianism**, with some reservations for the Independents, became the established Church. The **Self-Denying Ordinance** (April 3) having excluded members of either house from military command, Fairfax superseded Essex as captain-general, and Cromwell, with the Self-Denying Ordinance suspended in his case, became lieutenant-general The army was re-formed into the *new model* on the lines of the Ironsides.

1645, June 14. BATTLE OF NASEBY, decisive defeat of the king, ruin of his cause. Royalist towns and houses surrendered rapidly Leicester (June 18), Bridgewater (July 23), Bristol (Sept. 11), Carlisle, Winchester, Basing House (Oct.), Latham House (Dec.) At **Stowe-on-the-Wold** (Mar. 26, 1646) Lord Ashley was beaten and captured in the final battle of the war. Charles surrendered himself to the Scotch (May 5).

1646, July. Parliament submitted to the captive Charles **the Newcastle proposals:** that Parliament control the militia for twenty years; that Charles take the Covenant, that he support the Presbyterian establishment. Hoping to profit by the obviously impending breach between the Presbyterians in Parliament and the Independents in the army, Charles rejected the propositions

1647, Jan. 30. The Scotch surrendered Charles to Parliament in return for their back pay (£400,000). He was brought to Holmby House in Northamptonshire. **Army and Parliament in open conflict.** Parliament reappointed Fairfax commander-in-chief, re-enacted the Self-Denying Ordinance, and voted the disbandment of all soldiers not needed for garrisons or for service in Ireland. This the army refused to accept, claiming full payment for arrears in salary A detachment headed by Cornet Joyce seized Charles at Holmby House (June 4), and carried him prisoner to the army, thus forestalling an agreement between king and Presbyterians.

June 4. On the same day Cromwell fled from Parliament to the army at **Triptow Heath**, where it had taken an oath not to disband until freedom of conscience was secured, and had erected a council of adjudicators From St Albans the army addressed to Parliament a *humble representation* (June 10) and demanded the exclusion of eleven members, among them Holles, obnoxious to it The two speakers, fourteen lords, and about one hundred of the Commons fled to the army (July). Proposals were presented to the king by the army· that worship be free for all, that Parliament control army and navy for ten years and appoint officers of state, that Parliament serve for three years (**triennial Parliaments**). The king rejected them, and moved to take refuge with the Presbyterian members of Parliament; but the army entered London (Aug 6) and forced Parliament to take back the members who had fled to the army. Charles removed to Hampton Court, where he rejected a modified form of the previous proposals and fled to the Isle of Wight, where he was detained by the governor of Carisbrooke Castle (Nov. 11).

Dec. 24. "The four bills" presented to the king by Parliament: (1) Parliament to command the army for twenty years, (2) all declarations and proclamations against the Parliament to be recalled, (3) all peers created since the great seal was sent to Charles to be incapable of sitting in the house; (4) the two houses should adjourn at pleasure. Charles, who was only playing with the Parliament in the hope of securing aid from Scotland, rejected the four bills (Dec. 28), after he had already signed a secret treaty with the Scots (Dec. 26). Charles agreed to abolish Episcopacy and restore Presbyterianism; the Scots, who looked with horror on the rising tide of toleration in England, agreed to restore him by force of arms

1648, Jan. 15. Parliament renounced allegiance to the king, and voted to have no more communication with him.

1648. SECOND CIVIL WAR. At once a war between Scotland and England, a war between the royalists

and the Roundheads, and a war between the Presbyterians and the Independents

Mar. At a meeting of army officers at Windsor it was decided to bring the king to trial Parliament having reassembled with 306 members and the Presbyterians again in control, repealed the non-communication resolution and attempted to reopen negotiations with the king (July)

Aug. 17-20. Battle of Preston Pans. Under the Duke of Hamilton, a Scotch army invaded England, but was beaten by Cromwell. This ended the second civil war. The so-called **Treaty of Newport,** between king and Parliament, had no result, as Charles was seized by the army (Dec 1) and, Parliament having again attempted to treat with the king, **Colonel Pride,** by order of the council of affairs, forcibly excluded 96 Presbyterian members from the Parliament (*Pride's Purge,* Dec. 6, 7), which is henceforth known as the *Rump Parliament* (some 60 members)

Dec. 13. The **Rump** repealed the vote to continue negotiations with Charles, and voted that Charles be brought to trial. Appointment of a high court of justice of 135 members to try the king was rejected by the Lords (1649, Jan 2) and the Commons resolved that legislative power resided solely with the Commons (Jan 4, passed Jan 6 without concurrence of the Lords)

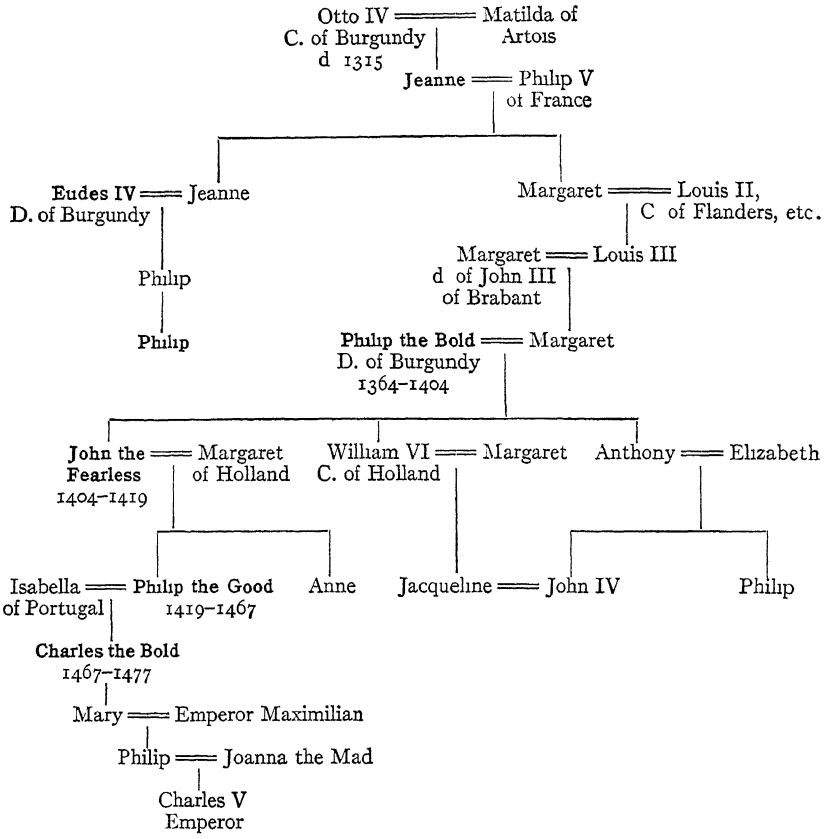
1649, Jan. 20. The army council drew up a temporary **Instrument of Government.** Charles was tried before the high court (67 members present, Bradshaw presiding) whose jurisdiction he simply denied (Jan. 20–27) **The king was sentenced to death and beheaded at Whitehall** (Jan 30).

(*Cont. p.* 425)

2. THE NETHERLANDS TO 1648

The provinces of the **Low Countries,** originally inhabited by Batavians and other Germanic tribes, had formed a part of the empire of Charlemagne and, after the **Treaty of Mersen** (870), belonged in large part to Germany, forming a dependency of the Kingdom of Lothaingia The decline of the ducal power favored the growth of powerful counties and duchies, such as Brabant, Flanders, Gelders, Holland, Zeeland, Hainault, and the Bishopric of Utrecht After 1384 the provinces were brought under the control of the Dukes of Burgundy in the following manner: **Philip II** (the Bold), fourth son of John II of France, became Duke of Burgundy in 1363 He married **Margaret,** daughter and heiress of Louis II, Count of Flanders and Artois (d 1404) Their son was **John the Fearless,** Duke of Burgundy (1404–1419), who was succeeded by his son, **Philip the Good** (1419–1467). Philip acquired Namur by purchase (1425). Brabant and Limburg came to him by bequest (Joanna, daughter of John III, Duke of Brabant, left them to her great-nephew, Antoine, brother of John the Fearless) In 1433 he acquired Holland, Hainault, and Zeeland by cession from Jacqueline, Countess of Holland; and in 1443, Luxemburg, by cession from Elizabeth of Luxemburg. He also added Antwerp and Mechlin. His son, **Charles the Bold** (Duke of Burgundy 1467–1477), acquired Gelderland and Zutphen by bequest from Duke Arnold (1472)

Mary, the daughter and heiress of Charles the Bold, married **Maximilian,** Archduke of Austria and later emperor (p 398). Their son, **Philip the Handsome** (Duke of Burgundy), married **Joanna,** the daughter of Ferdinand of Aragon and Isabella of Castile, and thus the Netherland provinces passed ultimately into the hands of Philip's son, **Charles I** (Charles V as emperor).



1548. Charles annexed the seventeen provinces (Brabant, Limburg, Luxemburg, Gelderland, Flanders, Artois, Hainault, Holland, Zeeland, Namur, Zutphen, East Friesland, West Friesland, Mechlin, Utrecht, Overyssel, Groningen) to the Burgundian circle of the empire.

1556. Abdication of Charles. The Netherlands, like Spain, passed to his son,

1556-1598. PHILIP II.

1568-1648. REVOLT OF THE NETHERLANDS. The provinces had long enjoyed ancient and important privileges The Estates (*staaten, états*) granted taxes and troops. **Calvinism** had taken firm root in the northern provinces (commonly called Holland), but the southern provinces (now Belgium) remained Catholic. The Spanish garrison, the penal edicts against heretics, the dread of the introduction of the Spanish Inquisition, all these factors led (during the rule [1559–1567] of **Margaret of Parma,** the natural sister of Philip II, and her adviser, **Bishop Granvella**) to the formation of a **league of nobles** (*Compromise of Breda*), headed by Philip Marnix of St. Aldegonde. Presentation of a petition by 300 nobles (*Gueux* = *Beggars,* a party

The House of Burgundy

name, originating in the contemptuous remark of the Count of Barlaimont: "Ce n'est qu'un tas de gueux"). Insurrection of the lower classes. Destruction of images and sack of the churches. These disturbances were opposed by **Lamoral, Count of Egmont** (1522–1568) and **William of Nassau,** Prince of Orange (**William the Silent,** 1533–1584), the leaders of the higher nobility, who, however, soon lost control of the movement Protestant and Catholic parties soon emerged

1567. Philip sent to the Netherlands the **Duke of Alva** (1508–1582) with an army of 20,000 Spaniards. William of Orange and many thousands of Netherlanders left their native land. Margaret resigned her regency and also departed Creation of the *Council of Blood.* Ruthless suppression of opposition. **Execution of Egmont, Hoorn,** and many other prominent figures The estates of those who failed to appear before the tribunal were confiscated, including those of William of Orange. The latter, with his brother Louis, thereupon invaded the Netherlands, but was repulsed by Alva

The arbitrary taxes imposed by Alva (the tenth pfenning from the price of every article sold, the hundredth part of every income) produced a new revolt.

1572. **Capture of Brill,** by the "Water Beggars." The insurrection spread rapidly, especially throughout the north.

1573. **Alva** was recalled at his own request. His successor, **Luis de Requesens y Zuñiga,** gained a

1574. **Victory at Mookerheide,** where two brothers of the Prince of Orange

fell. But the Spaniards could not suppress the revolt. Requesens died (1576). **Capture and sack of Antwerp, Maestricht, Ghent,** and other towns by the Spaniards led to the

1576. PACIFICATION OF GHENT, a treaty between all the provinces by which they united, without regard to national or religious differences, to drive out the Spaniards The new governor, **Don John of Austria,** was unable to quiet the country, despite disputes between the various parties He died in 1578, and was succeeded by

1578-1592. Alexander Farnese (Duke of Parma), a shrewd statesman and an excellent general Parma ultimately subdued the southern provinces, on the promise that their old political freedom should be restored. The seven northern provinces (Holland, Zeeland, Utrecht, Gelderland, Groningen, Friesland, Overyssel), thereupon concluded

1579. THE UNION OF UTRECHT, followed by a proclamation of **independence from Spain** (1581) The hereditary *statthaltership* was settled on **William of Orange.** After his murder at Delft (1584, July 10), he was succeeded by his son

1584. Maurice of Nassau, only seventeen years old. Parma continued his victorious campaigns and managed to capture Antwerp Thereupon the English came to the aid of the insurgents

1588. Philip II, hoping to put an end to the Anglo-Dutch combination, organized the **Great Armada,** which was defeated by the English and destroyed in a terrible storm (p 373)

1609. The Twelve Years' Truce put an end to sporadic and inconclusive fighting and virtually established the independence of the northern provinces. After its expiration the war was resumed by the Spaniards The Hollanders, who had grown rich and powerful at sea in the course of the struggle, were well able to hold their own, and finally

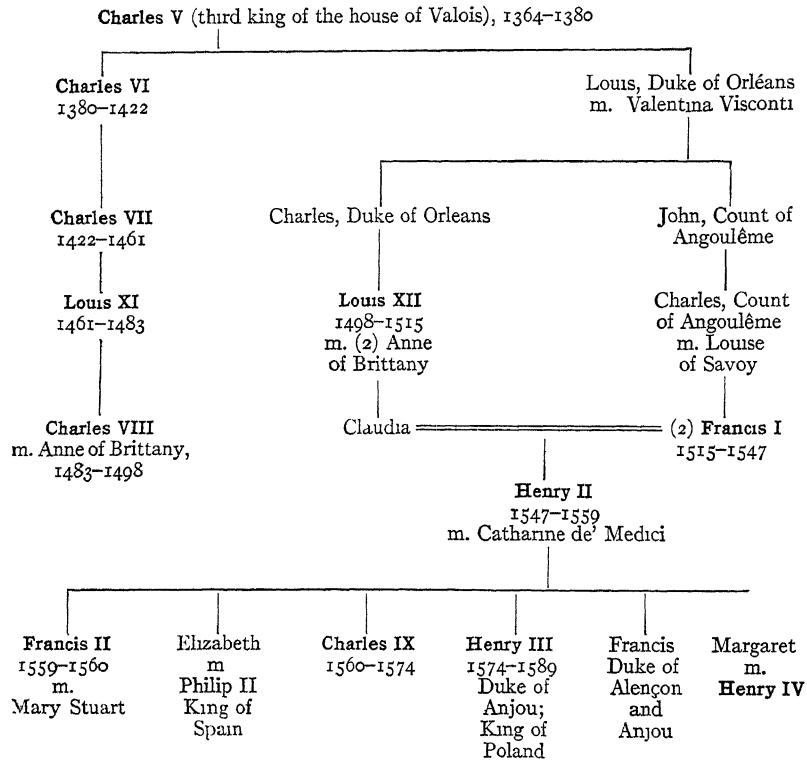
1648. THE TREATY OF WESTPHALIA recognized the independence of the Republic of the United Provinces.

(*Cont p* 437)

3. FRANCE, 1483-1641

1483-1498. CHARLES VIII. Death of the Duke of Brittany (1488) called forth a coalition of the empire, Spain, and England to preserve the independence of the duchy, but this proved futile. Charles married Anne, the heiress, in 1491, and concluded the **Treaties of Senlis** (with the emperor) **and Étaples** (with England) Spain was bought off by the cession of Roussillon and Cerdagne.

1495-1496. Charles' expedition to Italy to claim the inheritance of Naples (through his father from Charles, Duke of Maine and Provence, see geneal. table) Charles marched victoriously through Italy and conquered Naples, but was soon obliged to withdraw in the face of the **Holy League** (Emperor Maximilian, Pope Alexander VI, Spain, Venice, Milan, and ultimately England), formed to protect Italy from foreign domination. Importance of the expedition in furthering the introduction of the Renaissance into France.



1498-1589. HOUSES OF ORLEANS AND ANGOULÊME. Branch lines of the house of Valois (since 1328) whose relation to the main line is shown in geneal. table (p. 382).

1498-1515. LOUIS XII obtained a divorce from **Joanna,** daughter of Louis XI and married **Anne of Brittany,** widow of Charles VIII, in order to keep this duchy for the crown; as grandson of Valentina Visconti he laid claim to Milan, drove out Ludovico Moro, who was imprisoned when he ventured to return to Milan (1500).

1501. Louis, in alliance with Ferdinand the Catholic, King of Aragon, conquered the kingdom of Naples. The Spaniards and French soon falling out, the latter were defeated by the Spanish general Gonzalvo de Cordova on the Garigliano (1504). Louis XII gave up his claims to Naples.

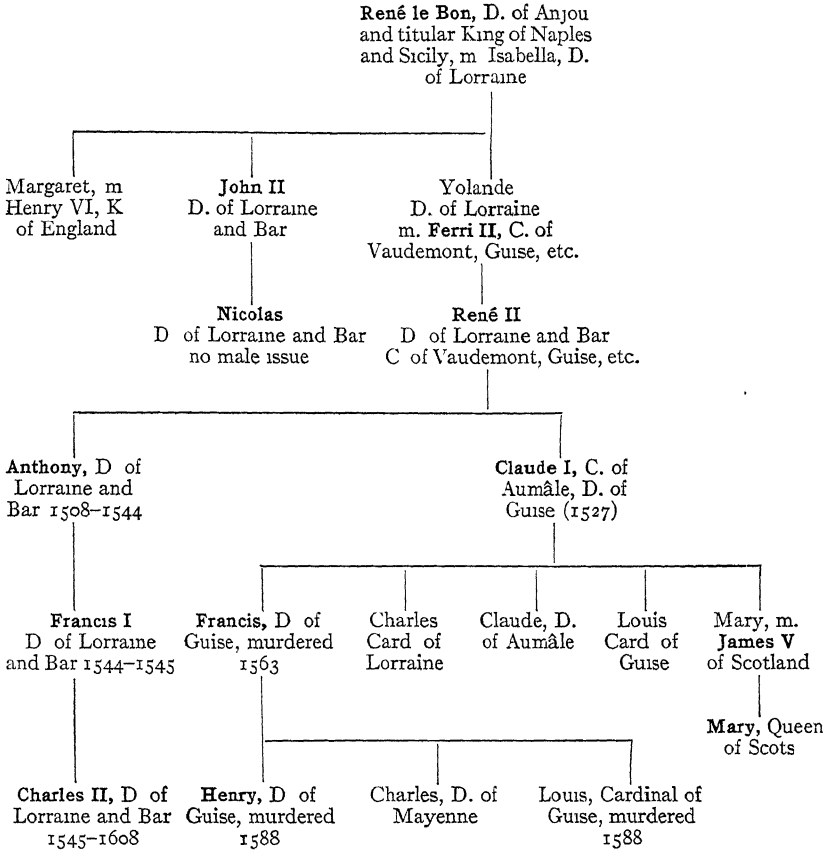
1508. Louis a party in the **League of Cambrai** (pp 393, 398). In 1511 the pope, Ferdinand the Catholic, and Venice renewed the **Holy League,** with the object of driving the French out of Italy. The latter, under the young **Gaston de Foix,** Duke of Nemours, nephew of Louis XII, were at first successful in the war, taking Brescia (1512) by storm (**Bayard,** *sans peur et sans reproche,* 1476–1524), and defeating the united Spanish and papal armies at **Ravenna,** with the aid of 5000 German mercenaries, in the same year; they were, however, compelled by the Swiss to evacuate Milan. In 1513 the French formed a new alliance with Venice,

The French Succession, 1498

but were defeated by the Swiss at **Novara** and withdrew from Italy. **Henry VIII of England,** who had joined the Holy League in 1512, and the **Emperor Maximilian,** who had joined in 1513, invaded France, and defeated the French at

1513, Aug. 17. **Guinegate,** called the *Battle of the Spurs* from the hasty flight of the French.

France concluded peace with the pope, with Spain (1513), with the emperor, and with Henry VIII (1514). Anne of Brittany having died, Louis took, as his third wife, Mary the sister of Henry VIII. He died soon after the marriage (1515) and was succeeded by his cousin, the Count of Angoulême, who had married Claudia, daughter of Louis XII and Anne, hence heiress of Brittany, which, however, was not actually incorporated with France until later.



1515-1547. FRANCIS I.

1515, Sept. 13-14. Francis reconquered Milan by the brilliant victory of **Marignano** over the Swiss. Peace and alliance between France and Switzerland **Treaty of Geneva** (Nov. 7, 1515); **Treaty of Fribourg** (Nov. 29, 1516). The latter (*la paix perpétuelle*) endured till the French Revolution.

1516. Increase of the royal power by the **Concordat of Bologna** with the pope, which rescinded the Pragmatic Sanction of 1438 and placed the choice of bishops and abbots in the hands of the king; the pope on the other hand received the annates, or the first year's revenue of every ecclesiastical domain where the king's right of presentation was exercised. Francis also abandoned the principle of the Council of Basel, that the pope was subordinate to an oecumenical council.

1520. **Meeting of Francis and Henry VIII** of England in the neighborhood

House of Lorraine and Guise

of Calais (*Field of the Cloth of Gold*) The wars of Francis with **Charles V** (p 400 ff) occupied the rest of the reign. Restrictions upon the political rights of the *parlements*. Beginnings of French Protestantism Reformers of Meaux, **Lefebvre d'Étaples** (1455–1537). King and *parlements* condemned the movement.

1547-1559. HENRY II, son of Francis Growing power of the house of **Guise** (**Francis**, Duke of Guise, and **Charles**, Cardinal of Lorraine)

Henry's mistress, **Diana of Poitiers**, Duchess of Valentinois, ruled him almost absolutely. **Montmorency**, constable. Persecution of the Protestants in France; assistance to German Protestants.

1547. Final union of Brittany with the French crown.

1552. War with Charles V (p. 402). Seizure of the three bishoprics (Toul, Metz, and Verdun) by the French.

1556-1559. War with Spain. The French were defeated by the Spaniards, supported by the English, in the **battle of St. Quentin** (1557), and by Egmont at **Gravelines** (1558).

1558. Calais, the last English possession in France, was captured by the Duke of Guise.

1559, Apr. 3. PEACE OF CATEAU-CAMBRÊSIS, which ended the Hapsburg-Valois wars. The French restored all their conquests except Calais and the three bishoprics Henry II, who died of a wound received in a tournament, was succeeded by his son

1559-1560. FRANCIS II, the first husband of Mary Stuart of Scotland, who was a niece of the Guises Measures against the Protestants (*chambres ardentes*). The king's mother, **Catherine de' Medici** (1519–1589), struggled for power and influence against the Bourbon princes: **Anthony** (King of Navarre), and **Louis of Condé,** who were descended from Louis IX. The **Guises,** at first rivals of the queen-mother and then in alliance with her, conducted all the affairs of state and surpassed in influence their opponents, the Catholic constable, **Montmorency,** and his nephews, the three Châtillon brothers **Gaspard, Admiral de Coligny; François d'Andelot,** and **Cardinal Châtillon,** later leaders of the Huguenots **Conspiracy of Amboise** against the Guises. This was defeated (1560) Death of Francis II

1560-1574. CHARLES IX (ten years old), the brother of Francis He was wholly under the influence of his mother

1562-1598. THE RELIGIOUS WARS Persecution compelled the **Huguenots** (as the French Protestants were called — derivation uncertain) to take up arms At the same time they formed a political party The ensuing struggles, therefore, did not constitute a purely religious war, but also a political, civil war, in which the leaders of both parties endeavored to exploit the weakness of the crown and get control of the government The Huguenots were recruited primarily from the nobility (between two-fifths and one-half of the French nobility were at one time Protestant) and from the new capitalist-artisan class. Save in the southwest very few peasants became Protestants Paris and the northeast in general remained Catholic throughout.

The first three wars form properly one war, interrupted by truces called peaces (**Amboise,** 1563; **Longjumeau,** 1568; **St. Germain,** 1570), which bore no fruit. Battles, in which the Huguenots were worsted, were fought at **Dreux** (1562); **Jarnac** (1569); and **Moncontour** (1569). Huguenot cavalry, recruited from the nobility, was excellent; the infantry was generally weak

The issue of the first period was that the Huguenots, despite defeat, were given conditional freedom of worship, which was guaranteed them by the surrender, for two years, of four strongholds (La Rochelle, Cognac, Montauban, La Charité).

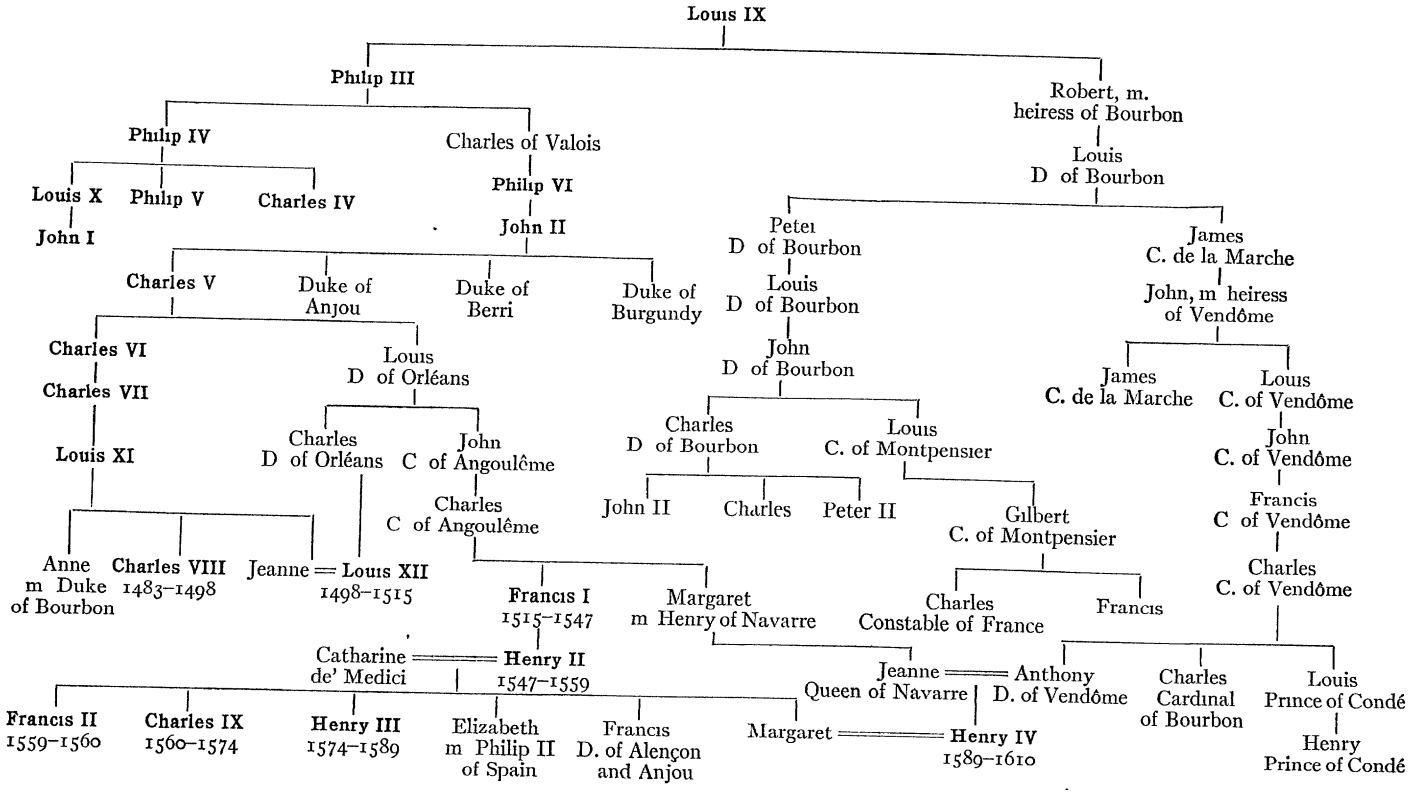
1572, Aug. 23-24. MASSACRE OF ST. BARTHOLOMEW. Murder of Coligny in Paris and general massacre of Protestants in Paris and in the provinces, on the occasion of the marriage of **Henry of Bourbon,** King of Navarre, with the sister of Charles IX, **Margaret of Valois.** Henry of Navarre saved his life by a pretended conversion to Catholicism. The massacre led to the

1572-1573. Fourth War. La Rochelle, besieged by Henry, brother of Charles IX, made a brave defense. The election of the Duke of Anjou to the crown of Poland brought about a compromise. **Edict of Boulogne** (July 8, 1573) ended the war favorably to the Huguenots.

Charles IX died May 30, 1574. His brother, who fled from Poland, became king

1574-1589. HENRY III.

1574-1576. The Fifth War, during which **Henry of Navarre** reassumed the Protestant faith, was concluded by conditions more favorable to the Huguenots than those of any previous peace **Peace of Chastenoy** (*Paix de Monsieur,* after the Duke of Alençon) May 6, 1576. Hence dissatisfaction among the Catholics. Origin of the **Holy League** (1576), which, in alliance with Philip II of Spain, purposed the annihilation of the reformed party, and the elevation of the Guises to the throne The king, out of fear of the league, proclaimed himself its head and forbade the exercise of the Protestant religion throughout France. The Protestants and moderate Catholics had joined forces in 1575 by the **Confederation of Milhaud.**



1577. Sixth War, wherein the Huguenots were defeated, but obtained favorable terms at the **Peace of Bergerac** or **Poitiers** (Sept 17), as the king was unwilling to let the league become too powerful. In spite of the renewal of the treaty of peace, not one of its articles was executed This caused the

1580. Seventh War, which was ended in the same year by the **Treaty of Fleix** (Nov. 26), in which the conditions granted the Huguenots in former treaties were confirmed

1584. The death of Francis, Duke of Alençon (since the accession of Henry III, Duke of Anjou), the younger brother of the king, rendered the extinction of the house of Valois certain. As it was the intention of the league to exclude from the throne Henry of Navarre, who belonged to the reformed religion, and to give the crown to the latter's uncle, the **Cardinal of Bourbon,** and as the league meantime had induced the king to revoke the concessions granted to the Huguenots, there broke out the

1585-1589. Eighth War, called the *War of the Three Henrys* (Henry III of Valois, Henry of Navarre, Henry of Guise).

The House of Bourbon (to 1610)

The Catholic party triumphed in spite of the **victory of Coutras** (Oct. 20, 1587), gained by Henry of Navarre. Formation of the **League of Sixteen** at Paris, which purposed the deposition of the weak king Guise entered Paris, was received with acclamation (*King of Paris*), the timid resistance of the king was broken by a popular insurrection (*Day of the Barricades*, May 12, 1588). Henry III fled to Blois, where he summoned the States-General of the kingdom Finding no support among them against the league, he caused Henry, Duke of Guise, and his brother, Louis the Cardinal, to be murdered (Dec. 23, 1588). At this news, a revolt of the Catholic party broke out, headed by the brother of the murdered men, the **Duke of Mayenne.** Henry III fled to Henry of Navarre in the Huguenot camp, where he was murdered before Paris, at St Cloud, by the monk **Jacques Clément** (July 31).

1589-1792. HOUSE OF BOURBON, descended from Louis IX's younger son Robert, Count of Clermont, husband of Beatrice of Bourbon

1589-1610 HENRY IV. The Catholic party refused to recognize Henry and made the old Cardinal of Bourbon king under the name of **Charles X** (1590) Some wished the Duke of Mayenne to be his successor, while others joined themselves to Philip II of Spain, who laid claim to the throne of France on behalf of his daughter by his third marriage with Elizabeth of Valois, sister of Henry III. Victory of Henry IV over the Duke of Mayenne at **Arques** (1589) and at the

1590, Mar. 14. Battle of Ivry, crucial battle of these wars Henry besieged Paris, which was relieved by Mayenne and the Spanish Duke of Parma. Henry's ultimate success was made possible by the *politiques*, usually moderate Catholics, but above all French patriots who wished a strong national monarchy **Michel de L'Hôpital** (1505–1573) their precursor and founder. Henry abjured the reformed religion at St. Denis (1593) and was crowned at Chartres (1594). Brissac having thereupon surrendered Paris to him, the power of the league was broken Not, however, until Henry, after public penance by his ambassadors at Rome, had been freed from the papal ban, was he generally recognized (by Mayenne too). The civil wars of religion were ended by the

1598, Apr. 15. EDICT OF NANTES, which gave the Huguenots equal political rights with the Catholics, but by no means secured them entire freedom of religious worship. The edict granted the exercise of the reformed religion to nobles having the right of criminal jurisdiction (*seigneurs hauts justiciers*), and to the citizens of a certain number of cities and towns, but prohibited it in all episcopal and archiepiscopal cities, at the court of the king, and in Paris, as well as within a circle of twenty miles around the capital Public offices were opened to the Huguenots and **mixed chambers** were established in four *parlements* (Paris, Toulouse, Grenoble, Bordeaux). The Huguenots obtained some fortified towns, and were recognized, to a certain extent, as an armed political party The Edict of Nantes was registered by the *parlement* only after a long delay. Though it established nothing like a **"free church in a free state,"** it did give legal status to a kind of toleration not yet formally recognized elsewhere **Treaty of Vervins** (May 2, 1598) with Spain; restoration of all conquests to France

Adoption of measures looking to the improvement of the finances and the general prosperity, which had gone to decay, especially by Rosny, afterward **Duke of Sully** (1560–1641) Fantastic plan of the King or Sully to establish a universal Christian republic in Europe, comprising six hereditary monarchies (France, England, Spain, Denmark, Sweden, Lombardy), five elective monarchies (the empire, papacy, Hungary, Poland, Bohemia), and four republics (Switzerland, Italy, Venice, Belgium), which probably would have turned out to be a league against the too great power of the house of Hapsburg. Yet this *great design* was a forerunner of later schemes to organize Europe internationally. Question of Cleves-Julich succession Henry IV supported the claims of Brandenburg. In the midst of great preparations for war, **Henry was assassinated** at Paris, 1610 (May 14) by the fanatic **Ravaillac.**

1610-1643. LOUIS XIII, his son, nine years old. Regency of his mother, **Marie de' Medici** (1573–1642). Sully removed from office; the Italian **Concini** was placed in control of affairs. Louis XIII, declared of age in 1614, was in fact all his life under the guidance of others. **Summons of the States-General,** 1614, being the last before the Revolution of 1789. Arrest and murder of Concini, the queen-mother banished to Blois (1617). The king under the influence of his favorite, the Duke of Luynes. By the mediation of **Armand-Jean du Plessis** (1585–1642), **Cardinal-Duke of Richelieu,** a treaty was concluded between Luynes and the queen-mother (1619). **New Civil war.** Contest of the crown with the nobility and the Huguenots. After the death of Luynes

(1621) Marie de' Medici and her favorite, Richelieu, obtained control of affairs The influence of the latter soon became supreme, and the queen-dowager quarreled with him.

1624-1642. **Administration of Richelieu,** whose influence over the king was henceforward unbroken. Numerous conspiracies against him instigated by Gaston of Orléans, the king's brother

1625. Revolt of the Huguenots under the Dukes of Rohan and Soubise.

1627-1628. **Siege of La Rochelle,** under the personal supervision of Richelieu In spite of the dispatch of three fleets from England to the aid of the Huguenots, the city surrendered Oct 28, 1628, after an heroic resistance of fourteen months Defeat of the Duke of Rohan, and complete subjugation of the Huguenots, who thereafter were no longer an armed political party, but only a tolerated sect.

War in Italy with Spain, subjugation of Savoy, Richelieu at the head of the army.

1631. **Treaty of Cherasco.** France renounced all conquests in Italy, but by a secret treaty with Victor Amadeus, Duke of Savoy, Pignerol was surrendered to France (negotiators of these treaties, Richelieu's confidant, **Father Joseph,** and the pope's agent, **Mazarin**).

A final attempt of Marie de' Medici to overthrow the cardinal failed ignominiously (Nov 11, 1630, the *Day of Dupes*).

1632, Oct. 30. Defeat of the conspiracy of Gaston and the Duke of Montmorency. Execution of Montmorency

1631-1648 **FRENCH PARTICIPATION IN THE THIRTY YEARS' WAR** (pp 405–407).

1635. Foundation of the *Académie Française.*

1641. Conspiracy of Henry d'Effiat, Marquis of Cinq-Mars (*Monsieur le Grand*) His secret treaty with Spain. The plot was discovered by Richelieu.

Richelieu, though not a good financial administrator, helped somewhat to further the power of the royal bureaucracy (*intendants*) at the expense of the nobles, the Huguenots, and the *parlements.* His true greatness, however, lay in the field of foreign affairs. He restored French influence in Italy, in the Netherlands and in Germany, and established it also in Sweden. It was his work that laid the foundation for the power of Louis XIV, and became the traditional basis of French foreign policy. (*Cont. p.* 440)

4. THE IBERIAN PENINSULA

a. SPAIN, 1479-1659

1479-1516. **REIGN OF FERDINAND OF ARAGON** and his wife, **ISABELLA,** Queen of Castile (1474–1504). During this period much progress was made, notably in Castile, toward the suppression of the fractious aristocracy and the regulation of the Church. Aragon, on the other hand, retained most of its privileges. The **conquest of Granada** (1492) ended Moorish power in the Peninsula, while the **discovery of America** in the same year opened up endless possibilities of overseas empire In matters of foreign policy, Ferdinand devoted his efforts to the conclusion of profitable marriage alliances and to the furtherance of his designs in Italy, which brought him into conflict with France and other Italian powers

1493, Jan. 19. **Treaty of Narbonne** with Charles VIII of France. The latter, about to invade Italy, ceded to Ferdinand Roussillon and Cerdagne, in the hope of securing support Ferdinand, with his usual duplicity, joined the pope, the Emperor Maximilian, Milan and Venice, and helped to frustrate Charles' plans.

1494. **Foundation of the *Consulado*** for foreign trade at Burgos This chamber, and the *Casa de Contratación* at Seville (1503) undertook to regulate Spanish trade and had much to do with the commercial expansion of the 16th century.

1500. By the **Treaty of Granada,** France and Spain again engaged to cooperate in Italian affairs, but friction over Naples soon led to hostilities Victories of the great Spanish commander, **Gonzalvo de Cordova** (especially at **Garigliano,** 1503). Aragon retained Naples By the **Treaty of Blois** (1505), Louis XII of France ceded his rights to Naples to his niece, Germaine de Foix, whom Ferdinand, a widower since 1504, married

1504. **The death of Isabella** made **Joanna** (wife of Philip, Archduke of Austria) legal heiress to Castile. Ferdinand, who had long planned the union of Castile and Aragon, in Joanna's absence secured from the Córtes authority to carry on the government in his daughter's behalf In

1506 Philip and Joanna came to claim their inheritance. **Treaty of Villafavila** between Philip and Ferdinand, the former securing the regency. Philip's death in the same year and the **insanity of Joanna** (kept in confinement for 49 years, d 1555) allowed Ferdinand to resume control.

1509-1511. **African campaigns,** organized, financed, and led by **Cardinal Jiménez de Cisneros** (1436–1517), aided by **Pedro Navarro.** Cisneros was one of the ablest statesmen of his time, who, having reformed the Spanish Church, now devoted himself to the crusade. The Spanish forces took Oran, Bougie, and Tripoli and forced the Moslem rulers to pay tribute

1511. **The Holy League** (the pope, Ferdinand, and Venice) against France and the Empire. **Victory of the League at Novara** (1513). (See pp. 394, 398) At the same time (1512) the Spaniards conquered **Navarre,** which was annexed to the Castilian crown, though it retained its own government (1515).

1516. **Death of Ferdinand. Regency of Cardinal Cisneros,** who vigorously repressed incipient disturbances by the nobles. The crowns now passed to the son of Philip and Joanna, Charles of Ghent, who became

1516-1556. **CHARLES I** of Spain, founder of the **Hapsburg dynasty.** Charles, who had been educated in Flanders, arrived (1517) with a large Flemish following, which regarded the Spaniards with disdain. Dissatisfaction of the Spaniards with Charles' election to the imperial throne (1519) led to widespread opposition to his leaving the country and using Spanish money and men for his imperial purposes.

1520-1521. **UPRISING OF THE *COMUNEROS.*** A group of cities (led by Toledo and by the Toledan **Juan de Padilla**) took issue with the government and organized a **Holy League** (*Santa Junta*) at Avila (July, 1520). Though this was originally as much an aristocratic as a bourgeois movement, radical tendencies soon appeared and the upper elements withdrew. After the **defeat of the *comuneros* at Villalar** (Apr. 23, 1521) the leaders were executed and government authority re-established. But in future Charles avoided as much as possible any infringement of traditional rights.

1521-1529. **War between France and Spain,** the result of French support of the *comuneros* and French designs on Navarre The French took Pampeluna and Fontarabia, but Charles, supported by the pope, Florence, and Mantua, expelled the French from Milan (1522). In 1524 the Spanish commanders, the **Constable de Bourbon** and the **Marquis Pescara,** invaded Provence and advanced to Marseilles Francis I was decisively defeated and captured at the **battle of Pavia** (Feb. 24, 1525) and in captivity at Madrid was obliged to sign the **Treaty of Madrid,** by which he abandoned his Italian claims and ceded Burgundy. On his release he violated his promises and the war was resumed By the **Treaty of Cambrai** (1529), Charles was obliged to renounce Burgundy, while Francis once more abandoned his claims to Naples.

1535. The expedition of Charles to Tunis (p. 422), which was part of a great duel between Spain and the formidable Turkish power.

1535-1538. Another war with France, arising from the succession to Milan (p. 395), led to another invasion of Provence (1536) and to the inconclusive **Treaty of Nice** (1538)

1541. Reverse of the Spaniards at Algiers

1542-1544. Further hostilities with France

1551-1559. The last war between Charles and the French kings, ending in the **Treaty of Cateau-Cambrésis** (Apr. 3, 1559) (See below.)

Charles I (Charles V as emperor) gave Spain efficient government, continuing the work of Ferdinand and Isabella. On the other hand, his imperial position resulted in the involvement of Spain in all general European problems and in the expenditure of much blood and money, a drain not so noticeable at the time because of the great influx of gold from the New World Culturally speaking, the whole 16th and the first half of the 17th century was Spain's golden age, a period of **humanism** (**Luis Vives,** 1492–1540, for a time professor at Oxford; **Luis de León,** b 1528, theologian, poet, and one of those who made Castilian a great literary language) and of **religious leadership** in the cause of Roman Catholicism. **Arias Montano** (1527–1598) was one of the outstanding scholars at the **Council of Trent** (p 396); **Luis de Granada** (1504–1588) was one of the greatest preachers of the century and a religious writer whose books were translated into all leading languages; **Francisco Suarez** (1548–1617), a Jesuit, was a neo-scholastic and an outstanding jurist (*De Legibus ac Deo Legislatore,* 1612); while **Francisco de Vitoria** (1486–1546) wrote extensively on the government of the colonies and became a pioneer of international law (*De Indis et de iure belli relectiones,* 1532). At the same time the Spaniards took the lead in the work of the Catholic Reformation. **Ignatius de Loyola** (1491–1558), after receiving a serious wound in war, made a pilgrim-

age to Jerusalem (1523–1524) and then studied at Paris (1528–1535). In 1540 he founded the **Society of Jesus** at Rome, the Jesuit organization from the beginning being placed on a military basis, and engaging in widespread missionary and teaching activity. At the same time **Sta. Teresa de Jesús** (1515–1582) undertook the reorganization of the Carmelite nunneries and, in her autobiography and her *Castillo interior* made outstanding contributions to mystical literature. **St. Jean de la Croix** (1542–1581), her disciple, effected similar reforms of the monasteries.

The period was one of equal greatness in the realm of **literature and art.** **Juan de Mariana** wrote a popular history of Spain, while **Bartolomé de Las Casas** (1474–1560), **Oviedo,** and **Gómara** distinguished themselves in treatment of the New World **Felix Lope de Vega** (1562–1635), who produced over 2000 plays, poems, and stories, was one of the great literary figures of all time and a founder of the modern drama, **Pedro Calderón** (1600–1681) continued the drama on a high plane, **Miguel de Cervantes Saavedra** (1547–1616) in his *Don Quijote* (1605) produced an incomparable picture of the Spain of his day and at the same time one of the world's most popular masterpieces

In the field of **art** the Italian influence was very strong, though the **Escorial** (begun in 1563 and built by **Juan de Herrera**) had a severe style of its own. Prominent sculptors of the age were **Gregorio Fernández** (d 1636), **Alonso Cano;** and **Martínez Montañés** (d 1649), but the achievements of painting overshadowed those of the other arts. **El Greco** (1547–1614; really a Greek from Crete, trained in Italy) came to Spain in 1575 and lived at Toledo until his death in 1614 One of the greatest painters of the Renaissance, he was the first of a number of world-famous artists **José Ribera,** called **Spagnaletto** (1588–1652); **Zurbarán** (1598–1664); **Bartolomé Murillo** (1617–1682) and above all the incomparable **Diego Rodríguez de Silva y Velásquez** (1599–1660). In music **Tomas Luis de Vitoria** was a worthy contemporary of Palestrina.

On the abdication of Charles I, Spain and the colonies, as well as the Netherlands, Franche-Comté, Naples, and Milan passed to his son

1556-1598. PHILIP II (b. at Valladolid in 1527), the most Spanish of the Hapsburg rulers and a monarch who spent most of his reign (1559–) in Spain. Affable, yet dignified and serious, Philip was a very hard-working bureaucrat as well as an autocrat, and at the same time a hard-hearted and vindictive religious fanatic. His entire policy centered about his determination to defend the faith and to stamp out Protestantism, and further to stand by the Hapsburg interests, outside as well as inside Spain. This involved constant intervention in general European affairs and many costly wars which drained the country. During this period the Spanish infantry (largely volunteer and with a considerable noble element) reached the pinnacle of its prestige.

Philip married four times: (1) **Mary of Portugal,** mother of Don Carlos; (2) **Mary the Catholic,** Queen of England, (3) **Elizabeth of Valois;** (4) **Anne of Austria,** daughter of Maximilian II.

1556-1559. Continuance of the **war with France.** Victories of the Spaniards under the **Duke of Alva,** at **St. Quentin** (Aug. 10, 1557) and at **Gravelines** (July 13, 1558), led to

1559, Apr. 3. The Treaty of Cateau-Cambrésis, which reaffirmed the Spanish possession of Franche-Comté and the Italian states. Philip married Elizabeth, the daughter of Henry II.

1560. The capital was definitively established at **Madrid.** In 1563 the construction of the Escorial Palace was begun.

1567. Beginning of the prolonged **struggle for independence in the Netherlands** (p 379).

1568. Death of Don Carlos, the son of the king, whom Philip is sometimes accused of having put away. Don Carlos appears to have been deranged and unmanageable, for which reason he was kept in confinement There is no evidence of unnatural death.

1569-1571. Revolt of the Moriscos (converted Moslems suspected of secretly retaining their original faith) The rising was put down with great severity and ultimately (1609) the Moriscos were expelled from Spain

1571, Oct. 7. Battle of Lepanto, the outstanding event in the long naval duel between the Spaniards and the Turks **Don John of Austria** (natural brother of Philip), with the aid of a papal and a Venetian fleet, inflicted a tremendous defeat on the Turks (p 423)

1574. The Spaniards lost Tunis

1580. Philip succeeded to the **Portuguese throne** (p. 392).

1587. Sir Francis Drake destroyed the Spanish fleet at Cadiz. England had for some time been incurring the displeasure of Philip, partly because of the

succession of Elizabeth and the progress of Protestantism, partly because of the aid given the Dutch rebels, and partly because of the piratical raids on the Spanish treasure ships. The **execution of Mary Stuart** (1587) brought matters to a crisis, and Philip sent against England

1588. THE GREAT ARMADA, which met with complete disaster (p 373). The war with England continued in a desultory way until 1603

1589-1598. War with France, arising from Philip's intervention against Henry IV. The Spaniards played an important rôle in this last phase of the Religious Wars in France, but failed to attain their objectives The war ended with the **Treaty of Vervins** (p 386).

1598-1621. PHILIP III, the son of Philip II by his last marriage A melancholy, retiring, and deeply religious man, the king devoted himself to the interests of the Church (9000 monasteries in this period, and one-third of the population in the church service) Philip left the government to his favorite (*privado*), the **Duke of Lerma,** who initiated the system of court intrigue and corruption Formation of a court nobility, growth of huge estates, marked decline in agriculture (depopulation through wars and emigration to the colonies). Spain became to a large extent a wool-raising country Industry and trade, so flourishing in the 16th century, suffered a marked decline Spain generally entered upon a period of decadence and lethargy.

1609. Expulsion of the Moriscos (see above).

1618. Beginning of the Thirty Years' War (p. 403), into which Spain was drawn by Hapsburg interests and by religious considerations.

1621-1665. PHILIP IV, an amiable prince, not interested in politics and therefore quite content to leave the conduct of affairs to his *privado*, the **Count-Duke Olivares** (1587–1645, Count of Olivares, Duke of Santander), an able and patriotic administrator who, until his fall in 1643, made valiant efforts to modernize the governmental system by means of greater centralization and increase of the royal power.

1622. The occupation of the Valtelline Pass (between Milan and the Austrian lands) by the Spanish led to war with France, which, in a sense, was merely one aspect of the Thirty Years' War. France, under the able leadership of Richelieu, gradually established her ascendancy over Spain (p. 386).

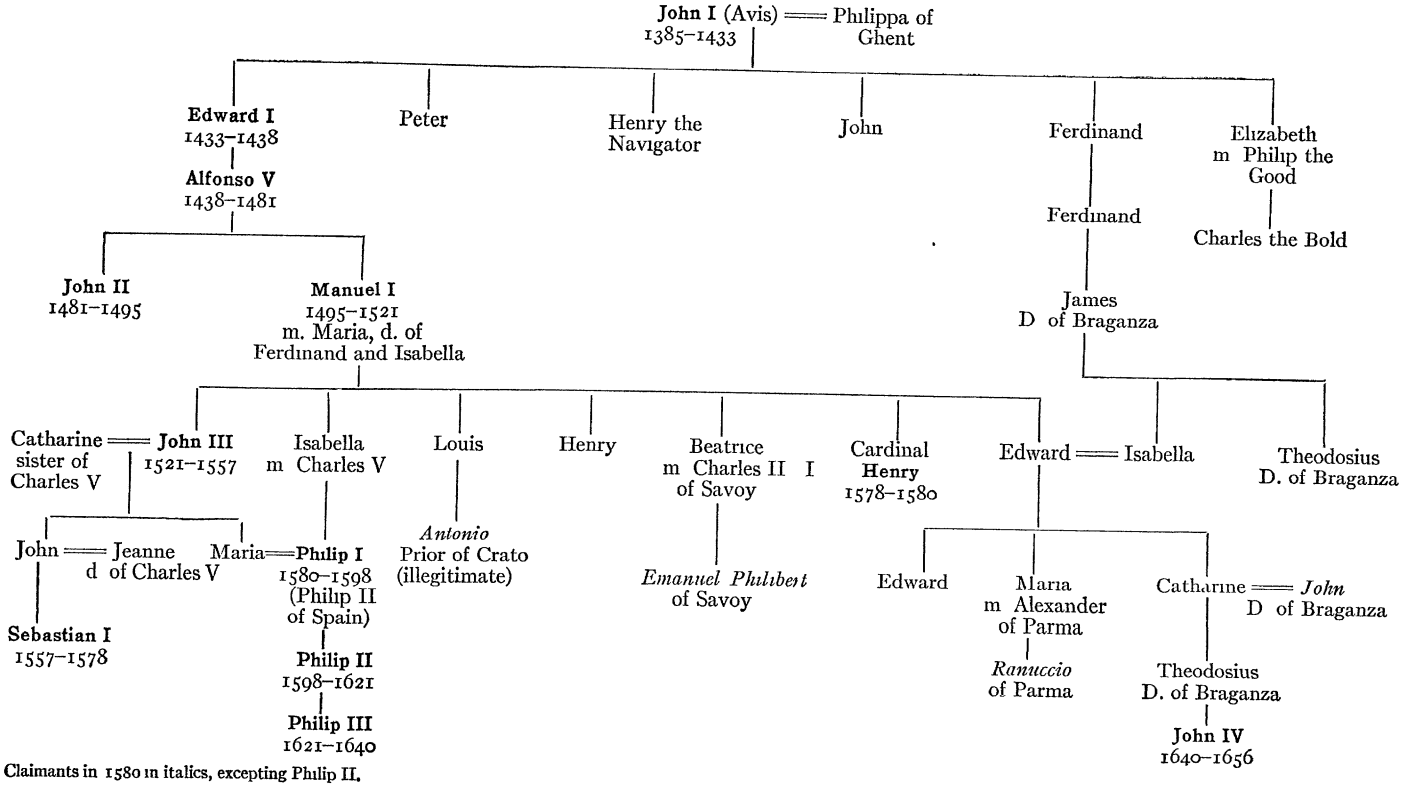
1640-1659. THE GREAT REVOLT IN CATALONIA, a direct result of the policy of Olivares The king's failure to summon the Catalan Córtes, the imposition of new taxes, the demands for aid for the foreign wars, the quartering of troops in the country and in general the centralizing tendencies of the Count-Duke, precipitated the conflict. The movement was supported by France, which even recognized a **Catalan republic.** After the struggle had gone on for twelve years, Barcelona was finally obliged to submit (1652, Oct) In the final settlement (1659) the Catalans retained most of their former rights and privileges

1642. The French occupied Roussillon.

1643, May 19. The battle of Rocroi. Defeat of the Spaniards. This battle is generally taken as marking the end of the supremacy of the Spanish forces

1647. Revolt of Naples, under **Masaniello** (p 398).

1648. The Peace of Westphalia (p 408) This did not apply to the war between France and Spain, which continued for another eleven years.



1658, June 14. Battle of the Dunes; decisive defeat of the Spaniards

1659, Nov. 7. TREATY OF THE PYRENEES (signed on the Isle of Pheasants, in the Bidassoa River) Spain was obliged to cede to France the frontier fortresses in Flanders and Artois, and also Roussillon and Cerdagne. Louis XIV married Maria-Theresa, daughter of Philip IV (*Cont. p.* 448)

b. PORTUGAL, 1495-1640

1495-1521. MANUEL I (*the Great, the Fortunate*), the brother of John II His reign and that of his successor mark the apogee of Portuguese power and empire, following the great discoveries (**Vasco da Gama's** voyage to India, 1497–1498; **Pedro Alvares Cabral's** discovery of Brazil, 1500; **Magellan's** circumnavigation of the globe, 1520, see p. 363 et seq). The new empire was at first ruled by men of exceptional ability and courage (**Francisco d' Almeida,** first viceroy of the Indies, 1505; **Afonso de Albuquerque,** viceroy, 1507–1511) and brought in large returns. Lisbon very soon displaced Venice as the entrepôt for Asiatic goods, and became a center of wealth and luxury. Colonial trade was a royal monopoly, and the court became a Mecca for concession-seekers. The old agrarian system became undermined by the introduction of black slavery, while the

The Portuguese Succession (1580)

Claimants in 1580 in italics, excepting Philip II.

aristocracy to a certain extent abandoned itself to imperial war, to corruption at home and to exploitation abroad In short, the 16th century, outwardly brilliant, was already the beginning of decadence

1496. Expulsion of the Jews from Portugal This step was taken chiefly to please Ferdinand and Isabella of Spain, whose daughter, Isabella, Manuel married (1497; she died in the next year) Persecution and massacre followed the expulsion order, which deprived Portugal of many of its most educated and wealthiest inhabitants

1521-1557. JOHN III (*the Pious*), during whose reign

1536. The Inquisition was established in Portugal and the **Jesuit Order** invited in. The consequences were much like those in Spain

1557-1578. SEBASTIAN I, the grandson of John, succeeded. Regency of his mother, Joanna of Austria, a daughter of Charles V, until 1562, followed by the regency of **Cardinal Henry,** brother of John III and grand inquisitor. Sebastian himself was educated by the Jesuits and was consumed with the idea of a crusade against the infidel, which he undertook despite the contrary advice of Philip II of Spain and of the pope

1578, Aug. 4. THE BATTLE OF AL KASR AL-KABIR (Alcazar-Qivir), in which the Portuguese and their mercenary troops were completely defeated by the Moors. Sebastian, the King of Fez, and the Moorish pretender all lost their lives (*battle of the three kings*).

1578-1580. CARDINAL HENRY, king

1579. Death of Luis de Camões, greatest of Portuguese poets (*The Lusiads*, published 1572), whose work not only brought to culmination the literary flowering of the 16th century (dramas of **Gil Vicente**), but served as a profound commentary on Portuguese national life and imperial enterprise

1580. A regency of five was established to govern the country on the death of Cardinal Henry. There were no less than seven claimants to the throne, of whom the most powerful was **Philip II of Spain** (son of Elizabeth, the daughter of Manuel I) and the most popular was **Antonio,** the Prior of Crato (illegitimate son of Luis, the brother of John III). Philip's candidacy was supported by the high clergy and by part of the nobility. Antonio enjoyed the support of the townsmen and of the peasants, and was backed by France.

Aug 25. The Spaniards, under the Duke of Alva, invaded Portugal and defeated their opponents in the **battle of Alcántara,** near Lisbon.

1580-1598. PHILIP I (Philip II of Spain), who was accepted by the Cortes. Philip promised to respect the rights of the country and to rule only through Portuguese He himself generally observed this obligation, but under his successors it was more and more ignored First Portugal itself, then the Portuguese Empire, was turned over to Spanish officials The result was growing discontent in Portugal and increasing weakness abroad. After the defeat of the Spanish armada (1588), the British and the Dutch began to attack the Portuguese possessions, many of which were conquered before 1640

1583. Antonio of Crato, with a French fleet, established himself in the Azores and prepared to reconquer the throne, but the French-Portuguese fleet was defeated by a Spanish fleet off the island of St Miguel

1589. Antonio, now supported by the British, made a landing in Portugal and marched on Lisbon, but was defeated by the Spaniards. He died at Paris in 1595

1598. Dutch trade with Lisbon was prohibited. This marked the beginning of Dutch enterprise in the east and of the gradual conquest of Portuguese possessions

1640, Dec. 1. REVOLT OF THE PORTUGUESE, inspired and organized by **João Ribeiro,** a professor at the University of Coimbra, and supported by the nobility and clergy. The insurgents, all disillusioned about Spanish rule, took advantage of the revolt in Catalonia Like the Catalonians they were supported by France, which was at war with Spain. The Spanish government, unable to devote much attention to Portugal, could not prevent the **election of John of Braganza,** to the throne. (*Cont p.* 452.)

5. ITALY

a. THE ITALIAN WARS, 1494-1559

The period from about 1450 to 1550 not only marked the apogee of the Renaissance, but also the intellectual and artistic primacy of Italy. In the field of history and political science, **Francesco Guicciardini** (1483–1540, *Istoria d' Italia* published only in 1561) and **Niccolo di Machiavelli** (1469–

1527, *Il Principe*, 1514) were outstanding **Pietro Aretino** (1492–1552) was a famous publicist of the time, while **Baldassare di Castiglione** (*Il Cortegiano*, 1527) produced a famous handbook of the courtier. **Ludovico Ariosto** (1474–1533; *Orlando Furioso*, 1516) was one of the greatest epic poets of all time. In the field of music **Giovanni da Palestrina** (1525–1594; at St. Peter's after 1551) and **Orlando di Lasso** were men of the first rank. Architects and painters of eminence were too numerous to be listed, and it will suffice to recall names like **Leonardo da Vinci** (1452–1519); **Raffael Santi** (1483–1520; *Sistine Madonna*, 1516); **Michelangelo Buonarroti** (1475–1564; Sistine Chapel paintings, 1508–1512, 1534–1541; dome of St. Peter's, 1547); **Titian** (Tiziano Vecelli, 1477–1576); **Gentile Bellini** (1429–1507), **Tintoretto** (1512–1594); **Paolo Veronese** (1532–1588), **Mantegna, Correggio, Cellini**, etc.

Politically, however, Italy was divided and soon became the "cockpit" of Europe, the victim of the rivalries of the strong monarchies which were arising in the west and all of which coveted the wealth of the Peninsula. There were, at the time, five major states. **Venice**, the strongest of all, deriving her wealth and influence from the extensive eastern trade, from her possessions in the Adriatic, Ionian, and Aegean Seas and from domination of the neighboring mainland; **Milan**, ruled by Ludovico Sforza and commanding the rich valley of the Po; **Florence**, long one of the most progressive of Italian communities, having attained to great splendor under Lorenzo the Magnificent; the **Papal States**, carved from the central part of the Peninsula and in process of expansion under the political popes of the late 15th century; the **Kingdom of Naples**, deeply involved in the Near East, ruled by a branch of the Aragonese house. These states maintained a precarious balance among themselves, but were almost all so imperialistic that they were constantly endeavoring to victimize each other and ultimately reached the point of calling in the foreigner, with the result that Italy became the prey of French, German, and Spanish ambitions.

1492. Formation of a secret alliance between Florence and Naples for the spoliation of Milan. This led to Ludovico Sforza's appealing to Charles VIII of France to make good the Anjou claims on Naples

1494-1495. THE FRENCH INVASION OF ITALY. Charles arrived in Sept. and met with no real resistance Florence submitted, but then drove out **Piero de' Medici** (Nov.) and abandoned the French connection. Thereupon Charles attacked and took Florence, which was obliged to give up Pisa and other towns. Charles advanced on Rome (Jan. 1495) and thence into Naples. Alfonso fled to Sicily, leaving Naples to his son Ferrante, who was driven out by a revolt The French entered Naples (Feb. 22, 1495), but their very success led to the formation of a coalition directed against them Milan, Venice, Emperor Maximilian, Pope Alexander VI, and Ferdinand of Aragon leagued together against Charles, forcing his retreat to the north. Ferrante and the Spaniards (Gonzalvo de Cordova) soon reconquered Naples. This first French invasion of Italy was poorly planned and carelessly executed, but had much importance in opening up the international side of the Italian problem as well as in disseminating the learning and art of Italy throughout western Europe.

1499, Feb. Venice agreed to support the claims of Louis XII of France to Milan, in return for a promise of Cremona The French thereupon invaded Italy a second time (Aug.) and forced **Ludovico Sforza** to flee from Milan to Germany Milan surrendered (Sept. 14). The next year Sforza returned with an army of German mercenaries and obliged the French to evacuate Before long the German forces began to disintegrate and the French returned to Milan. Ludovico was captured and died (1508) in a French prison. Milan thus became French.

1500, Nov. 11. By the **Treaty of Granada**, Ferdinand of Aragon agreed to support Louis' claim to Naples, which was to be divided between France and Spain In 1501 (June) the French army, marching south, entered Rome, whereupon the pope declared Federigo of Naples deposed and invested Louis and Ferdinand with the kingdom. The French took Capua (July), while the Spanish fleet seized Taranto (Mar., 1502) So much having been gained, the two allies fell to quarreling over the division of the spoils, and war resulted (July). The Spaniards at first suffered reverses, but in 1503 defeated a French fleet and won a decisive victory at **Cerignola** (Apr 28). They took Naples (May 13), and, after another victory at **Garigliano** (Dec. 28), forced the French to surrender at **Gaeta** (Jan. 1, 1504). This completed the Spanish conquest of Naples, which, with Sicily, gave them control of southern Italy, as the French had control of Milan in the north.

1508, Dec. 10. THE LEAGUE OF CAMBRAI, organized to despoil Venice of her possessions on the mainland and in

Apulia. Emperor Maximilian promised Louis XII the investiture of Milan in return for support. Ferdinand of Aragon and Pope Julius II joined the coalition. The French attacked and defeated the Venetians at **Agnadello** (May 14, 1509). Surrender of Verona, Vicenza, and Padua, which were handed over to Maximilian, while the pope occupied Ravenna, Rimini, Faenza, and other Venetian possessions in the Romagna The Apulian towns, Brindisi, Otranto, etc., fell to Ferdinand. But the Venetians soon rallied and retook Padua (July 17), which was besieged in vain by Maximilian. Vicenza too rose against the emperor and recalled the Venetians In 1510 the pope, fearful of the power of the Germans, deserted the league and joined Venice, while Ferdinand, having secured his share of the spoils, turned neutral The papal forces took Modena and Mirandola (Jan. 1511), but the French conquered Bologna (May 13). In Oct. Ferdinand completed a *volte face* and joined Venice and the pope, while Henry VIII of England also adhered After a French victory at **Ravenna** (Easter, 1512), even the emperor and the Swiss cantons joined the coalition against the French, who were driven out of Milan (May). In a **congress of the league at Mantua** (Aug) the Spaniards forced the Florentines to take back the Medici and join the league Milan was given to Maximilian Sforza (son of Ludovico). The war continued until the French were badly defeated at **Novara** (June 6, 1513), after which the pope, Ferdinand, and Henry of England all made peace.

1515. The new French king, **Francis I,** as deeply interested in Italy as his two predecessors, and quite as adventurous, concluded an alliance with Henry VIII and Venice against the Emperor Maximilian, the pope, Ferdinand, Milan, Florence, and the Swiss. The French won a great victory at **Marignano** (Sept. 13) by which they recovered Milan. Thereupon the pope came to terms, surrendered Parma and Piacenza, and in return secured the **Concordat of Bologna** (p. 382) After the death of Ferdinand (Jan 1516), his successor, Charles I (later Emperor Charles V), confronted with serious problems in Spain and Germany and eager to secure European co-operation against the advance of the Turks, concluded with Francis the **Treaty of Noyon** (Aug 13, 1516), by which the French retained Milan, but gave up their claims to Naples. Maximilian returned Brescia and Verona to Venice in consideration of a money payment.

1522-1523. First of the Hapsburg-Valois wars, for many of which Italy became a battlefield The pope and England supported Charles V against Francis Having been driven out of Milan, Parma, and Piacenza, the French were defeated at **Bicocca** (Apr 27, 1522) and retained only the citadel of Milan. In May they were even driven from Genoa, their all-important sea-base. But in Oct. 1524, the French invaded Italy with a large army. They retook Milan (Oct. 29) The pope changed sides and joined the French.

1525, Feb. 24. THE BATTLE OF PAVIA, the most important engagement of the long Italian wars. The Spanish commanders, **Constable de Bourbon** (prominent French noble and opponent of Francis), and **Marquis de Pescara,** completely defeated the French. Francis himself was captured and sent to Madrid There he concluded the **Treaty of Madrid** (Jan 14, 1526), by which he promised to surrender his Italian claims, give up Burgundy, and abandon his suzerainty over Artois and Flanders. These engagements he never meant to observe, and they were repudiated by him as soon as he was liberated.

1526, May 22. THE LEAGUE OF COGNAC, a coalition of Francis I, the pope, Sforza, Venice, and Florence against Charles and the Spaniards. The league was the natural result of the too great success of the Spaniards in Italy and the objective was to restore the *status quo* of 1522. But the Spaniards forced Sforza out of Milan (July 24) and before long attacked Rome (Sept. 21). The pope was helpless and could not prevent

1527, May 6. THE SACK OF ROME by the Spanish and German mercenaries of Charles. The sack was horrible even when judged by the customs of the day, and ended Rome's pre-eminence in the Renaissance The pope himself was captured

May 17. Florence rose against the Medici, who were again driven out and replaced by a republic (under **Niccolo Capponi**). **Genoa also revolted,** under **Andrea Doria** (formerly in French service). The French were expelled and a republican constitution established The French, however, having overrun Lombardy (Oct) began to march south. Meanwhile the pope, who had fled to Orvieto (Dec.) made his peace with Charles (**Treaty of Barcelona,** June 29, 1529 — the papal states to be restored and the Medici returned to Florence) The war was ended by

1529, Aug. 3. The Treaty of Cambrai (*Paix des dames,* because negotiated by Charles' aunt, Margaret, and by Francis' mother, Louise of Savoy). Francis once more renounced his Italian claims and the

overlordship of Artois and Flanders Venice was obliged to disgorge her conquests (Apulian towns, Ravenna, etc). The Duchy of Milan was given to Francesco Maria Sforza, Charles V retaining the citadel Florence was forced, after an eight months' siege, to take back Alessandro de' Medici as duke On Feb 23, 1530, Charles was crowned by the pope as emperor and King of Italy

1535. The **death of Francesco Sforza** opened the question of the Milanese succession Charles V claimed it as suzerain, but the French invaded Italy and took Turin (Apr 1536) After an invasion of Provence by the imperialists, the **Truce of Nice** was concluded for ten years (June 18, 1538). It reaffirmed the Treaty of Cambrai, but the French remained in occupation of two-thirds of Piedmont and the emperor retained the rest.

1542-1544. **The war between Francis I and Charles V,** though fought out in the Netherlands and in Roussillon, had repercussions in Italy The **Treaty of Crespy** (Sept 18, 1544) involved abandonment of French claims to Naples, but provided that the Duke of Orléans should marry either Charles' daughter, with the Netherlands and Franche-Comté as a dowry, or else Charles' niece, who would bring Milan The plan failed through the death of Orléans (1545) Piedmont and Savoy were to be restored to the legitimate ruler

1556. Alliance of Pope Paul IV and Henry II of France to get Naples. The French, under the **Duke of Guise,** invaded Italy, but were obliged to withdraw after their defeat at **St. Quentin** (1557). This practically ended the French struggle for Italy The **Treaty of Cateau-Cambrésis** (Apr. 3, 1559) involved the abandonment of French possessions, except Turin, Saluzzo, and Pignerol Margaret, sister of Henry II, was to marry Emanuel Philibert of Savoy

b. THE PAPACY

The earlier part of this period marked the nadir of the papacy viewed from the moral standpoint Most of the popes were typical products of the Renaissance, patronizing the arts, living in splendor and luxury, using their position either to aggrandize their families or to strengthen the temporal position of the Church. Of religious leadership there was almost none, yet politically speaking the period was one of the utmost importance.

1484-1492. **INNOCENT VIII** (Giovanni Cibo), an indolent and altogether corrupt pontiff, who was entirely under the influence of Cardinal Giuliano della Rovere. A long-drawn conflict with Naples ended in marriage alliances of the pope's family with the Aragonese house and with the Medici

1492-1503. **ALEXANDER VI** (Rodrigo Borgia), a stately, energetic, ruthless, and thoroughly immoral pope, whose life was a scandal even in the Italy of his time The main objective of his policy was to establish the rule of his family in central Italy He broke the power of the great Roman families (Orsini, Colonna), and, through his son, **Caesar Borgia** (1475–1507), a former cardinal and the hero of Machiavelli's *Prince*, undertook the conquest of the Romagna. Caesar reduced most of the principalities (1499–1501) and became Duke of the Romagna. In 1501 the Borgias joined France in the attack on Naples, and the French aided Caesar in putting down a revolt of his captains at Sinigaglia (Dec 1502) But the death of the pope and the hostility of the new pontiff, Julius II, frustrated Caesar's schemes. Forced to disgorge his conquests, he turned to Spain for aid In 1506 he was arrested at Naples and sent to Spain, where he died (1507)

1503. **PIUS III** (Francesco Piccolomini, a nephew of Pius II), died within 26 days of his election

1503-1513. **JULIUS II** (Giuliano della Rovere), one of the greatest of the popes and the real founder of the Papal States, a man of great intelligence and boundless energy, more a statesman than a priest He not only regained the Romagna, but took the lead in the effort to expel the foreigner from Italy. In 1508 he was in the forefront of the **League of Cambrai,** through which he hoped to acquire the Venetian possessions in the Romagna. Having humbled Venice, he turned on the French. In reply Louis XII summoned a church council at Pisa (1511), which obliged the pope to convoke a rival **council at the Lateran** (1512). This remained in session for several years, and first undertook reform of abuses in the Church

1513-1521. **LEO X** (Giovanni de' Medici, son of Lorenzo the Magnificent), a noteworthy patron of art, but an easy-going churchman, whose pontificate was noted chiefly for the **beginning of the Reformation** in Germany (1517, see p. 399). There is no evidence that the pope realized the gravity of the situation and the only solution he could offer was to ban Luther (1521).

1522-1523. **ADRIAN VI** (of Utrecht), the last non-Italian pope. Adrian was,

at the time of his election, regent of Spain for Charles V. An upright and austere man, he attempted to purge the papacy of abuses and tried to reconcile Charles V and Francis I in order to unite Christendom in a crusade against the Turks His efforts brought him great unpopularity in Italy and conflict, even with Charles V, but he died before accomplishing much

1523-1534. CLEMENT VII (Giulio de' Medici), a hard-working but undecided pontiff. He failed entirely to cope with the religious revolt in Germany, and failed also to maintain a safe position in the conflict between the French and the Spaniards for domination of Italy. Hence the terrible **sack of Rome** (May 6, 1527, see above), which may be said to have brought to a close the greatness of Rome in the Renaissance.

1534-1549. PAUL III (Alessandro Farnese), another worldly pope, whose greatest concern was for his family. On the other hand, he recognized clearly the urgency of reform in the Church. By creating cardinals of eminent scholars and serious churchmen he completely changed the character of the college. In 1536 he established a **reform commission** of nine The **Society of Jesus** was founded (Sept 27, 1540) under his auspices, and the **Universal Inquisition** was established at Rome (July 21, 1542). Finally the pope yielded to the demand of years, and in 1545 opened the **Council of Trent,** which undertook the reform of the Church, under Jesuit guidance. The work of the council was several times interrupted and therefore divides into three periods 1545–1547, 1551–1552, 1562–1564. The first period was perhaps the most important, both for organizational and doctrinal reform

1550-1555. JULIUS III (Giovanni Maria del Monte), an elegant pope whose reign marked a short return to the papacy of the Renaissance.

1555. MARCELLUS II (Marcello Cervini), whose election marked the victory of the strict reform party The pope died within 22 days, and was succeeded by

1555-1559. PAUL IV (Gian Pietro Caraffa), a sincere and vigorous reformer and one of the chief inspirers of the **Counter-Reformation.** The powers and activities of the Inquisition were extended and the **first index of forbidden books** was drawn up (1559). As a Neapolitan the pope detested the Spanish rule and was soon in conflict with the Hapsburgs. He allied himself with France, but was defeated by the Duke of Alba.

1559-1565. PIUS IV (Giovanni Medici, not related to the famous Florentine family), an amiable pontiff who followed the guidance of his high-minded and able nephew, **Carlo Borromeo,** Archbishop of Milan. He made peace with the Hapsburgs and concluded the Council of Trent (*Professio Fidei Tridentina,* 1564)

1566-1572. ST. PIUS V (Michaele Ghisleri), the last pope to be canonized. Pius was an exceedingly devout and ascetic priest, whose attitude was well reflected in the **anathematization of Queen Elizabeth** (1570) and in the financing of the naval crusade against the Turks which culminated in the great **victory of Lepanto** (Oct. 7, 1571, see p. 423). Under Pius' direction the decisions of the Council of Trent were further embodied in the *Catechismus Romanus* (1566), the *Breviarium Romanum* (1568), and the *Missale Romanum* (1570)

1572-1585. GREGORY XIII (Ugo Buoncampagni), who continued the policy of his predecessor and did much to encourage the Jesuit colleges. He is remembered chiefly for his **reform of the calendar** (1582), which involved the dropping of ten days, and for the future the striking out of leap year at the close of each century, excepting every fourth century. This reform was not accepted by Protestant countries until long afterward (in Russia not until 1918)

1585-1590. SIXTUS V (Felice Peretti), one of the really great popes, who, after suppressing the powerful nobility of the Papal States and purging the territory of bandits, reorganized the government, reestablished the finances on a sound basis, and encouraged industry (silk culture) In the same way he remade the papal curia (college of cardinals fixed at 70; establishment of 15 congregations or commissions of cardinals to deal with particular aspects of church affairs). New edition of the Vulgate Bible Beautification of Rome, which now took on its characteristic Baroque appearance (construction of the Vatican Palace and Library, the Lateran Palace, the Santa Scala; completion of the dome of St. Peter's according to Michelangelo's plans). There followed the three brief pontificates of

1590. Urban VII, who died in 14 days,

1590-1591. Gregory XIV, and

1591. Innocent IX, who died in two months.

1592-1605. CLEMENT VIII (Ippolito Aldobrandini), a pious, serious pope, who supported the Catholic cause in France and ultimately mediated the peace between France and Spain (1598). His reign was distinguished by the great cardi-

nals, **Roberto Bellarmin** (1542–1621), eminent theologian and defender of the papal right to interfere in temporal affairs (*De potestate summi pontificis in rebus temporalibus*, 1610, *De officio principis christiani*, 1619), and **Caesar Baronius** (1538–1607), the great historian of the Catholic Church (*Annales ecclesiastici*, 1588–1607). During this pontificate Ferrara was added to the Papal States by reversion (1597)

1605. **Leo IX** lived only 25 days, and was succeeded by

1605-1621. **PAUL V** (Camillo Borghese), whose high idea of the papal power brought him into conflict with Venice and led to a compromise On the outbreak of the Thirty Years' War the pope gave financial support to the Hapsburgs

1621-1623. **GREGORY XV** (Alessandro Ludovisi), a weak old man who was guided by his able nephew, **Ludoviso Ludovisi.** He regulated the papal elections and organized the *Congregatio de propaganda fide* (1622), which united all missionary activity of the Church

1623-1644. **URBAN VIII** (Maffeo Barberini) He secured Urbino by reversion (1631), thus completing the dominions of the Papal States In the Thirty Years' War he attempted to maintain a neutrality which brought him much criticism from the imperialist side. His main concern appears to have been for the States of the Church, which he carefully fortified

(*Cont. p.* 455)

c. VENICE

The discovery of the new route to the Indies struck at the old traditional trade through the Levant and at once began to undermine the prosperity of Venice. At the same time the steady advance of the Turks left the Venetians the choice between active opposition or accommodation In general the latter policy was followed (much to the disgust of other European states), but nevertheless Venice became involved in a number of disastrous conflicts, which cost her most of her outposts in the east (p. 420). The assault upon the possessions of Venice in Italy (**League of Cambrai,** see p. 393) proved less successful than the powers had expected, but thenceforth Venice was obliged to remain on the defensive and to observe, as well as might be, a neutral attitude as between France and Spain and later between France and Austria

1570. The Turks attacked Cyprus, the largest and most important base of Venetian power in the east. In the course of the ensuing war, the allied Spaniards and Venetians, supported by the papal fleet, won the great

1571, Oct. 7. Battle of Lepanto, which, however, was not effectively followed up The Venetians took the earliest opportunity to make peace, and

1573. Venice abandoned Cyprus and agreed to pay a heavy indemnity. Thenceforth only Candia (Crete), Paros, and the Ionian Islands remained in Venetian hands.

(*Cont. p.* 458)

d. OTHER ITALIAN STATES

After the Treaty of Cateau-Cambrésis (1559, see p 383) all the Italian states, with the possible exception of Venice, were more or less directly under Spanish influence. The Counter-Reformation was soon in full swing, and by the end of the 16th century Italy was already losing the intellectual and cultural primacy which she held during the Renaissance

MILAN declined rapidly in economic and political importance after 1525 The death of the last Sforza (**Francesco II**) in 1535 brought Milan under direct Spanish rule. In 1556 the Duchy of Milan became an appanage of the Spanish crown, though held as a fief of the empire

GENOA had been, in the later 15th century, a bone of contention between France and Milan Torn by internal struggles of rival families (**Adorno** and **Fregoso**), it had lost its great commercial power and was important chiefly as a base of operations for France In 1528 (Sept 9), however, the great Genoese admiral, **Andrea Doria,** having left the French service, seized the town and re-established the republic, with a pronouncedly aristocratic constitution. Efforts of the French to recapture it failed Gian Luigi Fieschi (**Fiesco**) in 1547 staged a spectacular conspiracy that was supported by France Gianettino Doria, nephew of Andrea, was murdered and Andrea himself forced to flee The conspirators secured most of the town, but then Fieschi was accidentally drowned and the movement collapsed **Andrea Doria** returned as doge and the constitution was restored. On Andrea's death (1560) he was succeeded by **Gian Andrea Doria.** The **loss of Chios** to the Turks (1566) marked the end of Genoese power in the east

SAVOY was an independent state, the rulers of which governed also Piedmont. Lying astride the Alps and commanding the passes from France into Italy, the state was one of considerable importance, but the feudal organization resulted in such weakness that for long the dukes were un-

able to pursue an independent policy In the early 16th century Savoy was decidedly under French influence, and when, in 1536, the duke departed from the traditional policy, his dominions were overrun and for the larger part occupied by the French **Emanuel Philibert** (1553–1580) was the first really outstanding ruler. By following the Spanish lead he secured his dominions again in 1559, and in the course of his reign he acquired Asti and other territories by negotiation. He made much progress in breaking the power of the nobility and in organizing a central government and an effective army His successor, **Charles Emanuel I** (1580–1630), squandered much of his father's achievement, waging war and neglecting the economic development of the country **Victor Amadeus I** (1630–1637) was a wise and just ruler, but his short reign was followed by a civil war, and when finally **Charles Emanuel II** (1638–1675) ascended the throne, his mother **Christina** (daughter of Henry IV of France) dominated the situation as regent

MANTUA played a fleeting rôle on the international stage in the years 1627–1631, when the death of **Vincenzo II** (Gonzaga) without heirs provoked the **War of the Mantuan Succession.** The best claim was that of **Charles of Nevers,** of the French branch of the Gonzaga line, but the emperor, at Spain's suggestion, sequestered the territory in order to keep the French out. The Spaniards overran the duchy, but the pope and Venice championed Nevers, appealing to France for aid During 1629 the French fought the Spaniards in the duchy, but both sides were diverted by the larger obligations of the Thirty Years' War. The invasion of Germany by Gustavus Adolphus finally turned the scales in Frances' favor and by the **Treaty of Cherasco** (Apr. 26, 1631), Nevers was invested with the duchy

FLORENCE, like Milan, sank rapidly in importance during the 16th century. The Medici, restored in 1512, were expelled for a second time in 1527, when the republic was re-established. But in 1530 Charles V appointed **Alessandro de' Medici** hereditary ruler **Cosimo de' Medici** became duke in 1537 and ruled until 1574. During this period Siena was incorporated with Florence (1555) and Florence became the **Grand Duchy of Tuscany** (1569).

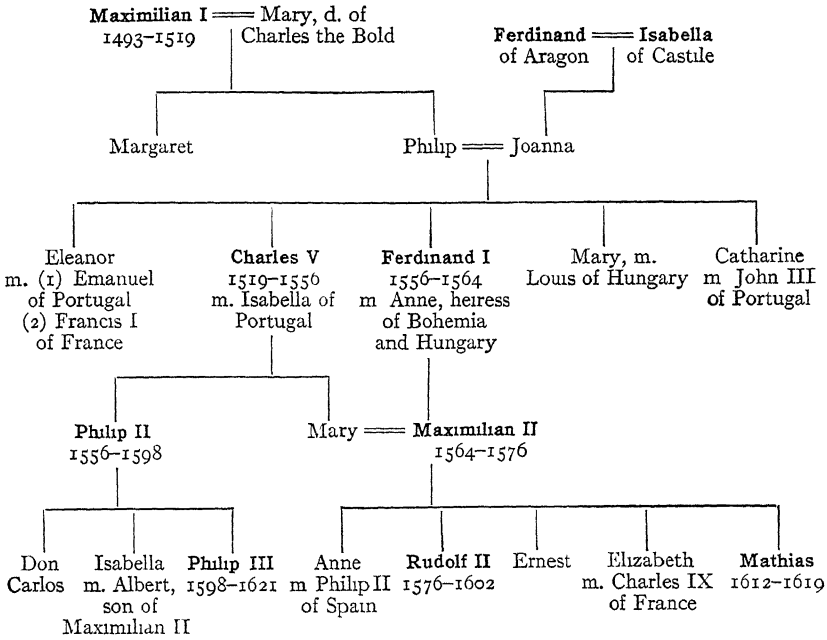
NAPLES, conquered by the Spaniards in 1504, became an appanage of the Spanish crown and was, throughout this period, the headquarters of Spanish power in Italy. Though unpopular, the Spaniards were not threatened in their position excepting by the **revolt of Masaniello** (Tommaso Aniello, a fisherman), in July, 1647 The insurrection, at first completely successful, led to extremism and confusion, in the midst of which Masaniello was murdered

(*Cont. p.* 454)

6. GERMANY

a. GERMANY, 1493-1618

1493-1519. MAXIMILIAN I, who first took the title of *Roman Emperor elect.*



1495. The Diet of Worms. Constitutional reform. Attempted "modernization" of the medieval empire. Perpetual public peace. Imperial Chamber (*Reichskammergericht*), first at Frankfurt, then at Speier, and finally at Wetzlar (1689). At the **Diet of Cologne** (1512) the reorganization of the empire was carried further: establishment of ten circles for the better maintenance of public peace (*Landfriedenskreise*): (1) Austria; (2) Bavaria; (3) Swabia; (4) Franconia; (5) Upper Rhine; (6) Lower Rhine, (7) Burgundy (ceded to the Spanish line of the Hapsburgs, 1556); (8) Westphalia; (9) Lower Saxony; (10) Upper Saxony. In all there were 240 states in the empire, exclusive of the imperial knights. Bohemia and the neighboring states (Moravia, Silesia, Lusatia) with Prussia and Switzerland (which was already completely independent in fact) were not included in the circles Establishment of the **Aulic Council,** a court more under the control of the emperor than the Imperial Chamber, and to which a large part of the work of the latter was gradually diverted

1508. The League of Cambrai, between Maximilian, Louis XII, Pope Julius II, and Ferdinand the Catholic. The purpose of the league was to break the power of Venice Maximilian took possession of a part of the republic's territory, but he besieged Padua in vain (1509). The pope withdrew from the league, and concluded with Venice and Ferdinand the

1511. Holy League, directed against France. Maximilian finally (1513) joined in this

The genealogical table shows the **claim of the Hapsburgs to Spain,** and division of

The Hapsburg House in the Sixteenth Century

the house into Spanish and German lines Through these marriages the central European lands of the Hapsburgs, the Burgundian lands in what are now France and Belgium, and the united lands of the crowns of Castile and Aragon (Spain, Naples, and the Americas) all came by birth to **Charles I of Spain** (eldest son of Philip and Joanna). He acquired the empire and his better known title of **Charles V** by election in 1519.

1517. BEGINNING OF THE REFORMATION. Background: Wiclifite (Lollard), Hussite, and other preceding rebellions against the Roman Church, the Babylonian Captivity and the Great Schism, which weakened the prestige of Rome; corruption and worldliness of the Church during the Renaissance; rise of national feeling and dislike of foreigners, especially in Germany and England, growth of a middle class and a capitalist economy, which felt Roman Catholicism as a restraint (economic interpretation of the Reformation in modern writings of Max Weber and R. H. Tawney), great landed wealth of the Church available for confiscation by ambitious and unscrupulous princes.

Martin Luther (1483–1546), born at Eisleben, the son of a miner; monk in the Augustine monastery at Erfurt; priest (1507); professor at Wittenberg (1508); visit to Rome (1511).

1517, Oct. 31. Luther nailed on the door of the court church at Wittenberg his **95 theses** against the misuse of absolution or indulgences (especially by the Dominican monk **Tetzel**). In the following year another reformatory movement was begun in Switzerland by **Ulrich Zwingli** (1484–1531).

1518. Summoned to Augsburg by Cardinal de Vio of Gaeta (*Cajetanus*), Luther refused to abjure, but appealed to the pope Mediation of the papal chamberlain, Von Miltitz.

1519. Discussion at Leipzig between **Bodenstein** (called *Carlstadt*) and **Eck.** The latter secured a papal bull against 41 articles in Luther's writings Luther burned the papal bull and the canon law (1520) Thereupon he was excommunicated

Basic Lutheran doctrine: justification by faith, which makes priestly offices of the Catholics an unnecessary intermediary between the individual and God.

In the meantime the German electors, despite the claims of Francis I of France, had chosen as emperor the grandson of Maximilian, King Charles I of Spain, who as emperor became

1519-1556 CHARLES V. He came to Germany for the first time in 1520, to preside at a grand diet at **Worms** (1521) There Luther defended his doctrines, coming under a safe-conduct The ban of the empire having been pronounced against him, he was taken to the Wartburg by Frederick the Wise of Saxony, and there enjoyed protection The **Edict of Worms** prohibited all new doctrines **Luther's translation of the Bible.**

1521-1526. First war of Charles V against Francis I of France. Charles advanced claims to Milan and the Duchy of Burgundy. Francis claimed Spanish Navarre and Naples. The French, under Lautrec, were driven from Milan, which was turned over to **Francesco Sforza** (1522). The French constable, **Charles of Bourbon,** transferred his allegiance to Charles V Unfortunate invasion of Italy by the French, under Bonnivert (1523–1524) Imperial forces thereupon invaded southern France. Francis I crossed the Mt. Cenis Pass and recaptured Milan

1522. Progress of the Reformation. Luther, hearing of Carlstadt's misdoings, returned to Wittenberg and introduced public worship, with the liturgy in German and communion in both kinds in electoral Saxony and in Hesse The spread of the Reformation was favored by the fact that the emperor was deeply engrossed in the war with France

1522. The Knights' War. Franz von Sickingen and **Ulrich von Hutten** advocated the Reformation. Sickingen stood at the head of a league of nobles directed against the spiritual principalities He laid siege to Trier (1522), but in vain He was then himself besieged in Landstuhl and fell in battle. Hutten fled the country and died on the island of Ufnau in the Lake of Zurich (1523).

1524-1525. THE PEASANTS' WAR, in Swabia and Franconia The peasants took the occasion of the disorders attendant on Luther's revolt (inspiration of his passionate attacks on the constituted authorities) to rise against the social and economic inequalities of late German feudalism. They incorporated their demands in the revolutionary **Twelve Articles.** Luther himself repudiated the peasants. They were defeated at **Königshofen** on the Tauber and cruelly punished. Another religious-social revolt was that of the **Anabaptists** in Thuringia, who denied the efficacy of infant baptism and put forward a program strongly colored with communism. Their leader, **Thomas Munzer,** was captured and executed

1524. Ferdinand of Austria, younger brother of Charles V, to whom the emperor had entrusted the government of Germany in 1522, at the instigation of the papal legate, **Campeggio,** formed an alliance with the two dukes of Bavaria and the Bishop of southern Germany, in the hope of checking the religious changes.

1525. THE BATTLE OF PAVIA (p 394). Francis was completely defeated and captured by the imperial forces. In the **Peace of Madrid** (1526) he renounced all claim to Milan, Genoa, and Naples, as well as the overlordship of Flanders and Artois; he also assented to the cession of the Duchy of Burgundy, and gave his sons as hostages

1526. The League of Torgau formed by the Protestant princes (John of Saxony, Philip of Hesse, Luneburg, Magdeburg, Prussia, etc.) to oppose Ferdinand and his Bavarian allies The league procured the enactment of the **Diet of Speier,** favorable to the new doctrine

1526-1532. War with the Turks (p. 422)

1527-1529. Second war between Charles V and Francis I, who had declared that the conditions of the Peace of Madrid were extorted by force, and hence void **Alliance at Cognac** between Francis, the pope, Venice, and Francesco Sforza against the emperor. The imperial army, unpaid and mutinous, took Rome by storm under the Constable of Bourbon, who fell in the assault; the pope besieged in the Castle of St. Angelo (1527) The French general, **Lautrec,** invaded Naples, but the revolt of Genoa (Doria), whose independence Charles V promised to recognize, and the plague, of which Lautrec himself died, compelled the French to raise the siege of the capital and to retire to France

1529. Aug. 3. Treaty of Cambrai (*Paix des dames*) So called from the fact that it was negotiated by Margaret of Austria, Charles' aunt, and Louise of Savoy, Duchess of Angoulême, mother of Francis. Francis paid two million crowns and renounced his claims upon Italy, Flanders, and Artois; Charles promised not to press his claims upon Burgundy *for the present,* and released the French princes.

1529. Second Diet at Speier, where, in consequence of the victorious position of the emperor, Ferdinand and the Catholic party took a more decided position. The strict execution of the Decree of Worms was resolved upon. The

evangelical states protested against this resolution, whence they were called **Protestants.**

1530. Charles crowned emperor at Bologna by the pope This was the last coronation of a German emperor by the pope.

1530. Brilliant **Diet at Augsburg,** the emperor presiding in person Presentation of the **Confession of Augsburg** by **Melanchthon.** The enactment of the Diet commanded the abolition of all innovations

1531, Feb. 6. Schmalkaldic League, agreed upon in 1530, between the majority of Protestant princes and imperial cities.

Charles caused his brother, Ferdinand, to be elected King of Rome, and crowned at Aachen. The Elector of Saxony protested against this proceeding in the name of the evangelicals. In consequence of the new danger which threatened from the Turks, Ferdinand concluded the

1532. Religious Peace of Nurnberg. The Augsburg Edict was revoked, and free exercise of their religion permitted the Protestants until the meeting of a new council to be called within a year

1534-1535. The Anabaptists in Munster (**Johann Bockelsohn** of Leyden). Extreme anarchistic (*Antinomian*) consequences of Luther's doctrine of justification by faith

1534. Philip, Landgrave of Hesse, restored the Lutheran duke, Ulrich of Wurttemberg, who had been driven out (1519) by the Swabian league of cities. The emperor had invested his brother Ferdinand with the duchy, but the latter was obliged to agree to a compact, whereby he was to renounce Wurttemberg and in turn be recognized as King of Rome by the Evangelical party

1534. FOUNDATION OF THE JESUIT ORDER. Ignatius de Loyola (Iñigo Lopez de Recalde, 1491–1556) with five associates founded the *Society of Jesus,* commonly known as the Jesuit Order It was approved by the Pope Paul III, in 1540 The Jesuits, organized with military strictness, under direct papal control, were the chief agents in spreading the Catholic (or Counter) Reformation

1535. Charles' successful expedition against Tunis (p 422).

1536-1538. Third war of Charles against Francis I of France. The latter, having renewed his claims to Milan after the death of Francesco Sforza II, without issue, Charles invaded Provence anew, but fruitlessly Francis made an inroad into Savoy and Piedmont, and besought the alliance of **Suleiman,** who thereupon pressed his advance on Hungary and sent his fleets to ravage the coasts of Italy. The war was ended by

1538, June 18. The Truce of Nice, which was concluded on the basis of possession, and for ten years

1541. JOHN CALVIN (1509–1564) introduced the Reformation into Geneva. Calvin was born at Noyon, France, and published the *Christianae Religionis Institutio* in 1535 He was head of the state in Geneva, save for a short exile to Strassburg (1538–1541), until the time of his death. He systematized Luther's rather emotional revolt, adapting from St Augustine the rigorous **doctrine of predestination.** Calvinist churches had a strict moral code, and, unlike Lutheran, maintained independence of the Church from the lay authority In Geneva, in Scotland (**John Knox,** 1513–1572), and briefly in England and even in the New World (at Boston), the Calvinists erected theocratic states In France and Hungary they became an important minority. In Holland and parts of Germany they were soon the dominant Protestant group

1541. Charles' unsuccessful expedition against Algiers

1542. Henry, Duke of Brunswick-Wolfenbuttel, was driven from the duchy by the Schmalkaldic League.

1542-1544. Fourth war between Charles and Francis, occasioned by the investiture of Charles' son, Philip, with Milan. The fact that two secret agents whom Francis had sent to Suleiman were captured in Milan and, when they resisted, were put to death, served Francis as a pretext Francis in alliance with **Suleiman** and the Duke of Cleve. The allied Turkish and French fleets bombarded and plundered Nice. Charles, in alliance with Henry VIII of England, conquered the Duke of Cleve, and advanced as far as Soissons Suleiman invaded Hungary and Austria.

1544, Sept. 18. Treaty of Crespy. Francis' second son, the Duke of Orléans, was to marry a princess of the imperial family and receive Milan He died in 1545, however; Milan continued in the possession of the emperor, who gave it, nominally, to his son Philip, as a fief Francis gave up his claims to Naples, and the overlordship of Flanders and Artois; Charles renounced his claims to Burgundy

1545-1563. COUNCIL OF TRENT (not attended by the Protestants). The **Tridentine Decrees** effected a genuine internal reform in the Roman Catholic Church, and reaffirmed its essential dogmatic bases (p 396)

1546-1547. SCHMALKALDIC WAR Charles V, since the Treaty of Crespy, unhindered by foreign complications, sought to crush the independence of the states of the Empire in Germany, and to restore the unity of the Church, to which he was urged by the pope, who concluded an alliance with him, and promised money and troops. The leaders of the League of Schmalkalden, John Frederick, Elector of Saxony, and Philip, Landgrave of Hesse, placed under the ban. Duke Maurice of Saxony concluded a secret alliance with the emperor. Irresolute conduct of the war by the allies in upper Germany. The elector and the landgrave could not be induced by General Schartlin of Augsburg to make a decisive attack, and finally retired, each to his own land. John Frederick of Saxony reconquered his electorate, which Maurice had occupied. Charles V first reduced the members of the league in southern Germany, then went to Saxony, forced the passage of the Elbe, and defeated in the

1547, April 24. Battle of Muhlberg, the Elector of Saxony, captured him, and besieged his capital, Wittenberg Treaty mediated by Joachim II of Brandenburg The electoral dignity and lands given to the **Albertine line** (Duke Maurice). The **Ernestine line** retained Weimar, Jena, Eisenach, Gotha, etc The elector was kept in captivity Philip of Hesse surrendered, and was detained in captivity. **Interim of Augsburg** (1548), not generally accepted by the Protestants. The city of Magdeburg, the center of the opposition, placed under the ban. **Maurice of Saxony,** entrusted with the execution of the decree, armed himself in secret against Charles V and

1552. Surprised the emperor, after the conclusion of the **Treaty of Friedewalde** (1551) with Henry II of France, and forced him to liberate his father-in-law, Philip of Hesse, and to conclude the **Convention of Passau:** Free exercise of religion for the adherents of the Confession of Augsburg until the next Diet.

1552-1556. War between **Charles V** and **Henry II,** who, as the ally of Maurice, had seized Metz, Toul, and Verdun. Charles besieged Metz, which was successfully defended by Francis of Guise The **Truce of Vaucelles** left France, provisionally, in possession of the cities which had been occupied.

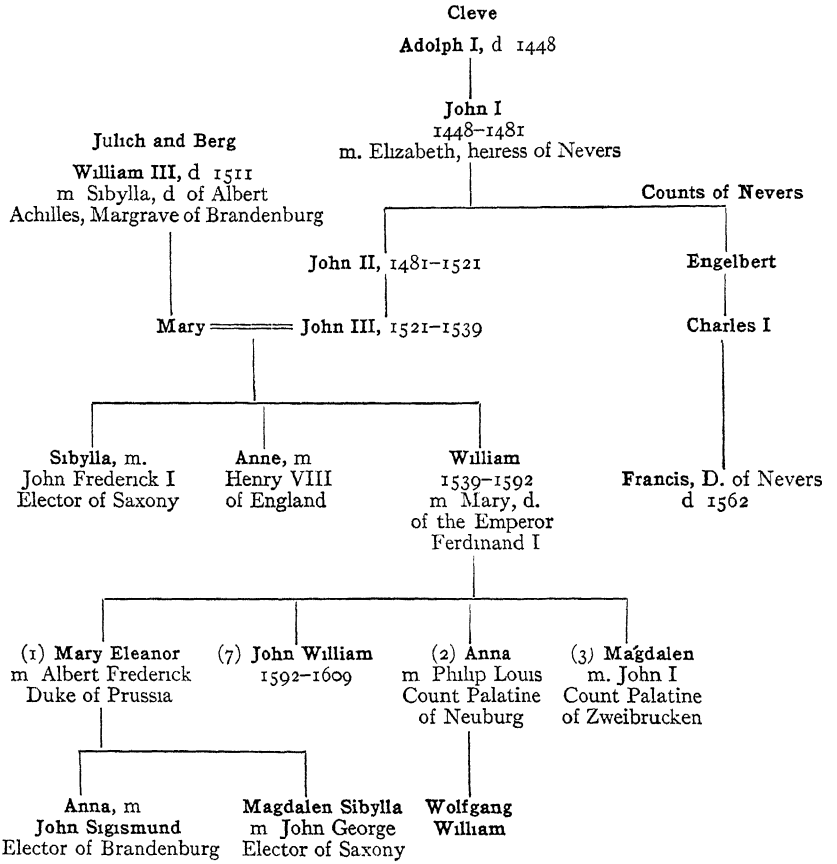
1553. Maurice defeated Albert, Margrave of Brandenburg-Culmbach, at **Sievershausen,** but was mortally wounded.

1555, Sept. 25. RELIGIOUS PEACE OF AUGSBURG. The territorial princes and the free cities, who, at this date, acknowledged the Confession of Augsburg, received freedom of worship, the right to introduce the Reformation within their territories (*jus reformandi*), and equal rights with the Catholic states. No agreement reached as regarded the **ecclesiastical reservation** that bishops and abbots who became Protestant should lose their offices and incomes; but this provision was inserted by imperial decree This peace secured no privileges for the *reformed* (Calvinist) *religion.*

1556. ABDICATION OF CHARLES V at Brussels (Oct. 25, 1555, and Jan 15, 1556).

The crown of Spain with the colonies, Naples, Milan, Franche-Comté, and the Netherlands, went to his son **Philip;** the imperial office and the Hapsburg lands to his brother **Ferdinand I.** Charles lived in the monastery of St Just as a private individual, but not as a monk, and died there in 1558

1556-1564. FERDINAND I, husband of Anna, sister of Louis II, King of Bohemia and Hungary, after whose death he was elected king of these countries by their estates. Constant warfare over the latter country, which he was obliged to abandon, in great part, to the Turks (p 423)



1564-1576. MAXIMILIAN II, son of Ferdinand, was of a mild disposition and favorably inclined to the Protestants, whom he left undisturbed in the free exercise of their religion. War with Zapolya, Prince of Transylvania, and the Turks' Sultan **Suleiman** I died in camp before Szigeth, which was defended by the heroic Zrinyi. By the **Truce with Selim II** (1566) each party retained its possessions (p. 423).

REACTION AGAINST PROTESTANTISM: Catholic, or Counter, Reformation.

1576-1612. RUDOLF II, son of the Emperor Maximilian II, a learned man, an astrologer and astronomer, but incapable of governing. New quarrels over the ecclesiastical reservation The imperial city of Donauworth, placed under the ban by the emperor because a mob had disturbed a Catholic procession, was, in spite of the prohibition of the emperor, retained by Maximilian of Bavaria, who had executed the ban (1607) These troubles led to the formation of a

1608. Protestant Union (leader, **Frederick IV,** Elector Palatine), which was opposed by the

Cleve-Jülich Succession (1609)

1609. **Catholic League** (leader, **Maximilian,** Duke of Bavaria) Both princes were of the house of Wittelsbach.

Rudolf, from whom his brother, Matthias, had forced the cession of Hungary, Moravia, and Austria, hoping to conciliate the Bohemians gave them the

1609. **Royal Charter** (*Majestatsbrief*), which permitted a free exercise of religion to the three estates of lords, knights, and royal cities.

1609. Beginning of the quarrel about the succession of **Jülich-Cleve** on the death of John William, Duke of Cleve. The Elector of Brandenburg and the Prince of Newburg were the principal claimants.

Rudolf, toward the close of his life, was forced by Matthias to abdicate the government of Bohemia

1612-1619. **MATTHIAS,** being childless, and having obtained the renunciation of his brothers, secured for his cousin Ferdinand, Duke of Styria, Carinthia, and Carniola, who had been educated by the Jesuits in strict Catholicism, the succession in Bohemia and Hungary, in spite of the objections of the Protestant states.

b. THE THIRTY YEARS' WAR

1618-1648. **The Thirty Years' War** is generally divided into four periods, which were properly as many different wars. The first two, the Bohemian and the Dan-

ish, had a predominantly religious character, they developed from a revolt in Bohemia into a general conflict of Catholic Europe with Protestant Europe. The two latter, the Swedish and the French-Swedish, were primarily political struggles, wars directed against the power of the Hapsburg house and wars of conquest by Sweden and France, fought upon German soil

(1) *The Bohemian Period*, 1618-1625

Origin of the war: closing of an Utraquist church in the territory of the Abbot of Braunau, and destruction of another in a city of the Archbishop of Prague. The irritation of the Bohemian Protestants (*Utraquists*) was increased by the transference of the administration to ten governors, seven of whom were Catholics Meeting of the defensors, and revolt in Prague, headed by **Count Matthias of Thurn.**

1618, May 23. Defenestration of Prague. The governors, Martinitz and Slawata, were thrown from a window in the palace of Prague They fell seventy feet into a ditch, but escaped with their lives The rebels then appointed thirty directors. The Protestant Union sent Count Mansfeld to their aid, and from Silesia and Lusatia came troops under Margrave John George of Jagerndorf. The imperial forces were defeated by Mansfeld and Count Thurn

1619-1637. FERDINAND II. Thurn marched upon Vienna The Austrian estates, for the most part Protestant, threatened to join the Bohemians, and made rough demands upon Ferdinand, who, by his courage and the arrival of a few troops, was rescued from a dangerous situation Thurn, who arrived before Vienna shortly afterward, was soon obliged to retire by an unfavorable turn of the war in Bohemia Ferdinand went to Frankfurt, where he was elected emperor by the other six electors.

Meantime the Bohemians had deposed him from the throne of Bohemia and elected the young **Frederick V** (*The Winter King*) Elector Palatine, the head of the Union and of the German Calvinists, son-in-law of James I, King of England.

Count Thurn, for the second time before Vienna, allied with **Bethlen Gabor** (i e Gabriel Bethlen), Prince of Transylvania (Nov. 1619) Cold, want, and an inroad of an imperial partisan in Hungary, caused a retreat.

Ferdinand leagued himself with (1) **Maximilian**, Duke of Bavaria, head of the Catholic League, the friend of his youth, who helped him subdue the Austrian estates, with (2) Spain (Spinola invaded the County Palatine, **Treaty of Ulm**, July 3, 1620, neutrality of the Protestant Union secured), and (3) with the Lutheran elector of Saxony, who resubjugated Lusatia and Silesia. Maximilian of Bavaria, with the army of the League commanded by **Tilly** (Jan Tserklaes, Baron of Tilly, in Brabant, 1559–1632), marched to Bohemia and joined the imperial general Buquoy They were victorious in the

1620, Nov. 8. BATTLE OF THE WHITE MOUNTAIN, over the troops of Frederick V, under the command of **Christian of Anhalt.** Frederick was put under the ban, and his lands confiscated, he himself fled to Holland Christian of Anhalt and John George of Brandenburg-Jagerndorf also put under the ban Subjugation of the Bohemians, destruction of the royal charter, execution of the leading rebels, extirpation of Protestantism in Bohemia Afterward, violent counter-reformation in Austria, and, with less violence, in Silesia.

Dissolution of the Protestant Union and transfer of the seat of war to the Palatinate, which was conquered in execution of the imperial ban by Maximilian's general, Tilly, aided by Spanish troops under Spinola.

1622, Apr. Battle of Wiesloch; defeat of Tilly by Mansfeld

May. Battle of Wimpfen; victory of Tilly over the Margrave of Baden-Durlach

June. Battle of Höchst; victory of Tilly over Christian of Brunswick, brother of the reigning duke and administrator of the Bishopric of Halberstadt

1623. Maximilian received the electoral vote belonging to Frederick V and the Upper Palatinate; Saxony obtained Lusatia in pledge for the time being

(2) *The Danish Period*, 1625-1629

Christian IV, King of Denmark and Duke of Holstein, was the head of the Lower Saxon Circle of the empire, and leader of the Protestants.

Albert of Wallenstein (1583–1634), born in Bohemia of an Utraquist family, but educated in the Catholic faith, made Duke of Friedland in 1624, became the commander of an imperial army recruited by himself and provisioned by a system of robbery.

1626. Wallenstein defeated Mansfeld at the **Bridge of Dessau**, and pursued him through Silesia to Hungary, where Mansfeld joined Bethlen Gabor. Death

of Mansfeld and of Christian of Brunswick (1626)

Aug. Tilly defeated Christian IV at **Luther am Barenberge,** in Brunswick.

1627. Tilly and Wallenstein conquered Holstein Wallenstein alone subdued Schleswig and Jutland, drove the Dukes of Mecklenburg from their country and forced the Duke of Pomerania into submission.

1628. Wallenstein besieged **Stralsund.** Heroic defense of the citizens for ten weeks obliged Wallenstein to raise the siege

1629, Mar. 29. EDICT OF RESTITUTION. (1) Agreeably to the ecclesiastical reservation, all ecclesiastical estates which had been confiscated since the convention of Passau should be restored. This affected two archbishoprics Magdeburg and Bremen, twelve bishoprics Minden, Verden, Halberstadt, Lubeck, Ratzeburg, Meissen, Merseburg, Naumburg (the latter three were, however, left in the possession of the Elector of Saxony), Brandenburg, Havelberg, Lebus, and Camin, besides very many (about 120) monasteries and foundations (2) Only the adherents of the Augsburg Confession were to have free exercise of religion, all other "sects" were to be broken up Beginning of a merciless execution of the edict by Wallenstein's troops and those of the league.

1629. May 22. TREATY OF LÜBECK, between the emperor and Christian IV The latter received his lands back, but promised not to interfere in German affairs, and abandoned his allies The Dukes of Mecklenburg put under the ban Wallenstein invested with their lands.

1630. Electoral Assembly at Regensburg. The party of Bavaria and the league was hostile to Wallenstein and took up a position of determined opposition to the too powerful general An excuse was found in the well-grounded complaints of all states of the empire, particularly the Catholics, of the terrible extortion and cruelty practiced by Wallenstein's army. The emperor consented to decree the dismissal of the general and a large part of the army.

(3) *The Swedish Period,* 1630-1635

1630, July. GUSTAVUS II ADOLPHUS (1594-1632), King of Sweden, landed on the coast of Pomerania

Object and grounds of his interference: protection of the oppressed Protestants, restoration of the Dukes of Mecklenburg, his relatives, the rejection of his mediation at the **Treaty of Lubeck;** anxiety in regard to the maritime plans of the emperor

Political position of Sweden: Finland, Ingermannland, Estonia, Livonia, belonged to the kingdom of Gustavus, Courland was under Swedish influence, the acquisition of Prussia and Pomerania would have almost made the Baltic a Swedish sea Gustavus concluded a subsidy treaty with France (**Richelieu**), drove the imperial forces from Pomerania and captured Frankfurt-on-the-Oder Negotiations with his brother-in-law, George William, Elector of Brandenburg (1619-1640), who was under the influence of Schwarzenberg Spandau was at last surrendered to him Negotiations in regard to the surrender of Wittenberg; Saxony, which endeavored to maintain the position of a third, mediatory, party in the empire, a sort of armed neutrality (**Diet of princes of Leipzig,** 1631), was with difficulty brought to form an alliance with an enemy of the empire.

Meanwhile

1631, May 20. Capture of Magdeburg by Tilly The storm was conducted by Pappenheim Terrible massacre and sack of the city by the unbridled soldiery of Tilly, who did what he could to check the outrages Fire broke out suddenly in many places far removed from one another, and the whole city with the exception of the cathedral was consumed (*not* by Tilly's command)

Tilly took possession of Halle, Eisleben, Merseburg, and other cities, and burned them John George, Elector of Saxony, formed an alliance with Gustavus Adolphus, who crossed the Elbe at Wittenberg Leipzig occupied by Tilly The imperial army and that of the Swedes and Saxons, each about 40,000 strong, were face to face.

1631, Sept. 17. BATTLE OF LEIPZIG of **BREITENFELD.** The Saxons were at first put to rout by Tilly, but after a bloody fight Gustavus Adolphus won a brilliant victory

The Saxons entered Bohemia. Gustavus crossed Thuringia and Franconia to the Rhine, and occupied Mainz

Meantime Prague was captured by the Saxons under Arnim (Boytzenburg), a former subordinate of Wallenstein The emperor held fruitless negotiations with the Saxons

At the urgent request of Ferdinand, Wallenstein collected an army, over which he received uncontrolled command He recaptured Prague, and drove the Saxons from Bohemia. Their eagerness for the

war and the Swedish alliance was already chilled

1632. Gustavus advanced to the Danube by way of Nurnberg to meet Tilly Conflict at **Rain**, near the confluence of the Lenz and the Danube. Tilly, mortally wounded, died at Ingolstadt.

Gustavus went to Augsburg, vainly besieged Maximilian in Ingolstadt, but forced Munich to surrender. Wallenstein summoned to the assistance of Maximilian

1632, July-Sept. Fortified camp near Nurnberg Gustavus and Wallenstein face to face for eleven weeks. Wallenstein declined battle Reinforced by Bernhard of Saxe-Weimar, the Swedes attacked Wallenstein's entrenchments, but were repulsed with heavy loss. Gustavus advanced to the Danube. Wallenstein turned upon Saxony, now defenseless, Arnim having marched through Lusatia to Silesia with the Saxon and Brandenburg troops. Terrible ravages committed by the bands of Wallenstein. At the call of the Elector of Saxony, Gustavus hastened back by way of Kitzingen and Schweinfurt, joined Bernhard of Saxe-Weimar at Arnstadt, marched upon Naumburg and, hearing that Wallenstein had dispatched Pappenheim from Leipzig to the Rhine, attacked the imperial forces (18,000 against 20,000 Swedes) in the

1632, Nov. 16. BATTLE OF LÜTZEN. Death of Gustavus Adolphus. Pappenheim, recalled in haste, took part in the battle with his cavalry, after three o'clock; he was mortally wounded. The victory of the Swedes was completed by **Bernhard of Saxe-Weimar.**

Bernhard, Gustavus Horn, and Baner took command of the Swedish forces. The conduct of foreign affairs was assumed by the Swedish chancellor, **Axel Oxenstierna** (1583–1654) **League of Heilbronn** between the circles of Swabia, Franconia, Upper and Lower Rhine, on the one part, and Sweden on the other.

1633. Expedition of Bernhard of Saxe-Weimar to Franconia. He took Bamberg and Höchstädt, drove back the Bavarians under Aldringer, and joined Marshal Horn. Bernhard received from the chancellor the investiture, with the Bishoprics of Wurzburg and Bamberg, under the name of the Duchy of Franconia, and occupied the upper Palatinate

Feb. After Wallenstein had tried and punished with death many of his officers in Prague, and had filled their places with new recruits, he marched to Silesia, fought with the Saxon, Brandenburg, and Swedish troops, and negotiated frequently with Arnim. Negotiations with Oxenstierna.

Nov. Regensburg captured by Bernhard of Saxe-Weimar. Wallenstein found himself unable to go to the assistance of the Elector of Bavaria, as the emperor urged, and went into winter quarters in Bohemia

Growing estrangement between Wallenstein and the imperial court. The Spanish party and the league wished him removed from his command. Wallenstein conducted secret negotiations with the Saxons, the Swedes, the French He intended to create, with the help of the army, an independent position for himself, whence he could, with the aid of the two North German electors, liberate the emperor from the control of the Spanish party, and if necessary, *compel* him to make peace and reorganize the internal affairs of the empire. He had resolved upon open revolt if the hostile party continued in power. Whether he harbored a wish for the crown of Bohemia, along with other fantastic plans, it is hard to decide. The court of Vienna succeeded in detaching the principal generals (Piccolomini, Gallas, Aldringer, Marradas, Colloredo) from his cause Ilow, Trzka, Kinski, remained faithful

1634, Jan. 24. Imperial proclamation: "*Friedland was concerned in a conspiracy to rob the emperor of his crown*" The chief officers of the army commanded to obey him no longer.

Feb. 18. Second proclamation, formally deposing Wallenstein. On the 24th Wallenstein went to Eger, where he was to be met by Bernhard of Saxe-Weimar, and Arnim. There occurred the

Feb. 25. Assassination of Wallenstein by Captain Devereux, at the instigation of the Irish general, Butler, after his intimate friends had been treacherously massacred The emperor had not commanded the murder, nor had he definitely desired it; but he had given rein to the party which he knew wished "to bring in Wallenstein, alive or dead," and, after the deed was done, he rewarded the murderers with honor and riches

1634. Victory of the imperialists under Ferdinand, the emperor's son, and Gallas and the Bavarians (John of Werth), over the Swedes at **Nördlingen.**

1635, May 30. TREATY OF PRAGUE, between the emperor and the Elector of Saxony. (1) The elector received Lusatia permanently, and the Archbishopric of Magdeburg for his second son, August, for life. (2) Those ecclesiastical lands, not

held immediately of the emperor, which had been confiscated before the convention of Passau, should remain to the possessor forever, all others should remain for forty years (from 1627), and in case no further understanding was reached before the expiration of that period, forever, in the condition in which they were on Nov 12, 1627. (3) Amnesty, except for participants in the disturbances in Bohemia and the Palatinate, common cause to be made against Sweden The Lutherans alone to be allowed freedom of worship. Brandenburg and the majority of the other Protestant states accepted the peace

(4) *The Swedish-French Period*, 1635-1648

The policy of Sweden was determined by **Oxenstierna,** that of France by **Richelieu,** and afterward by **Mazarin.** France fought at first in the person of Bernhard of Saxe-Weimar only, with whom subsidy treaties had been concluded, and who was trying to conquer for himself a new state in Alsace, in place of the Duchy of Franconia, which he had lost by the **battle of Nordlingen** **Capture of Breisach** (1638). After his death (1639) France took control of his army

1636. Victory of the Swedes under Baner at **Wittstock** over the imperialists and the Saxons. **Death of Ferdinand II.**

1637-1657. FERDINAND III, his son, was desirous of peace. After the death of Baner (1641) **Torstenson** became commander-in-chief of the Swedes.

1640. Death of George William. Frederick William, Elector of Brandenburg (the **Great Elector,** 1640–1688)

1641. Discussion of the preliminaries of peace in Hamburg. A congress agreed upon

1642. Second Battle of Leipzig (Breitenfeld) Torstenson defeated the imperialists under Piccolomini. He then threatened the hereditary states of the emperor These Swedish successes aroused the envy of Christian IV of Denmark Hence

1643-1645. War between Denmark and Sweden.

1643, Sept. Torstenson hastened by forced marches to the north, conquered Holstein and Schleswig, and invaded Jutland.

Meanwhile the French in South Germany, under Marshal Guébriant, had penetrated to Rottweil Guébriant fell in battle. Shortly afterward the French, under Rantzau, were surprised at **Tuttlingen** by an Austro-Bavarian army under Mercy and Werth, and totally defeated.

1643. Opening of the negotiations for peace in Osnabruck with the Swedes; 1644 in Munster with the French.

Marshal Turenne and the twenty-one-year-old Prince of Bourbon, Duke of Enghien, afterward **Prince of Condé,** appointed commanders-in-chief of the French troops

1644. The French forced the Bavarians under Mercy to retreat Condé captured Mannheim, Speier, and Philippsburg. Turenne took Worms, Oppenheim, Mainz, and Landau

Meanwhile an imperial army, under Gallas, had been sent to the aid of the Danes, who were hard pressed, both by land and by sea by the Swedish admiral, Gustavus Wrangel

1645, Jan. The imperial force was repulsed by Torstenson and Konigsmark, pursued into Germany, and almost annihilated at **Magdeburg.**

March. Brilliant victory of Torstenson over the imperialists at **Jankau** in Bohemia, whereupon, in union with the Prince of Transylvania, Rákóczi, he conquered the whole of Moravia, and advanced hard upon Vienna

May. Turenne defeated by John of Werth at **Mergentheim** in Franconia

Aug. Turenne, at the head of the French and Hessians, defeated the Bavarians at **Allersheim.**

Peace between Sweden and Denmark at **Bromsebro.**

After a futile siege of Brunn, the plague having broken out in his army, Torstenson returned to Bohemia He resigned his command on account of illness, and was succeeded by Wrangel

1646. Wrangel left Bohemia, united to his own force the Swedish troops under Konigsmark in Westphalia, and joined Turenne at Giessen Swedes and French invaded Bavaria and forced the Elector Maximilian to conclude the

1647. Truce of Ulm, and to renounce his alliance with the emperor. After Turenne had been recalled, from envy at the Swedish successes, and Wrangel had gone to Bohemia, Maximilian broke the truce and joined the imperialists again

1648. Second invasion of Bavaria by the French and Swedes; terrible ravages. A flood on the Inn prevented the further advance of the allies, who returned to the Upper Palatinate

Terrible condition of Germany. Irreparable losses of men and wealth Destruction

of towns and trade. Reduction of population; increase of poverty; retrogradation in all ranks.

1648, Oct. 24. TREATIES OF WESTPHALIA. Negotiations from 1643 to 1648. Imperial ambassadors, Count Trautmannsdorf and Dr. Volmar. French, Count d'Avaux and Count Servien. Swedish, Count Oxenstierna, son of the chancellor, and Baron Salvius. France and Sweden, against the will of the emperor, secured the participation of the states of the empire in the negotiations.

Terms of the Treaties: (A) **Indemnifications:** (1) **Sweden** received as fief of the empire the whole of Hither Pomerania and Rugen, with a part of Farther Pomerania, the city of Wismar (formerly a possession of Mecklenburg) and the Bishoprics of Bremen (not the city) and Verden as secular duchies. Indemnity of five million rix dollars. Sweden became a member of the German Diet with three votes. (2) **France** received absolute sovereignty over the Bishoprics and cities of Metz, Toul, and Verdun (in French hands since 1552); also Pignerol, the city of Breisach, the Landgravate of Upper and Lower Alsace (which belonged to a branch of the Austrian Hapsburgs), and the government of ten imperial cities in Alsace These cities and the other imperial states of Alsace (particularly Strassburg) retained their membership in the empire France received also the right to garrison Philippsburg. (3) **Hesse-Cassel** received the Abbey of Hersfeld and part of the County of Schaumburg. (4) **Brandenburg** received, as indemnification for Pomerania (all of which had belonged to Brandenburg by right of inheritance, though only the larger part of Farther Pomerania had been taken over), the Bishoprics of Halberstadt, Minden, and Kammin as secular principalities, the Archbishopric of Magdeburg as a duchy, with the reservation that it should remain in possession of the administrator, August of Saxony, during his life (died 1680). (5) **Mecklenburg** received the Bishoprics of Schwerin and Ratzeburg, as principalities. (6) **Brunswick** was given the alternate presentation to the Bishopric of Osnabruck, where a Catholic and an Evangelical bishop alternated until 1803. (B) **Secular affairs of the empire:** (1) General amnesty and return to the condition of things in 1618 (2) The electoral dignity and the possession of Upper Palatinate were left to the Wilhelmian (Bavarian) line of the house of Wittelsbach, while a new electorate (the eighth) was created for the Rudolfian (Palatinate) line. (3) The territorial superiority (*Landeshoheit*) of all the states of the empire, as regarded their relation to the emperor, was recognized. This involved the right of concluding alliances with one another and with foreign powers, provided they were not directed against the empire or the emperor (4) The Republics of the United Netherlands and of Switzerland were recognized as independent of the empire (C) **Ecclesiastical affairs:** (1) The Convention of Passau and the Peace of Augsburg were approved and extended so as to include the Calvinists (2) Catholic and Protestant states were to be on complete equality in all affairs of the empire (3) January 1, 1624, was adopted as the norm (*annus normalis*) by which questions of ownership of ecclesiastical states and the exercise of religion should be determined As things were on that date, so they were to remain forever, i.e the ecclesiastical reservation was acknowledged to be binding for the future. The subjugated Protestants of Austria and Bohemia obtained no rights by the treaties, but those Evangelical states which had been won to the Counter-Reformation during the war (i.e. the Lower Palatinate, Wurttemberg, Baden, etc) were allowed to resume the exercise of that religion which had been theirs in 1618 The *jus reformandi*, the privilege of deciding by fiat the religion of those subjects to whom the year 1628 did not secure free exercise of religion, was retained for the future by the territorial lords. The right of emigration was, however, reserved to the subjects in such cases. The imperial court (*Reichskammergericht*) was restored and its members were equally divided between Protestants and Catholics.

The Treaty of Westphalia was guaranteed by France and Sweden. (*Cont. p* 461)

c. THE SWISS CONFEDERATION

The confederation, at the beginning of the 16th century, was still a loose union of practically independent cantons, each sending two representatives to a federal diet There were, after 1513, thirteen cantons, of which six (Schwyz, Uri, Zug, Unterwalden, Glarus, and Appenzell) were rural, and seven (Lucerne, Zurich, Bern, Solothurn, Freiburg, Basel, and Schaffhausen) were urban The Aargau, Thurgau, Ticino, and parts of Vaud were governed by the confederation or one or more of its members. Franche-Comté was under Swiss protectorate. In addition there were a number of states allied with the confederation (St. Gall, Upper Valais, Neuchâtel, Rothweil, Mulhausen, Geneva, etc).

Swiss military prestige had reached its zenith in the latter part of the 15th century Swiss mercenaries took an important part in the Italian expedition of Charles VIII and continued to form a crucial part of the French and Italian armies.

1503. The Forest Cantons seized Bellinzona after the French conquest of Milan

1510. The Swiss joined in the **Holy League** against France. In partnership with the Venetians they restored the Sforza to the Milanese duchy (1512), taking for themselves Locarno, Lugano, and Ossola Great victory of the Swiss over the French in the **battle of Novara** (June 6, 1513).

1515, Sept. 13-14. In the **battle of Marignano** (p. 382) the French won a decisive victory over the Swiss and Venetians. This led to the conclusion of peace (Nov. 12, 1516)· the Swiss retained most of the Alpine passes and received a French subsidy in return for the right for the French to enlist mercenaries.

1519, Jan. 1. Beginning of the **REFORMATION IN SWITZERLAND,** under the leadership of **Ulrich Zwingli** (b. 1484, educated at Basel and Bern; priest at Glarus, 1506; after taking part in the Italian campaigns, became priest at Einsiedeln, 1516; preacher at Zurich, 1518) Zwingli denounced indulgences and other abuses in the Church and made a great impression in Zurich In 1521 he denounced the hiring of mercenaries, and in 1522 condemned fasts and celibacy (he himself married in 1524). The town, following his teaching, abolished confession (1524) and closed the monasteries Zwingli acted independently of Luther, from whom he was separated chiefly by difference of opinion on transubstantiation

1524. Five cantons (Lucerne, Uri, Schwyz, Unterwalden, and Zug) banded together against Zurich and the Reformation movement

1528. Bern and Basel accepted the Reformation, and were followed by three others Freiburg and Solothurn remained Catholic and sided with the original five (rural) cantons.

1531. War of the Catholic cantons against Zürich. The Zürichers were defeated in the **battle of Kappel** (Oct 11) and Zwingli was killed. Thus the division of the confederation was complete; the weakness resulting therefrom made impossible all effective action in the ensuing century.

1536. Geneva (allied with Bern) adopted the Reformation, largely through the efforts of William Farel. In the same year **John Calvin** (1509–1564) arrived in the city. His teaching made a deep impression, but also aroused much opposition. In 1538 he was banished and retired to Strassburg.

1536. Bern subdued Vaud, Chablais, Lausanne, and other territories of the Duke of Savoy, thus laying the basis for a long-drawn duel between the two powers.

1541-1564. CALVIN, recalled to Geneva, organized the town as a theocratic state (*City of God*). A consistory of twelve (half clerical, half lay) controlled the council and the government. Drastic suppression of all godlessness (i.e. everything at variance with Calvinist doctrine).

1553. Execution of Servetus for denying the Trinity.

1555. Ruthless suppression of an anti-Calvinist uprising. Geneva a center for Protestant refugees from England and France and a radiating point for Calvinist doctrine. But the Protestant cantons of Switzerland remained predominantly Zwinglian

1564. Bern was obliged, under pressure from the Spanish power in Italy, to retrocede Gex and Chablais to Savoy. The Savoyards, supported by Spain and also by the Catholic cantons, began a prolonged offensive against Geneva and Bern, which drove the Protestant cantons into the French fold

1577. Opening of a Jesuit seminary at Lucerne, marking the most active phase of the **Counter-Reformation,** directed chiefly by Cardinal Carlo Borromeo of Milan.

1584. Alliance of Bern, Geneva, and Zurich against Savoy and the Catholic cantons, followed by an alliance of the latter with Spain (1587).

1602. Savoyard attack on Geneva. This was frustrated, but one important result was the renewal of the alliance between the whole confederation and France (the Catholic cantons, however, retained also their alliance with Spain).

1620-1639. Struggle for control of **the Valtelline Pass,** the most important link in the communications between Hapsburg Austria and the Spanish Hapsburg possessions in Italy. The pass was controlled by the **Grisons League,** but in 1620 was seized by the Spaniards, who enjoyed the support of the Catholic faction (under **Rudolf Planta**). Thereupon Bern and Zurich sent aid to the Protestant faction, led by the pastor **George Jenatsch** (1596–1639). The Protestants were at first

successful, but in 1621 were expelled by the Austrians, Spain taking over control of the pass. In 1625 it was seized by a Swiss force in French pay. Governorship of the Duke de Rohan. But in 1637 Jenatsch, having turned Catholic in the interest of patriotism, secured Austrian aid and once more drove out the foreigner. By **treaty with Spain** (Sept 3, 1639) the passes were left open to the use of Spanish troops. The war had been conducted by both sides with the utmost cruelty, typical of the Thirty Years' War. In that great struggle the Swiss Confederation remained officially neutral, being paralyzed by the division between Catholic and Protestant cantons. Nevertheless, by

1648. The Treaties of Westphalia, the confederation, owing to the efforts and diplomacy of **John Rudolf Wettstein,** burgomaster of Basel, was able to secure a European recognition of its independence of the German Empire. (*Cont. p.* 459)

7. SCANDINAVIA

a. DENMARK AND NORWAY, 1513-1645

During this period the union of the three Scandinavian kingdoms became dissolved. The attempt of the Danish king,

1513-1523. CHRISTIAN II, to assert Danish supremacy in Sweden by invading the latter and executing the leaders of the national Swedish party (**the massacre of Stockholm,** 1520) led to a

1520. National revolt headed by **Gustavus Ericksson Vasa,** a young Swedish nobleman. The Danes were defeated, and

1523. Gustavus Vasa became first administrator of the kingdom, then king (see below, Sweden).

In his domestic policy Christian II, in alliance with the middle classes, tried to strengthen royal authority at the expense of the nobility and the Church. This caused a rebellion, led by the nobles and the bishops, who invited the Duke of Holstein to rule over Denmark as

1523-1533. FREDERICK I. A civil war followed in which the middle classes sided with Christian II. Christian was defeated and deposed in 1532 After the death of Frederick in 1533, civil war broke out anew (**the Feud of the Counts**). Order was restored with the accession of Frederick's son

1534-1558. CHRISTIAN III. During his reign the **Reformation** finally triumphed in Denmark. Church property was secularized and a national Protestant (Lutheran) Church was established. Simultaneously there was a great strengthening of royal power. Christian III intervened in the religious struggle in Germany siding with the Protestant princes against the emperor.

The continuation of the same policy led to Denmark's participation in **the Thirty Years' War** (p. 403) under

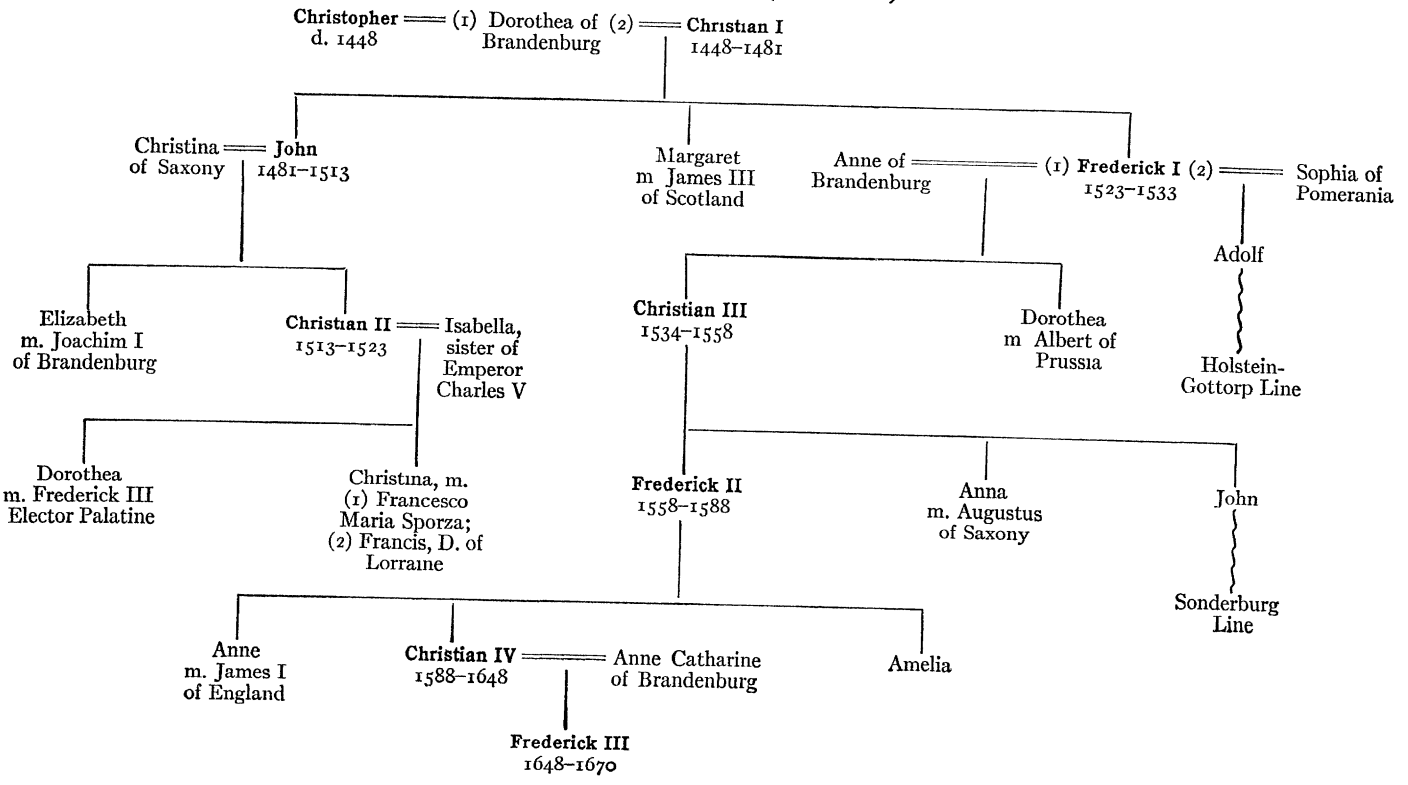
1588-1648. CHRISTIAN IV. At the same time rivalry with Sweden in the Baltic caused the

1611-1613. War of Kalmar with indecisive results, and

1643-1645. A second war, in which the Swedes were victorious Denmark lost some territory on both sides of the Sound. Upon the death of Christian IV an aristocratic reaction brought about a temporary weakening of the royal power

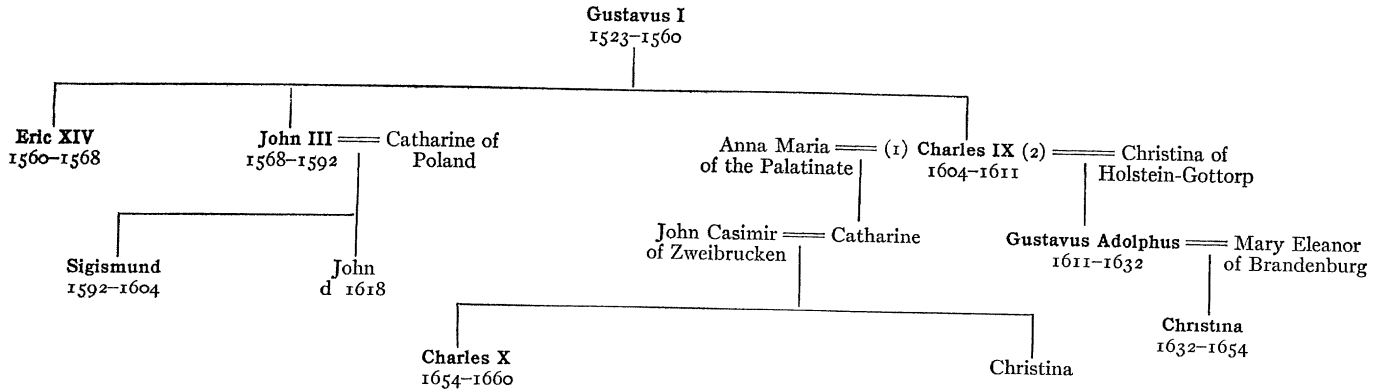
Norway during this period remained under Danish domination all the important posts in the administration were occupied by the Danes and the Danish language was predominant. However, Norway benefited from the activity of some of the Danish kings. Christian IV improved administration, developed national resources, founded **Christiania.** Under the influence of Denmark, Norway also became Protestant (Lutheran). (*Cont. p.* 474)

b. SWEDEN, 1523-1654



1523-1654. The **HOUSE OF VASA,** under whom Sweden became the strongest power in the Baltic.

1523-1560. GUSTAVUS I. War with Lübeck, concluded by the **Treaty of 1537,** put an end to the trade monopoly of the Hanseatic League in the Baltic region. In the internal life of Sweden the most important event was the progress of the **Reformation.** Olaus Petri successfully preached the Lutheran doctrine and translated the New Testament into Swedish (1526).



1527. By the decision of the **Riksdag of Västeras,** bishops were made entirely dependent on the king, payment of the Peter's pence to the pope was discontinued, church estates were partially secularized.

1529. The ordinances of the **Synod of Örebro** modified the church service in the Protestant sense. As

Kings of Denmark (1448-1670)

The House of Vasa in Sweden (1523-1660)

the Swedish crown was made hereditary, Gustavus Vasa was succeeded by his son

1560-1568. ERIC XIV. Under him Baltic expansion continued and Sweden came into the possession of Reval (1561) and the adjoining territory Toward the end of his life Eric became insane, and finally was deposed Under his brother **John III** and John's son **Sigismund** (King of Poland since 1587), Sweden participated in the **Livonian War** (p 417) in which she acquired all of Estonia with Narva, by the **Treaty of Teusina** (1595)

1593. Sigismund's attempt to restore Catholicism was met by the reaffirmation of the Protestant faith, based on the **Confession of Augsburg,** at the **Convention of Uppsala,** while his absolutist tendencies provoked

1599. A rebellion which ended in his deposition He was succeeded by the youngest son of Gustavus Vasa,

1604-1611. CHARLES IX (in virtual control of the government since 1599) under whom Sweden intervened in Russia during the **Time of Troubles** (p. 418). Under his son and successor,

1611-1632. GUSTAVUS II ADOLPHUS, war with Russia was ended by the **Treaty of Stolbovo** (1617) Sweden acquired eastern Carelia and Ingria, cutting Russia off from the Baltic Sea This was followed by

1621-1629. A war with Poland, the result of dynastic competition, in the course of which Sweden occupied all of Livonia For Swedish participation in the **Thirty Years' War** see p 405

Gustavus Adolphus' domestic policy was one of conciliation. A royal charter (1611) gave the Council and the Estates a voice in all questions of legislation, and a power of veto in matters of war and peace. Administration and courts were modernized, education promoted, commerce and industry sponsored, foreign immigration invited The king's chief collaborator was his chancellor, **Axel Oxenstierna** (1583–1654), who became the actual ruler of Sweden under Gustavus Adolphus' daughter,

1632-1654. CHRISTINE. For Swedish acquisitions under the **Treaty of Westphalia** see p 408 (*Cont. p* 471)

8. POLAND-LITHUANIA, 1492-1648

The history of Poland in this period was marked by a constant growth of power on the part of the lesser nobility, so that Poland became transformed into a republic of the ***szlachta*** (*Recz, Pospolita*) with an elected king as the titular head All efforts of the kings to strengthen the royal power, reform the government, and establish a modern standing army met with failure.

1492-1501. JOHN ALBERT, the son of Casimir IV, relied upon the gentry (*szlachta*) to reduce the power of the great magnates The result was the

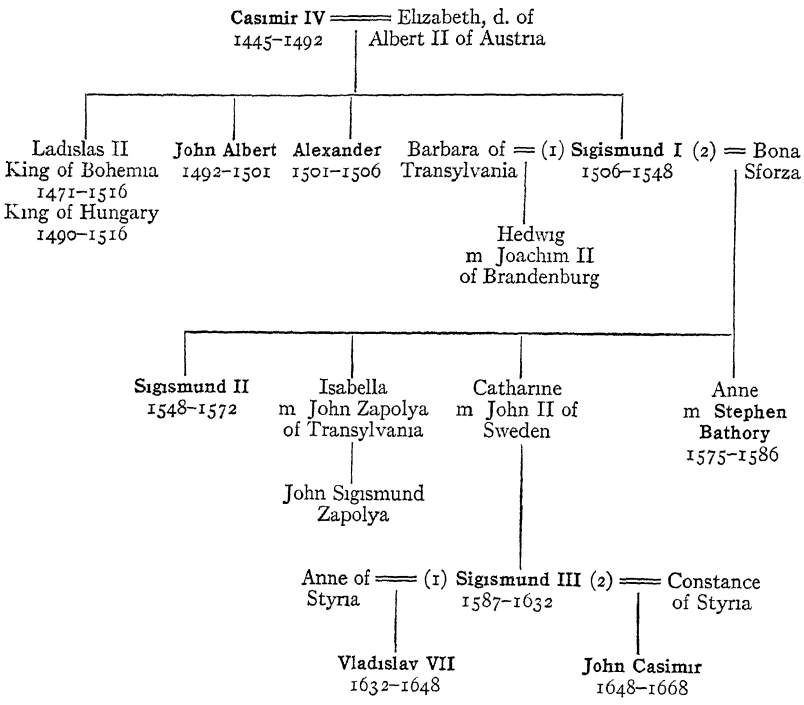
1496. Statute of Piotrkow (the *Magna Carta* of Poland) which gave the gentry extensive privileges at the expense of the burghers and peasants The burghers were restricted from buying land and the peasants were practically deprived of freedom of movement.

1497-1498. A futile invasion of Moldavia, which was intended to secure a throne for the king's brother, resulted in a devastating invasion by the Turks

1501-1506. ALEXANDER I, brother of John Albert and, since 1492, Grand Duke of Lithuania His reign was important only for the **war with Ivan the Great** of Russia (p. 317), which resulted in the loss of the left bank of the Dnieper by Poland (1503), and for

1505. The Constitution of Radom, which definitely made the national Diet, elected by the nobles at their provincial assemblies (the *dietines*), the supreme legislative organ. Henceforth no new laws were to be passed without the Diet's consent.

1506-1548. SIGISMUND I, brother of John Albert and Alexander, during whose reign the Diet (1511) passed laws finally establishing serfdom in Poland



1512-1522. War with Russia over the White Russian region. The Russians made considerable gains and in 1514 took Smolensk, the key city.

1525. Secularization of Prussia and end of the rule of the Teutonic Knights. Prussia remained a fief of Poland.

1534-1536. Another war with Russia brought no success to the Poles Smolensk remained in Russian hands.

1548-1572. SIGISMUND II (*August*). His reign was distinguished by the wide spread of the **Protestant Reformation,** which had taken root in 1518 and had

Kings of Poland (1445-1668)

gained ground, especially in the Baltic lands and in the towns, despite many edicts penalizing the adherents, who were known as *Dissidents* Demands for a national Church, marriage of the clergy, communion in both kinds, Slavonic liturgy, etc **Calvinism** and **Antitrinitarianism** also established themselves After the **Council of Trent** (p 396) the crown, backed by the recently formed Polish-Lithuanian chapter of the Jesuit Order (1565), succeeded in checking the movement and in restoring the supremacy of Roman Catholicism.

1557-1571. The Livonian War, arising from a disputed succession and from the conflicting claims of Poland, Russia, Sweden, and Denmark. The Russians invaded the country (1557) and the Swedes took Estonia, while the Danes acquired part of Courland. In 1561 the Poles took over Livonia, but Ivan the Great of Russia conquered part of it in 1563

1569, July 1. THE UNION OF LUBLIN, which, despite opposition on the part of Lithuania, merged that country with the Polish kingdom. The two nations were to have a common sovereign, and a common diet, though Lithuania was to retain a separate administration and army.

With the death of Sigismund II the **Jagellon dynasty** came to an end and the Polish crown, already elective in theory, became so in fact The result was a tremendous weakening of the royal power, constant embroilment in the rivalries of other nations, and a growing hopelessness of reform

1573-1574. HENRY OF VALOIS was elected king on condition of signing the *Pacta Conventa*, formally recognizing the right of the nobility to elect kings and strictly limiting the royal power. The Diet was to meet at least once every two years Henry paid richly for his election and for the alliance of Poland with France, but, on the death of his brother, Charles IX, he slipped away and returned to France There followed a period of con-

fusion, during which the Hapsburgs made great efforts to secure the crown The Poles ultimately elected

1575-1586. STEPHEN BATHORY, husband of Anna, the last Jagellon. Stephen was a strong ruler, but was unable to make much progress against the powerful nobility His great success was in the field of foreign affairs and war Plan for a union of eastern Europe under his leadership, preparatory to a united attack upon the Turk This came to nothing, but Stephen, with a new army of peasant infantry, raised on the royal estates, was able, in the last phase of the Livonian War (1579–1582) to retake Polotsk and to put an end to the steady encroachment of Russia upon the White Russian regions.

1587-1632. SIGISMUND III (*Vasa*), son of King John of Sweden He had been educated by the Jesuits and threw his entire influence on the side of the Counter-Reformation For the rest he demonstrated little statesmanship and involved Poland in endless wars with Sweden because of his claims to the Swedish throne

1595-1596. Attempts to reunite the Greek Orthodox Church in Poland with Rome foundered on the obstinacy of the Jesuits However, part of the Orthodox formed the so-called **Uniate Church,** retaining Eastern rites but recognizing papal authority The result was the **Confederation of Vilna** (1599), an alliance between the Orthodox and the Dissidents against the power of the Roman Church

1609-1618. Polish intervention in Russia during the **Time of Troubles** (p 418). An attempt to put Sigismund's son, Vladislav, on the Russian throne ended in the expulsion of the Poles from Moscow

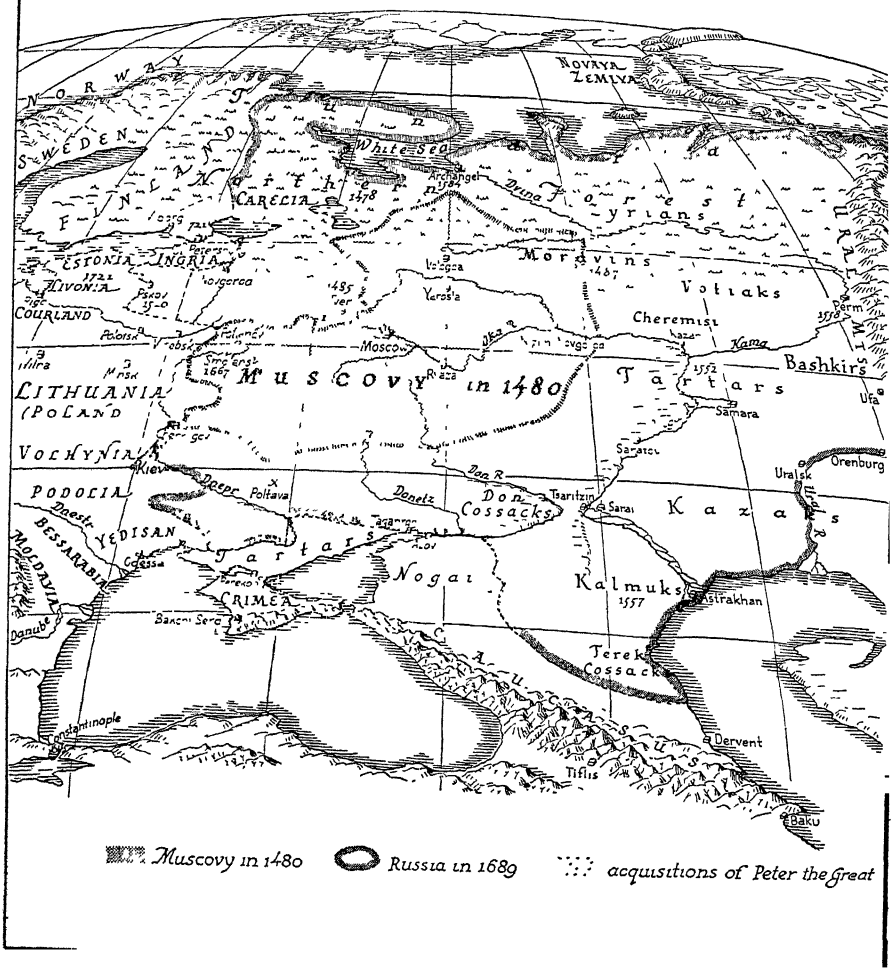
1629. The Treaty of Altmark, a truce in the long conflict with Sweden, signalized the defeat of the Poles and confirmed the loss of Livonia.

1632-1648. VLADISLAV VII, the son of Sigismund He was elected without opposition and pursued a policy diametrically opposed to that of his father But his efforts to restrict the powers of the Jesuits were vain.

1632-1634. War with Russia, which was ended by the **Treaty of Polianov** (1634). Vladislav renounced his claims to the Russian throne, but regained the Smolensk region for Poland (*Cont. p* 475.)

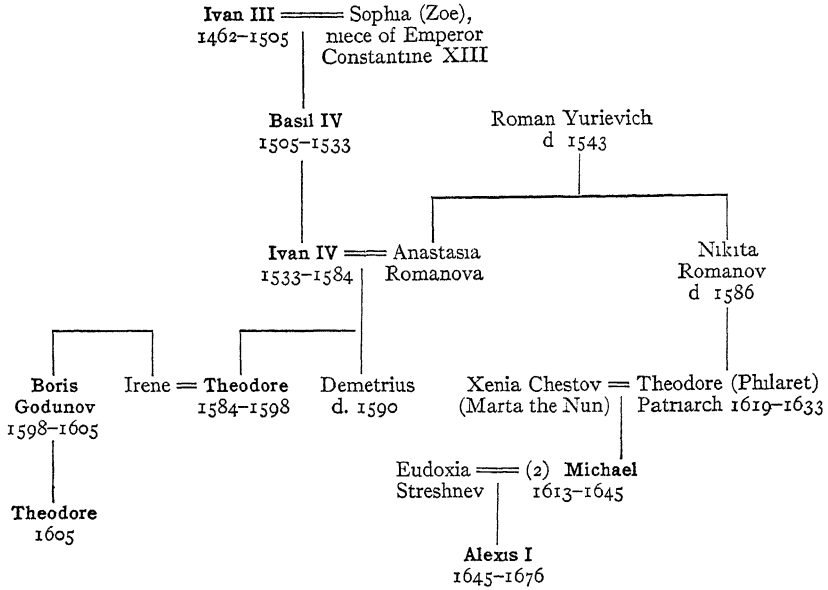
9. RUSSIA, 1505-1645

In Russia, as in many other countries, the period was one of conflict between the crown and the powerful landed nobility, accompanied by a decline in the influence of the townsmen and a gradual relapsing of the peasantry into serfdom In Russia the latter problem was closely connected with defense and territorial expansion. Since 1454 the Grand Dukes of Moscow granted non-hereditary military fiefs (*pomestye*) to secure a supply of fighting men for use in the struggle against the Tatars The corollary was a steady debasement in the position of the peasants, who consequently tended to run off to newly conquered territories in the southeast Depopulation in the center resulted in ever more drastic measures to hold the cultivator on the land At the same time there grew up on the borders the Cossack colonies, wild, free communities which were to play a great rôle in this period



1505-1533. BASIL III, the son of Ivan the Great and Sophia The reign was a fairly quiet one, during which the work of consolidation was continued by the reduction of Pskov (1510), Smolensk (1514) and Riazan (1517).

1533-1584. IVAN IV (*the Terrible*), the son of Basil He ascended the throne at the age of three The regency was in the hands of his mother, **Helen Glinski** (of Lithuanian family), until 1538, and thereupon fell into the hands of powerful noble (*boyar*) families, notably the **Shuiskys** and **Belskys,** whose oligarchic policy presented the young ruler with an almost insuperable problem



1547. Ivan assumed power and had himself crowned *tsar*, the first Russian ruler to assume the title formally At the same time he established a *chosen council*, composed of personally selected advisers, which he hoped to make a counterweight to the power of the **Council of Boyars** (*Duma*) This was followed in 1549 with the convocation of the first national assembly or *Zemski Sobor*, also meant to broaden the support of the crown In these early years Ivan made considerable progress in breaking down the power of the provincial governors and in establishing a measure of local government.

1552-1556. The conquest of Kazan and Astrakhan from the Tatars gave Russia control of the entire course of the Volga and opened the way for expansion to the east and southeast Already in the last years of Ivan's reign (1581–1583) Russian traders (the Stroganov family)

Growth of Russia in Europe to 1725

Russian Rulers (1462-1676)

established themselves east of the Urals and Cossack pioneers, under **Yermak,** began the conquest of Siberia

1553. The British, under Chancellor, reached Moscow by way of the White Sea and Archangel They were given trade rights in 1555 and formed an important link in Russian communications with the west, which were otherwise cut off by Poland-Lithuania and Sweden.

1557-1582. THE LIVONIAN WAR, arising from the disputed succession to the Baltic territories ruled by the German Knights Ivan appreciated to the full the importance of an outlet to the Baltic, and seized Narva and Dorpat In 1563 he conquered part of Livonia, which had been taken over by the Poles.

1564. Conflict of Ivan with the powerful boyars, led by **Prince Kurbsky.** Ivan eventually withdrew from Moscow and issued an appeal to the people, which, through the metropolitan, urged him to return He took a terrible revenge on his opponents and began a reign of terror marked by incredible excesses and fantastic self-debasement At the same time Ivan set aside about half of the realm as his personal domain (*oprichnina*), in which he established a new administration and a separate royal army.

1570. Ivan **ravaged Novgorod** and massacred many of the inhabitants, whom he suspected of sympathy for the Poles

1571. **The Crimean Tatars** attacked and sacked Moscow.

1578. **Defeat of the Russians by the Swedes** at Wenden, in the course of the struggle for the Baltic lands Polotsk was lost in the following year

1581. **Stephen Bathory,** King of Poland, invaded Russia and advanced victoriously to Pskov

1582. Peace between Russia on the one hand and Poland and Sweden on the other, mediated by the Jesuit Possevino, who had been sent by the pope in the hope of effecting a union of the Orthodox and Roman churches Ivan was obliged to accept most of his recent losses.

1584-1598. THEODORE I, the son of Ivan, a feeble and utterly weak ruler The actual government fell again into the hands of the boyars, notably Nikita Romanov (related to Ivan IV's first wife) and Boris Godunov, brother-in-law of Theodore

1589. **Establishment of the Russian patriarchate** as separate from that of Constantinople The Russian Church thus

became entirely independent Theodore dying without issue, a national assembly elected to the throne

1598-1605. BORIS GODUNOV, an intelligent but none too courageous ruler who was faced with the jealousy of other boyar families Against these he acted by intrigue and persecution

1604-1613. THE TIME OF TROUBLES, which began with the appearance of a **false Dmitri,** i e a pretender who claimed to be the supposedly murdered son of Ivan IV. Dmitri was an able and forceful person who soon found extensive support among the Poles and the Cossacks Boris' death at this crucial time initiated a period of utmost confusion during which boyar families struggled for supremacy while their position was challenged by the lower classes (led by the Cossacks), and foreigners (Poles and Swedes) took full advantage of the situation to further their own interests

1605. Theodore, the son of Boris, succeeded to the throne He was soon deposed and murdered by the boyars, many of whom accepted Dmitri The latter advanced to Moscow and established himself on the throne

1606. Basil Shuisky and a faction of the boyars succeeded in driving out the pretender and murdering him Shuisky thereupon became tsar. But new pretenders soon appeared, and the situation became desperate when the Cossacks and peasants in the south and east rose in revolt

1608. The new Dmitri defeated Basil and advanced to Tushino, outside Moscow In urgent need, Basil ceded Carelia to the Swedes in return for aid

1609. Sigismund of Poland advanced to Smolensk and made extensive promises to the Russian boyars in the hope of acquiring the crown.

1610. Skopin-Shuisky, nephew of Basil, with a Swedish force under De La Gardie, relieved Moscow, but the Poles continued their advance The Russians then deposed Basil and a boyar faction offered the throne to Vladislav, son of Sigismund. The latter, jealous of his son and anxious to secure the throne himself, evaded the offer and advanced to Moscow.

1611. The turn of the tide was marked by the death of the pretender and by a powerful reaction against the Poles, especially in the northern and eastern provinces A national militia was formed under **Pozharsky** and this in

1612. Relieved Moscow and drove out the Poles

1613, Feb. 21. A national assembly (*zemski sobor*) elected to the throne

1613-1645. MICHAEL ROMANOV, grandnephew of Ivan IV and son of the patriotic leader, **Philaret.** Michael was crowned on July 11 and therewith began the **Romanov dynasty,** which ruled until 1917 Michael himself was a man of no ability, who was guided by his father and later fell under the influence of favorites. The reign saw the gradual restoration of order, but also the firmer establishment of serfdom and the gradual disappearance of local self-government The national assembly, which was frequently summoned, failed to establish a regular organization or to develop beyond the status of a consultative body

1617. Treaty of Stolbovo, with Sweden. The Swedes restored Novgorod, which they had occupied, but Russia was obliged to abandon the few towns which had still been held on the Gulf of Finland

1634. Treaty of Polianov, with Poland, bringing to a temporary end a long period of conflict In return for recognition of his title, Michael was obliged to give up many of the frontier towns (including Smolensk) which had been taken by the Poles

1637. Russian pioneers reached the coast of the Pacific, after a phenomenally rapid advance over the whole of Siberia

1637. The Cossacks managed to take the important fortress of **Azov** from the Crimean Tatars They offered it to Michael, who refused it (1642) in order to avoid conflict with the Turks The fortress was thereupon returned (*Cont. p.* 478)

10. BOHEMIA, 1471-1627

1471-1516. LADISLAS II, son of the King of Poland, first ruler of the **Jagiello family,** a boy of sixteen at his accession. Ladislas proved himself a gentle but weak and undecided ruler, wholly unsuited to the position. He continued the persecution of the Bohemian Brotherhood, but made no progress toward unifying the country As King of Hungary also, he spent most of his time at Pressburg, leaving open the way for the domination of Bohemia by powerful nobles During

the entire later 15th century the aristocracy extended its possessions and power at the expense of the crown and Church The towns declined in power and the peasantry sank back into serfdom or a status close to it Great influx of German peasants in the west and north, and also in the towns

1516-1526. **LOUIS**, son of Ladislas, who ascended the throne of Bohemia and Hungary at the age of ten. Conditions continued as under Ladislas, further complicated by the spread and persecution of Lutheranism

1526. **Louis was defeated and killed** by the Turks at the **battle of Mohács.** **Ferdinand,** brother of Emperor Charles V and brother-in-law of Louis, was elected king, opening a long period of Hapsburg rule.

1547. The Bohemian crown was proclaimed hereditary in the house of Hapsburg Constant growth of the royal prerogative at the expense of the Diet and of town government.

1618. **Defenestration of Prague** and beginning of the Thirty Years' War (p 403) Ferdinand II was declared deposed and the Protestant Frederick of the Palatinate was elected king (*the Winter King*)

1620, Nov. 8. **BATTLE OF THE WHITE MOUNTAIN;** defeat of Frederick and the Bohemians Bohemia was virtually deprived of independence and a wholesale confiscation of the lands of the native nobility took place

1627. **A new constitution** confirmed the hereditary rule of the Hapsburgs and strengthened royal power. The incorporation of Bohemia with the Hapsburg Empire was completed in the 18th century with the extension of the imperial administration under Joseph I (1705–1711) and with the **Pragmatic Sanction of 1720** (p. 463)

11. HUNGARY, 1490-1648

1490-1516. **LADISLAS II,** King of Bohemia, was elected King of Hungary by the nobles A weak and ineffectual ruler, he allowed the work of Mathias Corvinus to be undone within a few years. In order to secure recognition from the Hapsburgs, he gave up Mathias' conquests and arranged dynastic marriages with the Hapsburgs (his infant son Louis was married to Mary, granddaughter of Maximilian, his own daughter, Anne, was married to Maximilian's grandson Ferdinand). This policy led to the formation of a national party among the Hungarian nobility, which was led by Stephen Zápolya (Szapolyai), the Vaivode (Prince) of Transylvania The nobles refused Ladislas all effective financial support, so that he was unable to maintain an army and was soon at the mercy of the feudal elements

1514. A great revolt of the peasants, led by George Dózsa, was directed against the ruthless exploitation by the aristocrats It was suppressed in a sea of blood by John Zápolya, leader of the nobility

1514. **The *Tripartitum,*** a constitution worked out by Stephen Verboczy, was passed by the Diet It established the equality of all nobles and at the same time fixed the system of serfdom on the peasantry.

1516-1526. **LOUIS II,** the son of Ladislas, succeeded his father at the age of ten A dissolute youngster, devoted to pleasure, he did nothing to stop the disintegration of the royal power. His reign was marked chiefly by the spread of the **Protestant Reformation.** The movement first took root in the German areas and in the towns, and was vigorously opposed by the nobles. In 1523 it was declared punishable by death and confiscation of property, but despite all edicts it took firm hold of the country

1521. The Turks took Belgrade, beginning their victorious advance into Hungary

1526, Aug. 29-30. **BATTLE OF MOHÁCS.** Defeat and death of Louis when the Turks completely overwhelmed his disorganized feudal army of 20,000

1526-1528. Louis' death was followed by a hot contest over the succession. Part of the nobility, hoping for German aid against the Turks, elected **Ferdinand of Hapsburg,** brother of Emperor Charles V. The national party, on the other hand, elected **John Zápolya** as king. After a civil war lasting two years, Zápolya was defeated. He appealed to the Turks, who supported him vigorously. By the **Peace of Nagyvarad** the two kings recognized each other, each ruling part of the territory. Zápolya became a vassal of the Turks, but Ferdinand continued the war against them which was interrupted only by occasional truces (p. 423).

1540. Death of John Zápolya. The Turks recognized his infant son, John II (Sigismund) **Zápolya** (1540–1571) This led to a new clash with Ferdinand, who began the invasion of eastern Hungary. The Turks again invaded and took Buda They now took over the entire central part of Hungary (the great plain), which was organized in four *pashaliks* There was no settlement by the Turks, but the territory was granted in military fiefs and subjected to heavy taxation Religious tolerance of the Turks Transylvania, under Zápolya, was a vassal state of the Turks, but was left almost entirely free. Under **Cardinal Martinuzzi** it was organized as a state (three nations Hungarians, Szeklers, and Germans, meeting in a *Landtag*, elected the king and passed laws) The Transylvanians (even the nobility) soon accepted **Calvinism**, so that during the later 16th century the larger part of Hungary was either Lutheran or Calvinist In 1560 religious toleration was established in Transylvania **The Hapsburgs**, on the other hand, held only a narrow strip of western and northern Hungary, and even for this they long paid tribute to the Turk Warfare was incessant on this frontier (blockhouses and constant raids) The Hapsburgs employed Italian and Spanish mercenaries to defend their possessions, and these ravaged the country as much as the Turkish territory. Ferdinand and his successors governed from Vienna or Prague and with little reference to the traditional rights of the Hungarian nobility This led to growing friction and later to serious conflict.

1581-1602. Sigismund Bathory, Prince of Transylvania His efforts to unite with the Hapsburgs for a grand assault on the declining Turk power met with vigorous opposition on the part of the Transylvanian nobility

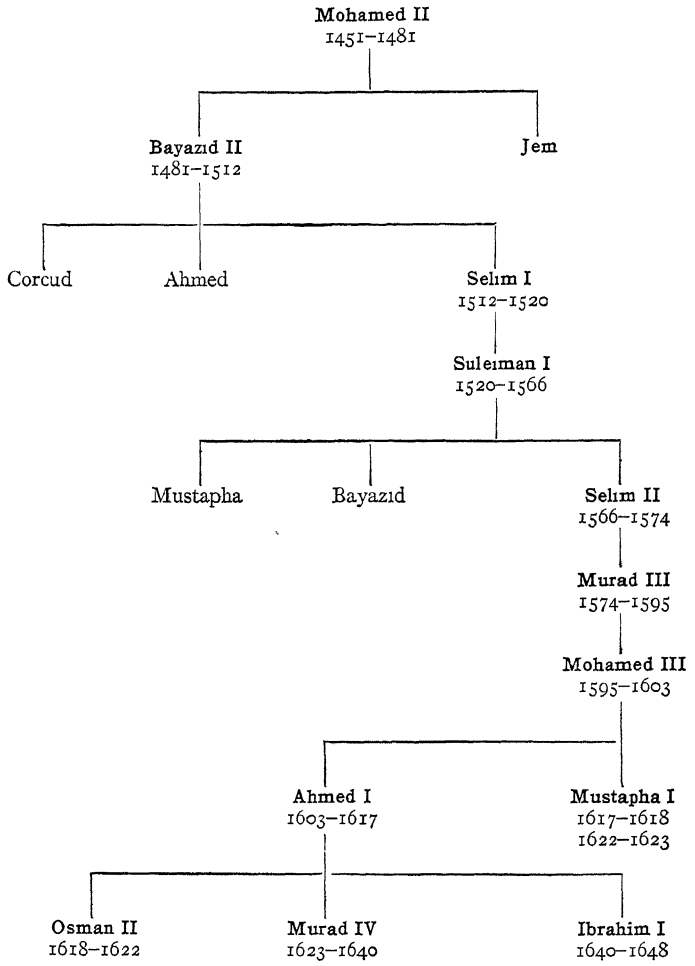
1604. Beginning of the Counter-Reformation, under Hapsburg auspices. This resulted in a revolt of the Hungarians, who were supported by the Transylvanians

1604-1606. STEPHEN BOCSKAY became Prince of Transylvania and, after defeating the Hapsburgs, secured the **Treaty of Vienna,** by which Protestantism was given equal status with Catholicism Nevertheless, the Counter-Reformation made great strides, especially among the nobility, due to the efforts of Cardinal Pazmany and the Jesuits

1613-1629 BETHLEN GABOR (Gabriel Bethlen), Prince of Transylvania He was one of the greatest rulers of the country and made his state the center of Hungarian culture and national feeling On the outbreak of the **Thirty Years' War,** he openly sided with the enemies of the Hapsburgs and made Transylvania a vital factor in European politics.

1630-1648. GEORGE RÁKÓCZI I, another eminent Prince of Transylvania He continued the policy of his predecessor and managed to guide the country through the storms of the European crisis At the same time he took full advantage of the growing weakness of the Turks, making Transylvania virtually an independent state which played a part of some importance in international affairs

12. THE OTTOMAN EMPIRE, 1481-1656



1481-1512. BAYAZID II, a man of intellectual tastes, but the least significant of the first ten sultans He was raised to the throne with the support of the Janissaries, but his position was challenged by his younger brother, Jem (**Djem**), who had himself proclaimed sultan at Brusa, and then proposed a division of the empire. Jem was defeated by Bayazid's forces at Yeni-Shehr and fled, first to Egypt, then to Rhodes The Knights of St. John sent him to France and extracted from Bayazid a treaty of peace As a valuable hostage many of the European powers tried to get control of him, but he was finally (1489) turned over to the pope, who tried to use him to extract money and support from Bayazid against Charles VIII of France During the latter's invasion of Italy, Jem fell into his hands He died under suspicious circumstances at Naples (1495)

1489. The Venetians acquired Cyprus from the Christian ruler by bequest, and tried to take advantage of Bayazid's weakness to strengthen their position in the Aegean

1499-1503. War between the Venetians and the Turks. The Turks had a powerful fleet, commanded by Kemal Re'is (possibly a Greek), who defeated the Venetians off Modon During the war the Turks took Lepanto, Modon, and Koron, while the Turkish cavalry raided Venetian territory as far as Vicenza In the peace treaty Venice abandoned the stations she had lost, but kept Nauplion and some of the Ionian Islands

1512-1520. SELIM I (*the Grim*). He

Ottoman Sultans (1451-1649)

forced his father to abdicate, after a civil war between Bayazid's three sons, Ahmed, Corcud, and Selim

1513. Selim defeated his brother Ahmed in Anatolia and had him executed.

1514. **War against Shah Ismail** of Persia, who had supported Ahmed The struggle was accentuated by religious differences, the Kizilbashes in Anatolia being Shi'ites and wholly in sympathy with the Persians Selim, a fanatic Sunnite, is said to have slaughtered 40,000 of his own heretic subjects before proceeding against the Persians

1514, Aug. 23. Selim completely defeated the Persians at **Chaldiran,** east of the Euphrates He took and plundered Tabriz, but was obliged to fall back because of the objections of the Janissaries to further advance

1515. Conquest of eastern Anatolia and Kurdistan by the Turks

1516. Selim embarked on a second campaign against Persia, but was diverted by the Mameluke Sultan of Egypt, Kansu al-Gauri, who was allied to Persia and appeared at Aleppo with an army.

1516, Aug. 24. BATTLE OF MARJ-DABIK, north of Aleppo Selim, with the use of artillery, completely defeated Kansu, who was killed. Aleppo and Damascus at once surrendered to the Turks. Selim, anxious to proceed against Persia, offered peace to the new sultan, Tuman Bey, on condition that he accept Turkish suzerainty. This was refused

1517, Jan. 22. The Turks took Cairo, and sacked it The **Sherif of Mecca** surrendered voluntarily The **Caliph Mutawakkil** was sent to Constantinople, but after Selim's death returned to Egypt (legend of his having transferred his authority as caliph to Selim). The important thing was that Selim secured control of the Holy Places in Arabia. Tuman Bey was executed, but Egypt left under the rule of the Mameluke Beys, under a Turkish governor-general. Legend of the Turks cutting the routes of oriental trade these had really been cut by the Portuguese, operating at the entrance of the Red Sea.

1520-1566. SULEIMAN I (*the Magnificent*), only son of Selim, a highly cultivated but proud and ambitious ruler, generally rated as the greatest of the sultans. In reality he left affairs largely to his famous viziers **Ibrahim Pasha,** son of a Greek of Parga, practically ruled the empire from 1523 to 1536 In 1524, after an attempt of the Turkish governor of Egypt to set himself up as sultan, Ibrahim completely reorganized the government of the country, with more effective control by the Turks

1521. Capture of Belgrade, after several assaults In the succeeding years the Turks raided regularly in Hungary and Austria, creating a panic throughout central Europe

1522. Capture of Rhodes, which had become the headquarters for Catalan and Maltese pirates who threatened Turkish communications with Egypt The Knights of St. John put up a valiant defense, but the help expected from the West did not materialize They thereupon capitulated In 1530 they were established at Malta by Charles V.

1526, Aug. 29-30. BATTLE OF MOHÁCS. Defeat of King Louis of Hungary and his 20,000 ill-disciplined knights and peasants. Louis was killed and the Turks advanced and took Ofen. Disputed succession in Hungary: John Zápolya elected in Transylvania, Ferdinand of Hapsburg at Pressburg After two years of civil war Zápolya was defeated He appealed to Suleiman.

1528. Second campaign in Hungary. Ofen retaken by the Turks

1529, Sept. FIRST SIEGE OF VIENNA. After several assaults the Turks withdrew (Oct 16), partly because of valiant resistance of the garrison, partly because of wretched weather and inability to bring up the heavy artillery But Suleiman rejected repeated offers of Ferdinand to pay tribute for Hungary in return for recognition.

1529. Khaireddin Pasha, famous Turkish admiral and corsair (originally a Greek of Mytilene in the service of the Bey of Tunis, 1512, entered Turkish service in 1516) took the Peñon of Algiers

1531. Turkish campaign in Hungary The Turks took Guns, after a valiant resistance Suleiman then retired, because of the threat from Persia

1533. Peace between **Suleiman** and **Ferdinand.** The latter retained that part of Hungary which he still held, Zápolya remained king of the rest, both paid tribute to the Turks No peace made with Charles V, so that the naval war in the Mediterranean (Khaireddin and Andrea Doria) continued Khaireddin evacuated thousands of Moors, expelled from Spain.

1534. Khaireddin drove out the Bey of Tunis and ravaged the coasts of Sicily and southern Italy

1534. War against Shah Thamasp of Persia, who had been negotiating with Charles V. The Turks marched to Tabriz, and conquered Baghdad and Mesopotamia

1535, June-July. Great expedition of **Charles V** to Tunis, the fleet commanded by Andrea Doria The town was taken after Khaireddin had been defeated off the coast Horrible sack of three days The Bey, Mulai Hassan, was reinstated

1536, Mar. Formal alliance between **Suleiman** and **Francis I** of France, against the Hapsburgs This had been under discussion since 1525 and had led to some measure of co-operation.

1537-1540. War with Venice, forced by the Turkish threat to close the Straits of Otranto. The Sultan and Khaireddin besieged Corfu, with French aid, but were obliged to give up the project.

1538. Holy League against the Turks (Charles V, the pope, and Venice) Abortive efforts of Charles V to buy off Khaireddin. After a defeat at sea (**battle of Prevesa**) the Venetians made peace

(1540), losing Nauplion, their last station in the Morea, and paying a large indemnity.

1538. Turkish naval expedition through the Red Sea to the northwest coast of India The entire east coast of the Red Sea (Yemen, Aden) was taken over.

1540. **Death of John Zápolya,** leaving an infant son as his successor, whom Suleiman recognized Invasion of Hungary by Ferdinand, who tried to make good his claim to the whole country

1541. Suleiman's campaign in Hungary. He marched to Buda and took over control during the minority of John Sigismund Zápolya. Direct Turkish administrative control established

1547. **Five years' truce** between Suleiman and Ferdinand, the Turks retained the larger part of Hungary and Ferdinand paid tribute for the small strip remaining to him.

1548. Second expedition against Persia. Tabriz again occupied.

1551-1562. Renewal of war with Ferdinand This was carried on in desultory fashion and consisted chiefly of sieges After Ferdinand's succession to the imperial throne peace was made, Zápolya receiving Transylvania, the Turks retaining Hungary proper, and Ferdinand paying tribute for the western section.

1552. The Persians took the offensive and captured Erzerum

1553. Suleiman proceeded against the Persians and ravaged the western part of the country Peace was made in 1555, Suleiman retaining his conquests in Mesopotamia

1554. Dragut, successor of Khaireddin (d. 1546), took Mehedia, a strong base on the Tunisian coast, from the Spaniards The conquest of the North African coast was completed in the following two years

1565. **Turkish siege of Malta,** the headquarters of the Spanish corsairs After taking one of the three main forts the Turks were obliged to withdraw

1566. Renewal of war in Hungary, the result of continued raids ordered by the Emperor Maximilian

1566, Sept. 5. Death of Suleiman, at the siege of Szigeth His last years had been embittered by family troubles. His wife, **Roxelana** (probably a Russian captive), and her son-in-law, the Grand Vizier **Rustem Pasha,** so poisoned his mind against his eldest son, Mustafa, that he had him strangled in 1553. There ensued a conflict between the sons of Roxelana, Selim and Bayazid. The latter took up arms in 1559, but was defeated at Konia He fled to Persia, where he and his sons were executed in return for a high money payment by Suleiman But Suleiman left the empire the greatest in Europe and the best organized, an easy match for the European powers, rent by dynastic and religious antagonisms.

1566-1574. **SELIM II** (*the Sot*), an intelligent but indolent ruler, much given to drink Divided counsels of **Mohammed Sokòlli** (grand vizier, 1560–1579), who favored close relations with Venice and continuance of the war against Spain (peace made with Maximilian in 1568), and the friend of Selim, **Don Joseph Nassi,** most prominent of the thousands of Spanish Jews who settled in Constantinople, Saloniki, Adrianople, and other towns of the empire after the expulsions from Spain and Italy. Nassi had come to Constantinople in 1553 and had financed Selim in the struggle with Bayazid In return Selim had induced Suleiman to grant Nassi the region about Lake Tiberias, where Nassi undertook to settle Jewish refugees from Italy In 1566 Selim made him Duke of Naxos and other Aegean islands Nassi was very hostile to France and Venice, for personal reasons.

1570. Nassi persuaded the Sultan to declare **war on Venice,** after the latter had refused to cede Cyprus, which Nassi may have intended to make a refuge for Jews Spain joined Venice in the war, but the two allies were unable to co-operate successfully and their fleets delayed the relief of Cyprus until too late.

1571, May 20 **Pope Pius V** finally succeeded in organizing a **Holy League** against the Turks A great armada, under **Don John of Austria,** assembled at Messina

Aug. 3. The Turks took Famagusta, after a siege of eleven months and six assaults

Oct. 7. BATTLE OF LEPANTO, between the allied fleets (208 galleys, including 6 immense galleasses) and the Turks (230 galleys) under supreme command of **Ali Pasha.** After a ferocious fight of three hours, 80 Turkish galleys were sunk and 130 captured, 40 escaped from the wing Greatest naval battle since Actium. Tremendous joy throughout Europe But the advantages of the victory were lost through continued dissension between the Spaniards and the Venetians, the former insisting on the reconquest of North Africa, the latter desiring to reconquer Cyprus

The Turks rebuilt their fleet with astounding rapidity, and Don John refused to attack it in the Adriatic in 1572

1573. **Don John** took Tunis, which had been captured by the Turks in 1569

Mar. The Venetians deserted the Spaniards and made peace, abandoning Cyprus and paying an indemnity of 300,000 ducats.

1574. The Turks drove the Spaniards out of Tunis again Despite the Lepanto disaster, the Turks continued to ravage the coasts of the western Mediterranean during the rest of the century

1574-1595. MURAD III.

1581. **Peace between Spain and the Turks** (definitive 1585) based on the *status quo*

1585. Beginning of the phenomenal **decline of the empire**, due to the degeneracy of the sultans, the abandonment of the government to viziers (mostly favorites), the growth of corruption and harem influence, the emergence of governing cliques (Jews, Greeks, etc) and the inevitable decline of the military organization, especially the Janissary corps, to which Turks were gradually admitted As the empire had advanced to the frontier of strong European states, conquests became more difficult and military grants fewer The soldiers had to be kept quiet with presents and favors Before long the Janissaries became a veritable praetorian guard, making and unmaking sultans, most of whom were mere puppets in their hands The period was marked by rising taxation in the empire and general decline in the treasury. On the other hand, the Dutch, English, and French began to develop an extensive trade in the Levant

1590. Peace between the Turks and Persia, after a long and desultory war which had begun in 1577 The Turks acquired Georgia, Azerbaijan, and Shirwan, thus extending their frontiers to the Caucasus and Caspian

1593-1606. War between Austria and the Turks, in which **Sigismund Bathory**, Prince of Transylvania, took the side of the emperor

1596. **Turkish victory at Keresztes** (near Erlau in northern Hungary). The campaigning, however, remained desultory, due to the preoccupation of the emperor with Transylvania, which he took successively from Bathory and from Michael the Brave of Moldavia The Turks thereupon supported **Stephen Bocskay** and helped him drive out the Austrians (1605). But the Turks, in turn, were diverted by troubles with Persia.

1602-1618. War with the Persians (**Abbas the Great**), who had completely reorganized their forces (with the help of **Sir Anthony** and **Sir Robert Shirley**; mission of Sir Anthony to Europe to secure co-operation).

1603. Abbas retook Tabriz, and then Erivan, Shirwan, and Kars After a great victory at Lake Urmia, Abbas took Baghdad, Mosul, and Diarbekr. Peace was made in 1612, but the war was renewed in 1616 By the **Treaty of 1618** the Turks abandoned Azerbaijan and Georgia

1606. **Treaty of Zsitva-Torok** (first peace treaty signed by the Turks outside Constantinople) between the Turks and Austrians The Austrians abandoned Transylvania to Bocskay, but were recognized by the Turks as equals and ceased paying tribute for their part of Hungary.

1623-1640. MURAD IV, a boy of fourteen, who found the empire wracked by revolts and at the mercy of insubordinate Janissaries By savage ruthlessness Murad asserted his authority

1625. Murad's efforts to retake Baghdad were foiled by new uprisings, which he again suppressed with great ferocity

1630. Murad took Hamadan from the Persians

1635. The Turks reconquered Erivan and Tabriz

1638. Murad retook Baghdad In the peace the Persians retained Erivan, and the Turks Baghdad

1638. Murad abolished the tribute in Christian children, reorganized the system of military fiefs, reduced the Janissary corps and began the organization of a new military system This first effort at reform was ended with his death in 1640.

1645-1664. LONG WAR WITH VENICE, occasioned by Turkish designs on Candia (Crete). The Venetians showed themselves far stronger than the Turks and sent their fleets into the Straits. The Janissaries thereupon revolted, deposed **Ibrahim I** (1640–1648) and put on the throne

1648-1687. MOHAMMED IV, a boy of ten. There followed another period of anarchy, brought to an end in 1656 by a great Venetian victory off the Dardanelles

1656. **Mohammed Kiuprili**, made grand vizier He was a simple Albanian pasha, noted for his energy and firmness.

(*Cont. p.* 482.)

B. EUROPE AND THE NEAR EAST, 1648-1789

1. ENGLAND, SCOTLAND, AND IRELAND

1649-1660. THE COMMONWEALTH, a republican form of government Power in the army and its leader **Cromwell.** Theoretically legislative power still in the *Rump* (some 50 Independent members of the Long Parliament), executive power in a council of state of 41 (3 judges, 3 officers of the army, 5 peers, 30 members of the Commons) Title and office of king abolished, as was the House of Lords

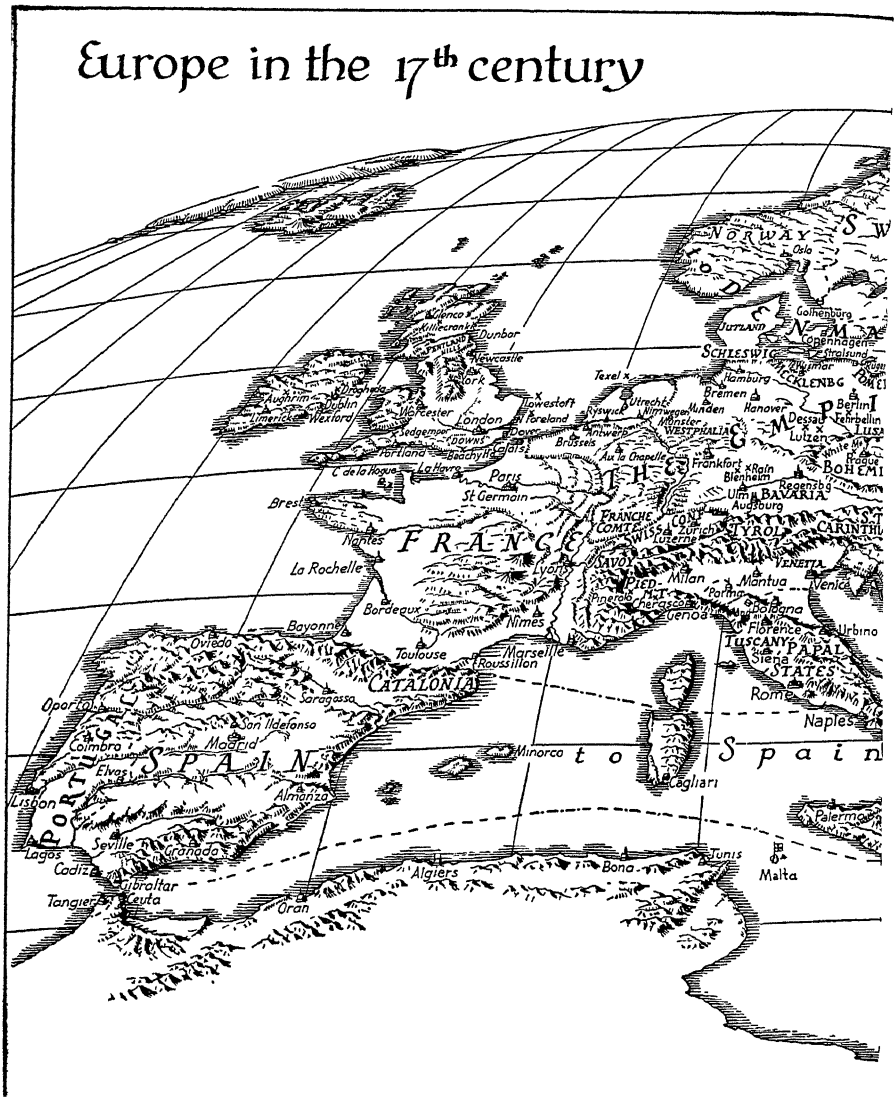
1649, Feb. 5. The Scotch proclaimed **Charles II** in Edinburgh and the Irish rose in his favor under Ormond Cromwell went to Ireland himself and quickly suppressed the rebellion at the **storming of Drogheda** (Sept 12) and of **Wexford.** Massacres of both garrisons. Cromwell returned to London (May) leaving Ireton to complete his work By 1652 the Cromwellian settlement had been achieved. Catholic landholders had been dispossessed in favor of Protestants, many Catholics had been killed The Irish question took on a new bitterness

1650. **Montrose** came again to Scotland, was beaten at **Corbiesdale** (April 27), captured and executed at Edinburgh (May 21)

June 24. **Charles II** landed in Scotland, took the covenant, and was proclaimed king At the **battle of Dunbar** (Sept 3) the Scotch under Leslie were totally defeated by Cromwell Charles II, however, was crowned at Scone and marched on into England while Cromwell took Perth (Aug 2, 1651) Cromwell then turned and pursued the king, completely defeated the royal army at the **battle of Worcester** (Sept 3) Charles in disguise escaped to France, after romantic adventures

1651, Oct. 9. First Navigation Act passed forbidding the importation of goods into England except in English vessels or in vessels of the country producing the goods This typical measure of mercantile economy helped the British merchant marine to gain supremacy over the Dutch.

1652, July 8. War with the Dutch broke out because of this act It was almost wholly naval. English commanders, Blake, Monk, Dutch, Van Tromp, De Ruyter. The English won off the **Downs** (May, before the declaration of war); defeated Van Tromp off **Portland** (Feb 18, 1653) and off the **North Foreland** (June 2–3) Monk won an important victory of the **Texel** (July 31) where Van Tromp died. **Peace with the Dutch** (April 5, 1654)



Trouble had long been brewing between the *Rump* and the army Negotiations for the return of confiscated royalist estates led to charges of bribery of members After an **Act of Indemnity and Oblivion** (Feb 1652) and an **Act of Settlement for Ireland** (Aug.) had been passed,

1653, Apr. 20. Cromwell turned out the *Rump* and dissolved the council of state He set up a new council and a nominated parliament of 140 members, called **Barebone's** or the **Little Parliament** (July 4). The Cromwellians in Parliament resigned their powers to Cromwell (Dec 12) who set up the **Protectorate** (Dec. 16).

1653, Dec. 16–1658, Sept. 3. CROMWELL, LORD PROTECTOR OF THE COMMONWEALTH OF ENGLAND, SCOTLAND, AND IRELAND. The *Instrument of Government*, a written constitution The executive (lord protector) had a co-operative council of 21, there was a standing army of 30,000, Parliament was to be triennial, and composed of 460 members, once summoned, it could not be dissolved within five months The protector and council could issue ordinances between sessions, but Parliament alone could grant supplies and levy taxes

1654, Sept. 3. The new Parliament quarreled with the protector, who ordered an exclusion of members (Sept 12) After voting that the office of protector should be elective instead of hereditary, the Parliament was dissolved (Jan. 22, 1655)

1655, Mar.-May. The rising of Penruddock at Salisbury was suppressed and Penruddock executed England was divided into 12 military districts, each with a force supported by a tax of 10% on royalist estates Anglican clergy were forbidden

to teach or preach Catholic priests ordered out of the kingdom Censorship of the press. Rigid "puritanical" rule in arts and morals

Oct. Pacification of Pinerolo, with France the Duke of Savoy stopped the persecution of the Vaudois and Charles II was to be expelled from France

1656-1659. War with Spain. An English raid under Penn and Venables which had captured Jamaica in the West Indies (May), brought on the war. Capture of Spanish treasure ships off **Cadiz** (Sept. 9, 1656) Victory of Blake off **Santa Cruz** (April 20, 1657)

1656, Sept. 17–1658, Feb. 4. Cromwell's third Parliament witnessed another exclusion of members, and the **Humble Petition and Advice** (March–May, 1657) altering the constitution Establishment of a second house, reduction of the power of the council of the state, the protector deprived of the power of excluding members, fixed supply for army and navy, toleration for all trinitarian Christians except Episcopalians and Catholics Cromwell rejected the title of king (May 8)

1658. Dunkirk besieged by the English and French. A Spanish relieving force was beaten in the battle of **Dunes** (June 4) Dunkirk surrendered to the English, who retained it at the **Peace of the Pyrenees** (p 440)

1658, Sept. 3. Death of Oliver Cromwell.

1658, Sept 3–1659, May 25. Richard Cromwell, Oliver's son, lord protector. A new Parliament met (Jan. 27, 1659) and was soon involved in a dispute with the army, which induced Richard to dissolve Parliament (Apr 22). The Rump Parliament came together under Lenthall as speaker (May 7) and Richard was induced to resign as lord protector After the futile insurrection of Booth (Aug) the army, under Lambert, expelled the Rump and appointed a military committee of safety (Oct) There was a reaction against military *coups d'état*, and the Rump was restored (Dec 26)

1660, Feb. 3. General Monk led his army from Scotland to London, assumed control as captain-general, and reestablished the Long Parliament with the still living members excluded by Pride's Purge restored (Feb. 21). Final dissolution (Mar. 16)

1660, Apr. 14. Charles issued his **Declaration of Breda,** proclaiming amnesty to all not especially excepted by Parliament, promising liberty of conscience and the confirmation of confiscated estates in the hands of the actual holders A **Convention Parliament,** 556 members chosen without restrictions (Apr), returned a favorable answer to Charles (May 1) and proclaimed him king (May 8), on May 29 he entered London

1660-1685. CHARLES II. The king's brother, James, Duke of York, appointed lord high admiral and warden of the Cinque Ports, Monk (later Duke of Albemarle), captain-general, Sir Edward Hyde (later Earl of Clarendon), chancellor and prime minister Abolition of the rights of knight service, worship, and purveyance in consideration of a yearly income for the king of £1,200,000 Restoration of the bishops to their sees and to the House of Lords Acts of indemnity for all political offenses committed between Jan 1, 1637, and June 24, 1660 (the regicide judges were excepted from this act) All acts of the Long Parliament to which Charles I had assented were declared in force This meant that the Restoration was by no means a restoration of "divine right" monarchy, but rather a restoration of the moderate parliamentarian régime aimed at by Pym and Hampden The army was disbanded (Oct 2) except some 5000 men The Cromwellian settlement of Ireland was reaffirmed

1660, Dec. 29. Dissolution of the Convention Parliament. Rising of Fifth Monarchy men in London put down (Jan 1661). Bodies of Cromwell, Ireton, Bradshaw disinterred and scattered Royalist Parliament in Scotland **abolished the Covenant** and repealed all preceding parliamentary enactments for the last twenty-eight years.

1661, May 8–1679, Jan. 24. First Parliament of Charles II. The **Cavalier Parliament,** overwhelmingly royalist Social reaction against puritanism, revival of games, dancing, the theater. Parliament enacted a series of repressive measures since known as the **Clarendon Code** (Clarendon himself was opposed to many of these measures) They were (1) The **Corporation Act** (Nov 20, 1661) by which all magistrates were obliged to take the sacrament according to the Church of England, to abjure the covenant, and take an oath declaring it illegal to bear arms against the king (2) The **Act of Uniformity** (Aug 24, 1662) which required clergymen, college fellows, and schoolmasters to accept everything in the Book of Common Prayer (those who refused were the *Nonconformists*). (3) The **Conventicle Act** (May, 1664) which forbade nonconformist (dissenting) religious meetings of more than five persons, except in a private household. (4) The **Five-Mile Act** (Oct 1665) which required all who had

not subscribed to the Act of Uniformity to take an oath of non-resistance, swearing never to attempt any change in Church or State, and which prohibited all who refused to do this from coming within five miles of any incorporated town, or of any place where they had been ministers. The code, and especially this last act, was impossible of strict enforcement

1662, May 20 **Charles married Catherine of Braganza,** daughter of John IV of Portugal. Dunkirk was sold to France for £400,000.

1665-1667. **War with Holland,** marked by the defeat of the Dutch by the English fleet off **Lowestoft** (June 3, 1665). France entered the war against England (Jan. 1666) Albemarle beaten by De Ruyter and De Witt off the North Foreland Defeat of the Dutch in another naval fight (July 25) The Dutch rallied, burnt Sheerness, entered the Medway (June, 1667), low point of English naval power

1665-1666. Two great domestic disasters: the **great plague** in London (April, 1665), the **great London fire** (Sept. 2–9, 1666) burning 450 acres St. Paul's cathedral rebuilt by Wren.

1666. **The Scotch Covenanters revolted** against restrictions laid on them by the triumphant Episcopalians, and were crushed by Dalziel in the **battle of Pentland Hills** (Nov 28)

1667, July 21. **Treaties of Breda** between England, Holland, France, Denmark England received from France Antigua, Montserrat, St Kitts, France received Acadia, England and Holland adopted the *status quo* of May 21, 1667, England retaining New Amsterdam and Holland Surinam The Navigation Acts were modified to permit the bringing to England in Dutch vessels of goods brought down the Rhine

1667. **Clarendon,** who had had to bear the burden of unpopularity for much of the work of the Cavalier Parliament, was forced to resign, and was impeached and exiled The chief officers of state now began to be looked on as a distinct (if perhaps unconstitutional) council, the nucleus of the future cabinet system. This was emphasized by the accession to power of the so-called **Cabal** (Clifford, Arlington, Buckingham, Ashley, Lauderdale). There was no cabinet solidarity, and no clear party system The court and the country factions did, however, foreshadow the later **Tories** and **Whigs.** The court (Tory) party were supporters of the royal prerogative, and in a sense heirs of the Cavaliers; the country (Whig) party, supporters of the power of Parliament and heirs of the majority group in the Long Parliament, but *not* democrats or radicals Both *Whig* and *Tory* were originally terms of reproach, the first Scotch, the second Irish in origin

1668, Jan. 13 **The triple alliance** between England, Holland, and Sweden negotiated by Sir William Temple and John De Witt as a check on Louis XIV. Charles II went behind Parliament and signed with Louis the **Treaty of Dover** (May, 1670) in secret provisions of which he agreed that he and his brother James would openly join the Church of Rome as soon as expedient, and that he would support Louis in his wars with Spain and Holland. Louis promised Charles £200,000 a year while the war lasted and the assistance of 6000 men in case of an insurrection. James, Duke of York, at once professed his belief in Roman Catholicism

1672, Mar. Charles issued a **Declaration of Indulgence,** which aimed to free both nonconformist Protestants and Catholics from restrictions Parliament, insisting that the royal power of dispensing from statutory obligations could be applied only to particular, never to generalized, cases, forced him to withdraw the indulgence (1673)

1672, Mar. 17–1674, Feb. 9. **WAR WITH HOLLAND,** pursuant to the policy of the treaty of Dover English naval victory at **Southwold Bay** (May 28, 1672). **William of Orange,** Dutch stadholder. Marriage of the Duke of York with the Catholic Maria d'Este of Modena (Nov 21, 1673). The war was concluded by the **Treaty of Westminster** (Feb. 9, 1674).

1673. **The Test Act,** an attempt to salvage something from the Clarendon Code, and to attack the Duke of York and his supporters. All persons holding office were compelled to take oaths of allegiance and of supremacy, to abjure transubstantiation, and to take the sacrament of the Church of England This act was not repealed until 1828, but it was nullified after 1689 by the typically English practice of passing bills of indemnity to legalize the acts of magistrates who had not conformed — i e taken communion in the Established Church — while in office Such officials were commonly dissenters rather than Roman Catholics

1673. Shift in the ministry; the Duke of York, Shaftesbury, Clifford resigned, being superseded by Prince Rupert, Sir Thomas Osborne (later Earl of Danby). Sir Heneage Finch (later Earl of Nottingham). Buckingham out of office.

1677, Nov. 4. **Marriage of Mary,** daughter of the Duke of York, with **William of Orange** (later William III).

1678, Sept. The Popish Plot. Titus Oates began the scare by alleging that Don John of Austria and Père la Chaise had plotted to murder Charles and establish Roman Catholicism in England In the ensuing wave of frenzy against the "papists," five Catholic lords (Powys, Bellassis, Stafford, Petre, Arundel) were sent to the Tower Coleman, confessor of the Duchess of York, convicted and executed Passage of the **Papists' Disabling Act**, excluding Roman Catholics from Parliament (repealed 1829)

1679, Jan. 24 Dissolution of the Cavalier Parliament Danby, who had been impeached (Dec 1678) on a charge of criminal correspondence with France, was dismissed from the office of lord high treasurer The Duke of York left the kingdom

1679, Mar. 6–1680, May 27. Third Parliament of Charles II. Danby's impeachment resumed, but not carried, he remained in the Tower until 1685 A new cabinet council composed of Sir William Temple, Viscount Halifax, the Earl of Essex, the Earl of Sunderland, and Shaftesbury (afterward in opposition). Introduction of a bill to prevent the Duke of York, as a Catholic, succeeding to the throne. Charles fought various exclusion bills, which were backed by Shaftesbury, until he had secured his brother's succession

1679, May. The Habeas Corpus Act. Judges were obliged on application to issue to any prisoner a writ of *habeas corpus*, directing the jailer to produce the body of the prisoner, and show cause for his imprisonment, prisoners should be indicted in the first term of their commitment, and tried not later than the second, no person once set free by order of the court could be again imprisoned for the same offense

1679. The Covenanters again rose in Scotland against the repressive measures of Lauderdale. Murder of Archbishop Sharpe (May 3). Defeat of Claverhouse by the Covenanters under Balfour at **Drumclog** (June 1) Defeat of the Covenanters by the Duke of Monmouth at **Bothwell Brigg** (June 22) Covenanters, Conventiclers, Cameronians — all shades of Presbyterians repressed, but not successfully. Passage of a **Test Act** against the Presbyterians (1681) caused some eighty Episcopalian bishops to resign Trial and condemnation of Argyle (Dec 1681), who fled the kingdom.

1679, Oct. 7. Charles, without advice of the cabinet, prorogued his third Parliament before it had done any business. Temple, Essex, and Halifax resigned, and were succeeded by the Earl of Godolphin and Laurence Hyde, Earl of Rochester. Another alleged papist conspiracy (**meal-tub plot**) disclosed by Dangerfield Petition that Parliament be called, whence **petitioners** (country party, Whigs) and those who expressed their abhorrence at this interference with the prerogative, **abhorrers** (court party, Tories)

1680, Oct. 21–1681, Jan. 18. Fourth Parliament of Charles II. The exclusion bill passed the Commons, but lost in the Lords (Halifax)

1681, Mar. 21-28. Fifth Parliament called at Oxford, and immediately dissolved when the exclusion bill was introduced

1683, June. Judgment given against the City of London on a *quo warranto*, forfeiture of the charter, which was ransomed The process repeated for other corporations Confederacy of leaders of the country party against the policy of Charles, which seemed to them a repetition of earlier Stuart attempts to extend the power of the crown (Essex, Russell, Grey, Howard, Sidney, Hampden, Monmouth) This was supplemented by, and at the same time confused with, the **Rye House plot,** a plan concerted by quite different persons to assassinate the king Both plots were revealed Essex committed suicide, Russell and Sidney were executed, becoming republican martyrs for later generations, Monmouth (natural son of Charles and Lucy Walters) was pardoned, and retired to Holland The Duke of York was reinstated in office (Sept) and Oates, now known to be a liar, was fined

1685, Feb 6. Charles died knowing that his brother would succeed and that the Whigs were at the moment worsted

1685-1688. JAMES II, a Roman Catholic, whose tactless attempt to secure freedom of worship for his co-religionists united against him Whigs and Tories in defense of the Anglican Church (*not*, as far as the Tories were concerned, in defense of parliamentary supremacy).

1685, May 19–1687, July 2. Parliament of James II. Halifax, president of the council, Sunderland, secretary of state, Godolphin, chamberlain, Clarendon, lord privy seal, Rochester, treasurer. Trial and condemnation of Baxter, a dissenting clergyman Danby and the five Catholic lords were liberated Oates and Dangerfield were tried, condemned, and sentenced to whipping, from which Dangerfield died (May, 1685).

1685. Rebellion of Monmouth and Argyle. Argyle landed in Scotland, but could not arouse the Covenanters. He was captured and executed (June 30). Monmouth landed in Dorsetshire and proclaimed himself king, but his motley followers were easily beaten at the **battle of Sedgemoor** (July 6) — the last formal warfare in England until German naval attacks and Zeppelin raids in 1914–1918 **Monmouth was executed,** and **Jeffreys** sent on a circuit in the west to try the rebels (*the Bloody Assizes*). Jeffreys became lord chancellor, Halifax was dismissed; Sunderland, converted to Catholicism, took his place

1686. James set out to test the **anti-papal laws.** By dispensation, he appointed a Catholic, Sir Edward Hales, to office. In a test suit, decision was rendered in favor of the king by judges he had appointed. Compton, Bishop of London, refused to remove the rector of St. Giles', who had disobeyed a royal order against violent doctrinal sermons. He was tried before a new court of ecclesiastical commission (July) and suspended The fellows of Magdalen College, Oxford, having refused to accept Farmer, a Catholic, whom James had appointed their president, were expelled from the college (1687) These and other specific cases were rapidly rousing opinion against the king

1687. James generalized his action, he issued the first **Declaration of Liberty of Conscience,** granted liberty to all denominations in England and Scotland (Apr). A second declaration of liberty of conscience (Apr 1688) was ordered to be read in all churches. Sancroft, Archbishop of Canterbury, and six other bishops were committed to the Tower for having petitioned the king not to insist on their reading what they held to be an illegal order.

June 10. Birth of a son to James, said by Whigs at the time to have been introduced in a warming-pan. The knowledge that James' policies might be continued by a son to be brought up as Catholic turned against him many Tories hitherto loyal.

June 29, 30. Trial of the bishops for seditious libel. The bishops were acquitted. Great popular enthusiasm An invitation was dispatched to William of Orange to save England from Catholic tyranny: it was signed by the *seven eminent persons* (Devonshire, Shrewsbury, Danby, Compton, Henry Sidney, Lord Lumley, Admiral Russell).

Sept. 30. Declaration of William accepting the invitation. William's real purpose in accepting was to bring England into the struggle against Louis XIV, begun by the **League of Augsburg.** His success reversed the policy of Charles II and James II, which had been broadly pro-French, and re-established English foreign policy along lines which were later considered "traditional" — opposition to any overwhelmingly powerful continental state, especially if that power threatened the Low Countries.

James, frightened by the declaration, dismissed Sunderland and tried to retrace his steps. **William** left Helvoetsluys with 14,000 men (Oct. 19), but was driven back by a gale

Nov. 5. William succeeded in landing at Torbay. Risings in various sections of England. **Grafton** and **Churchill** (later **Duke of Marlborough**) went over to William (Nov 22) James issued writs for a new Parliament and endeavored to treat with William The queen and the baby prince were sent to France (Dec. 10) and James, throwing the great seal into the Thames, fled on Dec 11 **Interregnum,** rioting in London, seizure of Jeffreys.

Dec. 12. The peers set up a provisional government in London. James, stopped at Sheerness, was brought back to London, but succeeded in escaping to France (Dec 22), after William had entered London (Dec 19). Louis XIV set up the exiled Stuarts at the Court of St Germain.

1689, Jan. 22–1690, Jan. 27. Convention Parliament, summoned by advice of the peers On Jan. 28 the Commons declared: "That king James II, having endeavored to subvert the constitution of the kingdom by breaking the original contract between king and people, and by the advice of Jesuits and other wicked persons having violated the fundamental laws, and having withdrawn himself out of the kingdom, has abdicated the government, and that the throne is vacant." Also: "That it hath been found by experience to be inconsistent with the safety and welfare of this Protestant kingdom to be governed by a popish prince."[2] The Lords objected to the use of the word "abdicated," and to the declaration of the "vacancy" of the throne, but an agreement being reached in a conference of the two houses, the crown was offered to Mary and the regency to William; this being refused, Parliament offered the crown to William and Mary jointly.

1689, Feb. 13. The offer was accompanied by the **Declaration of Rights,** asserting the "true, ancient, and indubitable rights of the people of this realm": (1) That the making or suspending law without consent of Parliament is illegal; (2) that the

exercise of the dispensing power is illegal, (3) that the ecclesiastical commission court and other such like courts are illegal, (4) that levying money without consent of Parliament is illegal, (5) that it is lawful to petition the sovereign, (6) that the maintenance of a standing army without the consent of Parliament is illegal, (7) that it is lawful to keep arms, (8) that elections of members of Parliament must be free, (9) that there must be freedom of debate in Parliament; (10) that excessive bail should never be demanded, (11) that juries should be empaneled and returned in every trial, (12) that grants of estates as forfeited before conviction of the offender are illegal; (13) that Parliament should be held frequently. William and Mary were declared King and Queen of England for life, the chief administration resting with William; the crown was next settled on William's children by Mary, in default of such issue, on the Princess Anne of Denmark and her children; and in default of these, on the children of William by any other wife. The crown was accepted by William and Mary, who were on the same day proclaimed King and Queen of Great Britain, Ireland, and France

1689-1702. WILLIAM III AND MARY (until 1694). Privy councillors: Earl of Danby (Marquis of Carmarthen), president; Nottingham, Shrewsbury, secretaries of state; Marquis of Halifax, privy seal; Schomberg (Duke of Schomberg), master-general of ordnance, Bentinck (Earl of Portland), privy purse.

1689, Feb. 22. The Convention Parliament was transformed by its own act into a regular Parliament. **Oaths of allegiance and supremacy** were taken by the houses, the clergy, etc. Six bishops and about 400 clergymen refused them, and were deprived of their benefices (1691) These non-jurors ordained their own bishops, and maintained their own private Church of England until the 19th century.

Mar. 14. James landed in Ireland with a few followers, was joined by **Tyrconnel,** and entered Dublin (Mar. 24) amid popular enthusiasm. Irish Parliament (May 7). James besieged the Protestant town of Londonderry (April 20–July 30) which was finally relieved by Kirke.

The first **Mutiny Act,** to punish defection in the army, made necessary by the **Declaration of Rights** (Mar), passed henceforth annually. The Protestant dissenters who had disdained James' gift of freedom were rewarded by the **Toleration Act** (May 24) which exempted dissenters who had taken the oaths of allegiance and supremacy from penalties for non-attendance at the services of the Church of England

1689, May 7. WAR BROKE OUT WITH FRANCE. In Scotland Claverhouse (Viscount Dundee) raised his standard for James among the Highlanders, after episcopacy had been abolished by law. At the **battle of Killiecrankie** (July 17) he defeated the Whig general, Mackay, but fell on the field. The revolt gradually petered out

1689-1690. A series of measures made the constitutional adjustments necessitated by the **Glorious Revolution.** The system of requiring estimate and accounts for supplies, and of specific appropriations —i.e. the nucleus of modern budgetary systems — now became fixed The **Bill of Rights** (Dec. 16, 1689) was a parliamentary enactment of the **Declaration of Rights,** repeating the provisions of that paper, settling the succession, and enacting that no Roman Catholic could wear the crown William's **second Parliament** (Mar 20, 1690–May 3, 1695) by an act of recognition further legalized the already legal acts of the Convention Parliament, settled William's civil list (at a smaller figure than James' or Charles') and by the **Act of Grace** (May 20, 1690) gave indemnity to all supporters of James II except those in treasonable correspondence with him. Shrewsbury and Halifax resigned.

1690. William went to Ireland, and defeated James at the crucial **battle of the Boyne** (July 1) James fled to France Dublin and Waterford fell quickly Limerick resisted successfully under Sarsfield (Aug.). In the open field Ginkel defeated Sarsfield and the French St. Ruth at the **battle of Aughrim** (July 12, 1691). Limerick, besieged a second time, surrendered (Oct. 3) under the conditions known as the **pacification of Limerick:** Free transportation to France of all Irish officers and soldiers so desiring. (The Irish Brigade in the French armies had a long and distinguished history.) All Irish Catholics to have the religious liberty they had had under Charles II, carry arms, exercise their professions, and receive full amnesty. The English Parliament confirmed the treaty, but the Irish Parliament, consisting wholly of Protestants, refused to ratify it (1695) and enacted severe anti-Catholic legislation contrary to the pacification terms.

1690, June 30. Defeat of the English fleet by the French at the **battle of Beachy Head.** Lord Torrington, the English admiral, was tried by court-martial and acquitted, but dismissed the service. This defeat was redeemed by the **English naval**

victory under Russell over the French under Tourville at **Cap de la Hogue** (May 19, 1692).

1692, Feb. 13. Massacre of Glencoe. The Highlanders, incompletely pacified after Dundee's rising, had been given until Dec 31, 1691 to take oath to William. This had been done by all the chieftains save MacIan of the MacDonalds of Glencoe. He took the oath on Jan 6, 1692, but this fact was suppressed by William's agent, the Master of Stair. A company of soldiers commanded by a Campbell (hereditary foes of the MacDonalds), quartered peacefully at Glencoe, turned suddenly on the Highlanders, killed MacIan and some forty others. The incident was of great political use to William's enemies

William's land campaigns were unsuccessful; he was defeated by the French at **Steinkirk** (July 24, 1692) and at **Neerwinden** (July 19, 1693) (p. 444). At home he was obliged to turn for support to the **Whig Junto** — Somers, lord keeper, Russel, Shrewsbury, Thos. Wharton, secretaries of state; Montague, chancellor of the exchequer. **Marlborough** had been detected in correspondence with James (Jan 1692) and disgraced. Sunderland returned to Parliament.

1693, Jan. Beginning of the national debt. £1,000,000 borrowed on annuities at 10%.

1694, July 27. Charter of the Governor and Company of the Bank of England, a company of merchants who, in return for certain privileges, lent the government £1,200,000 Bill for preventing officers of the crown from sitting in the House of Commons (**Place Bill**). Unsuccessful **attack on Brest.** (Treachery of Marlborough?)

1694, Dec. 22. The Triennial Bill became law, **Queen Mary died** (Dec. 28), the **Licensing Act** ran out, and was not renewed for the next year, thus abolishing censorship of the press

1695, Nov. 22–1698, July 5. Third Parliament of William III (first triennial Parliament) Whigs in majority. Recoinage Act. Isaac Newton, master of the mint **Trials for Treason Act** (1696); two witnesses required to prove an act of treason. Plot to assassinate William discovered, and conspirators executed, one of them, Fenwick, was the last person to be condemned by a bill of attainder and executed (1696). Formation of a loyal association. Suspension of the *Habeas Corpus Act.*

1697, Sept. 20. TREATY OF RYSWICK (p 444).

1698, Dec. 6–1700, Apr. 11. Fourth Parliament of William III. London Stock Exchange, the first true stock exchange, formed (1698) **Disbanding Act,** reducing the army to 7000 men (Feb 1699). Act for the resumption of forfeited estates, aimed at William's Dutch favorites. Further anti-papal measures· Catholic teachers and priests liable to life imprisonment (repealed 1778).

1701, Feb. 6–June 24. Fifth Parliament of William III. Tories in a majority Harley (later Earl of Oxford) speaker. Portland, Somers, Oxford (Russell) Halifax impeached (Apr -June)

June 12. ACT OF SETTLEMENT. The crown was settled on **Sophia,** Princess of Hanover, granddaughter of James I, and her issue. The sovereigns of Great Britain were to be Protestant and not leave the kingdom without consent of Parliament; the country should not be involved in war for the defense of the foreign possessions of the sovereigns, no foreigner should receive a grant from the crown, or hold office, civil or military; ministers should be responsible for the acts of their sovereigns; judges should hold office for life unless guilty of misconduct

Sept. 16. Death of James II. His son **James Edward** (the **Old Pretender**) proclaimed King of Great Britain and Ireland by Louis XIV.

1701, Dec. 30–1702, July 2. Sixth Parliament of William III. Attainder of James Edward, "pretended" Prince of Wales. Oath of abjuration reimposed.

1702, Mar. 8. Death of William III.

1702-1714. ANNE, second daughter of James II, wife of Prince George of Denmark. In the first part of her reign Anne was under the influence of her favorite, **Sarah, Duchess of Marlborough,** and her husband, the duke.

1702, May 4. War declared upon France by the Grand Alliance; for this **War of the Spanish Succession,** see p. 445. **Marlborough** was captain-general of the land forces. Godolphin, lord high treasurer; Nottingham, secretary of state Halifax and Somers not in the privy council

1702. The campaign: **capture of Venloo** and **Liége** by the allies, loss of the lower Rhine to France. Sir George Rooke failed to take Cadiz, but seized part of the Spanish treasure fleet at Vigo Bay (Oct).

1702, Oct. 20–1705, Mar. 14. First Parliament of Anne. Harley, speaker.

1703, Nov. Establishment of Queen Anne's Bounty, a grant of the first fruits and tithes which Henry VIII had confiscated for the crown, in trust for increasing the incomes of small benefices

Dec. 27. Treaty between England and Portugal, known from its English negotiation as the **Methuen Treaty.** England admitted Portuguese wines at duties one-third less than those paid by French wines, while Portugal agreed to import all her woolens from England.

1703-1706. Progress of the war: Marlborough took Bonn, Huy, Limburg, and Guelders (1703). Sir Geo. Rooke took **Gibraltar** (July 24, 1704). Marlborough's great victory at **Blenheim** (Aug 13, 1704) Capture of Barcelona by Lord Peterborough (Oct. 4, 1705). **Battle of Ramillies** (May 23, 1706) won by Marlborough.

1707, May 1 UNION OF ENGLAND AND SCOTLAND under the name of **Great Britain.** This measure, which was made necessary by the omission of Scotland from the Act of Settlement, provided (1) that Sophia, Princess of Hanover, and her Protestant heirs should succeed to the crown of the united kingdom, (2) there should be one Parliament, to which Scotland should send sixteen elective peers and forty-five members of the Commons. No more peers of Scotland to be created. Scotch law and legal administration to be unchanged; the Episcopal Church in England and Presbyterian in Scotland to be unchanged **Adoption of the Union Jack** (Crosses of St. George and St. Andrew) as the national flag of Great Britain

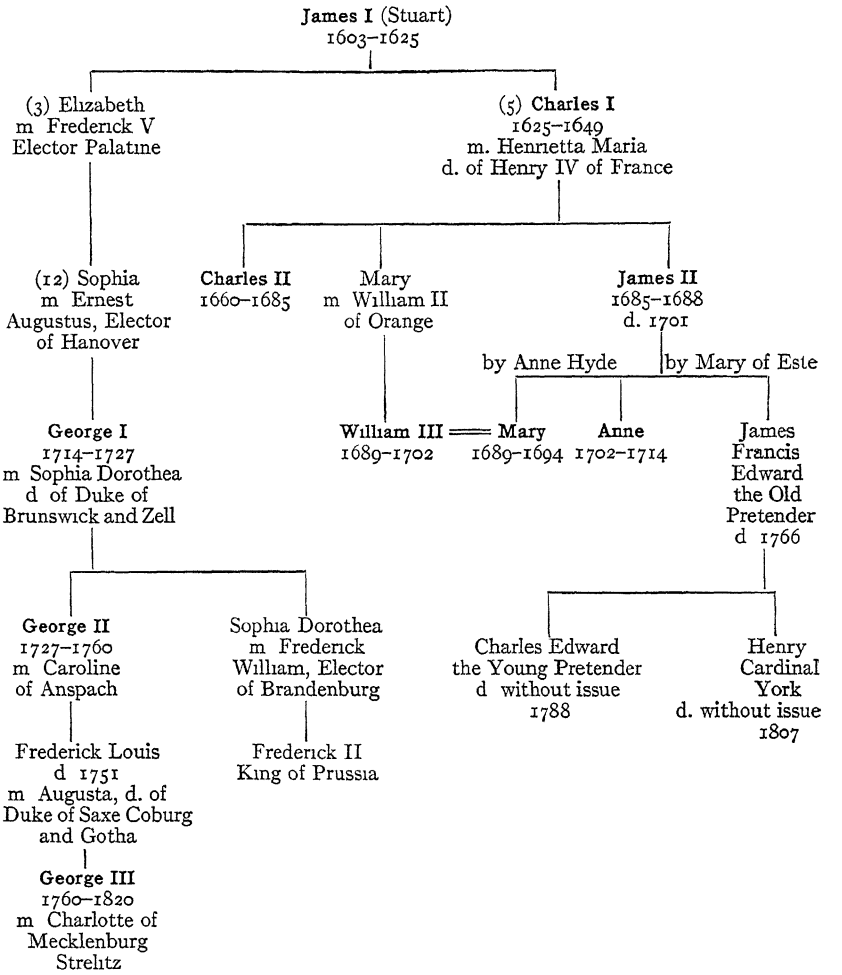
Oct. 23. First Parliament of Great Britain.[1] The influence of Marlborough and his wife had been gradually weakened by Harley and by the influence of the queen's new favorite, Abigail Hill, now Mrs Masham. Marlborough, however, was still so strong that a hint at resignation secured the dismissal of Harley and St John from the cabinet, and the substitution of Boyle and Robert Walpole (secretary-at-war) Last royal veto

1708, Mar. James Edward landed in Scotland; the French fleet sent to help him was beaten by Admiral Byng The pretender soon returned to France

1708, Nov. 16-1710, Apr. 5. Third Parliament of Anne (II). Whig majority. Somers, president of the council. Leaders of the Whigs (*Junto*): Somers, Halifax, Wharton, Oxford, Sunderland.

1708-1709. The progress of the war: Marlborough won at **Oudenarde** (July 17, 1708) and again after a bloody battle, at **Malplaquet** (Sept. 11, 1709). Marlborough called by his Tory enemies "the butcher"

1710, Feb.-Mar. Trial of Dr. Sacheverell for preaching sermons of an ultra-Tory cast. His conviction further endeared him to the people, and helped the Tory cause.



1710, Nov. 25-1713, July 16. Fourth Parliament of Anne (III). Tory majority clear in the Commons. In the Lords it was made certain in 1712 by the creation of twelve Tory peers for the purpose. Complete change in ministry. This election was the first clean-cut peaceful transfer of power under the modern party system in England. Harley (Earl of Oxford in 1711), lord high treasurer. St. John (Viscount Bolingbroke in 1712), secretary of state. Godolphin dismissed. Mrs Masham, who had gradually supplanted the Duchess of Marlborough in Anne's affections, had a large part in this transfer of power. The Duke of Marlborough was accused of peculation (Nov. 1711), dismissed from his offices, and supplanted as commander-in-chief by the Duke of Ormond. English participation in the war reduced by Tory policy to a negligible point. Complicated peace negotiations begun with France

1711. South Sea Company incorporated by vote of Parliament in a bill dated 1710 Passage of **Occasional Conformity Bill,** directed against dissenters who technically satisfied the Test Act by one communion in an Anglican Church, and then attended a non-conformist "chapel" regularly. **Landed Property Qualification Act,** an attempt by landed proprietors to exclude merchants, financiers, and industrialists from Parliament (repealed 1866) Neither of these Tory measures were long successfully enforced

1713, Apr. 11. TREATY OF UTRECHT. Articles affecting **Great Britain:** renunciation of the pretender by Louis XIV, who recognized the Protestant succession in Great Britain; crowns of France and Spain *not* to be united under one head, fortifications of Dunkirk to be razed and its harbor filled up, cession by France of Hudson's Bay and Acadia, Newfoundland and St. Kitts to Great Britain **Great Britain and Spain:** cession of Gibraltar and Minorca to England; grant of the Asiento (*el pacto del asiento de negros*), or contract

[1] Not a new Parliament, but the second Parliament of Anne revived by proclamation Henceforward Parliaments are numbered without regard to reigns, but here the distinction is retained The number as a Parliament of Great Britain is indicated by a Roman numeral in parenthesis.

The House of Stuart

for supplying slaves to Spanish America, to the subjects of Great Britain for thirty years (Royal African Company)

1714, Feb. 16-Aug. 25. Fifth Parliament of Anne (IV). Death of Sophia of Hanover (May 28). **Schism Act.** Oxford dismissed (July 27) and succeeded as lord high treasurer by the Earl of Shrewsbury. Many leading Tories, who foresaw that the Hanoverian succession would mean a Whig monopoly of power, attempted negotiations with the pretender.

Aug. 1. Death of Anne.

1714. HOUSE OF HANOVER or **BRUNSWICK**, changed (1917) to House of Windsor. None of Anne's seventeen children having survived her, the crown, according to the act of succession, descended to the Protestant house of Hanover, the Catholic line of the Stuarts being excluded

1714-1727. GEORGE I.

1714, Sept. 18. The king landed in England George I favored the Whigs

in the formation of the first government, Lord Townshend, sec. of state, Shrewsbury resigned, and Halifax was made first lord of the treasury (Shrewsbury was the last lord high treasurer), Sunderland, lord lieutenant of Ireland, Lord Cowper, chancellor; Earl of Nottingham, president of the council; Marlborough, commander-in-chief.

1715, Mar. 17–1722, Mar. 7. First Parliament of George I (V). Impeachment of Bolingbroke, Ormond, Oxford. Flight of Bolingbroke and Ormond; Oxford in the Tower. Jacobite riots in England

1715-1716, Sept. "The Fifteen," Jacobite rising in Scotland under the Earl of Mar **Battles of Sheriffmuir and Preston.** Arrival of the pretender ("James III") from France (Dec. 1715). The Duke of Argyle (Campbell, MacCallum More) dispersed the Jacobite troops without a battle, and the pretender fled (Feb. 5, 1716) Impeachment of Jacobite leaders, execution of Derwentwater and Kenmure (Feb. 24).

1716. Partly because of this Jacobite scare, Parliament passed the **Septennial Act,** prolonging its own life to seven years, and making that the full legal term for future Parliaments.

1717, Jan. 4. Triple alliance between England, France, and Holland because of the intrigues of the pretender, Charles XII, and Alberoni, the empire joined these in the **quadruple alliance** (Aug 2, 1718). War between England and Spain (see p 451)

1718, Jan. Repeal of the Occasional Conformity Act and the Schism Act.

1719. Abortive Spanish expedition to Scotland to help the pretender.

Treaty of Stockholm (Nov 20, 1719): Sweden ceded Bremen and Verden to George I (as Elector of Hanover) for 1,000,000 rix dollars.

1720, Jan. Spain joined the quadruple alliance, making peace with England

1720, Jan. Bursting of the **South Sea Bubble:** disastrous financial panic influenced by the earlier bursting of Law's **Mississippi Bubble** in France (p. 447).

1721-1742. Administration of Sir Robert Walpole, first true prime minister. The cabinet system and the party system now took the form they held until 1832. Parallel administration of Fleury in France (1726–1742). Both ministers were cautious and peace-loving, anxious to restore prosperity after the ravages of the "first World War." Period of stability, of common sense, the **Augustan Age** of European letters, great advances in commerce and industry

1722, Oct. 9–1727, July 17. Second Parliament of George I (VI). Treaty of Hanover between England, France, and Prussia (Sept. 3, 1725)

1727-1760. GEORGE II. Walpole continued in office. The king was much influenced by his wife, the capable Caroline of Anspach, who remained loyal to Walpole.

1728, Jan. 23–1734, Apr. 16. First Parliament of George II (VII).

1729, Nov. 9. Treaty of Seville with Spain. restoration of conquests; England retained Gibraltar; the *asiento* confirmed.

1731, Mar. 16. Treaty of Vienna with the empire, dissolution of the Ostend East India Company, which had been formed as rival to the English India Company, by the emperor

1735, Jan. 14–1741, Apr. 25. Second Parliament of George II (VIII)

1736. Porteous riots in Edinburgh

1736. John Wesley and his brother **Charles** returned from Georgia, set up the little groups of evangelical Christians out of which came the **Wesleyan societies,** and, after the death of John Wesley (1791), the various independent **Methodist churches. George Whitefield,** their great collaborator, was ordained in 1736. The Methodists were emotional and revivalistic, but politically conservative. The movement was probably important in preventing the spread of political radicalism in 18th century England.

1739-1748. WAR WITH SPAIN (*War of Jenkins' Ear*). Capture of Porto Bello in Darien by Vernon (Nov. 22, 1739). Futile attack upon Cartagena by Vernon and Wentworth (1740). Voyage of Commodore Anson to Chile and Peru and around the world (Sept. 1740–June, 1744)

1741, Dec. 1–1747, June 17. Third Parliament of George II (IX). Fall of Walpole (Feb. 1742). Interim administration of the Earl of Wilmington, followed (1743–1754) by that of **Henry Pelham,** first lord of the treasury. The Whig party tended to disintegrate into rival groups, held together loosely by place and privilege, and by the "interest" of the Duke of Newcastle. *Broad bottom ministry:* Pelham, Pitt, Newcastle, Harrington (later Earl Stanhope), Bedford.

1740-1748. WAR OF THE AUSTRIAN SUCCESSION. England took part on the side of Austria. For further details see p. 465.

1745, May 11. Battle of Fontenoy, victory of the French under Saxe over the allies under Cumberland.

1745-1746. SECOND JACOBITE REBELLION (*The Forty-five*). The Young Pretender, **Charles Edward**, landed in Scotland (July 25) and proclaimed his father as **James VIII** of Scotland and III of England The Jacobites entered Edinburgh with some 2000 men (Sept 11), won the **battle of Prestonpans** (Sept 21), and under Charles Edward himself marched down into England, where they reached Derby, his farthest point, on Dec 4. Jacobite victories at **Penrith** (Dec 18) and at **Falkirk Moor** (Jan 17, 1746) But only in the Highlands was the Jacobite cause strong, and here they were beaten decisively at **Culloden** (Apr 16) The pretender escaped to France (Sept 20). This was the last Stuart effort.

1747, Nov. 10–1754, Apr. 6. Fourth Parliament of George II (X).

1748. Treaty of Aix-la-Chapelle, p 466 England emerged from this war a defeated nation, except in North America The divisions of the Whigs continued, and their ablest man, **William Pitt** (Earl of Chatham in 1766), was not trusted with power save at the crisis of the **Seven Years' War** (1767).

1752. The Gregorian calendar adopted in England and the colonies The eleven days between Sept 2 and 14 were omitted ("Give us back our eleven days!")

1753. Foundation of the British Museum by government purchase of the collection of Sir Hans Sloane

1754. On the death of Pelham (Mar) he was succeeded as prime minister by his brother, the Duke of Newcastle Henry Fox, secretary of state

1754, May 31–1761, Mar. 19. Fifth Parliament of George II (XI).

1755-1763. LAND AND NAVAL WAR BETWEEN ENGLAND AND FRANCE. (*Seven Years' War*) originating in boundary disputes in North America, carried on by land in America (and Germany), by sea in all parts of the world. The English had the ultimate advantage of the French almost everywhere (War in America, p 516, in India, p 535)

1757-1761. Coalition ministry of Newcastle, first lord of the treasury, and the elder **Pitt,** secretary of state, to centralize war policy and administration Pitt was the real leader, and helped make possible England's victory in the duel with France.

1759, Sept. 13 Battle of **Quebec,** death of **Wolfe** and **Montcalm** Naval **battle of Quiberon Bay** (Nov. 20); defeat of the French by Sir Edward Hawke

1760-1820. GEORGE III.

1761, Aug. 15. Bourbon family compact between France and Spain, with the assumption of the accession of Naples and Parma, for reciprocal guarantee of all possessions and an offensive and defensive alliance

Oct. 5. Pitt, insisting that war be declared against Spain, resigned. **Lord Bute,** adviser to the king George attempted to carry out his mother's advice to "be king," but in a way thoroughly consonant with the organization of politics in 18th century England. He built up in Parliament, with Tory aid and by the usual means of patronage and bribery, a party of *king's friends*, and thus brought the Tories into power for the first time since 1714. Newcastle continued prime minister in the new cabinet (Oct. 5, 1761). Egremont and Bute, secretaries of state, George Grenville, leader of the Commons

1761, Nov. 3–1768, Mar. 10. First Parliament of George III (XII). **War declared against Spain** (Jan 1762) Bute became prime minister (May 29, 1762), Grenville, secretary of state

1763, Feb. 10. TREATY OF PARIS between Great Britain, France, and Spain. (1) France ceded to England In North America, Canada, and Cape Breton Island, the Mississippi was recognized as the boundary between Louisiana and the British colonies; in the West Indies, Grenada, in Africa, the French possessions on the Senegal England restored to France Goree in Africa, and Pondichéry and Chandernagor in India (2) Spain ceded to England Florida, as indemnification for which France had already ceded Louisiana to Spain, Spain received from England all conquests in Cuba including Havana. In consequence of this peace and her acquisitions in India, Great Britain approached the summit of her extent and power; the North American colonies had gradually developed into virtually self-governing states

1763, Apr. 1–1765, July. Ministry of George Grenville; Halifax and Egremont, secretaries of state; Fox created Lord Holland.

1763-1764. No. 45 of the *North Briton* (Apr. 23, 1763), containing insulting remarks concerning the king by **John Wilkes,** general warrants for the apprehension of the authors, printers, and publishers,

were issued. Wilkes was arrested and expelled from the Commons (Jan. 19, 1764). General warrants declared illegal by the chief justice Wilkes outlawed.

1765, July–1766, July. Ministry of the Marquis of Rockingham; Conway, leader of the Commons This was succeeded by a ministry headed by **Chatham** (Aug. 1766–Dec. 1767) and then by the ministry of the **Duke of Grafton** (Dec. 1767–Jan 1770), Townshend, chancellor of the exchequer, Conway, Shelburne, secretaries of state, the Earl of Chatham, lord privy seal Lord Hillsborough the first colonial secretary.

1768, May 10–1774, June 22. Second Parliament of George III (XIII) Wilkes returned and was elected to the Commons from Middlesex. He was expelled from the House by votes of the "king's friends," but was thrice elected and thrice rejected, at the last election his opponent, Colonel Luttrell, who received a small minority of votes, was declared elected. This was a Pyrrhic victory for George The affair of the **Middlesex election** stirred up animosities against him, and resulted finally in establishing freedom of election of the House of Commons

1769-1772. *Letters of Junius*, containing bitter attacks on the Duke of Grafton, Lord Mansfield, and other members of the government, appeared in the *Daily Advertiser* The author is still unknown, but the weight of evidence favors **Sir Philip Francis.**

1770, Jan.–1782, Mar. Ministry of Lord North, first lord of the treasury and chancellor of the exchequer, and George's favorite. Full Tory government Under North, third Parliament of George III (Nov 29, 1774–July 8, 1780) (XIV) and fourth Parliament (Oct 31, 1780–Mar. 24, 1784) (XV).

Constitutional developments: Establishment of publication of speeches in the Commons, in spite of their protests (1771) Wilkes made lord mayor of London and member for Middlesex The sixth motion to expunge the resolution rejecting him, as "subversive of the rights of electors," carried (May 3, 1782) Repeal of some of the penal laws against Roman Catholics (1778) helped bring on the **Lord George Gordon riots** in London (June, 1780), originating as a protest against further Catholic emancipation, but degenerating into drunken orgies and brawls. London in the hands of the mob for three days

The failure of North to subdue the American colonies resulted in a series of motions hostile to him, culminating in that of Sir J. Rous (Mar. 15, 1782) "that the House could no longer repose confidence in the present ministers" (lost by only nine votes). On threat of renewal of the motion, **North resigned,** thus setting a further precedent in parliamentary government.

1775-1783. WAR OF AMERICAN INDEPENDENCE (see p 520). The war widened in 1778 with the entrance of France against Great Britain, in 1779 with the entrance of Spain against her Gibraltar, defended by Elliott, besieged by French and Spanish in vain (1779–1782). Holland entered the war against Great Britain (Dec 30, 1780) In 1781 the English lost Pensacola, Tobago, St Eustace, Demerara, St. Kitts, Nevis, Monserrat, Cornwallis surrendered at **Yorktown** (Oct 19, 1781) Minorca lost (1782) A British naval victory near Martinique, Rodney and Hood over De Grasse (Apr 12, 1782) helped restore the balance But England was sick of the war, and the new government had, without a formal election, a mandate to make peace

1782, Mar. 20-July 1. Ministry of Rockingham· Shelburne and **Charles James Fox** (1749–1806), secretaries of state, Thurlow, lord chancellor, **Edmund Burke** (1729–1797), paymaster of the forces; **Richard Brinsley Sheridan** (1751–1816), under-secretary of state With Chatham, Fox, Burke, Sheridan, the golden age of English oratory On Rockingham's death (July 1), Lord Shelburne became prime minister in a cabinet (July 1, 1782–Feb 24, 1783) from which Fox, Burke, and Sheridan were excluded, and **William Pitt** (1759–1806) included as chancellor of the exchequer.

1782, Nov. 30. PRELIMINARY TREATY OF PARIS with the United States (p 522) followed by the general **Treaty of Paris** (Jan 20, 1783–Sept 3) between the United States, Great Britain, France, Spain, and Holland (1) Recognition of the independence of the thirteen United States. (2) England surrendered Tobago and Senegal to France (3) Spain retained Minorca and Florida (4) Holland, badly worsted (separate peace, May 20, 1784), gave Negapatam and the right of free navigation in the Moluccas to England.

1783, Apr. 2–Dec. 13. Coalition ministry of North and Fox, nominally headed by the Duke of Portland, Cavendish, chancellor of the exchequer, North and Fox, secretaries of state, Burke, paymaster The alliance of two such bitter opponents as North and Fox shocked public opinion and paved the way for the ministry of the younger Pitt.

1783, Dec. 26–1801, Mar. 17. First ministry of William Pitt the Younger, formed after Fox's bill to reform the government of India was lost in the Lords Pitt's bill was also rejected, whereupon Parliament was dissolved (1784, Mar. 25) and new elections held

1784, May 18–1795. Fifth Parliament of George III (XVI)

Aug. 13. Pitt's India bill became law (p. 535).

1788. Temporary insanity of George III. In the course of discussion regarding the regency, the king recovered

1793, Feb. 1. The French Republic declared war on Great Britain (p. 582) The government at once took measures against revolutionary agitation (Traitorous Correspondence Bill, suspension of the *Habeas Corpus* Act, [1794]).

1794, May. Trial of Hardy, Horn Tooke, and Thelwall, on charge of high treason, all of whom were eventually acquitted (Dec)

Nov. Jay's treaty between the United States and Great Britain (p 766.)

1796, Sept. 17. The sixth Parliament of George III convened (XVII)

1797, Apr. 15. The mutiny at Spithead. The sailors' demands for better treatment were reasonable and were met by the government (May 17), but immediately afterward a more serious outbreak occurred at the **Nore**, which had to be suppressed by force (June 30)

1799. Suppression of the **insurrection of the United Irishmen.** This organization had been formed in 1791 to secure the complete separation of Ireland from England The French had sent several expeditions to aid them (notably that of Hoche, which was scattered by a storm, Dec 1796), but the United Irishmen were defeated at **Vinegar Hill** (June 21, 1798) and the insurrection stamped out. As a result

1801, Jan. 1. THE LEGISLATIVE UNION OF GREAT BRITAIN AND IRELAND, under the name of the *United Kingdom*, was brought about. The Act of Union provided that there should be one Parliament, to which Ireland should send four spiritual lords, sitting by rotation of sessions, 28 temporal peers, elected for life by the Irish peerage, and 100 members of the Commons The churches of the two countries were to be united into one Protestant Episcopal Church Pitt proposed to make some concessions to the Roman Catholics, but the king was persuaded that this would involve a breach of his coronation oath. Thereupon

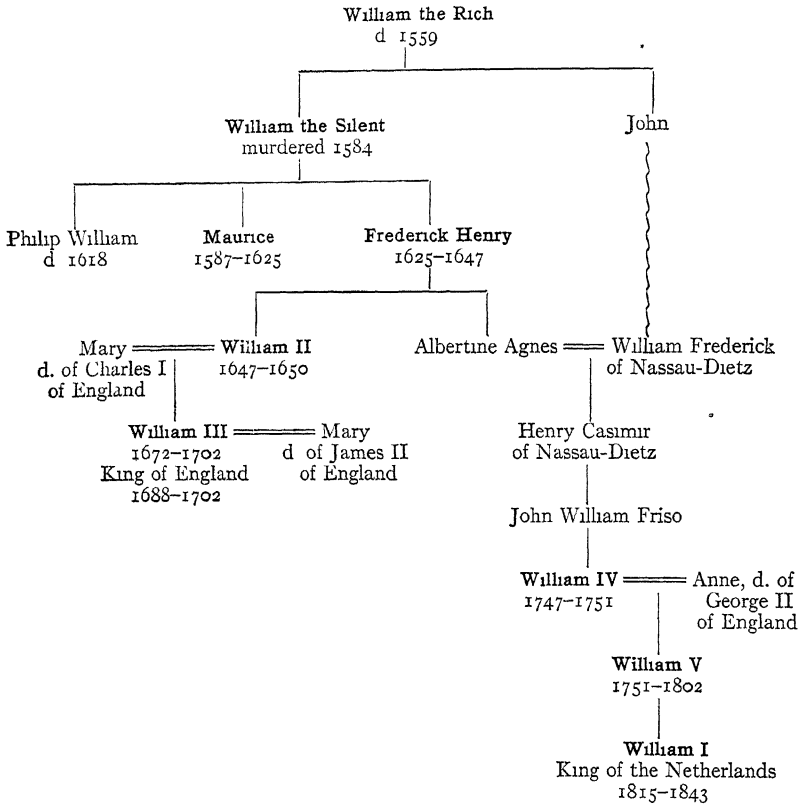
Feb. 3. Pitt resigned

Mar. 14. His friend **Henry Addington** then headed the cabinet, with Pitt advising, and concluded peace with France, embodied (Mar. 27) in the **Treaty of Amiens.**

The passage of the **Health and Morals of Apprentices Act** in this year marks a step towards government supervision of labor conditions The Act forbade the hiring out of pauper children for work in the cotton mills until they were nine years of age, restricted their working day to 12 hours, and prohibited their employment at night work.

1803, May 16 The war between Britain and France was renewed. (See p 590.)

1804, May 10. Pitt returned to office and helped to organize the **Third Coalition** against France He was stricken by the news of Napoleon's victory at Austerlitz and died on Jan 23, 1806



1806. Pitt's place was taken by **Lord William Grenville,** with **Charles James Fox** as foreign secretary until the latter's death, Sept. 13.

1807. Abolition of slavery decreed in the British dominions. The **Duke of Portland** formed his second ministry (March) and held office until May, 1809, when **Spencer Perceval** replaced him, to be followed (June, 1812) by the **Earl of Liverpool,** whose unusually long ministry lasted until April, 1827 (*Cont. p.* 604)

2. THE DUTCH REPUBLIC

The first half of the 17th century, during which the Dutch provinces were still at war with Spain to secure their independence, was nevertheless the golden age of the Netherlands, a period of unexampled flowering in art and literature This was probably due primarily to the unprecedented expansion of Dutch commerce, which resulted from the closing of Lisbon to Dutch trade after the annexation of Portugal to Spain. The Dutch were obliged to find their own way to the east and within a remarkably short time they were disputing the command of the Indies with the Portuguese, whom they soon displaced. The **Dutch East India Company** (founded 1602), was given extensive political and military authority and became one of the chief organs of Dutch imperialism. In the east, Batavia was founded in 1619. The Portuguese

The Houses of Orange and Nassau (1559-1843)

were expelled from Ceylon (1638–1658), and Malacca taken from them (1641). In 1652 the Dutch established themselves at the Cape of Good Hope and in 1667 they took Sumatra. The **Dutch West India Company** (founded 1621) had the same extensive control over the American and African coast trade. In 1623 the Dutch seized Pernambuco and began extensive conquests in Brazil (till 1661) They took the islands of St Eustace and Curaçao (1634–1635), Saba (1640), and St. Martin (1648) With this far-flung colonial empire, the Dutch provinces became the commercial center of Europe, Amsterdam easily holding the lead as a financial center.

The provinces, however, were politically connected only in the loosest fashion Despite the stadholdership of the house of Orange, there continued to be (esp. in Holland, the chief province) strong suspicion of all centralizing tendencies and an almost fanatical attachment to state rights

1647-1650. WILLIAM II, a young man of 23, succeeded his father, Frederick Henry, in the stadholdership Able, ambitious, and restless, William disapproved of the **Treaty of Munster** (1648), which recognized the independence of the provinces, and would have preferred to continue the war He soon became involved in conflict with the States-General and, by arresting some of the leaders of Holland and attacking Amsterdam itself (1650), he forced the submission of the state-rights group

1650, Nov. 6. William's early death gave the decentralizing party a golden opportunity, for William's son was born posthumously and there was no one to dispute the taking over of control by the

States-General In 1653 **John de Witt** became grand pensionary of Holland, and through this position exercised control over general policy. An able statesman and adroit diplomat, he easily maintained Dutch prestige and greatness

1652-1654. THE FIRST ANGLO-DUTCH WAR, the direct outgrowth of the **English Navigation Act** (1651) and the steadily growing competition of English and Dutch, esp in the east The English and the Dutch, led by outstanding commanders like Blake, Monk, Tromp, de Ruyter, and de Witt, fought no less than twelve naval engagements, most of them indecisive. By the **Treaty of Westminster** (Apr 5, 1654) the Dutch agreed to enter a defensive league with England and to pay indemnity. The province of Holland secretly agreed to exclude all members of the house of Orange from the stadholdership (this was due to Cromwell's uneasiness about the relationship of the Stuarts and Oranges — William II having married the daughter of Charles I)

1657-1660. The Dutch interfered successfully in the Swedish-Danish War in order to prevent the entrance of the Baltic from falling into exclusively Swedish control

1657-1661. War with Portugal, over conflicting interests in Brazil

1660. On the restoration of the Stuarts in England, the Dutch States-General at once rescinded the exclusion of the house of Orange from the stadholdership.

1662. The Dutch allied themselves to the French to provide against the danger of attack by the British

1664. The British seized New Amsterdam (New York) and appropriated various Dutch stations on the African coast

1665-1667. SECOND ANGLO-DUTCH WAR. France and Denmark supported the Dutch, who, on the whole, maintained the upper hand at sea (attack on the English fleet in the Medway, etc, see p 427), but by the **Treaty of Breda** (July 10, 1667) they abandoned claims to New Amsterdam in return for Surinam

1668, Jan. 13. Triple Alliance of England, Holland, and Sweden to check the aggression of Louis XIV in the Spanish Netherlands Louis soon managed to buy off the English and the Swedes and thereafter concentrated his hatred upon the Dutch

1672-1678. WAR WITH FRANCE AND ENGLAND (p 442) The Dutch were quite unprepared for a land war and consequently the French were able to overrun much of the country The result was much agitation against **John de Witt,** who, with his brother Cornelius, was brutally murdered by a mob (Aug. 27, 1672).

1672-1702. WILLIAM III (son of William II), stadholder With the aid of the emperor and of Brandenburg he was able to hold his own against the French and indeed to force their retirement The British abandoned the war (1674) and by the **Treaty of Nijmwegen** (Nimwegen, Nimeguen) of 1678, the Dutch came off without losses

1688, Nov. 5. William III (married in 1677 to **Mary,** the daughter of James II of England) landed in England in response to an appeal from the opponents of James II In 1689 he was proclaimed king and joint ruler with Mary (p 429)

1689-1697. WAR OF THE LEAGUE OF AUGSBURG against Louis XIV (p 443). William was very decidedly the leader in the coalition and threw the whole weight of England as well as of the Netherlands into the struggle Though rarely successful in the field, William's perseverance and able management saved him from disaster By the **Treaty of Ryswick** (1697), France and the Netherlands returned to the *status quo ante.*

1702, Mar. 8 The death of William III, without children, brought to an end the direct line of the house of Orange, which, however, was continued by the related house of Nassau For the time being, however, the States-General resumed control of affairs, which were ably conducted by **Anthony Heinsius,** since 1688 grand pensionary of Holland and close collaborator of William III Heinsius remained in power until his death in 1720

1702-1713. THE WAR OF THE SPANISH SUCCESSION (p. 445), in which the Dutch again played their part in conjunction with England These wars, costly in men and money, reacted most unfavorably on the Dutch position. After 1715 there was a marked and steady economic decline The republic was soon overshadowed by England and became more and more an adjunct of the English system.

1715, Nov. 15. By the **Barrier Treaty,** the empire ceded to the Dutch a number of strong places on the French frontier of the (since 1713) Austrian Netherlands, as protection against attack by France

1731. The Dutch signed the **Pragmatic Sanction** of Emperor Charles VI

in return for abolition of the Ostend Company, which had been set up as a rival to the Dutch East India Company.

1734. The Prince of Orange-Nassau married Anne, the daughter of George II.

1743. The Dutch Republic joined England in the alliance with Maria Theresa against Prussia and France. The French conquests in the Austrian Netherlands constituted a direct danger to the republic

1747-1751. WILLIAM IV of Orange-Nassau (grandson of William III's cousin) proclaimed stadholder, a dignity which now became hereditary in the family

1751. On the death of William IV, his widow, Anne, acted as regent for the three-year-old heir

1766-1795. WILLIAM V assumed the position of stadholder. He proved himself a weak and ineffectual ruler

1780-1784. The Dutch went to war with England over the question of the right to search ships at sea As a result the Dutch lost some of their possessions in both the East and the West Indies.

1785. Beginning of serious conflict between William and the States-General, due to the emergence of the **Patriot Party** (representing the French influence). William ultimately had to call in Prussian troops (1787) to restore his authority.

1793. France declared war on the Dutch Republic as well as on England (friction over the opening of the Scheldt by the French in 1792).

1794-1795. The French general, Pichegru, overran the country, capturing the Dutch fleet while it was frozen in the ice in the Texel William V fled to England

1795-1806. THE BATAVIAN REPUBLIC, modeled on France and governed by the Patriots under more or less direct French influence In the interval the British, still at war with France, seized the Dutch colonies.

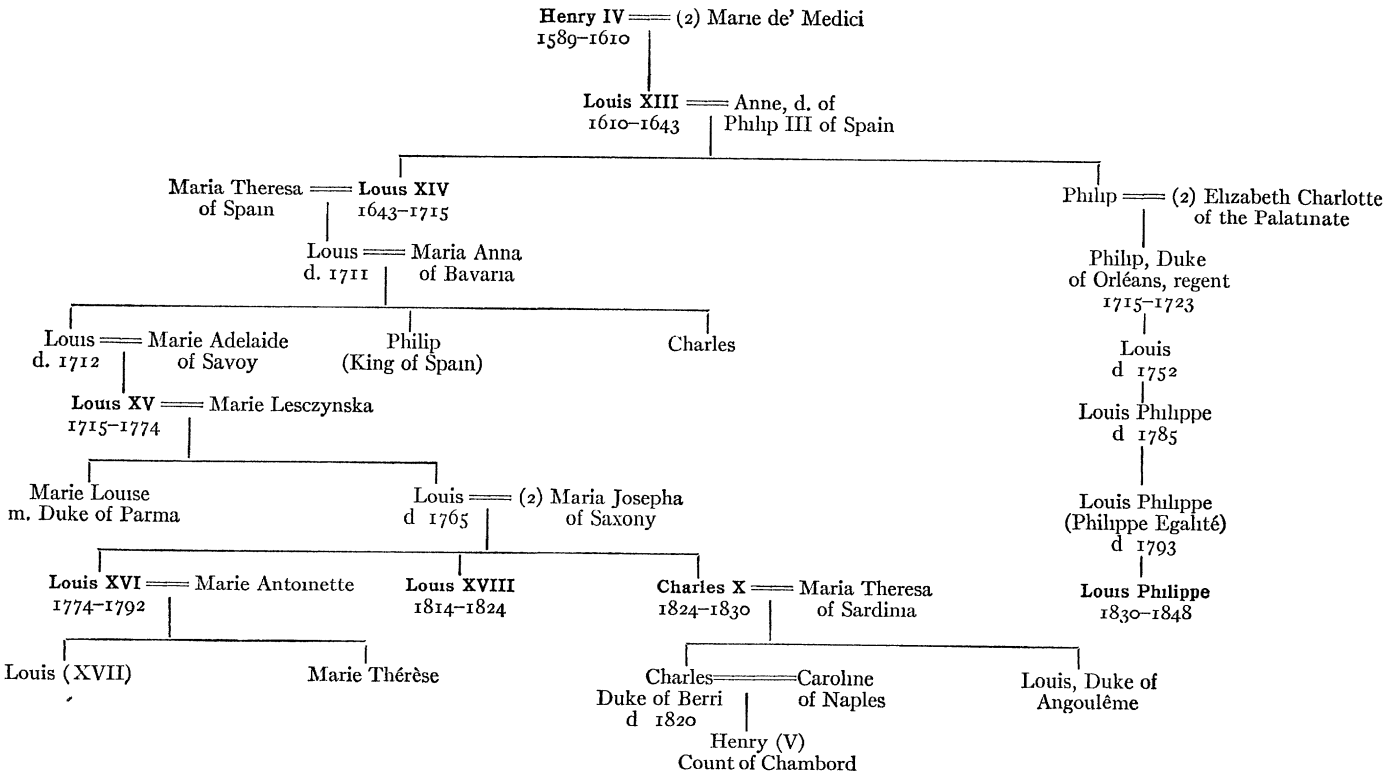
1806-1810. LOUIS, the brother of Napoleon, King of Holland His policy, aimed at the good of his adopted kingdom, brought him into conflict with his brother.

1810. THE KINGDOM OF HOLLAND was incorporated with France as an integral part of the empire

(*Cont. p.* 621)

3. FRANCE

1643-1715. LOUIS XIV, who ascended the throne at the age of five. His mother, **Anne of Austria** (daughter of Philip III of Spain) acted as guardian The government, even after Louis' arrival at majority, was conducted by **Cardinal Mazarin.**



1648-1653. Disturbances of the **Fronde** (**Cardinal Retz; Prince of Condé,** resistance of the *parlement* of Paris), the last attempt of the French nobility to oppose the court by armed resistance The parlementary, as contrasted with the noble, Fronde, was, however, an attempt to substitute government by law for government by royal or any other irresponsible will Condé, at first loyal, afterward engaged against the court, fought a battle with the royal troops under Henri de la Tour d'Auvergne, Vicomte de **Turenne,** in the Faubourg Saint Antoine, and took refuge in Spain The first conspiracy, the old Fronde, ended in 1649, with the second **Treaty of Ruel;** the second conspiracy, the new Fronde, which involved treasonable correspondence with Spain, failed in 1650 A union of the two was crushed in 1653. (Gaston of Orléans, and his daughter "Mademoiselle.")

1648. Acquisitions of France in the **Treaties of Westphalia,** p 408.

The war with Spain, which sprang up during the Thirty Years' War (victory of Condé at **Rocroy,** May 18, 1643; alliance with England, 1657, Cromwell sent 8000 men of his army to the assistance of Turenne) was continued till the

1659. TREATY OF THE PYRENEES: (1) France received a part of Roussillon, Conflans, Cerdagne, and several towns in Artois and Flanders, Hainault and Luxemburg (2) The Duke of Lorraine, the ally of Spain, was partially reinstated (France received Bar, Clermont, etc , and right of passage for troops); the Prince of Condé entirely reinstated (3) Marriage between Louis XIV and the infanta **Maria Theresa,** eldest daughter of Philip IV of Spain, who, however, renounced her claims upon her inheritance for herself and her issue by Louis forever, in consideration of the payment of a dowry of 500,000 crowns by Spain.

The French Bourbons (1589-1830)

1661. Death of Mazarin. Personal government of Louis XIV (1661–1715), absolute, at least in the theory of certain royalist pamphleteers, and perhaps of Louis himself, without Etats-Généraux, without regard to the remonstrances of the parlement of Paris (*L'état, c'est moi*) Louis was in practice, however, limited by his inability to do everything himself The French bureaucracy was a privileged group, often owning their offices (*vénalité des offices, Pauleite*, a tax to the crown paid by office owners). Three constitutional limitations on the crown king must be a Catholic; no woman may occupy the throne (**Salic law**), king may not alienate his lands by *appanage* system **Colbert**, controller general of the finances from 1662–1683. **Reform of the finances**; mercantile system Construction of a fleet of war. **Louvois**, minister of war, 1666–1691. Quarrel for precedence in rank with Spain. Negotiations with the pope concerning the privileges of French ambassadors at Rome The ambition of Louis for fame, and his desire for increase of territory were some of the causes of the following wars, in which these generals took part Turenne, Condé, Luxembourg, Catinat, Villars, Vendôme, Vauban (inventor of the modern system of military defense).

1667-1668. FIRST WAR (*War of Devolution*) on account of the Spanish Netherlands

Cause: After the death of his father-in-law, Philip IV of Spain, Louis laid claim to the Spanish possessions in the Belgian provinces (Brabant, Flanders, etc), on the ground that, being the personal estates of the royal family of Spain, their descent ought to be regulated by the local *droit de dévolution*, a principle in private law, whereby in the event of a dissolution of a marriage by death, the survivor enjoyed the usufruct only of the property, the ownership being vested in the children, whence it followed that daughters of a first marriage inherited before sons of a second marriage. The renunciation of her heritage which his wife had made was, Louis claimed, invalid, since the stipulated dowry had never been paid.

1667. Turenne conquered a part of Flanders and Hainault. By the exertions of John de Witt, pensioner of Holland, and Sir William Temple, England, Holland, and Sweden concluded the **Triple alliance** (1668, Jan. 23) which induced Louis, after Condé had, with great rapidity, occupied the defenseless free country of Burgundy (Franche-Comté) to sign the

1668, May 2. Treaty of Aix-la-Chapelle: Louis restored Franche-Comté (the fortresses having been dismantled) to Spain, in return for which he received twelve fortified towns on the border of the Spanish Netherlands, among others Lille, Tournay, and Oudenarde. The question of the succession was not settled, but deferred.

1672-1678. SECOND WAR (against Holland) The course of Holland in these transactions had inflamed the hatred of Louis against her, a hatred made still stronger by the refuge given by the provinces to political writers who annoyed him with their abusive publications To gain his purpose, the destruction or the humiliation of Holland, Louis secured the disruption of the Triple Alliance by a private treaty with Charles II of England (the **Treaty of Dover**, 1670, p 427), and between France and Sweden (1672) Subsidy treaties with Cologne and Munster, 20,000 Germans fought for Louis in the following war

1672. Passage of the Rhine. Rapid and easy conquest of southern Holland by Turenne, Condé, and the king, at the head of 100,000 men. The brothers De Witt, the leaders of the aristocratic republican party in Holland, were killed during a popular outbreak (Aug. 27), and **William III of Orange** was placed at the head of the state. The opening of the sluices saved the province of Holland, and the city of Amsterdam. Alliance of Holland with Frederick William, Elector of Brandenburg (1640–1688), afterward joined by the emperor and by Spain.

1673. Frederick William concluded the separate **Peace of Vossem,** in which he retained his possessions in Cleves, except Wesel and Rees.

1674. Declaration of war by the empire. Peace between England and Holland. Louis conquered Franche-Comté in person; Condé fought against Orange (drawn **battle at Senef**) in the Netherlands. Brilliant campaign of **Turenne** on the upper Rhine (first ravaging of the Palatinate) against Montecucculi, the imperial general, and the Elector of Brandenburg. The latter, recalled by the inroad of the Swedish allies of Louis XIV into his lands, defeated the Swedes in the

1675, June 28. Battle of Fehrbellin. In the same year Turenne fell at Sasbach, in Baden (July 27) The French retreated across the Rhine.

1676. Naval successes in the Mediterranean against the Dutch and Spanish. Death of De Ruyter.

1678. Surprise and capture of Ghent and Ypres by the French. Negotia-

tions with each combatant, which had been for some time in progress, resulted in the

1678-1679. TREATIES OF NIMWEGEN (Nijmwegen, Nimeguen) **Holland** and **France** (Aug 10, 1678); **Spain** and **France** (Sept 17, 1678), the **emperor,** with **France** and **Sweden** (Feb 6, 1679), **Holland** with **Sweden** (Oct 12, 1679). At Fontainebleau, **France** and **Denmark** (Sept 2, 1679) At Lund, **Denmark** and **Sweden** (Sept 26, 1679).

(1) **Holland** received its whole territory back, upon condition of preserving neutrality. (2) Spain ceded to France Franche-Comté, and on the northeast frontier, Valenciennes, Cambray, and the Cambrésis, Aire, Poperingen, St Omer, Ypres, Condé, Bouchain, Maubeuge, and other towns, France ceded to Spain: Charleroi, Binche, Oudenarde, Ath, Courtray, Limburg, Ghent, Waes, etc, and in Catalonia, Puycerda (3) The emperor ceded to France: Freiburg in the Breisgau, France gave up the right of garrison in Philippsburg, the Duke of Lorraine was to be restored to his duchy, but on such conditions that he refused to accept them

Louis XIV forced the Elector of Brandenburg to conclude the

1679, June 29. Peace of St. Germain-en-Laye, whereby he surrendered to Sweden nearly all of his conquests in Pomerania, in return for which he received only the reversion of the principality of East Friesland, which became Prussian in 1744, and a small indemnification.

Louis was now at the height of his power Stimulated by the weakness of the empire, he established the

1680-1683. Chambers of Reunion at Metz, Breisach, Besançon, and Tournay These were French courts of claims with power to investigate and decide what dependencies had at any time belonged to the territories and towns which had been ceded to France by the last four treaties of peace. The king executed with his troops the decisions of his tribunals Saarbrucken, Luxemburg, Zweibrucken, Strassburg (1681), and many other towns were thus annexed to France.

1683. Invasion of the Spanish Netherlands, occupation of Luxemburg, and seizure of Trier (1684) Lorraine permanently occupied by France. To the weakness of the Empire, the wars with the Turks, and the general confusion of European relations since the Peace of Nimwegen, it is to be attributed that these aggressions were met by nothing more than empty protests, and that

1684. A truce for twenty years was concluded at Regensburg between Louis and the emperor and the Empire, whereby he retained everything he had obtained by reunion up to Aug. 1, 1681, including Strassburg.

Louis' mistresses: Louise de la Vallière; Madame de Montespan, Madame de Maintenon, a devout Catholic, whose influence over the king was boundless. Maria Theresa died 1683 Louis privately married to Madame de Maintenon **War upon heresy.** The dragonnades in Languedoc Wholesale conversions of Calvinists

1685, Oct. 18. REVOCATION OF THE EDICT OF NANTES. The exercise of the reformed religion in France was forbidden, children were to be educated in the Catholic faith, emigration was prohibited In spite of this more than 50,000 families, including military leaders (Schomberg), men of letters, and a large part of the artisans of France, made their way to foreign countries Their loss was a blow to the industry of the country, which perhaps hastened the approach of the revolution. The exiles found welcome in Holland, England (Spitalfields), Brandenburg, English North America, and South Africa. The Protestants of Alsace retained the freedom of worship which had been secured to them

1688-1697. THIRD WAR. (War of the League of Augsburg).

Cause: After the extinction of the male line of the Electors Palatine in the person of the **Elector Charles** (d. 1685), whose sister was the wife of Louis XIV's brother, the Duke of Orléans, the king laid claim to the allodial lands of the family, a claim which he soon extended to the greater portion of the country. Another ground for war was found in the quarrel over the election of the Archbishop of Cologne, which Louis was resolved to secure for Von Furstenberg, Bishop of Strassburg, in place of Prince Clement of Bavaria (1688)

Meantime the unfavorable impression produced throughout Protestant Europe by the revocation of the Edict of Nantes had contributed to the success of the plans of William of Orange, and on July 9, 1686, **The League of Augsburg,** directed against France, was signed by the emperor, the Kings of Sweden and Spain, the Electors of Bavaria, of Saxony, and the Palatinate. In 1688 occurred the revolution in England which placed William of Orange on the throne of that country, and added a powerful kingdom to the new foes of Louis. The exiled James II took refuge with the French monarch (court at St. Germain).

1688, Oct. Invasion and devastation of the Palatinate, by order of Louvois The military successes of the French on the Rhine were unimportant, especially after 1693, when **Prince Louis of Bavaria** assumed the chief command against them

1689, May 12. The Grand Alliance, between the powers who had joined the League of Augsburg and England and Holland (Savoy had joined the league in 1687). The principal scene of war was in the Netherlands

1690, June 30. Battle of Fleurus, defeat of the Prince of Waldeck by Louis' general, Marshal **Luxembourg.** The French expedition to Ireland in aid of James had but a temporary success, and ended in defeat, 1690 French successes in Piedmont, Catinat reduced Savoy, defeat of Victor Amadeus at Staffarda

1692, May. Defeat of the French fleet under Tourville by the English and Dutch at **Cap La Hogue.** The mastery of the sea passed from the French to the English Death of Louvois

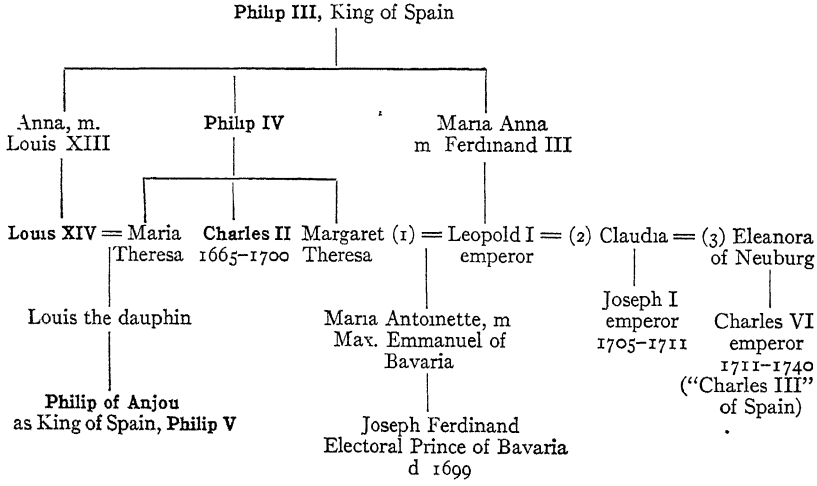
July 24. Battle of Steinkirk (Steenkerken) Victory of Luxembourg over William III

1693, June 30. Battle of Lagos; defeat of the British fleet by the French under Tourville.

July 29. Battle of Neerwinden. Victory of Luxembourg over William III, who in spite of his many defeats still kept the field

In Italy Marshal Catinat defeated the Duke of Savoy at **Marsaglia.** Rise of **Prince Eugene of Savoy** (1663–1736)

1695. Death of Luxembourg, who was succeeded by the incapable Villeroy.



1695, Sept. Recapture of **Namur** by William III

1696, May 30. Separate peace with Savoy at Turin. All conquests were restored to the duke (Pignerol and Casale), and his daughter married Louis' grandson, the Duke of Burgundy. Savoy promised to remain neutral

1697, Sept. 30. TREATY OF RYSWICK between France, England, Spain, and Holland (1) Confirmation of the separate peace with Savoy (2) Restoration of conquests between France and England and Holland, William III acknowledged as King of England, and Anne as his successor, Louis promising not to help his enemies. (3) It was agreed that the chief fortresses in the Spanish Netherlands should be garrisoned with Dutch troops as a barrier between France and Holland (4) France restored to Spain all places which had been "reunited" since the Treaty of Nimwegen, with the exception of 82 places, and all conquests (5) Holland restored Pondichéry in India to the French East India Company and received commercial privileges in return

Oct. 30. Treaty between France and the emperor (and empire) (1) France ceded all the "reunions" except Alsace, which henceforward was lost to the empire.

The Spanish Succession (1700)

(2) Strassburg was ceded to France. (3) France ceded Freiburg and Breisach to the emperor, and Philipsburg to the empire. (4) The Duchy of Zweibrucken was restored to the King of Sweden, as Count Palatine of the Rhine. (5) Lorraine was restored to Duke Leopold (excepting Saarlouis) (6) The claims of Cardinal Furstenburg to the archbishopric of Cologne were disavowed. (7) The Rhine was made free.

1701-1714. WAR OF THE SPANISH SUCCESSION. The family relations which led to the war will be made clear by the genealogical table.

Leopold I had, besides his daughter **Maria Antoinette,** two sons. by his second marriage, **Joseph I,** emperor from 1705–1711; by his third marriage, **Charles VI,** emperor from 1711–1740

Charles II, King of Spain, was childless, the extinction of the Spanish house of Hapsburg in the near future was certain; hence the question of the Spanish succession formed the chief occupation of all the European cabinets after the **Treaty of Ryswick.** The question had two aspects: (a) The *legal*, according to which there were three claimants: (1) **Louis XIV,** at once as son of the elder daughter of Philip III and husband of the elder daughter of Philip IV The solemn renunciations of both princesses were declared null and void by the *parlement* of Paris. (2) **Leopold I,** the representative of the German line of Hapsburg, as son of the younger daughter of Philip III, and husband of the younger daughter of Philip IV Both princesses had expressly reserved their right of inheritance. (3) The **Electoral Prince of Bavaria,** as *great-grandson* of Philip IV, and *grandson* of the younger sister of the present possessor, Charles II. (b) The *political* aspect with regard to the balance of power in Europe, in consideration of which the naval powers, England and Holland, would not permit the crown of the great Spanish monarchy to be united with the French, or to be worn by the ruler of the Austrian lands. On this account Leopold I claimed the Spanish inheritance for his second son Charles only, while Louis XIV's claim was urged in the name of his second grandson, Philip of Anjou.

1698, Oct. 11. First Treaty of Partition Spain, Indies, and the Netherlands to the Electoral Prince of Bavaria, Naples and Sicily, seaports in Tuscany, and the province of Guipuzcoa, to the dauphin, the Duchy of Milan, to Archduke Charles The negotiations of the powers in regard to the succession, and the conclusion of a treaty of partition without the participation of Charles II, provoked that monarch In order to preserve the unity of the monarchy, he made the Prince Elector of Bavaria, then seven years old, sole heir of the whole inheritance, a settlement to which the naval powers agreed

1699, Feb. 6. Sudden death of the Prince Elector New intrigues of France (Harcourt ambassador, Cardinal Portocarrero) and Austria at Madrid, while both parties were negotiating a new treaty of partition with the naval powers.

1700, Mar. 13. Second Treaty of Partition. Spain and the Indies to Archduke Charles, Naples and Sicily and the Duchy of Lorraine to the dauphin, Milan to the Duke of Lorraine in exchange. Finally Charles II, although originally more inclined to the Austrian succession, signed a new will, making Louis' grandson, Philip of Anjou, heir. Immediately afterward

1700, Nov. 1. Charles II died. Louis XIV soon decided to follow the will rather than the treaty with England. The Duke of Anjou was proclaimed as **Philip V,** and started for his new kingdom. (*Il n'y a plus de Pyrénées.*)

1701, Sept. 7. Grand Alliance of the naval powers with the Emperor Leopold I, for the purpose, at first, of securing the Spanish possessions in the Netherlands and in Italy for the Austrian house, while France allied herself with the Dukes of Savoy and Mantua, the Electors of Bavaria and Cologne The other states of the empire, especially Prussia, joined the emperor. Portugal afterward joined the Grand Alliance, and in 1703 Savoy did likewise, deserting France Three men were at the head of the Grand Alliance against France **Eugene, Prince of Savoy,** imperial general, **Marlborough,** English general, formerly John Churchill, **A. Heinsius,** after the death of William III, 1702, pensionary of Holland. Spain, the real object of the war, had but little importance in the campaigns, the chief seats of war being Italy, the Netherlands, and Germany Philip of Anjou was recognized in Spain as **King Philip V.** His strongest support was in Castile

1701. Commencement of the war by Eugene's **invasion of Italy.** Victory over Catinat at Carpi, over Villeroy at **Chiara;** the latter was captured at Cremona (1702).

1702. Eugene and Vendôme fought a drawn **battle at Luzzara,** after which the French had the advantage in Italy until 1706

1703. The Bavarians invaded Tyrol, but were repulsed. Eugene went to Germany, along the Rhine. Marlborough

invaded the Spanish Netherlands. The Archduke Charles landed in Spain, and invaded Catalonia, where he established himself as Charles III **The English captured Gibraltar** (1704).

1704, Aug. 13. BATTLE OF HOCHSTÄDT AND BLENHEIM (BLINDHEIM), (between Ulm and Donauworth), Bavarians and French (Tallard) defeated by Eugene and Marlborough

1706. Charles conquered Madrid but held it for a short time only

May 23. VICTORY OF MARLBOROUGH AT RAMILLIES over Villeroy Submission of Brussels, Antwerp, Ghent, Ostend, etc

Sept. 7. VICTORY OF EUGENE AT TURIN, over Marsin and the Duke of Orléans with the help of the Prussians under Leopold of Dessau. Submission of all Lombardy Charles III proclaimed at Milan. **The French excluded from Italy.**

1708, July 11. VICTORY OF MARLBOROUGH AND EUGENE AT OUDENARDE over Vendôme and the Duke of Burgundy. Siege and surrender of Lille.

Negotiations for peace. Demands of the allies: surrender of the Spanish monarchy to Charles of Austria, and of the border fortresses of the Netherlands to the Hollanders; restoration of all matters relating to the empire and the emperor to the state prescribed in the peace of Westphalia, i.e the cession of Strassburg, Breisach, etc England insisted on the recognition of Anne and the Protestant succession (p. 429) and the banishment of the Pretender. These terms Louis was willing to accept, but when the demand was added that he should drive his grandson from Spain with French weapons, it was too much The negotiations were broken off, Louis made a successful appeal to the people of France, and the war was continued

1709, Sept. 11. BATTLE OF MALPLAQUET. The French were again beaten by Eugene and Marlborough, but, by no means broken, retired in good order. The bloodiest battle of the war. The argument of "butchery" helped overthrow the Whigs in England The allies lost 20,000 men. New approaches on the part of Louis Capture of Douai, Mons, etc (1710). In Spain Philip, by the aid of Vendôme, had the advantage of Charles The Spanish people favored Philip. Renewal of the negotiations at Gertruydenburg. Louis offered to pay subsidized troops against his grandson The allies demanded that he should send his armies against Philip. Renewal of the war. Victories of Vendôme over the English (**Brihuega**, 1710) and the imperialists (**Villaviciosa**, in Spain).

1710, Aug. Fall of the Whig ministry in England, and accession of the enemies of Marlborough

1711. Death of the Emperor Joseph, whereby Charles became heir of all the Austrian possessions, so that the monarchy of Charles V would have been restored had the Spanish inheritance also devolved upon him These events completely altered all the political relations, in favor of Louis XIV. **Marlborough** removed from command, the Grand Alliance dissolved, preliminaries of peace between England and France Death of the dauphin, of Adelaide of Savoy, her husband and their son, the Duke of Brittany

1712. Victory of the French commander Villars at **Denain** over Lord Albemarle Recapture of Douai, Le Quesnoy, and Boucham Opening of the **Congress at Utrecht.** Each of the allies presented his demands separately Dissensions between the allies caused the conclusion of separate treaties of peace, which are comprehended under the name of the

1713, Apr. 11. TREATY OF UTRECHT.

(1) **England:** Recognition of the Protestant succession in England, confirmation of the permanent separation of the crowns of France and Spain France ceded to England Newfoundland, Nova Scotia (Acadia), and Hudson Bay territory, but retained New France (Quebec), Spain ceded to England Gibraltar, the island of Minorca, and the *Asiento*, or contract for supplying the Spanish colonies with African slaves

(2) **Holland:** Surrender of the Spanish Netherlands to the Republic of Holland, in order that they should be delivered to the Austrians, after the conclusion of a barrier treaty, in regard to the fortresses along the French border from Furnes to Namur, which were to be garrisoned by the Dutch. Lille restored to France Demolition of the fortifications of Dunkirk.

(3) **Savoy** received the island of Sicily as a kingdom, and an advantageous change of boundary in upper Italy, renounced its claims upon Spain, reserving, however, its right of inheritance in case the house of Bourbon should become extinct

(4) **Prussia** received recognition of the royal title, and possession of Neuchâtel and the upper quarter of Guelders. Prussia's claim upon the principality of Orange, on the Rhône, was transferred to France.

(5) **Portugal** obtained a correction of boundaries in South America.

Philip V (founder of the Spanish branch of the Bourbons) was recognized as king of Spain and the colonies

Reservations in the peace: (1) for the emperor, the possession of the appanages of the Spanish monarchy, the Netherlands, Milan, Naples, Sardinia, but *not* Sicily, (2) for the empire the *status quo* of the Treaty of Ryswick, only.

1713. The emperor and the empire continued the war. Unsuccessful campaign of Eugene, who was wretchedly supported Landau and Freiburg taken by Villars. After these losses the emperor concluded peace with France, in his own name at Rastadt, in that of the empire at Baden (in Switzerland).

1714, Mar.-Sept. TREATY OF RASTADT AND BADEN. Austria took possession of the Spanish Netherlands, after the barrier for Holland had been agreed upon, and retained Naples, Sardinia, and Milan, which she had already occupied. For the empire. ratification of the Treaty of Ryswick, the Electors of Bavaria and Cologne, who had been placed under the ban of the empire, were reinstated in their lands and dignities Landau was left in the hands of France No peace between Spain and the emperor, who did not recognize the Bourbons in Spain.

1715-1774. LOUIS XV, five years old, great-grandson of Louis XIV. **Philip, Duke of Orléans,** became regent during the minority of Louis XV (1715–1723), thus setting aside the will of Louis XIV An attempt was made to use the higher nobility in government by means of councils, but this failed Under the regent's favorite, **Cardinal Dubois,** a man of low birth who had risen through political skill, the foreign policy of Louis XIV was reversed. **Alliance with England and Holland.**

1718-1720. War with Spain (p. 450). By the **Treaty of The Hague** (Feb 17, 1720) the emperor received Sicily, and Savoy received Sardinia in exchange In domestic policy, increased religious toleration of Protestants and Jansenists

1718-1720. Law's Mississippi scheme. In his financial distress the regent grasped at the dazzling plans of the Scotsman **John Law.** Royal bank, Company of the West, grant of Louisiana Characteristic boom phenomena — rise in value of stock of the Mississippi Company, inflation (made worse by paper) Sudden collapse of the company bringing widespread disaster (1720) Law's boom, like most such speculative manias, left behind it some definite achievements — increased shipping, some colonization in Louisiana, private fortunes for those who had sold out in time With the contemporary English **South Sea Bubble,** Law's scheme forms an introduction to modern speculative finance.

1723-1726. Administration of the Duke of Bourbon. Louis XV married (1725) the daughter of the deposed King of Poland, **Stanislas Leszczynski,** having broken off a projected marriage with the Infanta of Spain and sent her back, to the great indignation of Philip V Louis was under the influence of his tutor, **Cardinal Fleury,** who replaced Bourbon and his favorite Prie, and banished them from court.

1726-1743. Administration of Fleury, generally peaceful, and marked by economic growth Quarrels over the papal bull *Unigenitus,* marked by the government's abandonment of the Jansenists and their defense by the courts (*parlements*) Wave of religious revivalism, similar to Methodism in England (*convulsionnaires,* Archdeacon Pâris) Growth of deism among the literate classes.

1733-1738. France with Spain and Sardinia, took part in the **War of the Polish Succession** (p 477) and occupied Lorraine (1733)

1740-1748. War of the Austrian Succession (p. 465) France supported the claims of the Bavarian elector and allied with Frederick the Great against Maria Theresa (1741). This involved France in conflict with England, especially in North America and India (pp 516, 535).

1756-1763. The Seven Years' War (p 466) in which France played a leading rôle, but this time on the Austrian side, against Prussia The war overseas (p 516) led to the loss of most of the French colonial empire.

After the **death of Fleury,** a series of administrations influenced by the royal mistresses, especially the **Marquise de Pompadour** (1745–1764), who helped make possible the Austrian alliance of 1756 (*The Diplomatic Revolution,* p 467). Heavy expenditures, growth of luxury The king, once *Louis le bien-aimé,* now hated **Damiens,** who attempted to assassinate the king (Jan 5, 1757), was tortured and killed In spite of general failure in war, France added in this reign Lorraine (1766) and Corsica (1769) In his old age, Louis came under the influence of the politically least able of his mistresses, the plebeian Jeanne Vaubernier, by marriage with a superannuated courtier, **Comtesse du Barry.**

Throughout the reign, quarrels with the

parlements, especially that of Paris, which asserted a claim to something like a power of judicial review over the royal decrees. The *parlements* were abolished in 1771 by the chancellor, Maupéou, and a more simple and efficient system of courts set up, but the reform was very unpopular, and Louis XVI restored the *parlements* as one of the first acts of his reign. The crown was made still more unpopular by the affair of the *pacte de famine*, an attempted corner in the grain trade in which the king himself was implicated. Steady growth of a literature of attack on the government.

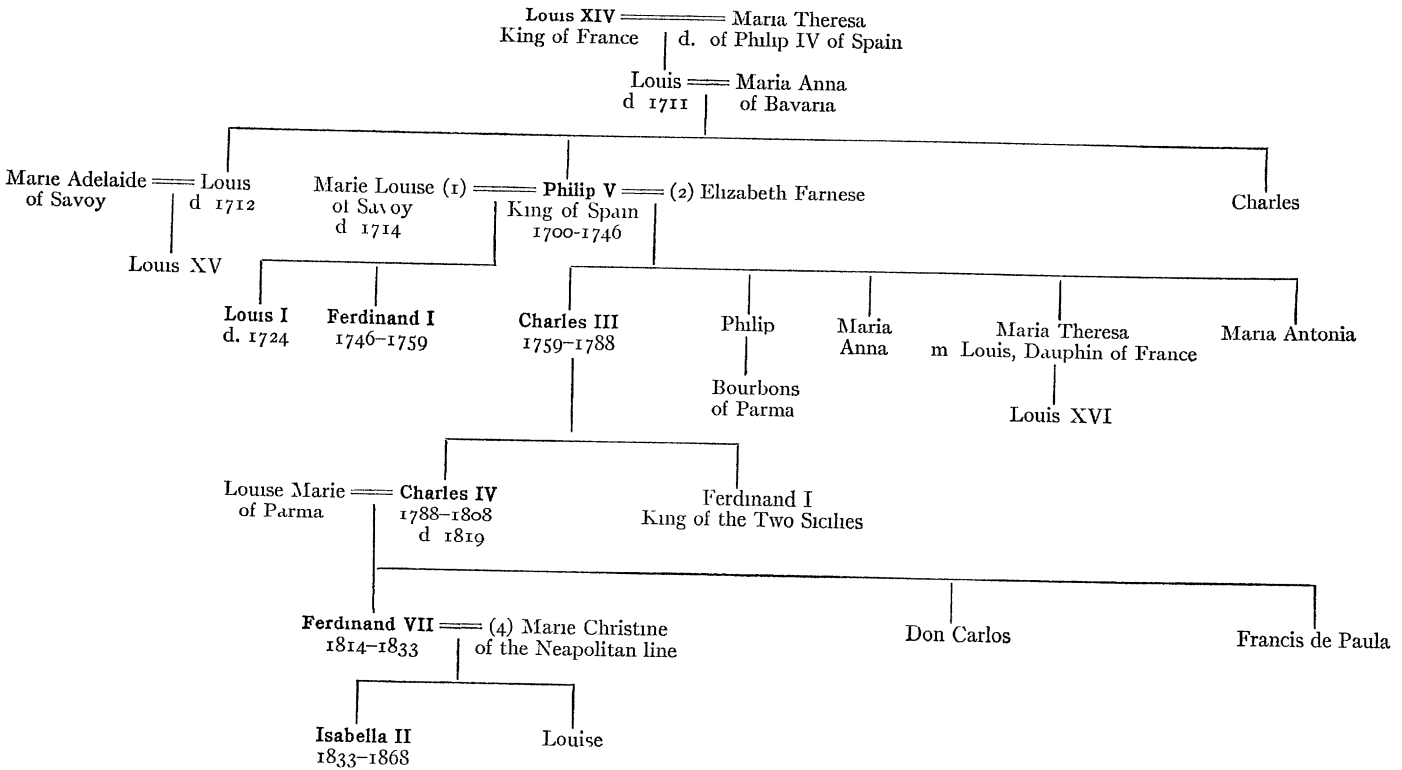
1774-1792. LOUIS XVI, grandson of Louis XV. The new king's personal morality and good will were neutralized by a lack of energy and understanding. As dauphin he had (1770) married **Marie Antoinette,** daughter of the Empress Maria Theresa. The queen, always unpopular with the anti-Austrians at court, was a proud and tactless woman, fond of dances, theaters, parties, and was easily made unpopular with the masses by the propaganda of the *philosophes* and their friends ("Let 'em eat cake") The scandal of the **diamond necklace** (1785) was especially disastrous to her reputation. She did much, by purely personal choices of favorites, to prevent any consistent or thoroughgoing reforms in French administration.

Yet the early years of the reign were marked by an effort, in keeping with the spirit of "Enlightened Despotism," to achieve reforms. **Turgot,** minister of marine and finance (1774–1776), by the *Six Edicts* made reforms in taxation, dissolved the old trade guilds, and tried to carry out the *laissez-faire* economics of the **physiocrats,** of whom he was one of the leading thinkers. He was dismissed, partly by court intrigue, partly by the opposition of the guilds, and his work largely undone. **Necker,** a Swiss banker, was minister of finances (1777–1781) and effected piecemeal reforms. The greatest achievements of Louis' reforming ministers were those of the **Comte de St. Germain** at the war office. The standing army was improved, especially in the artillery. St. Germain and his aids, **Guibert** and **Gribeauval,** did much to make the victories of the armies of 1792–1794 possible. **Maurepas** was the head of the ministry, 1774–1781, and on his death was succeeded by the **Comte de Vergennes** (1781).

1778-1783. France intervened in the **War of American Independence** on the side of the colonists (p. 520). Her expenses in this war added disastrously to her financial deficit.

1781. Necker, dismissed from office, published a somewhat disingenuous *compe rendu* of the finances, the effect of which was to bring the deficit dramatically before the public. The next seven years were filled with the desperate expedients of a series of ministers to solve the financial problem. A solution was probably impossible without taxing heavily the *privilégiés* (nobles, state officials, clergy, and even certain commoners). These resisted the efforts of the government, no matter how well intentioned.

1783-1787. Calonne (minister of finances), a facile courtier, contracted an immense debt, but came in the end to the sensible decision to reform the land-tax thoroughly. He encountered resistance, and was forced out in favor of **Loménie de Brienne.** Meanwhile



1787, Feb. 22. An **assembly of notables,** a purely consultative body, with not very clear constitutional precedents, called to Versailles, was dissolved (May 25) without having achieved any real reform. Loménie de Brienne attempted to issue reform edicts on lines Calonne had worked out, but the *parlements*, headed by the *parlement* of Paris, refused to register them. The *parlement* of Paris was banished to Troyes (Aug. 14). Public opinion was in favor of the *parlement*, and its president, **d'Espréménil,** became a hero, largely because he had defied the government. The *parlement* was recalled (Sept. 24), but continued its resistance when Brienne proposed new loans. In Jan. 1788, it presented a list of grievances, and was abolished in favor of a *cour plénière* (May 8). Louis and his advisers now decided to give in to many pressures, and summon the old mediaeval legislative body of the realm, the **Estates-General,** which had last met in 1614. In Aug. 1788, **Brienne** resigned and amid popular rejoicing **Necker** was recalled to arrange for the Estates. (*Cont. p.* 578.)

4. THE IBERIAN PENINSULA

a. SPAIN

The **Peace of the Pyrenees** (1659) marked the end of the Spanish power in Europe, as it established the ascendancy of France. From that time on Spain, far from controlling affairs, came to be looked on more and more as decadent and as suitable spoil for the stronger states.

The Spanish Bourbons (1700-1868)

1665-1700. CHARLES II, the four-year-old son of Philip IV and the last of the Spanish Hapsburgs Until 1676 his mother, **Marie Anne of Austria,** headed the council of regency. She, in turn, was wholly under the influence of her Jesuit advisers (**Everard Nitard,** *et al*). The general laxity and incompetence of the government, as well as the queen-mother's preference for foreigners, aroused much opposition, led by **John Joseph of Austria** and some of the nobles These ultimately effected the downfall of Nitard and even the departure of the queen-mother Thereafter John Joseph controlled the king until the former's death in 1679

1667-1668. The War of Devolution (p 442), representing an attack by Louis XIV on the Spanish possessions in the Netherlands He was forced, by the combined action of England, Holland, and Sweden, to restore most of his conquests, but by the **Treaty of Aix-la-Chapelle** (May 2, 1668) Louis retained twelve fortified places in Flanders.

1674. Spain joined the coalition against France occasioned by Louis' attack on Holland By the **Treaty of Nimwegen** (Sept 17, 1678) Spain, as the ally of Holland, lost to France Franche-Comté, Artois, and sixteen fortified places in Flanders (p 443).

1680. Charles II married Marie Louise of Orléans On her death he

1689. Married Marie Anne, daughter of the Elector Palatine

1690. Spain joined the League of Augsburg (p 443) against Louis XIV. By the **Treaty of Ryswick** (1697), which concluded the war, Spain was obliged to cede Haiti to France

1698, Oct 11. First partition treaty between England, Holland, and France, regarding the succession to Spain and the Spanish Empire. Charles, naturally irritated by this cavalier treatment,

1700, Oct. 3. Named **Philip of Anjou,** grandson of Louis XIV, heir to his dominions The king, long ill, died on Nov. 1.

1700-1746. PHILIP V, the first Bourbon king, 17 years old at the time of his accession: a mediocre, irresolute, and pious ruler

1701-1715. WAR OF THE SPANISH SUCCESSION (p 445)

1703. The powers of the Grand Alliance against France proclaimed Archduke **Charles of Austria** as King of Spain.

1704, Aug. 4. The British took Gibraltar, which they have held ever since.

1705. Charles landed in Catalonia and took Barcelona (Oct 14) Catalonia and Valencia, ever strongholds of anti-French sentiment, accepted Charles and supported him

1706, June. The Portuguese, acting with the Grand Alliance, invaded Spain and occupied Madrid, but were driven out by Philip in Oct

1707, Apr. The forces of the allies were defeated at **Almanza** by the Duke of Berwick, in Spanish service

1709. The British seized **Minorca.** Philip was defeated by the Austrians at **Almenara** and **Saragossa,** and

1710, Sept. 28. Charles took **Madrid.** Before long, however, Philip and the French won victories at **Brihuega** and **Villaviciosa** (Dec 10) and Charles was obliged to abandon Madrid again.

1713, Apr. 11. The Treaty of Utrecht (p 446). Philip was recognized as King of Spain by England and Holland, on condition that the French and Spanish crowns should never be united **At** the same time he ceded to his father-in-law, Victor Amadeus of Savoy, the island of Sicily. The English retained Gibraltar and Minorca and secured the *Asiento*, a contract allowing them to import into the Spanish colonies 4000 Negroes a year and to keep one ship stationed at Porto Bello

1713, May. The Salic law was introduced in Spain to govern the succession to the throne

1714, Mar. 6. Treaty of Rastadt, ending the war with Austria Spain gave up her possessions in Flanders (henceforth the Austrian Netherlands), Luxemburg, and Italy

Sept. 11. Barcelona finally capitulated to Berwick The privileges of Catalonia and Valencia had already been declared abolished (1707). The provinces were now put under Castilian law and the use of the Catalan language was forbidden in the courts.

With the end of the War of Succession the **Bourbon rule in Spain** may be said to have begun, properly speaking. The rulers of the line soon proved themselves to be no more efficient than the later Hapsburgs and the court continued to be a hotbed of intrigue, dynastic and personal On the other hand, the Bourbon kings regarded themselves as absolute rulers and did their utmost to reduce the old feudal privileges. They reorganized the administration (central secretariats in the place of the old commissions) and established a bureaucracy

(intendants, corregidores) An impressive number of **reforming ministers** succeeded each other through the century, of whom may be mentioned Patiño, Ensenada, Aranda, Floridablanca, Campomanes, Jovellaños and Godoy They succeeded in putting the finances on a sounder basis, in rebuilding the army and navy (introduction of conscription — every fifth man), and above all devoted themselves to economic development — road- and bridge-building, encouragement of industry and trade, establishment of technical schools, agricultural improvements, etc

1714. **Philip married Elizabeth Farnese** of Parma, on the death of his first wife, Marie Louise of Savoy. Elizabeth was a handsome, alert, and very ambitious woman, who soon had the king wholly under her influence. With the aid of her adviser, Abbé (later Cardinal) **Giulio Alberoni**, an Italian of low extraction, she devoted herself to the problem of supplanting the Austrian power in Italy and providing Italian thrones for her children Philip, on the other hand, appears to have hoped for many years to succeed to the French throne and did his utmost to undermine the position of the French regent, the Duke of Orléans. Thus Spain, though hardly a match for either power, antagonized both France and Austria at the same time

1717. Philip secretly sent an expeditionary force, which seized Sardinia, and, later (July, 1718), Sicily also

1718, Aug. 2. Conclusion of the **Quadruple Alliance** (England, France, Holland, and Austria) to counteract the attempts of Philip to overturn the peace settlements The British fleet landed an Austrian force in Sicily, while the French invaded the Basque country and Catalonia. The war was concluded by

1720, Feb. 17. The Treaty of the Hague, by which Philip abandoned his Italian claims in return for an Austrian promise of the succession to Parma, Piacenza, and Tuscany for Charles, the eldest son of Philip and Elizabeth Farnese. At the same time the emperor gave up his claims to Spain. Savoy was given Sardinia in place of Sicily, which was turned over to Austria

1721, June. Spain joined the alliance of England and France. Louis, son of Philip by his first wife, married Louise Elizabeth of Orléans (1722), while Louis XV of France was betrothed to a daughter of Philip and Elizabeth, who was then only five years old.

1724. **Abdication of Philip,** for reasons not clear. He was succeeded by his son

1724. **LOUIS I,** who, however, died in the same year Philip then resumed the crown.

1725. The **Duke of Bourbon,** chief minister of Louis XV of France, eager for an heir to the throne, cancelled the engagement of the king to the girl-princess of Spain. In reply Philip allied himself to Austria (work of the adventurer, Baron de Ripperdá) by the **Treaty of Vienna** (Apr 30, 1725). This alliance, in turn, provoked the **Treaty of Hanover** (Sept 3) between England, France, Prussia, and Holland

1727-1729. **War with England and France.** By the **Treaty of Seville** (Nov. 1729), England and France agreed to the Spanish succession in the Italian duchies

1731. **Charles,** the son of Philip and Elizabeth, on the extinction of the Farnese family, succeeded to the Italian duchies At the same time Spain recognized the **Pragmatic Sanction** of Charles VI (p 463)

1733. First *pacte de famille* between France and Spain Spain thereupon joined France in

1733-1738. **The War of the Polish Succession** (p 477) against Austria A Spanish force was sent to invade Lombardy, while another seized Naples and Sicily (1734) By the **Treaty of Vienna** (Nov 13, 1738) Charles gave up Parma, Piacenza, and Tuscany and instead became King of the Two Sicilies

1739-1741. **War of Jenkins' Ear,** with England (p. 434).

1740-1748. **War of the Austrian Succession** (p. 465). Spain took part in the war as the ally of France against Austria By the **Treaty of Aix-la-Chapelle** (1748), Philip, the second son of Philip V and Elizabeth, was given the Duchies of Parma, Piacenza, and Guastalla, while his brother Charles retained Naples and Sicily. Thus the dynastic aspirations of their mother were realized

1746-1759. **FERDINAND VI,** the second son of Philip V by his first wife Ferdinand was a good but timid ruler, who did but little to impress his age or his people

1754. **Concordat with the Vatican.** Thereby the Spanish Church became practically independent of Rome and was placed under the control of the government

1756-1763. The Seven Years' War (p 466). Spain at first remained neutral, though Spanish troops recovered **Minorca** (1756).

1759-1788. CHARLES III, son of Elizabeth Farnese and thitherto King of the Two Sicilies, which he now passed on to his son Ferdinand. Charles has been classified as one of the enlightened despots and he did, in fact, give considerable impetus to administrative and economic reform

1761, Aug. 15. Second *pacté de famille* with France, against England. In this generally defensive arrangement the Bourbon states of Italy were included.

1762. Spain joined in the war against England The British seized Cuba and the Philippines. By the **Treaty of Paris** (1763, Feb. 10) Spain recovered these possessions, but lost Minorca and Florida. In return for the loss of Florida, France ceded Louisiana to Spain.

1767, Mar. 1. Without warning or trial the king secretly expelled the Jesuits from Spain. Some 10,000 of them were deported to the Papal States

1779, June. Spain joined France in the **War of American Independence** against England. The Spaniards seized Florida and Honduras and Minorca (1782), but failed to retake Gibraltar (1779–1783). By the **Treaty of Versailles** (Sept 3, 1783), Spain retained both Minorca and Florida

1788-1808. CHARLES IV, the son of Charles III, a well-intentioned but weak and undecided ruler His ministers, **Floridablanca** and **Aranda,** made great efforts to shut out the teaching and influence of the French Revolution, and the Spanish court did its utmost to save the life of Louis XVI, but the queen effected the overthrow of Aranda and brought into power her favorite, **Manuel Godoy.**

1793, Mar. 7. FRANCE DECLARED WAR ON SPAIN. Spain made an alliance with England (Mar. 13) and the Spaniards invaded Roussillon and Navarre. But in 1794–1795 the French took the offensive, invading Catalonia and Guipúzcoa. By the **Treaty of Basel** (June 22, 1795), the French returned their conquests and secured in return Santo Domingo. Godoy was given the title *Prince of the Peace.*

1796, Aug. 19. Treaty of San Ildefonso. Spain joined France in the war against England. Defeat of the Franco-Spanish fleet at **Cape St. Vincent** (Feb. 14, 1797). The British seized Trinidad.

1800, Oct. 1. Second Treaty of San Ildefonso. France secured Louisiana in return for a promise to enlarge Parma. By agreement of Jan 20, 1801, Spain promised to detach Portugal from England, by force if necessary. This latter provision resulted in the **War of Oranges,** between Spain and Portugal (to June 6, 1801).

1802, Mar. Treaty of Amiens, between England, France, and Spain. The Spaniards secured Minorca but abandoned Trinidad.

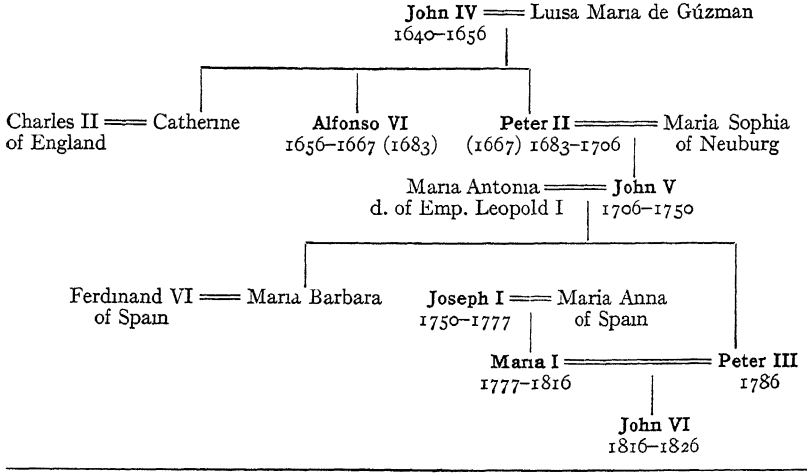
1805, Jan. 4. Spain entered the **War of the Third Coalition** on the side of France. Defeat of the Franco-Spanish fleet at **Trafalgar** (Oct. 21, 1805). Growing opposition of the Spanish people to the disastrous Francophil policy of Godoy Ferdinand, the heir to the throne, soon emerged as the leader of the opposition.

1807, Oct. 27. Treaty of Fontainebleau, between Napoleon and Spain. Portugal was to be divided between Charles IV and Godoy (who was to become Prince of the Algarves, under Spanish suzerainty). The French were to aid in the conquest, and a French army, under **Junot,** soon arrived in Spain. Invasion of Portugal and capture of Lisbon (Nov. 30, 1807).

1807, Mar. 17. Popular uprising against Godoy at Aranjuez Charles thereupon abdicated (Mar 19), but **Murat,** who arrived soon afterward at Madrid, induced the king to retract his abdication and persuaded both Charles and Ferdinand to meet Napoleon

Apr. 30. The Bayonne Conference. Napoleon told Ferdinand to abdicate the throne he had just assumed. Then Charles was forced to abdicate in Napoleon's favor (May 10) Both princes were given estates in France and handsome pensions

June 6. JOSEPH, Napoleon's brother, became King of Spain.



(*Cont pp* 593, 643)

b. PORTUGAL

The story of Portugal in this period parallels that of Spain. The period was one of steady decline economically and socially, accompanied by a growth of the royal power. The last Córtes was called in 1697. The nobility became more and more a court group, dependent on royal favor. The Church, too, was subjected to the state, though within the country the Church possessed great wealth and exercised immense influence.

1640-1656. JOHN IV, first king of the house of Braganza. He was recog-

The House of Braganza (1640-1826)

nized almost at once by France and Holland, but Spain fostered a plot of Portuguese nobles against him This was discovered and the leaders executed Hostilities with Spain continued in desultory fashion In 1644 the Portuguese, supported by England and France, took the offensive and invaded Spain (**victory of Montijo**). This brought a suspension of operations for some years.

1654. **The Dutch** were finally driven from Brazil, where they had established themselves during the Spanish period

1656-1667. **AFONSO VI,** a frivolous, profligate, and vicious young man, during the first period of whose reign his mother, **Luisa María de Guzmán,** served as regent In these years hostilities with Spain were reopened The Spaniards were defeated at **Elvas** (Jan 14, 1659), and, when they attempted to invade Portugal (1662) were again overwhelmed (**battle of Ameixal,** June 8, 1663) in a series of Portuguese victories in 1664–1665

1661. **Charles II of England married Catherine,** the daughter of John IV, thus preparing the way for ever closer relations between England and Portugal

1667. **Peter** (Pedro), the brother of Afonso, led the opposition to the outrageous conduct of the king He set himself up as regent and exiled Afonso to the Azores (d 1683). Peter's rule was more respectable and enjoyed wide popular support

1668, Feb. 13. **Conclusion of peace with Spain,** through the mediation of Charles II of England. Spain at last recognized Portuguese independence.

1683-1706. **PETER II** ruled as king after the death of Afonso. His reign was memorable for the conclusion of

1703, Dec. 27. **THE TREATY OF METHUEN,** with England (concluded by Lord Methuen, the British ambassador). By the agreement English textiles were to be freely admitted into Portugal and England was to admit Portuguese wine at a greatly reduced tariff. The treaty resulted in rapid domination of Portuguese trade by the British

1704. **Invasion of Portugal** by the Spanish under Berwick, the consequence of Portugal's participation in the War of the Spanish Succession on the side of England The British sent a force to Lisbon, the Spaniards were driven out and the Portuguese in turn invaded Spain, taking Madrid (June 28, 1706)

1706-1750 **JOHN V,** the son of Peter II, a profligate, extravagant, and bigoted ruler, during whose reign the court became another Versailles (construction of the **Mafra palace**), filled with mistresses and favorites

1707, Apr. Defeat of the Portuguese by Berwick at **Almanza.** Thereafter the Portuguese played no important part in the war

1750-1777. **JOSEPH I,** during whose entire reign the government of the country was in the hands of the **Marquis de Pombal** (Sebastião José de Carvalho e

Mello, who became Marquis of Pombal only in 1770), the most remarkable statesman of modern Portuguese history Pombal was a ruthless and heartless dictator, but at the same time a man affected by the French philosophy of the enlightenment. He devoted himself to breaking the power of the privileged nobility and even more of the Church. On the other hand, he reformed the finances and the army, encouraged industry and trade (establishment of trade companies with monopolistic powers), tried to revive agriculture (silk-raising), and did much to develop primary and technical education

1755, Nov. 1 THE GREAT EARTHQUAKE AT LISBON, which was accompanied by fire and by flood of the Tagus Tens of thousands lost their lives in the great disaster Lisbon was destroyed, with many of its treasures. The city was rebuilt under Pombal's energetic direction

1758, Sept. Conspiracy of the Tavoras, a plot by a group of nobles against the king and more especially against the all-powerful minister The leaders, among them members of the highest aristocracy, were tortured and executed

1759, Sept. 3. Expulsion of the Jesuits, who were deported to the Papal States. This was a direct result of the Tavora conspiracy, in which some Jesuits were involved. Pombal thus set the example for Spain and other states and in fact took a leading part in inducing the pope to abolish the Society of Jesus (1773)

1761. During the Seven Years' War, the Portuguese stood by England. The result was an invasion by Spanish and French forces, but this was repulsed with British aid (Dec. 1762)

1774. Insanity of Joseph I, and regency of his wife, **Maria Anna.** She began gradually to reduce the power of Pombal

1777-1816 MARIA I, the daughter of Joseph I, queen. She married her uncle, Peter, who assumed the title of king as **Peter III,** but who died in 1786 Under Maria the nobility began to recover its position. Pombal was exiled (d. 1782), but his reform policies were continued at a reduced pace.

1792. Insanity of Maria and regency of her son John. John, ardently supported by the clergy, undertook a drastic repression of all revolutionary agitation and thought

1801, Feb.-Sept. War of the Oranges, with Spain, resulting from the bargain made between Spain and France After a Spanish invasion the Portuguese made peace By the **Treaty of Madrid** (Sept 29) Portugal paid a heavy indemnity and renounced the treaties with England.

1807, Oct. 27. Treaty of Fontainebleau between France and Spain, envisaging the **partition of Portugal.** The provinces of Entre-Douro and Minho (with Oporto) were to go to Louis, King of Etruria, who was to become King of Northern Lusitania Alentejo and Algarve were to go to Godoy as Prince of the Algarves; Beira, Tras-6s-Montes, and Estramadura were to be disposed of later

Nov. 30. Lisbon was taken by a French army under Junot, assisted by the Spanish. The Portuguese royal family thereupon fled to Brazil

(*Cont. pp.* 593, 648.)

5. ITALY AND THE PAPACY

a. ITALY (GENERAL)

Italy remained, during the late 17th and in the 18th century, a mere geographical expression, politically divided and for the most part under foreign rule. But the cultural decadence of the 17th century gave way in the 18th to a remarkable flowering which again made Italy an important factor in European art and thought and contributed much to the general European enlightenment. In music Italy was outstanding. **Amati** and **Stradivarius** built the finest stringed instruments; the **opera** (dating from 1600) was brought to a high stage of development by **Monteverdi** (1698–1782), **Pergolesi** (1710–1736), **Cimarosa,** and **Paisiello.** Two great schools of music at Venice and Naples **Lorenzo Bernini** (1598–1680), architect and sculptor, was one of the leading artists of the Baroque period, which preceded the Rococo of the 18th century and the classical revival represented by **Canova** (1757–1822). In painting, **Giambattista Tiepolo** (1693–1770) for a time brought Venice a final burst of glory. The **Academy of Arcadia** (1692) started a widespread vogue of the conventional and artificial in literature, which, however, was counterbalanced by the comedies of **Goldoni** (1707–1793) and the serious patriotic drama of **Vittorio Alfieri** (1749–1803) But Italy was pre-eminent also in the fields of social

and physical science. **Pietro Giannone** (1676–1748) created a profound stir with his anti-clerical *Istoria civile del regno di Napoli* (1723), **Antonio Genovesi** (1712–1769) was an outstanding physiocrat, another distinguished economist was **Pietro Verri** (1728–1797); **Giambattista Vico** (1668–1744), with his *Scienza Nuova* (1725), laid the basis of the modern philosophy of history, while **Cesare Beccaria** (1738–1794) in his *Dei delitti e delle pene* (1764) founded the modern science of penology In the natural sciences **Spallanzani** (1729–1799) made fundamental contributions to the study of digestion, while **Galvani** (1737–1798) and **Volta** (1745–1827) were in the front rank among the pioneers of electricity

b. THE PAPACY

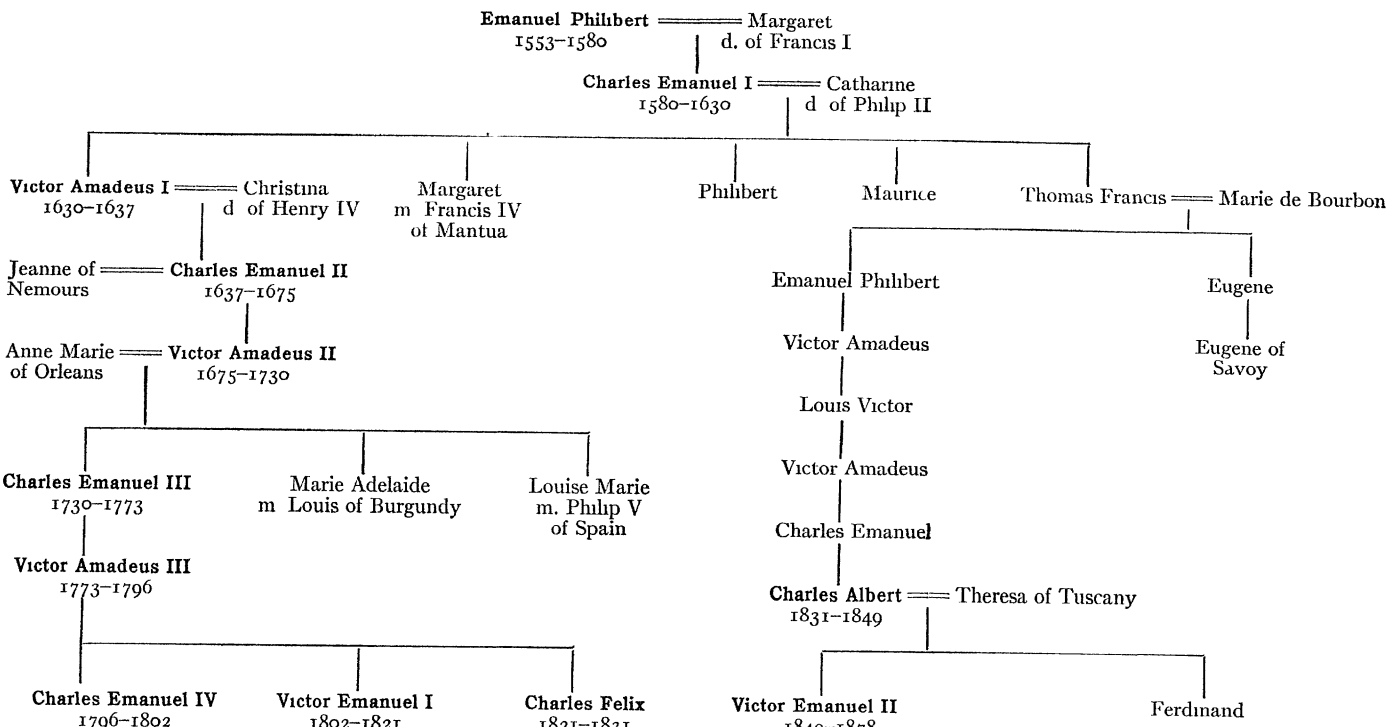
Most of the popes of the later 17th and 18th centuries were altogether worthy men, but the currents of the time were against the papacy. By attempting to remain neutral in the great conflicts between the Bourbons and the Hapsburgs, the popes sacrificed the support of both. Furthermore, the Church before long became divided on the question of **Jansenism** (from **Cornelius Jansenius,** Bishop of Ypres, who died in 1638, leaving a famous book, *Augustinus*, published in 1640. In this he emphasized inner regeneration rather than external reorganization of the Church, as represented by the Jesuits). Jansenism and Jesuitism soon came into conflict and the papacy was sapped in the process The enlightenment of the 18th century completed the development and by the time of the French Revolution the papacy appeared as an ineffectual and outworn, as well as superfluous institution

1644-1655. INNOCENT X (Giambattista Pamphili), a pope who was entirely under the control of his sister-in-law, **Olympia Maidalchini,** whose machinations brought about almost complete financial collapse The pope denounced the **Treaty of Westphalia** because of the abolition of bishoprics, etc, but the protest was of no effect By the bull *Cum occasione impressionis libri* (May 31, 1653) the pope condemned five propositions in the work of Jansenius, thus initiating the Jansenist controversy

1655-1667. ALEXANDER VII (Fabio Chigi), an honest and cultured, but apathetic pontiff, who left the conduct of affairs to his nephew, **Flavio Chigi.** Beginning of friction with Louis XIV over the prerogatives of the Church.

1667-1669. CLEMENT IX (Giulio Rospigliosi), elected by the French influence He attempted to mediate between Jesuits and Jansenists, but died before much could be achieved

1670-1676. CLEMENT X (Cardinal Altieri), regarded as pro-Spanish. He disapproved of the French alliance with the Turks and did what he could to support the war of the Hapsburgs against the enemy.



1676-1689. INNOCENT XI (Benedetto Odescalchi), one of the outstanding popes of the period He undertook a much-needed financial reorganization of the papacy, refused to practice nepotism, enforced regulations to improve the morality of the clergy At the same time he financed the Austrians in their campaigns against the Turks The **conflict with Louis XIV** came to a head when the French ruler called a church assembly at St Germain (1682) which adopted the four articles (1) Sovereigns are not subject to the pope in temporal matters, (2) a general council is superior to a pope, (3) the power of the pope is subject to the regulations of a council and a pope cannot decide contrary to the rules of the Gallican Church, (4) decisions of the papacy are not irrevocable. In reply to these articles the pope refused to invest as bishops any French clerics who had taken part in the assembly. Ultimately 35 French bishoprics were vacant Further friction developed The pope protested against the suppression and expulsion of the Huguenots and actually approved the expedition of William III to England, as part of an anti-French policy

1689-1691. Alexander VIII (Pietro Ottoboni).

1691-1700. INNOCENT XII (Antonio Pignatelli), another able pope. By the bull *Romanum decet pontificem* (1692) he definitely limited the number of offices that could be held by relatives of the pope, thus putting an end to nepotism in its worst form He also checked the sale of offices In 1697 he made peace with France, winning a substantial victory. Louis XIV abrogated the four articles of 1682, probably in order to win support in the matter of the Spanish Succession

1700-1721. CLEMENT XI (Giovanni Francesco-Albani), an upright priest, who, though he inclined toward France, attempted to maintain neutrality in the Bourbon-Hapsburg struggle The Austrians therefore ignored papal claims In the course of the war they occupied Parma and Piacenza, marched through the Papal States and conquered Naples. In

The House of Savoy (1553-1878)

1709 the pope was obliged to recognize Charles as King of Spain But Clement's pontificate was noteworthy chiefly for the renewed condemnation of Jansenism, which had made extraordinary progress in France The bull *Unigenitus* (Sept 8, 1713) was a landmark in the controversy

1721-1724. Innocent XIII (Michelangelo Conti), a kind but ineffectual pope, who was followed by two other unimportant pontiffs,

1724-1730. Benedict XIII (Cardinal Orsini-Gravosa), and

1730-1740. Clement XII (Lorenzo Corsini)

1740-1758 BENEDICT XIV (Prospero Lambertini), a charming, learned, and serious-minded pope He was much influenced by the enlightenment in Europe, was a friend of Voltaire and Montesquieu, did much to encourage agriculture and trade His policy was to seek a compromise with the absolute rulers, whose efforts to establish national churches had so much weakened the papacy Conclusion of **concordats with Naples** (1741) and **Spain** (1753) were important steps in this direction, though they cost the papacy far-reaching concessions

1758-1769. CLEMENT XIII (Card della Torre de Rezzonico), a pope elected through the efforts of the Jesuits (*Zelanti*), but who proved too weak and mild to save them The Jesuits had become unpopular as a result of Jansenist attacks, and because of their interference in politics, their engagement in commercial and industrial enterprise, etc Their expulsion from Portugal (1759) and France (1762) set the ball rolling, and the next pope,

1769-1774. CLEMENT XIV (Lorenzo Ganganelli), was unable to resist the pressure of the Bourbon governments By the breve *Dominus ac redemptor noster* (July 21, 1773) the Society of Jesus was ordered dissolved

1775-1799. PIUS VI, during whose pontificate the papacy felt the full force of the revolutionary doctrine The pope tried to deter Joseph II from his anti-clerical policy, but was soon confronted with the radical anti-clericalism of the French Revolution As a result the French armies invaded papal territory (1796) and, after a short truce, intervened in Rome to set up the revolutionary **Roman Republic** (1798) The pope was taken off to southern France (Valence), where he died in the next year. (*Cont. pp.* 595, 663)

c. SAVOY (SARDINIA)

The beginning of the period was one of almost complete eclipse for Savoy, where the **regency of Duchess Christina** for her son, Charles Emanuel II, formed a long interlude of conflict between the French and Spanish factions and brought on a decisive weakening of the ducal power In the 18th century, however, Savoy re-emerged as a strong military state (the Prussia of Italy)

1638-1675. CHARLES EMANUEL II, who came of age in 1648, submitted to the domination of his mother until her death in 1663. His reign was scarred by the horrible **massacres of the Waldenses** (1655) which stirred the indignation of Europe

1675-1730. VICTOR AMADEUS II. His mother, **Jeanne de Nemours,** acted as regent not only until the young duke attained his majority, but until 1684 She continued the Francophil orientation of Savoyard policy. In 1681 Louis XIV appropriated Casale as part of his reunion plan

1685. Further persecution of the heretics, at the behest of Louis XIV

1690. The duke at last made a break in the pro-French policy and joined the League of Augsburg against the French But in 1696, hoping to make better terms with Louis, he reversed himself and received Pinerolo in return. The French and Savoyard forces obliged the powers of the league to evacuate Italy and agree to its neutralization for the duration of the war.

1701, Apr. War of the Spanish Succession (p 445) Victor Amadeus stuck by the French connection and allowed the French to occupy Milan and Mantua But once again the duke changed sides, joining the Grand Alliance in 1703 As a result the French, under Vendôme, overran Savoy in 1704, but the Austrians, under **Prince Eugene of Savoy,** relieved the situation in 1705. During the following year the French again invaded and besieged Turin until, in Sept., they were again driven out by Prince Eugene Occupation of Milan by the Austrians and Savoyards (Sept 24) This practically ended the war in Italy.

1713. By the **Treaty of Utrecht,** Victor Amadeus was awarded Sicily as his share of the Spanish spoils. At the same time he assumed the royal title.

1717. A Spanish raid on Sicily resulted in war (p 451) and a new peace settlement, by which

1720. Victor Amadeus gave up Sicily to Austria and received in exchange the island of Sardinia Henceforth he was *King of Sardinia.*

1730-1773. CHARLES EMANUEL III, king. He joined France and Spain in the War of the Polish Succession, in the hope of driving the Austrians out of Italy By the **Treaty of Vienna** (Oct 3, 1735), however, his possessions remained unchanged.

1742-1747. Savoy sided with Austria in the War of the Austrian Succession, and by the **Treaty of Aix-la-Chapelle** (1748) was rewarded with that part of the Duchy of Milan which lay on the west of the Ticino

Savoy-Piedmont had relatively little share in the intellectual and artistic life of Italy, being essentially a military state The army, however, was not nearly strong enough to resist the storms of the French Revolution

1773-1796. VICTOR AMADEUS III. Strongly anti-revolutionary by temperament and policy, the king in 1792 joined Austria in the war against France, rejecting French offers of Lombardy His territories were soon overrun by the French and

1796. Napoleon's appearance in Italy sealed the fate of the kingdom The armies of the king were quickly defeated and, by the **armistice of Cherasco** (Apr 28) the king was obliged to abandon the Austrian alliance Napoleon's defeat of the Austrians led to a fundamental remaking of the whole Italian situation (p 585). (*Cont pp* 585, 650)

d. NAPLES

The Spanish rule continued in Naples until the War of the Spanish Succession (p. 445) During this conflict

1707. The Austrians occupied Naples, and

1713. By the **Treaty of Utrecht,** Spain ceded to Austria Sardinia and Naples, while Sicily passed to Savoy In 1720 Austria exchanged Sardinia for Sicily, but, after the War of the Polish Succession

1735. Austria ceded Naples and Sicily to the Spanish Bourbons, on condition that they should never be united with Spain as one crown

1735-1759. CHARLES IV (son of Philip V of Spain), King of Naples and Sicily. His reign was one of reform and enlightenment, guided by **Bernardo Tanucci.** Restriction of feudal privilege, reform of finance and taxation, reorganization of prisons, reduction of church wealth and power (**Concordat of 1741**). Naples the musical and intellectual center of Italy. Excavation of Herculaneum (1738) and discovery of the temples at Paestum (1752) paved the way for neo-classicism in art (Winckelmann, etc)

1759-1825. FERDINAND I, the third son of Charles, succeeded to the throne when his father was called to assume the Spanish crown Ferdinand was only nine years old, and continued under the influence of Tanucci until the latter's fall in 1771 By that time his wife, **Maria Carolina** (daughter of Maria Theresa) already dominated him She, in turn, followed the lead of an English adventurer, **Sir John Acton,** who was busily engaged in rebuilding the Neapolitan army and navy The result of Maria Carolina's policy was to break down the Spanish influence and to direct the king toward the Austrian connection (*Cont pp* 586, 650.)

e. OTHER STATES

VENICE continued to fall into ever deeper decline, the old aristocratic rule becoming ever more unsuited to the demands of the European world In international affairs Venice became entirely devoted to peace and neutrality, and only in the wars with the Turks was there some reflection of earlier glory

1645-1669. The Candian War (p 424), during the earlier part of which the Venetians won resounding naval victories at the Dardanelles (under Grimani and Mocenigo). The war ultimately centered on the siege of Candia (1658–1669). France came to the aid of Venice and the Venetians themselves put up a stout defense, under **Francesco Morosini** Finally, however, the Venetians were obliged to yield. By the peace settlement they lost Candia (Crete).

1684. Venice joined with Austria and Poland in the war against the Turks (p. 483) In 1685 Morosini began the **conquest of the Morea,** which was completed in 1687 The Venetians even captured Athens (explosion of the ammunition stores in the Parthenon) By the **Treaty of Karlowitz** (p 484), the Venetians retained the Morea.

1718. By the Treaty of Passarowitz (p. 484), the Venetians, who had joined in the Turkish War at the side of the Austrians, lost the Morea Thenceforth Venice retained only the Ionian Islands and the Dalmatian coast. Politically Venice stagnated, while artistically it remained one of the most active centers in Europe.

MILAN remained under Spanish rule until, by

1713. **The Treaty of Utrecht** it passed to Austria Mantua was incorporated with the Duchy of Milan, after the last Gonzaga had, in 1701, sold it to Louis XIV

Parma and Piacenza changed hands several times during the 18th century

1731. On the extinction of the Farnese family, the duchies were given to Charles, the son of Philip V of Spain and his second wife, Elizabeth Farnese. In 1733 (War of the Polish Succession) Charles conquered Naples and Sicily, and these territories were awarded him in the peace settlement In return he abandoned Parma and Piacenza to Austria

1748. As a result of the **War of the Austrian Succession,** Maria Theresa ceded Parma and Piacenza to **Philip,** the younger brother of Charles of Naples Philip ruled until 1765 and was succeeded by his son **Ferdinand,** who married a daughter of Maria Theresa and generally followed the lead of the Vienna government.

The **GENOESE REPUBLIC,** like the Venetian, remained independent, though constantly exposed to encroachment by Savoy, France, and Austria

1730. **Revolt of Corsica** against Genoese rule After a long and variable struggle, during which a German adventurer, Baron Neuhof of Westphalia, appeared for a time as **King Theodore I** (1736), the Genoese called upon the French for assistance After many engagements (especially against **Pasquale Paoli,** the Corsican leader), the French subjugated the island, which the Genoese ceded to them (1768).

TUSCANY (Florence) continued under the decadent and unedifying rule of the Medici (**Cosimo III,** 1670–1723, **Gian Gastone,** 1723–1737) until the extinction of the line in 1737

1737-1745 **Francis of Lorraine,** Grand Duke of Tuscany He became the husband of Maria Theresa and, after his election as German emperor, turned over Tuscany to his second son

1745-1790. **Leopold I,** who devoted himself to the thoroughgoing reform of his dominion. The administration was remade, serfdom abolished, trade and industry encouraged Tuscany became perhaps the best ruled and most progressive region of Italy (*Cont p* 650)

6. THE SWISS CONFEDERATION

The century from 1650 to 1750 was one of stagnation and decline in Switzerland. The confederation continued to be the loosest kind of union, the cantons divided against each other by religious issues Within the cantons patrician oligarchies became dominant and ruled in a reactionary fashion The main occupation of the Swiss continued to be fighting, and mercenaries were engaged by foreign states (especially France) by the tens of thousands. Only after 1750 was there a renaissance, which brought Switzerland to the threshold of the French Revolution.

1653. **A peasant revolt,** led by Nicholas Leuenberg, brought the insurgents to the very gates of Bern, but was suppressed with the aid of other cantons.

1655. Proposals for the establishment of a more centralized state, put forward by Zürich, were defeated by the Catholic cantons

1656. **THE FIRST VILLMERGEN WAR,** in which Bern and Zurich were pitted against the Catholic cantons. The Protestants were defeated at Villmergen (Jan. 24) and complete control of religious affairs had to be left to the individual members of the confederation

1663. Renewal of the alliance with France, enabling Louis XIV to draw as many mercenaries as he chose from the cantons. The alliance was opposed by Zurich and some of the Protestant cantons, and in the ensuing period there was much friction between France and Switzerland over the question of service with France against Protestant states, over the reception of Huguenots expelled from France, etc

1663-1776. During more than a century there was no meeting of the federal Diet, indicating the almost complete collapse of the federal connection

1678. **Franche-Comté,** hitherto under federal protection, was annexed to France

1693. The Protestant cantons, incensed by French use of mercenaries against the Dutch, agreed to supply soldiers to the Dutch, and later to the English. Thereupon the Catholic cantons made an agreement to supply men to the Spaniards. In the War of the Spanish Succession (p.

445) the Swiss fought by the thousands on both sides

1707. A popular insurrection at Geneva led by Peter Fatio, was suppressed with the aid of the Bern and Zurich oligarchies

1708. **The house of Hohenzollern** succeeded to the principality of Neuchâtel Louis XIV was prevented by the war from pressing the claims of the Prince of Conti

1712. **THE SECOND VILLMERGEN WAR,** another conflict between Catholics and Protestants This time the Bernese won a decisive victory, again at Villmergen (July 25), after which the dominance of the Protestant cantons was firmly established

1723 **Revolt of Abraham Davel** in the Vaud, against the oppressive rule of Bern The whole affair was a harebrained undertaking, inspired by noble motives After taking Lausanne, Davel was easily outmaneuvered, captured, and executed.

1725. Renewal of the treaty with France, but this time with the abstention of the Protestant cantons.

1734, 1737. Further uprisings in Geneva led to some constitutional revision in the popular direction

With the middle of the century there came a distinct economic improvement in Switzerland, marked by the expansion of industry This brought with it a falling-off of the mercenary system, but also a rise of the-middle class and an intellectual renaissance Zurich (with **Johannes J. Bodmer,** 1698–1783, **Albrecht von Halle,** 1708–1777, and **Johannes C Lavater,** 1741–1801) became an important center of German literature and thought, Geneva (with **Rousseau,** 1712–1778, **Voltaire,** resident in the vicinity after 1755, etc) became a refuge for advanced thinkers of the French school. The **Helvetic Society** (founded 1762) was an exuberant organization devoted to the new ideas.

1776. The whole confederation once more allied itself with France, but Swiss mercenaries in French service fell to less than 10,000

1789-1792. In the first years of the **French Revolution** the Swiss oligarchies were strongly hostile and seriously considered intervention by the side of Austria and Prussia. In the end they determined on neutrality, though pursuing at home a repressive policy (crushing of unrest in the Vaud by the Bern government)

1792, Dec. 5. A revolutionary coup at Geneva put the government in the hands of the popular party. Thenceforth the developments in France were faithfully mirrored in Geneva.

1793. The French Republic annexed the Bishopric (not the town) of Basel.

1797, Oct **Napoleon,** following his successes in Italy, annexed the Valtelline and Chiavenna to the Cisalpine Republic

Dec. Revolutionists seized the town of Basel

1798, Jan 23. The French declared the Vaud free from Bernese rule and organized it as the **Lemanic Republic.**

Feb. 9. France decreed the establishment of a **Helvetic Republic** The move was inspired by the Helvetic Committee in Paris, a revolutionary group headed by **Frédéric-César de La Harpe,** 1754–1838, a Vaudois whose great aim was the liberation of his homeland from the hated Bernese aristocracy, and by **Peter Ochs,** a less high-minded radical The new republic was to be organized along French lines: excepting for territory annexed to France, all the cantons, together with the subject territories, were to be made into 23 cantons, the whole bound together by a centralized government consisting of an elected chamber of deputies (eight members from each canton) and a senate (four from each canton) At the head was to be a directory of five

The French move finally convinced the Swiss oligarchies of the danger Bern declared war and the Bernese defeated the French army under Brune at **Laupen** (Mar 5) But another Bernese force was vanquished on the same day by Gen Schauenberg Bern surrendered and was sacked. Indemnity of 17 million francs.

Apr. **Five Forest** (Catholic) **cantons** revolted against the French, under Aloys von Reding They won some successes, but then made peace, accepting the Helvetic constitution on condition that the French should not interfere or occupy territory of the five cantons

Apr. 26. **Geneva was annexed to France.**

(*Cont pp* 586, 666.)

7. GERMANY

1658-1705. LEOPOLD I, the son of Ferdinand III After 1683 a permanent **Diet at Regensburg,** consisting of representatives of the 8 electors, the 69 secular princes, and the imperial cities, an ineffectual legislature, often degenerating into a squabble for precedence ("a bladeless knife without a handle") *Corpus Catholicorum* and *Corpus Evangelicorum,* the corporate organizations of the Catholic and Protestant states, the latter being the most important This organization of the Protestant states had existed, in fact, since the latter half of the 16th century, but it was legally recognized in the Treaty of Westphalia, which decreed that in the Diet matters relating to religion and the Church should not be decided by a majority, but should be settled by conference and agreement between the Catholic and Protestant states, as organized corporations

1661-1664. War against the Turks (p 483)

1666. Settlement of the contested **succession in Cleve-Julich·** Cleve, Mark, and Ravenstein, as well as half of Ravensberg, were given to Brandenburg, afterward the whole of Ravensberg in place of Ravenstein

1668. The empire joined in the **War of Devolution,** against Louis XIV of France (p 442), and likewise in

1674. The Dutch War, siding with the Dutch against the ambitious aggression of the French king

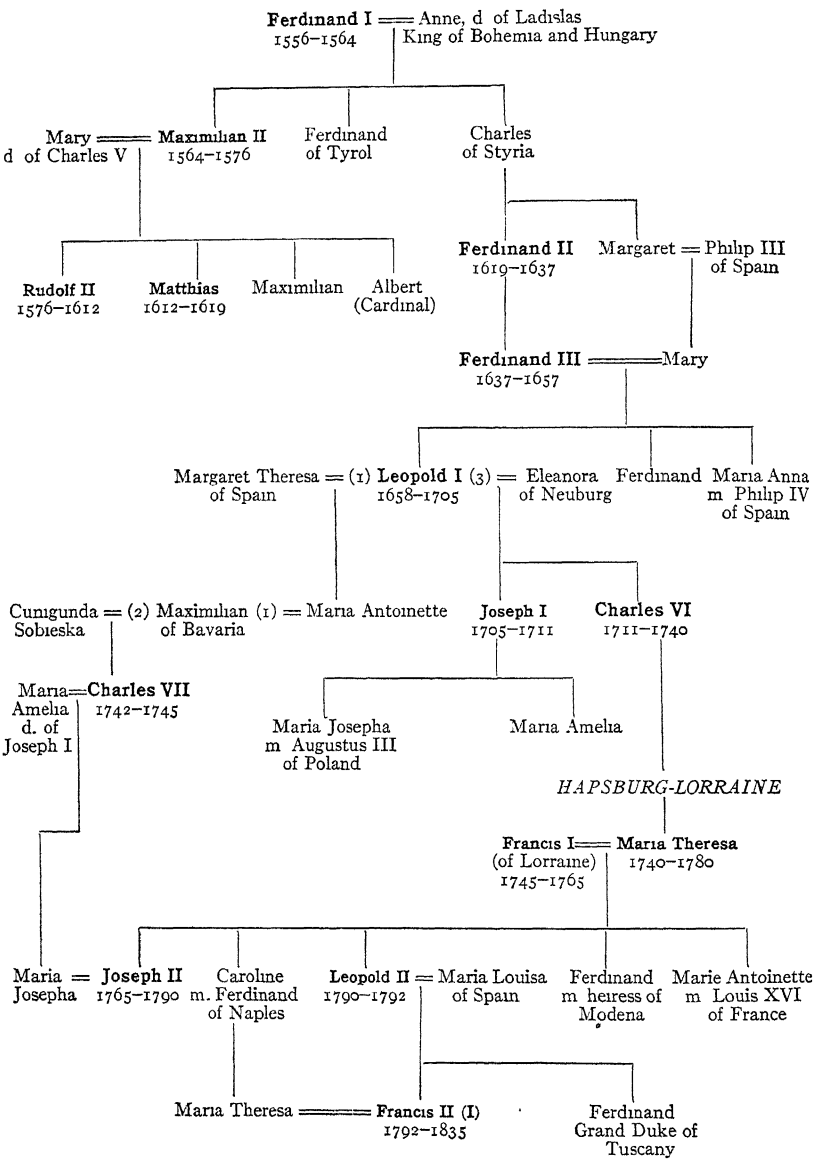
1682-1699. THE LIBERATION OF HUNGARY as a result of a prolonged war against the Turks Hungary had undergone a marked decline in the mid-century. The greatness of Transylvania came to an end with **George II Rakoczi** (1648–1660) whose ambitious dynastic policy (alliance with Sweden, attempt to secure the Polish crown) had led to trouble with the Turks, who finally drove him from the throne In that part of Hungary ruled by the Hapsburgs there continued to be persecution of the Protestants and, under Leopold I, extension of the royal power, confiscation of estates of opponents, etc This led to much unrest (insurrection of **Imre Tökölli**), but the reconquest of the country entirely transformed the situation.

For details of the **war against the Turks** see p 483 After the siege of Vienna (1683), the imperial generals, Charles of Lorraine and Louis of Baden, advanced into Hungary Buda was taken (1686) and, after the **victory at Mohacs** (1687) the Turks were driven beyond the Danube. Eugene of Savoy's great **victory at Zenta** (1697) brought the war to a close. By the **Treaty of Karlowitz** (Jan. 26, 1699) the Hapsburgs secured all Hungary excepting the Banat of Temesvar In the meanwhile the Hungarian Diet had (1687) fixed the succession to the throne in the male line of the Hapsburgs In view of the general devastation and depopulation the government began an extensive policy of colonization (1690 Serbs in southern Hungary, 1720–1800 large-scale settlement of Germans) The reconquered territories were awarded in large part to German commanders and soldiers and during the whole century following the reconquest there was a steady increase of royal power and an ever greater concentration of authority in the Vienna government bureaus The ancient constitution of Hungary subsisted, but it fell more and more into neglect The higher aristocracy tended to devote itself to the pleasures of the Vienna court, and the opposition of the gentry (concentrated in the local assemblies or comitats) was not sufficient to stem the tide of absolutism

1688-1697. War of the League of Augsburg, against Louis XIV (p 443). This war distracted the empire to such an extent that the reconquest of Hungary was delayed for a decade

During this period several of the German princes were elevated in rank

1692. Hanover became an electorate (the ninth).



1697. Augustus II, Elector of Saxony, was elected King of Poland on the death of John Sobieski. He thereupon adopted the Catholic faith.

1701, Jan. 18. FREDERICK III, Elector of Brandenburg (1688–1713), with the consent of the emperor, assumed the title of *King of Prussia* (*Konig in Preussen*) (Frederick I) and crowned himself at Konigsberg

1710-1714. War of the Spanish Succession (p 445) The emperor, though he and his allies failed to prevent the succession of the Bourbon house in Spain, nevertheless effected the breakup of the Spanish dominions in Europe By the final settlement Austrian power and influence replaced that of Spain in Italy, and Austria also succeeded to the Spanish Netherlands (henceforth the Austrian Netherlands)

1703-1711. Revolt of the Hungarians under **Francis II Rakoczi.** This was the result of widespread discontent with the policy of the Vienna govern-

The German Hapsburgs (1556-1835)

ment. Ultimately the movement became a real social upheaval. Rakoczi soon controlled most of Hungary and even began to threaten Vienna. But his followers accepted the **Peace of Szatmar** (May 1, 1711), by which the emperor promised respect for the Hungarian constitution and redress of grievances. Rakoczi himself refused these terms and took refuge in Turkey (d. 1735)

1705-1711. JOSEPH I, son of Leopold. He was succeeded by his brother,

1711-1740. CHARLES VI.

1713-1740 FREDERICK WILLIAM I, son of Frederick I, King of Prussia, by wise economy, military severity, and the establishment of a formidable army, laid the foundation of the future power of Prussia. Maintenance of a standing army of 83,000 men, with a population of two and a half million inhabitants **Prince Leopold of Anhalt-Dessau** (*der alte Dessauer*).

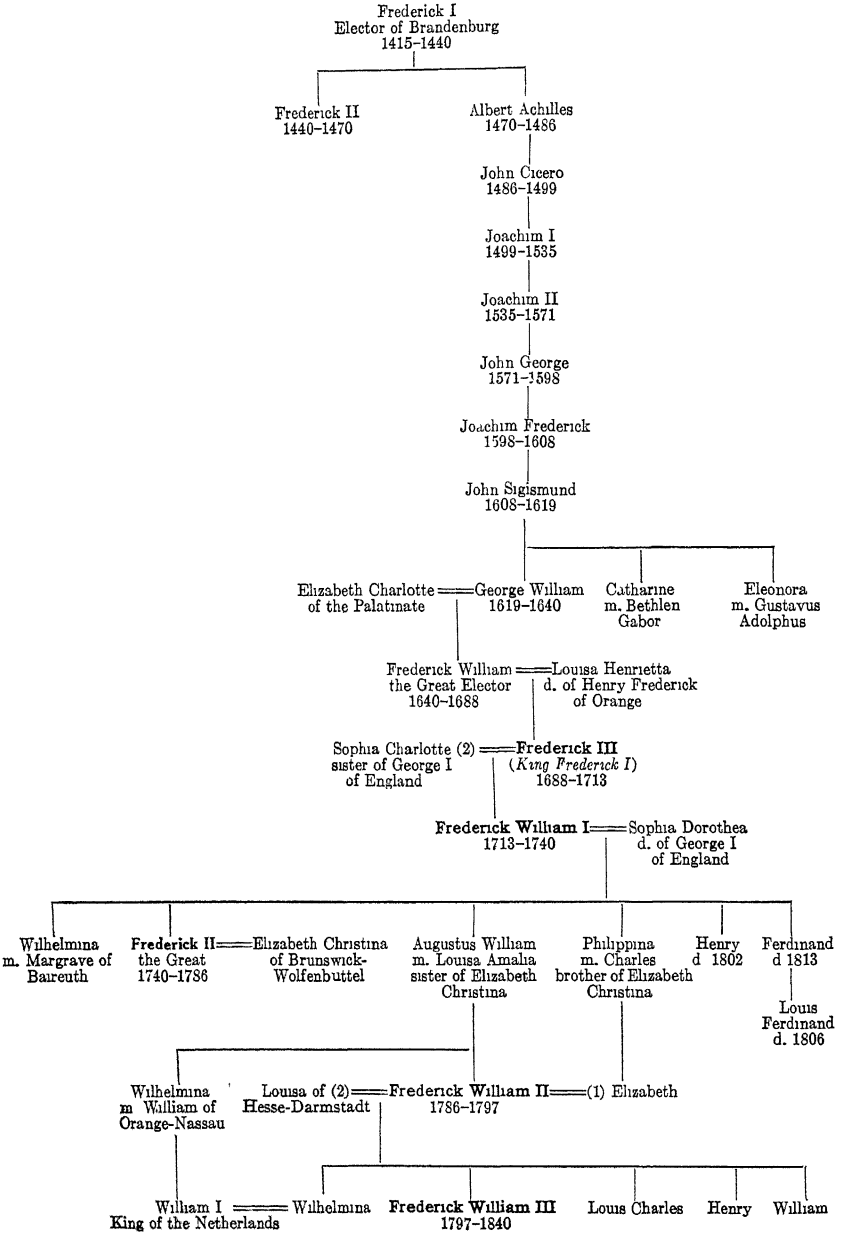
1714-1718 War of the Turks with Venice, and after 1716 with the emperor (p. 484) The seizure of Sardinia (1717) and Sicily (1718) by Spain, where Elizabeth of Parma, the second wife of Philip V, and her favorite, the minister and Cardinal **Alberoni,** were planning to regain the Spanish appanages lost by the **Treaty of Utrecht,** brought about the

1718, Aug. 2. Quadruple Alliance for the maintenance of the **Treaty of Utrecht,** between France, England, the emperor, and (1719) the Republic of Holland. After a short war and the fall of Alberoni, who went to Rome (d. 1752), the agreements of the Quadruple Alliance were executed in 1720 (1) **Spain** evacuated Sicily and Sardinia, and made a renunciation of the appanages forever, in return for which the emperor recognized the Spanish Bourbons. (2) **Savoy** was obliged to exchange Sicily for Sardinia. After this time the **Dukes of Savoy** called themselves **Kings of Sardinia.**

The Emperor Charles VI was without male offspring His principal endeavor throughout his whole reign was to secure the various lands which were united under the scepter of Austria against division after his death Hence he established an order of succession under the name of the **Pragmatic Sanction,** which decreed that. (1) the lands belonging to the Austrian Empire should be indivisible, (2) that in case male heirs should fail, they should devolve upon Charles' daughters, the eldest of whom was **Maria Theresa,** and their heirs according to the law of primogeniture; (3) in case of the extinction of this line the daughters of Joseph I and their descendants were to inherit.

To secure the assent of the various powers to the Pragmatic Sanction was the object of numerous diplomatic negotiations. The Hungarian Diet accepted it in 1723 A special agreement between Austria and Spain (1725), in regard to this measure, produced the **Alliance of Herrenhausen,** in the same year, between England, France, and Prussia in opposition Prussia soon withdrew from the alliance and joined Austria by the **Treaty of Wusterhausen.** The alliance between Austria and Spain was also of short duration

1733-1735 WAR OF THE POLISH SUCCESSION, after the death of Augustus II



Cause: The majority of the Polish nobles, under the influence of France, elected **Stanislas Leszczynski,** who had become the father-in-law of Louis XV, king, a second time Russia and Austria induced a minority to choose **Augustus III,** Elector of Saxony (son of Augustus II), and supported the election by the presence of troops in Poland France, Spain, and Sardinia took up arms for Stanislas

The seat of war was at first in Italy, where Milan, Naples, and Sicily were conquered, and the Austrians lost everything except Milan, and afterward on the upper Rhine, where the old **Prince Eugene** fought unsuccessfully, and Francis Stephen, Duke of Lorraine, the future husband of **Maria Theresa,** alone upheld the honor of the imperial arms Lorraine occupied by the French Kehl captured Preliminaries of peace (1735), and, after long negotiations,

1738, Nov. 18. TREATY OF VIENNA: (1) **Stanislas Leszczynski** made a renunciation of the Polish throne, receiving as compensation the duchies of Lorraine and Bar, which at his death were to devolve upon France Stanislas died 1766. (2) The Duke of Lorraine, **Francis Stephen,** received an indemnification in **Tuscany,** whose ducal throne had become vacant by the extinction of the family of Medici 1737 (3) **Austria** ceded Naples and Sicily, the island of Elba and the State degli Presidi to Spain as a *secundogeniture* for Don Carlos, so that these lands could never be united with the crown of Spain, receiving in exchange Parma and Piacenza, which Don Carlos had inherited in 1731 upon the death of the last Farnese, his great-uncle. (4) **France** guaranteed the Pragmatic Sanction

1736-1739. Unsuccessful war with the **Turks** (p 484).

The Hohenzollern House (1415-1840)

1740, May. Death of **Frederick William I** of Prussia.

1740-1786. FREDERICK II, THE GREAT of Prussia

1740, Oct. With the **death of Charles VI,** the male line of the Hapsburgs was extinct

1740-1780. MARIA THERESA, Queen of Bohemia and Hungary, Archduchess of Austria, etc, married **Francis Stephen** of the house of Lorraine, Grand Duke of Tuscany (co-regent)

1740-1748. WAR OF THE AUSTRIAN SUCCESSION:

Cause The following claimants for the Austrian inheritance appeared (1) **Charles Albert,** Elector of Bavaria, who had never recognized the Pragmatic Sanction, a descendant of Anna, the eldest daughter of Ferdinand I He based his claim upon the marriage contract of Anna, and upon the will of Ferdinand I, whereby the Austrian inheritance was (he claimed) secured to the descendants of Anna, in case the *male* descendants of her brother should become extinct (The *original* will, however, read, in case the *legitimate* descendants of her brother became extinct) (2) **Philip V,** King of Spain, relying on a treaty between Charles V and his brother Ferdinand, on occasion of the cession of the German lands, and upon a reservation made by Philip III in his renunciation of the German lands (3) **Augustus III** of Saxony, the husband of the *eldest* daughter of Joseph I

The claims advanced by **Frederick II** to a part of Silesia, and his desire to annex the whole of Silesia to his kingdom, the rejection of the offer which he made at Vienna to take the field in favor of Austria if his claims were recognized, brought about, before the commencement of hostilities by the other claimants, the

1740-1742. FIRST SILESIAN WAR. Legal claims of Prussia to a portion of Silesia (1) The principality of Jagerndorf was purchased in 1523 by a younger branch of the electoral line of Hohenzollern, and the future acquisition of Ratibor and Oppeln secured at the same time, by an hereditary alliance In 1623 Duke John George was placed under the ban by the Emperor Ferdinand II, as an adherent of Frederick V, the Elector Palatine, and in spite of the Peace of Westphalia, neither he nor his heirs had been reinstated (2) The Elector Joachim II had made an hereditary alliance in 1537 with the Duke of Liegnitz, Brieg, and Wohlau, which Ferdinand I had forbidden as King of Bohemia and feudal superior of the duke After the extinction of the ducal house (1675) Austria took possession of the inheritance In 1686 Frederick William, the Great Elector, renounced the Silesian duchies, in return for the cession of the circle of Schwiebus. The latter, however, was secured to Austria by a secret agreement with the prince elector, and was restored by him, as Elector Frederick III in 1695

1740. Occupation of Silesia by Frederick's troops Capture of Glogau.

1741, Apr. 10. Prussian victory of **Mollwitz.**

May. Secret **alliance of Nymphenburg** against Austria concluded by France, Bavaria, and Spain, afterward joined by Saxony, and lastly by Prussia. The allied French (Belle-Isle) and Bavarian army invaded Austria and Bohemia. Prague taken in alliance with the Saxons. Charles Albert caused himself to be proclaimed archduke in Linz, while Frederick II received homage in Silesia. Charles Albert was elected emperor in Frankfurt as

1742-1745. CHARLES VII. Meantime **Maria Theresa** had gone to Hungary. **Diet at Pressburg** (1741); enthusiasm of the Hungarian nobility which was guaranteed immunity from taxation, two armies raised, alliance concluded with England. An Austrian army conquered Bavaria where Maria Theresa received the homage of Munich, a second besieged the French in Prague

1742, May 17. The victory of Frederick at **Czaslau** and **Chotusitz,** and Maria Theresa's desire to rid herself of a dangerous enemy led to the separate

1742, June and July. Treaty of Breslau and Berlin between Austria and Prussia· (1) **Frederick** withdrew from the alliance against Maria Theresa. (2) **Austria** ceded to Prussia upper and lower Silesia and the county of Glatz, retaining only the principality of Teschen, and the southwestern part of the principalities of Neisse, Troppau, and Jagerndorf, the Oppa forming the boundary. (3) **Prussia** assumed the debt upon Silesia held by English and Dutch creditors, to the amount of 1,700,000 rix dollars.

Austria prosecuted the war against the allies with success, driving them entirely out of Bohemia (1742), and Bavaria (1743); the Pragmatic army (English, Hanoverians, Hessians), under King George II, defeated the French in the

1743, June 27. Battle of Dettingen. The Emperor Charles VII was a refugee in Frankfurt.

These Austrian successes and the treaties with Sardinia and Saxony (1743) made

the King of Prussia anxious about his new acquisitions. He concluded a *second* alliance with Charles VII and France, and began the

1744-1745. SECOND SILESIAN WAR, by forcing his way through Saxony with 80,000 men and invading Bohemia He took Prague, but, deserted by the French, was soon driven back into Saxony (1744).

1744. East Friesland, upon the extinction of the reigning house, fell to Prussia

1745, Jan. Alliance between Austria, Saxony, England, and Holland against Prussia. The French and Bavarians took Munich Charles VII died (1745, Jan.). His son **Maximilian Joseph** concluded the

Apr. Separate **Treaty of Füssen,** with Austria. (1) **Austria** restored all conquests to Bavaria. (2) The **Elector of Bavaria** surrendered his pretensions to Austria and promised Francis Stephen, the husband of Maria Theresa, his vote at the imperial election

The French under Marshall **Maurice of Saxony** (*Maréchal de Saxe*, son of Augustus II and the Countess Aurora of Königsmark) defeated the Pragmatic army in the

1745, May 11. BATTLE OF FONTENOY (Irish Brigade), and began the conquest of the Austrian Netherlands

Frederick the Great defeated the Austrians and Saxons under Charles of Lorraine in the

June 4. Battle of Hohenfriedberg, in Silesia, and the Austrians alone in the

Sept. 30. Battle of Soor, in northeastern Bohemia.

By the election of the husband of Maria Theresa as emperor, the

1745-1806. HOUSE OF LORRAINE-TUSCANY acceded to the imperial throne in the person of the emperor,

1745-1765. FRANCIS I.

After a victory of the Prussian general, Leopold von Dessau, over the Saxons at **Kesseldorf,** Dec 15, the

1745, Dec. 25. TREATY OF DRESDEN was concluded between Prussia and Austria (Saxony). (1) Ratification of the **Treaty of Breslau and Berlin** in regard to the possession of Silesia. (2) **Frederick II** recognized Francis I as emperor. (3) **Saxony** paid **Prussia** one million rix dollars

After the flower of the English army had been recalled to England, where they were needed in the contest with the "young pretender" (p 435) **Marshal Saxe** obtained at **Raucoux** (1746) a second victory over the allies of Austria and completed the conquest of the Austrian Netherlands

At the same time, the naval war between France and England, and the war in Italy between Spain, France, and Austria, were carried on with varying fortune Sardinia had concluded peace with Austria as early as 1743. At last the Empress of Russia, **Elizabeth** (p 481), joined the combatants as the ally of Austria and sent an army to the Rhine Congress, and finally,

1748, Oct. TREATY OF AIX-LA-CHAPELLE. (1) Reciprocal restoration of all conquests (2) Cessions of Parma, Piacenza, and Guastalla to the Spanish infant, Don Philip, making the second *secundogeniture* of the Spanish Bourbons in Italy The following guaranties were given that Silesia should belong to Prussia, that the Pragmatic Sanction should be sustained in Austria, that the house of Hanover should retain the succession in its German states and in Great Britain

Change in the relations of European states induced by the rise of Prussia to the rank of a great power Envy between Prussia and Austria; the latter seeing a disgrace in the loss of Silesia to a smaller power, and intriguing for the recovery of the lost province Thus began the

1756-1763. THIRD SILESIAN, or SEVEN YEARS' WAR.

Cause· Before the Treaty of Aix-la-Chapelle Maria Theresa had concluded a **defensive alliance** with Frederick's personal enemy, Elizabeth, Empress of Russia (May, 1746) Secret articles of this treaty provided for the reunion of Silesia with Austria under certain specified conditions In Sept. 1750, George II of England, moved by anxiety for his principality of Hanover, signed the main treaty, the secret articles being excepted. Saxony (minister, Count Bruhl) signed the treaty unconditionally **Prince Kaunitz** (until 1753 Austrian ambassador in France, then chancellor of the empire in Vienna) succeeded in promoting a reconciliation between the cabinets of Versailles and Vienna, and securing the Marquise de Pompadour in favor of an Austrian alliance Formation of a party inimical to the Prussian alliance at the French court.

Maria Theresa and Kaunitz induced England to conclude a new subsidy treaty with Russia in 1755. In June of the same year, however, hostilities broke out between England and France in North America without any declaration of war Dreading a French attack upon Hanover, George II concluded, in January, 1756, a treaty of

neutrality with Frederick at Westminster, which caused a rupture between England and Russia Kaunitz made skillful use of the indignation at Versailles over the **Treaty of Westminster.** In May, 1756, conclusion of a defensive alliance between France and Austria. In June, 1756, war broke out between France and England, in Europe

Frederick, well informed concerning the alliances of the powers, and knowing that Russia and France were not in condition to take the offensive against him in 1756, decided to take his enemies by suprise

1756, Aug He invaded Saxony with 67,000 men and took Dresden (Sept. 2). On Oct 1 he defeated the Austrians at **Lobositz,** and on Oct 15 the Saxons (18,000) surrendered at Pirna

1757, Jan. 10. War was declared on Frederick in the name of the empire. Hanover, Hesse, Brunswick, and Gotha, however, continued in alliance with Prussia. Conclusion of an agreement between Austria and Russia (Jan) concerning the partition of the Prussian monarchy Offensive treaty between Austria and France (May 1).

Frederick invaded Bohemia in four columns, and won a

May 6. Victory over the Austrians at **Prague.** Death of Schwerin Frederick besieged Prague and attacked Daun, who attempted to relieve the city. But Frederick was defeated in the

June 18. Battle of Kolin, as a result of which he had to evacuate Bohemia

July 26. Victory of the French over the British at **Hastenbeck,** which led to the capitulation of the British army (Duke of Cumberland) at **Kloster-Zeven** (Sept. 8) The French occupied Hanover, though the treaty was rejected by the British government.

July 30. Battle of Grossjägerndorf, in which the Russians, under Apraxin, after invading East Prussia with a large force, defeated the Prussians, under Lehwald. Nevertheless the Russians withdrew from East Prussia and did not exploit their success. But the Swedes in the meanwhile began to occupy Pomerania, promised them in return for participation in the war.

Nov. 5. BATTLE OF ROSSBACH, one of the most spectacular victories of Frederick. The French, under Soubise, had joined the imperial army, under Duke Frederick William, for the purpose of liberating Saxony. But Frederick surprised them on the march and completely overwhelmed them He then led his victorious army into Silesia, where the Austrians had just won a victory over the Duke of Brunswick-Bevern at Breslau (Nov. 22).

Dec. 5. Battle of Leuthen. Frederick completely defeated the Austrians under Charles of Lorraine and Daun.

1758. Frederick campaigned in Moravia, but failed to take Olmutz In the west, Ferdinand of Brunswick drove the French back over the Rhine and defeated them in the

June 23 Battle of Crefeld. But the greatest Prussian victory of the year was Frederick's defeat of another invading Russian army in the

Aug. 25 Battle of Zorndoff. But this was counterbalanced by the

Oct. 14. Battle of Hochkirch. The Austrians had invaded Lusatia and Frederick had hurried to the relief of his brother Henry. Daun defeated the Prussians at Hochkirch, but was not able to drive Frederick out of Saxony and Silesia.

1759. The French resumed the offensive in the west, and, under the Duke of Broglie, defeated Ferdinand of Brunswick at Bergen, near Frankfurt (Apr 13). Later in the year Ferdinand made good this defeat by his victory over the French in the

Aug. 1. Battle of Minden.

The Russians once again advanced into Germany and defeated the Prussian general, Wedell, at **Kay** (July 23). Frederick was unable to prevent their union with the Austrians under Laudon and suffered a major reverse in the

Aug. 12. BATTLE OF KUNERSDORF The Austrians thereupon captured Dresden On Nov 20 Daun surrounded and captured 13,000 Prussians under Fink at **Maxen.**

1760, June 23. The Prussians, under Fouqué, were defeated and captured by the Austrians in the battle of **Landshut,** but

Aug. 15. Frederick's victory over Laudon in the battle of **Liegnitz** (Pfaffendorf) enabled him to prevent the union of the Austrians and Russians. The latter, under Tottleben, nevertheless

Oct. 9-12. Surprised and burned **Berlin,** retreating only as Frederick hurried to the relief

Nov. 3. Victory of Frederick over Daun at **Torgau.**

1761. Frederick established a defensive position opposite the united Aus-

trians and Russians near Bunzelwitz But on Oct. 1 the Austrians took Schweidnitz and the Russians occupied Kolberg before the year was out (Dec. 16). By this time Frederick, deprived of the English subsidies by the accession of George III (1760), was in great distress His position was saved by

1762, Jan. 5. The death of Elizabeth of Russia. Her successor, **Peter III,** was an admirer of Frederick and very soon concluded the

Mar. 16. Truce of Stargard, which was followed by the

May 5. Treaty of St. Petersburg. Russia restored all conquests and both parties renounced all hostile alliances. The defection of Russia brought with it also the

May 22. Treaty of Hamburg between Sweden and Prussia, which restored the *status quo ante bellum* The alliance between Prussia and Russia was soon broken off by the deposition of Peter III (July 9) His successor, **Catherine II,** recalled her troops from Frederick's army, nevertheless their inactivity upon the field contributed to the

July 21. Victory of Frederick at Burkersdorf (Reichenbach) over the Austrians (Daun).

After Prince Henry in the

Oct. 29. Battle of Freiburg had defeated the Austrians and the imperial forces, and the preliminaries of the **Treaty of Fontainebleau** between England and France had made it certain that the French armies would be withdrawn from Germany, Austria and Prussia concluded the

1763, Feb. 15. TREATY OF HUBERT(U)SBURG: (1) Ratification of the Treaties of Breslau and Berlin, and that of Dresden, i.e. Prussia retained Silesia (2) Prussia promised her vote for the Archduke Joseph at the election of the King of Rome. Saxony (restoration to the *status quo*) and the empire were included in the peace

Frederick's endeavors to heal the wounds inflicted by the war upon his kingdom; distribution of the magazine stores, remission of taxes for several provinces, establishment of district banks, of the Bank (1765) and the Maritime Company (1772) at Berlin Afterward, however, introduction of an oppressive financial administration; tobacco and coffee were made government monopolies. Drainage of the marshes along the Oder, Werthe, and Netze Canal of Plauen, Finow, and Bromberg Reform of the jurisdiction Codification of the common law by grand chancellor von Carmer, a part of which was published in 1782.

1765-1790. JOSEPH II, emperor, for the Austrian lands co-regent only with his mother, **Maria Theresa,** until 1780, and without much influence.

1778-1779. WAR OF THE BAVARIAN SUCCESSION. Cause: Extinction of the electoral house of Bavaria with Maximilian Joseph (1777). **Charles Theodore,** Elector Palatine, the legal heir of the Bavarian lands, as head of the house of Wittelsbach, and in consequence of various treaties, was persuaded by Joseph II to recognize certain old claims of Austria to Lower Bavaria, and a part of the Upper Palatinate **Treaty of Vienna** (1778, Jan) Occupation of Lower Bavaria by Austrian troops Charles Theodore was childless, his heir presumptive was Charles Augustus Christian, Duke of the Palatinate of Zweibrucken (Deux-ponts) **Frederick II** opened secret negotiations with this wavering and irresolute prince through Count Eustachius von Gorz and encouraged him, under promise of assistance, to make a formal declaration of his rights against the Austrian claims. Saxony and Mecklenburg, also incited by Frederick, protested as heirs presumptive of a part of the Bavarian inheritance As direct negotiations between Austria and Prussia were without result, Joseph and Frederick joined their armies, which were already drawn up face to face on the boundary of Bohemia and Silesia

Saxony allied with Prussia. No battle in this short war Frederick and Prince Henry invaded Bohemia (July, 1778). Impossibility of forcing Joseph from his strong position along the upper Elbe, or of getting around it The armies maintained their positions of observation so long that want began to make itself felt In the autumn Prince Henry retired to Saxony, Frederick to Silesia. Unimportant skirmishes along the frontier A personal correspondence between **Maria Theresa** and **Frederick,** commenced by the former, led in the following spring, with the help of Russian and French mediation, to a truce and a congress, and soon after to the

1779, May 13. TREATY OF TESCHEN. (1) The Treaty of Vienna with Charles Theodore was abrogated Austria retained only the district of the Inn, in Bavaria, i.e. the part of Lower Bavaria between the Inn, Salza, and Danube (2) Austria agreed to the future union of the margravates of Ansbach and Baireuth with the Prussian monarchy. (3) Saxony obtained some hitherto disputed rights of sovereignty and nine million rix dollars; Mecklenburg the *privilegium de non appellando.*

1780-1790. JOSEPH II. Period of his reign alone and of his attempts at reform. The prudent government of Maria Theresa (d 1780), with its carefully matured scheme of reform, was succeeded by the essentially revolutionary reign of Joseph II, whereby the ancient forms were shaken to their foundations, and their substance, reluctant and stiff from lack of change, forcibly subjected to experiments made in sympathy with the enlightenment of the century. Joseph II is the best representative of the contradictions of the 18th century, and of its philanthropy and its devotion to right, and again of its severity and lack of consideration, where there was question of executing some favorite theory Filled with dislike of the clergy and the nobility, and entertaining the ideal of a strong, centralized, united state, Joseph pursued his reforms with the purpose of breaking the power of the privileged classes mentioned above, of destroying all provincial independence, and of establishing unity in the administration (centralization). Despite all his failures, despite the fact that, with few exceptions his reforms did not outlive him, Joseph's reign regenerated the Austrian monarchy, lending it mobility and vitality

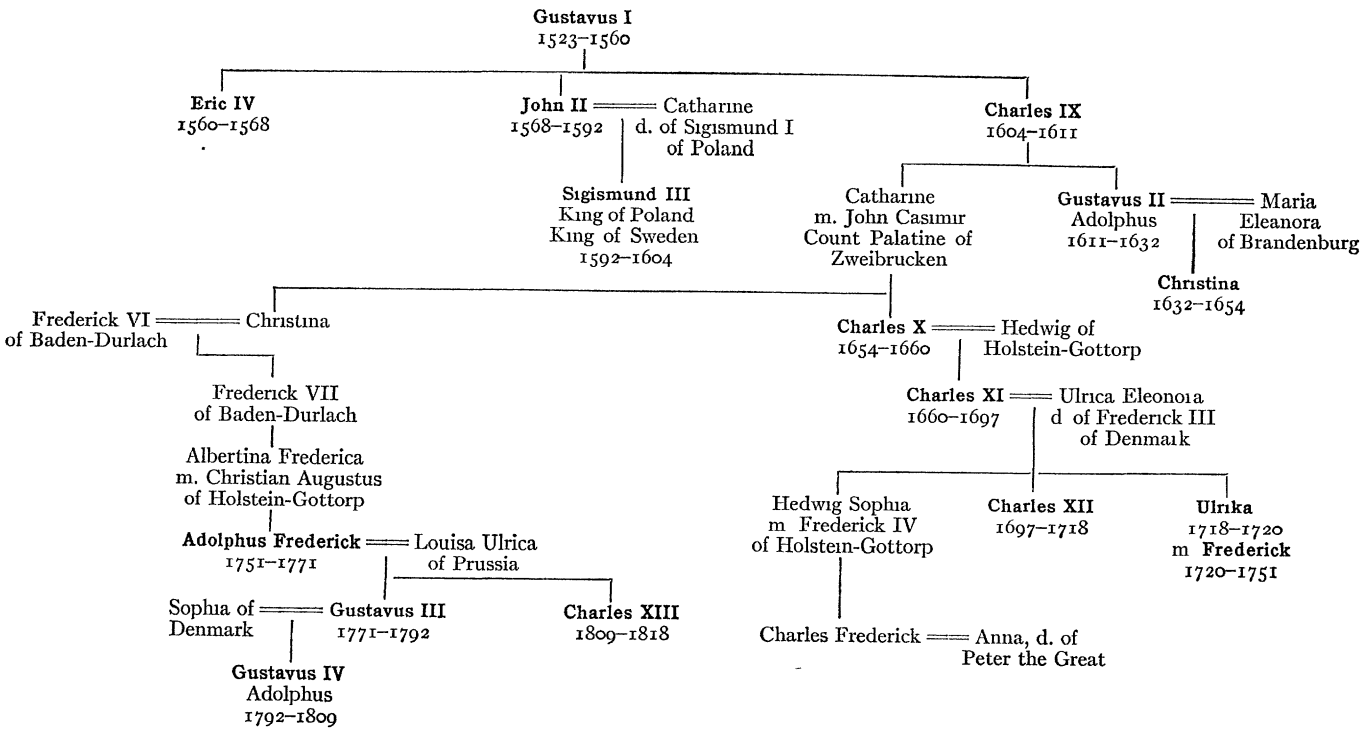
1781, Oct. 13. Edict of tolerance. Within eight years 700 monasteries were closed and 36,000 members of orders released There still remained, however, 1324 monasteries with 27,000 monks and nuns For those which remained a new organization was prescribed The connection of the ecclesiastical order with Rome was weakened, schools were established with the property of the churches, innovations in the form of worship were introduced, nor did the interior organization of the Church escape alteration Futile journey of Pope **Pius VI** to Vienna (1782), undertaken to prevent these changes Reform of jurisdiction. The feudal burdens were reduced to fixed norms, and attempts were made to abolish completely personal servitude among the peasants

1781. Disputes between Joseph and the Dutch; the emperor arbitrarily annulled the **Barrier treaties** (p 447) He demanded that the Scheldt, which had been closed by the Treaty of Westphalia to the Spanish Netherlands, in favor of the Dutch, should be opened Finally, after four years of quarreling, French mediation brought about the **Treaty of Versailles** (1785) Joseph withdrew his demands in consideration of ten million florins

Joseph attempted to improve the legal system of the empire His encroachments in the empire. Violent proceedings in the case of the **Bishop of Passau** (1783).

1783. The endeavors of Frederick the Great to conclude a union of German princes (1783), which should resist the encroachments of the emperor, and to strengthen Prussia in her political isolation by a "combination within the empire," were at first but coldly supported by his own ministers and the German princes Frederick's plan was not taken into favor until news was received of

1785. **Joseph II's** plan of an exchange of territory, according to which Charles Theodore was to cede the whole of Bavaria to Austria, and accept in exchange the Austrian Netherlands (Belgium), excepting Luxemburg and Namur, as the Kingdom of Burgundy France maintained an attitude of indifference. Russia supported the project and endeavored by persuasion and threats to induce the heir of Bavaria, the Count Palatine of Zweibrucken, to consent to the scheme The latter sought help from Frederick the Great, who, a year before his death (d. 1786, Aug. 17), succeeded in forming the



1785, July. League of the German Princes between Prussia, the Electorate of Saxony, and Hanover, which was afterward joined by Brunswick, Mainz, Hesse-Cassel, Baden, Mecklenburg, Anhalt, and the Thuringian lands, directed against Joseph's scheme

Opposition to Joseph's reforms in the Austrian Netherlands and in Hungary The removal of the crown of Hungary to Vienna produced so great a disturbance that the emperor yielded and permitted its return The revocation of the constitution of Brabant caused a revolt in the Belgian provinces (1789). War with the Turks (p 485). **Death of Joseph II** (1790). His brother became

1790-1792. LEOPOLD II, emperor. He suppressed the Belgian insurrection, but restored the old constitution and the old privileges A **conference at Reichenbach** prevented a war with Prussia, which (Jan 31, 1790) had concluded a treaty with the Turks, in order to procure more favorable conditions for the latter from Austria and Russia (p 485)

(*Cont pp* 581, 667)

The House of Vasa (1523-1818)

8. SCANDINAVIA

a. SWEDEN

Gustavus Adolphus and his able lieutenants and successors took advantage of the Thirty Years' War to lift Sweden to the rank of a first-class power, with dominance over the whole Baltic area But the greatness of Sweden was to be short-lived During the later 17th century the royal power was greatly strengthened, but nevertheless Sweden lacked the resources to compete with the neighboring powers, like Prussia and Russia The attempts of the Swedish kings to establish control in Poland and the extravagant schemes of Charles XII soon reduced Sweden to the position of a second-class power

1654. Queen Christine, the daughter of Gustavus Adolphus, abdicated the throne and spent the rest of her life as a converted Catholic, devoted to religion and art. She left the throne to her cousin, Charles Gustavus of Pfalz-Zweibrucken, son of a sister of Gustavus Adolphus, who became

1654-1660. CHARLES X GUSTAVUS His reign was pre-eminently one of military activity, devoted to

1655-1660. The First Northern War. Charles declared war on Poland on the pretext that John Casimir (of the house of Vasa) refused to acknowledge him Actually Charles' purpose was to extend the Swedish possessions on the southern Baltic coast

1656. The Swedes, allied with the Elector of Brandenburg (**Treaties of Königsberg and Marienburg**) invaded Poland and won a great **battle at Warsaw.** Thereupon Russia, Denmark, and the empire declared war on the Swedes, and Brandenburg soon deserted the Swedish cause to join the coalition (Poland recognized the elector's sovereignty over East Prussia)

1657. The Swedes were driven out of Poland, but

1658. Charles twice invaded Denmark The valiant defense of Copenhagen saved the Danish monarchy from annihilation and the death of Charles facilitated the

1660, May 3. Treaty of Oliva: John Casimir of Poland abandoned his claims to the Swedish throne and ceded Livonia to Sweden By the **Treaty of Copenhagen** Denmark surrendered to Sweden the southern part of the Scandinavian Peninsula, but retained Bornholm and Trondheim. The **Treaty of Kardis** (1661) between Sweden and Russia re-established the *status quo ante bellum.*

1660-1697. CHARLES XI.

1672-1679. Sweden took part in the Dutch War as an ally of France (p 442), but the Swedes achieved little The invasion of Brandenburg resulted in the

1675, June 18. Battle of Fehrbellin, in which the Swedes were defeated by the forces of the Great Elector A severe blow to Swedish military prestige. The elector then invaded Swedish Pomerania, took Stettin, Stralsund, and Greifswald, but, by the **Treaty of St. Germain-en-Laye** (1679), Sweden, through her French ally, was able to recover all that had been lost

In the internal history of Sweden this reign was marked by the establishment of an **absolutist government.** The council was reduced to impotence, and the Estates were kept in submission

1680. Under the pressure of the king the Estates passed a law by the terms of which all earldoms, baronies, and other large fiefs should revert to the crown This wholesale confiscation of estates dealt a severe blow to Swedish aristocracy

1697-1718. CHARLES XII. He ascended the throne at the age of 15, but was soon to prove himself one of the military geniuses of modern times. His reign was taken up almost entirely by the

1700-1721. GREAT NORTHERN WAR, which, in a sense, was one aspect of the general war in Europe during the first fifteen years of the century

The Northern War was caused by the common opposition of Russia, Poland, and Denmark to the Swedish supremacy in the Baltic region **Peter of Russia** was firmly determined to make his country a naval power, and to get possession of the harbors of the Baltic; **Augustus II,** Elector of Saxony and King of Poland, had a scheme for the reunion of Livonia with Poland, the **King of Denmark,** besides desiring the general weakening of Sweden, resented Swedish support of the Duke of Holstein-Gottorp in his struggle with Denmark A secret alliance between the three sovereigns was concluded in the fall of 1699, and next year the war opened with an invasion of Schleswig by the Danes, and of Livonia by

Augustus' Saxon troops Unexpected landing of Charles XII of Sweden in Zeeland, he threatened Copenhagen and extorted from the Danes the

1700, Aug. 18. Treaty of Travendal. (1) Indemnification of the Duke of Holstein (2) Denmark promised to abstain from hostilities against Sweden for the future

Meantime the Saxons were besieging Riga (in Livonia), and the Russians Narva (in Ingermanland)

Nov. 30. Landing of Charles XII with 8000 men and decisive victory of **Narva** over the Russians Instead of pursuing the Russians, Charles turned west, relieved Riga (1701, June 17) and then invaded Poland

The following six years were spent by Charles in an effort to defeat Augustus II After a series of victories over the Poles and Saxons, Charles invaded Saxony and compelled Augustus to sign the

1706, Sept. 24. Treaty of Altranstadt: (1) Augustus abdicated the Polish crown and recognized the previously elected **Stanislas Lesczynski** (the candidate of the pro-Swedish party) as King of Poland (2) Augustus broke his alliance with the Russian Tsar.

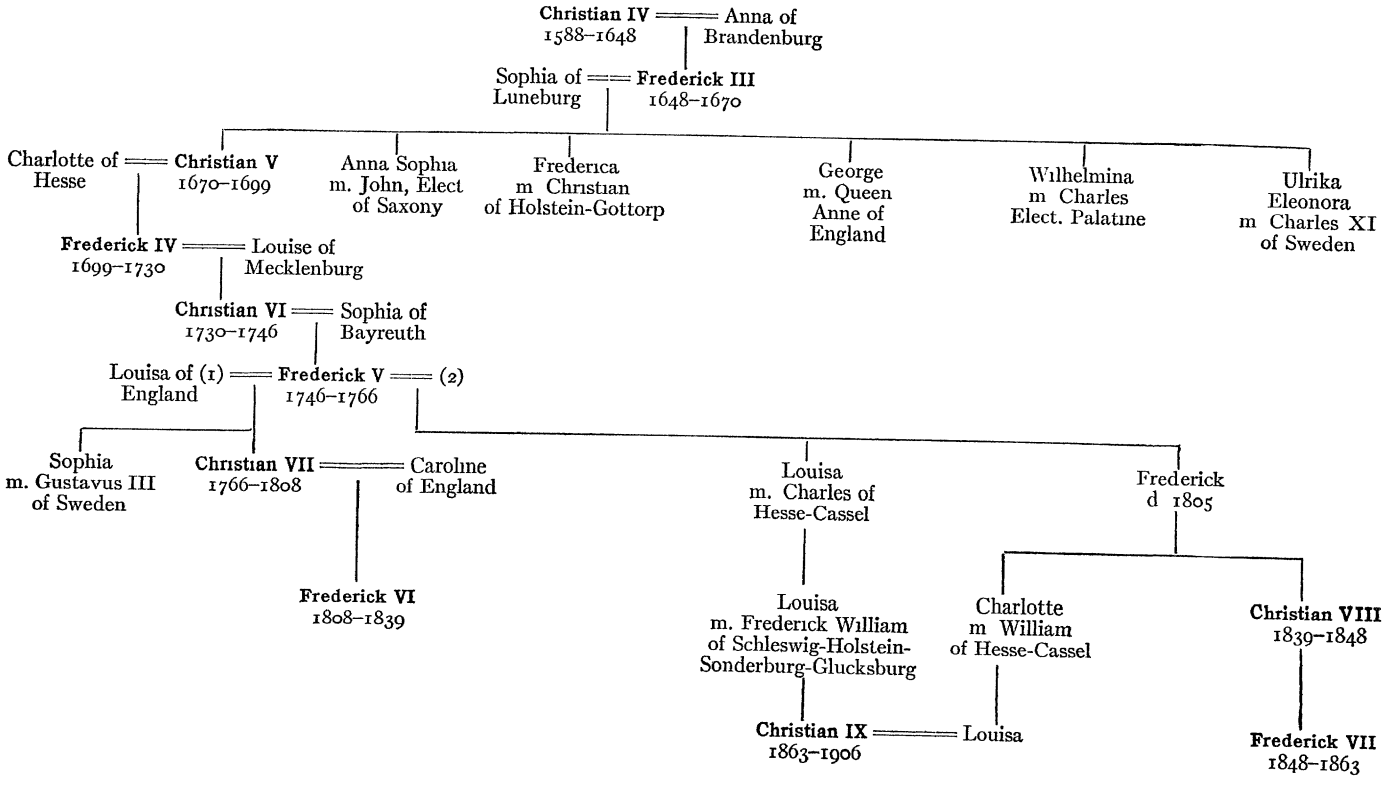
1707, Sept. After this, Charles took the field against Peter, who had employed the interval in making conquests and establishing his power in the Baltic (St. Petersburg founded at the mouth of the Neva in 1703, Narva captured in 1704), and in forming a trained and well-supplied army

1708. Charles advanced in the general direction of Moscow, and then suddenly turned south into the Ukraine where his secret ally, the Cossack hetman, **Mazeppa**, had promised him a general anti-Russian uprising. The uprising failed to materialize, and the Swedish army found itself in a difficult situation Meanwhile the Russians had intercepted and defeated an auxiliary Swedish corps, under Loewenhaupt, which was moving south from Livonia with supplies for Charles' army. In an attempt to seize the city of Voronezh, Charles besieged the fortress of Poltava which lay on his way there, and Peter led his main army to the rescue of the stronghold.

1709, July 8. BATTLE OF POLTAVA. The Russian army, superior in numbers and equipment, completely defeated the Swedes, who were exhausted by long marches and lack of food. The Swedish army was broken up, and a large part of it captured Charles, accompanied by Mazeppa, found refuge in Turkey Two years later he induced the Porte to declare war against Peter

1711. Peter, allied with the rulers of Moldavia and Wallachia, moved to the river Pruth, but was surrounded by a much larger Turkish army and was obliged to conclude the **Treaty of the Pruth:** (1) Azov given back to the Porte. (2) Charles allowed to return to Sweden

Charles XII, indignant at this treaty, refused to depart, and remained in Turkey for three more years. Meanwhile (1709) Augustus II drove King Stanislas from Poland Peter occupied all of Livonia, Estonia, Ingermanland, Carelia, Finland The Danes took Schleswig away from the Duke of Holstein-Gottorp, conquered the Swedish Duchies of Bremen and Verden, which they afterward sold to Hanover upon condition that that state should take part in the war against Sweden, and jointly with the Poles invaded Pomerania The Prussians occupied Stettin



1714. Charles XII at last returned to his kingdom through Hungary and Germany After this the war dragged on for several years with Russia, Saxony, Poland, Denmark, Prussia, Hanover allied against Sweden

1718, Dec 11. Charles XII was shot near Friedrichshall, during a military expedition to Norway He was succeeded by his sister

1718-1720. ULRIKA ELEONORA, who was accepted on condition that the Riksdag should be allowed to draw up a constitution The **new constitution** provided for joint rule of the monarch and the council when the Riksdag was not in session While the Riksdag was sitting, the principal decisions were to be made by a secret committee composed of members of the three higher estates (nobility, clergy, and burghers). The peasants were, however, to be heard in matters of taxation. This new system involved the re-establishment of the political power of the nobility and clergy and continued until 1771. But the ruling class was divided in the 18th century, between the party of the *Caps*, who favored a prudent foreign policy, and that of the *Hats*, who were eager to regain Sweden's supremacy in the Baltic.

1720-1751. FREDERICK I (of Hesse-Cassel), the husband of Ulrika Eleonora, to whom she turned over the government. Cautious policy of the minister, **Count Arvid Horn,** a Swedish Fleury, who allowed the dangerous connection with France to lapse, and sought better relations with England and Russia. In 1738 he was

The Danish House of Oldenburg (1588-1906)

overthrown by **Count Gyllenborg,** leader of the *Hats* and wholly under the French influence (alliance of 1738). This brought Sweden before long into conflict with Russia. The *Hats* remained in power until 1766.

1720-1721. Conclusion of the Northern War. By the **Treaties of Stockholm:** (1) The *status quo ante bellum* was restored as between Sweden, Saxony, and Poland (2) Hanover was allowed to retain Verden, but paid Sweden 1,000,000 thalers (3) Prussia received Stettin, western Pomerania as far as the Peene, the islands of Wollin and Usedom, but paid Sweden 2,000,000 thalers. (4) Denmark restored all conquests, in return for which Sweden paid 600,000 rix dollars, gave up its freedom from customs duties in the Sound, and abandoned the Duke of Holstein-Gottorp, whom Denmark deprived of his share of Schleswig

1721, Aug. 30. Treaty of Nystadt, between Sweden and Russia: Sweden ceded to Russia· Livonia, Estonia, Ingermanland, part of Carelia, and a number of islands, among others Oesel and Dagö Russia restored Finland and paid 2,000,000 rix dollars

The main results of the great war were the destruction of Sweden's preponderance in the Baltic and the emergence of Russia as a great European power

1741-1743. War against Russia, provoked by the *Hats*, who were under French influence and were thirsting for revenge. The war ended in another setback for Sweden. By the **Treaty of Abö** (1743, Aug 7), Sweden ceded to Russia more territory in Finland.

1751-1771. ADOLPHUS FREDERICK of Oldenburg-Holstein-Gottorp, king, introducing a collateral line

1771-1792. GUSTAVUS III, the son of Adolphus Frederick. Gustavus, fearful lest Sweden should be victimized by Russia and Prussia, restored absolute government by means of a military *coup d'état* (1772, Aug. 19). The power of the council was ended and the king again acquired full authority over the administration. The Riksdag lost its initiative in legislation Gustavus tried to be an "enlightened despot." He abolished torture, improved the poor laws, proclaimed religious toleration and liberty of the press, and encouraged trade. But with the outbreak of the French Revolution his policies soon assumed a more reactionary character.

1788-1790. War with Russia. Gustavus invaded Russian Finland and achieved several victories, but was attacked by the Danes and in the end was obliged to conclude the **Treaty of Wereloe,** which left Finland and Carelia in Russian hands.

1789, Feb. By the **Act of Unity and Security,** Gustavus, taking advantage of his victory over the Danes, effected another *coup* and established his despotic power in Sweden

1792, Mar. Gustavus III was murdered by James of Ankarstrom, a Swedish aristocrat

(*Cont pp* 595, 609)

b. DENMARK AND NORWAY

1648-1670. FREDERICK III. A few months after the conclusion of peace with Sweden (1660), a monarchical *coup d'état*, supported by the clergy and the burghers, transformed the king into an hereditary and virtually absolute ruler, with the council relegated to the position of a mere advisory body. A treatise expressing absolutist ideas was composed for the king by **Peter Schumacher** (afterwards **Count Griffenfeld**) Published under the title of *Kongelov* (*King's Law*) it guided Griffenfeld's administration under Frederick's successor,

1670-1699. CHRISTIAN V.

1699-1730. Under **FREDERICK IV,** Denmark took part in the **Northern War** (p. 471). As a result of the war a certain balance between Denmark and Sweden was established in the Baltic region: Denmark was no longer afraid of a Swedish invasion, and on her part gave up ideas of reconquering her lost possessions in the south of the Scandinavian Peninsula. In his domestic policies, Frederick IV perfected the machinery of royal absolutism.

These gains, however, were partially lost during the reigns of his feeble successors (**Christian VI,** 1730–1746, **Frederick V,** 1746–1766) characterized by the rule of royal favorites mostly of German origin.

Under the mentally unbalanced

1766-1808. CHRISTIAN VII an attempt at radical internal reform was made during the administration (1770–1771) of the German, **John Frederick Struensee,** an exponent of "enlightened despotism": Struensee tried to make the royal power independent of the nobility by suppressing the council, attacked aristocratic privileges, reorganized the administration, abolished torture and censorship of the press.

1772. Struensee was overthrown by a palace revolution and subsequently executed. This was followed by the rule of a reactionary aristocratic group, headed

by **Guldberg**, and after his fall (1784) by the

1784-1788. Administration of an able and enlightened statesman, **Count Andreas Peter Bernstorff**, who began by regulating relations between the landlords and their peasant tenants, and then passed a series of measures (1787–1788) virtually abolishing serfdom in Denmark.

In **NORWAY**, which remained under Danish domination, this period saw the vigorous growth of a national cultural movement: literary activity of **Ludwig Holberg** (1684–1754), formation of the **Norwegian Society** among the university students in Copenhagen (1772).

(*Cont. pp* 595, 697)

9. POLAND

1648-1668. JOHN II CASIMIR. His reign was marked by grave internal disturbances and unsuccessful foreign wars against the Swedes, the Russians, and the Turks Frequent uprisings of the serfs and of the Ukrainian Cossacks

1654. The hetman of the Cossacks, **Bogdan Khmelnitsky,** placed himself under the protection of Russia, thus precipitating a prolonged conflict between Russia and Poland for possession of the Ukraine.

1655-1660. War between Sweden and Poland (p. 471) Invasion of the Swedes. By the **Treaty of Oliva** (May 3, 1660), Poland lost to Sweden her last Baltic territories

1667, Jan. 20. Treaty of Andrussovo, ending the conflict with Russia. Poland ceded to Russia the eastern Ukraine and Smolensk

1668. John Casimir abdicated and there followed a period of ardent struggle for the throne. The Poles finally elected a national candidate,

1669-1673. MICHAEL WISNIOWIECKI, during whose short reign the Cossacks again rose in revolt and appealed to the Turks for aid.

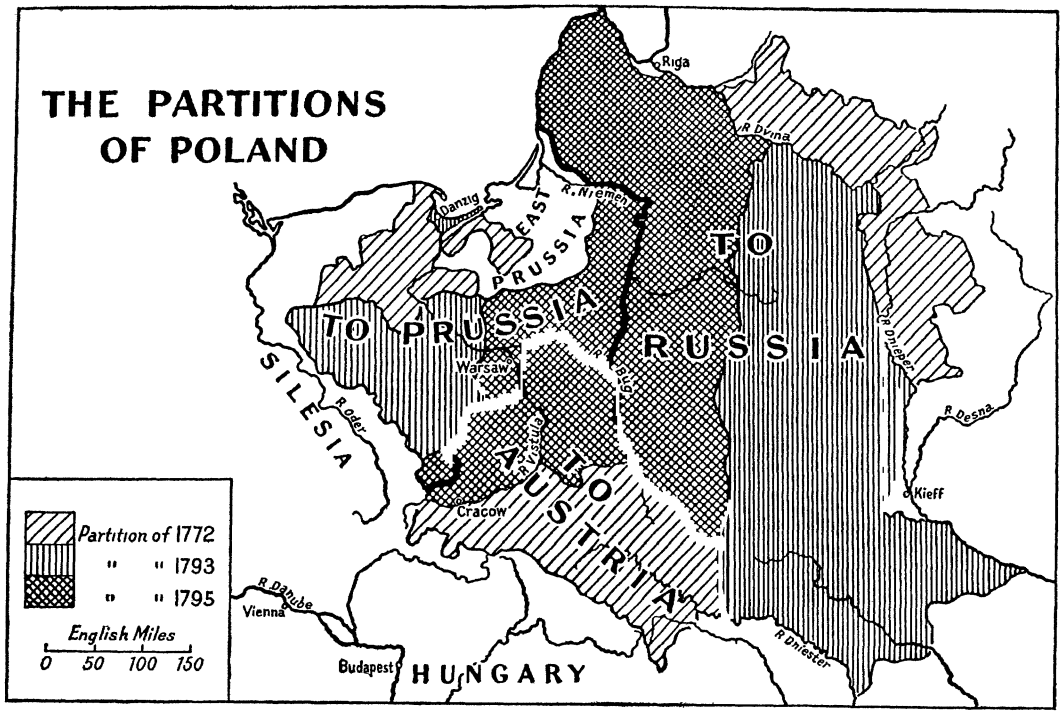
1672-1676. War with Turkey. The Turks, having taken Kameniec, secured from the disheartened Polish king the **Treaty of Buczacz** (1772), by which Poland lost Podolia and recognized the western Ukraine as independent under Turkish protectorate. The Polish Diet refused to ratify the treaty and the Poles resumed the struggle under the lead of **John Sobieski,** an able commander who gradually drove the Turks back.

1674-1696. JOHN III SOBIESKI, king after the death of Michael. After a victory over the Turks at Lemberg (1675), he concluded with them the

1676, Oct. Treaty of Zuravna, by which the Turks retained only part of the Ukraine

1683, Mar. 31. John Sobieski made an alliance with Austria in order to present a united front to the Turkish advance on Vienna The Poles then played an important rôle in the relief of Vienna from the famous second siege (p. 483) Sobieski continued to participate in the reconquest of Hungary until 1685

These military successes, however, were not enough to arrest the process of decline which resulted from the basic defects of the Polish political organization, viz the absence of real unity, the lack of strong central authority, the impotence of the national Diet (repeatedly paralyzed by the use of the *liberum veto* or right of each individual member of the Diet to defeat a resolution by his protest, and thus to break up the session)



1697-1733. AUGUSTUS II (Elector of Saxony), King of Poland. He attempted to strengthen the royal power, but without much success.

1699, Jan. 26. Treaty of Karlowitz, ending the long war against Turkey (p. 484). By this settlement the Poles regained Podolia and the Turkish part of the Ukraine

1700-1721. The Great Northern War (p. 471), which was fought largely on Polish soil. The Poles had made an agreement with Russia to despoil Charles XII of Sweden They invaded Livonia (1700), but in 1701–1702 Charles invaded Poland, taking Warsaw and Cracow (1702). The Polish magnates then dethroned Augustus, and elected

1704-1709. STANISLAS LESCZYNSKI as king By the **Treaty of Altranstädt,** with Sweden (1706), Augustus gave up his claims. The empire, Brandenburg, England, and Holland all recognized Stanislas But after the defeat of Charles at Poltava (1709), **Augustus** returned and drove out his rival. Poland suffered tremendously from the Swedish invasion and the civil war, yet gained nothing whatever from the defeat of Charles.

1715-1717. Further disorders, resulting from a rising of the nobles against

the absolutist policies of Augustus This offered an opportunity for Russian intervention and initiated the gradual subordination of Poland to Russia

1733-1735. WAR OF THE POLISH SUCCESSION. The Poles, supported by France, elected Stanislas Lesczynski, who had become the father-in-law of Louis XV The Russians and Austrians insisted on the election of Augustus of Saxony, son of Augustus II A huge Russian army invaded the country and drove out Stanislas, who withdrew to Danzig France, supported by Spain and Sardinia, declared war on the empire French expedition to the Baltic to relieve Danzig (besieged by the Russians from Oct 1733 onward).

1734, June 2. Capitulation of Danzig; Stanislas fled to Prussia In the meanwhile the main fighting was done in Italy (French and Spanish victories, p 451) and on the Rhine (indecisive). The war was finally ended by the **Treaty of Vienna** (Oct 5, 1735, ratified 1738), which wrought profound changes in Italy and assured the victory of the Russian-Austrian policy in Poland.

1734-1763. AUGUSTUS III, king He spent but little time in Poland and did little to prevent Russian encroachment, especially during the Seven Years' War Growing agitation for reform in Poland after 1740 two parties, led by the **Potocki** and **Czartoryski** families The former looked to France for support and aimed at the establishment of an aristocratic constitution; the latter, relying on Russian support, envisaged strengthening of the royal power, abolition of the *liberum veto*, etc

1764-1795. STANISLAS PONIATOWSKI, king He was a nephew of Prince Czartoryski and was the favorite of Catharine II of Russia By agreement of Apr. 11, 1764, Russia and Prussia had arranged for co-operation in Polish affairs Poniatowski and the reformers attempted to introduce changes, but Russia soon showed herself lukewarm on the subject

1766-1768. Question of the Dissidents (Greek Orthodox Catholics and Protestants), who were granted equal rights with Roman Catholics, at the insistence of Russia and Prussia This raised a storm of protest in Poland and led (1768) to the formation of the **Confederation of Bar,** an anti-Russian association which soon enjoyed the active support of France. Civil war of the most violent type broke out in Poland, invasion and campaigns of the Russians against the Confederates. Ultimately the Turks, encouraged by the French, declared war on Russia, in support of Polish "liberties"

1772, Aug 5. THE FIRST PARTITION OF POLAND. This resulted directly from the Russian victories against the Turks, which so alarmed the Austrians that they came to the point of making war on Russia Frederick the Great, fearing involvement in a general European conflict, engineered the partition of Poland, by which Russia might make gains unobjectionable to Austria, while Prussia and Austria might participate in the spoils By the first partition Russia acquired White Russia and all territory to the Dvina and Dniepr, about 1,800,000 inhabitants (mostly Greek Orthodox), Austria took Red Russia, Galicia, and western Podolia, with Lemberg and part of Cracow (2,700,000 inhabitants), Prussia took Polish Prussia, except Danzig and Thorn (416,000 inhabitants) In all Poland lost about one-third of her territory and about one-half of her inhabitants

1773. The Polish Diet, forced to accept the partition, began to effect reforms (council of state, divided into five ministries, to govern when the Diet was not in session). Intellectual awakening under the influence of French ideas, educational reforms, etc.

1788-1792. The Four Years' Diet, dominated by the progressive patriotic party, supported by Prussia. Austria and Russia being at war with the Turks (p 485), the Prussian minister **Hertzberg** hoped to secure Danzig and Thorn by agreement with a reformed Poland. Developments in France led to an agreement between Prussia and Austria and to postponement of the scheme.

1791, May 3. The Polish patriots put through a **NEW CONSTITUTION** which (1) converted the elective monarchy into an hereditary monarchy (the Elector of Saxony to succeed Poniatowski and to establish a Saxon dynasty), (2) conferred the executive power upon the king and council of state, (3) vested the legislative power in a diet of two chambers; (4) abolished the *liberum veto*. Prussia and Austria accepted this change, but the Russians organized

1792, May 14. The Confederation of Targowitz, in defense of the old constitution. Russian invasion was followed by similar action on the part of the Prussians, and finally led to a bargain between the two powers in the

1793, Jan. 23. SECOND PARTITION OF POLAND. Russia took most of Lithuania and most of the western

Ukraine, including Podolia (3,000,000 inhabitants); Prussia took Danzig and Thorn, as well as Great Poland (1,100,000 inhabitants). In addition, Russia forced Poland to accept a **Treaty of Alliance**, whereby Russia was given free entry for her troops in Poland and the right to control Poland's relations with other powers

1794, Mar. 24. NATIONAL UPRISING in Poland, led by **Thaddeus Kosciuszko** (1746–1817) After an unequal struggle against the forces of Russia and Prussia, the Poles were defeated (capture of Kosciuszko, surrender of Warsaw to Suvorov), and Austria joined Russia and Prussia in the

1795, Oct. 24. THIRD PARTITION OF POLAND. Russia took what remained of Lithuania and the Ukraine (1,200,000 inhabitants), Prussia secured Mazovia with Warsaw (1,000,000 inhabitants), while Austria obtained the remainder of the Cracow region (1,000,000 inhabitants) Courland, long under the suzerainty of Poland, but since 1737 practically under Russian influence (Biron, Duke of Courland), was incorporated with Russia

10. RUSSIA

1645-1676. ALEXIS, the son of Michael Romanov, who ascended the throne at the age of sixteen. His reign was marked by much internal unrest (serious revolt in Moscow, 1647) and by the adoption by a national assembly (1649) of a new code of law (in force until 1832) designed to improve the administration and to eliminate various abuses In some of its provisions, however, it involved the final establishment of peasant serfdom in Russia

1654-1667. War with Poland for the possession of the Ukraine, after the Cossack hetman, **Bogdan Khmelnitsky**, had placed himself under Russian protection By the **Treaty of Andrussovo** (Jan. 20, 1667) Russia obtained the Smolensk region and the eastern Ukraine, with Kiev The outcome of the war was of great importance, since the Russian gains first brought them in contact with the Turks in the Balkans

1667. Revision of the Russian church ritual and liturgical books in accordance with Greek practice This reform, undertaken by the patriarch, **Nikon**, resulted in secession from the Church of the so-called **Old Believers**, who were condemned by a church council as schismatics

1670-1671. A great **peasant revolt** in the Southeast, led by the Don Cossacks, under **Stephen Razin**, was suppressed with great difficulty.

By the end of the reign of Alexis the government had established more effective control and the crisis of the early 17th century was definitely overcome. The tsar, indeed, felt strong enough to discontinue calling the national assembly At the same time there was a rapid infiltration of Western influences, which foreshadowed the westernizing reforms of Peter the Great.

1676-1682. THEODORE III, the son of Alexis, during whose short reign Russia fought the first of many wars against the Ottoman Turks By the **Treaty of Radzin** (1681) the Turks abandoned most of the Turkish Ukraine to Russia

1682-1689. IVAN V (son of Alexis' first wife), with whom was associated **Peter I** (son of Alexis' second wife) as co-tsar. **Sophia**, the daughter of Alexis, acted as regent In 1689 the partisans of Peter overthrew Sophia and

1689-1725. PETER I (*the Great*) was effectively the sole ruler, though Ivan V lived until 1696. Peter, an intelligent but ruthless and headstrong ruler (b 1672), spent the first years of his reign in a process of self-education (chiefly technical and military) He established close relations with members of foreign colonies in Moscow and prepared for his later campaigns through his military and naval "games"

1689. Conflict with China, resulting from the penetration of Russian pioneers into the Amur region By the **Treaty of Nerchinsk** (1689) — the first Russian treaty with China — the Russians were obliged to withdraw from the occupied territory

1695-1696. Peter's expeditions against Azov, the fortress commanding the Sea of Azov and the entrance to the Black Sea The first expedition, by land, was unsuccessful, but the second, supported by a naval force, resulted in the capture of the stronghold (July 28, 1696)

1697-1698. Peter's European journey, which he undertook *incognito* as part of a grand embassy sent to secure allies in western Europe for a crusade against the Turks Peter was the first Russian sovereign to go abroad and his travels in France, England, and Holland strengthened him in the determination to "westernize" Russia. He returned to Moscow to sup-

press a **revolt of the Streltsy** (soldiers of the Moscow garrison, among whom there were many Old Believers), and then embarked upon his first reforms At the same time he prepared for war with Sweden for possession of the Baltic coast, having failed to induce the western powers to continue the Turkish war beyond the year 1699 (**Treaty of Karlowitz,** p 484) Peace was concluded with the Turks in 1700, Russia retaining Azov

1700-1721. THE GREAT NORTHERN WAR (p. 471). Peter was at first no match for Charles XII, who defeated him at **Narva** (Nov 30, 1700) But Charles spent the next years campaigning in Poland, thus giving Peter an opportunity to reorganize his army on European lines and to construct a fleet in the Baltic The capital was moved to the newly founded **city of St. Petersburg** (modern Petrograd and Leningrad) in 1703

1709, July 8. THE BATTLE OF POLTAVA, a decisive battle in Russian history. Charles XII, having allied himself with **Mazeppa,** the Cossack hetman, began to march on Moscow, but then turned off south At Poltava Peter won a resounding victory which broke the power of Charles and marked the emergence of Russia in place of Sweden as the dominant power in the north.

1710-1711. War with Turkey, due to pressure from Charles XII (a refugee in Turkey) and France The Russians were surrounded by the Turks on the Pruth River and Peter had to buy himself off. By the **Treaty of the Pruth** (July 21, 1711), he was obliged to return Azov to the Turks

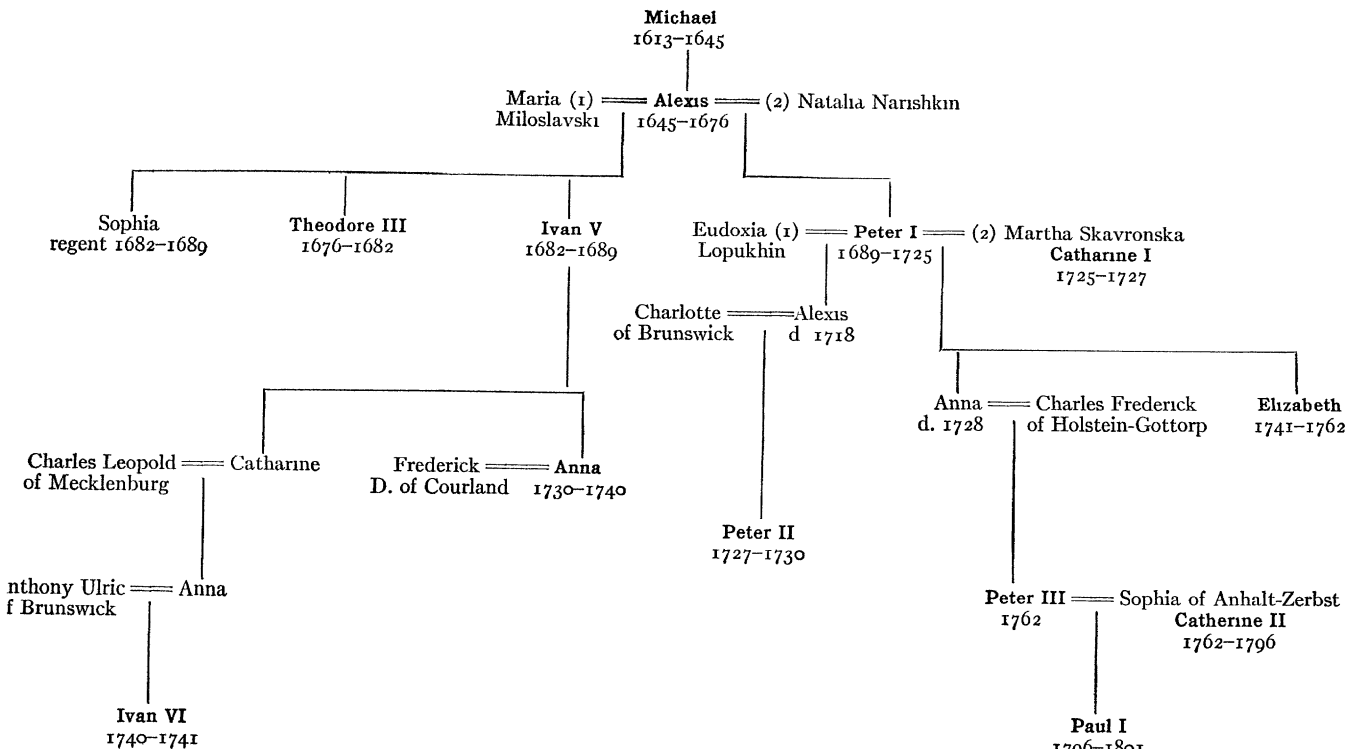
1721, Aug. 30. Treaty of Nystadt, between Russia and Sweden, concluding the Northern War Russia acquired Livonia, Estonia, Ingermanland, part of Carelia and a number of Baltic islands. Thus Peter had achieved his great purpose of acquiring a "window" on the Baltic which would open up connections with the west Russia now definitely took her place as a European power

INTERNAL REFORMS OF PETER: centralization of the administration The old council of the boyars was abolished and was replaced by a governing *senate* (1711), consisting of nine members appointed by the tsar. New government bureaus were set up (1718) under the name of *colleges* The nobility was made to serve the state (establishment of a hierarchy of offices) and Peter did much to encourage trade, industry, and education (Academy of Science opened the year after Peter's death). In order to subordinate the Church to state control Peter abolished the patriarchate and in its place established (1721) a synod composed of bishops, but presided over by a layman (procurator of the Holy Synod) Many of Peter's reforms were incomplete and even more of them were hasty and premature, but his drastic innovations no doubt did much to arouse Russia from the stagnation of the preceding period

Alexis, the son of Peter I, who had become the center of opposition to Peter's policies, died in prison in 1718 In 1722 Peter issued a law which empowered the reigning sovereign to appoint his own successor. He himself died without making use of this right. Upon his death the officers of the palace guard elevated to the throne his second wife,

1725-1727. CATHARINE I, a woman of lowly birth, but intelligent and energetic During her short reign the most influential member of the government was **Prince Menshikov,** one of Peter's closest collaborators Catharine named as her successor

1727-1730. PETER II, the son of Alexis and grandson of Peter I, a boy of 12 There ensued a struggle between the Menshikov and the Dolgoruki families, which ended in the exile of the former. Peter II died young and was succeeded by



1730-1740. ANNE, daughter of Ivan V, who was married to Frederick, the Duke of Courland Anne was an ineffectual person, dominated by her favorite, **Biron** (properly Buhren) The government began to fall almost entirely into the hands of Germans, many of them adventurers, but many of them extremely able Foreign affairs were competently handled by **Ostermann,** while the army, under **Münnich,** scored great successes in its campaigns

1733-1735 War of the Polish Succession (p 477). As a result of the internal weakness of Poland, the Russians were able to establish on a firm basis their control over Polish affairs and to prepare the way for the final partitions.

1736-1739. War against the Turks (p. 484), in alliance with Austria. The war was the result of Russian action in Poland The Russians recaptured Azov and, after some reverses in 1737, Münnich advanced victoriously into Moldavia. French mediation deprived Russia of gains she might have made By the **Treaty of Belgrade** (Sept. 18, 1739) the Russians retained Azov, but agreed to raze the fortifications and not to build a fleet on the Black Sea

1740-1741. IVAN VI, the grandson of Anna's sister Catharine Ivan's

The House of Romanov (1613-1801)

mother, the Duchess of Courland, conducted the government for a short time after the fall of Biron (effected by Munnich), but a military revolt soon placed on the throne

1741-1762. ELIZABETH, the youngest daughter of Peter the Great, a thoroughly Russian character, politically keen, but dissolute and easy-going Nationalist reaction against German favorites Elizabeth set up a brilliant if somewhat uncouth court and gave wide rein to the court nobility. Golden age of the aristocracy, which began to emancipate itself from onerous obligations of service to the state, while gradually increasing its privileges Development of learning and science **first Russian university** founded at Moscow (1755), activity of the Academy of Sciences (**Michael Lomonosov,** 1711–1765, the first outstanding native scientist)

Foreign policy was, during most of the reign, directed by **Alexis Bestuzhev-Riumin,** and was based on the alliance with Austria and England as against Prussia and France The great objectives of Russia continued to be expansion at the expense of Sweden, domination of Poland and conquest at the expense of the Turk

1741-1743. War with Sweden, provoked by the pro-French party in Sweden After some fighting, the Swedes, by the **Treaty of Abö** (1743, Aug. 7) were obliged to cede to Russia further territory in Finland

1746, June 2. By treaty with Austria, Russia finally joined in the **War of the Austrian Succession** (p. 465), in which, however, the Russians played an insignificant rôle.

1756-1763. THE SEVEN YEARS' WAR, in which Russia took an active and important part The "diplomatic revolution" of 1756, which brought Austria and France together, led to the estrangement of Russia and England, and to the downfall of Bestuzhev Russia fought on the side of Austria and France against Frederick the Great (p 467ff.), but made no direct gains as a result of the war

Elizabeth named as her successor **Peter,** Duke of Holstein-Gottorp, her sister's son, who in 1744 married Sophia-Augusta of Anhalt-Zerbst. Sophia took the name Catharine on conversion to the Orthodox faith

1762. PETER III, a weak and incompetent ruler. As an intense admirer of Frederick the Great, he effected Russia's withdrawal from the war, thereby causing much resentment among the officers and the aristocracy (despite the fact that he proclaimed the freedom of the nobility from obligatory state service). After a six months' reign, Peter was deposed (July) by a military revolution led by the **Orlov brothers.** A few days later he was killed while in captivity. Peter was succeeded by his wife

1762-1796 CATHARINE II (*the Great*), an exceptionally astute and energetic ruler, who completed the work initiated by Peter the Great In domestic affairs Catharine was guided by the teachings of the French Enlightenment (especially Voltaire) and tried to establish a benevolent despotism On the other hand, she was obliged to cultivate the good will of the nobility, to which she owed her power In order to codify the Russian law and also in order to learn the needs of the country, she convoked at Moscow a legislative commission (1767–1768), consisting of representatives of all classes excepting the serfs Although no law code was produced, Catharine made good use of the commission's findings in planning her later legislation.

1766-1768. Drastic interference of Catharine in the affairs of Poland, where one of her favorites, Stanislas Poniatowski, had been placed on the throne (p 477) The Russian advance in Poland led to

1768-1772. WAR WITH THE TURKS (p 484), in which the Russians won unprecedented victories The prospective gains of Russia so excited the Austrians (thitherto the partners of the Russians in the advance against the Turks) that the two powers came to the very verge of war In order to prevent a general conflagration, Frederick the Great engineered the

1772, Aug. 5. FIRST PARTITION OF POLAND (p 477) The Russian operations against Turkey were hampered further by

1773-1775. Pugachev's revolt, a formidable insurrection of the peasants and Cossacks of southeastern Russia, which was suppressed only with great difficulty.

1774, July 21. The Treaty of Kuchuk Kainarji ended the war against Turkey Russia acquired Kinburn, Yenikale, and Kertch in the Crimea and secured the right of free navigation for commercial ships in Turkish waters The Tatars of the Crimea were recognized as "independent" and Russia was given important rights of intervention in Moldavia and Wallachia and in behalf of Christians in the Ottoman Empire (for details see p. 484).

1775. The statute of provincial administration was a direct result of Puga-

chev's revolt, which convinced Catharine of the need for reform. It completely reorganized local government (small administrative units, better division of functions among the branches of government, some measure of self-government, more particularly for the nobility). Catharine did not dare, however, to touch the evil of serfdom On the contrary, this institution reached its fullest development in her reign Catharine's encouragement of education, art, and letters contributed to the growth of a liberal public opinion on the social problem After the outbreak of the French Revolution, Catharine became decidedly hostile to this movement **Alexander Radishchev** (1749–1802) was arrested and exiled to Siberia (1790) for having published his *Journey from St Petersburg to Moscow*, which contained a vigorous protest against serfdom

1780. Armed neutrality at sea, an idea advanced by Russia during the War of American Independence, as a method of protecting commerce The idea was supported by Denmark and Sweden (1780) and later by Prussia, Austria (1782) and Portugal (1783), France and Spain recognized the principle, but England prevented Holland from joining the league by declaring war on the Dutch The demands of the **League of Armed Neutrality** were (1) free passage of neutral ships from port to port and along the coasts to combatants, (2) freedom of enemy goods in neutral ships (*le pavillon couvre la marchandise*), excepting for contraband, (3) definition of blockade (nominal, "paper" blockade not sufficient; a blockade, to be legal, must be effective)

1780. Visit of the Emperor Joseph II to Catharine and conclusion (1781) of an **Austro-Russian treaty.** Catharine's *Greek Scheme* for the disruption of the Ottoman Empire and division of the Balkans between Russia and Austria (p. 485) In keeping with her Near-Eastern plans, Catharine carried through

1783. The annexation of the Crimea, on the plea of restoring order The Turks were with difficulty dissuaded by England and Austria from declaring war on Russia

1785. Charter to the nobility, recognizing their corporate rights. A similar charter was issued for the towns, but not for the peasantry.

1787-1792. Second war of Catharine against the Turks (p 485) Austria joined in the war The Russians advanced to the Danube, but were badly distracted by

1788-1790. War with Sweden, and the Swedish invasion of Finland (p 474). Under Prussian pressure, the Austrians finally backed out of the Turkish war, and Russia concluded the **Treaty of Jassy** (1792, Jan. 9), by which she secured Oczakov and the boundary of the Dniestr River
